land. Just real quick, it's an important place. It's a place where—close to the Syrian border, where Al Qaida was moving the terrorists from outside the country inside the country, trying to achieve their objective. And right after we removed Saddam Hussein, they started moving in. And I cannot describe to you how awful these people treat the citizens there. I mean, they are—I told a story about a young boy who was maimed, taken to a hospital, was pulled out of the hospital, was killed by the terrorists. His dad went to retrieve him on the side of the road, and they put a bomb underneath him and blew up the family. I mean, Americans cannot understand the nature—how brutal these people are. It's shocking what they will do to try to achieve their objectives.

But it really shouldn't shock us when you think about what they did on September the 11th. It's the same folks, same attitude, same frame of mind. But they're able to lock down cities, particularly those that are worried about their security, and so they basically took control of Tall 'Afar. So our troops went in with Iraqis and cleaned it out. The problem—[applause]—oh, not through yet. [Laughter] A little early on the clap. [Laughter] The problem was, we continued to pursue the enemy, and they moved back in, these killers and murderers moved back in and just created a mess. I mean, they—I said in my speech, they mortared children in a playground. They recruited young kids, abused them, violated them. There's one boy in particular who told our guys, once the city eventually got liberated, his dream was to behead somebody with a—anyway, we started working with the local folks again. This time, though, we had trained more Iraqi Army ready to go.

And the difference in the story between the first time we liberated Tall 'Afar from them and the recent liberation was that the Iraqis were in the lead. And not only were they in the lead, they stayed behind after we left. So our troops are chasing

high-value targets and training—and capable Iraqi forces are providing security. And so the day of terror began to change when they saw capable forces and a new mayor and police forces.

I mean, this is—it's hard to put ourselves in their—the shoes of the folks in this town that had been traumatized. But the strategy of clear, hold, and build began to create a sense of confidence. And what's interesting is I can say that—I got one data point that I can share with you—the vote in the January '05 election was the second-lowest vote in the—as percentage of voting population, in the country, and the last vote, 85 percent of the eligible voters voted. In other words, people had a sense of security and hope.

A free Iraq is important for the United States of America. It was important to remove a threat; it was important to deal with threats before they fully materialized. But a free Iraq also does some other things: One, it serves as an amazing example—it will serve as an amazing example for people who are desperate for freedom.

You know, this is, I guess, quite a controversial subject, I readily concede, as to whether or not the United States ought to try to promote freedom in the broader Middle East. Our foreign policy before was just, kind of, if the waters looked calm, great. Problem is, beneath the surface was resentment brewing, and people were able to take advantage of that, these totalitarians, like Al Qaida. So I changed our foreign policy. I said, freedom is universal; history has proven democracies do not fight each other; democracies can yield peace we want, so let's advance freedom. And that's what's happening.

It's a big idea, but it's an old idea. It's worked in the past. I strongly believe that by promoting liberty, we're not only protecting ourselves, but we're laying the foundation of peace for a generation to come. And I'll tell you why I believe that, and then I'll answer questions. Thank goodness

Laura isn't here; she'd be giving me the hook. [*Laughter*]

Two examples that I use that are obviously—well, I'm living one example, and that is my relationship with the Prime Minister of Japan. He is one of my best buddies—I don't know if you're supposed to call them “buddies” in diplomacy or not, but anyway—one of my best buddies in working to keep the peace. I find that a really interesting statement to say to you, knowing my own family's history—18-year-old—my dad, when he was 18, went to fight the Japanese. I think it's really one of the interesting twists of history that I stand here in West Virginia saying to you that Prime Minister Koizumi and I talk about ways to keep the peace, ways to deal with North Korea—he's helping in Iraq—ways to deal with other issues. And 60 years prior to that, when the country called, George H.W. said, “I want to go,” just like, I'm sure, relatives of you all. And Japan was a sworn enemy. And there was a lot of bloodshed in order to—remember, they attacked us too. And yet today, the President says, “We're working to keep the peace.” And what happened? It's an interesting lesson that I hope people remember. Something happened. What happened was, Japan adopted a Japanese-style democracy.

I believe freedom and liberty can change enemies into allies. I believe freedom has the power to transform societies. It's not easy work; it's difficult work. But we've seen history before. I know you've got relatives who were in World War II. On that continent, hundreds of thousands of Americans lost their lives in two world wars during the 1900s. And yet today, Europe is whole, free, and at peace. What happened? Democracies don't war. And so part of my decisionmaking that I'm trying to explain to you today, about war, about what you're seeing on your TV screens, about the anxiety that a lot of our citizens feel, is based upon, one, the need to protect the American people and my deep reservoir of commitment to doing what it takes—to look

at the world realistically, to understand we're in a global war against a serious enemy.

But also my thinking is based upon some universal values and my belief that history can repeat itself and that freedom and liberty has a chance to lay a foundation of peace so that maybe 40 years from now, somebody is speaking here in West Virginia saying, "You know, a bunch of folks were given a challenge and a task, and that generation didn't lose faith in the capacity of freedom to change, and today, I'm able to sit down with the duly elected leaders of democracy in the Middle East, keeping the peace for the next generation to come."

That's what I've come to talk to you about, and that's what's on my mind. And now I'll be glad to answer any questions you got.

Yes, sir. First man up.

#### *Support for the U.S. Armed Forces*

Q. Mr. President, I'm going to make your job a little easier on you. To sum it all up, what you're trying to say is, when it comes to fighting terrorism, there is no easy button.

*The President.* Thank you, sir. I'll be glad to answer any question on any subject, but I always appreciate a good editorial. [Laughter]

Q. Mr. President—

*The President.* Yes, sir. Hold on for a second. We're going to do it a little more orderly here. Right here. Right there. Yes, there you go. Get moving on the mike, please. [Laughter] Generally what happens if they don't have a mike, the guy yells the question, and I just answer whatever I want to answer. [Laughter]

Q. Mr. President, I have a son that's Special Forces in Iraq. And I have another son that's in the Army. He left college to join the Army. He's out in Hawaii. He's got the good duty right now. [Laughter] But I thank God that you're our Commander in Chief. And I wouldn't want my boys—[applause].

*The President.* Okay, thanks.

Q. Again, I thank God you're our Commander in Chief. You're a man for our times. And I'm a supporter of yours, and I think it's good that you come out and tell your story. And I think you need to keep doing more of it, and tell the story and the history of all this. And God bless you, and I thank you for your service.

*The President.* Well, I appreciate you saying that. A couple of points. First, you tell your kids thanks. The good news is, for moms and dads and husbands and wives and children, that in spite of the debate you're seeing in Washington, that there is a commitment to support our troops when we—when they're in harm's way. There may be an argument about tactics and whether or not we should have done it in the first place; I understand that. But the Congress has stood up, and that's what Congress should do. And take comfort, please, sir, in knowing that the debates that you're seeing will not lessen our Government's support for making sure the people are well-trained, well-paid, well-equipped, well-housed. We owe that. And I'm pleased with the congressional response to supporting troops.

Second, you can e-mail them. It's an interesting war we have, where moms and dads and wives and husbands are in touch with their loved ones by e-mail. It's really interesting.

And I want to thank you very much for saying what you said. I am—as I said, I'm educator in chief, and I'm going to spend a lot of time answering questions and just explaining—explaining to people as clearly as I can about why I made decisions I made and why it is important for us to succeed.

And again, I understand debate. I understand there's differences of opinion, and we should welcome that in America. People should never fear a difference of opinion, particularly on big matters. And war is a big matter, war and peace. And it's healthy for our country for people to be debating,

so long as we don't send the wrong signals to our troops, so long as they don't think that we're not behind them, and so long as we don't send mixed signals to the enemy. The enemy believes that we will weaken and lose our nerve. And I just got to tell you, I'm not weak, and I'm not going to lose my nerve. I strongly believe that we're doing the right thing.

Do you want to say something, Joe?

*Governor Joe Manchin III.* Yes.

*The President.* How about your Governor? Make it easy.

### *Alternative Sources of Energy*

*Gov. Manchin.* [Inaudible]

*The President.* Yes, I appreciate it.

Joe talked to me about how do we use the natural resources of the State of West Virginia in such ways to become less dependent on oil. Now, let me talk about that, starting with coal gasification leading to coal liquefaction. I appreciate the subject.

I know it shocked some of you—I know it shocked some of you when I stood up in the State of the Union and said, “We got a problem; we’re addicted to oil.” Texas, you know, the whole thing—[laughter]. I’ll tell you why I said it. I’ll tell you why I said it. One, because when the demand for fossil fuels goes up, for non-renewable resources goes up in other parts of the world, it affects the gasoline price here at home. When somebody else’s economy starts to boom and they start using more fossil fuel, it affects your price too. It’s important for people to understand. And there are some new economies emerging that are growing and that need and use—that are using a lot of hydrocarbons.

Secondly, we get oil from parts of the world that don’t like us, is the best way to put it, which creates a national security issue. And therefore, it is in our economic interest and national interest that we get off of our addiction to oil. We import about 60-something percent of our oil from overseas. What Joe is talking about is a different

use of resources to help us achieve that objective.

First thing is, we got a lot of coal, 250-year supply of coal, which helps us on our electricity. And we’re spending a lot of money on clean coal technology. The whole idea is to use taxpayers’ money to develop a technology that will enable us to have zero-emission plants, which will help us achieve an environmental objective, as well as an energy independence objective.

Joe is talking about spending research money on the gasification of coal, which then will lead to the liquefaction. In other words, we’re able to develop a product that way. And I believe we ought to attack this issue on all fronts, on a variety of fronts. I know we ought to use nuclear power. It is a renewable source of energy that has got zero greenhouse gas effect.

And by the way, I went to a plant that’s making solar panels, photovoltaic cells—not bad for a history major. [Laughter] Technologies are coming. And to me, it makes sense to work with Congress to spend money on new technologies aiming for a national objective.

The place where we’re really going to affect reliance upon oil is changing our automobile—how automobiles are powered. One is, battery technologies are coming around. One of these days, I am told, that if we continue to stay focused in research, you’re going to be able to have a pretty good-sized vehicle, plug it in, and it’ll be able to drive 40 miles before you need to use any gasoline in your engine. Now, that’s not going to help some of you rural folks in West Virginia or Texas, but it’s going to help urban people who generally tend not to drive more than 40 miles a day. But imagine if we’re able to have battery power where you plug your battery into—when the electricity is down, low usage at night, and they drive 40 miles. That will save—that will reduce demand for gasoline, which reduces demand for crude oil.

Secondly, we're going to be able to drive our cars based upon—with a sugar base or a corn base or saw grass. I said that one day—what the heck is saw grass? It's just grass. It just grows out there, and you bulk it for them. And the idea is to develop technology so that we're using more ethanol. It's happening in the Midwest, by the way. They've got what they call E-85—that's 85 percent ethanol—that's powering automobiles now. A whole new industry is beginning to grow. And the more we use alternative sources of energy, the less dependent we are on oil.

So Joe has been—Joe is always thinking, and he's a practical fellow, which is sometimes not the case in government. [*Laughter*] But what he's saying is, "Can't we use our resources here, in a way, Mr. President, that helps you achieve a grand national objective, which is getting off Middle Eastern oil?" And the answer is, yes, we can.

Yes, you got a question? Are you in school?

#### *Civilian Nuclear Power Program in India/ Iran*

Q. Yes.

*The President.* Good. Did you use me as an excuse to skip school?

Q. Of course. [*Laughter*] Mr. President, I was wondering, actually, how you felt about America's double standard on nuclear energy, as far as countries like Iran, India, and Israel go?

*The President.* Yes, I appreciate that. I may ask you to clarify your question of "double standard."

Q. Well, how we don't allow Iran to have nuclear energy, yet we're supporting India.

*The President.* Yes. No, I got it, good, good, good.

Q. And Israel's nuclear weapons—

*The President.* I wouldn't—I wouldn't necessarily—well, first of all, let me explain the policy, and then you can draw whatever conclusion you want. First of all, it's in our interests that India use nuclear power to power their economic growth because,

as I told you, there is a global connection between demand for fossil fuels elsewhere and price here. And so I went to India, and I said—actually, it's a very sophisticated question, by the way—but I said, we ought to encourage you to use nuclear power.

Now, the difficulty with that issue, and that Congress is going to have to deal with, is that India has heretofore been denied technologies from the United States because of previous decisions they made about nuclear weaponry. My attitude is that over 30 years, they have proven themselves to be a nonproliferator, that they're a transparent democracy. It's in our interest that they develop nuclear power for—to help their economy grow. They need power, and they need energy to do so, and they're willing to go under the safeguards of the IAEA, which is an international forum to make sure that there are certain safeguards.

Iran—the Iranians are a nontransparent society. They're certainly not a democracy. They are sponsors of terrorism. They have joined the IAEA, and yet we caught them cheating. In other words, they weren't upholding the agreements, and they started to try to enrich uranium in order to develop a weapons program. India is heading to the IAEA; the Iranians are ignoring IAEA.

And so to answer your question about potential conflict of civilian energy power, I have said that I support the Russian proposal that says the Iranians should have a civilian nuclear industry; however, Russia and other suppliers would give them the enriched—the product necessarily to power their industry and collect the spent fuel but not enable the Iranians to learn how to enrich in order to develop a weapons programs. That's, I think, how—hold on for a second—oop, oop, oop. [*Laughter*] That's how we addressed the inconsistency on the power side, apparent inconsistency.

However, in that the Iranians are non-transparent, in that they are hostile to the United States and hostile to allies, we've

got to be very careful about not letting them develop a weapon. And so we're now dealing with this issue diplomatically by having the Germans and the French and the British send a clear message to the Iranians, with our strong backing, that you will not have the capacity to make a weapon, the know-how to make a weapon. Iran with a nuclear weapon is a threat, and it's dangerous, and we must not let them have a weapon.

Yes.

### *Voluntarism*

*Q.* Sir, thank you for being in West Virginia. I'm the recruiting commander of the West Virginia Army National Guard. And there are a lot of National Guardsmen here with you in Wheeling today. West Virginians are a proud and very patriotic people. I'd like for you to share with us what you would say to a young person today who would like to join the National Guard, and maybe give some encouraging words in that respect.

*The President.* Okay, thanks—kind of doing your job for you. All right. [*Laughter*] My statement to all Americans is, serve your country one way or another. I—and service can be done by wearing the uniform. Wearing the uniform is a fantastic way to say, “I want to serve my country.” A lot of people have chosen that way, and it's a rewarding experience to wear the uniform. If you want to go to college, it's a good way to gain some skills to help you in your education.

There are also other ways to serve. You can mentor a child, and you're serving America. You can help the Katrina victims, and you're serving America. You can be a Boy Scout troop leader, and you're serving America.

What's really interesting about our country—and I said this early on—is the notion of people coming together to serve a concept greater than themselves. It is—I know it's not unique to America, but it certainly helps define our spirit. De Tocqueville,

who's a French guy, came in 1832 and recognized—and wrote back—wrote a treatise about what it means to go to a country where people associate voluntarily to serve their communities. And he recognized that this—one of the great strengths of America—this is the 1830s—it is still the strength of America. It is a vital part of our society and our communities, the idea of people volunteering to help a neighbor in need.

And one of my jobs is to honor people who are serving our country that way, and to call other peoples to service as well. As you know, one of the interesting and at times controversial proposals was whether or not Government should open up grant money for competitive bidding for faith-based organizations. I'm a big believer in providing grant money available for faith-based organizations, so long as the money doesn't go used—to be used to proselytize, but is used to help serve a purpose, like if your mother or dad is in prison, that it would help to go find a mentor for that child. Or if you're a drug addict or got hooked on alcohol, that you could redeem the Government help at a faith-based institution.

In other words, we in government ought to be asking the question, does the program work? And a lot of times, programs based upon faith do work, that it is—there's nothing better than a faith-based program which exists to love a neighbor like you'd like to be loved yourself. And therefore, one of my jobs is to not only help recruit for the Guard, which—put a plug in there for you—[*applause*]*—there you go—but also to call other—to call people to serve, to help change our society one person at a time. And it's happening. It's a remarkable part of the—I'm confident—of this community, just like it is all around the United States. And thanks for your question.*

Yes, sir. Yes, the guy in the yellow hat. Give it to the guy on the aisle. Well, no, you're not a guy. [*Laughter*] Right behind you; there you go.

*Religious Freedom/Afghanistan*

Q. President Bush, I'm a professional firefighter here in Wheeling, West Virginia.

*The President.* Thank you, sir.

Q. And back during 9/11, I lost over 300 of my brothers in New York. And I was glad that you were our President at that time and took the fight to the terrorists. But as I see, you said earlier about the guy in Afghanistan that is going to convert to Christianity, he may get killed over there for doing that. Do you have an army of sociologists to go over there and change that country, or are you hoping that in a couple decades that we can change the mindset over there?

*The President.* I appreciate the question. It's a very legitimate question. We have got influence in Afghanistan, and we are going to use it to remind them that there are universal values. It is deeply troubling that a country we helped liberate would hold a person to account because they chose a particular religion over another. And so we are—we will make—part of the messaging just happened here in Wheeling. I want to thank you for that question.

No, I think it's—we can solve this problem by working closely with the Government that we've got contacts with—and will. We'll deal with this issue diplomatically and remind people that there is something as universal as being able to choose religion.

So thank you for the question. I understand your concerns. I share the same concerns.

I had a little guy back here. Yes, sir.

*The Presidency*

Q. Do you like living in the White House?

*The President.* Do I like living in the White House? Yes. That's a good, fair question. Your brother has got one too. Do you want to back to back them?

Q. [Inaudible]

*The President.* Okay. Well, I've been the President for 5½ years. I do like living

in the White House—it's an interesting question—for some practical reasons. I've got a 45-second commute to my office. [Laughter] The food is pretty good. [Laughter] It is a—I've enjoyed every second of the Presidency. That's probably hard—like my buddies come up from Texas; one of the things that Laura and I are most proud of—we're proud of a lot—we're most proud of our girls, but we're also very proud of the fact that we had friends prior to being in politics from Texas that will be our friends after we're in politics.

And they come up from Texas, and they're kind of looking at you like, "Man, are you okay?" Yes—you know. [Laughter] And I tell them, I say, you know, I can't tell you what an honor it is to do this job. They often ask, "What's the job description?" I say, making decisions. And I make a lot. Obviously, I'm trying to share with you—you may not agree with the decision, but at the very minimum, I want you to understand that I make my decisions based upon some principles I hold dear. In order to make decisions, you have to be enthusiastic about your job, you have to be optimistic about the future, and you have to stand for something. You can't be a President trying to search for what you believe in the midst of all the noise in Washington.

Yes, ma'am. Yes. No, right here. There you go.

*Progress in Iraq/Media Coverage*

Q. Good afternoon, Mr. President. It is an honor to be here today. Thank you for coming. Greetings from Columbus, Ohio.

*The President.* There you go.

Q. My husband, who is sitting right here with me—

*The President.* Actually, my grandfather was raised in Columbus, Ohio—not to change subjects, but—

Q. That's okay, you can do whatever you want to do.

*The President.* Prescott S. Bush. [*Laughter*]

Q. I have a comment, first of all, and then just a real quick question. I want to let you know that every service at our church you are, by name, lifted up in prayer, and you and your staff and all of our leaders. And we believe in you. We are behind you. And we cannot thank you enough for what you've done to shape our country.

This is my husband, who has returned from a 13-month tour in Tikrit.

*The President.* Oh, yes. Thank you. Welcome back.

Q. His job while serving was as a broadcast journalist. And he has brought back several DVDs full of wonderful footage of reconstruction, of medical things going on. And I ask you this from the bottom of my heart, for a solution to this, because it seems that our major media networks don't want to portray the good. They just want to focus—[*applause*].

*The President.* Okay, hold on a second.

Q. They just want to focus on another car bomb, or they just want to focus on some more bloodshed, or they just want to focus on how they don't agree with you and what you're doing, when they don't even probably know how you're doing what you're doing anyway. But what can we do to get that footage on CNN, on FOX, to get it on Headline News, to get it on the local news? Because you can send it to the news people—and I'm sorry, I'm rambling—like I have—

*The President.* So was I, though, for an hour. [*Laughter*]

Q. —saying can you use this? And it will just end up in a drawer because it's good, it portrays the good. And if people could see that, if the American people could see it, there would never be another negative word about this conflict.

*The President.* Well, I appreciate that. No, it—that's why I come out and speak. I spoke in Cleveland, gave a press conference yesterday—spoke in Cleveland

Monday, press conference, here today. I'm going to continue doing what I'm doing to try to make sure people can hear there's—why I make decisions and, as best as I can, explain why I'm optimistic we can succeed.

One of the things that we've got to value is the fact that we do have a media, free media that's able to do what they want to do. And I'm not going to—you're asking me to say something in front of all the cameras here. [*Laughter*] Help over there, will you? [*Laughter*]

I just got to keep talking. And one of the—there's word of mouth; there's blogs; there's Internet; there's all kinds of ways to communicate, which is literally changing the way people are getting their information. And so if you're concerned, I would suggest that you reach out to some of the groups that are supporting the troops, that have got Internet sites, and just keep the word moving. And that's one way to deal with an issue without suppressing a free press. We will never do that in America. I mean, the minute we start trying to suppress our press, we look like the Taliban. The minute we start telling people how to worship, we look like the Taliban. And we're not interested in that in America. We're the opposite. We believe in freedom, and we believe in freedom in all its forms. And obviously, I know you're frustrated with what you're seeing, but there are ways in this new kind of age, being able to communicate, that you'll be able to spread the message that you want to spread.

Thank you for your concerns, and thank you for your prayer. I want to tell you something interesting about the job of President, and, frankly, I didn't anticipate this part of the Presidency, but it's an amazing part of my job to know that millions of people pray for me. It's a—[*applause*]*—it really is. It's—think about that. Strangers stand up and say, in front of a couple thousand people, I'm praying for you. And it helps. And I appreciate it, and*

I want to thank you for your prayers. It helps do the job; it helps keep perspective.

Yes, sir.

### *Vision for the Future*

Q. I'm a senior at the local high school, Wheeling Park High School, and I just want to know what your views are on what type of America my generation will lead.

*The President.* Yes, interesting question. First, I hope that your generation will lead—no doubt, your generation will lead. Generations, when called, somehow find the courage to lead. That's step one. Two, I think you'll be dealing in a world in which you will be confronted with making values choices—for example, family, understanding that the family is an important aspect of society. Secondly, the choice of life—for example, you'll be confronted with a very difficult debate between science, on the one hand, and the hopes of science, and life. And it's—that debate is just beginning. In other words, do you destroy life to save life, for example, is one of the very difficult debates that your generation will be confronted with—to what extent does science trump morality, as some see it.

You'll be confronted, hopefully, with a world that has been able to be free enough so that this war that's going on now is—has kind of faded out. This war is not going to stop like that. It's not going to be, like, we'll have the signing ceremony somewhere. But it's a matter of marginalizing those who espouse violence and empowering those who love freedom.

You'll be confronted with a world in which—we're seeing a little bit of it now in America—whether or not we will be bold and confident in our economic policy to shape the future, or will we be worried about competition and retreat within our borders. It's an interesting debate. My attitude is, as I said in the State of the Union, we cannot become an isolationist nation. But you'll be confronted with making that decision. If we're an isolationist nation, it means we'll just say, "Let them—don't

worry about them over there; let them deal with it themselves." If it's an isolationist nation, we won't worry about HIV/AIDS on the continent of Africa, which we should worry about. See, I believe to whom much is given, much is required, and that we have an obligation not only to help our folks here at home but also to help save lives elsewhere.

And you'll be confronted with that decision. You'll be confronted with the decision as to whether or not we can confidently compete against nations like India and China on the economic front. And it will be an interesting challenge. We're facing that challenge somewhat now, and in my judgment, this is the beginning of what will be a constant set of decisions that future generations are going to have to make.

You'll be confronted with privacy issues—privacy on the Internet, privacy in electronic medical records that I think ought to happen in order to make sure we save costs in medicine. But you'll be confronted with making sure that these new technologies that we're going to use to help improve, for example, the information of medicine, that it doesn't encroach into your private business, into your life. That will be a confrontation that you'll have to deal with.

Anyway, you'll be confronted with some stuff. Hopefully, our job is to make sure you're confronted with less issues, like being hooked on oil. One of the issues that we're confronting with now that I hope you'll not have to confront with is jobs going elsewhere because our—because we don't have the math and science skills and engineering skills and physics skills that are taught to our children here. One of the really interesting challenges we have is to make sure not only the education of our children focuses on literacy, but there's literacy in math and science and physics and chemistry—where the jobs of the 21st century—the skills necessary for the jobs of the 21st century. Hopefully, we'll have dealt with that. Otherwise, you're going to

be confronted with playing catchup. And that's why it's important for us to get that job done.

You're going to be confronted with, unless we act now, a Social Security system and a Medicare system that's gone broke. I want to talk about that right quick, now I thought about it. [Laughter] No, I think about it a lot because I see what's coming down the road—a lot of baby boomers like me turning 60 this year. I'll be retirement age in 2 years, in 2008. [Laughter] Kind of convenient, isn't it? [Laughter] And there's a lot of me—people like me, a lot of people like me, a whole lot of baby boomers. That's one of those statistical facts that people got to pay attention to.

And interestingly enough, my generation has been promised more benefits than the previous generation. People are running for office saying, "Vote for me; I'm going to make sure this next generation gets a better deal than the previous generation." And because there was a lot of folks like me being promised greater benefits who are living longer—I don't know how plan—how other 60-year-olds, how long they plan to live—I plan on kind of stretching her out, you know. And there are fewer people paying in the system per beneficiary. And so we got a problem coming. The system is going to go broke. And I addressed the issue last year, and I'm going to address the issue again and again and again, to call Congress to the table.

My strategy last time was to go around the country and explain the problem, on the belief that once the people heard there was a problem, they would then demand their Representatives do something about the problem. It didn't work. There was no legislation last year. So I got another idea, and that is, I'm going—we're going to set up a group of Members of Congress from both parties, both Chambers, recognizing that nothing can get done on this issue unless it's a bipartisan issue—and say, "Now is the time." That's what we're here for. We have been elected to confront

problems and deal with them. That's what the people expect. And they're tired, by the way, of all the politics in Washington, DC. They expect people to come together, to sit down at the table, and to solve this problem so you don't have to deal with it.

All right, last question. Then I got to go back to work. This isn't work. Yes, go ahead. Hold on for a minute. Please. Like—I can't—okay, two questions. Who yelled the loudest? You did? All right, go ahead. Then you're—you're the last guy. You're next to last. You're last.

#### *Trade*

Q. Mr. President, thank you again for coming. My question—I believe that one of our greatest resources is our self-sufficiency. And as you drive down the road, you'll see that our community is dying because of the importation of cheap steel. I'd like to know what your plans are to help alleviate this.

*The President.* Yes. Well, as you know, right before—right after I got elected, I put a 201 in place—that was our way of providing breathing space so that the firm could adjust. And I fully understand the problems that the steel mills are going through here. The Governor spent a lot of time briefing me on that, on the way in, as did Shelley Moore. And it's—obviously, it's going to require good energy policy. Your plant can exist if it's got decent energy and reliable supplies at reasonable prices. Your plant can exist if you've got reasonable health care costs. And that's why it's important for us to do a variety of measures to help reduce the cost of health care. I just mentioned one on information technology. Another is to get rid of these junk lawsuits that are running up the cost of medicine.

In order for you to be competitive, we've got to make sure that products are treated fairly. As you know, I'm a free trader, but I also believe that people ought to treat the United States the way we treat them.

If we're letting products coming in here, they ought to let our products in on the same basis. I believe—[*applause*—I'm aware of the issue you brought up, and thank you bringing it up.

Yes, sir. Final guy. Got to head back home. I hope you understand. Otherwise we'd be here all day. Wouldn't mind being here all day, but I got something else to do. [*Laughter*]

Let her go.

### *Political Ethics*

*Q.* Mr. President, I want to say it's a privilege and a blessing to be here with you.

*The President.* Thank you.

*Q.* And thank you for having integrity since you've been in office, and character.

*The President.* Thank you, sir.

*Q.* I'm statewide field director for the campaign for Hiram Lewis for U.S. Senate. And as you close—I appreciate what you had stated earlier about politicians. And as you close today, I did 2 years of volunteer work for the Republican Party while I worked a full-time job, and it paid off for me in this position now. And I see folks that are increasingly discouraged with the status quo, because the difference—

*The President.* No campaign speeches.

*Q.* No, sir, I'm not.

*The President.* Okay.

*Q.* My only question is, what would you say to those, whether Democrat or Republican—how could you encourage those that are dissatisfied with the status quo?

*The President.* Right. No, I appreciate that. Look, it is really important for people to at least trust the decisionmaking process of those of us in public office. You may not agree with the decisions. You may not—and look, I understand a lot of people don't agree, and that's fine, that's fine. But they've got to understand, at least in my case, that I'm making my decisions based upon what I think is right, and that making decisions that are the kind that I make, for example, got to be based upon a set

of principles that won't change. People got to understand that.

When there's any doubt about the integrity of the public servant, like in Washington there has been recently, they got to clean up—they got to work to clean it up. There's got to be lobby reform in this case. I mean, the truth of the matter is, a couple of Members of the House of Representatives disgraced the process. A person took money in order to put things in appropriations bills. That's unacceptable in our democracy. And it needs to be dealt with in order to be able to earn the confidence of the people.

I worry about lack of voter participation. I'm concerned that people don't participate at the ballot box. And it is something that we've all got to work on, because democracy is—really depends upon the participation of our citizenry. It's really important for high school students. And one of the challenges you'll face is whether or not our democracy is able to continue to get people to say, "I can make a difference in the ballot box."

And so, to answer your question, integrity is a central part of the process. Integrity in decisionmaking, integrity in how we deal with the people's money, integrity of—and part of a system based upon integrity is one that deals with, like in this case, unethical behavior very quickly, with certainty so that people have got confidence in the system.

I appreciate you working in the process. I want to thank you for your question. I wish I could stay longer to answer your questions. I can't; I got to go back to DC. I'm not necessarily saying I'd rather be in DC than here; I'd rather be here than there. But nevertheless, that's what my life dictates. God bless you all.

NOTE: The President spoke at 12:17 p.m. at the Capitol Music Hall. In his remarks, he referred to Terry Sterling, president, Wheeling Area Chamber of Commerce; Gov. Joe Manchin III of West Virginia, and his wife,

Gayle; Mayor Nicholas A. Sparachane of Wheeling, WV; Christopher Wakim, representative, West Virginia State House of Representatives; John Anderson, employee, Wheeling, WV, office, and Janis LaFont, employee, White Plains, MD, office, Valley National Gases, Inc.; President Hamid Karzai

of Afghanistan; former President Saddam Hussein of Iraq; senior Al Qaida associate Abu Musab Al Zarqawi; U.S. Ambassador to Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; and Prime Minister Junichiro Koizumi of Japan.

## Memorandum on Designation of Officers of the National Archives and Records Administration

March 22, 2006

*Memorandum for the Archivist of the United States*

*Subject:* Designation of Officers of the National Archives and Records Administration

By the authority vested in me as President under the Constitution and laws of the United States of America and pursuant to the Federal Vacancies Reform Act of 1998, 5 U.S.C. 3345 *et seq.* (the “Act”), I hereby order that:

### *Section 1. Order of Succession.*

During any period when both the Archivist of the United States (Archivist) and the Deputy Archivist of the United States (Deputy Archivist) have died, resigned, or otherwise become unable to perform the functions and duties of the office of Archivist, the following officers of the National Archives and Records Administration, in the order listed, shall perform the functions and duties of the office of Archivist, if they are eligible to act as Archivist under the provisions of the Act, until such time as the Archivist or Deputy Archivist is able to perform the functions and duties of the office of Archivist:

Assistant Archivist for Administration  
Assistant Archivist for Records Services,  
Washington, D.C.

Assistant Archivist for Regional Records Services

Assistant Archivist for Presidential Libraries

Assistant Archivist for Information Services

Director of the Federal Register

Director, National Personnel Records Center

Director, Jimmy Carter Library

### *Sec. 2. Exceptions.*

- (a) No individual who is serving in an office listed in section 1 in an acting capacity, by virtue of so serving, shall act as Archivist pursuant to this memorandum.
- (b) Notwithstanding the provisions of this memorandum, the President retains discretion, to the extent permitted by the Act or other law, to depart from this memorandum in designating an acting Archivist.

### *Sec. 3. Prior Memorandum Superseded.*

This memorandum supersedes the Presidential Memorandum of March 19, 2002, entitled, “Designation of Officers of the National Archives and Records Administration.”

GEORGE W. BUSH

## Remarks Following a Meeting on Immigration Reform *March 23, 2006*

I've just had a very constructive and important dialog with members of the agricultural community, the faith community, the concerned citizen community about immigration. Ours is a nation of law, and ours is a nation of immigrants, and we believe that we can have rational, important immigration policy that's based upon law and reflects our deep desire to be a compassionate and decent nation.

Our Government must enforce our borders; we've got plans in place to do so. But part of enforcing our borders is to have a guest-worker program that encourages people to register their presence so that we know who they are, and says to them, "If you're doing a job an American won't do, you're welcome here, for a period of time, to do that job."

The immigration debate is a vital debate for our country. It's important that we have a serious debate, one that discusses the issues. But I urge Members of Congress and I urge people who like to comment on this issue to make sure the rhetoric is in accord with our traditions. I look around the table and I recognize that we've got people from different backgrounds, different heritages. We all may have different

family histories, but we all sit around this table as Americans.

And therefore, when we conduct this debate, it must be done in a civil way. It must be done in a way that brings dignity to the process. It must be done in a way that doesn't pit one group of people against another. It must be done in a way that recognizes our history. I think now is the time for the United States Congress to act to get an immigration plan that is comprehensive and rational and achieves important objectives.

So I want to welcome you all for being here. I want to thank you very much for your involvement in this vital issue. I've assured folks here at the table that I will continue to speak out on the issue. I feel passionately about the need for our country to conduct themselves with dignity and, at the same time, enforce our border and treat people here with respect.

Thank you all very much.

NOTE: The President spoke at 10:37 a.m. in the Roosevelt Room at the White House. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks on Signing a Bill To Authorize the Extension of Nondiscriminatory Treatment to the Products of Ukraine *March 23, 2006*

Thank you. Pleased be seated. Ambassador, good to see you. Please be seated. Welcome. Appreciate you all coming. In a few minutes, I'm going to sign a bill that authorizes permanent normal trade relations between the United States and Ukraine. It's a good bill, and it's going to strengthen our ties with our friend Ukraine.

It's going to create new opportunities, economic opportunities, for both our countries.

I really want to thank the chairman of the Senate Foreign Relations Committee, a man who knows what he's talking about when it comes to the world, and that's Chairman Lugar from Indiana. Thank you for coming, sir. I thank the bill sponsor,

Congressman Jim Gerlach; and his wife, Karen, is here today. Thank you for coming, Mr. Congressman. Congressman Tom Lantos is with us. He's the ranking member of the House International Relations Committee. Congressman Curt Weldon, a cosponsor of the bill, is with us. Congresswoman Candice Miller from Michigan, a cosponsor, is with us, as well as a cosponsor, Congressman Mike Fitzpatrick. Thank you all for being here.

I welcome you all here. I especially welcome the Ambassador from Ukraine, Ambassador Shamshur. Welcome, Mr. Ambassador. Appreciate you coming. This is the third time we've been together in the last 30 days. [Laughter] I'm better for it. [Laughter]

The bill I sign today marks the beginning of a new era in our history with Ukraine. During the cold war, Congress passed the Jackson-Vanik Amendment as a response to widespread Communist deprivation of human rights. The law made American trade with Communist nations contingent on those countries' respect for the rights of their own people. At the time, the law served an important purpose; it helped to encourage freedom and the protection of fundamental rights and penalized nations that denied liberty to their citizens. Times have changed. The cold war is over, and a free Ukraine is a friend to America and an inspiration to those who love liberty.

The Orange Revolution was a powerful example of democracy for people around the world. The brave citizens who gathered in Kiev's Independence Square demanded the chance to determine their nation's future, and when they got that chance, they chose freedom. In the past 2 years, Ukraine has held free elections, and the people of Ukraine and its President, Viktor Yushchenko, are deeply committed to democratic reform. On Sunday, the Ukrainian people will again have the chance to cast a ballot in parliamentary elections, and they have a chance to continue to shape their own future.

Ukraine is also working to expand its market economy and produce measurable improvements in the lives of the Ukrainian people. America supports these efforts, and this bill is an important step. By eliminating barriers to trade between the United States and Ukraine, the bill will help Ukraine grow in prosperity. As we've seen over the past 50 years, trade has the power to create new wealth for whole nations and new opportunities for people around the world. By expanding trade with Ukraine, this bill will open new markets for American products and help Ukrainians continue to build a free economy that will raise the standard of living for families across their land.

As Ukraine embraces democracy and more open trade, our nations' friendship will grow. President Yushchenko has made reforms to increase transparency and provide intellectual property protection and strengthen the enforcement of the rule of law.

These reforms have taken great conviction. And earlier this month, our two nations signed a bilateral agreement that will establish the terms of trade between our nations when Ukraine join the World Trade Organization. We support Ukraine's goal of joining the WTO, and we will help resolve the remaining steps required for entry as quickly as possible. As the Ukrainian Government continues to build on a record of progress at home, we will help Ukraine join the institutions that unite free nations and become a part of Europe that is whole, free, and at peace.

The growth of economic freedom and ownership in countries like the Ukraine reinforces the habits of liberty and democracy and gives citizens a stake in the success of their nation. Ukrainian people have shown the world they are committed to the ideals of economic freedom and democratic progress and open trade, and that gives them a promising future.

The United States is proud to call Ukraine a friend, and I'm honored to sign this important piece of legislation into law.

NOTE: The President spoke at 11:01 a.m. in Room 350 of the Dwight D. Eisenhower Executive Office Building. In his remarks, he

referred to Ukraine's Ambassador to the U.S. Oleh Shamshur. H.R. 1053, approved March 23, was assigned Public Law No. 109-205.

## Memorandum on the National Flood Insurance Program March 23, 2006

*Memorandum for the Secretary of the  
Homeland Security*

*Subject:* National Flood Insurance Program

Pursuant to the authority vested in me by the Constitution and laws of the United States, including 42 U.S.C. 4016, I have

reviewed and hereby approve your request to issue notes to the Secretary of the Treasury in excess of \$18.5 billion, but not to exceed \$20.775 billion, for the National Flood Insurance Program.

GEORGE W. BUSH

## Remarks at a Celebration of Greek Independence Day March 24, 2006

Thank you. Welcome. Your Eminence, thank you for your kind words. You're a philosopher; you're a wise person; you're an incredibly compassionate soul; and I'm proud to call you friend. Thank you for being here.

Thank you for inviting me to help celebrate the 185th anniversary of Greek Independence. America is a better country because of Greek Americans. It's something about the passion, the verve for life, the willingness to serve. I am blessed by having Greek Americans in my administration, two of the most important of whom have joined us, Your Eminence: John Negroponte, the Director of the National Intelligence, and the Homeland Security Adviser, Frances Fragos Townsend.

Madame Foreign Minister, we are thrilled to have you here. Thank you for coming. Let me just say this, that it is a wise government who relies upon the judgment and advice of a woman as a Foreign Minister or Secretary of State. [*Laughter*] And I look forward to sharing our visit with my mother and dad, who are close to the

Minister. And I know they're going to be thrilled to know that you're strong and optimistic in serving your great country with class and dignity.

Mr. Ambassador, thank you as well. Appreciate—good to see you, sir. I appreciate Christos Folias, who is the Deputy Minister of Economy for Greece. Welcome, sir. It's good to see you.

I am really pleased that Senator Paul Sarbanes is with us today. He has served with great distinction in the United States Senate. He has decided to move on to other ventures, and the State of Maryland will miss his leadership. Proud you're here, sir.

I want to thank those who wear the Nation's uniform. Your Eminence, as you know, ours is a remarkable country, where people are willing to volunteer to serve our country in times of war. And our Nation is blessed to have men and women who, in the face of danger, say, "I want to help." So thanks for coming. More importantly, thanks for serving. I know you share the

same feeling I share, that it is an honor to serve the United States of America.

I want to thank the other Greek Americans, leaders, and folks who are here. Thanks for coming. Thanks for traveling long distances to be here in Washington.

We honor Greek Independence Day because of the values we share. That's why it's a comfortable event. That's why it's an important event, Your Eminence. The ancient Athenians gave birth to democracy. They entrusted their citizens with the power to govern. That's a powerful concept. It wasn't always that way. In some parts of the world, it still isn't that way. But nevertheless, it is a universal concept, started by the Athenians.

We respect the philosophy that grew out of Greece that honored and respected human dignity and human rights and, as you said, Your Eminence, the belief that there is universality to the concept of liberty. Freedom is not confined to Greece, nor is it confined to America. It is universal in its application, and that's one of the great lessons of Greek Independence Day.

America's Founding Fathers were inspired by the democratic ideals, and it helped form our own Union. Those ideals became implanted in long-lasting documents. But as we watch the world today, we must understand that democracy is difficult at times. It's not easy to take hold. It requires work and diligence and optimism and strength and will. But the Greek lesson, not only in Greece but also here in America, is one that with time and persistence, liberty does take hold because of its universality. It's a lesson we honor on Greek Independence Day.

When the founders of modern Greece claimed their freedom in 1821, they had the strong backing of America. The American people supported that independence. John Adams, Thomas Jefferson, James Madison, all members of the ex-Presidents Club—[laughter]—I'm not there yet, Your Eminence—[laughter]—all urged support of the Greek cause.

Young Americans volunteered to serve in the new Greek Army. Many more Americans contributed funds to support the Greek people in their struggle for freedom. America stood side by side with those who struggled for liberty in 1821.

It's reminiscent of what's taking place in the 21st century. Our two nations have continued to work together in freedom's cause. Greece was an ally of the United States in major international conflicts of the 20th century. We're allies in the war on terror. In Afghanistan, Greece is a valuable contributor to the NATO-led International Security Assistance Force, and we thank your Government for that. Greece provides security at the Kabul International Airport, and we thank your Government for that as well.

Greece has also been generous in the support for the Afghan people, and the Afghan people thank the Greek Government for that as well. Last month in London, for example, Greece pledged funds to support educational programs. The Greek Government decided to support entrepreneurship, with the full knowledge that education and entrepreneurship can lead to a prosperous and thriving economy so that the people can see the benefits of liberty.

Greece is supporting other efforts in the war on terror. Our two nations remain committed to the security and counterterrorism partnership we put in place during the Olympics in Athens in 2004. By the way, people still marvel at how well those Olympics were run. The Government stood up and, in spite of all the criticism that was taking place, put on some great games. It's a model for other countries to follow.

Greece and the United States are working together to keep our people safe. We'll continue to work together to spread the blessings of liberty because we understand that when we spread the blessings of liberty, it lays the foundation for peace. And that's what we want.

At home, Greek Americans strengthen our communities. Greek entrepreneurs contribute to our country's prosperity. The Greek culture enriches our entire country. The Greek Orthodox Church reflects America's religious diversity. It's a source of strength and unity and inspiration for many Greek Americans.

I also understand that Greek Independence Day is the Feast of the Annunciation in the Orthodox faith, that they're celebrated together because they both represent good news. On Greek Independence Day, Greeks and Americans honor the anniversary of the Greek call for independence and celebrate the universal good news of freedom and liberty. We believe that

freedom is God's gift to all people. And we know that by working together, freedom is on the march.

Your Eminence, thank you for inviting me. May God bless you all.

NOTE: The President spoke at 9:59 a.m. in Room 450 of the Dwight D. Eisenhower Executive Office Building at the White House. In his remarks, he referred to Archbishop Demetrios, Primate of the Greek Orthodox Church in America; Minister of Foreign Affairs Theodora Bakoyianni of Greece; and Greece's Ambassador to the U.S. Alexandros Mallias. The Greek Independence Day proclamation of March 17 is listed in Appendix D at the end of this volume.

## Remarks at a Reception for Congressional Candidate Michael E. Sodrel in Indianapolis, Indiana *March 24, 2006*

Thank you all for coming. Please be seated. Michael, thanks for having me here. Let me start off by telling you it's great to be back in Indiana, the great city of Indianapolis. I'm here because I strongly believe it's in Indiana's interest to send Mike Sodrel back to the United States Congress.

And I want to thank you all for supporting him. Some of you are from his district; some of you aren't, but all of you are wise enough to know a good candidate when you see one.

I'm traveling without the better half of my family. Laura sends her best to the Sodrels; she sends her best to the Governor; she sends her best to the good people of Indiana. I'm a lucky man to be married to Laura Bush, and Mike Sodrel is a lucky man to be married to Keta Sodrel. I'm glad to be here with the Sodrels and the Sodrel family. I like a man in Congress who has his priorities straight, and Michael

Sodrel prioritizes his family as a central part of his life.

Governor, I'm proud you're here. I knew Mitch was going to be a fine Governor because, first of all, he's a fine man. He's got a wonderful sense of humor. I like a fellow who doesn't take a—run a poll to tell him what to think. I like somebody who stands up and does what he thinks is right. Give the first lady my best and the four daughters.

I want to thank Congressman Steve Buyer for being here. Buyer, it's good to see you. Thanks for your service in the United States Congress. And Congressman Michael Pence—thanks for coming, Mike. I appreciate you being here. It's a good sign when other Members of Congress come out to support one of their brothers. So thanks for supporting Mike.

You know what I know about him. He's an effective person. He can get things done. He's a reasonable guy. That's what you want in the United States Congress.

In a land of lawyers, it's good to have somebody who is an entrepreneur and started their own business.

I thank the attorney general, Steve Carter, for being here. General, I'm proud you're here; the secretary of State, Todd Rokita—thank you both for coming, and thanks for serving your State. I thank everybody else for coming, particularly those who have worked hard to raise the money. For those of you who are interested in following up on your contributions, get over to Mike's district and help turn out the vote.

And that's why I want to recognize Murray Clark, who's the chairman of the Indiana Republican Party, and his wife, Janet. Get those grassroots moving at the proper time, and we'll send this guy back to the United States Congress.

And finally, I understand the former mayor of Indianapolis, my longtime friend, Steve Goldsmith, is with us today. Stephen, if you're here, thanks for being here; thanks for your service; and thanks for your friendship. He was on the leading edge of the compassionate conservative agenda, which has made an enormous difference in the lives of people, not only here in Indianapolis but around the country.

Let me give you a Mike Sodrel quote. He said, "The first role of the Federal Government is to provide for the defense of the country." It's important to have people in the United States Congress who understand this is a nation at war. I wish I could tell you otherwise. I wish I could say that an enemy which attacked us on September the 11th, 2001, has quit. That is not the reality of the world in which we live. The reality in the world in which we live is there's an enemy which hates those of us who embrace freedom and would like to strike us again. And therefore, it's important to have Members of the United States Congress who understand the stakes in the global war on terror. And Mike Sodrel understands the stakes.

My most important job is to lead our Nation and to protect you. And so I have—want to share with you some of the lessons I learned after September the 11th, 2001, lessons that Members of the United States Congress must have in order for us to do our job. Lesson one is that we must defeat the enemy overseas so we do not have to face them here at home.

Ours is an enemy which has embraced an ideology—an ideology of hatred, an ideology that is totalitarian in nature. They decide if you can worship and how you worship; they decide whether or not your children can go to school; they decide this; they decide that. They stand exactly the opposite of the United States of America. They have expressed their tactics for the world to see. They believe that those of us living in democracies are weak, flaccid. It's just a matter of time, they believe, if they continue to exert pressure, that we will retreat from the world. That's what they want.

It's important to have Members of the United States Congress who understand the stakes and understand the nature of the enemy. They cannot exist without safe haven. And so one of the doctrines and one of the lessons learned after September the 11th is that we must hold people to account for harboring terrorists. If you harbor a terrorist, if you feed a terrorist, if you house a terrorist, you're equally guilty as the terrorists.

Michael Sodrel understands that. He also understands that when the President speaks, he better mean what he says. And I meant what I said when I said that, and that's why I told the Taliban—I said, "Get rid of Al Qaida." They refused. We sent a liberation force into Afghanistan to uphold doctrine, to protect ourselves and, in so doing, liberated 25 million people from the clutches of a barbaric regime.

A lesson of September the 11th is that not only are we facing a brutal enemy that's willing to take innocent life, an enemy which thinks we're soft, an enemy which

tries to find safe haven—but a vital lesson of September the 11th that our Nation must not forget is that when we see a threat, we must take it seriously, before it comes to hurt us. You see, before September the 11th, it was assumed by policymakers and people in office that we were safe, that oceans protected us, that we're in good shape when it came to threats. We could see a threat overseas, and we could deal with it if we wanted to, or not.

That changed on September the 11th. From now on, the United States of America, in order to protect our citizens, must deal with threats, must take them seriously to do our most fundamental job, which is to protect the American people. I saw threats in Saddam Hussein. Members of the United States Congress—both Republicans and Democrats—saw a threat in Saddam Hussein. Members of the United Nations Security Council saw threats in Saddam Hussein. The world spoke. They said, “Disarm, disclose, or face serious consequences.” The choice was Saddam Hussein's, and removing Saddam Hussein has made this Nation and the world a safer place.

I need Members of Congress who support a plan for victory in Iraq. We've committed brave men and women, volunteers, people who said, “I volunteer to serve the United States of America.” And they're in harm's way, and we must have Members of the United States Congress who will not weaken and who will make sure our troops have all the necessary support to achieve the mission. And Mike Sodrel understands that and is a strong supporter of the United States military.

Our strategy is to help rebuild the country. Our strategy is to encourage democracy. I know it's troubled times. I understand the enemy is capable of affecting how we think about the war in Iraq because they're willing to take innocent life. And this turbulence on your TV screens affects the conscious of Americans—I know that, and so does the enemy. But amidst all the

turmoil, I want you to remember that progress towards democracy is being made. It wasn't all that long ago—4 months ago—that 11 million Iraqis defied the killers, defied the terrorists, and said loud and clear, “We want democracy.” Democracy is on the march in Iraq, and our job as a government is to help them form a unity government, a government around which the country can rally.

The other part of our strategy is to train the Iraqis so they can take the fight to the enemy. The enemy cannot defeat us on the battlefield. They just can't beat us. So what they tried to do is they're trying to create a civil war; that's why they blew up the mosque. But amidst the turmoil and the pictures and the devastation and the reprisal, I want you to know that the Iraqi forces performed. The Iraqi forces we trained were able to bring some sense of stability throughout the country of Iraq. The mission is to train the Iraqis so they can take the fight. The mission is to encourage democracy. As Iraqi troops stand up, we'll stand down.

But I'm going to tell you something about me. I'm not going to make up my mind about Iraq based upon polls and focus groups. I will make up my mind about troops based upon the recommendations of the United States military, not politicians in Washington, DC. *[Applause]* Thank you all.

The only way that we can lose is if we lose our will. It's the only way we can lose. The stakes in Iraq are high. Remember, this is a global war on terror. Iraq is a part of the war on terror. And they're high because the enemy has stated they would like to have a safe haven from which to launch attacks against America again.

I fully understand some in the United States don't believe what the enemy has said. I think you better have a President and Members of Congress who take the enemy seriously. You better have people in Washington, DC, who see the world the way it is, not the way we would like it

to be. If our most important job is to protect the American people, we must be diligent and steadfast and never ending in our desire to protect you. Mike understands that, and so do I. Ultimately, the way to defeat the enemy, the way to defeat an ideology of darkness, a totalitarian ideology of darkness, is to defeat it with a philosophy of light. And that philosophy is liberty.

As I make my decisions as to how to protect you, I want you to know I'm guided by this principle: I believe there's an Almighty, and I believe the Almighty's great gift to every man and woman—every man and woman—on the face of the Earth is freedom. Freedom is universal. It is non-negotiable. And as freedom takes hold, the world becomes more peaceful. Democracies don't war.

As you explain what we're trying to do in Iraq—and will do in Iraq—to your friends and neighbors, remind them about the history of Europe. America lost hundreds of thousands of soldiers on the continent of Europe in two world wars. And yet today, Europe is whole, free, and at peace. And the reason why is, democracies don't war.

My dad, as an 18-year-old kid, when the country called, said, "I'm going in to fight the Japanese." I'm sure there's—you've got some relatives of others who went to war with the Japanese in World War II. They were the sworn enemy. They attacked us. They attacked the United States of America. Less people, by the way, died in the Pearl Harbor attack than died on September the 11th, 2001, on our soil.

And yet today, interestingly enough, I sit at a table with the Prime Minister of Japan working on how to keep the peace. Isn't that interesting? Sixty years ago or so, 18-year-old George H.W. Bush volunteered to fight the Japanese as his sworn enemy. And now his son sits at the table to keep the peace with the Japanese.

What happened? What happened was the Japanese adopted a Japanese-style democracy. If we don't lose our nerve, if we stay

the course, someday down the road, an American President will be working with democratically-elected leaders in the broader Middle East at the table to keep the peace.

I like working with Mike Sodrel because he understands the role of government is not to create wealth but an environment in which the entrepreneurial spirit can flourish, in which people can realize their dreams, in which people can start with nothing in America and, through hard work and imagination, build assets they call their own.

Mike understands that. By the way, that environment was challenged during my Presidency. We've had a recession; we had a stock market collapse; we had an attack on our country; we have been a nation at war; we've had major natural disasters. But because our party, because Members of the Congress here, people like Mike Sodrel, understand that if people have more of their own money to save and spend and invest, we can recover from difficult economic times.

Oh, I remember the tax debates there in Washington, DC. I remember those Democratic critics who spoke loud and clear. I remember one of them saying, "It's reckless, irresponsible plan that will undermine opportunity in our country." You remember those debates, the loud noises they made about cutting taxes.

Well, let me read to you the statistics. Our economy grew last year at 3.5 percent. The unemployment rate across America is 4.8 percent. In the last 2½ years, we've added nearly 5 million new jobs. The unemployment rate in Indiana is 4.7 percent. Productivity is up. Small businesses are flourishing. More people own a home than ever before in our Nation's history. Cutting taxes for the American people was the right thing to do.

We've got a record to stand on. We've got a record of dealing with some serious economic times. There's a debate, of

course, in Washington, DC, about tax cutting, and I want the people of the Ninth Congressional District and districts all across America to understand the difference in our record. Our party and Members of the United States Congress stood squarely for tax relief for everybody who pays taxes.

And the Democratic Party has a clear record. In 2001, more than 90 percent of the congressional Democrats voted against cutting income tax rates. More than 90 percent of the Democrats voted against the bill that provided tax relief for married couples. More than 90 percent of the Democrats voted for [against]<sup>\*</sup> a bill that would have put the death tax on the road to extinction. More than 90 percent of the Democrats voted against a bill that doubled the child credit. More than 95 percent of the congressional Democrats voted against cutting taxes on capital gains.

And recently, during the budget debate, Democrats used the occasion to call for \$173 billion in tax hikes and fee increases. The difference is clear: If you want the Government in your pocket, vote Democrat; if you want to keep more of your hard-earned money, vote Republican.

And so the fundamental question confronting us in Washington is, how do we keep this economic recovery going? That's what people ought to be talking about. And we've got some good ideas as to how to keep it going. And the first thing is, make the tax cuts permanent. Oh, I know you've heard the same talk I've heard in Washington, "We've got a problem with the deficit." We do, and we're going to deal with it. But the Democrats have got a good idea, they think, and that's to run up your taxes to make sure the deficit—folks, that's not the way Washington works.

Here's the way Washington works. They'll increase your taxes, and they'll figure out new ways to spend your money. The best way to make sure that we reduce

the deficit is to keep pro-growth economic policies in place and be wise about how we spend your money. That's why we need people like Mike Sodrel in the United States Congress.

It's important to set priorities when it comes to our budget. So long as we've got men and women in harm's way, we will make sure they have got that which is necessary to do their job. And I want to thank Mike and the Members of the United States Congress who are here who have prioritized supporting the United States military when it comes into our budget—comes to budget matters.

I don't know if you realize this, but over the past—the last budget cycle, thanks to the good work of Members of the United States Congress, we actually cut nonsecurity discretionary spending. We not only have slowed the growth of nonsecurity discretionary spending every year that I have been the President, last year we cut nonsecurity discretionary spending. And I submitted a budget to the United States Congress to do it again. And the Members in this crowd are supportive of a good, prioritizing, lean budget. And I want to thank you for your support.

The problem we have is that we've got people who want to spend more money in Washington. That's why we need fiscally sound people like Mike Sodrel in the United States Congress. And we also must show some political courage when it comes to the budget. The main reason the budget goes up is because of mandatory spending increases. Those would be your increases in Social Security and Medicare.

And we've got a problem, folks, when it comes to Social Security and Medicare. We've got a whole bunch of us getting ready to retire—that would be baby boomers like me. As a matter of fact—Mitch, you probably don't know this—but I turn 62, which qualifies me for Social Security, in 2008. That's a convenient year to become eligible for retirement. [Laughter]

---

<sup>\*</sup> White House correction.

And there's a lot of us, a lot of us baby boomers. I'm kind of scanning out there, and I see quite a few of us. [Laughter] And we've been promised greater benefits than the previous generation, and we're living longer. I don't know about you all; I plan on just kind of stretching it out a little bit. [Laughter] And there are fewer people paying in the system, and the system is going broke.

I need people in the United States Congress like Michael, who's willing to work with me to reform and modernize these mandatory programs so that a future generation of kids can come up and say, "Thank God for that Congress. Thank God they're willing to do the hard work. Thank God they're willing to take on problems and not pass them on to future Presidents and future generations."

It's a tough issue, but that's why you sent us to Washington, DC, to deal with tough issues. If it were an easy issue, other people would have taken care of it. And I'm looking forward to working with both Republicans and Democrats to modernize both Social Security and Medicare so a young generation will say, "Job well done."

In order to make sure that we're—this economy keeps growing, listen, we can't fear the future. We've got to shape the future. We've got to be confident as a nation. We lead the world today, and I intend to work with Congress to put policies in place so that we can lead the world tomorrow.

And let me share some ideas with you. First of all, in order to lead—be the economic leader of the world, we've got to do something about these frivolous and junk lawsuits that are making it hard to risk capital. You know, it's fine, one thing to be—to have a legitimate lawsuit. It's these frivolous lawsuits and the junk lawsuits—and people are filing lawsuits right and left that are hurting the capacity of this country to realize our full potential. I look forward to working with Congress for meaningful and real tort reform.

I look forward to working with Congress to do something about our energy situation. I know it came as a surprise to you that a fellow from Texas would stand up and say, "We've got a problem; we're addicted to oil." [Laughter] But I meant it. It's an economic problem. It's an economic problem because as other economies begin to grow and use more fossil fuels, it affects our price.

It's a national security problem. We're dealing with some countries that don't particularly like us, and they've got a lot of oil. It gives us a national security problem when people threaten to hold oil off the market for geopolitical reasons.

This country needs to come together, do some smart things—particularly when it comes to research and development—smart things about how we change our driving habits. I want people driving with corn extract, ethanol grown right here in the State of Indiana, in order to keep these cars moving. One of these days, they're going to walk in with a crop report to the President and say, "The harvest down there in Indiana is great. We've got us a lot of corn, that means we're less dependent on foreign sources of oil."

We've got to make sure that we continue to invest in battery technologies. Right around the corner is a technology that will enable you to plug in your pickup truck and drive the first 40 miles on electricity. That's not going to help you in parts of rural Indiana, but if you're an urban person—in Indianapolis or Houston, Texas, or anywhere else in America—that first 40 miles means a lot when it comes to your driving. Imagine people being able to drive on electricity, not on gasoline, for the first 40 miles. It will make us less dependent on foreign sources of oil. When it comes to electricity, we've got to be wise about how we use our resources.

We'll continue to invest in clean coal technologies so this abundant resource can be used without fear of polluting our air. We need safe nuclear power if we intend

to be an energy dependent and an environmentally conscious country. No, in order to help us remain competitive in the world, we've got to be wise about our energy policy, and I look forward to leading the Congress toward a new day when it comes to consuming, particularly Middle Eastern, oil.

In order to make sure that we're a competitive nation, we shouldn't fear the future; we ought to lead it. And the best way to lead it is to make sure our kids are educated for the jobs of the 21st century. I appreciate what these Governors, like Mitch Daniels, are doing—setting high standards and holding the people to account. I think it makes sense if you're spending a lot of money to say to the school districts, "Why don't you show us whether or not a child can read and write?" It seems like a legitimate question to me.

It doesn't make any sense for the Federal Government to tell you how to teach. We believe in local control of schools. But when you're spending as much money as we do, it seems like we ought to be able to say, "Show us whether or not a child is reading." And if not, correct the problems early, before it's too late. You can't solve a problem unless you diagnose the problem.

And the No Child Left Behind Act believes every child can learn, believes in setting high standards, and says to the local districts, "All we want to know is, can the child learn to read and write and add and subtract? And if not, here's a little extra money to bring them up to speed."

Now, we've got to apply that same rigor and same standards to math and science and at the same time increase Government investment in research and development—and at the same time say to the private sector, "There's certainty when it comes to your budgets." The research and development tax credit should be a permanent part of the Tax Code. In order for the United States of America to be the leader of the world, we must have a job—a set of skills available for youngsters that will able to

fill the jobs of the 21st century, and we must be the leader in research and technology.

Mike Sodrel understands that. Mike Sodrel doesn't fear the future because he intends to work with President George W. Bush to shape the future. By being the economic leader in the world, our people will realize a better standard of living. By being the economic leader of the world, we will continue to be able to bring prosperity to corners of our country.

You know, one thing Mike told me, he said, "Just remember one thing, when you're talking about my district, is that we've got a lot of farmers there." All right, I'm going to talk to the farmers in Mike's district. You better have somebody elected to the United States Congress who works to make sure there's markets for you to sell your products. If you're good at something, you want to be able to sell your products in new markets. And Indiana's farmers are very good at a lot of things. They're good at growing. They're good at harvesting, and the United States Government ought to help them sell those products overseas at good prices.

Secondly, if you're a farmer, you better have a Member of the United States Congress who understands the effects of the death tax on the American family farmer. We've got a system today where you farm all your life; you're paying your taxes; and then you pass on—and your heirs get to pay taxes again. And sometimes those inheritance taxes mean you have to liquidate your farm. For the sake of stability in the farm community, we need to get rid of the death tax once and for all.

Most of all, I'm here for Mike Sodrel because he's a good, honest man. He's a decent man. He's a problem-solver. He's a practical fellow. He likes to get things done. He's a patriotic man. He's done a real fine job in the United States Congress, and I look forward to working with him in my last 2 years as President of the United States.

I want to thank you all for coming to support Michael Sodrel. Thanks for your interest. Thanks for your concern about our future. May God bless Indiana. May God continue to bless the United States of America.

NOTE: The President spoke at 2:10 p.m. in the Murat Centre. In his remarks, he referred to Gov. Mitchell E. Daniels, Jr., of Indiana, and his wife, Cheri; and Prime Minister Junichiro Koizumi of Japan.

## Message on Freedom Efforts in Belarus *March 24, 2006*

I send greetings to those working to return freedom to Belarus and observing the 88th anniversary of the first effort to establish an independent Belarus.

Freedom is the birthright of every human soul and the permanent hope of all mankind. The desire for justice, freedom, human rights, and accountable, representative government is universal. Nations grow by allowing the talents and liberties of their people to flourish, not by suppressing freedom. By upholding the rule of law, limiting the power of the state, holding free and fair elections, and respecting the rights of all people, governments can foster more hopeful societies and empower their citizens.

I appreciate those who labor in the shadows to return freedom to Belarus, and our

Nation's thoughts are with those who have been harassed, detained, imprisoned, or beaten for their efforts. The United States condemns the actions by Belarusian security services on the morning of March 24, and we urge all members of the international community to join us in condemning any and all abuses and demanding that Belarusian authorities respect the rights of their own citizens to express themselves peacefully. The United States will continue to stand with the people of Belarus and all those who are working to help Belarus take its rightful place in the community of democracies.

## The President's Radio Address *March 25, 2006*

Good morning. On Monday, I will attend a naturalization ceremony here in Washington. It's always inspiring to watch a group of immigrants raise their hands and swear an oath to become citizens of the United States of America. These men and women follow in the footsteps of millions who've come to our shores seeking liberty and opportunity, and America is better off for their hard work and love of freedom.

America is a nation of immigrants, and we're also a nation of laws. And our immigration laws are in need of reform. So at Monday's ceremony, I will discuss my vision for comprehensive immigration reform that will secure our borders, improve enforcement of our immigration laws, and uphold our values.

Comprehensive immigration reform begins with securing our borders. Since I took office, we've increased funding for border

security by 66 percent, and the Department of Homeland Security has caught and sent home nearly 6 million illegal immigrants. To improve security at the border, we're hiring thousands more Border Patrol agents. We're deploying new technology like infrared cameras and unmanned aerial vehicles to help our agents do their job. And we're installing physical barriers to entry, like fences in urban areas.

We're also working to end the unwise practice of catch-and-release. For decades, many illegal immigrants were released back into society soon after they were caught because we did not have enough detention space. So we're adding more beds so we can hold the people we catch, and we're reducing the time it takes to send them back home. When illegal immigrants know they will be caught and sent home, they will be less likely to break the rules, and our immigration system will be more orderly and secure. We're making good progress, but we have much more work ahead, and we will not be satisfied until we have control of our border.

Comprehensive immigration reform also includes strengthening the enforcement of our laws in America's interior. Since I took office, we've increased funding for immigration enforcement by 42 percent. We're increasing the number of immigration enforcement agents and criminal investigators, enhancing worksite enforcement, and going after smugglers and gang members and human traffickers.

Finally, comprehensive immigration reform requires a temporary-worker program that will relieve pressure on our borders. This program would create a legal way to match willing foreign workers with willing American employers to fill jobs that Americans will not do. By reducing the number of people trying to sneak across the border, we would free up our law enforcement offi-

cers to focus on criminals and drug dealers and terrorists and others who mean us harm.

One thing the temporary-worker program would not do is provide amnesty to those who are in our country illegally. I believe that granting amnesty would be unfair, because it would allow those who break the law to jump ahead of people who play by the rules and wait in the citizenship line. Amnesty would also be unwise, because it would encourage waves of illegal immigration, increase pressure on the border, and make it more difficult for law enforcement to focus on those who mean us harm. For the sake of justice and for the sake of border security, I firmly oppose amnesty.

In the coming days, the United States Senate plans to consider proposals on immigration reform. This is an emotional debate. America does not have to choose between being a welcoming society and being a lawful society. We can be both at the same time. As we debate the immigration issue, we must remember, there are hard-working individuals, doing jobs that Americans will not do, who are contributing to the economic vitality of our country.

To keep the promise of America, we must enforce the laws of America. We must also ensure that immigrants assimilate into our society and learn our customs and values—including the English language. By working together, we can meet our duty to fix our immigration system and deliver a bill that protects our country, upholds our laws, and makes our Nation proud.

Thank you for listening.

NOTE: The address was recorded at 7:59 a.m. on March 24 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on March 25. The transcript was made available by the Office of the Press Secretary on March 24 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks at a Naturalization Ceremony March 27, 2006

Thank you all. Thank you very much. It's good to be with you. I am grateful for the chance to witness this joyous and uplifting ceremony. It is inspiring to see people of many different ages, many different countries raise their hands and swear an oath to become citizens of the United States of America.

For some of you, this day comes after a long and difficult journey. For all of you, this is a defining moment in your lives. America is now more than your home; America is your country. I welcome you to this free nation. I congratulate you and your families, and it's an honor to call you fellow Americans.

I appreciate the Attorney General. Dr. Gonzales, thank you, sir. And, Alfonso, it's good to be up here with you. I want to thank the president general of the Daughters of the American Revolution, Ms. Presley Wagoner, for letting us use this fantastic facility for this important ceremony. Thank you for singing the national anthem so beautifully.

It is fitting that we hold this ceremony at the home of the Daughters of the American Revolution. The Daughters of the American Revolution were the daughters of immigrants, because the leaders of our Revolution all had ancestors who came from abroad. As new citizens of the United States, you now walk in the footsteps of millions. And with the oath you've sworn, you're every bit as American as those who came before you.

Our immigrant heritage has enriched America's history. It continues to shape our society. Each generation of immigrants brings a renewal to our national character and adds vitality to our culture. Newcomers have a special way of appreciating the opportunities of America, and when they seize those opportunities, our whole nation benefits.

In the 1970s, an immigrant from Ireland—or the 1790s, an immigrant from Ireland designed the White House, right where Laura and I live. And he helped build the Capitol. In the 1990s, an immigrant from Russia helped create the Internet search engine Google. In between, new citizens have made contributions in virtually every professional field, and millions of newcomers have strengthened their communities through quiet lives of hard work and family and faith.

America's welcoming society is more than a cultural tradition; it is a fundamental promise of our democracy. Our Constitution does not limit citizenship by background or birth. Instead, our Nation is bound together by a shared love of liberty and a conviction that all people are created with dignity and value. Through the generations, Americans have upheld that vision by welcoming new citizens from across the globe, and that has made us stand apart.

One of my predecessors, President Ronald Reagan, used to say this: "You can go to live in France, but you cannot become a Frenchman. You can go to live in Japan, but you cannot become Japanese. But anyone, from any corner of the world, can come to live in America and be an American."

The new Americans we welcome today include men and women from 20 countries on 5 continents. Their ages range from 18 to 59, and they work as teachers and small-business managers and nurses and software engineers and other professions.

One new citizen is Veronica Pacheco. Veronica first came to the United States from Bolivia 15 years ago. In 2000, she moved here permanently and found a job at a catering company in Virginia. Every Friday and Saturday, she spent 5 hours studying English at the local community college. Over the years, she saved enough

money to buy her own townhouse. Here's what Veronica says about America: "This is a country of opportunity. If you want to be successful, you can do it. You can have your dreams come true here."

Another new citizen is Maisoon Shahin. Maisoon grew up in Kuwait and moved to the United States with her husband 7 years ago. She enrolled in the community college to improve her English, took a job teaching marines to speak Arabic. Here's what Maisoon said: "The United States is a symbol of justice, freedom, and liberty. I love that. Here they respect people because they are people. I feel I am honored, and I feel that I'm loved."

America is stronger and more dynamic when we welcome new citizens like Maisoon and Veronica to our democracy. With that in mind, I've called on Congress to increase the number of green cards that can lead to citizenship. I support increasing the number of visas available for foreign-born workers in highly skilled fields like science, medicine, and technology. I've signed legislation creating a new Office of Citizenship at the Department of Homeland Security to promote knowledge of citizenship rights and procedures.

And after September the 11th, I signed an Executive order making foreign-born members of our military immediately eligible for citizenship, because those willing to risk their lives for our democracy should be full participants in our democracy. Over the past 4 years, more than 20,000 men and women in uniform have become citizens of the country they serve. They've taken the citizenship oath on the decks of aircraft carriers, on deployments to Afghanistan and Iraq, and at military bases around the world. At Bethesda Naval Medical Center, I watched a brave marine born in Mexico raise his right hand and become a citizen of the country he had defended in uniform for more than 26 years. It's a privilege to be the Commander in Chief of men and women like these, and I'm proud to call them fellow citizens.

All who swear the oath of citizenship are doing more than completing a legal process; they're making a lifelong pledge to support the values and the laws of America. The pledge comes with great privileges, and it also comes with great responsibilities. I believe every new citizen has an obligation to learn the customs and values that define our Nation, including liberty and civic responsibility, equality under God, tolerance for others, and the English language.

Those of us who have been citizens for many years have responsibilities as well. Helping new citizens assimilate is a mission that unites Americans by choice and by birth. I appreciate the work of patriotic organizations like the Daughters of the American Revolution. Some of the new Americans here today might have used DAR's Manual for Citizenship to prepare you for the citizenship test. They obviously did a pretty good job, since you passed. *[Laughter]*

Many other organizations, from churches to businesses to civic organizations, are answering the call to help new citizens succeed in our country. And I am grateful for all those who reach out to people who are going to become citizens.

Government is doing its part to help new citizens succeed as well. The Office of Citizenship has created a new official guide for immigrants. This free publication includes practical advice on tasks like finding housing and jobs or enrolling your children in school or paying taxes.

We're conducting outreach programs with faith-based and community groups to offer civics and English language courses. My administration will continue to pursue policies that open a path to education and jobs, promote ownership, and to give every citizen a chance to realize the American Dream.

Our Nation is now in the midst of the debate on immigration policy, and it's good. Immigration is an important topic. Immigration is also an emotional topic, and we

need to maintain our perspective as we conduct this debate. At its core, immigration is a sign of a confident and successful nation. It says something about our country that people around the world are willing to leave their homes and leave their families and risk everything to come to America. Their talent and hard work and love of freedom have helped make America the leader of the world. And our generation will ensure that America remains a beacon of liberty and the most hopeful society the world has ever known.

America is a nation of immigrants, and we're also a nation of laws. All of you are here because you followed the rules and you waited your turn in the citizenship line. Yet some violate our immigration laws and enter our country illegally, and that undermines the system for all of us. America should not have to choose between being a welcoming society and being a lawful society. We can be both at the same time. And so, to keep the promise of America, we must enforce the laws of America.

We must also reform those laws. No one is served by an immigration system that allows large numbers of people to sneak across the border illegally. Nobody benefits when illegal immigrants live in the shadows of society. Everyone suffers when people seeking to provide for their families are left at the mercy of criminals or stuffed in the back of 18-wheelers or abandoned in the desert to die. America needs comprehensive immigration reform.

I've laid out a proposal for comprehensive immigration reform that includes three critical elements: securing the border, strengthening immigration enforcement inside our country, and creating a temporary-worker program. These elements depend on and reinforce one another, and together they will give America an immigration system that meets the needs of the 21st century.

The first element is securing our border. Our immigration system cannot function if we cannot control the border. Illegal immi-

gration puts a strain on law enforcement and public resources, especially in our border communities. Our Nation is also fighting a war on terror, and terrorists crossing the border could create destruction on a massive scale. The responsibility of Government is clear: We must enforce the border.

Since I took office, we've increased funding for border security by 66 percent. We've expanded the Border Patrol to more than 12,000 agents, an increase of more than 2,700 agents. And the budget next year funds another 1,500 new agents. We're helping these dedicated men and women do their jobs by providing them with cutting-edge technology like infrared cameras, advanced motion sensors, and unmanned aerial vehicles. We're installing protective infrastructure, such as vehicle barriers and fencing in urban areas, to prevent people from crossing the border illegally. And we're integrating manpower and technology and infrastructure in more unified ways than ever. Our objective is to keep the border open to trade and tourism and closed to criminals and drug dealers and terrorists.

Our strategy to secure the border is getting results. Since I took office, our agents have apprehended and sent home more than 6 million people entering this country illegally, including more than 400,000 with criminal records. Federal, State, and local and travel enforcement officials are working side by side. Through the Arizona Border Control Initiative, we apprehended more than 600,000 illegal immigrants in Arizona last year. The men and women of our Border Patrol have made good progress, but we have much more work ahead, and we cannot be satisfied until we're in full control of the border.

We're also changing the way we process those we catch crossing the border illegally. More than 85 percent of the illegal immigrants we apprehend are from Mexico, and most are sent back home within 24 hours. We face a different challenge with non-

Mexicans. For decades, Government detention facilities did not have enough beds for the non-Mexican illegal immigrants caught at the border, and so most were released back into society. They were each assigned a court date, but virtually nobody showed up. This practice of catch-and-release is unwise, and my administration is going to end it.

To end catch-and-release, we're increasing the number of beds and detention facilities by 12 percent this year and by another 32 percent next year. We're also expanding our use of a process called expedited removal, which allows us to send non-Mexican illegal immigrants home more quickly.

Last year, it took an average of 66 days to process one of these illegal immigrants. Now we're doing it in 21 days. The goal is to increase the process faster. It's helped us end the catch-and-release for illegal immigrants from Brazil and Guatemala, Honduras, and Nicaragua caught crossing our Southwest border. And since last summer, we've cut the number of non-Mexican illegal immigrants released in society by more than a third. We've set a goal to end catch-and-release over the next year. I look forward to working with Congress to close loopholes that makes it difficult for us to process illegal immigrants from certain countries. And we will continue to press foreign Governments like China to take back their citizens who have entered our country illegally.

When illegal immigrants know they're going to be caught and sent home, they will be less likely to break the rules in the first place. And the system will be more orderly and secure for those who follow the law.

The second part of a comprehensive immigration reform is strengthening enforcement of our laws in the interior of our country. Since I took office, we've increased funding for immigration enforcement by 42 percent, and these resources have helped our agents bring to justice

some very dangerous people: smugglers, terrorists, gang members, and human traffickers. For example, through Operation Community Shield, Federal agents have arrested nearly 2,300 gang members who were here illegally, including violent criminals like the members of MS-13.

Better interior enforcement also requires better worksite enforcement. Businesses have an obligation to abide by the law. The Government has the responsibility to help them do so. Last year, I signed legislation to more than double the resources dedicated to worksite enforcement. We'll continue to confront the problem of document fraud, because hard-working businessowners should not have to act as detectives to verify the status of their workers.

Next month, we're going to launch law enforcement task forces in 11 major cities to dismantle document fraud rings. We're working to shut down the forgers who create the phony documents, to stop the smugglers who traffic in human beings, and to ensure that American businesses are compliant with American law.

The third part of comprehensive immigration reform is to make the system more rational, orderly, and secure by creating a new temporary-worker program. This program would provide a legal way to match willing foreign workers with willing American employers to fill the jobs that Americans are unwilling to do. Workers should be able to register for legal status on a temporary basis. If they decide to apply for citizenship, they would have to get in line. This program would help meet the demands of a growing economy and would allow honest workers to provide for their families while respecting the law.

A temporary-worker program is vital to securing our border. By creating a separate legal channel for those entering America to do an honest day's labor, we would dramatically reduce the number of people trying to sneak back and forth across the border. That would help take the pressure off

the border and free up law enforcement to focus on the greatest threats to our security, which are criminals and drug dealers and terrorists.

The program would also improve security by creating tamper-proof identification cards that would allow us to keep track of every temporary worker who is here on a legal basis and help us identify those who are here illegally.

One thing the temporary-worker program should not do is provide amnesty for people who are in our country illegally. I believe granting amnesty would be unfair, because it would allow those who break the law to jump ahead of people like you all, people who play by the rules and have waited in the line for citizenship.

Amnesty would also be unwise, because it would encourage future waves of illegal immigration, it would increase pressure on the border, and make it difficult for law enforcement to focus on those who mean us harm. For the sake of justice and border security, I firmly oppose amnesty.

This week, the Senate plans to consider legislation on immigration reform. Congress needs to pass a comprehensive bill that secures the border, improves interior enforcement, and creates a temporary-worker program to strengthen our security and our economy. Completing a comprehensive bill is not going to be easy. It will require all of us in Washington to make tough choices and make compromises, and that is exactly what the American people sent us here to do.

As we move toward the process, we also have a chance to move beyond tired choices and the harsh attitudes of the past. The immigration debate should be conducted in a civil and dignified way. No one should play on people's fears or try to pit neighbors against each other. No one should pretend that immigrants are threats to American identity because immigrants have shaped America's identity.

No one should claim that immigrants are a burden on our economy because the work and enterprise of immigrants helps sustain our economy. We should not give into pessimism. If we work together, I'm confident we can meet our duty to fix our immigration system and deliver a bill that protects our people, upholds our laws, and makes our people proud.

It's a joyful day for all of you, and it's one you'll always remember. When you came here this morning, I was the President of another country. Now I'm the President of your country, and I'm grateful for that honor. I wish you good luck as citizens of the greatest Nation on the face of the Earth.

May God bless you and your families, and may God continue to bless America. Thank you very much.

NOTE: The President spoke at 10:12 a.m. at the DAR Administration Building. In his remarks, he referred to Alfonso Aguilar, Chief, Office of Citizenship, U.S. Citizenship and Immigration Services. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks at a Reception for Senatorial Candidate Conrad Burns March 27, 2006

Senator, thank you. I kind of like being on the same platform as Senator Burns because he makes me sound like Shakespeare. [Laughter] I like a plain-talking fellow. The

good thing about Conrad Burns is you know where he stands. That's why the people of Montana respect him and they like him. And I'm here to urge the good people

of the State of Montana to send him back to the United States Senate.

I appreciate Phyllis. Phyllis, it's great to see you. Conrad married well. [Laughter] So did I. And Laura sends her love to both you all. It was neat to meet daughter Keely and son Garrett, daughter-in-law Kate. But right before we came on, the Senator wanted me to make sure I understood how brilliant and beautiful his granddaughter Ella is. That says something about the man. He's got his priorities straight. He cares deeply about his family. He understands the importance of family in our society, and I appreciate your priorities, Senator.

By the way, he also loves Montana. Every time I see him, he says, "I want you to remember the great State of Montana." He cares deeply about the people there, and he knows the State about as well as anybody could possibly know it. He's traveled the State. He tells people what's on his mind. He is—he's a down-to-earth guy. And the people of Montana have got to understand he can get some things done here in Washington, DC. No, there's a lot of eloquent folks in this town, but it's sometimes short of doers and people who can accomplish some things. I'm here because Senator Burns can get some things done for the good of the people of Montana and the people of the United States of America.

I thank Congressman Denny Rehberg for being here as well. He's a good, down-to-earth guy too. And he's serving the great State of Montana with class and dignity. He is the—he's the leader of the Montana congressional delegation. [Laughter]

I appreciate Senator Kit Bond. Senator Bond from Missouri is here tonight. It's nice of him to come by. It's good of you to honor your old buddy, and I'm proud to—I recently said hello to former Senator Don Nickles from Oklahoma. Don, thank you for coming here as well. Montana has elected some fine people—no finer person than Marc Racicot, who I've gotten to know

really well, and I appreciate you being here, Governor. Thanks for coming.

Karl Ohs, who is the chairman of the Republican Party, and Sherri, is with us—Republican Party of Montana, that is. I appreciate you being here, Mr. Chairman. Thanks for coming. I want to thank John Green, who is the finance chair. Thank you all for listening to John's admonition to support this good man. Long word—he's trying to show off here for the folks of Montana. [Laughter]

I particularly want to thank the International Union of Painters and Allied Trades for endorsing Conrad Burns tonight. The Painters' general president, Jimmy Williams, is here. Jimmy, thank you for supporting this good man. I'm proud you're here. There's Jimmy over there.

We've got a lot to do in this country. We're in—we're going through historic times, and it's important to have people in the United States Senate who understand the stakes, understand the world in which we live. It's important to have clear-eyed realists working with the administration to lay the foundation for peace. It's really easy to be out there talking about the world the way you'd like it to be, but we can't afford that luxury because we're in a war against some terrorists who would like to harm America again.

Our—over my time—my remaining time here and the time that Senator Burns will have here after he's reelected, we'll be working on making sure that we accomplish our most important objective, and that is to protect the American people from further harm. I know some probably think that, well, this war on terror is isolated to a few angry individuals that got lucky on September the 11th. That's not how I look at the world, and that's not how Conrad Burns looks at the world. After that attack, I vowed that I'd use everything in our national—everything we could, all our national assets to do our most important

job, and that is defend the American people, which means we better have some people in the United States Senate who understand the best way to defend the American people is to stay on the offense against an enemy who would do us harm, to defeat an enemy overseas so we do not have to face them here at home.

I appreciate people standing up and supporting the President when he enforces doctrine. I said to the world, "If you harbor a terrorist, you're equally as guilty as the terrorist." And the Taliban didn't take us seriously. So for our own national security and for liberating others, we sent a mighty coalition into Afghanistan to free the people of that country and, at the same time, secure our own. And Conrad Burns stood strong when it came to the liberation of Afghanistan, and I want to thank you for your support.

I want to thank you for your support in Iraq. Iraq is the central front in the war on terror. And one of the lessons of September the 11th is that when this Nation sees a threat, we must take the threat seriously, before it materializes.

And I saw a threat in Saddam Hussein. But it wasn't just me who saw the threat. Members of the United States Senate from both political parties saw the same threat. My predecessor saw the threat. Members of the House of Representatives from both political parties saw the threat. Fifteen members of the United Nations Security Council saw the threat. And the United Nations Security Council said to Saddam Hussein, "Disclose, disarm, or face serious consequences." It was his choice to make. He chose war. And the world is better off without Saddam Hussein in power.

And we need people in the United States Senate who understand the stakes in this theater of the war on terror. The enemy cannot defeat us. They cannot defeat us militarily. The only thing they can do is to use their terror tactics to shake our will. And I'm enjoying working with a United States Senator like Conrad Burns whose

will cannot be shaken because of the actions of thugs and assassins. The United States of America will accomplish our mission. There will be a democratic Iraq that is able to defend itself, sustain itself, and become an ally in the war on terror.

In order to achieve that objective, we must have Senators who support our men and women in combat, and Conrad Burns does. And we must have Senators who will not—who will not—lose their nerve in the face of these terrorist attacks. Conrad Burns is such a man.

I believe liberty and freedom are universal. So does Senator Burns. We believe that there is an Almighty, and the Almighty's gift to each man and woman on the face of this Earth is freedom. The United States of America was formed on the natural rights of men and women. And it should not surprise us when 11 million Iraqis went to the polls in defiance of terrorists and car bombers and assassins and says, "We want to be free." A free Iraq—a free Iraq will help lay the foundation of peace for generations to come.

I like to remind people about this interesting fact of history. My dad—18-year-old kid—raised his arm and said, "I want to volunteer to defend the United States of America against the Japanese." What I find interesting is that some 60 years later, his son, the current President, sits down with the Prime Minister of Japan talking about keeping the peace. We talk about North Korea; we talk about how proud I am that the Japanese have committed forces to help bring security to the people of Iraq so their democracy can develop. Japan is an ally. Japan is a friend in peace.

And what happened between then 18-year-old George H.W. and 59-year-old W.—[laughter]—standing here? What happened was, the Japanese adopted a Japanese-style democracy. History has proven people want to be free and democracies yield the peace. And I believe 30 or 40 years from now, an American President will

be up here talking—will be talking to people, and they'll be looking back at this moment in history and say, thank God that people like Senator Conrad Burns and Chairman John Warner of the United States Senate and Senator Kit Bond were wise enough to understand about the power of liberty to transform nations into allies. And they'll be keeping the peace with democratically elected leaders in the broader Middle East, starting with Iraq.

These are the stakes. We're laying the foundation of peace, and it's important to have Members of the United States Senate who can look beyond the short term, who have got a strategic view of the world in which we live. And Conrad Burns has that view. Proud to stand with you in laying that foundation.

Here at home, we've been through a lot together. We've had a recession; we've had a stock market correction; we've had corporate scandals; we had an attack on our Nation; we went to war to defend ourselves; we had major natural disasters; we had rising energy prices. But we acted. We put progrowth economic policies in place. We believe that when people have more money in their pockets to save or to spend or to invest, the economy benefits. And so we cut the taxes on the hard-working people of America, and our economy is strong, and it's getting stronger.

People say here in Washington, "Oh, well, these tax cuts didn't make a difference." I can remember all the dire predictions when the debates went on about the ability for taxes to help revitalize our economy and overcome the obstacles we went through. Not Conrad Burns, he understood the basic principle of trusting people with their own money. Today, our economy has grown to 3.5 percent. We have 4.8 percent unemployment nationwide. We've added over 5 million jobs in the last 2½ years. Productivity is up; homeownership is at an alltime high; small businesses are flourishing. The tax cuts we passed are working.

And now the people of Montana are going to be facing a decision as to whether or not they want their taxes to go up or stay low. You see, the Democrat Party showed its true colors during the tax debate. Time in and time out, they voted against cutting the taxes on the American people. And now you hear them talking about, "Well, we need to raise taxes to balance the budget." Conrad and I know better. We've been in Washington long enough to understand how Washington works. Yes, they'll raise your taxes, but they will figure out new ways to spend your money. To keep this economy strong, we must make the tax relief permanent. And I'm proud to have Conrad Burns on the side—[*applause*].

There are a lot of things we need to do during my—the rest of my time here and for Conrad's time as a reelected Senator, starting with making sure we get off foreign oil. In order to make sure this country is competitive over the next 30 to 50 years, in order to make sure we remain the economic leader of the world, we have got to be wise about our energy policy.

Conrad reminded me, walking in here, that we've got plenty of coal in the great State of Montana. And that's why I'm such a strong supporter of clean coal technologies to make sure we can use that coal in environmentally friendly ways and get us off Middle Eastern oil.

But that's just the start. We got to change how we fuel our automobiles. I want it to be said that when there's a good soy crop out of Montana, we got more biodiesel available for people to use in their automobiles. I want it to be said, when we have a technological breakthrough, which we're close to getting to, that we can use saw grass grown in the State of Montana to help grow—to help produce ethanol so we become less dependent on Middle Eastern oil. I want it to be said that this country is imaginative in our use of technology to make us less dependent,

for economic security as well as national security.

And Conrad Burns understands that. The people of Montana need to put him back in the United States Senate to join us in making sure we have energy independence.

One of the things that's important for the people of Montana to understand is, you better have somebody here in Washington who's effective when it comes to representing the farmers and ranchers. You know, a lot of times you get the big talkers running for office, but they get here to Washington, and they're unable to deliver. I'd suggest the voters of Montana pay careful attention to the record of this United States Senator when it comes to representing the basic industries and the small-business owners and the hard-working people of the State of Montana.

I remember when I went to Billings, and we sat around and talked to those farmers and ranchers about the threats to their industry and about the opportunities. Conrad was there. He was talking their language. They didn't need a dictionary or a Roget's

Thesaurus to figure out what he was saying. [Laughter]

He's the kind of person the people of Montana need here. They need somebody who's steadfast when it comes to defending the country; who's wise about how we spend your money; who understands that the money we spend is your money, not the Government's money; who understands good tax policy can keep this economy growing; who knows we've got to have a good, wise energy policy; and who can speak the language of the farmers and the ranchers, right here in Washington, DC.

I'm proud to stand by this man. I strongly urge the people of Montana to reelect Conrad Burns to the United States Senate.

NOTE: The President spoke at 6:07 p.m. at the Madison Hotel. In his remarks, he referred to Phyllis Burns, wife of Senator Burns; former Gov. Marc Racicot of Montana; Sherri Ohs, wife of Montana Republican Party chairman Karl Ohs; John Green, national finance committee chairman, Senator Burns's reelection campaign; and Prime Minister Junichiro Koizumi of Japan.

## Interview With Foreign Print Journalists March 27, 2006

*The President.* Thanks for coming. I'm looking forward to going down to Cancun. I'm very grateful for President Fox's hospitality. I've never been to Cancun, but I've had a lot of friends who have been to Cancun, and they tell me if I stay too long, I won't return. This is a relatively quick trip. I'm looking forward to going to the Mayan ruins, which will be really exciting. And I'm looking forward to both bilateral and our trilateral discussions.

With Mexico, obviously, there's big issues, particularly immigration right now. But I'll remind people that our relationship is more than just the migration issue. Mex-

ico is our second-largest trading partner. The relationship with Mexico is a strong and vital relationship. Obviously, not only do we have important trade equities, but we've also got common values, and we've got millions of Mexican Americans who take great pride in their heritage. And so Mexico has been and will be a vital issue for future Presidents. And it's very important for us to work on a relationship that has a foundation of mutual benefit as well as openness and candor when it comes to dealing with difficult issues.

And I really value my friendship with President Fox. Obviously, we have been

through a lot during my Presidency and his. We've agreed on things, and we haven't agreed, but we've always remained friends, and that's a sign of a vital relationship. I'm, obviously, aware that there is a political season coming up, but until someone is sworn in office, my relationship will be with Vicente Fox as the leader of our important friend to the south. And I'm sure there's going to be all kinds of speculation about whether or not the United States will be involved in the election, and we won't be, pure and simple.

The relationship with Canada is also a vital relationship. Canada is our largest trading partner. This will be my first meeting with the Prime Minister as—with him as the Prime Minister. Obviously, I met him in the past. I'm looking forward to it. This will be the third Prime Minister with which I've dealt as the President. I've had good relations with the previous Prime Ministers, and I'm looking forward to good relations with Stephen Harper.

I'm fully aware of the relationship—the nature of the relationship between Canada and the United States. One, it's a vital relationship, but it's also one in which there is a certain skepticism about the United States, and therefore, I will do my very best to find common ground and to convince—through my relationship with the Prime Minister, convince the people of Canada we genuinely care about our friends and neighbors to the north and will work to resolve different issues in an above-board way that is mutually beneficial.

So it's an important meeting, and it's a way for us to confirm the—and then, eventually, the three of us will get into a room to meet. And it's a very strong signal that the three of us working together are better than each of us working apart, and that whether it be border security or commerce or hearing the values that are important in our neighborhood, we can do a lot together. And I find these meetings to be very useful and very important.

All right, we'll go around a couple of times. Pepe.

#### *Mexico-U.S. Relations*

Q. Sir, you mentioned the ties that bind both countries, the U.S. and Mexico. But those ties are also—those issues are extremely politically charged in both countries—trade, immigration, et cetera. So my question would be, where do you expect to lead the U.S.-Mexico relation in the next 3 years?

*The President.* Appreciate that. First, I think it's very important for both President Fox and myself to explain to both our countries the benefits of \$300 billion [billion]\* two-way trade—well, nearly \$300 billion [billion]\* in the year 2005 of two-way trade. In other words, it's one thing to talk trade, and I fully understand that unless those benefits are translated to more and more people, people begin to wonder whether or not trade is worthwhile.

You'll find that here in America, we're having a debate as well, over trade. I said in my State of the Union that we've got to reject protectionism because I believe that trade, when it's done right, free and fair, is beneficial to the parties. And I strongly believe that the trade between the United States and Mexico has been beneficial for Mexico, as it has for the United States. But as a leader, I've got to continue to explain to people why.

I have a different perspective than many because of the relationship between—because of my time as Governor of Texas, and I remember full well what life was like on the border before NAFTA. And if you go down to the border now, you see vitality on the border, you see that—and vitality on both sides of the border.

There's been—commerce has helped people get jobs, and commerce has helped people realize a better life. And it's important for us to make sure we continue to explain that because if not, there will be

---

\* White House correction.

protectionist tendencies that will tend to emerge, not only in our two countries but around the world. And in my judgment, leadership has got to fight off protectionist tendencies. I think that would tend to isolate each other and make it more difficult for us to realize the benefits of our relationship.

There's also going to be an important call for our countries to work together to emphasize the institutions, the democratic institutions that are vital for a functioning and stable society: anticorruption measures; free press; free religion; institutions that sometimes can be challenged in the course of politically—development within our neighborhood and around the world, for that matter.

So the common value theme is a very important theme for me to continue to work with Vicente Fox and whoever were to replace him—obviously, we've got a lot of human issues to deal with. The migration of people across our border is a vital issue that must be done in the same way to protect and honor people's lives. Americans are—I am disgusted by a system in which people are snuck across the border in the bottom of an 18-wheeler. This is inhumane. There's a more humane way to deal with our neighborhood.

There's a lot of big issues that confront us. But in order to make the relationship vital, we've got to explain to people exactly why—you know, the consequences of, for example, not having commerce flow as frequently as we do.

Tell me your papers now. Pepe.

Q. It's El Universal.

Q. La Opinion.

*The President.* Si. Thank you. Welcome.

### *Immigration Reform*

Q. Over a million people across the country have marched in support of legalization and against H.R. 4437, the Sensenbrenner bill.

*The President.* In support of what? Legalization, you said?

Q. Legalization, yes. Since you're opposing amnesty, sir, would you agree on a language that puts the undocumented on a path to earn legalization—

*The President.* Let me tell you what I am for. First of all, there is a—the legislative process is one that—obviously, it goes through the House and then the Senate, and if there are differences, it has got to be resolved. And what people are now doing is reacting to a legislative process. I believe that any immigration bill ought to make sure that we're, one, able to secure the borders. That's what Americans want; that's what any country should want. Your borders ought to be secure.

And I also recognize that part of securing the borders requires a guest-worker program. In other words, the two go hand in hand. I don't believe people who have been here illegally should be granted citizenship status right off the bat. That's amnesty.

Let me finish.

I just, as a matter of fact, gave a speech to a group of citizens that have become U.S. citizens today, in my presence. They had stood in line. And I do not think a country that relies upon law ought to say to somebody who was here illegally, you get to be ahead of the line.

In other words—so therefore, I think that part of a rational worker program is—say you're here on a temporary basis, and if you choose to be a citizen or want to be a citizen, you get in line. But like I said today, I've called upon Congress to increase the number of green cards. To me, that's the most rational way of dealing with the citizenship issue. It's essential that we not have automatic amnesty or legality. First of all, it would send a signal that said, all you've got to do is get here illegally and eventually you get in the head of the line. And that's—I don't think it will work.

Q. But what if they get in line behind those who are waiting for their green cards now?

*The President.* That's why I said I think one way to deal with this is to increase the number of green cards. And right now part of the problem is that the green cards are limited. And that's why I have spoken before and again reiterated my position that there ought to be a temporary-worker program; people who want to be here should not get—be a citizen should not get ahead of the line but ought to be waiting in line. And if the Congress so desires, they ought to increase the number of green cards in order to take the pressure off the system.

Q. But—

*The President.* It's a plan that—again, I know people are saying, "Well, the House bill didn't have a temporary-worker program in there," and I think any bill should be a comprehensive bill including a temporary-worker program. I've spoken out on it ever since I've been the President, and I think it is the best way to go, because I realize that, one, it is important to enforcing the border—that being a temporary-worker program; secondly, that it's a humane way to deal with people who are making a contribution to our economy.

In other words, if something is illegal, then people will figure out ways to get around the system. That's what creates the *coyotes*; that's what creates the smugglers; that's what creates the document forgers; that's what creates these places where people are dumped for a period of time and then smuggled across and then told to walk; that's what creates the dangerous predicament for people coming across the desert. And so there's a—and that's why people—that's what causes people to hide in the shadows of our cities.

And there's a much more rational way and much more humane way to deal with people who are doing jobs that Americans won't do. Anyway, that's why I think the work component is a vital part of an immigration policy, and I believe border—I know border security and a guest-worker program go hand in hand. In other words, one supports the other.

### *U.S. Border/Homeland Security*

Q. I guess I wanted to ask you about an issue on the northern border that's of some concern. Your administration has proposed a Western Hemisphere Travel Initiative, which would require passports or passport-like documents for Canadians and Americans coming and going. And there's been some concern in Canada that this will, in effect, do more to harm economic trade and tourism and do little to actually improve security. And I'm wondering, when you're moving towards, sort of, a more integrated approach to security on things like NORAD, why move ahead with something that really amounts to a bit more of a restriction?

*The President.* Well, I think—first of all, we have the same issue to the south, by the way. How do you come up with a policy where there are thousands of border crossings a day, without—and trying to have a rational approach to determining who's coming in and who's going out of the country, without endangering workforce, tourism, trade? Our goal is to, obviously, consult with our partners to develop, you know, passport and/or passport-like document, you said, and I think that may be the operative word as a plan develops.

There is a desire for a lot of our citizenry—and it's reflected in the Congress—to know, as I said, who's coming in and who's going out and why. And I think that—I'm pretty confident that if we work closely, we can develop such a plan that enables a scanning device or a card that can be dealt with on a scanning device to not stop the flow of traffic of people who make a daily routine of it, and also make sure that we know who's coming in the country.

The purpose is not to impede trade and/or cross-border relations. The purpose is to expedite them in a way that gives both countries, or all three countries, comfort in knowing who's coming across. In Texas, for example, like in El Paso, on a daily

basis, there's thousands of people that it's just a part of their daily routine. And the idea would be to develop a document that could be scanned as they just walk across the bridge. It's the same concept for Canada as well.

Q. You couldn't just do it through a driver's license? I mean, that's the—

*The President.* Well, that's what they're working on. First of all, we have found in our own country that drivers' license aren't necessarily a secure document. I mentioned to you that this is a—the document forgery is a significant problem for our country, primarily for people coming in from the south. And you've got a person looking for somebody to help build an apartment building, and people show up, and they flash a document, and the employer is not equipped to be a document checker. It's not what they do.

And so they say, "Sure, come on and work." And the truth of the matter is, there is a whole industry out there to provide fake documents for people doing work that Americans won't do, because the system needs—the system says—just hasn't been rational, let me just put it to you that way. And therefore, there's a skepticism about certain documents which can be forged. And that's why you're seeing the notion of trying to develop one that is tamper-proof, for not only border crossings but also for working.

And it seems to me to make sense without—again, I understand the sensitivity. I'm very aware, and I'm sure Stephen and Vicente will bring this up. I've already talked to Vicente about the issue in regards to Mexico.

Look, again, this is an issue I'm very familiar with because of my time as the Governor of Texas. Immigration issues and border issues are—it's been a part of our State's history for a long period of time.

Yes, Pepe. You're not going back to migration, are you?

### *Immigration Reform*

Q. Unless you want to go there.

*The President.* No, but Maribel will. [Laughter] I can see it's on the tip of her tongue. No, that's all right. It's a big issue. It's a huge issue. Look—and you should.

Q. The question would be, though—if you excuse me, a few months ago, or a year ago, you said that you would invest political capital in the issue of—the immigration issue.

*The President.* Yes. You did come back to it. That's good.

Q. Yet in the last couple of weeks, there have been a lot of people in this town talking that your political capital is wasted. So—

*The President.* Don't underestimate me, Pepe.

Q. No, I don't. But—

*The President.* Okay. [Laughter]

Q. Is this Congress underestimating you? Because—

*The President.* We'll see. But I will keep speaking out on it. One thing is I'm—I believe it's very important to get this issue—to reform the immigration system. I have spoken out on it before, and I will continue speaking out on it. It's now coming to a head. And I will continue to call Congress to have a comprehensive package that is more than just border security but also enforcement—interior enforcement, as well as a guest-worker program. And I'm going to say it again, that—particularly for the American audience—the two go hand in hand. A temporary-worker program that enables people to cross our border legally to do work Americans won't do takes pressure off of Border Patrol agents who are trying to stop illegal activities, which makes it easier to secure the border.

### *Government of Mexico/Mexican National Economy*

Q. If I may, sir, then what would you expect—or what would you propose or expect or hope that the Mexican Government would do in this case?

*The President.* No, I appreciate that. I think it's very important for the Mexican Government to continue doing what they have recently done, which is to make it clear to the American people that we have responsibilities on both sides of the border. And I thank President Fox for putting out those statements.

You're aware of, I'm sure, a series of advertisements in our newspapers that said, we have an important relationship with the United States. And it requires the understanding that we will work together on our border—as well as, by the way, working on the southern border of Mexico, because many of the folks that are now coming into our country are coming up from Central America, for example. A lot of folks from Central America have been crossing into Mexico and across. And part of making sure that our borders are secure—all our border, when I say “our borders,” I'm talking about Mexico and the United States borders in this case—is that we work hand in glove in the north and also help in the south.

And Vicente has told me he understands that there is an issue on the southern border of Mexico. It's a difficult border to enforce, but it's important.

The truth of the matter is, the long run for the issue is going to be for Mexico's economy to extend its promise beyond just certain regions. Look, I strongly believe most people want to be able to find decent wages at their home, where people are able to provide for their families. And I've told our people ever since I've been involved in this issue that—and the way I like to put it is, family values don't stop at the Rio Grande River. In other words, moms and dads in Mexico are anxious to put food on the table for their children. And therefore, many of them are willing to come great distances and lengths to be able to provide for their families. And I think most people would rather be providing for their families close to their homes.

And so part of a larger strategy has got to be to make sure that we work in concert

to develop—to encourage economic growth so that there are meaningful jobs throughout the country. That's why I'm a believer in trade. I believe if we were ever to stop our trade, it would make it harder for prosperity to spread.

And I appreciate Vicente's understanding that education programs are vital. People have got to have a skill set in order to be able to make sure that jobs are—that jobs spread throughout the country. And for a period of time, many people used to come across the border from the border regions, but prosperity, as I mentioned to you, is visible. The life has changed on the border. But the prosperity on the border has caused people from other parts of the country who are looking for work to migrate north, come across the border, and try to find jobs in the United States.

And I believe that the immigrant worker has helped grow our economy. In other words, there's jobs Americans will not do, and it makes sense to have a legal policy that says, if there's a job Americans won't do and people are willing to do it for the sake of their families, we ought to encourage them to do so and make it a legal, temporary experience. And we'll negotiate what the definition of temporary is, and we'll negotiate the kind of documentation necessary to make sure that they're not—there's not a lot of fraud. And we will—and also the issue of citizenship. And again, my own judgment is, is the best way to deal with the citizenship is to not say—to say to somebody, “If you're here illegally, you don't get to take somebody else's place in line who is here legally.” The reason we have lines is because of the green card issue. There's a shortage of green cards. And Congress has the right to increase the number of green cards.

Yes, Miss Maribel.

#### *Naturalization/Amnesty*

*Q.* Sir, do you believe there is a difference between amnesty and earned legalization—

*The President.* What does “earned legalization” mean? Why don’t you give me your description, and I will answer your question.

Q. According to Chairman Specter, is they have to pay a fine—the undocumented, I’m talking about—pay a fine, get in line, prove they have a job, that they have paid taxes, that they don’t have a criminal record.

*The President.* Right. But “get in line,” you said?

Q. Yes.

*The President.* That’s exactly what I just said. Somebody, in order to become a citizen, must get in line. And amnesty means you’re automatically legal and you get ahead. In other words, there is no line; you’re just it. You know, you’ve been here, undocumented; you’re legal; boom, you don’t have to wait in line.

Getting in line is exactly what I just said. You can call it by any way you want to call it. I would say that it’s a system that does not—that rewards and understands people here are doing jobs Americans won’t do—take out “rewards”—understands that there are people doing jobs that Americans won’t do, but you don’t get to be an automatic citizen. You have to get in line.

Q. So you agree with Senator McCain, then.

*The President.* Look, I’m just telling you exactly what I am for. And what I am for is a program that is not amnesty. In other words, amnesty means you’re automatically legal. And there are some that believe that ought to happen, that think that’s a rational policy. I disagree. And the reason I disagree was, one, it undermines rule of law. In other words, there’s a lot of people here trying to become a citizen that are waiting in line, and all of a sudden—and they’re doing it legally, and all of a sudden, you know, by law, it means that those who have been here not legally get ahead of the line.

Secondly, I think it sends a wrong message. In other words, basically, “It’s okay; fine, all you have to do is come, come

in the country, be undocumented, and in a matter of time, we’ll make you legal.” And I think that will cause another group of people to come. So therefore, my view is, is that, yes, you can become a citizen, but you have to get in line. In other words, you can’t get ahead of those who have been here playing by the rules.

And the bottleneck is the number of green cards the Government issues. And that can be changed, and that’s why I called upon Congress to increase the number of green cards.

Now, was that your question? [*Laughter*] You can see, Sheldon, that the migration issue is a consuming issue. And it’s an important issue. One of the things that’s very important is that this issue be conducted in such a way as it brings dignity to our process, that immigration is emotional and the people who are speaking out on the issue must understand its emotional nature and must not pit neighbor against neighbor, must treat people with respect. After all, we are a nation of immigrants, and I believe has helped—it helps revitalize our soul. I think it’s a very important part of our Nation’s history. And America should be viewed as a welcoming society that supports its laws, and the two don’t necessarily contradict each other.

#### *Trade Relations With Canada*

Q. If I could ask you about—a bit of a two-parter. I know you don’t like two-parters, necessarily.

*The President.* It hasn’t stopped these people. [*Laughter*] Did it stop you, Nedra [Nedra Pickler, Associated Press], the two-part question, or are you still giving them?

Q. Yes. [*Laughter*]

Q. You mentioned that there’s skepticism in Canada about the U.S. And I’m wondering, over the last few years, you’ve had some—

*The President.* Let me just make sure that—first of all, I believe most—I believe people on both sides of the border think it’s a very important relationship, and

there's great friendships. Having said that, the Canadians have, oftentimes, taken independent view of decisions the United States makes. And there is concern about some of the decisions I have made, yes. I just want to make sure that it's not, kind of, universal skepticism—kind of, define it to the proper source.

*Q.* There's been some personal invective hurled at you over the years by Canadian Parliamentarians. You were the star in one of the former Government's campaign ads.

*The President.* Did it work?

*Q.* It didn't work for them.

*The President.* Okay. [Laughter]

*Q.* I wonder whether that's tarnished your image of Canada at all, and whether—one of the issues that's caused a lot of skepticism—

*The President.* If it did tarnish my image of Canada, it would also tarnish my image of my own country, because part of being in the political scene is that people—it's the great thing about free societies, people speak their minds. That's what happens here in this country as well.

*Q.* Well, do you see the opportunity for better relations, and specifically on the issue of softwood lumber? That's an issue that's caused a lot of skepticism.

*The President.* It has.

*Q.* People are looking for a strong signal from the President of the United States.

*The President.* Right. No, I understand. First of all, the relationship is much deeper than softwood lumber. And there will be—I'll comment on softwood lumber in a minute. First of all, I'd like to get the issue solved. So the strong signal is, is that I've told our folks that, let's work hard to bring this issue to conclusion. And we were close to getting it done at one point. And so my strong signal is, yes, let's get this behind us.

I predict, however, that there will be other issues that arise because of our—when we trade as much as we trade, nearly

half-a-billion [half-a-trillion]\* two-way trade in '05, there's going to be issues that come up. I can remember the potato issue—I don't know if it had as much impact on thought that softwood lumber did, but it was an important issue. I guess it was mainly confined to the eastern part of the country.

But with as much trade as we've got going for us, there will be other issues that arise. Same with Mexico, by the way. We're dealing with, you know, tomatoes, on occasion, or corn syrup, I think it was—yes, corn syrup. And it's just very important to be in a position to have a relationship such that we can work through these problems. But, no—democracy is what it is. It's a chance for people to express themselves. Sure, there were some harsh words, but—at least from my perspective, the people tend to discount the polemics and the, you know, kind of, just how politics works, and they want to know whether or not there's a genuine commitment to friendship. And there is, between not only America and Canada but also between the United States and Mexico. It's been a long-term relationship.

The migration issue, obviously, as you can see, has created a great deal of, at least, questioning, because it's on people's minds.

#### *Canada-U.S. Relations*

*Q.* Would it help if there was a little more maturity in the relationship, in terms of how Canada deals with the U.S.? Because there's been a perception in Canada that we haven't always been—dealt with you square on issues like missile defense or—you know, there have been a few things.

*The President.* I don't view—I, frankly, view the relationship as a good and strong relationship. Look, people—face it, part of the problem that we had was because of

---

\* White House correction.

my decision to go into Iraq. And the Government of both countries didn't agree, and I understand that. War is terrible. It's an awful thing. And yet we're still able to maintain good relations.

When people are dealing with the subject of war, there is a lot of emotion. And I fully understand that. So I view the relationships both as not only important and vital, but I do view them as mature. As I said, this is the third Prime Minister with whom I will have dealt, and I—there is a certain camaraderie that takes place by virtue of our close ties and close history. And I bear no ill will whatsoever, and I understand the strategic importance of being close to our friends and to have a capacity to talk among ourselves.

As I say, there's a lot we can get done by working together. The great competition for our respective economies, in the long run, will be coming from the Far East. And therefore, the more close our relationships and the more we're able to deal with cross-border issues on trade and other issues, the more we'll be able to work in concert to keep our standard of living high. And Vicente is—you've heard him talk a lot about his worries about China's trade into the hemisphere and his concerns about job losses as a result of competition. And I believe that rather than, kind of, walling

ourselves off, I believe that cooperation, like we have done through the NAFTA process, dealing with disputes in an open-handed way, will enable us to be able to leave in place something beyond our respective times in office, so that future leaders can compete confidently.

And obviously, that's part of a policy. I would like to extend this kind of cooperative spirit beyond just the three of us. That's why the Free Trade Agreement of the Americas—which 28 of 32 members, if I'm not mistaken, supported the Free Trade Agreement of the Americas—that's the concept behind this notion of having a hemisphere that trades freely in order to be competitive—help us be competitive, which will help maintain standards of living. That's, after all, one of the key goals of any government.

Good, we'll see you all down there. Thank you. Looking forward to it.

NOTE: The interview was taped at 11:09 a.m. in the Roosevelt Room at the White House. In his remarks, the President referred to President Vicente Fox Quesada of Mexico; and Prime Minister Stephen Harper of Canada. The transcript was released by the Office of the Press Secretary on March 28. A tape was not available for verification of the content of this interview.

## Remarks Announcing the Resignation of Andrew H. Card, Jr., as White House Chief of Staff and the Appointment of Joshua B. Bolten as White House Chief of Staff

March 28, 2006

Earlier this month, Andy Card came to me and raised the possibility of stepping down as Chief of Staff. After 5½ years, he thought it might be time to return to private life, and this past weekend, I accepted Andy's resignation.

Andy Card has served me and our country in historic times: on a terrible day when

America was attacked; during economic recession and recovery; through storms of unprecedented destructive power; in peace and in war. Andy has overseen legislative achievements on issues from education to Medicare. He helped confirm two Justices to the Supreme Court, including a new Chief Justice.

In all these challenges and accomplishments, I have relied on Andy's wise counsel, his calm in crisis, his absolute integrity, and his tireless commitment to public service. Andy is respected by his colleagues for his humility, his decency, and his thoughtfulness. They have looked to him as a leader and a role model, and they, like me, will miss him.

On most days, Andy is the first one to arrive in the West Wing and among the last to leave. And during those long days over many years, I've come to know Andy as more than my Chief of Staff. He is leaving the White House, but he will always be my friend. Laura and I have known Andy and his wife, Kathi, for more than 20 years, and our close friendship will continue.

With me today is Joshua Bolten, who will be the new White House Chief of Staff. Josh is a man with broad experience, having worked on Capitol Hill and Wall Street and the White House staff and for nearly 3 years as a Director of the Office of Management and Budget. Josh is a creative policy thinker. He's an expert on the budget and our economy. He's respected

by Members of Congress from both parties. He's a strong advocate for effective accountable management in the Federal Government.

He's a man of candor and humor and directness, who's comfortable with responsibility and knows how to lead. No person is better prepared for this important position, and I'm honored that Josh has agreed to serve.

The next 3 years will demand much of those who serve our country. We have a global war to fight and win. We have great opportunities to expand the prosperity and compassion of America. We've come far as a nation, yet there's a lot on the road ahead. I'm honored to have served with Andrew Card. I've got great confidence in my next Chief of Staff.

Congratulations, Josh.

NOTE: The President spoke at 8:31 a.m. in the Oval Office at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Chief of Staff Card and Chief of Staff-designate Bolten.

## Remarks Following a Cabinet Meeting *March 28, 2006*

Good morning. We've just finished our third Cabinet meeting of this year. I want to thank my Cabinet members for joining us. We talked about the war on terror. We talked about a war on terror that requires all of us involved in Government to respond and to protect America and help spread freedom.

My Cabinet officials obviously have got many responsibilities in their agencies, but we talked about their need to assume additional responsibilities to make sure that we're using every element of national

power to win the war on terror and to secure the peace.

This morning we had briefings from General Abizaid, Ambassador Khalilzad, and General Casey. We heard from the Ambassador about work toward a unity government. I'm pleased to hear from Zal that the Iraqis are now back at the table discussing the formation of a government, the process by which they will conduct a government once a unity government is formed, as well as, obviously, beginning to continue to—or continuing to discuss who will fill the key slots in the government.

We also heard from General Abizaid as well as General Casey, who reported on the ongoing efforts to win this war on terror, to defeat the enemy all around General Abizaid's theater of responsibility, as well as defeat the enemy in the central front in the war on terror, which is Iraq.

I appreciate very much General Pace joining us today as well. These leaders, folks on the ground who know the condition on the ground, recognize this is hard work, but they also report on steady progress that we're making toward meeting our important goals—important goal is to make sure Iraq is a democracy that can sustain herself, defend herself, and is not a safe haven for the terrorists.

Tomorrow I'm going to deliver a third in a series of speeches about the situation in Iraq. During Saddam Hussein's brutal rule, he exploited the ethnic and religious diversity of Iraq by setting communities against one another. And now the terrorists and former regime elements are doing the same; they're trying to set off a civil war through acts of sectarian violence. But the United States and our Iraqi forces cannot be defeated militarily. The only thing the Iraqi insurgents, as well as the terrorists, can possibly do is to cause us to lose our nerve and retreat, to withdraw.

I'm going to discuss how the Iraqi people and our coalition continue to work together to build a stable and free and prosperous Iraq. I'll remind the people we're not going to lose our nerve. The stakes are high; we will complete this mission. Our strategy for

rebuilding Iraq is comprehensive, and it includes a commitment from all parts of the Federal Government.

Secretary Rice encouraged our Cabinet members to build relationships with their counterparts in Iraq once the new Iraqi Government is formed, and I expect them to follow through on that—on their commitments. See, by making a broad commitment from the Federal Government, we'll help the Iraqis establish a democracy, we'll help them build the institutions necessary for a stable society, and we'll help defeat the terrorists.

Today was the—today two members of my Cabinet—we had the honor—a chance to honor two members of my Cabinet who won't be with us much longer: Secretary of the Interior Gale Norton and Chief of Staff Andy Card. These two folks have served our country with distinction and honor. I am proud to work side by side with them, and I'm proud to call them friend. Thank you all very much.

NOTE: The President spoke at 10:20 a.m. in the Rose Garden at the White House. In his remarks, he referred to Gen. John P. Abizaid, USA, commander, U.S. Central Command; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff; and former President Saddam Hussein of Iraq. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Interview With CNN Espanol

March 28, 2006

### White House Chief of Staff

Q. Thank you for the interview. A very busy day at the White House, so I have to ask you, you accepted the resignation

of Andrew Card today—is this a sign of a major shakeup at the White House?

*The President.* No, it's a sign of a fellow who has worked 5¼ years. He's here every morning early in the morning; he stays late;

and he put his heart and soul in the job. And he came to me about 2½ weeks ago, or 2 weeks ago and said, “I think it may be time for me to go on; you know, I’ve given it my all.” And I thank him for his service. I consider him an incredibly close friend. And obviously, I picked Joshua Bolten to take his place. And now Josh’s job is to design a White House staff that meets the needs of the President, which is one of the key—most important needs, is to make sure I get information in a timely fashion so I can make decisions.

*Q.* Any more changes coming up?

*The President.* Well, Josh has just begun to take a look at the White House structure. And I haven’t had a chance to talk to him about the future yet. But right now I’m honoring and celebrating the service of Andy Card.

#### *President’s Upcoming Visit to Mexico*

*Q.* Let’s talk about Cancun. You’ll meet with President Fox, Prime Minister of Canada. What do you expect to accomplish in that trip?

*The President.* Well, I think it’s very important for the three of us to continue to commit ourselves to a relationship that—a commercial relationship based upon trade, free and fair trade, a security relationship based upon, kind of, mutual understanding of how we can cooperate. We’re going to have a cultural event. We’re going to go to the ruins, which will be fantastic, the Mayan ruins.

But the point is, is that the three of us need to be interconnected and work closely together for the good of our respective peoples. I’ll remind people that we’re not starting anything new. We’re really building on what our predecessors left behind. In 2005, there was enormous trade between Mexico and the United States, much more significant than it was, you know, 10 years ago. And I believe both countries benefit from that trade.

But it is also not a given that people in both our countries accept trade. And

therefore, one of the jobs of leadership is to remind people about the benefits, that trade equals jobs, and jobs means people have a chance to realize hopeful dreams.

#### *Immigration Reform*

*Q.* The Government of Mexico recently placed ads in U.S. papers acknowledging their responsibility in the border problem and saying they should have a role in the way the guest-worker program is shaped. Should Mexico have that role? Is that appropriate?

*The President.* Well, I think, first of all, the fact that they put those ads in the papers talking about joint responsibility in the border makes it easier for those of us who believe in comprehensive migration or immigration reform to get something done. And I appreciate the Government’s stand there.

The truth of the matter is, the laws of the United States will be written inside the Congress. Of course, thoughtful suggestions may help. But the job is really to get a bill out of the Senate and eventually the House—or out of a conference committee—that I can sign. And I’m interested in comprehensive immigration reform. That includes not only border security but also a temporary-worker plan that recognizes there are hard-working people here doing jobs Americans won’t do. And they ought to be here in such a way so they don’t have to hide in the shadows of our society.

The fundamental issue, by the way, it seems like to me, on the guest-worker plan, is should somebody get to the head of the line when it comes to citizenship? And my answer is, no, they ought to get in line, but they don’t get to get to the head of the line. And that’s where some of the tension about the debate is taking place right now.

*Q.* The debate is taking place in the Senate. They are discussing a plan, and they’re including your guest-worker program that you’ve requested. But the House said, no.

The Sensenbrenner bill doesn't include a guest-worker program.

*The President.* Well, I wouldn't give up on it yet; we're just starting. For your listeners, this is a process. The House has passed a bill; the Senate, hopefully, will pass a bill; and then they'll get to conference and work something out in conference. And I have called upon both the House and the Senate to pass a comprehensive bill. And a comprehensive bill means, to make sure you include a guest-worker program as part of a comprehensive bill.

I happen to believe a guest-worker program recognizes reality—what's taking place in our economy today. But it also—a guest-worker program is part of border security. I mean, rather than have people sneaking across the border to come and do jobs that Americans won't do, it seems like it makes sense for people to be given an identification card that they can come and use to do a job on a temporary basis, so they can go back and forth freely with this tamper-proof ID card and not have to sneak across, so that our Border Patrol agents on both sides of the border are really dealing with drug smuggling or gun smuggling or terrorists trying to sneak into the country.

#### *Illegal Immigration*

*Q.* So the question is, after those 6 years, if they get the 6 years in this program, how will you enforce sending people back who have to go back who have been living—

*The President.* Well, you'll have to have a tamper-proof card in order to work. In other words, there will be—it will make it much easier to have employer enforcement in place when there is a card that you know is tamper-proof, in other words, one that can't be forged.

Right now there's a whole document forging industry that has evolved. There are people sneaking across in 18-wheelers or people risking their lives. And the system

is inhumane, as far as I'm concerned, and it needs to be reformed.

#### *Border Security*

*Q.* The White House supported the Sensenbrenner bill in the House, making the exception that you were going to pursue a temporary guest-worker program. Now, that bill includes the construction of 700 miles of border, and that is seen not only in Mexico but in many Latin American countries as a sign that the U.S. wants to isolate itself from the region. Is that—

*The President.* I don't think people ought to read that into it. I think people ought to—first of all, the House is the beginning of the process, as you know. But people shouldn't—it's impractical to fence off the border. But it is also realistic to give our Border Patrol agents tools to be able to do their job. We ought to enforce our borders. That's what the American people expect. I've talked to President Fox about Mexico enforcing her southern border, and he agrees there ought to be border enforcement down there. But he, like I, understand it's difficult to enforce large borders.

And I don't think anybody believes that you could totally fence off the border and be effective. But I do think we ought to be in a position to give our Border Patrol agents better tools, more effective ways to prevent people from smuggling people and/or drugs across our border.

#### *Venezuelan President Chavez*

*Q.* I want to ask you about Venezuela, President Hugo Chavez. He refers to you in very strong terms. He does the same about Secretary Rice. What is your reaction to that, and where do you see—how do you see that affecting relations between your two countries?

*The President.* I judge the President based upon his honoring of the institutions that make democracy sound in Venezuela. I think it's very important for leaders to honor the freedom to worship, the freedom of the press, contracts, legal—to honor legal

contracts, to allow people to express their opinion without fear. And it's very important for leaders throughout the hemisphere, whether they agree with America or not, to honor the tenets of democracy. And to the extent he doesn't do that, then I believe he should be subject to criticism.

### *Iraq*

*Q.* President—Iraq. You've been telling people the U.S. is going the right way. But the polls—and you've said you don't follow the polls—the polls say people don't agree with you. Could it be that they're right and you're wrong?

*The President.* History will prove whether I'm right. I think I'll be right because I do believe freedom is universal. I remember it wasn't all that long ago that 11 million Iraqis went to the polls in the face of terrorist threats, in the face of potential assassination, and said, we want to be free. That was last December.

That sentiment still exists in Iraq. The enemy has got—those who want to stop democracy have got one weapon, and that is the ability to kill innocent life to get

on the TV, to shake our will. And my will is not going to be shaken. You cannot have a President make decisions based upon yesterday's polls. You must have a President who believes in certain principles and is willing to lead based upon a vision for a better future.

And I believe my vision for a better future entails having a democratic Iraq as a friend and an ally and to prevent the stated goals of the enemy from taking place. They want us to leave Iraq so they can establish a safe haven from which to launch attacks on our people again. And I take their goal seriously, and I will use all resources at my disposal in order to protect the American people.

*Q.* *Muchas gracias, Señor Presidente.*

*The President.* *Si, por nada.*

NOTE: The interview was taped at 3:08 p.m. in the Map Room at the White House. In his remarks, the President referred to President Vicente Fox Quesada of Mexico; and Prime Minister Stephen Harper of Canada. A tape was not available for verification of the content of this interview.

## Statement on the Death of Caspar Weinberger *March 28, 2006*

Caspar Weinberger was an American statesman and a dedicated public servant. He wore the uniform in World War II, held elected office, and served in the Cabinets of three Presidents. As Secretary of Defense for President Reagan, he worked to strengthen our military and win the cold

war. In all his years, this good man made many contributions to our Nation. America is grateful for Caspar Weinberger's lifetime of service. Laura and I send our condolences and prayers to the entire Weinberger family.

## Interview With CTV March 28, 2006

### Canada-U.S. Relations

Q. Well, first of all, Mr. President, thank you very much for inviting us into your home. We certainly appreciate that.

Before we get on to talking about Canada-U.S. relations, I want to deal a little bit with your personal relations with Canadians. They haven't exactly been a roaring success. Does that matter? Does that matter to you? Does it matter to the relationship?

*The President.* I think I've had very good relations with the Canadians with whom I've dealt. I mean, Prime Minister Chretien and his successor, Paul Martin, and I got along just fine. We didn't always agree, but I can understand people not agreeing with some of the decisions I made. But that doesn't necessarily mean there's any problems with the relationship.

I guess much has been made about some of the name-calling that went on. That's just part of politics, and it doesn't bother me in the least. If I was bothered about name-calling from Canada, I'd certainly be bothered about name-calling from the United States as well. [Laughter]

The relationship between Canada and the United States is really a relationship not necessarily by government only but by the peoples, by the interchange, by the exchanges we have, by the relatives on both sides of the border. And that's what really makes the relationship unique and very strong.

### Trade With Canada/Softwood Lumber

Q. In that regard, Prime Minister Harper, the new—I think this is now the third Prime Minister you've gone through—

*The President.* It is. [Laughter]

Q. —in Canada. He said that of the top priorities that he's got, softwood lumber has to be number one; says it's, in his words, putting a very serious strain on the

relationship between the two countries. You've often said that this is something that you want to take care of. I'm giving you an opportunity to make some news here. [Laughter]

*The President.* I may not see that. [Laughter]

Q. Okay. [Laughter] What would be—is there any one thing that you can do to unblock this issue?

*The President.* Well, I can tell our people to try to find common ground. I thought we were pretty close to a deal a couple of years ago—I can't remember the exact timing of it, but I know we've been working on softwood lumber for quite a while.

I fully understand how difficult an issue this is, particularly from Canada's perspective, since there's been some rulings. And we want to get it solved. I told that to Stephen Harper, that I understand its importance. I understand its priority. And I'd like to get the issue resolved once and for all myself. The best thing I can do is tell our negotiators that—see if you can find common ground. Again, we were close to an agreement before—maybe that's a place for people to look for common ground.

I know it's not going to get solved if it's done—if these negotiations are public. It's going to require some very quiet consultations to see if we can do what I'd like to see done.

Q. Can it be solved on your watch?

*The President.* I certainly hope so. This is a difficult issue. I know it creates anxieties in Canada. I really don't want to create anxieties. On the other hand, I do want to be fair to our folks here as well, and I think we can find ground.

### Canada-U.S. Border/Homeland Security

Q. Talking about common ground, it seems to me that there's so much that we

have in common between these two countries: We've got the world's largest undefended border; we're both countries at war; we've got boots on the ground in Afghanistan. And yet here at home, we're putting more barriers along that Canadian-American border.

You've often said that the reason for this—or what Stephen Harper calls the passport problem—you've said that it's because you want to know who's coming and going across that border. So I guess it begs the question, are the Canadians not telling you who's coming and going? Are we not doing a good enough job?

*The President.* Oh, I think Canada has been very cooperative, and the relationship between our services is very good. The idea is to have—it doesn't necessarily have to be a passport. It can be a document, a tamper-proof document that will expedite border crossings, not delay border crossings. The idea is to make sure that tourists and trade moves freely and terrorists don't.

And right after September the 11th, obviously, our country took a hard look at the procedures enabling people to come back and forth across our borders, both north and south. And the idea was to come up, as I said, with a tamper-proof document. I know they've been focused on the passport, but surely we can design something—the law doesn't say passport only; the law says, kind of, passport-like, if I'm not mistaken.

But the key is that it be tamper-proof. We've found a lot of, for example, driver's license forgeries throughout the United States that make it difficult to—you know, as best as we can, assure our citizens that we know who's coming in and who's not.

*Q.* I guess part of the problem for a lot of people in this is they say, look, it's not so much guys like you and me going across—we've all got passports or identity cards. But it's the minor league, peewee hockey team, or the peewee baseball team that won't be able to play in each other's

countries right now because it's too much of a hassle to get this card.

*The President.* Again, the idea is to make it hassle-free as best as possible. I can understand—I mean, on any change of the status quo, you can always find, kind of, the nightmare scenario that makes life—it makes it feel like life is going to be a lot worse. I don't think it necessarily has to be. I think we can work with our Canadian counterparts to come up with something that's rational and meets the law that has been passed by the Congress and that I signed.

#### *Trade With Canada*

*Q.* Can you foresee—you're going down to Cancun as part of the exercise, I guess, of imagining a new North America and then getting it going. In your vision, can you foresee a day when there would be free travel of people across the borders without identity cards, just free movement of people in North America?

*The President.* Oh, I don't know. That's probably down the road. But I'm not imagining an important relationship, though, because we're really building on what our predecessors left behind, which is a trading arrangement that has substantially increased trade between the United States and Canada and Mexico.

Canada is our number-one trading partner. I'm a believer that trade helps grow economies. I think free trade is an important part—and fair trade—something that Canadians want and something that Americans want is free and fair trade—benefits both of us. You know, we traded about nearly \$500 billion, two-way trade, in 2005, which is very positive for both our economies.

What I'm concerned about is that protectionist tendency and isolationist tendency that could emerge in both our countries as well as in Mexico, which would make it harder for us to realize the benefits of collaboration together, make it harder for us to, kind of, grow together. And that

would be not beneficial for the hemisphere, and frankly, it will make it a lot harder for future Americans and Canadians and Mexicans to compete with the Chinese, for example.

And so there is a relationship which exists which needs to be protected and nurtured and streamlined and made more efficient, and that's really what the discussions will be in Cancun.

#### *Canadian Government*

*Q.* A quick last question for you—I don't know if you're going to take the bait on this one.

*The President.* Probably not.

*Q.* Okay. [Laughter]

*The President.* Now that you've let me know—

*Q.* I let the cat out of the bag.

*The President.* —let me know there was a hook coming. [Laughter]

*Q.* Are you any happier with the Conservative Government in Canada than a Liberal Government?

*The President.* I am—I respect the will of the Canadian people, and as I say, you know, this is—there were some tense times when I made the decision to go to war in Iraq, and I understand that. I'm not the—I fully understand why people, not only in Canada but in the United States, expressed deep concern about the use of force to protect ourselves. I stand by the decision. I think it's the right decision. And therefore, I wasn't surprised when I heard, you know, members of political parties in both our countries express deep concern about it.

Having said all that, however, in the midst of turbulent times, my relationships with the two Prime Ministers, prior to Stephen Harper, were good, solid relationships. We had candid discussions; we were friendly toward each other; we shared the same values of human rights and human dignity and freedom to speak and freedom to worship.

So I view the relationship with Canada as a very strong and important relationship for the United States of America. It's a relationship that we should never take for granted, and I'm confident the Canadians won't take our relationship for granted. And it's a relationship that needs attention and care. And there are problems that arise, like softwood lumber. Hopefully, we'll get that solved. But we've also had a BSE issue that came up on my watch, which we solved, as well as potatoes. We had a potato issue when I first became President of the United States that we worked through with Prime Minister Chretien.

*Q.* Mr. President, you've been very generous with your time, and I appreciate it.

*The President.* Well, thanks for coming.

*Q.* Thank you.

*The President.* Welcome to Washington.

*Q.* Thank you, sir.

NOTE: The interview was taped at 2:55 p.m. in the Map Room at the White House for later broadcast. In his remarks, the President referred to former Prime Ministers Jean Chretien and Paul Martin, and Prime Minister Stephen Harper of Canada. The transcript was released by the Office of the Press Secretary on March 29.

## Remarks Following Discussions With President Olusegun Obasanjo of Nigeria

March 29, 2006

*President Bush.* Mr. President, welcome back to the Oval Office. We have just had

a discussion that covered a lot of topics. Every time I meet with the President, he

brings a fresh perspective about the politics and the situation on the continent of Africa, and I want to thank you. I want to thank you for your leadership.

The President and I talked about Darfur and the Sudan, and I made it very clear to him that we're deeply concerned about the humiliation, the rape, the murder that is taking place among the—against the citizens of Darfur. He agreed. And I want to thank you for your compassion.

We talked and strategized about how to move forward, how to make it clear to the Sudanese Government that there will be a international response in working toward a peace. We talked about a dual track, that the rebels must come together and negotiate with the Government, and at the same time, we talked about bolstering the AU peacekeeping force with a blue-helmeted force. And I explained to him my desire to have a NATO overlay to make sure that force is robust.

We talked about economic development. Of course, I brought up energy to the President. He's—he and I talked about the situation in the Nigerian Delta. He talked to me about his strategy to deal with the energy issue.

And finally, I appreciate the decision he made regarding Charles Taylor. In my visit last week with the President of Liberia, we talked about Charles Taylor. The fact that Charles Taylor will be brought to justice in a court of law will help Liberia and is a signal, Mr. President, of your deep desire for there to be peace in your neighborhood.

So welcome to the Oval Office. It's good to have you here, sir.

*President Obasanjo.* Thank you very much. And as usual, I want to thank you for the warm and hardy reception that you have accorded us.

The areas that I would call the areas of concern, by the time I arrived here last night, seemed to have been definably dealt with by this morning, particularly the issue of Charles Taylor. And as I said to you

about a minute—a few minutes ago, Charles Taylor should be landing in Liberia by now, which should start putting the issue of Charles Taylor behind all of us.

I appreciate the understanding of everybody and the way that the issue has been handled. I met the press earlier today to actually give what was our own position and how we were hoping to deal with the issue of Charles Taylor's disappearance. And of course, I do not agree, must disagree that we have been negligent in the way we handled the Charles Taylor issue. If we had been negligent, then Charles Taylor would have got away. He would not have been arrested if there was connivance or condonation on our part.

Having said that, we, of course, talked about the general situation of peace and security in the West Africa subregion, and how West Africa subregion, with Charles Taylor issue behind us, how West Africa subregion is gradually becoming a haven of peace. We have dealt with Togo; we have dealt with Guinea-Bissau; we have dealt with Sierra Leone. Hopefully, we are now dealing with Liberia. And things seem to be going fairly well in Cote d'Ivoire. Well, of course, we are keenly watching the situation in Guinea—Conakry.

Then we looked at the rest of Africa, particularly Democratic Republic of Congo, Ethiopia and Eritrea, and the Great Lakes, generally. Then we talked about the issue of development, particularly security—supplies, security, stability, and also price stability of hydrocarbons from the Gulf of Guinea area, and how we are working hard to establish a Gulf of Guinea commission that will also deal with the issue of reconciling and dealing with ending misunderstanding among those in that—among countries that are in the Gulf of Guinea, how we can protect and how we can monitor what happens in that area, because the hydrocarbon we need for our own development and we need for the economic development and progress of the world. We are moving in this regard not only by ourselves

but also by our—with our development partners.

Then, of course, we talked about NEPAD, which is where we work with the G-8 and—politically and individually.

And we—I briefed the President on what we are doing with the Niger Delta, which is very important. And we are very grateful that the measures we are taking, which are essentially socioeconomic measures to address some of the grievances, identified grievances, will resolve the issues of the Niger Delta.

I think these are some of the points. And I think—I want to thank President for remaining his charming self. [Laughter] President Bush. Thank you, sir.

NOTE: The President spoke at 10:30 a.m. in the Oval Office at the White House. In his remarks, he referred to former President Charles Taylor of Liberia, who was arrested on March 29 in Nigeria on United Nations war crimes charges; and President Ellen Johnson Sirleaf of Liberia.

## Remarks to Freedom House and a Question-and-Answer Session March 29, 2006

*The President.* Thank you. Please be seated. I shouldn't be so instructive to the diplomatic corps. [Laughter] Peter, thank you for your warm introduction. Thank you for your commitment to freedom. It turns out freedom runs pretty deep in Peter's family. I don't know if you know this or not, but his son is a Marine First Lieutenant named Elliot Ackerman. He fought in the battle of Fallujah. I know you're proud of your son, and I'm proud to be the Commander in Chief of men and women who volunteer to defend our own freedom.

I appreciate very much the men and women of Freedom House. For more than 60 years, this organization has been a tireless champion for liberty. You've been a clear voice for the oppressed across the world. At Freedom House, you understand that the only path to lasting peace is the expansion of freedom and liberty.

Free societies are peaceful societies. When governments are accountable to their own citizens, when people are free to speak and assemble, when minorities are protected, then justice prevails. And so does the cause of peace.

Freedom House was founded on the principle that no nation is exempt from the

demands of human dignity. And you're carrying that message across the world, from Africa to China to Belarus and beyond. At Freedom House, you also understand free societies do not take root overnight, especially in countries that suffer from decades of tyranny and repression. You understand that free elections are an instrument of change, yet they're only the first step. So as you press for democratic change across the world, you're helping new democracies build free institutions they need to overcome the legacies of tyranny and dictatorship.

I want to thank you for your vital work. You're making a significant contribution to the security of our country. I'm also honored that we've got distinguished members of the legislative body with us, particularly Senators—John Warner, who is the chairman of the Armed Services Committee; Senator Dick Lugar, who is the chairman of the Senate Foreign Relations Committee; and, of course, Senator Ted Stevens. I thank the Members from the House and Senate who have joined these distinguished Senators. I appreciate you taking time to come and listen to me. Just listen to me a little more often. [Laughter]

I particularly want to pay homage to Ambassador Max Kampelman. Thank you very much. I was telling the Ambassador, right before I came over I was having a little visit with my Chief of Staff-to-be, Josh Bolten. It turns out that Josh's dad and the Ambassador were lifelong friends. And as I came over here, he said, "You make sure that you say hello to one of the finest men our country has ever produced." So, Mr. Chairman, on behalf of a grateful President and a grateful Chief of Staff-to-be, thank you for serving our country.

I appreciate the other members of the Freedom House Board of Trustees. And I thank the diplomatic corps for joining us as well.

We meet at a time of war but also at a moment of great hope. In our world and due in part to our efforts, freedom is taking root in places where liberty was unimaginable a couple of years ago. Just 25 years ago, at the start of the 1980s, there were only 45 democracies on the face of the Earth. Today, Freedom House reports there are 122 democracies, and more people now live in liberty than ever before.

The advance of freedom is the story of our time, and we're seeing new chapters written before our eyes. Since the beginning of 2005, we've witnessed remarkable democratic changes across the globe. The people of Afghanistan have elected their first democratic Parliament in more than a generation. The people of Lebanon have recovered their independence and chosen their leaders in free elections. The people of Kyrgyzstan have driven a corrupt regime from power and voted for democratic change. The people of Liberia have overcome decades of violence and are now led by the first woman elected as a head of state in any African nation. And the courageous people of Iraq have gone to the polls not once, not twice, but three times, choosing a transitional government, a democratic Constitution, and a new Government under that Constitution.

Each of these countries still faces enormous challenges that will take patience and the support of the international community to overcome. Yet Freedom House has declared, the year 2005 was one of the most successful years for freedom since the Freedom House began measuring world freedom more than 30 years ago. From Kabul to Baghdad to Beirut and beyond, freedom's tide is rising, and we should not rest, and we must not rest, until the promise of liberty reaches every people and every nation.

In our history, most democratic progress has come with the end of a war. After the defeat of the Axis powers in World War II and the collapse of communism in the cold war, scores of nations cleared away the rubble of tyranny and laid the foundations of freedom and democracy.

Today, the situation is very different. Liberty is advancing not in a time of peace but in the midst of a war, at a moment when a global movement of great brutality and ambition is fighting freedom's progress with all the hateful violence they can muster. In this new century, the advance of freedom is a vital element of our strategy to protect the American people and to secure the peace for generations to come. We're fighting the terrorists across the world because we know that if America were not fighting this enemy in other lands, we'd be facing them here in our own land.

On September the 11th, 2001, we saw the violence and the hatred of a vicious enemy and the future that they intend for us. That day I made a decision: America will not wait to be attacked again. We will confront this mortal danger. We will stay on the offensive. America will defend our freedom.

We're pursuing the terrorists on many battlefronts. Today, the central front in the war on terror is Iraq. This month, I've given a series of speeches on recent events in Iraq and how we're adapting our approach to deal with the events on the ground. At George Washington University,

I reported on the progress we have made in training the Iraqi security forces, the growing number of Iraqi units that are taking the lead in the fight, the territory we're handing over to them, and the performance they turned in after the bombing of the Golden Mosque in Samarra.

Last week in Cleveland, I told the American people about the northern Iraqi city of Tall 'Afar, which was once a key base of operations for Al Qaida and is now a free city that gives us reason to hope for a free Iraq. I explained how the story of Tall 'Afar gives me confidence in our strategy, because in that city, we see the outlines of the Iraq we've been fighting for, a free and secure people who are getting back on their feet, who are participating in government and civic life, and are becoming allies in the fight against the terrorists.

Today I'm going to discuss the stakes in Iraq and our efforts to help the Iraqi people overcome past divisions and form a lasting democracy, and why it is vital to the security of the American people that we help them succeed.

In the wake of recent violence in Iraq, many Americans are asking legitimate questions: Why are Iraqis so divided? And did America cause the instability by removing Saddam Hussein from power? They ask, after three elections, why are the Iraqi people having such a hard time coming together? And can a country with so many divisions ever build a stable democracy? They ask why we can't bring our troops home now and let the Iraqis sort out their differences on their own.

These are fair questions, and today I'll do my best to answer them. I'll discuss some of the reasons for the instability we're seeing in Iraq, why democracy is the only force that can overcome these divisions, why I believe the vast majority of Iraqis want to live in freedom and peace, and why the security of our Nation depends on the success of a free Iraq.

Today, some Americans ask whether removing Saddam caused the divisions and instability we're now seeing. In fact, much of the animosity and violence we now see is the legacy of Saddam Hussein. He is a tyrant who exacerbated sectarian divisions to keep himself in power. Iraq is a nation with many ethnic and religious and sectarian and regional and tribal divisions. Before Saddam Hussein, Iraqis from different communities managed to live together. Even today, many Iraqi tribes have both Sunni and Shi'a branches. And in many small towns with mixed populations, there's often only one mosque, where Sunni and Shi'a worship together. Inter-marriage is also common with mixed families that include Arabs and Kurds and Sunnis and Shi'a and Turkmen and Assyrians and Chaldeans.

To prevent these different groups from coming to challenge his regime, Saddam Hussein undertook a deliberate strategy of maintaining control by dividing the Iraqi people. He stayed on top by brutally repressing different Iraqi communities and pitting them one against the other. He forced hundreds of thousands of Iraqis out of their homes, using expulsion as a weapon to subdue and punish a group that resisted his rule. By displacing Iraqi communities and dividing the Iraqi people, he sought to establish himself as the only force that could hold the country together.

In Saddam's campaign of repression and division, no Iraqi group was spared. In the late 1980s, Saddam Hussein unleashed a brutal ethnic cleansing operation against Kurds in northern Iraq. Kurdish towns and villages were destroyed. Tens of thousands of Kurds disappeared or were killed. In his effort to terrorize the Kurds into submission, Saddam dropped chemical weapons on scores of Kurdish villages. In one village alone, a town called Halabja, his regime killed thousands of innocent men and women and children, using mustard gas and nerve agents. Saddam also forcibly removed hundreds of thousands of Kurds from their homes, and then he moved Arabs into

those homes and onto the properties of the people who were forced to leave. As a result of his strategy, deep tensions persist to this day.

Saddam also waged a brutal campaign of suppression and genocide against the Shi'a in the south of Iraq. He targeted prominent Shi'a clerics for assassination. He destroyed Shi'a mosques and holy sites. He killed thousands of innocent men, women, and children. He piled their bodies into mass graves. After the 1991 Persian Gulf war, Saddam brutally crushed a Shi'a uprising. Many Shi'a fled to the marshes of southern Iraq. They hid in the wetlands that could not be easily reached by Saddam's army.

The wetlands, by the way, were also home to the Marsh Arabs, an ancient civilization that traces its roots back 5,000 years. So Saddam destroyed the Marsh Arabs and those who hid in the marshes by draining the marshes where they lived. In less than a decade, the majority of these lush wetlands were turned into barren desert, and most of the Marsh Arabs were driven from their ancestral home. It is no wonder that deep divisions and scars exist in much of the Shi'a population.

Saddam also oppressed his fellow Sunnis. One of the great misperceptions about Iraq is that every Sunni enjoyed a privileged status under Saddam's regime. In truth, Saddam trusted few outside his family and his tribe. He installed his sons and his brothers and his cousins in key positions. Almost everyone was considered suspect, and often those suspicions led to brutal violence.

In one instance, Saddam's security services tortured to death a pilot from a prominent Sunni tribe and then dumped his headless body in front of his family's house. It caused riots that he then brutally suppressed. In the mid-1990s, Saddam rounded up scores of prominent Sunni economists and lawyers and retired army officers and former government officials. Many were never heard from again.

It is hard to overstate the effects of Saddam's brutality on the Iraqi nation. Here's what one marine recalls when he was on the streets of the Iraqi capital. He said, quote, "I had an Iraqi citizen come up to me. She opened her mouth, and she had no tongue. She was pointing at the statue. There were people with no fingers waving at the statue of Saddam, telling us he tortured them. People were showing us scars on their back." Iraq is a nation that is physically and emotionally scarred by three decades of Saddam's tyranny, and these wounds will take time to heal. As one Marsh Arab put it, "Saddam did everything he could to kill us. You cannot recover from that right away."

These are the kinds of tensions Iraqis are dealing with today. They are the divisions that Saddam aggravated through deliberate policies of ethnic cleansing and sectarian violence. As one Middle East scholar has put it, Iraq under Saddam Hussein was "a society slowly and systematically poisoned by political terror. The toxic atmosphere in today's Iraq bears witness to his terrible handiwork."

The argument that Iraq was stable under Saddam and that stability is now in danger because we removed him is wrong. While liberation has brought its own set of challenges, Saddam Hussein's removal from power was the necessary first step in restoring stability and freedom to the people of Iraq.

Today, some Americans are asking why the Iraqi people are having such a hard time building a democracy. The reason is that the terrorists and former regime elements are exploiting the wounds inflicted under Saddam's tyranny. The enemies of a free Iraq are employing the same tactics Saddam used—killing and terrorizing the Iraqi people in an effort to foment sectarian division.

For the Saddamists, provoking sectarian strife is business as usual. And we know from the terrorists' own words that they're

using the same tactics with the goal of inciting a civil war. Two years ago, we intercepted a letter to Usama bin Laden from the terrorist Zarqawi, in which he explains his plan to stop the advance of democracy in Iraq. Zarqawi wrote: "If we succeed in dragging the Shi'a into the arena of sectarian war, it will become possible to awaken the inattentive Sunnis as they feel imminent danger. The only solution is for us to strike the religious and military and other cadres among the Shi'a with blow after blow."

The terrorists and Saddamists have been brutal in the pursuit of this strategy. They target innocent civilians; they blow up police officers; they attack mosques; and they commit other acts of horrific violence for the cameras. Their objective is to stop Iraq's democratic progress. They tried to stop the transfer of sovereignty. They tried to stop millions of Iraqis from voting in the January 2005 elections. They tried to stop Sunnis from participating in the October referendum on the Constitution. And they tried to stop millions from voting in the December elections to form a Government under that Constitution.

And in each case, they failed. With every election, participation was larger and broader than the one that came before. And in December, almost 12 million people—more than 75 percent of eligible voters—defied the terrorists to cast their ballots. With their votes, the Iraqi people have spoken and made their intentions clear: They want to live in liberty and unity, and they're determined to chart their own destiny.

Now the elements of a free Iraq are trying to stop the—the enemies of a free Iraq are trying to stop the formation of unity government. They've learned they cannot succeed by facing coalition and Iraqi forces on the battlefield, so they've taken their violence to a new level by attacking one of Shi'a Islam's holiest sites. They blew up the Golden Mosque in Samarra in the hope that this outrageous act would provoke the Shi'a masses into widespread reprisals

which would provoke Sunnis to retaliate and drag the nation into a civil war.

Yet despite massive provocations, Iraq has not descended into civil war. Most Iraqis have not turned to violence. The Iraqi security forces have not broken up into sectarian groups waging war against each other. Instead, Sunni, Shi'a, and Kurdish soldiers stood together to protect religious sites, enforce a curfew, and restore civil order.

In recent weeks, these forces passed another important test when they successfully protected millions of Shi'a pilgrims who marched to the cities of Karbala and Najaf for an annual religious holiday. In 2004, the terrorists launched coordinated strikes against the pilgrims, killing scores of innocent worshipers. This year, the pilgrimage was largely peaceful, thanks to the courage and the unity of the Iraqi security forces. In the midst of today's sectarian tension, the ability of Iraqis to hold a peaceful gathering by millions of people is a hopeful sign for the future of Iraq.

In these last few weeks, we've also seen terrible acts of violence. The kidnappings and brutal executions and beheadings are very disturbing. There's no place in a free and democratic Iraq for armed groups operating outside the law. It's vital to the security of a free Iraq that the police are free of militia influence. And so we're working with Iraqi leaders to find and remove leaders from the National Police who show evidence of loyalties to militias. We're partnering U.S. battalions with Iraqi national police to teach them about the role of a professional police force in a democratic society. We're making clear to Iraqi leaders that reining in the illegal militias must be a top priority of Iraq's new government when it takes office.

The violence we're seeing is showing the Iraqi leaders the danger of sectarian division and underscoring the urgency of forming a national unity government. Today, Iraqi leaders from every major ethnic and

religious community are working to construct the path forward. Our Ambassador to Iraq, Zal Khalilzad, is helping Iraq's leaders reach out across political and religious and sectarian lines, so they can form a government that will earn the trust and the confidence of all Iraqis.

Putting aside differences to build a democracy that reflects the country's diversity is a difficult thing to do. It's even more difficult when enemies are working daily to stop your progress and divide your nation. Yet Iraqis are rising to the moment. They deserve enormous credit for their courage and their determination to succeed.

Iraqi leaders are coming to grips with an important truth: The only practical way to overcome the divisions of three decades of tyranny is through democracy. Democracy is the only form of government where every person has a say in the governance of a country. It's the only form of government that will yield to a peaceful Middle East. So Iraqis are working to overcome past divisions and build a free society that protects the rights of all its citizens. They're undertaking this progress with just a year's experience in democratic politics.

Many of the institutions and traditions we take for granted here in America—from party structures to centuries' experience with peaceful transitions of power—are new to Iraq, so we should not be surprised if Iraqis make mistakes or face setbacks in their efforts to build a government that unites the Iraqi people.

We're beginning to see the signs of progress. Earlier this month, Iraqi leaders announced they had reached an agreement on the need to address critical issues, such as de-Ba'athification in the operation of security ministries and the distribution of oil revenues, in the spirit of national unity. They agreed to form a new national security council that will improve coordination within the government on these and other difficult issues. This council will include representatives from all major political groups, as well as leaders from Iraq's exec-

utive, judicial, and legislative branches. As a result of this council's considered advice, the Iraqi Government that emerges will be more effective and more unified.

Another important sign of progress is that Saddam Hussein is now being called to account for his crimes by the free citizens of a free Iraq. Millions of Iraqis are seeing their independent judiciary in action. At the former dictator's trial, Iraqis recently saw something that's got to be truly amazing to them. When Saddam Hussein stood up and began to give a political speech, the presiding judge gaveled him down. Saddam growled at the judge, declaring, "I'm the head of state." The judge replied, "You used to be the head of the state. And now you're a defendant." Three years ago, any Iraqi who addressed Saddam in this way would have been killed on the spot. Now the former dictator is answering to a judge instead of meting out arbitrary justice, and Iraqis are replacing the rule of a tyrant with the rule of law.

Finally, some Americans are asking if it's time to pull out our troops and leave the Iraqis to settle their own differences. I know the work in Iraq is really difficult, but I strongly feel it's vital to the security of our country. The terrorists are killing and maiming and fighting desperately to stop the formation of a unity government because they understand what a free Iraq in the heart of the Middle East means for them and their ideology. They know that when freedom sets root in Iraq, it will be a mortal blow to their aspirations to dominate the region and advance their hateful vision. So they're determined to stop the advance of a free Iraq, and we must be equally determined to stop them.

The irony is that the enemy seems to have a much clearer sense of what's at stake than some of the politicians here in Washington, DC. One Member of Congress who has proposed an immediate withdrawal of American forces in Iraq recently explained that what would happen after American forces pulled out was this:

He said, "They'll fight each other; somebody will win; they'll settle it for themselves." While it might sound attractive to some, it would have disastrous consequences for American security. The Iraqi Government is still in transition, and the Iraqi security forces are still gathering capacity. If we leave Iraq before they're capable of defending their own democracy, the terrorists will win. They will achieve their stated goal. This is what the terrorists have told us they want to achieve. They will turn Iraq into a safe haven. They will seek to arm themselves with weapons of mass destruction. They will use Iraq as a base to overthrow moderate governments in the Middle East. They will use Iraq as a base from which to launch further attacks against the United States of America.

Mindful of recent history, I ask you to think about what happened in Afghanistan. In the 1980s, the United States helped Afghan freedom fighters drive the Soviet Red Army from Kabul, and once the Soviets withdrew, we decided our work was finished and left the Afghans to defend themselves. Soon the terrorists moved in to fill the vacuum. They took over the country; they turned it into a safe haven from which they planned and launched the attacks of September the 11th.

If we leave Iraq before the job is done, the terrorists will move in and fill the vacuum, and they will use that failed state to bring murder and destruction to freedom-loving nations.

I know some in our country disagree with my decision to liberate Iraq. Whatever one thought about the decision to remove Saddam from power, I hope we should all agree that pulling our troops out prematurely would be a disaster. If we were to let the terrorists drive us out of Iraq, we would signal to the world that America cannot be trusted to keep its word. We would undermine the morale of our troops by betraying the cause for which they have sacrificed. We would cause the tyrants in the Middle East to laugh at our failed re-

solve and tighten their repressive grip. The global terrorist movement would be emboldened and more dangerous than ever. For the security of our citizens and the peace of the world, we will not turn the future of Iraq over to the followers of a failed dictator or to evil men like bin Laden and Zarqawi.

America will leave Iraq, but we will not retreat from Iraq. We will leave because Iraqi forces have gained in strength, not because America's will has weakened. We will complete the mission in Iraq because the security of the American people is linked to the success in Iraq.

We're pursuing a clear strategy for victory. Victory requires an integrated strategy: political, economic, and security. These three elements depend on and reinforce one another. By working with Iraqi leaders to build the foundations of a strong democracy, we will ensure they have the popular support they need to defeat the terrorists. By going after the terrorists, coalition and Iraqi forces are creating the conditions that allow the Iraqi people to begin rebuilding their lives and their country. By helping Iraqis with economic reconstruction, we're giving every citizen a real stake in the success of a free Iraq. And as all this happens, the terrorists, those who offer nothing but death and destruction, are becoming isolated from the population.

I wish I could tell you the violence in Iraq is waning and that all the tough days in the struggle are behind us. They're not. There will be more tough fighting ahead with difficult days that test the patience and the resolve of our country. Yet we can have faith in the final outcome because we've seen freedom overcome the darkness of tyranny and terror and secure the peace before. And in this century, freedom is going to prevail again.

In 1941, the year the Freedom House began its work, the future of freedom seemed bleak. There were about a dozen lonely democracies in the world. The Soviet Union was led by the tyrant Stalin, who

massacred millions. Hitler was leading Nazi Germany in a campaign to dominate Europe and eliminate the Jewish people from the face of the Earth. An imperial Japan launched a brutal surprise attack on America. Today, six decades later, the Soviet Empire is no more; Germany and Japan are free nations, and they are allies in the cause of peace; and the majority of the world's governments are democracies.

There were doubters six decades ago who said that freedom could not prevail. History has proved them wrong. In this young century, the doubters are still with us but so is the unstoppable power of freedom. In Afghanistan and Iraq and other nations, that power is replacing tyranny with hope, and no one should bet against it.

One of the greatest forces for freedom in the history of the world is the United States Armed Forces. In the past 4½ years, our troops have liberated more people than at any time since World War II. Because of the men and women who wear our Nation's uniform, 50 million people in Iraq and Afghanistan have tasted freedom, and their liberation has inspired millions more across the broader Middle East to believe that freedom is theirs as well.

This is going to be freedom's century. Thank you for giving me a chance to come and visit with you. May God bless. [*Applause*]

Okay, sit down, please. All right, I'll be glad to answer some questions.

Yes, sir. Yes, please.

#### *Millennium Challenge Account*

*Q.* I have a question. I am from Mali. A couple of years ago, the Millennium Challenge Account was created to help countries that were already on the path to democracy. Looking at a country like Mali in West Africa, where just yesterday we celebrated our 15 years of freedom—we haven't seen any money yet. [*Laughter*]

*The President.* I like a good lobbyist. [*Laughter*]

*Q.* Well, isn't it cheaper and easier for people—people from Mali and all throughout Africa, who already are in love with America, and isn't it easier politically to you and show to your critics that, look, in Iraq, maybe we need some [*inaudible*]—we're in there, but in places like Mali that have freedom, we can step in and help them without expecting something back? Thank you.

*The President.* No, I appreciate that. I—he's referring to a foreign policy initiative of mine called the Millennium Challenge Account. I want to thank the Members of Congress who have been strong supporters of the Millennium Challenge Account. I would hope they would continue to support the Millennium Challenge Account.

The Millennium Challenge Account, the idea behind it was, is that nations are capable of defeating corruption; they are capable of investing in health and education for their citizens; and they are capable about supporting market-oriented economies. If you believe that, then why shouldn't our aid say, you get aid in return for fighting corruption, investing in the health and education of your citizens, and putting market-oriented economic measures in place?

We started the process recognizing that a lot of people would raise their hands, including Mali, by saying we'll start with the poorest nations first. I must confess that our Millennium Challenge Account, while funded in its first year, was a little slow to get going. We've changed the structure to make sure money gets out the door so that other nations such as Mali will be eligible for application and consideration.

I can remember when I first put in the Millennium Challenge Account. People were somewhat aghast that the United States would dare ask for conditions for its money. Those are the defeatists in the world, those who believe that certain people can't fight corruption. We believe opposite of that in America. We believe in high

standards, and the taxpayers sure believe in accountability for our foreign dollars.

So thank you for bringing it up. I appreciate a man who is willing to stand up and defend his country in front of the President and all the cameras. [Laughter]

Yes, sir.

#### *Liberia/Sudan*

Q. Mr. President, I'm from The Economist magazine. I understand, Mr. President, you met with President Obasanjo of Nigeria today. I wonder if you could tell us what you discussed and also if—

*The President.* No, but keep going. [Laughter]

Q. Okay. Are you now confident—

*The President.* I can tell you what I discussed.

Q. Are you now confident that Charles Taylor, the recently recaptured Liberian warlord, will stand trial?

*The President.* I am much more confident today than I was yesterday. [Laughter] This is what we call embedding. [Laughter] I talked to the President about a variety of things, one of which, of course, was Charles Taylor. There is a process to get Charles Taylor to the court in the Netherlands. Such a process will require a United Nations Security Council resolution. Secretary Rice, who was in the meeting, told me that she thought that might happen relatively quickly. And so therefore, I think he is headed for where he belongs, which is trial.

I spoke to President Sirleaf about this issue as well. She was deeply concerned that Charles Taylor could be in a position to disturb this young democracy. I must tell you that I was most impressed by the leader from Liberia. I think America is going to be—should be very anxious to work with her and help this country overcome years of violence.

But I do believe that he is headed for trial. We certainly will do our efforts in the diplomatic channels to see to it that that's the case.

We also talked about Sudan. I'm deeply worried about the human conditions in Darfur. Ours is a government that spoke out about genocide, and we meant it. I thanked President Obasanjo for the AU presence in the Sudan. I told him, however, I did not think the presence was robust enough. I do believe there needs to be a blue helmeting of not only the AU forces but additional forces with a NATO overlay. And the reason I believe that NATO ought to be a part of the operation is twofold: one, to provide logistical and command and control and airlift capability but also to send a clear signal to parties involved that the West is determined to help a settlement—to help affect in a settlement, that this is serious business, that we're just not playing a diplomatic holding game, but that when we say "genocide," we mean that the genocide needs to be stopped.

Secondly, we talked about the need for a parallel track, a peace process to go forward, that there needs to be unity amongst the rebel groups. The President told me he has met with the rebel groups, trying to come up with a focused message that can then be used to negotiate with the Government of Sudan. There is a pretty good template to go by, a resource-sharing arrangement. There's a governing structure that, if implemented, would be—in the north/south—because of the north/south agreement, could be a go-by for the Darfur region. But those are the two main things I talked to him about.

Yes, sir. Are you embedded? [Laughter]

#### *Environment/Alternative Fuel Sources*

Q. From Australia—I've got a question about global warming. A couple of days ago, in the Australian Parliament, Tony Blair called for greater action. And this seems to be something that the U.S. President could make a major difference on. There's a virtual consensus that the planet is warming. If you addressed issues like emissions, fuel efficiency, issues to do with alternative energy in your last few years

as President, it could make a significant difference, I think, to the—

*The President.* I appreciate you bringing that up.

*Q.* And I suppose I want to know, what is your plan?

*The President.* Good. We—first of all, there is—the globe is warming. The fundamental debate: Is it manmade or natural? Put that aside. It is in our interests that we use technologies that will not only clean the air but make us less dependent on oil. That's what I said in my State of the Union the other day. I said, look—and I know it came as quite a shock to—for people to hear a Texan stand up and say, "We've got a national problem; we're addicted to oil." But I meant what I said.

Being addicted to oil is a problem for our economy. In a global economy, when burgeoning economies like India and China use more fossil fuels, it affects the price of gasoline here in America. In a world in which sometimes people have got the oil we need, don't like us—kind of a undiplomatic way of putting it—it means we've got a national security issue.

I have—much of my position was defined early on in my Presidency when I told the world I thought that Kyoto was a lousy deal for America. And I tell you why it was a lousy deal for America. It meant that we had to cut emissions below 1990 levels, which would have meant I would have presided over massive layoffs and economic destruction. I believe the best way to put technologies in place that will not only achieve national objectives like less addiction to oil but also help clean the air is to be wealthy enough to invest in technologies and then to share those technologies with parts of the world that were excluded from the Kyoto Protocol.

And so I guess I should have started differently when I first became President, and said, "We will invest in new technologies that will enable us to use fossil fuels in a much wiser way." And what does that mean? Well, it means that we've got

to figure out how to use ethanol more in our cars. Ethanol is produced mainly by cane and corn. But we're near some breakthroughs—that we can use saw grass and biomass to be able to produce ethanol.

It means we got to continue investing in hybrid batteries. Ours is a country where many people live in urban centers, like Washington, DC. And it's possible to have a hybrid battery breakthrough which says that the first 40 miles of an automobile can be used by electricity alone. Right now the hybrid vehicles, as you know, switch between gasoline and electrical power. But that consumes gasoline, which means we're still reliant upon oil. The idea is to get off of oil.

On the electricity front, we need to be using nuclear power more in this country, in my judgment. It is a renewable source of energy that has zero gas emissions. We've got a great natural resource here in America called coal. We have 250-plus years of coal reserves. But we also recognize that by—burning coal causes environmental problems, and so we're spending billions on research to come up with clean coal technologies. And we'd like to share those technologies with other nations of the world that are beginning to grow, so that they are good stewards of the environment as well.

And so I got a comprehensive plan that uses technologies to help this Nation from a national and economic perspective but also will help improve the global economy—the environment from those new, burgeoning economies that are—like China and India, to be exact.

Yes.

#### *Iraq/Syria/Iran*

*Q.* Mr. President, first, thank you for your remarks and your commitment to advance freedom and the courage to use your office to follow through with it. My question is about Iraq. And I wonder if you could tell us, to what degree do you think the insurgency inside Iraq is dependent—

dependent on foreign support, particularly from regional powers—

*The President.* Yes.

*Q.* —and what are we doing, or what could we do more to prevent that?

*The President.* There are three elements of the insurgency. One are the rejectionists. Those are the Sunnis that didn't feel like they were going to get a fair shake in what they viewed would be a Shi'a-led government. They are slowly but surely recognizing that democracy is their best hope. Then there are the Saddamists. Those are the folks that received enormous privilege under Saddam Hussein, and they're furious that they don't have those privileges. And the last group, of course, is Al Qaida. Now, Al Qaida has stated clearly what I told you during the speech. They have made it abundantly clear that their ambitions are to drive us from the country. They're the ones that we worry about—were receiving foreign assistance—money, as well as safe haven.

The two countries that worry us the most, of course, are the two neighboring countries next to Iraq. That would be Syria and Iran. And we are making it abundantly clear to both that we think it's in their interests to let an Iraqi democracy develop.

Syria has been a—Syria is a complicated issue because of Lebanon. It's not complicated; actually, it's quite clear what needs to be done. Our first focus with Syria, besides stopping cross-border infiltration—that, frankly, has required our—required us to adjust our tactics on the ground and spend a lot of time training people to stop the cross-border infiltration, because there's some doubt as to whether or not we're getting much cooperation on the other side of the border. But we spend a lot of time working with, particularly, France in making it abundantly clear we expect the Syrians to allow the Lebanese democracy to evolve.

I guess it's kind of hard to give up on a country on which you've had a stranglehold. There was a troop withdrawal, as you

know. My main concern is to whether or not they withdraw more than just troops, whether they draw intelligence services and people that were in a position to influence the future of the country.

It is very important that there be full cooperation in the investigation of the death of Mr. Hariri. But our message to Bashar Asad is that we expect—if they want to be a welcomed country into the world, that they have got to free Lebanon, shut down cross-border infiltration, and stop allowing Hizballah, PIJ, and other terrorist groups to meet inside the country.

The Iranian issue is more—in dealing with Iran, we're dealing with more than just influence into the formation of a national unity government. I happen to believe that ultimately the Iraqis will say, we want to have our own government. We want to be on our own feet. We've had a little problem with Iran in the past, and therefore, let us, kind of, manage our own affairs. No question, right now we're concerned, however, about influencing the formation of the government, but also, obviously, we're deeply concerned about whether or not the Iranians have the wherewithal and/or the knowledge about building a nuclear weapon.

My negotiation strategy on this issue is that I believe it is better for the Iranians to hear from more than one voice as to whether or not the world accepts them as a viable nation in the international affairs. And so we have asked Germany and France and Great Britain to take the lead, to send a clear message to the Iranian Government.

It's difficult to negotiate with nontransparent societies. It's easier for a nontransparent society to try to negotiate with countries in which there's a free press and a free political opposition and a place where people can express their opinions, because it sometimes causes people to play their cards publicly. In negotiating with nontransparent societies, it's important to keep your counsel.

But I am pleased with the progress we have made on the diplomatic front. As you know, there are now talks of a Presidential letter out of the United Nations, and my Secretary of State, working with Ambassador John Bolton, are constructing such a letter and trying to make sure that there is common consensus, particularly amongst the P-5 plus Germany. As a matter of fact, Condi leaves, I think, today, if not tomorrow, for Europe to sit down with the P-5 plus Germany to continue keeping people knitted up on our strategy. Obviously, there's some cross pressures to some members of the P-5. There's a lot of politics in Europe, there's—which is a good thing, by the way, that people are questioning whether or not it's worth it to try to stop the Iranians from having a nuclear weapon. I just believe strongly it's worth it. Now is the time to deal with these problems before they become acute.

I'm troubled by a nontransparent regime having a weapon which could be used to blackmail freedom-loving nations. I'm troubled by a President who has declared his intentions to destroy our ally, Israel. And we need to take these admonitions and these threats very seriously in order to keep the peace.

So issues around Iraq are complicated and necessary, and that's why my administration spends a lot of time on them.

Yes, sir. You're going to ask me if I read the book. [Laughter]

#### *Spread of Democracy/Russia/China*

Q. Mr. President, as you noted at the beginning—I'm with Freedom House, and I gave the President a copy of our annual report, "Freedom in the World," before he took the stage. And as you noted, our reports have—

*The President.* Little print, no pictures. Go ahead. [Laughter]

Q. It's the bible of freedom, yes. [Laughter]

*The President.* I'm the funny guy. Go ahead. [Laughter]

Q. Our publications have confirmed that freedom is advancing overall in the world during the years of your administration. There is one big, important country, however, in which freedom has declined year by year the last several years, and that's Russia.

*The President.* Correct.

Q. You have a big summit coming up in July with the G-8 in St. Petersburg. There's been an increasing crackdown on civil society and political parties in Russia. And I'm wondering, if the time between now and the St. Petersburg summit, what you and the administration can do to raise these issues and try to help the defenders of freedom in Russia.

*The President.* I appreciate that. The G-8 will raise the issue. That's the interesting thing about, kind of, meetings and moments. And I have worked very hard to convince Vladimir Putin that it's in his interest to adopt Western-style values and universal values—rule of law, freedom of religion, the right to people to assemble, political parties, free press.

My strategy with Vladimir Putin is to be in a position where I can talk frankly to him. I've heard some say, "Don't go to the G-8." I think that would be a mistake for the United States not to go to the G-8. I remember very—because I need to be in a position where I can sit down with him and be very frank about our concerns.

I remember meeting with the human rights groups in Russia. And I asked them, "What strategy should I take as the President of the United States? Should I be in a position where I can engage the President in frank discussion? Or should I publicly scold him, in which case he may turn a deaf ear?" And the universal consensus for them kind of played to my own instincts, which is that I think it's important for the United States to be in a position to be able to express our concerns.

Listen, we work with Russia on a variety of issues. Nunn-Lugar is an issue where

we work with Russia, for example. But I spend a lot of time with the President making it clear that he should not fear democracy on his border, nor should he fear democracy within his borders. I like to make the case to him that democracies don't war with each other. You don't need to remind him about the brutal history that the Soviet Union went through in World War II. But I do think it's illustrative to point out—like I pointed out in the speech—that Europe is now free, whole, and at peace, and there's a reason why. It's what Americans have got to understand. We tend to forget. Ours is a society where things are, like, instant, so therefore, history almost is, like, so far back it doesn't count. But it counts when you really think about life lost on the continent of Africa and wonder why there's no war today. And there's a reason why there's no war today. And that's because history has proven democracies don't war with each other.

And so in my explanation, to different events that are taking place, to the President, I try to point to historical truths, that it's in an interest of a country like Russia to understand and welcome democracy. It's in an interest for the country to give people the freedom to express themselves.

I do spend time with him in private talking about issues like the NGO law. And as you noticed, they changed laws—obviously now the—it's how laws get implemented matters. But I'm confident that will be a topic of discussion.

I haven't given up on Russia. I still think Russia understands that it's in her interest to be West, to work with the West, and to act in concert with the West. Nobody is saying to Russia, you must look like the United States of America. But we are saying there's just some basic institutions that ought to be adopted. And I will continue making that case.

I do think it's important for me to go to the G-8 so I can make the case. One of the things that I find is that nations oftentimes approach me at these different

meetings we go to and say, "Hey, pass the message for me, will you? We need you to pass a message, Mr. President. You're the person who can best make the case." And so I'm pretty confident in these countries' interest that I be in a position where I'm able to walk into the room with the President of Russia and him not throw me out. And, in fact, that he—you know, we've got a relationship—personal relationships such that there is the possibility for candid conversation.

The other big opportunity for democracy, of course, is China. President Hu Jintao is coming to our country, as you know. I will continue to remind him, ours is a complex relationship and that we would hope that he would not fear a free society, just like it doesn't appear that he's fearing a free market. I happen to believe free markets eventually yield free societies. One of the most pure forms of democracy is the marketplace, where demand causes something to happen. Excess demand causes prices to—the supply causes prices to go up, and vice versa. That stands in contrast to governments that felt like they could set price and control demand.

One of the things that I think should be a part of any foreign policy is to shine the spotlight, is to open societies. You heard me talk about what it's like to deal with nontransparent societies. I think a useful tool of foreign policy for our country is try to let the sun shine in. China has recently read the book on Mao. It's an amazing history of a couple of things: one, about how fooled much of the world was, and how brutal this country was. And yet now there's more transparency into China.

I will make it clear, of course, to the President that our relationship is vital on a variety of fronts. One such front is the economy, and we expect that country to treat us fairly. We expect there to be strong adherence to intellectual property rights. We believe that we grow pretty good crops and grow good beef, and perhaps it's in their interest to open up their markets to

our agricultural products. We expect our manufacturers to be treated fairly. We don't believe in state subsidization of industry to give unfair advantage to state-owned enterprise. In other words, there's a variety of things we'll talk about, and one of them is freedom.

I have been—I don't hesitate to talk to him about my visits with the Dalai Lama who is—comes and sees me in the White House; nor do I hesitate to talk about the concerns of the Catholic Church. I'm anxious to talk to him about the evangelicals' concerns inside of China, reminding him that a whole society is one that's just more than open markets; there's institutions and common values that are necessary.

Some, of course—let me say, if I might make a philosophical statement about how I think. As Peter mentioned, there is a philosophical debate taking place in the world—at least I think it is—and that is, whether freedom is universal, or whether, one way to put it, it just applies to only a handful of us. I believe in the universality of freedom. That's what I believe. Much of my foreign policy is driven by my firm belief that everybody desires to be free; that embedded in the soul of each man and woman on the face of the Earth is this deep desire to live in liberty. That's what I believe. I don't believe freedom is confined just to the United States of America, nor do I believe that we should shy away from expressing our deep desire for there to be universal liberty.

You hear the debate, "Well, they're just imposing their values. That's all they're doing." Well, those are the folks who must not think that freedom is universal. They're not American values. There's something universal about the notion of liberty—at least I think it is. And that's what's going to drive my foreign policy. I'll be unabashed about trying to work for more free societies. I believe that's the calling of the 21st century. I meant what I said, that in the 21st century, America ought to work

to end tyranny in our world. It is a noble goal for the United States of America.

I'm concerned about isolationist tendencies in our country that would say, "Well, maybe this isn't—maybe we're not up to this task." Well, if we're not up to this task, who is up to the task? I'm concerned about protectionist policies in our country, which says to me, "We don't have the confidence to compete anymore. Let us withdraw within our borders." I strongly reject isolationism and protectionism. It's not in our country's interest, nor is it in the world's interest.

There's great talk about what you do as the American President with American influence. I believe American Presidents ought to confidently use American influence for the good of the world, and that includes demanding universal liberty and human rights and human dignity.

Yes, sir.

#### *Spread of Democracy/Egypt*

Q. Mr. President, I'm from the Public International Law and Policy Group. I'm also from Egypt, and I aspire to one day go back there and join Egyptian politics. So my question is—

*The President.* Go for President. [*Laughter*]

Q. I'm working on it; I'm working on it—in 2017, everyone. [*Laughter*] But my question is, would you support the regime of Gamal Mubarak if he takes over after President Mubarak?

*The President.* That's a leading question. [*Laughter*]

Q. —question.

*The President.* No. That's a "question I don't answer" question. [*Laughter*] I support a country which does not fear political movements but is willing to compete with political movements. That's the kind of country I support.

There's a—first of all, I appreciate the fact that there were elections in Egypt. That's positive. I think people in positions of responsibility, like mine, ought to say,

if there seems to be a movement gaining ground on the streets, the question ought to be why—not how can we repress it, but what is taking place? What is it that's causing somebody to be in favor? What are they saying that I'm not saying, or what are they doing that I'm not doing?

Competition for ideas and the votes of people are very healthy in societies. As a matter of fact, it's one of the ways to defeat the terrorists. Terrorists feed on resentment. When people don't feel their voices are heard, they become resentful, and then they become eligible for recruitment. If people don't feel like they have a chance to express themselves and have a government listen to them, they're likely to turn to people—the false prophets, people who subvert a great religion to play on people's frustrations and then use that false prophecy to kill.

And so I—to answer your question is, is that I support an openness in the political process. I think when—I think Egypt is a—has a chance to be one of the leaders of the freedom movement in the Middle East. And I recognize that not everybody is going to embrace this concept of democracy and freedom as firmly as I'd like them to. But all of us have got to continue to advance progress.

One of the interesting debates we have about the freedom movement is whether or not institutions have to be right before there's elections. So in other words, kind of, one of these interesting philosophical debates that's taking place. My answer—you heard my answer—my answer is, you got to have—you can't wait for perfect, because it's an excuse for the status quo.

Elections start the process; they're not the end of the process. They're oftentimes the beginning of the process. And one of the reasons I respect the Freedom House is because you understand that you follow elections with institution-building and the creation of civil society. But for those who say, "Well, we can't have elections until everything is just right or until we know

the outcome of the elections," are those who provide excuse, in my judgment, for a foreign policy which in the past has said, it's okay, just so long as energy is priced okay; and okay, so there's no ruffles on the—the sea looks calm. My problem with that attitude is beneath the surface, there's resentment and anger.

I'll also tell you another—I'm not going to tell you your business in the Freedom House, but I think a movement that must be tapped into in order to advance freedom is the women's movement. I just—there is something universal about the desire to be treated fairly and equally. And therefore, in societies in which women are not being treated fairly and equally—provides great opportunities to advance the cause of freedom. We've got to be wise about how we do it in the United States. Sometimes the stamp of America, obviously, provides those who are trying to resist freedom, giving them an excuse not to; I understand that. But it's—there are great opportunities in the world.

The temptation in today's society is to say, it's not worth it, or certain people can't self-govern. It's really part of the debate in Iraq, isn't it, when you think about it—is, can these people self-govern? And I can understand why some in America say they can't, because all they see is unbelievable violence. And we're a country of deep compassion; we care. One of the great things about America, one of the beauties of our country, is that when we see a young, innocent child blown up by an IED, we cry. We don't care what the child's religion may be or where that child may live; we cry. It upsets us. The enemy knows that, and they're willing to kill to shake our confidence. That's what they're trying to do.

They're not going to shake my confidence, I just want you to know. I understand their tactics, and I know their designs. But I also believe that Iraqis can and want to self-govern. That's what I believe. And so when you see me make decisions or make statements like I make,

you've got to understand it's coming from a basic set of beliefs. That's what I believe. And that's what a decisionmaker ought to do. The decisionmaker ought to make decisions based upon deep-seated beliefs. You don't need a President chasing polls and focus groups in order to make tough decisions. You need Presidents who make decisions based upon sound principle.

Now, people may not agree with the decisions; I understand that. But I hope after this talk, those of you who didn't agree at least know I'm making my decisions based on something I believe deep in my soul and something that's worked in the past. Democracies have yielded the peace. I believe 30 years from now, people are going to look back at this moment and say, thank goodness a generation of Americans stood up and said, "We have faith in democracy, faith in democracy to lay the foundation for peace," and an American President will be discussing issues of peace with duly elected leaders in the Middle East, and our children will be better off for it.

And I want to tell you one anecdote now that you've got me wound up. [Laughter] I sit down at the table with Prime Minister Koizumi. I tell this story all the time, because one of my jobs is to go out and explain to the American people the consequences of the decisions that I have made and why I think it's in our interests. Koizumi and I are not only good friends, but we're partners in peace. We talk about a variety of issues—North Korea is an issue, we talk—you know, he's got 1,000 troops in Iraq. Isn't that amazing, when you think about it? Because he understands the benefits of democracy in the broader Middle East. We're close friends.

Sixty years ago—it seems like an eternity for a lot of people, I recognize that, but it's not that long ago—my dad fought the Japanese, and so did your relatives. They were the sworn enemy of the United States of America. I find it unbelievable part of history that I am now sitting down at the

table with the Prime Minister of Japan talking about the peace, and my dad fought them. And so what happened? What happened was, Japan adopted a Japanese-style democracy. That's what happened. And now they're peaceful. And they sit at the table with their former enemy. I think that's a lesson worth listening to and understanding.

But I bet you after World War II, there were great doubters as to whether or not Harry Truman was doing the right thing to help Japan become a democracy. I see Stevens nodding; he was there. Weren't you? [Laughter] Well, I wasn't. [Laughter] But I'm reading a lot about it. And I believe it's a lesson for all of us in this—in the 21st century. Spreading democracy is hard work. It's hard to overcome sectarian division and torture. It's hard to overcome that. But it's worth it, for the sake of our children and grandchildren.

Yes. Yes, ma'am. Okay, I'll get you over there. [Laughter] You're in the end zone. You're next.

#### *Progress in Iraq*

Q. Oh, I'm next.

*The President.* No, you're not next. She's next. [Laughter]

Q. I'm with Creative Associates, and we're one of the small companies that has the honor to work in Iraq, so today is a real honor to be here. As you were mentioning all the steps that we're going to have to go through in the near future, I'm still very concerned that we might not be concentrating on the suffering of the children.

*The President.* In Iraq?

Q. In Iraq. So I would like to be sure that as the different programs get processed that we don't give up on the children.

*The President.* Good, thank you very much. Our soldiers are good Samaritans. They're unbelievable. I see pictures all the time from family members of our soldiers

in Iraq of their loved one showing compassion to children. No question, I'm concerned about the children in Iraq as well. So our—we've got people in the field who care about the children too. The truth of the matter is, if you care about the children of Iraq, then you would want to make sure that Iraq doesn't slip back into tyranny. Thousands of children lost their parents because of Saddam Hussein.

And so I want to thank you for your work. It's very important for the security situation to improve so that NGOs, people of compassion, are able to help lift lives. But there's a lot of work to be done. There's just a lot of work to be done—same in Afghanistan. First of all, we've rebuilt thousands of schools in Iraq, as we have in Afghanistan as well. And the world is more hopeful as the result of the liberation of these people. Afghanistan—it's obvious—when you have a society in which young girls weren't allowed to go to school because of the Taliban—thought it was, like, against humanity to send girls to school, and now they can, there's an amazing change in that society.

But I readily concede there's a lot of work left to be done. It's—there's no such thing as instant success. I told you that—and by the way, after World War II, Germany and Japan took a while to rebuild, and it took a while for those societies to become stable societies. It just takes a while.

Our march, by the way, between Revolution, liberation, and Constitution wasn't all that smooth either. And frankly, our adhering to the full extent of the liberties embedded in the Constitution and the Declaration of Independence took a while. I realize that when I talk to my Secretary of State. We were—we had people enslaved in the United States for a century. It takes a while. It's hard work. And the fundamental question the American people have to answer is, is it worth it? You've got my position; it absolutely is worth it.

Freedom is contagious, by the way. As liberty begins to spread in the Middle East, more people will demand it. And we should not shirk our duty, nor should we be afraid to encourage reformers. The worst thing that could happen, in my judgment, for the peace of the world is for the United States to lose our nerve and retreat. And there's—anyway. Yes.

Thank you. You've been very anxious. This better be a good one. Yes, you've been waving and yelling over there—[laughter]—waving, yelling, stomping your feet. It's a free society. That's what happens. [Laughter]

*Message to the People of Iraq*

Q. I'm Iraqi-American.

*The President.* Thank you.

Q. Thank you, Mr. President. I think based on what—review over 30 years of Saddam's oppression and the regime in Iraq, and also based on the belief that you have—as an Iraqi mother, Iraqi-American mother and a woman—and I went back 2 years ago without—I worked for a year—there's always that concern and still worrisome. These are beautiful messages, yet there's a big gap that never crosses that ocean. It never gets to the Iraqi, to the simple man, the Iraqis facing despair, disillusionments, all kinds of things. I speak to Iraqi friends and families on daily basis. This is what their message is: We hear of these things, but we don't see it. It doesn't get to us.

*The President.* Yes, tangible results on the street, right.

Q. But it's not only us, Mr. President. It's not only that. It doesn't reach them in any kind of media, unfortunately. So how can we do that? I've been wondering about this, and you are the only person, I think, who can maybe do something.

*The President.* Talk to the Iraqi people?

Q. Talk to someone, talk to the Iraqi, relay that message that we are honest, we have great beliefs, and we want to do something.

*The President.* Well, I appreciate that. First of all, I've got great confidence in the people of Iraq. Iraqis are entrepreneurial; they're well-educated; they're peace-loving. Iraqi mothers want their children to grow up in a peaceful world. That's what mothers want all over the world.

And so I—what my concern is, is that the tangible benefits of democracy aren't reaching into people's pockets yet. I mean, there's got to be a direct correlation with someone's lifestyle, someone's standard of living, and a style of government. And that's one of the things that people who push freedom understand. I mean, there's got to be a—people got to see the direct benefits at some point in time about being free. One direct benefit is that there's not going to be a central government summarily pulling you out of society and killing you if need be. That's the biggest benefit.

But there also has to be tangible benefits on the street. I try to speak to the Iraqi people all the time. Sometimes the message gets through the filters; sometimes it doesn't. I want them to hear a couple of things. I want the Iraqi people to hear I've got great confidence in their capacity to self-govern. I also want to hear—the Iraqi people to hear it's about time you get a unity government going. In other words, Americans understand newcomers to the political arena, but pretty soon, it's time to shut her down and get governing.

I want the Iraqi people to hear that we care deeply about the individuals in Iraq, regardless of their religion. That's what we care about. And we want them to worship freely. I like the fact in Iraq that there's a burgeoning free press; there's a lot of press, which is a positive sign. It's a healthy indication. I also want the Iraqis to hear that while there's a political debate going on here in America, I believe in what we're doing, and we're not going to leave prematurely, that we have got a mission, along with the Iraqis, and that is to secure a country for its democracy and to help them defend themselves, deny Al Qaida a safe

haven, and have an ally in the war on terror.

And so I thank you for that admonition for me to speak out to the Iraqi people. I try to do it as much as I possibly can.

Yes, ma'am. No, not—[*laughter*]. Ambassador, you want to ask a question next? Yes, okay, fine.

#### *Immigration Reform*

*Q.* Good afternoon, Mr. President. I'm glad to see you here speaking today. I have a question about the immigration issue that's going on right now. And I'm just curious—the Senate will probably pass a measure; the House has already passed a measure. And I'm curious, what kinds of components are you looking for in an immigration bill that you can support? And how do you reconcile a guest-worker program for undocumented residents who are here, versus those who are on line and in the system waiting 5 and 10 years to get here?

*The President.* No, that's a great question. Thanks. It's obviously topic du jour and—[*laughter*]. Pretty fancy, huh? Topic du jour? [*Laughter*] I don't want to ruin the image. [*Laughter*]

I believe there ought to be three components to good immigration law. First of all, I hope we get a bill out of the Senate. There's one out of the House. It goes to what's called conference. And here's my suggestions: One, that we're a nation of law, and we ought to enforce our borders. Both the House and the Senate passed good border enforcement measures. We're modernizing or upgrading our border. We recognize that it's important to have more Border Patrol, which we do. But the Border Patrol needs additional tools in order to do their job. We're talking about long borders. It's a subject I'm quite familiar with since I was the Governor of a State that had a long border with Mexico. And so the American people have got to know that we'll enforce law.

Secondly, we've got to enforce—and by the way, part of enforcing law means to

make sure that when somebody is caught coming into our country illegally, they're not let back out in society. We had a real issue with detention beds, particularly for non-Mexican illegal people coming in. We'd catch people from Central America. And people worked hard; they spotted people being smuggled across. They were detained—the people being smuggled across. They said, "Check in with your immigration officer in 15 days," and nobody did. And so now we've added the number of detention beds and are working for expedited removal procedures with the countries in Central America. As far as the Mexican folks sneaking in the border, they're sent back very quickly, back into their country. Since 2001, believe it or not, we've stopped 6 million people trying to sneak into our country—an amazing statistic. It's a lot.

Secondly, there's got to be better interior enforcement. But it's very difficult to enforce—get an employer to enforce the law when the employer is uncertain as to whether or not the documentation being presented for the needed worker is legal.

It turns out—what's very interesting is that when you deny—when you make something illegal and there's a demand for it, people find ways around it. That's why you've got a whole smuggling industry called *coyotes*. That's why you've got unbelievable document forging going on. That's why there's tunnels. I mean, there's imaginative ways by people—by unscrupulous people to take advantage of people who are coming here to do an honest day's work.

Thirdly, my judgment is, you cannot enforce the border without having a temporary guest-worker program. The two go hand in hand. There are people doing jobs Americans will not do. Many people who have come into our country are helping our economy grow. That's just a fact of life. And I believe that we ought to say to somebody doing a job an American won't do, here is a tamper-proof identity card that will enable you to be here for a period

of time. And if that person wants to become a citizen of the United States, because we're a nation of law, they get at the end of the line, not the beginning of the line.

I also believe—and the Senate is working through different measures to say to the person getting into the line, there's a consequence for being here illegally. Now, if Congress believes that the line is too long or that we should facilitate people's capacity to then get a green card and become a citizen, increase the number of green cards. But people who have been here legally should not be penalized by someone who's been here illegally.

And so I'd like to tell the American people, we are a nation of law but that doesn't preclude us from being a welcoming nation. I think a system which forces people underground and into the shadows of our society, which causes people to have to sneak across our border and risk their life, is a system that needs to be changed.

I also know—and I used to tell this to people down there in Texas—family values don't stop at the Rio Grande River. If you're a mother or a father who's worried about putting food on the table and you're living in an impoverished area and you know there's a job that Americans won't do here, you'll come to do it for the sake of your family. And therefore, I think it makes sense to have a temporary-worker program that says, you're not an automatic citizen, to help, one, enforce the border, and two, uphold the decency of America. If our Border Patrol agents don't have to focus on people trying to sneak across to get a job, they will be able to be more focused on people smuggling drugs, smuggling guns, smuggling terrorists.

And so I look forward to the debate. I'm going to say again what I've said before on this debate. It's very important for all of us in this debate to conduct ourselves with the following principles in mind: One, we're a nation of immigrants; two, our soul is refreshed by newcomers to our society;

three, we love the idea of people starting with nothing and ending up with something in America; four, we value family values, no matter where they may be; and five, we've got to be careful about the language we use when it comes to debating this important subject. People should not pit neighbor against neighbor, group of people against group of people in our country. Ours is a nation that's able to assimilate people because we believe in human rights and human dignity of all.

Final question.

*Palestinian Government/Israel*

Q. Mr. President—

*The President.* Okay, two questions. Please, ma'am. You're last. You're the last guy. You're the closer. [*Laughter*] It's a baseball term. Yes, you're the closer. You've been persistent. [*Laughter*]

Q. Thank you, Mr. President, and I think I sprained my arm trying to get your attention. But the main reason for that is because I think I speak for the unheard people. I'm a Palestinian, and I come from a refugee camp, and I'm currently working at the World Bank.

*The President.* Welcome.

Q. Thank you. What can I say to my cousins, my friends, people in the streets who are asking, why is the United States punishing us and cutting funds for people who choose fair and free elections? I think the National Endowment for Democracy has characterized it as the textbook, fair and free elections. Then why are we punishing the people of—I don't mean the government—the people of Palestine—the refugees, the poor, the malnourished mothers and children?

*The President.* No, great question. Thank you for asking it. Just to step back, I believe I'm the first President to have articulated the—my desires for there to be a Palestinian state living at peace with Israel. And I still think it's a real possibility for that to happen. I believe democracies don't war with each other, and I believe a Pales-

tinian democracy is in the interests of the Palestinian people, the Israelis, and the rest of the world.

Secondly, I think that aid should go to suffering Palestinians, but nor should it go to a government, however, which has expressed its desire to destroy its neighbor. If the goal of the United States is two states living side by side in peace, and one government elected says, "We want to destroy one of the parties," it makes no sense for us to support that government. We support the election process. We support democracy, but that doesn't mean we have to support governments that get elected as a result of democracy.

Now, Palestinians must make a choice as to whether or not it makes sense for them to have a government that says they want to destroy their neighbor. I don't think it does. As a matter of fact, I think it's important for governments to say, we want to work out our differences in a peaceful way. But I am concerned about the suffering Palestinian people. I think the U.S. Government has got aid that goes directly to people. And I know that we'll continue to call upon governments in the region to support the Palestinian people.

I weep about the suffering of the Palestinians. I particularly weep about the fact that the leadership has let them down for year after year after year. And now is the time for strong leaders to stand up and say, we want the people to decide. And I was pleased that there was an election in the Palestinian Territories, and I agree with you that the elections were good elections. And—but now the government has to make a choice, and we will continue to watch very carefully about the choice they make.

Final question. Then I'm going down to be with the President of Mexico and the Prime Minister with Canada—Cancun. [*Laughter*] No Speedo suit here. [*Laughter*] Thankfully. [*Laughter*]

*Progress in Iraq*

Q. You ready?

*The President.* Yes. Sorry to interrupt you. Just testing your concentration. [Laughter]

Q. Mr. President, I am on the board of trustees of Freedom House.

*The President.* Thank you for having me.

Q. And my—you mentioned about Iraq.

*The President.* Iraq?

Q. About Iraq, the effect of leaving prematurely and the issue it would cause—is there an opportunity right now to perhaps supplement the American forces and perhaps finally to replace them with a strong, large, broad-based troops, security forces of Muslim countries from North Africa, from Middle East, South Asia, Southeast Asia, which could go in there and then perhaps help in the situation? Because Iraq—a disaster in Iraq is a disaster for the whole region.

*The President.* That's a really good question. I think the preferred strategy is to spend time and efforts on getting the Iraqis stood up so they can defend themselves. At some point in time, the Iraqi citizens are going to have to make the conscious decision that democracy is worth defending. And I appreciate the efforts of some in the Arab world to help train Iraqi police, like the Jordanian academy. There is support for training amongst different Arab nations, as there is from NATO. And the fundamental question is, what will expedite the situation so that the Iraqis are fully prepared to do their job?

So the question—I would reverse your question and say, are we prepared to have others help the Iraqis defend themselves? And the answer is, absolutely. But the Iraqis must be encouraged to continue to take the lead. And that's a measurable part of our progress on the ground, more territories controlled by Iraqis. The march I just described to you was policed by, or guarded by Iraqi units who were in the

lead. That Tall 'Afar example I used the other day talked about the Iraqi divisions in the lead that helped secure this city.

The ultimate solution for Iraq is for there to be a unity government which brings people confidence, one that unites different factions, thereby marginalizing the rejectionists, but also making sure the Iraqi Army is prepared to do what it needs to do, as well as a police force.

When we first got in there, we said, "Well, let's prepare an Iraqi Army for an outside threat." It turns out it wasn't necessary. The biggest threat was inside the country. And so we adjusted our strategy and started training Iraqis so that they are prepared to be able to defend sectors of their country. And now the big—Senator Warner came and briefed us at the White House the other day. He said—and this is what the General is telling me as well—we've made good progress in training the Iraqi Army. The problem is the Iraqi police force. And there is a national police force, which is more efficient than local police forces. It still needs to make sure there are coalition troops embedded in the police force to make sure that these police understand that there's—you don't seek reprisal as a police force. You've got to earn the confidence of all people, no matter what their religion is. And we're still working with local police forces.

So in due respect, I think the question is, how do we expedite more Iraqis to earn the confidence of the Iraqi people. We're dealing with a shattered confidence. There's a sense that, well, they may leave us, or our guys aren't prepared to provide security. And the quicker we can get the Iraqis stood up and trained, the faster the Iraqi people will have confidence, not only in their own security situation but in their government.

And so thanks for the suggestion. Listen, I've enjoyed it; I hope you have. God bless.

NOTE: The President spoke at 12:53 p.m. at the Hyatt Regency Capitol Hill. In his remarks, he referred to Peter Ackerman, chairman of the board, Freedom House; President Ellen Johnson Sirleaf of Liberia; Usama bin Laden, leader of the Al Qaida terrorist organization; senior Al Qaida associate Abu Musab Al Zarfawi; President Olusegun Obasanjo of Nigeria; former President Charles Taylor of Liberia, who was arrested on March 29 in Nigeria on United Nations war crimes charges; President Bashar al-Asad

of Syria; President Mahmud Ahmadi-nejad of Iran; President Vladimir V. Putin of Russia; President Hu Jintao of China; Prime Minister Junichiro Koizumi of Japan; former President Saddam Hussein of Iraq; President Vicente Fox Quesada of Mexico; and Prime Minister Stephen Harper of Canada. Participants referred to Prime Minister Tony Blair of the United Kingdom; and Gamal Mubarak, son of President Mohammed Hosni Mubarak of Egypt.

### Exchange With Reporters in Cancun, Mexico March 30, 2006

*Jill Carroll*

*Q.* Sir, do you have a reaction to Jill Carroll's release?

*The President.* Thank God.

*Q.* What do you know about why she is released?

*The President.* I'm really grateful she's released, and I want to thank those who worked hard for her release, and we're glad she's alive.

It's good to see you all. And I'd like to make sure you work more than you play.

NOTE: The exchange began at 8:07 a.m. at the LeBlanc Spa and Resort. In his remarks, the President referred to American journalist Jill Carroll, who was taken hostage in Baghdad, Iraq, on January 7 and released on March 30.

### Remarks Following a Tour of the Chichen-Itza Archaeological Ruins With President Vicente Fox Quesada of Mexico and Prime Minister Stephen Harper of Canada in Chichen-Itza, Mexico March 30, 2006

[*At this point, President Fox spoke in Spanish, and no translation was provided.*]

*President Bush.* Mr. President, thank you very much for your hospitality. This is a good start to a very important series of discussions. It is an honor to be here with the Prime Minister of Canada as well. We've got vital relations that will matter to the future of our people. And I look forward to the discussions.

And I want to thank you for letting us begin our very important meetings at this very significant historical site. And I congratulate our guide, and I want to thank those who have worked hard to make sure this important part of history is accessible and is available for people to understand the past, so we can better understand the future.

So, Mr. President, thank you for having us.

[Prime Minister Harper spoke in French, and no translation was provided. He then continued in English.]

Prime Minister Harper. And I can repeat the same thing quickly, if you don't mind. Forgive us; that's how we speak Spanish in the north. [Laughter] Wonderful to be here. Thank you for the welcome, President Fox. I think we stand here in a historic

site, a symbol here of our determination to build a new future for all inhabitants of North America. And I am honored to be with President Bush and President Fox and look forward to our discussions.

President Bush. *Gracias, señor.*

President Fox. *Bienvenidos.*

NOTE: The President spoke at 11:15 a.m.

## Remarks Following Discussions With President Vicente Fox Quesada of Mexico in Cancun March 30, 2006

President Fox. We are ready. Good afternoon. I would like to welcome President Bush to Quintana Roo, to Cancun, and to Mexico. It is a great honor to have him here, particularly in this place in Cancun, which is all set and receiving many visitors. But the best visitors are President Bush and Prime Minister Harper, with our working agenda that will be fruitful and positive for the three countries in Latin America.

Some words from Mr. Bush.

President Bush. Mr. President, thank you very much. First of all, thanks for inviting us to Cancun. It's such a beautiful part of the world. The hospitality is magnificent. I know you were hit hard by hurricanes, which reminds me that I need to thank you and the Mexican people for your strong support and help after Hurricane Katrina.

I will never forget being on the—in the gulf coast area of my country, helping people—lift people's spirits. And we went to a school that had been destroyed by Katrina, a little elementary school. And there was the Navy construction team working side by side with members of the Mexican Navy. It was a great sign of cooperation, and it reflects the spirit of friendship that defines the relationship between our two countries and defines our personal relationship.

When you were speaking, I thought about the first time I went to visit you. I was newly elected and flew down to your fantastic ranch. And that started a very important relationship. And I think it's important for the people of our countries to know that while we haven't agreed on every single issue, that nevertheless, we work in the spirit of friendship and cooperation.

Today we had a very important discussion. We discussed border security. The President understands, and I understand, we have an obligation to secure our borders. And I want to thank your Government for sending out such a strong statement about the need for—that the shared responsibility we have. In other words, border security is not just one country's prerogative; it's the prerogative and duty of both countries. And we spent time talking about how to work together to continue to strengthen that cooperation necessary to do our duty.

I also appreciate the President's work to enforce Mexico's southern border. It's a difficult job, but nevertheless, the President shared with me the strategies he's employing to do that job as well.

Obviously, the migration issue came up. I told the President there is a legislative process that's going forward, and that it may look cumbersome to some, but that's

how our democracy works. I told the President that I am committed to having a comprehensive immigration bill on my desk. And by “comprehensive” I mean not only border security—a bill that has border security in it, a bill that has interior enforcement in it, but a bill that has a worker permit program in it. And that’s an important part of having a border that works.

We don’t want people sneaking into our country that are going to do jobs Americans won’t do; we want them coming in, in an orderly way, which will take pressure off of both our borders. And I explained to the President my vision of the citizenship issue. I don’t believe somebody should be allowed to come into our country and get ahead of the line, the citizenship line.

And so I told President Fox that I think a program that will work is somebody working on a temporary basis with a tamper-proof ID card. And if they want to become a citizen, they can get in line but not the head of the line. And I reminded the President I called for an increase of green cards the other day in Washington, DC, as one way to help manage this issue.

But at any rate, we’re in the middle of a legislative process. I’m optimistic we can get a bill done, and I look forward to continuing to work with members of both parties to get a bill done.

We also talked about President Fox’s vision of working together in our hemisphere, particularly in Central America. And he’s proposed a very innovative set of ideas to help stabilize and help encourage growth in Central America, starting with an energy initiative. And of course we appreciate your leadership on that issue, and I look forward to sending some of our experts down to listen to the ideas being talked about.

One idea, of course, we want to inject in the conversation is the idea of developing alternatives to gasoline that comes from crude oil, that we’d like to see more use of ethanol, and how we can work together to increase the crops necessary to

become the feedstock for an ethanol production.

But at any rate, the point I’m making is, is that we’ve got a lot to do in our relationship. President Fox is—if people take an objective look at his record, one of the things that I’m most proud of, and I think our country must be most appreciative of, is the stability of the Mexican economy. It’s important to have a trade partner that has got a stable economy. And, Mr. President, you’ve done a fine job of providing stability and increasing the net worth of your citizens, and that’s important for the American economy as well. The more net worth there is in Mexico, the more likely it is a Mexican may be wanting to buy a U.S. product—and vice versa, by the way. And so our trade has made a difference in the lives of our citizens, and your leadership has made a difference in the state of your economy.

So it’s good to be with you again, sir. Thank you for your warm hospitality.

*President Fox.* Thank you, President Bush. Thank you. I would like to mention with great satisfaction how productive the relation with the United States has been on bilateral basis, how the NAFTA, the Free Trade Agreement of North America has been, in order to promote development here in Mexico. And all this is part of a commitment and obligation of generating opportunities, making sure that we can build up, create jobs, create greater income, revenues for the families in Mexico, the *maquilla*, the—[inaudible]—industry installed in the border of the country.

There is a deficit of 100,000 people. They want to give jobs to 100,000 people due to the great growth that’s going on. And not only in this field but in many other fields, in many other areas, we have been working. We might say that something that appeared in the mass media in Mexico—opposition of a state, clearly, very clearly in Mexico of the political parties—the Congress; the house of representatives;

the upper chamber, the Senators; the Executive power, the President of the Republic; the Governors of the States—everybody, everybody has a very clear idea in the topic of our relationship with the United States and, particularly, migration. It is a shared—shared—responsibility, and we understand very clearly here in Mexico all the main characters of the political scenario that we have to work so as to assume our responsibility.

Furthermore, we are working with Central American countries with the same purpose. Let us assume shared responsibilities. It is very clear for us that tomorrow, the Congress of the United States might approve any sort of bill, any sort of matter, migration-wise. It is a sovereign decision, of course, in the United States, but Mexico assumes its responsibilities to work with passion, with commitment, diligently, with our economy and developing opportunities for our people.

Our commitment with the citizenship is very broad. For example, with the United States, we work closely with Homeland Security, with the Ministry of the Interior here in Mexico, with Secretary Abascal. Secretary Abascal has a total support of the President of the Republic, and the possibility of adding the support of all the ministries and all the different Federal agencies that have to do with safety and security, so that we can give steps forward in this topic on the border.

We want to have a safe border for the benefit of our citizens and for the benefit of our relationship with the United States. Likewise, we have intensified our actions with the OASISS project. We are going after the criminals that are trafficking with people, that are, let's say, promoting illegally the movement of citizens to the United States—the alien smugglers. We have stopped more than 120 of these criminals, alien smugglers.

Likewise, in the southern border, as President Bush said, we are very active, very active on what has to do with patrol,

constructions of different stations so as to stop migrants, illegal migrants, people that are coming illegally to the Mexican territory, and sending them back to their own countries, with due respect to human rights. But we're doing an efficient work in that sense.

Now, with the same type of orientation, the idea that we share with President Bush, to consider an important element to thrust development in the Central American economies so that they can grow, they can generate jobs, that through this project and through this program they can generate actual opportunities in these countries, and this is a program of energy.

With this program, we want to achieve the construction of refineries for oil, different docks to build natural gas, sources of electric energy on the other hand, and conversion of natural gas—liquid, fluid gas to natural gas. It is a program that we shall approve next May, the Central American countries and Mexico. And we are cordially inviting the United States to attend, to know, to observe, to see the project, so as to know how can we interact with the strength and the capacity of North America so as to integrate a strong development and solid process in the Central American countries.

We have spoken—we have mentioned about the whole American canal. We have to reactivate the working commission in this area so that we can discuss ideas and give solutions for both parts, as we have always done, worked together, have a dialog, find solutions. And this is what we have proposed in reference to the total or whole American channel.

Thus, I want to thank President Bush for his attendance, for his presence, and for his work, as well as all his team.

Tomorrow in the trilateral meeting, we will be covering other topics—the topic of safety and security and then some other developing topics amongst the three countries, the three partners that belong to this

bloc of both economy, trade, and association for our prosperity and security of North America.

Thank you.

NOTE: The President spoke at 4:12 p.m. at the Fiesta Americana Condesa Cancun Hotel. President Fox spoke in Spanish, and

his remarks were translated by an interpreter. President Fox referred to Prime Minister Stephen Harper of Canada; and Secretary of Government Jose Carlos Maria Abascal Carranza of Mexico. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following Discussions With Prime Minister Stephen Harper of Canada in Cancun *March 30, 2006*

*President Bush.* Mr. Prime Minister, thank you. This is a—we've had a day full of talks. I had a really good meeting with the Prime Minister on the choppers, flying to the Mayan ruins. We've also had a very good meeting here. We talked about a lot of subjects.

I view the relationship with Canada as a vital relationship for the United States. The relationship, of course, is defined Government-to-Government. It's also defined people-to-people, and there's a lot of people in my country who respect Canada and have great relations with Canadians, and we intend to keep it that way.

The Prime Minister, of course, was—made an emphatic case for softwood lumber. And I appreciate his steely resolve to get something done. And I assured him that our intention is to negotiate in good faith, in a timely fashion, to resolve this issue. And I appreciate your—appreciate you pushing.

We also talked about the mutual values we share: respect for human life and human dignity. And along those lines, I want to thank you very much for two things: one, the quick response that your Government and your country gave to those who suffered by Katrina. It indicates the Canadian people's desire to help humans when they suffer. I appreciate very much your trip to Afghanistan and you and your

Government's support of their fledgling democracy, support of people that have been under the brutal thumb of tyrants—so brutal they wouldn't let young girls go to school—and it's representing the great Canadian tradition of really helping restore human dignity in people's lives.

The Prime Minister and I talked about a variety of subjects. We've got a lot of common interests. We've got a lot of trade between our countries—nearly half a billion dollars in—\$500 billion in the year 2005. And that trade means jobs on both sides of the border. And it's our intention to make sure that we continue to trade as freely as possible so that our people can benefit. All in all, Mr. Prime Minister, I found today to be a valuable day, and I want to thank you very much for your candor.

*Prime Minister Harper.* Thank you very much, Mr. President.

[*At this point, Prime Minister Harper spoke in French, and no translation was provided.*]

I'll try to repeat all of that. [*Laughter*] First of all, just to begin by saying that we had a long meeting both this morning and this afternoon, the President and I, discussing particularly global security issues of national and shared security interests.

And as you know, we're cooperating on these things in places like Afghanistan, Sudan, Haiti. Canada and the United States from time to time will disagree on particular courses of action that should be taken, and we may have different perspectives and even different interests, but there should be no doubt that Canada and the United States share very important common values—values like freedom, democracy, human rights, and the rule of law. We believe that these values are important not only for Canada and the United States, but they are the right of every people on the face of the Earth. We may disagree on how we get there, but that's the objective that we share.

We're going to meet later on in the spring to further discuss cooperation on some of these matters. We're also going to be discussing some initiatives—we've taken to task some of our officials to discuss some energy and environmental concerns. We're anxious—we're in a continental security market, and we're anxious to see our officials discuss not just energy security but how we can harness energy, new energy technology, to make real progress on greenhouse gas emissions and also on pollution. So we'll have some discussions in the next few weeks along those lines.

We're going to move quickly to renew—to sign an agreement to renew NORAD, to take that to Parliament in the not-too-distant future.

Of course, we discussed softwood lumber. The President has expressed his desire to see a resolution. I certainly accept at face value the President's commitment to that. I just reminded the President that Canada's position on this is very clear, and if we don't see a resolution, Canada is cer-

tainly going to continue to pursue all its legal options as well as enhanced support for our industry through this battle.

We talked about issues like passports, Devil's Lake, BSE, all areas where there remain some difficulties and some—[*inaudible*]*—*but I think we agreed to work together to seek some collaboration on all these fronts. In particular—and I didn't mention this in French—we've asked—we're going to be asking Secretary Chertoff and Minister Day to meet as soon as possible, at the highest levels, to do what we can to see how we can accommodate congressional legislation on passport travel issues. These present for us some pretty significant challenges, and we are concerned about the disruptions to trade and other travel that this may bring about.

And let me just end by saying, as I think you heard me say a few days ago, I expressed through Ambassador Wilkins, and I've had a chance to do it—[*inaudible*]*—*how much the Government of Canada appreciates the actions taken by our allies and our friends both in the United Kingdom and in the United States in the liberation of the hostages that were held in Iraq. You know, Iraq, in particular, has been a source of some disagreement—dare I say some tension—between our two peoples, but I think this incident reminds us that when the chips are down, we all pull together and support each other. I hope that's a lesson we keep in mind for the future.

NOTE: The President spoke at 5:40 p.m. at the Fiesta Americana Condesa Cancun Hotel. Prime Minister Harper referred to Minister of Public Safety Stockwell Day of Canada. A portion of these remarks could not be verified because the tape was incomplete.

The President's News Conference With President Vicente Fox Quesada of Mexico and Prime Minister Stephen Harper of Canada in Cancun  
March 31, 2006

*President Fox.* Good morning. Welcome for your interest and your presence and attendance. We have come to an end in this productive meeting, as you well know, with bilateral meetings yesterday and today a trilateral meeting, a very productive one, followed by an enlarged meeting, trilateral-wise, with the attendance of the entrepreneurial community, business, and investment of our three countries. Consequently, we will give you full information.

I would like to ask the Prime Minister of Canada, Stephen Harper, to make some comments.

[*At this point, Prime Minister Harper spoke in French, which was translated as follows.*]

*Prime Minister Harper.* Thank you. Thank you, President Fox, and ladies and gentlemen. I'd like to thank President Fox first of all. It was a pleasure to meet President Fox and President Bush to discuss issues of importance to our countries and our common will to work together.

In North America, we have an economy that is integrated; it is not necessary to differentiate our products. And we have discussed the progress accomplished in the Security and Prosperity Partnership of North America, and we are committed to considering the private sector. First of all, we believe that it is an engine of competitiveness, made up of members of the private sector, that will allow us to make our economies even more competitive.

Our ministers will be working on this. They will be identifying our priorities, and they will make sure that they are followed up. We will be cooperating on issues of importance—on border security, management of urgent situations, as well as energy security. We will prepare a coordinated and exhaustive way to approach the issues of the bird flu, and we will be guided by

common principles. Over the course of the next few months, we will be doing everything possible to ensure the security along our borders and to be able to move our merchandise back and forth. We will be working in the area of energy, the area of research and innovation, to be able to deal with clean technologies.

We are happy with the discussions of our trade ministers on cooperation and of the negotiation of our countries, and we encourage them to follow up with this work.

This meeting has been extremely productive. And Presidents Bush and Fox have accepted my invitation for the next summit meeting, which will take place in Canada in 2007.

[*Prime Minister Harper continued in English.*]

—grateful for our host, President Fox, and to the workers here at the hotel and the Mexican people for their warm hospitality.

Over the past 2 days, I've had the pleasure of meeting with President Fox and President Bush to discuss issues that jointly affect our three nations. I've been encouraged by the common will of our three nations. We are living today in an integrated economy. We cannot afford the politics of isolation.

During my meetings with Presidents Bush and Fox, we reviewed the progress of our Security and Prosperity Partnership, which provides a framework to advance the common interests in areas of security, prosperity, and quality of life.

We committed to further engage the private sector. We've agreed to set up a North American Competitiveness Council, made up of business leaders from all three countries, to advise us on ways to improve the

competitiveness of our economies. They will meet with our ministers, identify priorities, and make sure we follow up and implement them.

We agreed to expand our existing cooperation on key issues such as border security, emergency management, and energy security. As an immediate priority, we'll develop a coordinated and comprehensive approach to preparing for a possible avian or pandemic influenza outbreak in North America. Our action will be guided by shared principles. We'll take concrete steps in the coming 24 months to improve the security at our borders and to ensure the smooth and efficient flow of goods and people, particularly—particular discussions with President Bush on the Windsor-Detroit Corridor.

We'll collaborate on energy, especially with respect to innovation and science and technology, with the focus on clean technologies. We also welcome the discussions—the recent discussions by our trade ministers on NAFTA collaboration on trade negotiations with third countries. And we urge that this work be given priority.

These talks were productive. And I'm, of course, very pleased that President Bush and President Fox have accepted my invitation to have the next leaders' meeting in Canada in 2007.

Thank you.

*President Fox.* President Bush.

*President Bush.* Thank you for your hospitality. It's a really good choice to pick Cancun—as my press corps will tell you. They're looking forward to staying by the pool after I leave. [*Laughter*] It's a beautiful, beautiful part of the country.

I want to thank you for your friendship as well. It's been a joy discussing very important issues with you over the course of my Presidency. And this is probably one of the most productive meetings we've had. It's been a pleasure to meet with Prime Minister Harper in his official capacity as the Prime Minister of Canada. I find him to be a very open, straightforward fellow.

If he's got a problem, he's willing to express it in a way that's clear for all to understand. And that's the way I like to deal with people.

We've got big goals for this very important relationship. One goal is prosperity. You can't achieve a standard of living increase for your people unless you have a prosperous neighborhood, and it's this prosperity that has been much of a focus on NAFTA. And one of my vows, and I know the other leaders share this goal, is to make sure that people are able to connect the NAFTA relationship with improvement of their own quality of life.

I know there's deep concern about social justice throughout the neighborhood, and social justice can be achieved more likely if people are able to realize their dreams and if there's a prosperous society. And prosperity has been increased as a result of the trade between our nations. And we want to make sure that trade continues in a way that's fair and free but also in a way that enables our countries to be able to compete with the great challenges we face.

And we face prosperity challenges from abroad like never before—the challenge of a growing Chinese economy or the challenge of an Indian economy. And my attitude is we shouldn't fear these challenges; we ought to welcome them and position ourselves so that we can compete. And I think the leaders share that sense of unity when it comes to being a competitive part of the world in the future.

We talked about security. Look, we got long borders, and we got to make sure we work hard to secure the borders. We also have got to make sure we got smart borders. And so the whole vision of our borders has got to be to enhance trade and tourism but to prevent smugglers and terrorists and dope runners from polluting our countries. And I'm confident, with the use of technology and by close collaboration, we'll be able to achieve those objectives.

I want to thank the CEOs and the business leaders from the three countries who are here. I thought we had a very constructive discussion about ways to make sure that there is harmonization between our industries so that the people benefit. And they brought some really good ideas.

We talked about, of course, bird flu, avian flu, and the need to be prepared in case there is an outbreak. We spend a lot of time in my own country preparing for an avian flu outbreak, strategizing as how to coordinate efforts between the Federal, State, and local governments, working to wisely spend money to come up with, hopefully, a vaccine that would then be available for sharing around the world. And I do want to thank Canada for having taken the lead early in this issue and preparing the world for what is possible so that there's good information sharing if the bird flu were to break out in Southeast Asia, for example. But my point is, it's very important for us to share information and data and strategies amongst our three countries so that if this were to happen, there is a focused, coordinated, intelligent response.

We talked about energy. My view of the energy initiative is that we've got to be wise about the resources we have and be smart about the investment for research and development so we can change our energy habits. The truth of the matter is, we'll all be better off if we use alternative sources of energy like ethanol or explore how to use hybrid batteries in a better way. I mean, there's some really interesting things coming down the pike, and I look forward to not only leading my own nation to spend money to be on the leading edge of technological change when it comes to energy but also sharing those technologies and ideas with our counterparts. Because we want to make sure that we've got national security concerns addressed when it comes to energy; we also want to be good stewards of the environment—and we can do both by the use of proper technologies.

It's been a good meeting. I want to thank you for your leadership. I like coming to meetings where people put things on the table and we try to come up with solutions. And this has been such a meeting, Mr. President. Good job. *Es todo*.

*President Fox.* Thank you. Thank you so much. Undoubtedly, these two days have brought about spaces for meeting of both friends and partners, and undoubtedly, we have made a very good use of time.

The visit to Chichen-Itza was excellent, as well as yesterday evening's dinner, in a relaxed atmosphere but, likewise, creating this association and making a very productive association. Equally important were the different working meetings.

We took advantage of time; we were not working isolated. We touched upon fundamental items in that meeting. First of all, we carried out an evaluation meeting. Then we got information about the development of programs. And then we gave the necessary instructions for the works that should be carried out in the next period of work.

This is a most important thing, and this association has become a dynamic and professional process, a constructive process, a short-term action process, and great vision and perspective in a long term. Consequently, we have concluded that institutionalizing all these mechanisms is of utmost importance so that they will have continuity, so that there will be a followup—a necessary followup, so that they will be fruitful both at a short, middle, and long term.

So we have established the next meeting. The Prime Minister of Canada has suggested and has invited us to Canada. Next June, we shall have, let's say, an information, evaluation, and results study of the work of this association, this Security and Prosperity Partnership. And we have carried out a series of actions that should be integrated in this report.

First of all, I would like to make clear what has been the results of 12 years of joint work in the free trade agreement,

NAFTA. The three nations are fully satisfied of what we have been able to achieve. We have seen the fruits of work through this tool of cooperation, trade, and investment. Nonetheless, we're not fully satisfied. We have to give steps forward. We have many an opportunity and many a challenge.

I want to mention two figures in reference to the results of NAFTA. Mexico has a commercial balance trade of \$535 billion, the seventh in size throughout the world. And these would be a direct product of both trade and investment that has been carried out among the three partner countries. And then we should point out that every single State, border States with the United States had per capita income to December as of last year that go beyond to \$10,000. The per capita average income has to do with \$7,500—the highest in Latin America. Nonetheless, the borderline States are above \$10,000 per capita income, and some of them have a per capita rate to \$10,000.

We're not talking about small numbers, small figures; we're talking about a concrete result of the efforts and work through trade. It is achieved through investment, and likewise, it is achieved through joint work, everybody's work. Behind all this, there's nothing else but work, work, and work.

Now I would like to mention a couple of items in the goals. First, strengthen and maintain, growing, the free trade agreement, first of all. Benefits are evident, but before the new reality of the 21st century, we have decided to give steps forward and strengthen the relationship. Now we have the alliance both for security and prosperity. One item is as important as the other—shared responsibility an important element—one as important as the other. And that is what the three countries think.

We started with the constitution of the North American Competitiveness Council, so as to consider public and private policies—face a challenge of our region. We want to institutionalize our mechanisms,

have a clear project for the next month of June. It would imply mechanisms by means of which we will give the necessary importance and long-term action, something constant, and continuity should be achieved as well. That has been fruitful, and that can give very good results for our region. We are not renegotiating what has been successful or open the free trade agreement. It's going beyond the agreement, both for prosperity and security.

Summarizing, we have to increase competitiveness of our economies, of our companies, our enterprises, our structures, and likewise, our technological and educational levels so as to face competition of other blocs in the world. We have to homogenize normativity standards so as to have common standards to facilitate jobs and productivity. We have to make borders much more modern with technology so as to guarantee security but the good flow of commodities and products. We have invested a good amount of time to logistics, efficiency and efficacy in customs, topics that have to do with sharing—sharing these efficiencies.

We are totally aware that we require infrastructure studies in the borderline areas so as to analyze needs, to facilitate both trade and passage of people and goods. This is fundamental; security is fundamental for our future development. It is a problem and a challenge shared by the three countries. Migration can only be solved in that we agree upon under the framework of a legislation that will guarantee our legal order, safe and respectful migration, respecting the rights of people.

We have spoken about the collaboration of the three countries to support development and generation of opportunities for Central American countries and the Caribbean-area countries. We have seen an excellent level of relationships, and these are giving steps forward. They're better and better.

We have more points of coincidence amongst the three countries. I would like

to thank the attendance, the presence, in this beautiful port of Cancun in this area of the Riviera Maya. You can see it is dynamic, a beautiful place, as it always has been. We receive millions of tourists every single year, people that come over, and we're proud to receive.

We want to thank President Bush; we want to thank Prime Minister Harper—my acknowledgment, my thanks, and my commitment. We shall be working together, no doubt about it, to give steps forward in the field of prosperity and security. May you have a happy return back home. Thank you.

For the question-and-answer period, we have two questions for the journalists of each country.

#### *Border Security/Trade*

*Q.* Good morning, Presidents and Prime Minister. President Fox, what are the concrete measures that Mexico is implementing to guarantee this indispensable security so as to have a legal, safe, and orderly migration?

For President Bush and President Harper, do you consider that there should be a continuity on the economic policy in Mexico before the change of President in our country? Last but not least, how can the partners of NAFTA—can be competitive before the Asian countries if there are so many differences that are leading us to talk first about security, then productivity? And what are the unilateral decisions on migration matters? Thank you.

*President Fox.* First, security—many actions have been implemented. Many actions have to do with close cooperation with the security authorities with the United States. This effort, headed by the representative of Homeland Security, Mr. Chertoff, and Minister of the Interior here in Mexico, Mr. Abascal, and the cooperation based upon mutual trust, coresponsibility, and what has to do with security in the borders.

Likewise, we're doing our own work in cases of homicides and crimes among the

different Mafias, the drug cartels. We shall continue working on this. There's a presence of Federal forces in the main points in the border, and then a great commitment to win the battle against organized crime and drug trafficking, particularly in the city of Nuevo Laredo. We have programs such as Programma OASISS, OASISS Program, so as to attack the people that are trafficking with people, with migrants. And fortunately, there are more than 120 in jail. And then we have a permanent program, 24 hours a day, so as to achieve this.

We are working in the inner part and in the southern part of the country to stop migration flows that come from Central America that are crossing illegally the southern border of Mexico. And with all due respect to the dignity of these people, respecting their human rights, they are stopped; they remain on temporary bases and stations. They offer them services with dignity, and then we send them back to their communities of origin; 240,000 people—people that were detained, and then they were sent back to Central America.

We are working jointly with the Central American Governments. We have spoken about the fact that the decision of Mexico is not only assuming our responsibilities migration-wise, but we have a firm commitment of generating jobs and employment. We're working jointly with Central America so as to achieve this, so each country will absorb our commitment and our total commitment generating opportunities within our own countries.

And so this program, like the energy initiative for Central America, is one that has the purpose of bringing development and growth to the Central American economies. Thus we're working on a broad spectrum on the issue of security in all of its facets.

*President Bush.* I don't see how you can be prosperous if you don't have security. I mean, it's—if people are concerned that, for example, the towns along the border aren't secure, it's going to be difficult to

keep prosperity alive. And so I appreciate the President's commitment to security along our border, and we've got—we share the same commitment. It's very important to enforce laws. Robust economy depend upon the rule of law, and therefore, when countries enforce law, it kind of creates the conditions for continued economic growth.

When you have robust trade like we have, there are issues that come up. One way to look at it is if we had no trade, there would be no issues. And the more issues there are and the more opportunities there are to discuss them, the likelier it is these economies will continue to grow. And so I don't worry about having to deal with problems. As a matter of fact, I view the problems that have arisen as a result of complex and active trade as positive. And the fundamental question is, can we resolve these issues in a responsible way? And one of the reasons we meet is to put ourselves in a position to do so.

You mentioned something about the elections. I'm not going to talk about them. The only thing I am going to talk about is I love to have a strong, vibrant democracy on our southern border. And I want to thank the President for his strong leadership and his recognition that democracy is a very important legacy of his administration, the previous administration, that we certainly hope there will be a peaceful transition of power, and I'm confident there will be one.

*Prime Minister Harper.* Obviously, I don't want to get into the issue of Mexican politics, but I can say the same thing that I said yesterday with regard to the leadership of President Fox. We've had both bilateral and multilateral relationships progressively growing and without precedent. I trust that the President is going to leave a stronger economy that is shared, a firm democracy, respect for human rights, and faithfulness to the most important principles for our shared progress, for the Security and Prosperity Partnership of North

America, and all the good results that come from a free market economy.

All of these things lead to more progress, which we hope the next President will be able to build upon, which will benefit all of our countries.

[*Prime Minister Harper continued in English.*]

And I'll just repeat that I, obviously, do not intend to make any comments or get myself involved in Mexican politics, but I'll just repeat what I said yesterday, which is that President Fox has provided unprecedented leadership for both our bilateral and our trilateral relations, unprecedented progressive leadership.

I believe that the legacy of that leadership will be to leave behind not just the strong democracy that believes in liberty and human rights but also loyalty and adherence to the principles that are—on which the success of our integrated economy is based. And those are the principles of NAFTA, the principles of our security and economic partnership, and, of course, the advantages of free markets from which all of our nations benefit.

#### *Immigration Reform*

*Q.* Thank you. Mr. President, would you veto an immigration bill that did not include a guest-worker program? And how do you counter the angry argument from conservatives on Capitol Hill who are saying that your demand for one could hurt the Republican Party this fall?

*President Bush.* The migration issue has been a topic of discussion here, as you can imagine. I told the President exactly what I told our country, that, one, I expect the debate to bring dignity to America, in recognition that America is a land of immigrants and people ought to be treated with respect; and this debate ought to be a debate that does not pit neighbor against neighbor; that focuses on three elements. One is that we are a nation of laws and, therefore, must enforce our laws. And that

includes enforcing the laws of people coming into our country illegally.

President Fox and I discussed this issue at length. I don't know if people recognize, but his Government, all aspects of the Mexican Government came together to send a clear message to the American people: The Mexican Government understands it has a responsibility, as well, to protect the border. It is a nation of law. You heard the President talk about not only enforcing the northern border but also the southern border.

I also have said to the American people that we must enforce our laws in the interior of the country. Employers must be held to account if they're employing the people in our country illegally. However, part of the problem is—that complicates the lives of our many employers who are providing employment for people who are here illegally, is that there has been a lot of document forgery. There's an industry that has sprung up, and part of that industry is to provide forged documents so that our employers don't know whether a person is in our country legally or not.

I also believe strongly that an important part of securing the border and enforcing our laws is to recognize there are people in our country doing work that Americans will not do. And those people ought to be given a chance to have a tamper-proof card that enables them to work in our country legally for a period of time. That's called a guest-worker program. One of the important issues about a guest-worker program is, what does that mean for someone's desire to become a citizen of our country? I believe if someone has been here in our country illegally, they should not get at the head of the line if they want to become a citizen. In other words, we have a line of people waiting, people who are in our country legally, waiting to become a citizen. And people who have been in our country illegally should not get ahead of the line who are there legally.

A nation of laws can also be a welcoming nation, and I believe a guest-worker program will help us rid the society and the border of these *coyotes* who smuggle people in the back of 18-wheelers. I believe it will help get rid of the document forgers. I believe it will help people on both sides of our border respect the laws of our border and enforce our borders. I believe it is important to bring people out of the shadows of American society so they don't have to fear the life they live. I believe it's important for our Nation to uphold human rights and human dignity. And the plan I've just proposed is one that will do all that and achieve important objectives.

And I'm looking forward to working with the Congress. We're making the—I told the President we're making progress. You know, there's a legislative process. It's—some guy, some wag one time put it, it's like watching people make sausage. It's kind of a—you know, probably appears a little unpleasant from your perspective. [Laughter] But we're making progress. And I want a comprehensive bill. And I've made that very clear to the Members of the Congress, and I will continue making it clear to Members of Congress.

Q. [Inaudible]

President Bush. So, no answer—I said I want a comprehensive bill. You're presuming there won't be a comprehensive bill; I believe there will be a comprehensive bill.

#### Canada-U.S. Relations/Border Security

Q. Mr. President, can you explain to Canadians—

President Bush. Which one?

Q. That would be you, Mr. Bush.

President Bush. Me.

Q. Could you explain to Canadians why they'll need to have a passport or an unspecified secure document before they cross over to the United States? And what would the impact be on both of our countries economically if Canada doesn't follow

through by the deadline of the end of next year?

*President Bush.* I appreciate you bringing up this issue. This is an issue, obviously, that affects not only border crossings with Canada, it also affects border crossings with Mexico. The Congress passed the law, and I intend to enforce the law. But the law said there ought to be a passport or a passport-like document that, I believe, if properly implemented, will facilitate travel and facilitate trade, not hinder travel and trade. And the reason I believe that is, I think we can be wise about the use of technologies to—envision a card that can be swiped across a reading device that facilitates the movement of people.

It's a—look, I understand this issue has created consternation. Your Prime Minister made it very clear to me that he's very worried that such a implementation of the law on the books will make it less likely people will want to travel between our countries. I've heard from business leaders who are concerned about the bookings for conventions. And so what I've told the Prime Minister and told President Fox, as well, is that we have an obligation to work very closely with our counterparts to provide a set of standards as to what will meet the obligations of the law.

Again, I repeat to you: I believe this can be done in such a way that it makes future travel, future relations stronger, not weaker.

*Prime Minister Harper.* Maybe I could just add to that. Obviously, we are concerned. I expressed those concerns to President Bush, and I know they've been expressed by Canadian business leaders as well. The President is confronted with legislation passed by Congress and has a responsibility to act upon that legislation, and we understand that. We understand the security concerns that are behind that.

At the same time, we're obviously concerned that if we don't move quickly and properly on this, that this could have effects on trade and movement of people, conven-

tions, you name it, that is not helpful to our economy or to relationships. So we've agreed that Minister Day and Secretary Chertoff will meet as soon as possible to make this their top priority.

#### *Democracy in Mexico*

*Q.* Mr. President Fox, two questions. The first is, our Senate last night passed a law, and I'd like to know what you're going to do. Will you veto that law, or will you leave the legislative packet to the next President of our country? And second, you have spoken and you have warned us Mexicans against populism and the demagogues who exist in campaigns, in Presidential campaigns, and that we are going through a very difficult stage. I'd like to ask if you already forgot the populist language that you used in your own Presidential campaign when you even talked about—[*inaudible*—]—and things like that? What about talking about democracy using a populist language in the past, but now you are against candidates doing that.

*President Fox.* In reference to the first item, the Ministry of the Interior will inform, on behalf of the Federal Government, our position. And I celebrate—I'm glad that both the Congress, the lower chamber and the upper chamber, have exercised their autonomy, their freedom. They have discussed and approved one more of the many laws that have been approved in our country in this last 5 years of democratic and respectful Government—the autonomies and the independence on the other two powers. As never before, we have lived this reality that has been positive, fruitful, in reference to the application of our autonomy and constitutional freedom that all the other powers have.

Now, in reference to the second item, I can only say—and I will say it very clearly—from the second of July and since the second of July of the year 2000, there has been absolute freedom, and that is of utmost importance for all of us. Every single

person should express according to his own decision and convenience, by all means, respecting the rights of third parties. But above all this, we have the freedom of both Mexicans, ladies and gentlemen, that work in the mass media: press; newspapers; journals; TV. We have now a freedom that we never had in the past. Every single citizen in our country nowadays exercises this freedom openly. This is one of the great fruits and results of democracy won in the second of July of the year 2000.

#### Iran

*Q.* President Bush, Secretary of State Rice is finding common ground with the British today on the view that the next step against Iran could be sanctions. Do you agree that's the way to go if Iran fails to comply with the Security Council's 30-day deadline on its nuclear program?

*President Bush.* Thanks. First, I do want to offer my country's assistance to the people affected by the recent earthquakes in Iran. We obviously have our differences with the Iranian Government, but we do care about the suffering of Iranian people.

There is common agreement that the Iranians should not have a nuclear weapon, the capacity to make a nuclear weapon, or the knowledge as to how to make a nuclear weapon. And the reason there's common agreement is because the Iranian Government with such a weapon, as is now constituted, would pose a serious threat to world security.

Condoleezza Rice is in Europe today to discuss with the P-5, the permanent members of the U.N. Security Council plus Germany, a strategy to go forward in a unified way that says to the Iranian Government, the world rejects your desires to have a nuclear weapon. Condi is strategizing with those who will be making the U.N. Security Council decisions as to that united front. In other words, we agree on a goal. Now the question is, how do we work together to achieve that goal? And you're watching Secretary of State Rice work with our

friends to remind the Iranians on a regular and consistent basis that if they want to be—participate in the international order of things, if they don't want to isolate themselves, they must listen very carefully to what we are saying with unified voice.

#### *Murder Investigation in Cancun*

*Q.* My question is to President Fox, and I wonder if we could prevail upon you, sir, to answer it in English. A few weeks ago, there was a very bloody murder here with the Ianiero family in Cancun. Two young Canadian mothers are very concerned, back in Canada, that Mexican authorities have mistakenly made them suspects amidst concerns, also in Canada, the Mexicans may have bungled this investigation. Can you tell us where this investigation is going, and can you assure those two young women, indeed, they are not suspects?

*President Fox.* Well, we are absolutely sorry, and we have our, well, feelings that a crime has been carried out here in a hotel in Cancun. The attorneyship office is working, both the Federal one and the local one—they're working on the investigation. When the data is ready and when they finally decide, we can claim which are the guilty people. As of now, that is the only information we have at hand. We're working closely. We are reporting to the Government and the authorities of Canada. Investigation is being carried out. So far we cannot make any further comments. Thank you.

*Prime Minister Harper.* —say that we do appreciate the full cooperation of the Mexican Government, Mexican police at all levels. There has been consultation with our officials, and I've spoken to the RCMP, and they assure me that that has been the case, particularly since the commitments made by Secretary Derbez in Ottawa. So we are working together in this; we're fully apprised of the situation. I can just add one small thing, which is that we're told once again, and I think we've been saying

this repeatedly for some time, there is no extradition pending—extradition demand pending, nor is there one anticipated in the near future. And that's probably about all I can say.

*President Fox. Muchas gracias.*

NOTE: The news conference began at 10:45 a.m. in the Fiesta Americana Condesa

Cancun Hotel. President Fox spoke in Spanish, and his remarks were translated by an interpreter. Prime Minister Harper referred to Minister of Public Safety Stockwell Day of Canada; and Secretary of Foreign Affairs Luis Ernesto Derbez Bautista of Mexico. President Fox referred to Secretary of Government Jose Carlos Maria Abascal Carranza of Mexico.

## Joint Statement by President George W. Bush, Prime Minister Stephen Harper of Canada, and President Vicente Fox Quesada of Mexico—The Security and Prosperity Partnership of North America: Progress March 31, 2006

Canada, Mexico and the United States share a continued commitment to enhance the security, prosperity and quality of life of our citizens within North America. We recognize that the success of our countries is enhanced by working cooperatively. The Security and Prosperity Partnership of North America, which celebrates its first anniversary this month, provides a framework for us to advance collaboration in areas as diverse as security, transportation, the environment and public health.

This Partnership has increased our institutional contacts to respond to our vision of a stronger, more secure, and more prosperous region. In June 2005, our three governments released detailed work-plans identifying key initiatives that form an ambitious agenda of collaboration. Since June, we have worked to implement these initiatives. Many will take months or years to be completed, but we already note significant results. We ask our Ministers to build on this momentum.

We have discussed how we can ensure North America is the most economically dynamic region in the world and a secure home for our citizens. Today, we exchanged views with private sector leaders on how

to enhance the competitiveness of North America.

Building on existing commitments, we agree that priority initiatives warrant special attention in the coming year:

Strengthening Competitiveness in North America. We are pleased to announce the creation of a North American Competitiveness Council (NACC). The Council will comprise members of the private sector from each country and will provide us recommendations on North American competitiveness, including, among others, areas such as automotive and transportation, steel, manufacturing, and services. The Council will meet annually with security and prosperity Ministers and will engage with senior government officials on an ongoing basis.

We are convinced that regulatory cooperation advances the productivity and competitiveness of our nations and helps to protect our health, safety and environment. For instance, cooperation on food safety will help protect the public while at the same time facilitate the flow of goods. We affirm our commitment to strengthen regulatory cooperation in this

and other key sectors and to have our central regulatory agencies complete a trilateral regulatory cooperation framework by 2007.

**North American Emergency Management.** A disaster—whether natural or man-made—in one of our countries can have consequences across national borders. Our vision for a North American response, relief and recovery strategy would ensure that critical equipment, supplies and personnel can be deployed expeditiously throughout North America. We commit to develop a common approach to critical infrastructure protection, coordinated responses to cross border incidents, and coordinated training and exercises, with the participation of all levels of government in our countries.

**Avian and Human Pandemic Influenza.** Given the highly integrated nature of our economies, an outbreak of pathogenic avian flu or human pandemic influenza in any one of our countries would affect us all. Today, we have agreed to develop a comprehensive, science-based and coordinated approach within North America to avian influenza and human pandemic influenza management. We have endorsed a set of shared principles to underpin cooperative activities by our Governments in all stages of avian influenza and human pandemic influenza management: prevention; preparedness; response; and recovery. Pursuant to these principles, officials will develop, as an immediate priority, incident management protocols to ensure that we are well prepared in advance of an outbreak in North America. For instance, we have agreed to work together to accelerate research, development, production, and availability of human pandemic influenza vaccines, and develop a strategy to best facilitate the sharing of information to enhance the availability of vaccines to the region. We will also establish a small Coordinating Body of senior officials to ensure follow-up on these commitments.

**North American Energy Security.** A sustainable, secure and affordable supply of energy is key to fueling the North Amer-

ican economy. Collaboration in the areas of innovation, energy efficiency, and technology development, including moving these technologies to market, promotes energy security. Our governments renew their commitment to trilateral cooperation on clean energy technologies, conservation, and market facilitation as a means to meeting our shared goals of energy security and sustainable development. Officials will also examine how this cooperation can be expanded to further our climate efforts.

**North American Smart, Secure Borders.** Our vision is to have a border strategy that results in the fast, efficient and secure movement of low-risk trade and travelers to and within North America, while protecting us from threats including terrorism. In implementing this strategy, we will encourage innovative risk-based approaches to improving security and facilitating trade and travel. These include close coordination on infrastructure investments and vulnerability assessments, screening and processing of travelers, baggage and cargo, a single integrated North American trusted traveler program, and swift law enforcement responses to threats posed by criminals or terrorists, including advancing a trilateral network for the protection of judges and officers.

The Security and Prosperity Partnership of North America represents a broad and ambitious agenda. We instruct our Ministers to develop options to strengthen the SPP and present them next June as part of the second report on progress of the SPP.

President Fox and President Bush were pleased to accept, on behalf of their countries, Prime Minister Harper's invitation to host the next trilateral leaders meeting in Canada in 2007.

NOTE: An original was not available for verification of the content of this joint statement.

Joint Statement by President George W. Bush, Prime Minister Stephen Harper of Canada, and President Vicente Fox Quesada of Mexico—The Security and Prosperity Partnership of North America: Next Steps  
March 31, 2006

The three leaders of North America agreed to advance the agenda of the Security and Prosperity Partnership of North America (SPP) by focusing on five high priority initiatives:

*The North American Competitiveness Council.* Increasing private sector engagement in the SPP by adding high-level business input will assist governments in enhancing North America's competitive position and engage the private sector as partners in finding solutions. The Council will:

- Consider issues that could be addressed trilaterally or bilaterally, as improvements in our bilateral relationships enhance North American competitiveness.
- Address issues of immediate importance and provide strategic medium and long-term advice.
- Provide input on the compatibility of our security and prosperity agendas, given the linkages between security and prosperity in a global marketplace.
- Offer ideas on the private sector's role in promoting North American competitiveness.

*Advancing Cooperation on Avian and Pandemic Influenza.* Leaders agreed to the following principles to guide collaboration on all stages of avian or pandemic influenza management:

- Share information among our governments in an open, timely and transparent manner.
- Adopt an integrated and comprehensive approach that incorporates animal and public health aspects in managing avian influenza and influenza pandemics.
- Ensure coordination within our respective national governments on all as-

pects of emergency management for an avian influenza outbreak or a human influenza pandemic, by building on existing mechanisms of cooperation and strengthening them as required.

- Coordinate our actions and leverage our respective capacities to ensure rapid and effective steps are taken to deal with avian influenza outbreaks or a human influenza pandemic in North America.
- Advise one another in advance of making any decision that could seriously affect the other countries.
- Base our actions on the best available science and evidence-based decision-making.
- Agree that the imposition and removal of veterinary or public health measures on the movement of people, animals, and goods, under our national laws and international obligations, will not be more restrictive or maintained longer than necessary to achieve the veterinary or public health objective so as to avoid unnecessary interference with the movement of people and goods within North America.
- Ensure that the business continuity plans of our respective governments consider the highly interconnected nature of our economies.
- Strive to utilize clear and consistent messaging to the public and international organizations that is proactive, timely and accurate.

*North American Energy Security Initiative.* A secure and sustainable energy supply is essential for our economic prosperity in North America. To advance our energy agenda we have agreed to:

- Enhance the development of a diverse energy resource base in North America by increasing collaboration on research, development and commercialization of clean energy-related technologies, and
- Strengthen the North American energy market by improving transparency and regulatory compatibility, promoting the development of resources and infrastructure, increasing cooperation on energy efficiency standards, and supporting other efforts aimed at addressing challenges on the demand side.
- Develop and implement compatible electronic processes for supply chain security that use advanced electronic cargo information to analyze risk and ensure quick and efficient processing at the border;
- Develop standards and options for secure documents to facilitate cross-border travel;
- Exchange additional law enforcement liaison officers to assist in criminal and security investigations; and,
- Develop coordinated business resumption plans at border crossings to ensure legitimate trade continues.

*North American Emergency Management.* The commitments made in the SPP recognize that a disaster—whether natural or man-made—in one North American country can have consequences across national borders, and may demand a common approach to all aspects of emergency management. Recent experience with hurricanes, ice storms, industrial accidents and the like demonstrate our interdependencies, as well as the need for coordination and mutual assistance in protecting and safekeeping our populations. Moving forward we will:

- Develop a common approach to critical infrastructure protection, and response to cross border terrorist incidents and natural disasters, across a number of different sectors including, but not limited to, transportation, energy, and telecommunications.
- Develop and implement joint plans for cooperation for incident response, as well as conduct coordinated training and exercises in emergency response.

*Smart, Secure Borders.* Leaders agreed to complete the following activities, to contribute to smart and secure borders, over the next twenty-four months:

- Collaborate to establish risk-based screening standards for goods and people that rely on technology, information sharing and biometrics.

*The Security and Prosperity Partnership of North America Key Accomplishments since June 2005*

The Security and Prosperity Partnership of North America (SPP), launched by the leaders of Mexico, Canada and the United States in March 2005, aims to promote growth and economic opportunity, increase security, and improve the quality of life of our peoples. In June 2005, lead Ministers issued a joint report outlining steps to achieve these goals. Since then, highlights of accomplishments include:

- To enhance growth and competitiveness in a key sector, the North American Steel Trade Committee developed a new strategy aimed at reducing market distortions, facilitating trade and promoting overall competitiveness through innovation and market development.
- To adapt to changes in sourcing and production methods, the three countries have analyzed ways to liberalize requirements for obtaining NAFTA duty-free treatment. Changes to the rules of origin have been implemented successfully and technical teams are working on additional changes.
- To speed up response times when managing infectious disease outbreaks, save lives, and reduce health care costs, the United States and Canada

- signed an agreement to enable simultaneous exchange of information between virtual national laboratory networks (PulseNet).
- To make consumer goods safer, save lives, and prevent injuries, the United States and Mexico signed an agreement for advance notifications when consumer goods violate one country's safety standards or pose a danger to consumers. Canada and the United States signed a similar agreement in June.
  - The United States and Canada signed an agreement, which is a milestone in pipeline regulatory cooperation, to allow increased compliance data sharing, staff exchanges and joint training. The sharing of best practices will lead to a more uniform regulatory approach for cross border pipelines.
  - The United States and Canada reached a full Open-Skies aviation agreement, removing all economic restrictions on air service to, from, and beyond one another's territory by the airlines of both countries. The agreement will encourage new markets development, lower prices and greater competition.
  - The United States and Mexico expanded air service in specific markets by increasing the number of designated passenger airlines per city-pair, and opening cooperative marketing arrangements (code-sharing) to airlines of either country and carriers of third countries.
  - In order to increase navigational accuracy across the region, five Wide Area Augmentation System (WAAS) stations were installed in Canada and Mexico in 2005.
  - To promote prosperity by reducing the costs of trade, the United States and Canada decreased transit times at the Detroit/Windsor gateway, our largest border crossing point, by 50 percent.
  - To support increased trade and expedite secure processing of cross-border trade and travel between Mexico and the United States, six FAST/Express lanes are operating at the US-Mexico border, a new lane in Nogales will open soon, and we are working on a project for a lane in Matamoros. Exclusive lines and schedules will be implemented at nine crossings.
  - To allow more efficient examination of rail cargo for hazardous materials and illicit flows of goods, the United States and Mexico have installed gamma ray equipment at key border crossings.
  - To speed cargo shipping, the three countries are developing uniform in-advance electronic exchange of cargo manifest data for maritime, railroad and motor carriers.
  - To improve air quality and promote a more competitive automotive industry, Mexico implemented an official standard to reduce sulfur in fuels. This will increase supply of low-sulfur fuels in Mexico.
  - To increase border security, Mexican and U.S. agencies are harmonizing risk assessment mechanisms, exchanging information, and establishing protocols to facilitate detection of fraud and smuggling.
  - To strengthen the integrity and security of asylum and refugee status determination systems, the United States and Canada launched a pilot project to share information on refugee and asylum claimants based on a comparison of fingerprint records.
  - To address border violence, United States and Mexico signed an Action Plan to Combat Border Violence and Improve Public Safety. Officials of the two countries in Nogales, AZ-Nogales, Sonora and Laredo, TX-Nuevo Laredo completed protocols on border security and public safety.

- Under the United States-Mexico Voluntary Repatriation Program, more than 35,000 persons, including 20,500 in 2005, were returned to their home in a secure, legal, and humanitarian way.
- To increase maritime security, the United States and Canada completed joint exercises on the St. Clair and Detroit Rivers in September and in February during Super Bowl XL. Officers, who were cross-designated on vessels of the other nation, could authorize pursuit of suspect vessels crossing jurisdictions.
- To advance preparedness to address a cyber incident affecting critical infrastructure, authorities from the United States and Canada completed a multinational exercise, Cyberstorm, in February 2006.
- To enhance aviation security, the United States, Canada, and Mexico completed training on principles to protect aircraft from terrorism threats, on marksmanship skills, and on emergency procedures.
- To enhance port security, Canada and the United States concluded port facility visits at Oakland, CA and Vancouver, BC in October 2005 to facilitate the development of benchmark security standards.
- To ensure food safety while facilitating trade, a Food Safety Coordinating Task Force was formed and is developing a prioritized list of standards to compare for similarities, differences, and scientific bases for the differences. These efforts will facilitate the development of North American standards and, as appropriate, the removal of differences in standards.
- To enhance clarity and compatibility of energy regulation, Canadian, U.S. and Mexican regulators began regular meetings to exchange information on regulatory standards and energy market developments and to discuss bringing gas from Alaska to the North American market.
- To reduce marine air pollution, Canada and the United States have coordinated data collection, marine inventory development and air quality monitoring. The two countries are preparing to approach the International Maritime Organization to designate special areas for controlling sulfur emissions from marine vessels.
- Canada and the United States are developing Mutual Assistance Arrangements, which will enhance our preparedness for cross-border public health emergencies; Mexico has been invited to participate.

## Statement on the Earthquakes in Iran *March 31, 2006*

On behalf of the American people, Laura and I express our sincere condolences for the loss of life and suffering caused by the series of earthquakes in the Iranian Province of Lorestan. Our thoughts and prayers

are with families and individuals who have lost loved ones. The United States stands ready to assist the people of Iran, and we hereby extend an offer of humanitarian assistance.

## The President's Radio Address *April 1, 2006*

Good morning. As tax day approaches later this month, many American families are now finishing their tax returns. And as you do, an important debate is taking place in Washington that will affect the amount you will pay in the years ahead.

I believe our economy grows when you're allowed to keep more of your hard-earned money and make your own decisions about how to save, spend, and invest. So, working with Congress, we've provided tax relief for all Americans who pay income taxes. We lowered tax rates to let workers keep more of their paychecks. We doubled the child tax credit and reduced the marriage penalty, and we put the death tax on the road to extinction. We also cut taxes on dividends and capital gains and expanded incentives for small businesses to invest so they could grow and create new jobs.

Since 2001, the tax relief we delivered has left \$880 billion in the hands of American workers and small businesses and families like yours, and you've used that money to help produce more than 4 years of uninterrupted economic growth. Last year, our economy grew at a healthy 3.5 percent, faster than any other major industrialized nation.

One politician in Washington said in 2003 that our tax cuts were "ruining our economy and costing us jobs." The truth is that since August 2003, America has added almost 5 million new jobs. Our unemployment rate is now 4.8 percent—lower than the average of the 1970s, 1980s, and 1990s. Real after-tax income is up 8 percent per person since the beginning of 2001. More Americans now own their own homes than at any time in our history, and minority homeownership is at record levels. Consumer confidence is at its highest level in nearly 4 years. Productivity has grown

strongly over the past 5 years, and our small-business sector is thriving.

The evidence is overwhelming; the opponents of tax cuts were wrong. Tax relief has helped to create jobs and opportunities for American families, and it's helped our economy grow. By maintaining our progrowth economic policies and practicing spending restraint in Washington, we can keep our economy growing and stay on track to meet our goal of cutting the budget deficit in half by 2009.

The problem is that the tax relief we passed is set to expire over the next few years. Some Democrats in Washington are insisting that we let that happen—or even repeal the tax cuts now. In either case, that would weaken our economy and would leave American families with a big tax hike that they do not expect and will not welcome. Because America needs more than a temporary economic expansion, we need more than temporary tax relief. To keep our economy growing, to keep our businesses investing, and to keep creating jobs, we need to ensure that you keep more of what you earn. So Congress needs to make the tax relief permanent.

Making tax relief permanent includes extending the tax cuts on dividends and capital gains. These tax cuts have been vital to our economic growth. By lowering the cost of capital, this tax relief has given businesses an incentive to invest and expand, and that has helped create jobs and opportunity. I urge the Congress to extend these progrowth tax cuts, so our businesses can plan with confidence and keep creating jobs for American workers.

The debate in Congress over taxes ultimately comes down to this: Who knows best how to use your money, politicians in Washington or you? I believe the money we spend in Washington is your money, not the Government's money. I trust you

to make the best decisions about what to do with your hard-earned dollars, because when you do, your family is better off, our economy grows, and prosperity and opportunity spread throughout our great land.

Thank you for listening.

NOTE: The address was recorded at 9:15 a.m. on March 31 at the LeBlanc Spa and Resort

## Remarks Following a Meeting on Health Care Initiatives and an Exchange With Reporters *April 4, 2006*

*The President.* America needs a health care system that empowers patients to make rational and smart decisions for themselves and their families, a health care system in which the relationship between the patient and the provider are central, not a health care system where decisions are made by the Federal Government.

So we've been having a discussion here today about how to make sure our health care system meets certain objectives: one, empowering the patients; two, how do we have a system that helps control rising costs in health care?

And one of the interesting and innovative ways to do that is through health savings accounts. Health savings accounts are good for the uninsured; they're good for small businesses; they're good for larger corporations. And people around the table here have been sharing their experiences with how folks are saving money through health savings accounts. And I would urge the small-business owner or the individual who is concerned about his or her health care to take a look at a health savings account.

We talked about the importance of cost savings through these important products, but we also talked about how we can work with the United States Congress to strengthen them, to make them more appealing, to give people more choices in the

in Cancun, Mexico, for broadcast at 10:06 a.m. on April 1. The transcript was made available by the Office of the Press Secretary on March 31 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

marketplace, to say to the American people, "We trust your judgment. We trust you to make the right decision for you and your families."

And so I want to thank you all for coming for this most interesting discussion. And I'll be glad to take a couple of questions.

Nedra [Nedra Pickler, Associated Press].

### *Representative Thomas D. DeLay*

*Q.* Yes, sir. Thank you. I'm wondering if we can get your reaction to Tom DeLay's resignation? Do you think it hurts the Republican Party or your ability to get work done in Congress?

*The President.* I had a talk last night on my way back from the ball game with Congressman DeLay. He informed me of his decision. My reaction was, it had to have been a very difficult decision for someone who loved representing his district in the State of Texas. I wished him all the very best, and I know he's looking forward to—he's looking to the future.

My own judgment is, is that our party will continue to succeed because we're the party of ideas. And one of the most important ideas is to make sure that health care is available and affordable for the citizens of this country. One way to do so is to

trust the patients, trust the American people when it comes to making rational decisions for health care for them and their families. And that's exactly what we've been discussing here at the table.

Caren [Caren Bohan, Reuters].

#### *White House Staff*

*Q.* Thank you, sir. Your new Chief of Staff takes over soon, and I'm wondering, is there likely to be far-reaching changes in the staff at the White House? And is Secretary Snow expected to stay on?

*The President.* Secretary Snow is here at the table. He's been a part of this discussion. I'm glad you brought him up. He has been a valuable member of my administration, and I trust his judgment and appreciate his service.

I've, as you know, accepted the resignation of Andrew Card, my long-time friend, a person who will go down in the annals as one of the really fine Chiefs of Staff in the history of the White House. I've asked Josh Bolten to take his place. Josh has served us very well as the Director of the Office of Management and Budget. I told Josh that he is—will organize the White House in such a way that he is comfortable with and that meets my needs. And my needs are to have good, crisp information so I can make decisions on behalf of the American people.

And I look forward to Josh's recommendations as to how to get this White House to—for the last 2½ years of my administration, to continue to function in an effective way. And it functioned very effectively under Andy Card, by the way. I'm most proud of his administration and proud of the team that he assembled.

Dick [Richard Stevenson, New York Times].

#### *Iraq*

*Q.* Mr. President, the situation in Iraq continues to be fraught with violence. You have expressed impatience in recent days of the progress towards forming a coalition

government. Do you think, as some people on the ground there are saying in the Iraqi political firmament, that it's getting very close to the point of no return?

*The President.* I believe that people ought to pay attention to the fact that 3 months ago, or a little over 3 months ago, 12 million people went to the polls and said, "I want to live in a democracy." And there is a group of folks in Iraq that want to stop the advance of democracy, and therefore, they're willing to use violence to do so. The one way to help bring confidence to the Iraqi people that those few will not be able to determine the future of that country is for there to be a unity government that steps up and says, "I'm willing to lead."

And so I sent Secretary Rice to Iraq with that message. And the message is, is that the people of Iraq have voted, and now it's time for the elected leaders to stand up and do their job. So we look forward to working with them to put together a unity government, a government that will reject the sectarian violence, will reject the militias, reject Zarqawi and the terrorists that are trying to create enough chaos so that America loses nerve. And I'm not going to lose my nerve as the President, because we're doing the right thing in establishing a democracy in that country. And by establishing a democracy, we're laying the foundation for peace.

And that's what we want. We want there to be peace. We want our children not to have to grow up under the threat of violence coming out of the Middle East. And one of the lessons of September the 11th, 2001, is that—this sense of—that tyranny is okay, but underneath the surface there was resentment—and the way—and anger that became the breeding grounds for these killers. And the best way to defeat that is with the light and hope of democracy. And you bet it's tough in Iraq, and it's tough because people are trying to stop the advance of democracy. And I'm convinced we're making progress there. But

I do urge the folks on the ground to get that unity government in place so that the Iraqi people have confidence in their future.

I thank you all.

NOTE: The President spoke at 10:19 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to senior Al Qaida associate Abu Musab Al Zargawi. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Message to the Congress Transmitting a Treaty Between the United States and Uruguay Concerning the Encouragement and Reciprocal Protection of Investment

*April 4, 2006*

*To the Congress of the United States:*

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty between the United States and the Oriental Republic of Uruguay Concerning the Encouragement and Reciprocal Protection of Investment, with Annexes and Protocol, signed at Mar del Plata, Argentina, on November 4, 2005. I transmit also, for the information of the Senate, the report prepared by the Department of State with respect to the Treaty.

The Treaty is the first bilateral investment treaty (BIT) concluded since 1999 and the first negotiated on the basis of a new U.S. model BIT text, which was completed in 2004. The new model text draws on long-standing U.S. BIT principles, our experience with Chapter 11 of the North American Free Trade Agreement (NAFTA), and the executive branch's collaboration with the Congress in developing negotiating objectives on foreign investment for U.S. free trade agreements. The Treaty will establish investment protections that will create more favorable conditions for U.S. investment in Uruguay and assist Uruguay in its efforts to further develop its economy.

The Treaty is fully consistent with U.S. policy towards international and domestic investment. A specific tenet of U.S. investment policy, reflected in this Treaty, is that

U.S. investment abroad and foreign investment in the United States should receive national treatment and most-favored-nation treatment. Under this Treaty, the Parties also agree to customary international law standards for expropriation and for the minimum standard of treatment. The Treaty includes detailed provisions regarding the computation and payment of prompt, adequate, and effective compensation for expropriation; free transfer of funds related to investment; freedom of investment from specified performance requirements; and the opportunity of investors to choose to resolve disputes with a host government through international arbitration. The Treaty also includes extensive transparency obligations with respect to national laws and regulations, and commitments to transparency and public participation in dispute settlement. The Parties also recognize that it is inappropriate to encourage investment by weakening or reducing the protections afforded in domestic environmental and labor laws.

I recommend that the Senate give early and favorable consideration to the Treaty and give its advice and consent to ratification.

GEORGE W. BUSH

The White House,  
April 4, 2006.

## Remarks on Immigration Reform Legislation April 5, 2006

The United States Senate is debating a very vital issue for our country, and that is immigration reform. I urge the Senators to continue to work toward get a comprehensive bill; a bill that will help us secure our borders; a bill that will cause the people in the interior of this country to recognize and enforce the law; and a bill that will include a guest-worker provision that will enable us to more secure the border, will recognize that there are people here working hard for jobs Americans won't

do, and a guest-worker provision that is not amnesty, one that provides for automatic citizenship.

This is a vital debate. I thank the Members who are working hard to get a bill done. I strongly urge them to come to conclusion as quickly as possible and pass a comprehensive bill.

Thank you all very much.

NOTE: The President spoke at 8:55 a.m. on the Colonnade at the White House.

## Remarks in a Discussion on Health Care Reform in Bridgeport, Connecticut April 5, 2006

*The President.* Thank you all. Darrell, thanks for the invitation. I think you're going to find this an interesting way to discuss a vital issue for our country, and that is, really, how do we stay competitive? How does the United States of America remain the preeminent economic leader in the world?

And one way you do so is you make sure you've got an environment where small businesses can thrive, where people can feel comfortable in having health care that's available and affordable. So thanks for coming and giving us a chance to discuss the issue. You notice I say "us." There's nothing worse than a guy kind of blowing away in a lecture, so I've invited fellow citizens to come and share their experiences about an interesting way to approach affordability and availability in health care.

But before I do that, I want to thank you all very much for taking time out of your day to come and listen. I appreciate very much the Governor, Jodi Rell, joining

us. Governor Rell is a—you know, I know something about Governors. I used to be one. She is really a dignified, classy woman who has done a fine job for the State of Connecticut.

I flew down today with Congressman Chris Shays. Shays is a very thoughtful person. He is a friend. He is an independent fellow—[laughter]—who speaks his mind. But he does so in a way that gets people to listen to him. And I appreciate his thoughtful approach to a lot of issues. And I appreciate your friendship as well. I'm looking forward to hearing your lecture on the way back to Washington. [Laughter]

Mr. Mayor, thank you for joining us. So Laura comes back and says, "I met the mayor of Bridgeport. He's a good guy." I say, "Well, that's great." I don't know what you did, Mayor, but you at least convinced the First Lady you're a good guy. [Laughter] And I appreciate your hospitality and your kindness to my wife who—you know, she's really not a politician. She is a really fine woman, great mother, great

wife, thoughtful person. And I appreciate your kindness to her. She's also, obviously, got good judgment. Her Chief of Staff, Anita McBride, was raised right here in Bridgeport.

I appreciate other State and local officials who are here, thank all the business leaders. The challenge is whether or not this Nation is going to be a confident nation. Our economy is strong right now. GDP grew at 3.5 percent last year. We're adding jobs. The national unemployment rate is 4.8 percent. I think the unemployment rate here is something less than that, here in the State of Connecticut. People are working. Small businesses are flourishing. Productivity is up. And the fundamental question is, how do we keep it that way? What do we do? Do we lose our confidence and retreat, or do we create the conditions so that capital flows and the entrepreneurial spirit remains strong?

My attitude is that the United States is the leader of the world, and by putting good policies into place, we'll remain the leader of the world. And that's where we should be. And so here are some ideas as to how to do that.

One is to keep taxes low. I believe when people have more money in their pockets it helps the entrepreneurial spirit, causes the economy to grow. One reason we overcame the recession and the stock market collapse and the attacks on our country and the wars we've been through and the natural disasters we've been through is because people have got more money to save and invest and spend. And so I'm looking forward to working with Congress to keep the taxes low and, at the same time, be wise about how we spend the people's money.

I understand we've got an issue with energy. I know it probably came as a shock to some of my fellow citizens here in Connecticut when I stood up in front of the country and said, "We've got a problem; we're addicted to oil." And I meant it. We've got an economic problem being ad-

dicted to oil because when fossil fuels—demand for fossil fuels rise in other parts of the world, it causes our energy bills to go up. We've got a national security problem when it comes to oil. When you've got people in the world who don't like us, from which we get supplies of oil, it causes those problems to come into the Oval Office. And therefore, we have to deal with the geopolitics of oil when it comes to securing this country. And we've got an environmental problem relying upon fossil fuels. And so I think there's a better way forward, and I look forward to working with Congress to keep us competitive in the world's stage by diversifying away from the use of oil.

And here are some ideas: Using ethanol in our automobiles is an idea, developing hybrid plug-in batteries so that we can drive the first 40 miles on electricity and not using gasoline, being wise about nuclear power, using solar power. There's a variety of things we need to do together to help us diversify away from hydrocarbons, and I'm intent upon doing that for the sake of the competitiveness of the United States of America.

Another idea I look forward to working with Congress on is to make sure that we are competitive when it comes to having the workforce of the 21st century, and we're going to make good progress on this with Congress. And that is to do something on the research and development tax credit, is double our commitment to the research in the basic sciences in Washington, DC, so that we're technologically competent, that we're on the leading edge of research when it comes to the world's economy, and then make sure our kids have got the skills necessary to fill the jobs by emphasizing math and science, particularly in junior high.

In terms of competitiveness, a big issue, of course, is health care. And in Washington, DC, there is a philosophical debate that rages, and that is how best to implement a health care strategy; what should

it look like? And to simplify the debate, it basically says, “Government ought to be the decider. Government ought to drive demand, and Government ought to control supply,” versus a system in which individuals are in charge of their own health care decisions. I recognize that it may be oversimplification, but, nevertheless, that’s the crux of the debate.

And it’s an important debate, and so I’ve got some ideas as to how this debate ought to go. And it starts with, one, a Federal commitment to certain people within our society, the poor and the elderly. The Medicare plan we passed modernized Medicare for the first time since Lyndon Johnson provided that—signed that bill. It is an important piece of legislation. It is working; 27 million Americans have signed up. If you have not looked at the new Medicare opportunities for you, you ought to do so by calling 1-800-MEDICARE.

Interestingly enough, by providing competition into the system—in other words, giving our seniors choices—the estimated cost for Medicare is dropping significantly. I believe competition works. And I believe Government ought to trust people to make the right decision for their selves and their families. And that’s what Medicare has done.

Another important way for health care to work is to expand community health centers. One of the things Shays told me was, he said you’ve got a good community health center here in Bridgeport. Community health centers are vehicles—places of opportunity for low-income citizens to be able to get primary care, so as to take the stress off of emergency rooms of your hospitals, for example.

We’ve expanded 800 of them over the years; we intend to expand or open 400 more over the next 2 years. These are wise use of taxpayers’ money, to help keep a Federal commitment to helping the poor deal with health care.

And same goes to Medicaid. Medicaid is a very important program. I look forward

to working with the Governors to make sure that the Medicaid system works more efficiently, most importantly for those who are getting Medicaid help.

Now, in terms of a lot of other folks, it seems like to me that we ought to be working toward the design of a system that makes health care available and affordable. And let me give you some ideas as to how to do that.

One, many small businesses are having trouble affording health care insurance. One of the reasons why is, they don’t have the same pooling opportunity—pooling of risk opportunities that larger companies get. And so I think it makes sense to allow small businesses to pool risk across jurisdictional boundaries so they can afford the same kinds of insurance purchases that big companies get.

For example, a restaurant in Bridgeport ought to be allowed to pool risk with a restaurant in Texas so that there’s economies of risk. Today, that can’t happen. Association health plans will enable small businesses to better afford insurance. I’m looking forward to working with Congress to get that out of the Congress.

Secondly, one of the cost-drivers for health care are these frivolous lawsuits that are running good doctors out of practice and forces doctors and hospitals to practice defensive medicine. When I first went to Washington I said, “Well, this is just a State issue,” Governor. I thought it could be best solved at the State level, until I realized the defensive practice of medicine plus these liability increases through lawsuits costs us about \$28 billion a year to the Federal—cost the Federal budget \$28 billion. I said, that’s a national problem, and it demands a national solution.

The House passed a bill. Of course, it’s stuck in the Senate. It needs to get out of the Senate. In order to make health care more affordable and more available, we need comprehensive medical liability reform immediately. You know what’s an amazing statistic is, there are 1,700 counties

in our country that have no ob-gyn. They got run out of business. And that's not right, and it's not fair, and it's necessary for Congress to act.

The third area we need to work on is information technologies. I know there is a lot of hospital people here. But we've set the goal—and I think you understand what I'm talking about, is to make sure that health care is brought into the 21st century by using information technology in such a way as, on the one hand, we have medical records; on the other hand, we protect patients' privacy. And we can do so.

A classic example of the importance of information technology came down there with Katrina. A lot of veterans were displaced as a result of that hurricane, but they had medical electronic records because the Veterans Administration has begun to modernize. And therefore, they were able to take their medical electronics records to their destination—where they moved to and were able to get immediate health care. The records were there; they were available. The doc that they checked in with was able to access their records on a real-time basis and were able to—so there was no, kind of, loss of care; there was no confusion about what was necessary.

We will save a lot of costs with information technologies, and we'll reduce medical errors with information technologies. And Secretary Leavitt, who is the head of HHS, has got a strong program to encourage the advance of information technology. Some estimate we save 30 percent in health care costs when information technology is spread throughout our society. And so we've got a Federal commitment, and we look forward to working with you to spread that commitment.

And finally, we're here to talk about what's called health savings accounts. It's a really interesting idea that Congress passed in the new Medicare law. It's an idea that it's really important for people—no matter what side of the philosophical

debate you may be on—to at least pay attention to what's available. A health savings account addresses one of the major cost-drivers in our system, and that is, is that a lot of people get health care, but somebody else pays the bill. It's called a third-party payer system.

And when somebody else pays the bill, sometimes you don't pay attention to the cost. You know, when you go out and purchase an automobile, somebody doesn't pay the bill for you; you pay it. And you tend to shop and you look and you try to find out what's best for you. The third-party payer system, which is, you know, an integral part of our health care system today, essentially says, "You sign up for a program, and if you get sick, somebody else will take care of it for you." And I believe that the more the consumer is involved in pricing, the more the consumer is involved in the decisionmaking, the more likely it is people will start making rational decisions for their own needs.

And one way to do that is through the advent of health savings accounts, which is, in essence, health savings account coupled with a high-deductible, catastrophic insurance plan. That's long-word talk for, if you get sick, above a certain amount, your insurance pays for it. If not, you pay for it. But the savings, if you don't spend money, are tax-free. In other words, this is an interesting way of making sure the patient and the provider are the integral deciders in health care decisions. If that's not clear enough, they'll help clear it up for me.

You know, LASIK surgery is an interesting—it's interesting to think about. LASIK surgery is a surgery that helps correct your eyesight. And I don't know how many years ago it was, but LASIK surgery was very expensive. But this happened to be a part of medical—medicine where there really was a market. More people began to provide LASIK surgery. People began to shop for LASIK surgery. And the

cost for LASIK surgery has gone down dramatically, and the quality of LASIK surgery has improved dramatically.

A lot of that has to do with the fact that the consumer was the decider. The consumer actually began to look around and decide what was best for him or her in the marketplace. That stands in contrast to a system where somebody else pays the bills.

Health savings accounts really mean that the individual owns and controls their health care. Health savings accounts enable somebody to say, "Look, if I make the right decisions about smoking or drinking or exercising, that I'll end up saving money." Health savings accounts help small businesses more afford health care coverage. Many of the uninsured are people who work for small businesses. They are the working uninsured. And if we have product available for small businesses to better afford insurance, it will help this country remain competitive.

Health savings accounts would be good for young people. A lot of young people feel bulletproof. They don't feel like they need insurance; they don't think they're ever going to get sick. But if a young person starts saving now for future health care costs and the interest compounds on a tax-free basis, it's amazing how much money a person can save.

And so this is an interesting idea. It started off rather slowly. In the marketplace today, there are about 3 million citizens who have got health savings accounts. Interestingly enough, part of the debate in Washington is, they say, "Sure he wants health savings accounts; only the rich will access them." That's not what happened. The uninsured are accessing health savings accounts. Many of the health savings accounts owners are folks with their high school degree. A lot of health savings accounts owners are people with not an extraordinary amount of income. You know, it kind of defies the concept that certain people can't make decisions on their own—

you know, "If you don't have a Ph.D., you shouldn't be allowed to decide things." People are plenty smart when it comes to their own lives and coming to making decisions about health care needs. And I believe we ought to encourage more consumer activism, more involvement in making health care decisions.

So that's what we're here to talk about. And by the way, one other point is you can't make good health care decisions unless there's transparency in the marketplace. People need to see price. One of the things we're trying to encourage is for health care providers to post their prices so people can choose, so people are able to—you know, "This kind of makes sense for me; this doesn't make sense for me." Nontransparency in pricing makes it awfully hard to achieve savings. And after all, one of the national objectives has got to be to have a health care system that is available and affordable. Availability means transparency in prices; affordability means—will be enhanced by transparency in pricing.

And so there's a competing vision from one that says, let's let the Federal Government make decisions. It's one vision I strongly support because I believe—I'm one of these kind of persons that believes that people are plenty capable of making rational decisions and choices.

We're here to talk about this—I mentioned the panel of folks. We'll start with Stephen Glick.

*Stephen Glick.* Yes, good morning, Mr. President. Welcome to Connecticut.

*The President.* Yes, it's good to be back here. Was born here, good to be back. [Laughter] Educated here. [Laughter]

*Mr. Glick.* We love that.

*The President.* Yes.

*Mr. Glick.* Before I make my remarks, I'd like to have my wife, Sally Glick, and partner in the business stand up. She's in the middle of the row up there. Welcome.

*The President.* That's a pretty good move. Smart guy, you know? Welcome, Sally.

*Mr. Glick.* Next to her is my son, Aaron, who is finishing his second year of law school—hopefully. [Laughter] And next to her is my daughter, Jamie Lombardi. Jamie is part of our team at CIT, and we welcome her.

*The President.* Why don't you tell everybody what the CIT is.

[At this point, Mr. Glick, administrator, Chamber Insurance Trust, made brief remarks.]

*The President.* Good job. Skip the dating service thing. Anyway—[laughter].

*Mr. Glick.* Do you know—

*The President.* No, I don't, believe me. [Laughter] Look, I'm the funny guy; you're the—[laughter].

*Mr. Glick.* Once in my life. [Laughter]

*The President.* One of the interesting things about society is there's—sometimes people resist change, and part of the reasons I'm doing forums like this and part of the reason Steve does what he does is to help educate people about what's available.

I strongly urge small-business owners to find out more about health savings accounts. I urge young people to find out about health savings accounts. It doesn't hurt to learn. And I think you'll find these to be very interesting opportunities. And one person who knows a lot about them is Dr. Bill West, entrepreneur.

*William J. West, Jr.* Thank you very much, Mr. President.

*The President.* Is that a true statement, "entrepreneur"?

*Dr. West.* Yes, absolutely.

*The President.* Good. Sometimes "doctor" and "entrepreneur" don't go hand in hand. [Laughter]

*Dr. West.* "Businessman/doctor," don't go hand in hand.

*The President.* What kind of doctor?

*Dr. West.* I'm a board-certified practicing ob-gyn, located in Redding, Pennsylvania. I'm actually a third generation—

*The President.* Have you got a health care crisis in ob-gyns in Redding?

*Dr. West.* Yes, we do.

*The President.* A leading question—I knew the answer before he said it. [Laughter]

*Dr. West.* We actually just lost eight more people practicing obstetrics in our hospital as of January 1.

*The President.* We've got a serious national problem. The Senate needs to get rid of all this, you know, politics and focus on solving this problem. Different subject—go ahead. Sorry about that.

[Dr. West, president and founder, First HSA, LLC, made brief remarks.]

*The President.* So, like, you're making the pitch. What do you tell people about HSAs?

*Dr. West.* They are not just for the healthy and wealthy; they work for everyone, including the chronically ill. They make total sense for everyone out there. It truly is consumerism.

*The President.* Tell people why.

*Dr. West.* Well, basically, you know, right now in the physician marketplace, there is no consumerism. People don't know what the cost of services are, and I don't know what the cost of services are. I might prescribe a drug that I have no clue it costs \$20 a tablet, and it's taken every 4 hours. A one-week prescription could cost \$600. Why don't I know that? Because I'm not paying for it. And usually the patient is not paying for it because all they have is a copay.

That's the problem with the third-party system. We have a disconnect between the patient, the provider, and the true cost of those health care services. Health savings accounts reconnect the patient and the provider with the true cost. And we start to make wise decisions. We have increased use of generic medications. We shop around for services. Maybe an MRI costs a little bit more at this hospital versus that hospital. And we start to use—

*The President.* Just to make sure everybody understands—a health savings account is a combination of a high-deductible catastrophic plan, and the deductible is a cash account that earns interest-free. And the cash account is—as you’ll hear later on—can be contributed by the individual, contributed by the company, can be contributed a combination of the worker and the company, can be contributed all different ways. But the shopping around is for the cash portion of a person’s account.

*Dr. West.* Absolutely. At First HSA, we provide a checking account which allows unlimited checkbook and Visa debit card access to the funds. Clients get monthly statements; they get the IRS reporting; they have 24-hour telephone banking. And they earn interest on the accounts, and those unused funds rollover from year to year.

So if I had \$3,000 in my account and spent 1,000, 2,000 plus interest rolls into the next year, and I can put an additional 3,000 in the following year.

*The President.* What is important for people to understand is that when you combine the cash contribution plus the premium for the high-deductible insurance, it’s less cost than the current insurance plans. That’s important for people to understand. That’s why we keep—I urge people to take a look. I mean, this is a cost-savings measure that has the additional benefit of connecting the consumer to the provider.

*Dr. West.* Absolutely. And the consumer benefits from healthy lifestyle choices, as you stated earlier, and they financially benefit from that. As a physician, many times patients will come to me to want to stop smoking, and I’ll write a prescription to stop smoking. The first question they’re going to ask me is, “Does my health insurance plan cover that?” If the answer is no, they hand the prescription back to me because they’re not financially incentivized to do that. In a health savings account, they take that prescription, they go get it filled, and they stop smoking because they’re the

ones who are going to benefit from that healthy lifestyle.

*The President.* And they benefit because they don’t spend—ultimately spend money on disease that would drain their savings account. The important thing for people to understand when they listen to the health savings account discussion is that the savings account is owned by the individual, and if a person changed jobs, for example, the savings account goes with the person. It’s a part of a person’s asset base. It is an integral part of a person’s—and will be an integral part of a lot of people’s future, to have this money stored up for health care needs, coupled with a high-deductible catastrophic plan in case something disastrous happens.

How’s your business going?

*Dr. West.* It’s been phenomenal. There’s been exponential growth. I also wanted to let you know that we actually got a union to go 100-percent HSA as one of our clients, and they love the plan. They’re really—our clients range from professionals to unions to formerly unemployed, uninsured workers, sole proprietors, entrepreneurs. We have them all.

[*Dr. West made further remarks.*]

*The President.* Information keeps people involved. Information is an integral part of consumers making rational decisions and choices.

*Dr. West.* Absolutely. We’ve developed a personal electronic health record, where they can take this health record with them from doctor to doctor, so they have improved quality.

*The President.* Explain to people what a personal health record is—an electronic personal health record.

*Dr. West.* Basically, online, what they have access to is, they can put in all their personal health care information—all their diseases, their medications, past family history, social history—all those things are in the health record. They then can print it out and take that with them, or put it onto

their PDA or whatever, and take that with them to the doctor's office. Many times, when we first come into the doctor's office, what do we do? We have to fill out a new form saying, here's all my medical—

*The President.* Unless you're not a very good writer.

[*Dr. West made further remarks.*]

*The President.* Things are changing. I think if you listen carefully to the doc, he's describing a different approach to health care that is consumer-centered. Now you've got to—in order to accept that as a rational way of approaching health care, you've got to trust people to make rational decisions. And I think our society should. I think the Federal Government should trust people to make good decisions. And, amazingly, what happens when that starts to happen is, you start seeing the rapid increase of price in health care begin to decline and people watching their—how they treat their bodies better.

So thanks, doc. Thanks for being—

*Dr. West.* Thank you very much.

*The President.* Thanks for coming.

Greg?

*Gregory B. Gravel.* Good morning, Mr. President. Thank you. My name is Greg Gravel. I'm the president and chief executive officer of the Whitney Center.

[*Mr. Gravel made brief remarks.*]

*The President.* The Whitney Center, like you told me earlier, Aunt Marge?

*Mr. Gravel.* Absolutely.

*The President.* My grandfather's sister was—

*Mr. Gravel.* We go back a long ways, sir.

[*Mr. Gravel made further remarks, concluding as follows.*]

*Mr. Gravel.* We front-ended part of the HSA plan for our employees and continue to do so today.

*The President.* Tell everyone what that means.

*Mr. Gravel.* We actually put money into their account. As long as the employee were to contribute a like amount, we put \$520 a year into their health savings account.

*The President.* Right. So in this case, the deductibility is 1,040—

*Mr. Gravel.* Correct.

*The President.* Cash into the account that will earn interest tax-free, be withdrawn tax-free, was 1,040, half of which you paid and half of which the employee paid.

*Mr. Gravel.* Correct. Correct.

[*Mr. Gravel made further remarks.*]

*The President.* What's the premium on the high-risk deductible plan?

*Mr. Gravel.* It's about \$4,500 for a single covered employee. The difference between 2004 and 2005, we were able to save \$78,000 in our premiums; 2005 to 2006, we saw a 1.8 percent increase—1.8 percent, not point—not one-eighth—not 18 percent but 1.8 percent increase in our premium. When is the last time you have heard of your health care premium increasing by as little as that amount?

[*Mr. Gravel made further remarks.*]

*The President.* Good. Lin works with you?

*Mr. Gravel.* Absolutely.

*Lin Onorato.* My name is Lin Onorato. I am the assistant director of dining services at the Whitney Center. I am an HSA participant. I have a family plan.

[*Mrs. Onorato made brief remarks.*]

*The President.* Let me ask you something. People would say, well, you know, you can't possibly make rational decisions. I presume that, kind of, entering in the marketplace as a shopper, consumer is a little daunting at first—

*Mrs. Onorato.* Definitely.

*The President.* —but when somebody is listening out there that says, "I wonder

if I ought to try this,” how would you encourage—I mean, obviously you’re confident enough to talk about it sitting up here with the President—[laughter]—and you’ve gained a certain amount of experience in the process. What would you recommend to somebody who says, “Well, I don’t think I’ve got the capacity to go out and find out what’s available”?

*Mrs. Onorato.* It’s real easy. You get from—we use ConnectiCare, and they give us their provider book, and you can go through, and you can ask your doctor questions and, “How much will this cost?” And you can call up different people and get the best price for your money without compromising quality.

*The President.* See, this is a—change is hard. The old system was, “Well, don’t worry; somebody else will take care of it.” There is a new opportunity that saves people money, actually earns people money. And I love the idea of Lin being able to say, “I own my account.” Notice she emphasized the \$800 that was unspent in the cash portion of the account—say, “It’s my money; I get to roll it over.”

If something terrible were to happen, there is an insurance policy to take care—it’s called the catastrophic aspect of this plan. She is in charge of making the decisions for her family. That bothers some people in Washington, DC. They don’t believe she’s capable of doing so. I do. But the benefit for society as a whole—this helps control costs and makes health care more available and affordable.

And so I want to thank you for having the confidence to share this with us.

*Mrs. Onorato.* Thank you for the opportunity.

*The President.* Thank you for being here. Good job.

Verna, are you ready?

*Verna Moran.* Sure am.

*The President.* Tell everybody what you do.

*Ms. Moran.* First of all, I’d like to thank you for allowing me to be here today, Mr.

President. And my name is Verna Moran. I’m vice president of human resources for the Seitz Corporation.

[*Ms. Moran made brief remarks.*]

*The President.* Let me stop you right there, if you don’t mind. Sorry.

*Ms. Moran.* Sure.

*The President.* A lot of business people, small-business owners, when they’re confronted with a 25-percent increase on a relatively high base decide not to offer people insurance anymore. That’s why a lot of our citizens who work for small businesses do not have insurance. It’s the working uninsured—many of the working uninsured are employees of the small-business company.

What’s important, however, is that 70 percent of new jobs in America are created by small-business owners. And therefore, if our small-business sector is weakened because of rising health care costs, it makes this country less competitive.

Sorry to interrupt.

*Ms. Moran.* Not at all. And with the 25 percent—you can interrupt any time. [Laughter]

*The President.* Maybe here but not at the house. [Laughter]

[*Ms. Moran made further remarks.*]

*The President.* The combination of the high-risk deductible—premium on the high-risk deductible, relative to their cost last year, enabled the savings from their cost last year to be—this company to contribute 100 percent of the cash portion of the health savings accounts for their employee.

*Ms. Moran.* Correct.

*The President.* It’s a pretty strong benefit for a small company to be able to do.

[*Ms. Moran made further remarks, concluding as follows.*]

*Ms. Moran.* So a healthy employee could, in fact, at the end of the year, have their

whole deductible be rolled over in a future year.

*The President.* And it's their money.

*Ms. Moran.* And it's their money.

[*Ms. Moran made further remarks.*]

*The President.* It's an amazing story, isn't it? One hundred seventy-five employees?

*Ms. Moran.* One hundred fifty employees, yes.

*The President.* One hundred fifty employees, I just increased it a little bit. [*Laughter*]

*Ms. Moran.* Well, that's all right because we plan to increase, so that's okay. [*Laughter*]

*The President.* Oh, that's good. That's interesting. I bet you're more confident about expanding because all of a sudden, you've got a better handle on your health care costs.

*Ms. Moran.* Exactly.

*The President.* And I really strongly urge small-business owners to look at these products. And I find it amazing that Verna is able to describe a plan that is very innovative, employee-centered, and yet at the same time, she can say that we've saved money for the company.

*Ms. Moran.* Absolutely.

*The President.* Good job.

*Ms. Moran.* Thank you. Thank you very much, Mr. President.

*The President.* We've come to describe one way to approach health care. And it

is to take care of the elderly and the poor and to encourage our fellow citizens to become directly involved in making health care decisions.

I urge the Congress to look at ways to strengthen health savings accounts by making the tax deductibility fair, by expanding the size of the contribution levels that people can make, by making sure that health savings accounts are as portable as they possibly can be so that the worker, if he or she chooses to change jobs, can take the full account—insurance plus the savings—with him or her to a new job.

The United States of America is constantly faced with different choices. And there are very important philosophical debates raging. And today you all heard one aspect of a very important part of a philosophical debate taking place, and that is how best to run the health care system. I've made my decision. I'm looking forward to continuing to have a consumer-driven system to be the heart of American health care.

And I appreciate you all sharing your thoughts, and thank you all for letting us come and visit with you.

NOTE: The President spoke at 11:01 a.m. at the Playhouse on the Green. In his remarks, he referred to Darrell Harvey, chair, Business Council of Fairfield County; and Mayor John M. Fabrizi of Bridgeport, CT.

## Remarks on the War on Terror and a Question-and-Answer Session in Charlotte, North Carolina April 6, 2006

*The President.* Thank you. Firoz, thanks a lot. So I said, "That's an interesting name." He said, "I've lived in seven countries," but he also said he's proud to be an American. And we're proud you're an

American. Thank you very much for inviting me.

You know, I was just standing here, listening to Firoz; one of the great things about our country is that you can come, and you can enjoy the great blessings of

liberty, and you can be equally American if you've been here for 1 generation or 10 generations. I thought it was neat that somebody who has been—you've been here 27 years though, right? Yes. Well, seven countries, 27 years here, introducing the President, though. I think it says a lot about the United States of America. Thanks for having me.

I'm looking forward to sharing with you what's on my mind. I look forward to hearing what's on yours as well. First thing is, Laura sends her best to the folks of Charlotte. She sends her best, Tony, to you and your bride. Thank you for having us here, to Central Piedmont. I appreciate your involvement in education. I married well; she's a really patient person too. *[Laughter]*

I traveled down here with Congressman Robin Hayes, the Congressman from this district. Congressman, thank you for being here; appreciate it.

I've known your mayor for a long time. He's a man of accomplishment. I know he was particularly proud to land the NASCAR Hall of Fame. Pretty big deal, you know? It's a pretty big deal. Thank you all for coming. I want to thank the others who serve on the city council who are here. The mayor was telling me a lot of the council members are here. I appreciate your service to your city.

I think one of the things I'd like to tell you about is why and how I made some decisions I made. My friends from Texas who, once they get over the shock that I'm actually the President—*[laughter]*—like to ask me what it's like to be President. And I guess the simple job description would be, it is a decisionmaking experience. And I make a lot of decisions. Some of them you see; some of them you don't see. Decisionmaking requires knowing who you are and what you believe. I've learned enough about Washington to know you can't make decisions unless you make them on principle. And once you make a decision based upon principle, you stand by what you decide.

In order to make good decisions, you've got to rely upon good people. People have got to feel comfortable about coming in the Oval Office and tell you what's on their mind. There's nothing worse than people walking in and say, "Well, I'm a little nervous around the guy; I think I'd better tell him what he thinks he needs to hear." You can't do the country justice, you can't make good decisions unless you've got a lot of good, competent people around you, and I do—Condoleezza Rice, Secretary of State; Don Rumsfeld; Vice President.

These are people who have seen good times, and they've seen tough times. But in all times, they're capable of walking in and telling me what's on their mind. That's what you need as the President. And then once you make up your mind, they say, "Yes, sir, Mr. President, I'll get it done."

The biggest decision I've had to make since I've been your President is putting kids in harm's way. It's a decision no President wants to make. It's a decision I wish I did not have to make. But I'd like to share with you why I made the decision I made.

First of all, war came to our shores on September the 11th, 2001. It was a war we did not ask for. It's a war we did not want, but it is a war that I intend to deal with so long as I'm your President. In order to deal with this war on terror, you've got to understand the nature of the enemy. And I'll share my thoughts with—about this enemy we face.

They're an enemy bound together by an ideology. These are not folks scattered around that are kind of angry and lash out at an opportune moment. These are people that are—believe something, and their beliefs are totalitarian in nature. They believe you should not be able to worship freely. They believe that young girls should not go to school. They've got a perverted sense of justice. They believe in the use of violence to achieve their objectives. Their stated objectives, their stated goals are to spread their totalitarian view throughout

the Middle East. That's what they want to do.

They have made it abundantly clear that they believe folks who live in America are weak, that we don't have the will to compete with their philosophy. That's what they believe. I'm just telling you what they said. I think it's really important in a time of war for the President to take the words of the enemy very seriously. And I do.

They think that the use of violence will cause us to lose our nerve and retreat. And they have stated that they want safe haven from which to not only topple moderate governments in the Middle East but from which to launch attacks against the United States. Given that in mind, I'd like to share some of the lessons learned. One lesson is the nature of the enemy.

Another lesson is, is that we must defeat the enemy overseas so we don't have to face them here again. And that requires a strategy that is offensive in mind: press the enemy; find the enemy; bring the enemy to justice; never relent; never give them quarter; understand you cannot negotiate with these people; you can't rationalize with these people, that you must stay on the hunt and bring them to justice. This is precisely what we're doing.

One obviously immediate target is to dismantle Al Qaida. They hide in kind of the far reaches of the world. They plot and plan, however, from the far reaches of the world. They're good at communications. They're good at deception. They're good at propaganda. And they want to strike again. We have done a good job of dismantling the operating structure of Al Qaida—Khalid Sheikh Mohammed, Ramzi bin al-Shibh—a series of these folks that have become the operating element of Al Qaida. Obviously, Usama bin Laden and his sidekick Zawahiri is still at large. We understand that. But we're looking, and we're listening, and we're working with allies like President Musharraf of Pakistan, President Karzai of Afghanistan to bring this—to bring the head of Al Qaida to justice.

The second lesson learned is that unlike previous wars, these folks—this kind of terrorist network that is ideologically bound needs safe haven. They need a place to hide. They need a symbiotic relationship with governments that will enable them to plot, plan, and attack.

So early on in the conflict, I not only vowed that we would use our fierce determination to protect this country by staying on the offense, but that we would deny safe haven to these terrorists. And so I said, "If you harbor a terrorist, you're equally as guilty as the terrorist." And one thing that I think is really important for our citizens to understand is that when the President says something, he better mean what he says. In order to be effective, in order to maintain credibility, words have got to mean something. You just can't say things in the job I'm in and not mean what you say.

And I meant what I said. And so we said to the Taliban, "Get rid of the Al Qaida." They chose not to. I made my first decision to send our kids into harm's way and liberate Afghanistan. The decision to liberate Afghanistan was based first and foremost on the need to enforce the doctrine that I thought was necessary to protect the American people. One of the benefits of sending our kids into harm's way was that we liberated 25 million people from the clutches of one of the most barbaric regimes known to the history of man.

Laura and I went over to that fledgling democracy. We went to see President Karzai. It was a remarkable experience. It's hard to describe. You know, I'm not such a good poet. Let me put it to you this way: My spirits were lifted to see people committed to democracy, recognizing that democracy stands in stark contrast to the life these people had to live under the Taliban.

The task now is to continue to fight off the Taliban and Al Qaida that would continue to try to disrupt the march of the new democracy, help this country survive

and thrive and grow, and help the Afghan citizens realize the dreams of men and women that they can live in a free and peaceful world. Remember, these folks have voted for a President and voted for a Parliament. I'm proud of the progress we're making there. It's an historic achievement for our country and for our troops. And it was a necessary achievement to enforce the doctrines that we said were necessary to protect our people.

Another lesson—this is an important lesson for the country. It's one that, kind of, sometimes can get obscured in the politics of Washington, but it's one that I'm confident when I tell you it's necessary for this country to adhere to. It's going to be necessary for me or whoever follows me. When we see a threat, we have got to take the threat seriously before it comes to hurt us.

You know, growing up in Midland, Texas, we all felt pretty secure as a kid, mainly because we thought oceans could protect us. Now in my case, we were really far away from oceans too, but nevertheless, it's—when you think about it, though, if you're a baby boomer like me, you think about what it was like growing up. We knew there was a nuclear threat. Of course, we had put forth an interesting sounding strategy called “mutually assured destruction,” which provided an umbrella for security and safety.

But nevertheless, we never really felt anybody would invade us, did we? We never felt there would be another attack like Pearl Harbor on our lands. And yet September the 11th changed all that. More people died on September the 11th because of an attack by an enemy on our shore than died at Pearl Harbor. The biggest threat we face is when a terrorist network is able to acquire weapons even stronger than airplanes. If the terrorist network were ever to get weapons of mass destruction, one of their stated objectives, our country and the free world would face a serious threat.

I saw a threat in Iraq. Not only did I see a threat in Iraq; the previous administration saw a threat in Iraq. Not only did the previous—which, by the way, passed a resolution in the United States Congress that said, we ought to have a regime change in Iraq. Not only did the previous administration see a threat in Iraq; members of both political parties, in both Chambers, during my time as President saw a threat in Iraq. And the reason we saw threats is because the intelligence said that Saddam Hussein possesses weapons of mass destruction.

But it wasn't just U.S. intelligence that said that; there was—the worldwide intelligence network felt like he had weapons of mass destruction. After all, when I took the case to the United Nations Security Council, the Security Council voted 15 to nothing to say loud and clear, “Disclose, disarm, or face serious consequences.” That's not what the United States said alone. This is what France and Great Britain, China, Russia, and members of the Security Council said, because the world felt like Saddam Hussein had weapons of mass destruction. And after 9/11, it was abundantly clear that a state sponsor of terror, which is what he had been declared by previous administrations, and the idea of weapons of mass destruction and the fact that he was at least, at the very minimum, a stated enemy of the United States of America posed a serious threat for our country.

My biggest job is to protect the American people. That became abundantly clear on September the 11th. It's important to pass good reform for education; it's important to support the community college system; it's important to work for, you know, a Medicare plan that meets the needs. My biggest job is to protect you—at least that's how I see the job. Much of my decision-making, by the way, is based upon what happened on September the 11th. It had an effect on me, just like it had an effect on the country. I've never forgotten that

day. I've never forgotten the lessons learned, and so when we saw a threat, we got to take it seriously. Oceans could no longer protect us. The enemy was able to strike us and kill, and they were dangerous.

And before a President ever commits troops, you got to try diplomacy at all costs. I'm going to say to you what I said before: Putting those kids in harm's way is a tough, difficult decision. And nobody should ever want to do it, because I understand fully the consequences of the decision. And so as I told you, I went to the diplomatic route. I was hoping that when the world spoke with that one voice at the United Nations Security Council, Saddam Hussein would see the reason of the free world. But he didn't.

I felt all along the decision was his to make. He said—the world said, “Disclose, disarm.” In the meantime, I want you to remember, he was deceiving inspectors. It's a logical question to ask: Why would somebody want to deceive inspectors? I also told you earlier that when America speaks, we got to mean what we said. I meant what we said when we embraced that resolution that said, “Disclose, disarm, or face serious consequences.” Words mean something in this world, if you're trying to protect the American people.

I fully understand that the intelligence was wrong, and I'm just as disappointed as everybody else is. But what wasn't wrong was Saddam Hussein had invaded a country. He had used weapons of mass destruction. He had the capability of making weapons of mass destruction. He was firing at our pilots. He was a state sponsor of terror. Removing Saddam Hussein was the right thing for world peace and the security of our country.

Iraq is now the central front on the war on terror. The war on terror is broader than Iraq, but Iraq is the key battlefield right now. And the enemy has made it so.

The advance of democracy frightens the totalitarians that oppose us. Mr. Zarqawi, who is there in Iraq, is Al Qaida. He's

not Iraqi, by the way. He is there representing the Al Qaida network, trying to stop the advance of democracy. It's an interesting question, isn't it. Why would somebody want to stop democracy? Like, what's wrong with democracy; Mister, why are you afraid of it? Are you threatened by the fact that people get to speak and you don't get to dictate? Are you threatened by the fact that people should be able to worship the Almighty freely? What about democracy that bothers—I think it's a legitimate question we all ought to be asking.

But nevertheless, he's tough, and he's mean, and he'll kill innocent people in order to shake our will. They have stated, clearly stated—they being Al Qaida—that it's just a matter of time for the United States to lose its nerve. They recognize they cannot beat us on the battlefield; they cannot militarily defeat the United States of America. But they can affect our conscience. And I can understand why. Nobody likes to see violence on the TV screens. Nobody wants to see little children blown up when a U.S. soldier is trying to give them candy. Nobody likes to see innocent women die at the hands of suicide bombers. It breaks our heart.

The United States of America is an incredibly compassionate nation. We value human life, whether it be here at home or whether it be abroad. It's one of the really noble features of our country, I think. Nobody likes to see that, and the enemy understands that, however. They know that if we lose our nerve and retreat from Iraq, they win.

We've got a strategy for victory in Iraq. It's important for you to know that victory will be achieved with a democracy that can sustain itself, a country that will be able to defend itself from those who will try to defeat democracy at home, a country that will be an ally in the war on terror, and a country that will deny Al Qaida and the enemies that face America the safe

haven they want. Those are the four categories for victory. And they're clear, and our command structure and our diplomats in Iraq understand the definition of victory.

And we're moving that way. We're moving that way. We've got a plan to help rebuild Iraq. You know, when we first went in there—by the way, every war plan or every plan is fine, until it meets the enemy. But you've got to adjust. You've got to be able to say on the ground, "Well, this is working; this isn't working." The enemy is not a—they think differently; they make different decisions; they come up with different tactics to try to defeat us. And it's very important for us—for me to say to our commanders and our diplomats, "Devise that strategy on the ground; keep adjusting, so that we achieve the victory that we want."

So when we first got into Iraq, we went with big rebuilding projects. You know, "We're going to help them do this and help them do that," big electricity projects. And the enemy blew them up. And so what we've done now is we've gone to a more rational strategy to provide money for local folks, including our military, to help smaller projects, but projects that are able to connect with the people on the ground. You know, jobs helps a lot if you're trying to say democracy is worth it.

Second aspect of our plan was to promote democracy. And I know 4 months in the way these news cycles work seems like a decade; at least it does to me at times, you know? [*Laughter*] Four months ago, 12 million people went to the polls. It was an amazing event, wasn't it, I mean, really think about it. If you can project back to the amazement, surprise, exhilaration that happened when, given a chance to vote for the third time in one year, the Iraqi people having had suffered under the tyranny of Saddam Hussein said, "I want to be free. That's what we want to be." That's what they said. Twelve million people, in the face of incredible threats and potential suicide bombers—and ugly words

coming out of those who fear democracy—said, "Give me a chance." It was an amazing experience. It was a—in my judgment, a moment that is historic.

Part of the task now is to say to the Iraqis' leaders, "The people said something, now you need to get—you need to act. You need to get a unity government together." And that's what we're watching right now. It takes awhile for people to overcome the effects of tyranny, and there's a lot of politics happening in Iraq. It's a little different from what used to be the place. It's a little different from other countries in that part of the world where one person makes a decision, and everybody kind of either likes it or doesn't like it, but you keep your mouth shut if you don't like it.

Here you're watching people kind of edging for responsibility and working it, and we're very much involved. I know you know Condi went over there the other day, and her message was, let's get moving. The people want there to be a unity government. The people want there to be a democracy, and it requires leadership, for people to stand up and take the lead. And so we're working with them to get this unit government up and running.

And then there's the security side. You can't have a democracy unless the people are confident in the capacity of the state to protect them from those who want to stop the advance of democracy. The enemy for awhile tried to shake our nerve. They can't shake my nerve. They just can't shake it. So long as I think I'm doing the right thing and so long as we can win, I'm going to leave our kids there, because it's necessary for the security of this country. If I didn't think that we could win, I'd pull them out. You just got to know that. I cannot sit with the mothers and fathers of our troops in harm's way and not feel like victory is necessary and victory will be achieved.

Part of my decisionmaking process about whether they're there is based upon whether or not the goal is necessary and attainable. It's necessary to protect this country—I'm going to talk about it a little later—and it is attainable. It's attainable because the Iraqis on the political side have said, "You bet. Give us a chance." They wrote a Constitution; they ratified the Constitution. Twelve million went to the polls. That's a high voter turnout, by the way. On the security side, our goal, our mission is to let the Iraqis take the fight. And as I—I've always been saying, "They stand up; we stand down." That means we train the Iraqis to take the fight to those who want to disrupt their country.

And we're making good progress on the military side. By the way, we had to change our tactics. When we first got there, we said, why don't we train us an army that will be able to protect from an outside threat. It turned out there wasn't much of an outside threat compared to the inside threat. And so now the training mission has adapted to the tactics of the enemy on the ground. We're embedding our guys with the Iraqi Army. They're becoming more efficient. There's over 200,000 trained, and we're constantly monitoring the quality of effort. And as the quality of the forces improves, they take over more territory. The idea is to have the Iraqi face in front, making the—helping the folks get the confidence in their Government.

We lagged in police training. And so General Casey, as he—who is our general on the ground there, told me, he said, "You know, this is going to be the year of training the police so they can bring confidence to people."

The enemy shifted its tactics, as you know, and has tried to create a civil war. And they blew up the—one of the holiest sites in Samarra, trying to get the Sunnis to get after the Shi'a, and vice versa. This has been an objective for awhile. First it was go after coalition troops. There is still danger for our troops, don't get me wrong.

But they really tried to incite a civil war. And what was interesting to watch is to watch the reaction for the—by the Government. The Government, including many of the religious leaders, stood up and said, "No, we don't want to go there; we're not interested in a civil war."

The Iraqi troops did a good job of getting between some mosques and crowds, and they got in between competing elements and stood their ground. And as I put it awhile ago, they said—the Iraqi people looked into the abyss and didn't like what they saw. And it's still troublesome, of course. There's still sectarian violence. You can't have a free state if you've got militia taking the law into their own hands.

Now, remember, this is a society adjusting to being free after a tyranny. And Saddam Hussein's tactics to keep the country in check was to pit one group of people against another and say, "I'm the only stabilizing force for you." He was brutal on Shi'a; he destroyed, with chemical weapons, many Kurds; and he was tough on Sunnis too. But he created a kind of—this sense of rivalry.

And so you can understand why there's revenge after years of this kind of tension he created. Our job and the job of rational Iraqi leaders is to prevent these sectarian reprisal attacks from going on. And it's tough work, but I want you to know, we understand the problem. More importantly, General Casey understands the problem.

We're adjusting our tactics to be able to help these Iraqis secure their country so that democracy can flourish. They want democracy. That's what they've said. The troops, time and time again, have shown that they're better trained than before. And we've got more work to do on that, I readily concede. There's a lot of debate and a lot of questions about what's happening, I understand that.

Again, I repeat to you, I know what violence does to people. First of all, I'm confident—people are saying, "I wonder if these people can ever get their act together

and self-govern?" The answer is, I'm confident they can if we don't lose our nerve.

One of the decision—principles—a principle on which I made decisions is this: I believe that freedom is universal. America was founded on the natural rights of men and women, which speaks to the universality of freedom. And if you believe in the universality of freedom, then you have confidence that if given a chance, people will seize that opportunity.

No question the Iraqis need help after living under the thumb of a tyrant. But freedom is embedded, I believe, in the souls of men and women all over the Earth. You know, you don't demand freedom just—more than Methodists demand freedom, let me put it to you that way. I'm a Methodist. *[Laughter]* There's an interesting debate: Is it imposing one's values to encourage others to live in freedom? I argue the answer to that question is, absolutely not, if you believe in the universality of freedom.

And so while thrilled to see the vote, I was—I wasn't shocked. People want to be free. I know you're thinking about, "Well, when's he going to get our troops out of there?" There's a debate going on in Washington, DC, which it should, and it's an important debate about our troop levels. Here's my answer to you: I'm not going to make decisions based upon polls and focus groups; I'm going to make my decisions based upon the recommendations of our generals on the ground. They're the ones who decide how to achieve the victory I just described. They're the ones who give me the information.

I remember coming up in the Vietnam war, and it seemed like that there was a—during the Vietnam war, there was a lot of politicization of the military decisions. That's not going to be the case under my administration. They say, "Well, does George Casey tell you the truth?" You bet he tells me the truth. When I talk to him, which I do quite frequently, I've got all the confidence in the world in this fine

general. He's a smart guy; he's on the ground; he's making incredible sacrifices for our country. And he—if he says he needs more troops, he'll get them, and if he says he can live with fewer troops because the Iraqis are prepared to take the fight, that's the way it's going to be.

There are some in Washington, DC, and around the country who are good folks, legitimate, decent folks, saying, "Pull the troops out." That would be a huge mistake. It would be a huge—*[applause]*—hold on a second—it would be a huge mistake for these reasons: The enemy has said that they want us to leave Iraq in order to be able to regroup and attack us. If the American people—the American Government, not the people—were to leave prematurely, before victory is achieved, it would embolden the enemy.

Now, I recognize some don't see the enemy like I do. There's kind of a different view of the enemy. That's a good thing about America; people can have different points of view, you know. And people should be allowed to express them, which is great.

I see an enemy that is totalitarian in nature, that's clearly stated they want to attack us again, and they want safe haven from which to do so. That's why they're trying to stop democracy in Iraq. If we were to pull out our troops early, it would send a terrible signal to the Iraqis. Twelve million people said, "I want to be free." And they need our help. We're helping the Iraqis achieve freedom. They watch these deals. They listen carefully to the debate in America. They need to watch, by the way; they need to watch this debate, which is good. It's what free societies do; they debate. But they're also listening very carefully about whether or not this country has got the will necessary to achieve the objective.

Thirdly, if we left before the mission was complete, what would it say to our troops and the families, particularly those who have lost a loved one? I spend—let me

say this about our military: The Volunteer Army is a necessary part of our society. We need to maintain the Volunteer Army. It is a really—we've got a magnificent group of men and women who serve our country. Do you realize most people who served, are serving today, volunteered after 9/11? They saw the stakes, and they said, "I want to join the United States military." The retention rate is high, which means we've got people serving in uniform who not only volunteered and saw the stakes but have been involved in this conflict and said, "I'd like to stay in the military."

It is a—the military is a vital part of securing this country in the war on terror. Now, if you don't think we're at war, then it probably doesn't matter that much. I not only think we're at war; I know we're at war. And it's going to require diligence and strength and a really—and a military that's well-paid, well-housed, well-trained, where morale is high. And pulling out before the mission is complete would send a terrible signal to the United States military.

I welcome the debate, but I just want people here to know, we're going to complete the mission. We'll achieve victory. And I want to say this to the Iraqi people: We want to help you achieve your dreams. And the United States of America will not be intimidated by thugs and assassins.

I got one more thing to say, then I—*[applause]*—I got one more thing to say. I know I'm getting a little windy. I want to talk to people about why it's important for us to succeed in Iraq, and Afghanistan, for that matter. I told you there's a short-term reason: Deny safe haven and help get allies in the war on terror to prevent this totalitarian movement from gaining a stronghold in places from which they can come hit us.

There's a longer term reason as well, and that is, you defeat an ideology of darkness with an ideology of hope and light. And freedom and liberty are part of an ideology of light. Our foreign policy in the past has been one that said, well, if the waters look

calm in parts of the world, even though there may not be freedom, that's okay. The problem with that foreign policy is, below the surface there was resentment and anger and despair which provided a fertile ground for a totalitarian group of folks to spread their poisonous philosophy and recruit.

The way to defeat this notion of—their notion of society is one that is open, that is democratic, that is based upon liberty. This doesn't have to be an American-style democracy. It won't be. Democracy has got to reflect the tradition and the history of the countries in which it takes hold. I understand that. And nobody in the Middle East should think that when the President talks about liberty and democracy, he's saying you got to look just like America or act like America. Nobody is saying that.

I am saying, though, trust your people, give them a chance to participate in society. I believe a society is a whole society in which women are free and are given equal rights. I believe there's a whole society in which young girls are given a chance to go to school and become educated. I believe it's a whole society when government actually responds to people, not dictates to people. That's what I believe. And I believe that it's the best way in the long run to defeat an ideology that feels the opposite way. And we've seen it happen in our history before. It's happened in some of your lifetimes.

One of the ways I like to describe what I'm trying to tell you is about my relationship with Prime Minister Koizumi of Japan. I say this all the time, as the press corps will tell you traveling with me—"When is he ever going to quit saying that?" Well, it's the best example I can give you about what I'm trying to describe is happening today during these historic times. My dad fought the Japanese as an 18-year-old kid—or 19—he went in at 18, I guess. But he was in combat. Many of your relatives fought the Japanese. It's hard to think back and kind of remember the bitterness that we had toward the Japanese. They attacked

the United States of America and killed a lot of folks. And we want to war with them, and a lot of people died, and it was a bloody war.

After the war—and by the way, it ended with an old doctrine of warfare, which is, destroy as many innocent people as you can to get the guilty to surrender. That's changed, by the way, with the precision nature of our military and the way we're structured. And the way our troops think is we now target the guilty and spare the innocent. That's another subject if you got a question. But anyway, today, my friend in keeping the peace is Prime Minister of Japan.

Amazing, isn't it? Maybe you take it for granted. I don't. I think it's one of the really interesting parts of—one of the interesting stories of history, that 60 years after we fought the Japanese, I can tell you that I work with Prime Minister Koizumi on a variety of issues. It's amazing, I think. I know 60 seems like a long time. If I were six or seven, it would seem like a long time. At 59, it seems like a long time. [Laughter] Maybe when I'm 60, it will seem like a short time.

Anyway, so what happened? What was it that caused something to change, an enemy to become an ally? I believe it's because the Japanese adopted a Japanese-style democracy. And I appreciate the fact that one of my predecessors, Harry S. Truman, had the foresight to see the capacity of freedom, the universal right of people to change the world, to make it so that, eventually, an American President would be able to say, we're working together to keep the peace. They're no longer an enemy; they're a friend. Democracies don't war.

Europe is whole and free and at peace for a reason. We lost thousands of troops on the continent of Africa—on the continent of Europe since World War I. Thousands and thousands of young men and women lost their lives during that war. And today, there's peace. And the reason why

is because democracies don't war with each other.

I believe that one day an American President will be talking about the world in which he is making decisions or she is making decisions, and they'll look back and say, "Thank goodness a generation of Americans understood the universality of liberty and the fact that freedom can change troubled parts in the world into peaceful parts of the world."

Is it worth it in Iraq? You bet it is. It's worth it to protect ourselves in the short run, but it's necessary and worth it to lay the foundation of peace for generations to come. And that's what's on my mind these days.

I'll be glad to answer questions. Yes, ma'am.

#### *Federal Budget/National Economy*

Q. [Inaudible]

The President. Good.

Q. [Inaudible]

The President. Good. You're welcome here. [Laughter] This is not a political convention. [Laughter]

Q. But more importantly, I'm an American, and my husband and I are proud parents of four children and five grandchildren. And I care very deeply, as you, about our future as a country and our place in the world.

The President. Good.

Q. I agree with you completely, that when war came to our borders, that we needed to defend our country against Al Qaida and was completely with you there. I agree that Saddam Hussein is a tyrant, as many are across the world. But I am more concerned about the deficit that we are incurring in this country and the effect that that will have on my children and grandchildren and our present. My colleagues here on the city council and I were just talking about how we can't afford after-school enrichment opportunities for the children of Charlotte because of cutbacks

in the community development block grant. And I just—

*The President.* That's a great question. Thank you.

*Q.* —think we need to secure our borders, to protect our ports, and to invest in the people of Charlotte and this country—

*The President.* Good.

*Q.* —for a real national—

*The President.* I got your question, thank you. It's a good question. She basically—no seriously, it's a legitimate question. What are you doing about the deficit, you know? There are two types of deficits that I want to describe to you. One is the current account deficit. It's the deficit that we're on plan to cut in half by 2009. There's an interesting debate in Washington about how do you deal with a current account deficit.

By the way, we—and the area where we're able to affect the deficit the most is through some of the programs you described called discretionary spending. There's also discretionary spending and mandatory spending. Mandatory spending is a formula-driven spending that happens based upon conditions, not based upon, necessarily, legislation, although you can change mandatory spending through formula adjustment. Mandatory spending in Social Security, mandatory spending Medicare, mandatory spending Medicaid, programs like that; farm program is mandatory spending. Discretionary spending is some of the education programs you described. Discretionary spending is also military spending.

We—I'm going to put this in a little larger context. I promise to answer your question. We were confronted with a series of hurdles to economic growth that we had to deal with in Washington. We had a stock market correction, a quite significant stock market correction, and we had a recession early in '01. And then the enemy attacked us, which hurt our economy. Obviously, my decision to go to war—people don't—you

know, war is an unsettling thing. I fully understand that. Sometimes it's not conducive to risking capital during a time of war. We had a major natural disaster. All of this affected our economy.

I made the decision to cut taxes, as you know. It was a decision based upon the principle that if people had more money in their pocket, they're likely to spend it, save it, or invest it. And therefore, I felt like the best way to address these economic hurdles was to stimulate our economy through progrowth economic policies, starting with a tax cut—and a tax cut, by the way, for everybody. Everybody who paid taxes should get a cut. It's a tax cut that helped our small businesses. I firmly believe by cutting taxes on dividends and capital gains, it stimulated investment.

And our strategy has, I think, been proven by the numbers. We're growing at 3.4 percent—3.5 percent last year. The national unemployment rate is at 4.8 percent—5 million jobs in 2½ years. I mean, I could go on—housing is up. There's a lot of positive economic news. And no question, however, we've been running a deficit.

One reason we're running a deficit is because I'm going to make sure our troops have what it takes to do their job. In the harm's way—when they're in harm's way, you've got to be able to say to their families that we're going to give them all they got. You know, we want to help them.

One of the interesting things about—for this war is that we're saving a lot of lives through a health care system that is phenomenal. And we're pulling these kids off the battlefield and sending them to Walter Reed or Bethesda as quickly as possible, sparing no expense to save lives. But no question, it's been costly.

Katrina—we're up to \$100 billion on Katrina. I don't know if you've been over there. You know, it just breaks your heart to see the devastation done in the gulf coast of Mississippi and inside New Orleans. It's a gut-wrenching experience to see

the devastation that went on, and the Federal Government has made a strong commitment to provide that money.

That's background for—no question, we have a current account deficit. I have submitted a budget that says we can cut it in half by 2009. Now, there is a debate in Washington. Some of them are saying, "Raise the taxes in order to balance the budget." In all due respect, that's not the way Washington works. Washington will raise the taxes and figure out new ways to spend the money. So my attitude is, let's leave the progrowth economic policies in place, which by the way, yielded a \$100 billion-plus more money than anticipated last year, because a growing economy yields more tax revenues, and be tough on the spending.

And I understand it creates some of the conditions you said, and I appreciate you bringing those to my attention. We're now in another budget discussion in Washington. And I submitted another tough budget. Now, people said, "Why don't you veto the budgets?" I'd like to explain that to you. So we sit down from the executive branch and negotiate—we come up with a budget that we think is necessary to meet goals. The goal is to cut the current account deficit in half by 2009, and then we negotiate with the Congress. We say, "Here's the top line; here's what we want you to meet in order to meet the goals we think are necessary."

Thus far, they've hit the top line that we've suggested. Last year, as the councilwoman mentioned, the mayor pro tem mentioned, that there are some cutbacks in CDBG money. It's all aimed at trying to get this deficit under control. And the—and so Congress said last year, you're right. Here's the top line; we made it.

And so the size of the pie was what we thought was necessary to achieve an objective. And so therefore, I'm confronted with a choice. I may not like the slices of the pie, but I like the size. And if I vetoed bills because of the slices, but it

met the size, what would happen during the next budget negotiations? They'd say, "Well, wait a minute; we hit your number; you vetoed the bills. How can we trust you in good faith?"

The job of the President is to set a goal, which is to reduce that deficit in half by 2009. And if people want me to be able to deal with slices of the pie, just give me the line-item veto. And I think that will help make sure that—[*applause*—]let me talk about another thing. I'm sorry—this is a long answer to a very important question. I'm sorry I'm blowing on too much here, but the real deficit—I'll get you in a minute—the real deficit—another real deficit is the deficit inherent in Social Security and Medicare.

There is a massive amount of unfunded liability inherent in those two very important programs. And the reason why is, is that baby boomers like me are getting ready to retire. And there's a lot of us, and we're living longer than the program initially anticipated, and we've been promised greater benefits, and fewer people per retiree paying into the system. And the system is going to go broke, and a lot of people are watching whether or not the United States has the will to address this problem, because if we don't, future Presidents and future Congresses are going to have to raise taxes significantly, reduce benefits significantly, or reduce other programs significantly. This is a significant problem facing a future generation of Americans.

As you know, I took the problem on last year. I might have been the only guy in Washington taking the problem on last year. [*Laughter*] My theory was, go out and explain to the American people we got a problem. And the people now understand we got a problem, and the fundamental question is, how do you translate that to a program that Congress will act on?

And so my second strategy has been—remember, we're always adapting our tactics—was to put together a bipartisan group, which we're in the process of doing,

of members from both political parties, from both Chambers, to come up with common ground so we can say to the American people, here is a bipartisan approach to these very serious, unfunded liabilities that face future generations of Americans. It's a short-term account. It's very important, no question, Madam Councilperson. The long-term issue is equally, if not greater of importance, which is the unfunded liabilities inherent in Social Security and Medicare. I'm going to continue to take on the issue. It's a big issue, and I'm confident we can get it solved.

Okay. Yes, sir.

### *Freedom of Religion*

*Q.* [*Inaudible*—I want to thank you for coming back to Charlotte again. We certainly enjoyed your wife here a few weeks ago. Okay, thank you. But I just wanted not to ask a question but just to offer you a message of encouragement. I know many men and women in this room and around our region, both Democrat and Republican, continue to pray for wisdom and encouragement for you and strength during these times. So we just want to continue to encourage you.

*The President.* Thank you. Appreciate you.

I'd like to say one thing about religion—religion and politics, if you don't mind. The United States of America must never lose sight of this beautiful principle: You can worship or not worship, and you're equally American. You're equally American if you're a Christian, Jew, or Muslim, atheist, agnostic. We must never lose sight of that. That's what distinguishes us from the Taliban.

Having said that, I cannot thank you all enough for the prayers. It means a lot to me and Laura. One of the most amazing aspects of the Presidency is to meet total strangers, and they say, "I pray for you." They don't say, "I need a road or a bridge." [*Laughter*] The mayor might have said

that—[*laughter*]—or a museum. They say, "I pray for you, Mr. President." Thank you.

Let's see. Yes, ma'am.

### *The Presidency*

*Q.* A lot of people were betting that I wouldn't get a chance to ask you questions.

*The President.* Why is that?

*Q.* Just because there would be, you know, you might not choose me. [*Laughter*] Thank you very much.

*The President.* Don't bet against yourself is lesson one.

*Q.* Right. And I wanted to say to you, Mr. President, that on the war on terror, Social Security, the tax cuts, Dubai Ports, immigration, you have shown immense political courage. And I really think that you will be vindicated on all of those positions, as Ronald Reagan was, for example. And also, I wanted to know what else would it take for me to get my picture taken with you? [*Laughter*]

*The President.* My attitude is, about this job, is just do my job. Say what you think is right. There's an interesting sense about whether this poll or that poll—I'm just going to tell you something about the Presidency. You cannot make decisions based upon polls. [*Applause*] You've got to stand—I'm not trying to elicit applause here; I'm just trying to share with you what it's like, as best I can, to be your President, at least why I do what I do.

And I am—I'm the kind of fellow that—it's like the Social Security issue. You know, they say, "Well, you shouldn't have brought it up," you know. I can't live with myself if I see a problem and not willing to address it. I want, after 8 years, to be able to walk out of that office and say, I did what I thought was right.

Now, you talk—an interesting thing is, I'm reading a lot of history these days, and it's—I've got some books to recommend, if you like them, you know. [*Laughter*] In contrary to what some of them think back there, it's not big print and pictures, either.

[Laughter] Yes. Yes, I got you; thank you. [Laughter]

I read three books on George Washington. I think it's really interesting, isn't it? Historians are still analyzing the first President of the United States. And history is—sometimes history doesn't record the immediate effects of a Presidency. And you just do what you think is right, and you don't have to—you can't worry about it, you know. If they're still writing about Washington, you know, who knows how long I will be gone before they're writing about me in a way where there's enough time between the day—the Presidency and an objective look of what takes place.

You heard me quoting Harry Truman. I bet you when Harry Truman made the decision to help the Japanese become a democracy, there was some editorialization basically saying, how dare you work with an enemy. You know, I bet there was some of that. I bet there was a lot of skepticism, and I can understand that, you know. I can understand why people are skeptical about whether or not a democracy can take hold in a part of the world like the Middle East. My only point to you, it's necessary for the peace. It has worked in the past, and it's necessary. And we cannot lose confidence in these universal values.

Let's see here. Yes. Yes. No, wait a minute. You're second. Excuse me. [Laughter] I beg your pardon.

### Voluntarism

Q. [Inaudible]

*The President.* Young people involved—thank you for that. That's a good question. She asked, what can young people do to get involved? First of all, the fact that you asked the question is an encouraging sign.

I like to tell people that the true strength of America is the hearts and souls of our people. You know, our military might is strong; our wallets are fatter than anybody else's in the world, on an individual—per capita basis. But the true strength of our

country is the fact that neighbors love neighbors.

De Tocqueville saw this when he came to the United States in 1830s. He was a traveler, and he came and said, "I'm coming to the land of the rugged individualist." And he discovered something interesting way back in 1832, I think it was, when he wrote his book. He discovered that Americans have a penchant, the desire to form voluntary associations to help a neighbor. And it's that spirit of helping a neighbor that Presidents should foster and encourage because it really is the strength of the United States of America.

When you really think about the community of Charlotte, in spite of the fact that the Federal Government has got influence or the city council has got influence, there are thousands of your fellow citizens teaching a child to read. And it doesn't require one law. There are people feeding the hungry. I bet you've got some of the great food pantry programs in the United States of America here. There are people providing shelter for the homeless. There are thousands of acts of kindness. The Boy Scout troops are active, I bet—the Girl Scouts. These are—the Little League programs, you know, the basketball programs. They—there's thousands of acts of kindness taking place on a daily basis.

To answer your question, involvement can mean a lot of things. It can mean serving in the military; it can mean teaching a child to read; it can mean getting your classmates to volunteer to help feed the hungry. There's thousands of ways to contribute, and the fact that we have millions of Americans doing that is really a remarkable aspect of our country.

One of the principles that has guided me is, to whom much is given, much is required. That's why I'm very proud of our Nation's effort to help lead the effort to solve the HIV/AIDS issue, particularly on the continent of Africa. We're an abundant nation. We're a blessed people in many ways, and yet there's a pandemic raging

across the continent of Africa that's literally having the potential effect of wiping out a generation of people. And the stories are heartbreaking, and they're devastating to a civilization in many places. And yet our Nation has made the commitment to spend \$15 billion over a 5-year period of time to help provide antiretroviral drugs, to help provide prevention, to help the orphans who've been left alone. The program is being administered by the U.S. Government.

And one aspect—there's a Global Fund as well. Another aspect—but the people on the ground, the foot soldiers, many are from the faith community, who have said, "I want to help. What can I do to help a neighbor?" The neighbor could be right around the corner, or the neighbor could be on the continent of Africa, in this case. We are a generous, compassionate people, and it's our true strength.

Let's see here. Yes, sir. Yes, please.

### *Support for the President*

Q. Yes, sir. Actually, I'm bringing a statement to you for a friend, Sahara Bozanis, a young Iraqi woman who just came to America last year. She grew up under Saddam, and she actually worked for the U.S. forces during the war as an interpreter. I talked to her this week. She wanted to make sure that she knew—that you knew that her family that's still there is grateful, that she thinks that even though there may be terrorists still going on, that they are safer now than they ever were before. And her goal is to one day meet you to thank you in person because you have changed their lives. Even though we might not see that in the press, their lives are much better today than they were 3, 4 years ago.

*The President.* Thank you, sir.

Q. So she wanted to thank you.

*The President.* Say, wait a minute, I—I will keep my word here. Oh, there you are. Yes, sorry. You thought I forgot, didn't you? I beg your pardon; I did forget.

[*Laughter*] You know how guys near 60, they begin to kind of—[*laughter*].

### *International Support for the War on Terror*

Q. [*Inaudible*]

*The President.* A civics teacher, great, thank you. Thank you for teaching.

Q. [*Inaudible*]

*The President.* No, I appreciate—that's a very good question. First of all, thank you for teaching. By the way—as you grow up, the lady behind you—the girl behind you—as you grow up, one way to contribute is to teach, by the way.

The global war on terror requires a global response, and inherent in this woman's question was, what are you doing to make sure that others join the United States, recognizing that we cannot do this alone? And I appreciate the question a lot.

There is a lot of cooperation going on now. One of the great myths is that the United States is alone in the war on terror. Take, for example, Afghanistan. No question, we've got Special Forces there. No question, we've got a viable element of our military there to fight off Al Qaida or Taliban as they either sneak across the border or come from different Provinces to try to do harm, but NATO is very actively involved there as well.

The NATO presence is in the lead in many of the Provinces. There's what's called Provincial Reconstruction Teams. It's kind of along the lines that I talked about earlier, about localizing the reconstruction efforts on a Provincial basis. This is what's happening in Afghanistan, and there's reconstruction—Provincial Reconstruction Teams run by different countries. Germany has got a presence there. France has had—has presence in Afghanistan. In other words, there is a global network there.

In Iraq, as well, there's a lot of coalition forces, some small, some large. Great Britain, of course, is large. The Japanese had a thousand troops there. It's an amazing commitment by Prime Minister Koizumi

when you think about the aftermath of World War II. The South Koreans have got a significant force there. The Poles have had a significant force there. There's a big international presence there. Many of the—and the NATO mission, by the way, is present in Iraq, as well, all aimed at helping train. They're very much involved in the training mission to give the Iraqi troops the skills necessary to do their jobs.

The global war on terror is fought on more fronts than just the military front. For example, one of the really important parts of this war on terror is to share intelligence, is to be able to say, "If you hear somebody or see somebody coming that you tell a counterpart in another agency—another intelligence service." And so we spend a lot of time—John Negroponte, for example, or Porter Goss, spends a lot of time with their counterparts constantly figuring out how best to share information.

Again, in old war, people could measure movement by the enemy from—by watching ships and tanks move across plains. Now we're dealing with people that are kind of moving around stealthily. And we've got to be in a position where we can share that intelligence.

The third aspect of the global war on terror is to cut off their money. It turns out, terrorists need money—just like the Federal Government spends money. And it's a—so we're—our Secretary of Treasury, John Snow, and others are constantly working to make sure that *hawalas*, for example, which are kind of a money transmitting entity, doesn't—includes terrorist financing. Or we worked with the Saudi Government to make it clear that the financing of terrorist activities are not in our interest, obviously, or their interest.

By the way, the Saudi Government has been very active in the war on terror. They've got a list of Al Qaida potential killers, and they're bringing them to justice. Pakistan has been a strong ally in the war on terror. You might remember that President Musharraf was one of three coun-

tries—or that Pakistan under President Musharraf was one of three countries that had recognized the Taliban. And so needless to say, after September the 11th, he was—made a choice. Colin Powell did a wonderful job of talking to President Musharraf in a very respectful and dignified way and basically said, "Who are you with?" And he has been an ally in the war on terror.

The interesting thing about President Musharraf is, the enemy has tried to kill him four times. There have been four assassination attempts on him by Al Qaida, which causes him to be a strong ally in the war on terror. [Laughter]

And so it's a great question. I'm constantly working to remind people about the stakes. I knew one of the real dangers after 9/11 was that people would tend to forget the lessons learned. And that's normal. And frankly, if you're the President of the United States, you want normalcy. You want people to go back to their life as quickly as possible.

And so it's—my job is to travel the country, like I'm doing a lot of, and saying, "Here are the stakes. Go ahead and live your life and risk capital and raise your families. Let us worry about it." And it's such a different kind of war that we're constantly having to work with our allies, as well, to remind them about the stakes.

The enemy has reminded them about the stakes. Remember that ours isn't the only country that's been attacked. There were attacks in Madrid; there were attacks in London, attacks in Egypt; there's been a series of attacks around the world. Jordan—they go up—Al Qaida goes in and blows up a wedding. These are coldblooded killers, now. These are people that will stop at nothing to achieve their objectives.

And so—no, that's a great question. And the coalition is—it's been a large coalition, and we're constantly working it. Some countries feel comfortable about helping in Afghanistan; some—that same country may not feel comfortable about Iraq. But either

way, we're talking about this war on terror on a regular basis.

Yes. Sir.

*Progress in Iraq/Lessons Learned in the War on Terror*

Q. [Inaudible]

*The President.* Okay, yes. Squeaky wheel? Okay, hold on. [Laughter] It'll work.

Q. Mr. President, my name is—

*The President.* I went with the tall guy first. [Laughter]

Q. It's an honor to stand here in front of you and ask you this question. You talked a little bit about your decisionmaking ability, and you've been steadfast as it relates to the global war on terror, which I think is commendable. Another thing I look for in a leader is their ability to look in hindsight, and their ability to be—a degree of humility, and maybe wondering what could have been done differently. I wonder if you look back and go, maybe I should have done this differently. I'd just be curious to hear that.

*The President.* I appreciate that. I'm constantly looking back to see if things could be done differently or better. A classic example—first of all, I meant what I said on the strategic objective in Iraq. I said in the '04 campaign; I'm going to say it to you again: Knowing what I know today, I'd have made the same decision.

The tactics of going in—one of the interesting questions—you know, for example, the training of troops. We started training a military from ground one, Iraqi military, as if there was going to be a threat from outside its borders, which, in retrospect, we could have done better. After all, the threat was not from outside the borders; the threat was inside the borders as a result of Zarqawi coming in the country.

The police training has now begun in earnest in '06. The fundamental question is, could we have sped that up; could we have done a better job? The strategy, I'm convinced, is right, which is to give the Iraqis the opportunity to defend them-

selves. The question is, are the tactics—in order to achieve that, could we have done a quicker job and expedited the idea of having the Iraqis standing up and us standing down?

I mentioned the reconstruction projects. Again, these are all necessary to look back to make sure that as we head out into the future, that we're able to adjust quicker and better. And I spent a lot of time reviewing decisions made.

There's a—you know, there's a debate in Washington about the strategic objective, however. That's different from the tactics on the ground. I strongly believe what we're doing is the right thing. If I didn't believe it—I'm going to repeat what I said before—I'd pull the troops out, nor if I believed we could win, I would pull the troops out.

There is a—the military are constantly taking a real-time analysis based upon previous decisions and what they anticipate the needs to be. And so they themselves are constantly evaluating what could have been done differently.

Obviously, one classic case that hurt us that I wish were done differently was Abu Ghraib, the prison. What took place there and the pictures there just represented everything we didn't stand for. And it hurt us. It hurt us in the international arena, particularly in the Muslim world, where they said, look—it gave the enemy a fantastic opportunity to use it for propaganda reasons. "Look at the United States of America. Look what they're doing to these people. They're disgracing—they don't believe in the dignity of each person," and, in fact, we do. I wish that could be done over. It was a disgraceful experience. However, I'm proud to report that the people who made that decision are being brought to justice, and there was a full investigation over why something like that could have happened.

And so, yes, I do. Look, I fully understand there is—I guess, my reputation is,

he sticks to his guns and—it's a very legitimate question: Do you ever kind of understand that maybe—that you've got to be somewhat flexible?

I'm not flexible in my principles. I think if you're flexible in your principles, you end up not making sound decision. But I do agree with your question that a President has got to be capable of looking back and learning from how things could have been done differently. Great question. Thank you.

Okay, squeaky wheels. There's three of you up there. Is this like a chorus? [*Laughter*] Would you please decide among yourselves?

#### *Terrorist Surveillance Program*

Q. I've got the mike.

*The President.* Okay, yes, very good. [*Laughter*] Good move.

Q. You never stop talking about freedom, and I appreciate that. But while I listen to you talk about freedom, I see you assert your right to tap my telephone, to arrest me and hold me without charges, to try to preclude me from breathing clean air and drinking clean water and eating safe food. If I were a woman, you'd like to restrict my opportunity to make a choice and decision about whether I can abort a pregnancy on my own behalf. You are—

*The President.* I'm not your favorite guy. Go ahead. [*Laughter*] Go on, what's your question?

Q. Okay, I don't have a question. What I wanted to say to you is that I—in my lifetime, I have never felt more ashamed of nor more frightened by my leadership in Washington, including the Presidency, by the Senate, and—

*Audience members.* Boo-o-o!

*The President.* No, wait a sec. Let him speak.

Q. And I would hope—I feel like, despite your rhetoric, that compassion and common sense have been left far behind during your administration, and I would hope, from time to time, that you have

the humility and the grace to be ashamed of yourself, inside yourself. And I also want to say, I really appreciate the courtesy of allowing me to speak what I'm saying to you right now. That is part of what this country is about.

*The President.* It is, yes.

Q. And I know that this doesn't come welcome to most of the people in this room, but I do appreciate that.

*The President.* Appreciate—

Q. I don't have a question, but I just wanted to make that comment to you.

*The President.* I appreciate it. Thank you. Let me—I'm going to start off with what you first said, if you don't mind. You said that I tap your phones—I think that's what you said. You tapped your phone—I tapped your phones. Yes. No, that's right. Yes. No, let me finish.

I'd like to describe that decision I made about protecting this country. You can come to whatever conclusion you want. The conclusion is, I'm not going to apologize for what I did on the terrorist surveillance program, and I'll tell you why. We were accused in Washington, DC, of not connecting the dots, that we didn't do everything we could to protect you or others from the attack. And so I called in the people responsible for helping to protect the American people and the homeland. I said, is there anything more we could do?

And there—out of this national—NSA, came the recommendation that it would make sense for us to listen to a call outside the country, inside the country from Al Qaida or suspected Al Qaida in order to have real-time information from which to possibly prevent an attack. I thought that made sense so long as it was constitutional. Now, you may not agree with the constitutional assessment given to me by lawyers—and we've got plenty of them in Washington—but they made this assessment that it was constitutional for me to make that decision.

I then, sir, took that decision to Members of the United States Congress from both political parties and briefed them on the decision that was made in order to protect the American people. And so members of both parties, both Chambers, were fully aware of a program intended to know whether or not Al Qaida was calling in or calling out of the country. It seems like to make sense, if we're at war, we ought to be using tools necessary within the Constitution on a very limited basis, a program that's reviewed constantly, to protect us.

Now, you and I have a different—of agreement on what is needed to be protected. But you said, would I apologize for that? The answer is, absolutely not.

*Palestinian Elections/Israel*

Q. Mr. President—[inaudible]—I was raised on a ranch in New Mexico, and my heroes have always been cowboys.

*The President.* There you go. Thank you, yes. [Laughter] I'm not sure I qualify as a cowboy. [Laughter]

Q. Thinking about our children's children, if the all-powerful granter of the Presidential request were to visit you this evening and give you one of these three: of ongoing economic growth and security for America, ridding the world of the security threat now posed by North Korea and Iran, or establishing peace between the Israelis and the Palestinians, which one—

*The President.* Whew. [Laughter] Back to back, you know? [Laughter] I don't—that's not the way life works. You can do more than one thing at one time. We can achieve peace with the—we can win this war on terror if we're steadfast and strong. It's not going to happen on my watch. It's going to take awhile. We can spread liberty and freedom to create peace. And we can work on the Palestinian-Israeli issue at the same time. I am the first President to have articulated two states living side by side in peace.

And I'm also a President who believed that the Palestinians needed to have elec-

tions. There's an interesting debate in Washington, is do you wait for the conditions to be perfect before elections, that the institutions be in place before there are elections, or do you have elections as a step toward a civil society and a democratic society? As you know, I've taken the latter rather than the former, and encouraged the Palestinian elections.

And what was interesting about those elections is that—and since then, by the way, the Israelis have had elections. The Palestinian elections—let me just step back. I think the Palestinians have been a long-suffering people that deserve better government. The former leadership turned out to be corrupt, like, stole money. And as a result of his leadership, we never got very close to peace. There wasn't a lasting—there weren't lasting institutions in place. I believe democracies don't war.

And so the election was really an interesting one, I think, recently. Guess what the election was based on? Corruption. This is the Palestinian elections. Anticorruption campaigns, "Vote for me; we're not going to steal your money. Vote for me; we'll help educate your kids and provide health care." The dilemma we're in—it's not a dilemma. I made the decision that if you believe in two states living side by side in peace, then one of the parties in the state—one of the parties cannot declare their intentions to destroy the other party. That's not peaceful. That is warlike.

And so our posture at this point in time is to say to the Palestinians, Hamas, get rid of it; get rid of that platform. It's not a peaceful platform. It's a warlike platform. We want there to be two states side by side in peace.

We've also said, we'll help the people but not the Government. You know, somebody said, "Well, you support elections." I said, yes, I do. I don't necessarily have to like who wins. But I do think it was a necessary part of the evolution of the state to have the Palestinian people be able to say, "We're sick of it. We're sick of

the status quo. We want something differently. We want a government that's honest, and we want a government that listens to our demands." I thought it was a positive development. And now, I would strongly urge the Hamas Government to change their tune and their rhetoric about Israel and advocate the peace and work toward a civil society that will yield a lasting peace.

Again, this is an issue where I'm—progress is being made, but it requires a steadfast support of our belief that democracies will yield to peace.

I've got to go. I appreciate you. Yes, one last question. Yes, ma'am, I promised you. I'm sorry.

#### *Alternative Fuel Sources*

Q. Thank you. Thank you, very much, Mr. President. I am Wilhelmenia Rembert. I serve as vice chair of the Board of County Commission here in Mecklenburg County. I'm joined by my colleague, Commissioner Dumont Clarke, and we welcome you to Mecklenburg County.

*The President.* Thank you.

Q. I defer my own question to ask you a question of one of my students at Winthrop University—where I'm a professor of social work—asked me to bring to your attention. And that is, what can you, Mr. President, and what will you do to help control the rising cost of fuel, which is really affecting the ability of many students to travel and the rest of us—not just students—to travel back and forth to work and to school? Thank you.

*The President.* I appreciate that. I wish I could wave a wand and say, we need more gasoline relative to demand. I don't have the capacity to control the market. I do have the capacity to start leading this country away from dependence on oil. And I believe that we need to promote—vigorously promote alternative sources of energy, starting with ethanol, which could help the farmers around here, by the way. There's a lot of ethanol. Ethanol, basically, right now, is produced from corn. In the Mid-

west, a lot of people are using more ethanol—and to promote technologies such as plug-in hybrid batteries. We're close to some significant breakthroughs. By the way, this is where Republicans and Democrats are working together in Washington, DC, to provide the funding necessary for technology to help lead us away from dependency upon oil.

And so this isn't going to help your person tomorrow, I readily concede. But it is going to—it's going to, in the relatively near future, be able to enable people to plug their car in and drive the first 40 miles on battery as opposed to using gasoline.

And so there is a real need—that's why I put this in the State of the Union—a real need for us to diversify away from fossil fuels, not only to protect the environment, Mister, but also for national and economic security reasons. And the—we're making progress.

I was able to make a decision right after Katrina that helped deal with the—what could have been a even stronger rise in the price of gasoline. I was able to suspend EPA rules because of the natural disaster that took place. And by suspending the blended rules, that can create disruption as these—as the seasonal change, there's a disruption in supply. By suspending those rules, it enabled us to import more European gasoline. And that, in turn, provided stability in the marketplace. And so we didn't have significant spikes.

I fully understand the effects of gasoline price raises on people who are working. It's like a tax. Every time it goes up at the pump, people are, like, paying a tax. And the long-term solution is to get off oil. And we are aggressively doing so.

Thanks for your time. God bless.

NOTE: The President spoke at 10:45 a.m. at Central Piedmont Community College. In his remarks, he referred to Firoz Peera, chair, World Affairs Council of Charlotte; P. Anthony Zeiss, president, Central Piedmont

Community College, and his wife, Beth; Mayor Patrick McCrory of Charlotte, NC; Khalid Sheikh Mohammed, senior Al Qaida leader responsible for planning the September 11, 2001, terrorist attacks, who was captured in Pakistan on March 1, 2003; Ramzi bin al-Shibh, an Al Qaida operative suspected of helping to plan the September 11, 2001, terrorist attacks, who was captured in Karachi, Pakistan on September 11, 2002;

Usama bin Laden, leader of the Al Qaida terrorist organization; Ayman Al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al Qaida associate; former President Saddam Hussein of Iraq; senior Al Qaida associate Abu Musab Al Zarqawi; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; and former Secretary of State Colin L. Powell.

## Remarks on Immigration Reform Legislation in Charlotte *April 6, 2006*

I'm pleased that Republicans and Democrats in the United States Senate are working together to get a bipartisan comprehensive energy bill—let me start over. I'm pleased that Republicans and Democrats in the United States Senate are working together to get a comprehensive immigration bill.

I want to thank the efforts of those involved in the process. I appreciate their understanding there needs to be a com-

prehensive immigration bill. I recognize there are still details to be worked out. I would encourage the Members to work hard to get the bill done prior to the upcoming break.

Thank you all.

NOTE: The President spoke at 12:36 p.m. at the North Carolina Air National Guard base at Charlotte-Douglas International Airport.

## Remarks Honoring NCAA Championship Teams *April 6, 2006*

Thank you all. Welcome. Please sit down. Thanks for coming. It's an honor to welcome outstanding athletes to the White House. I welcome the athletes and their coaches. We offer our congratulations, and we're thrilled to call you national champs.

I'd like to say, champions day is also National Student Athlete Day. It's a chance for us to honor those who excel on the field as well as those in the classroom.

I'm especially pleased to welcome the Members of the United States Congress here, Senators and Congressmen from the States that we're honoring. Thank you all for coming. Proud you're here. I know

you'll want to congratulate the coaches and the team members after these brief remarks. We want to welcome the school officials who are here.

Today is the day we recognize that millions have competed in the NCAA, but only a few become champs. And the first champs we honor are the mighty Florida Gators, ably coached by Billy Donovan. People are making hand gestures back there.

I want you all to recognize that the Gators started the season with 17 wins in a row, and they ended with 11 in a row—the most important 11 wins of the season.

They have a following all over the country, including my brother. [Laughter] I'm pleased to welcome you here. I'm also pleased to remind the Gator fans the captain of your team, Adrian Moss, was from Humble, Texas. [Laughter]

We have three teams today from the great State of Maryland. Perhaps one theme of champions day is: Fear the Turtle.

I want to welcome Brenda Frese and the University of Maryland women's basketball team. They are the NCAA's newest national champions. Less than 48 hours ago, they were cutting down the nets in Boston. Here they are soaking up the sun in the White House. We welcome you here. We marvel at your dramatic overtime win, and we thank you for being such fantastic athletes.

We also welcome the University of Maryland field hockey team. Missy Meharg is with us as well. These women were the number one seed in the NCAA tournament, and they win the NCAA championship. We're proud you're here. It probably gave you a special delight to be able to beat your archrival, Duke.

We want to welcome Sasho Cirovski's University of Maryland men's soccer team. The men's soccer team won its first national championship in almost 40 years. I thought it was interesting that on Times Square, the NASDAQ ticker displayed a message that said, "Go Terps," in honor of the soccer team.

I want to welcome the University of Portland women's soccer team, coached by Garrett Smith. Portland came to celebrate the championship here in the year 2003. I think one of them said to herself, "You know, we'll be back, but I'm not sure if old George W. is going to make it." [Laughter] You're back, and so am I. [Laughter] I appreciate the fact that the Pilots dominated the season. They did not lose a single game. I appreciate what Father Beauchamp said—he's the university president—"They are Portland's team. They

brought us together as a community." Congratulations, ladies, for the championship.

Jerry Schumacher of the University of Wisconsin men's cross country team is with us today. For 3 years in a row, Wisconsin finished second in the NCAA championships. This year, they broke the pattern, and they come to the White House as national champs. Congratulations.

I welcome Peter Tegen and the Stanford women's cross country team. Stanford won its second women's cross country national championship in the past 3 years. Lauren Centrowitz is with us. She asked me not to mention her name. I kind of mentioned names, but I did it anyway. Sorry, Lauren. And the reason I did is because her dad, Lauren—I mean, Lauren's dad, Matt, won a national cross country championship of his own in 1977. The daughter and the dad on national cross country championship teams—there's nothing better than someone following in a famous father's footsteps. Congratulations to Stanford's team.

Jim McLaughlin and the University of Washington women's volleyball team is here. Congratulations to the Huskies. These women won their first national championship in school history. They weren't supposed to win. They were the underdog. They had low expectations. It's a good thing, is to keep expectations low, by the way. And they brought home a national championship to the University of Wisconsin. Congratulations to you all. I mean, the University of Washington; I beg your pardon.

Now we've got the University of Auburn men's and women's swimming and diving teams. Coach David Marsh is with us. Both the men's swimming and diving teams earned national championships. That's rare to do. And I welcome both teams with us today. It kind of says that, in a year of swimming, this is the year of War Eagle. I want you all to know that the women's swimming team kindly brought me a— [laughter].

[At this point, the President held up a Speedo swimsuit.]

Awfully thoughtful of you. [Laughter] I'm not going to wear it. [Laughter]

I welcome the University of Colorado ski team, under Richard Rokos. This is a coed team. The Colorado ski team's motto was "One team, one goal," and you achieved your goal by winning the National Championship. We welcome you. Your coach is an interesting story. He escaped Communist Czechoslovakia. He's a proud American coaching a wonderful group of athletes. Congratulations, and we're glad you're here.

The university—the United States Military Academy men's rifle team is with us. I congratulate the team here today. This is West Point's first championship in any varsity sport in a half a century. Congratulations to you. If you happen to be walking around and run into the Vice President—[laughter]—you might give him a few pointers. [Laughter] In the meantime, I look forward to coming to see you as your—as the graduation speaker here in May.

The thing I like about these teams is, they're not only great athletes but they also are champs off the field. When you think about the folks here from West Point, they decided to serve our country in a time of war. And I want to thank you for your contributions to our country.

Florida basketball players spent Thanksgiving morning serving hot meals at a local shelter. The Maryland basketball players raised money to support breast cancer research. The Maryland field hockey players worked as counselors in summer camps for girls. They served as mentors. The Mary-

land soccer players helped the school canned food drive. The Portland soccer players arranged for the university to donate money for hurricane relief for every goal the team scored. The Wisconsin cross country runners participated in the Frostbite Road Race to raise money for the local YMCA. The Stanford cross country team visited schools in East Palo Alto to talk about the importance of education and staying off drugs. The Washington volleyball players visited children in hospital. The Auburn swimmers helped raise funds for hurricane relief. The Colorado skiers participated in the Read With the Buff program in elementary schools. What I'm telling you is, we've not only got fine athletes with us; we've got fine Americans with us. Thank you for serving your communities.

Welcome to the White House. God bless.

NOTE: The President spoke at 3:05 p.m. on the South Lawn at the White House. In his remarks, he referred to Billy Donovan, head coach, University of Florida men's basketball team; Gov. Jeb Bush of Florida; Brenda Frese, head coach, University of Maryland women's basketball team; Missy Meharg, head coach, University of Maryland women's field hockey team; Sasho Cirovski, head coach, University of Maryland men's soccer team; Jerry Schumacher, head coach, University of Wisconsin men's cross country team; Peter Tegen, head coach, and Lauren Centrowitz, team member, Stanford University women's cross country team; Jim McLaughlin, head coach, University of Washington women's volleyball team; and Richard Rokos, head coach, University of Colorado women's and men's ski teams.

## Letter to the Speaker of the House of Representatives Transmitting Budget Amendments

April 6, 2006

Dear Mr. Speaker:

I ask the Congress to consider the enclosed FY 2007 Budget amendments for the Departments of Agriculture, and State and Other International Programs; the Federal Communications Commission; and the Smithsonian Institution. Overall, the discretionary budget authority in my FY 2007 Budget would not be increased by these requests.

This transmittal also contains FY 2007 Budget amendments for the legislative branch. As a matter of comity, appropriations requests for the legislative branch are commonly transmitted without change.

The details of these proposals are set forth in the enclosed letter from the Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

## Remarks at the National Catholic Prayer Breakfast

April 7, 2006

Thank you all very much. *Gracias, mi Tejano*. Thank you, sir, for your kind words. Thanks for inviting a Methodist. [Laughter]

When I first came out here and saw how comfortable these chairs look, I was a little worried you thought I might be giving quite a long speech. [Laughter]

I'm so thrilled to be here with cardinals of the Church. Cardinal McCarrick, I know, is here, and Cardinal Bevilacqua. Must make you feel good to see there's not a slice of bacon around. [Laughter] My spirits are always uplifted when I'm in the presence of Their Excellencies, and it's great to see you both.

I've been looking forward to this breakfast, but I've got to tell you, I was slightly concerned when I saw the draft of the program went like this: "We will mark the conclusion of the President's speech with the hymn, 'Now Thank We All Our God.'" [Laughter]

Laura sends her love and her best. I want to thank the leadership of the National Catholic Prayer Breakfast for having

me and, more importantly, having this chance for all to worship together.

I appreciate so very much the Chief Justice joining us. I'm proud you're here, Chief Justice. I haven't got to the best part of the family yet—[laughter]—and Jane.

Secretary Nicholson, I appreciate you being here—Jim Nicholson and Suzanne. As you might recall, he was our Ambassador to the Vatican, and he did a fantastic job.

Other members of the administration, thanks for coming. Don't tarry too long. [Laughter] Get back to work. [Laughter]

Looking around, I see Members of the United States Senate—Santorum; Members of the House of Representatives. Thank you all for coming. Proud you're here. Thanks for taking time out of your day. Smith, Beauprez, Lungren, I can't—I don't dare name them all.

We needed a hopeful moment for this world of ours. It's a time when more people have a chance to claim freedom that God intended for us all. It's also a time of great challenge. In some of the most

advanced parts of our world, some people no longer believe that the desire for liberty is universal. Some people believe you cannot distinguish between right and wrong. The Catholic Church rejects such a pessimistic view of human nature and offers a vision of human freedom and dignity rooted in the same self-evident truths of America's founding.

This morning we ask God to guide us as we work together to live up to these timeless truths. When our Founders wrote the Declaration of Independence, they called liberty an unalienable right. An unalienable right means that freedom is a right that no government can take away because freedom is not government's to give.

Freedom is a gift from the Almighty because it is—and because it is universal, our Creator has written it into all nature. To maintain this freedom, societies need high moral standards. And the Catholic Church and its institutions play a vital role in helping our citizens acquire the character we need to live as free people.

In the last part of the 20th century, we saw the appeal of freedom in the hands of a priest from Poland. When Pope John Paul II ascended to the Chair of Saint Peter, the Berlin Wall was still standing, his native Poland was occupied by a Communist power, and the division of Europe looked like a permanent scar across the continent. Yet Pope John Paul told us, "Be not afraid," because he knew that an empire built on lies was ultimately destined to fail. By reminding us that our freedom and dignity rests on truths about man and his nature, Pope John Paul II set off one of the greatest revolutions for freedom the world has ever known.

Pope John Paul has now been succeeded by one of his closest friends and colleagues, Pope Benedict XVI. Pope Benedict, when he was a Cardinal, and recently—when he was a Cardinal, Laura and I had a chance to meet him, and recently she went back

to Rome to see him again. He was such a gracious host, wonderfully kind man.

Like his predecessor, Pope Benedict understands that the measure of a free society is how it treats the weakest and most vulnerable among us. In his Christmas homily, the Pope noted that the Savior came to Earth as a defenseless child, and said that the splendor of that Christmas shines upon every child, born and unborn. Here in the United States, we work to strengthen a culture of life through many State and Federal initiatives that expand the protections of the unborn. These initiatives reflect the consensus of the American people acting through their elected representatives, and we will continue to work for the day when every child is welcome in life and protected in law.

I appreciate the leading role that the Catholic faith-based organizations play in our nation's armies of compassion. And one of the many ways that Catholic faith-based organizations serve their neighbors is by welcoming newcomers and helping them become good citizens.

This Nation of ours is having an important debate about immigration, and it is vitally important that this debate be conducted in a civil tone. I believe that the American Dream is open to all who work hard and play by the rules and that America does not have to choose between being a compassionate society and a society of law.

An immigration system that forces people into the shadows of our society or leaves them prey to criminals is a system that needs to be changed. I'm confident that we can change our immigration system in ways that secures our border, respects the rule of law, and, as importantly, upholds the decency of our country. As the Congress continues this debate, its Members must remember, we are a nation of immigrants, and immigration has helped restore our soul on a regular basis.

In this young century, our Nation has been called to great duties. I'm confident

we'll meet our responsibilities so long as we continue to trust in God's purposes. During our time in the White House, Laura and I have been blessed by the prayers of countless Americans, including many in this room. It's really an amazing country where people walk up to you, say, "Mr. President, I pray for you"—expecting to say, "Mr. President, I'd like a bridge." [Laughter] But instead, they say, "I pray for you and your family." It uplifts us, and I want to thank you for that from the bottom of our hearts.

I ask for your prayers again, that our Nation may always be an inspiration to those who believe that God made every

man, woman, and child for freedom. It is such an honor to be here. May God bless you all, and may God continue to bless our country.

NOTE: The President spoke at 8:30 a.m. at the Washington Hilton Hotel. In his remarks, he referred to Most Rev. Jose H. Gomez, Archbishop of San Antonio, who introduced the President; Theodore E. Cardinal McCarrick, Archbishop of Washington; Anthony J. Cardinal Bevilacqua, Archbishop Emeritus of Philadelphia; Jane M. Roberts, wife of Chief Justice John G. Roberts, Jr.; and Suzanne M. Nicholson, wife of Secretary of Veterans Affairs R. James Nicholson.

## Remarks on the National Economy *April 7, 2006*

Good morning. This morning's economic report shows that America's growing economy added 211,000 jobs in the month of March. The American economy has now added jobs for 31 months in a row, created more than 5.1 million new jobs for American workers. The unemployment rate is now down to 4.7 percent; that's below the average rate of the 1960s, 1970s, 1980s, and 1990s.

These millions of new jobs are evidence of an economic resurgence that is strong, broad, and benefiting all Americans. Real after-tax income has grown by more than 8 percent per person since I took office. That means, on average, Americans have an income that is \$2,100 higher this year than it was in 2001, after adjusting for inflation.

More Americans own their homes than at any time in history. Minority homeownership has reached record levels. Consumer confidence is at its highest point in nearly 40 years. Productivity is high; inflation is contained; manufacturing activity is grow-

ing; and the small-business sector is thriving.

The economy has expanded for 17 straight quarters. And last year, the American economy grew at a healthy rate of 3.5 percent. That's the fastest rate of any major industrialized economy.

These gains are the result of the energy and the effort of American workers, small-business owners, and entrepreneurs. They are also the result of progrowth economic policies. The tax cuts I signed left \$880 billion with our Nation's workers, small-business owners, and families. They've used that money to fuel our economic resurgence.

Not everyone in Washington agreed with the decision to let people keep more of their own money. On the day that Republicans in the House and Senate were finalizing the 2003 tax cuts, one Democratic leader said these cuts would, quote, "do nothing to create jobs." Facts have proven the critics wrong 5.1 million times over.

Tax relief has done exactly what it was designed to do. It's created jobs and growth

for the American people. Yet some are now proposing that we raise taxes, either by repealing the tax cuts or letting them expire. These are the same politicians who told us that letting Americans—letting America's working families keep more of their own money would be irresponsible, reckless, and shameful. They were wrong then, and they are wrong now. Our economy grows when the American people make the decisions about how to save, spend, and invest their money. To keep our economy creating jobs and opportunity, Congress needs to show its trust in the American people and make the tax relief permanent.

Congress also needs to restrain spending so we can stay on track to cut the deficit in half by 2009. And if necessary, I will enforce spending restraint through the exercise of the veto. The American people expect their leaders to address other key leaders—that directly affect their family budgets and bottom line, especially health care and energy.

## The President's Radio Address

*April 8, 2006*

Good morning. This week, Members of the United States Senate reached a promising bipartisan compromise on comprehensive immigration reform. Unfortunately, this compromise is being blocked by the Senate Democratic leader, who has refused to allow Senators to move forward and vote on amendments to this bill. I call on the Senate minority leader to end his blocking tactics and allow the Senate to do its work and pass a fair, effective immigration reform bill.

Immigration is an emotional issue and a vitally important one. At its core, immigration is the sign of a confident and successful nation. It says something about our country that people around the world are willing to leave their homes, leave their

When the cost of energy and health care rise, families are squeezed and small businesses suffer. I proposed practical reforms that would make health care more available and affordable. I put forward an energy initiative that will make our dependence on Middle Eastern oil a thing of the past. I've also laid out a plan to make America more competitive by increasing our investment in scientific research, encouraging research and development in the private sector, and improving math and science education.

I urge the Congress to move forward on all these important priorities so we can keep America the economic leader of the world and allow more families and small businesses to realize the American Dream.

Thank you for your time.

NOTE: The President spoke at 9:32 a.m. in the Diplomatic Reception Room at the White House.

families, and risk everything to come to America. Their talent, hard work, and love of freedom have helped make America a vibrant, strong nation. And by reforming our immigration laws to meet the realities of the 21st century, we will ensure that America remains a beacon of liberty for generations to come.

I made clear that a comprehensive immigration reform bill must include three elements. First, comprehensive immigration reform must secure our borders. Since I took office, we've increased funding for border security by 66 percent, and Federal agents have apprehended and sent home more than 6 million people entering this country illegally, including more than 400,000 with criminal records. To improve

security at the border, we're hiring thousands more Border Patrol agents; we're deploying new technologies like infrared cameras and unmanned aerial vehicles to help our agents do their jobs; we're installing physical barriers to entry, like fences in urban areas. We're making good progress, but we have much more work ahead to gain control of our border. I'll continue to work with Congress to strengthen border security, so we can prevent illegal immigrants from crossing our border and make the immigration system more orderly and secure.

Second, comprehensive immigration reform must strengthen the enforcement of our laws in America's interior. Since I took office, we've increased funding for immigration enforcement by 42 percent, increased the number of immigration enforcement agents and criminal investigators, enhanced worksite enforcement, and gone after smugglers, gang members, and human traffickers. A good immigration bill should enhance our ability to stop document fraud and help employers comply with our laws.

Finally, comprehensive immigration reform must include a temporary-worker program that relieves pressure on our borders while rejecting amnesty. A temporary-worker program would create a legal way to match willing foreign workers with willing American employers to fill jobs that no American is available to do. By creating a legal channel for those seeking temporary work in America, we would reduce the number of people trying to sneak across the border. This would free up law enforcement officers to focus on criminals, drug dealers, terrorists, and others who mean us

harm. A temporary-worker program would also improve security by creating tamper-proof identification cards, so we can keep track of every temporary worker who is here on a legal basis and identify those who are not.

A new temporary-worker program should not provide amnesty. Granting amnesty would be unfair to those who follow the rules and obey the laws. Amnesty would also be unwise, because it would encourage others to break the law and create new waves of illegal immigration. We must ensure that those who break our laws are not granted an automatic path to citizenship. We should also conduct the debate on immigration reform in a manner worthy of our Nation's best traditions.

To keep the promise of America, we must remain a welcoming society and also enforce the laws that make our freedom possible. As we do, our Nation will draw strength from the diversity of its citizens and unity from their desire to assimilate and become one people. By working together, we can fix our immigration system in a way that protects our country, upholds our laws, and makes our Nation proud.

Thank you for listening.

NOTE: The address was recorded at 12:56 p.m. on April 7 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on April 8. The transcript was made available by the Office of the Press Secretary on April 7 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

Remarks at the Paul H. Nitze School of Advanced International Studies  
and a Question-and-Answer Session  
April 10, 2006

*The President.* Thank you. Please be seated. Bill, thanks for the kind introduction. I'm pleased to be here at this school, which bears the name of one of America's greatest statesmen. Paul Nitze served as a trusted adviser to six Presidents, from Franklin Roosevelt to Ronald Reagan. He was one of a small group of men who shaped the world that emerged from the Allied victory in World War II. He encouraged our Nation to continue the—its noble and essential role as freedom's defender. He was the principal author of NSC-68, the strategic blueprint for America's victory in the cold war. At a time when some wanted to wish away the Soviet threat, Paul Nitze insisted that the cold war was, in his words, "in fact, a real war in which the survival of the free world is at stake." He helped rally America to confront this mortal danger, and his strategic vision helped secure the triumph of freedom in that great struggle of the 20th century.

At the start of this young century, America is once again engaged in a real war that is testing our Nation's resolve. While there are important distinctions, today's war on terror is like the cold war. It is an ideological struggle with an enemy that despises freedom and pursues totalitarian aims. Like the cold war, our adversary is dismissive of free peoples, claiming that men and women who live in liberty are weak and decadent; they lack the resolve to defend our way of life. Like the cold war, America is once again answering history's call with confidence. And like the cold war, freedom will prevail.

I thank Dr. Bill Brody; I thank Jessica Einhorn. Thank you all for having me here. I appreciate all those who teach here. I appreciate the students letting me come to speak. Glad to provide a convenient excuse to skip class. [*Laughter*] I want to thank

Bill Nitze, adjunct professor, son of a great man. I know how you feel. [*Laughter*] I appreciate Mike Chertoff being here. I'm proud to see a lot of folks who wear the Nation's uniform for joining us. Welcome.

I thought I'd give a speech, but a short speech, much to your relief, and then I'll be glad to answer some questions.

Yesterday our Nation marked the third anniversary of a great moment in the history of freedom; it was the liberation of Iraq. Three years ago, coalition forces entered the gates of Baghdad, fought their way into the center of the city, and helped Iraqis pull down the statue of Saddam Hussein. What they found in Baghdad horrified our troops. One marine describes how Iraqis led his unit to a children's prison where more than 100 youngsters were being held. Some of the children had reportedly been jailed because they refused to join the Ba'athist Party Youth Organization. He says, "It was really something. The children just streamed out of the gates, and their parents just started to embrace us."

Under Saddam's brutal regime, the Iraqi people lived lives of fear and desperation. Innocent civilians were executed in public squares; they were massacred and piled into mass graves. Saddam's regime denied people food and medicine while building elaborate palaces from which to rule with an iron hand. Saddam sponsored terrorism; he pursued and used weapons of mass destruction; he fired at U.S. and British air crews patrolling the no-fly zones; he defied more than a dozen U.N. Security Council resolutions. Today, because America and a great coalition acted, the regime is no longer in power, is no longer sponsoring terrorists, is no longer destabilizing the region, is no longer undermining the credibility of the United Nations, is no longer

threatening the world. Because we acted, 25 million Iraqis now taste freedom.

The decision by the United States and our coalition partners to remove Saddam Hussein was a really difficult decision. It was the right decision. After September the 11th, America decided that we would fight the war on terror on the offense and that we would confront threats before they fully materialized. Saddam Hussein was a threat to the United States of America. America is safer today because Saddam Hussein is no longer in power.

Coalition forces drove Saddam from power, and a U.S. Army unit, led by a graduate of this school—Colonel James Hickey, class of 1992—captured Saddam when he was hiding in a hole in the ground. Today, thanks to our courageous men and women in uniform, the former Iraqi dictator is sitting in a courtroom instead of a palace, and he's now facing justice for his crimes.

The past 3 years since liberation, the Iraqi people have begun the difficult process of recovering from Saddam's repression. They're beginning to build a democracy on the rubble of his tyranny. They still face brutal and determined enemies: members of the deposed regime who dream of returning to power; other insurgents; and foreign terrorists who dream of turning Iraq into what Afghanistan was under the Taliban, a safe haven from which to plot and plan new attacks against America and our allies. The enemies of a free Iraq are determined to ignite a civil war, put the Iraqi people—to pit the Iraqi people against one another, and to stop the country's democratic progress. Yet the Iraqi people are determined to live in freedom, and America is determined to defeat the terrorists, and we're determined to help the Iraqi people succeed.

America is doing our part to help the Iraqis build a democracy. Our Nation can be proud of what our courageous men and women in uniform have accomplished in the past 3 years. Since liberation, our forces

have captured or killed thousands of Al Qaida terrorists and other enemy fighters; we've freed Fallujah and Tall 'Afar and other Iraqi cities from the grip of the terrorists and the insurgents; we've trained Iraqi security forces so they increasingly can take the lead in the fight and eventually assume responsibility for the security of their country.

We've learned from our mistakes. We've adjusted our approach to meet the changing circumstances on the ground. We've adjusted depending upon the actions of the enemy. By pursuing a clear and flexible strategy in Iraq, we helped make it possible for Iraqis to choose their leaders and begin to assume the responsibilities of self-government and self-defense. In the past 3 years, our troops in Iraq have done everything expected of them and more. They've brought freedom to Iraq, security to our country, and pride to the uniform, and they have the gratitude of all Americans.

In the past 3 years, the Iraqi people have done their part. They defied death threats from the terrorists to cast ballots not one time, not twice, but three times, and each election saw larger and broader turnout than the one that came before. Iraqis chose a transitional government, drafted the most progressive Constitution in the Arab world, approved that Constitution in a nationwide referendum, and voted for a new Government under the new Constitution. And in December elections for this Government, despite the threats of violence and efforts to discourage Sunni participation, nearly 12 million Iraqis—that's more than 75 percent of eligible voters—turned out at the polls.

The Iraqi people have begun building a free society, with a thriving free press and hundreds of independent newspapers and magazines and talk radio shows where Iraqis openly debate the future course of their country. The Iraqi people have begun building a free economy, with an independent central bank and thousands of small businesses and a relatively stable currency. Iraqi people have stepped forward

to fight for their freedom as well. Despite repeated attacks on military and police recruiting stations, more than 250,000 Iraqis have volunteered to wear their country's uniform. These brave Iraqis are increasingly taking the lead in the fight against the terrorists and the insurgents. Today, there are more than 130 Iraqi Army and police combat battalions in the fight, with more than 70 Iraqi battalions taking the lead. Iraqi units have assumed primary responsibility for more than 30,000 square miles of Iraq. We expect that Iraqi units will control more territory than the coalition by the end of 2006.

Iraqis are fighting bravely, and many have given their lives in the battle for freedom for their country. And by their courage and sacrifice, the Iraqi soldiers and civilians have shown they want to live in freedom, and they're not going to let the terrorists take away their opportunity to live in a free society.

Now it's time for the Iraqi leaders to do their part and finish the job of forming a unity government. The people of Iraq have made their intentions clear. At great personal risk, they went to the polls to choose leaders in free elections. And now the leaders they've elected have a responsibility to come together to form a Government that unifies all Iraqis. Secretary Rice was just in Baghdad, where she delivered a strong message from me: Iraq leaders need to rise to the moment, to put aside their personal agendas, and take charge of their destiny.

Iraqi leaders have taken some important steps forward. They've agreed to an agenda for the new Government to take up once it assumes office, including tough issues such as demobilization of the militias, protecting the rights of women, restoring Iraq's infrastructure, and building national institutions that will effectively represent all Iraqis. Iraqi leaders have also agreed to form a new national security council that includes all major political groups and representatives of the executive and legislative

branches. And now they must take the next step and fill key leadership posts so that a new Government can begin its essential work.

I understand that putting aside differences to form a Government is difficult. Pretty hard for our country. Our first governing charter, the Articles of Confederation, failed, and it took us 8 years before we adopted our Constitution and elected our first President under that Constitution. Iraqis are going to make mistakes as well. They are undertaking a difficult process with little democratic experience and with the scars of nearly three decades of Saddam Hussein still fresh on their mind. Moving beyond past divisions to build a strong democracy requires strong leadership, and now is the time for Iraqis to step up and show the leadership.

The Iraqi people have a right to expect it, and so do the American people. Americans have made great sacrifices to help Iraq get to this point. Iraqi voters risked their lives to go to the polls. Iraqi soldiers and police have given their time to make this moment possible. And so Americans and Iraqis alike are waiting and watching to see what this sacrifice will produce, and we both expect results. In the words of one Iraqi newspaper, "The time has come for our politicians to save people from their suffering and crisis. The Iraqi people are more sacred than government positions."

Forming a unity government is critical to defeating the terrorists and securing the peace. The terrorists and insurgents thrive in a political vacuum, and the delay in forming a Government is creating a vacuum that the terrorists and insurgents are working to exploit. The enemies of a free Iraq blew up the Golden Mosque in Samarra in the hope that this outrageous act would provoke reprisals and drag the nation into a civil war. This past Friday, suicide bombers blew up another Shi'a mosque in northern Baghdad. The longer Iraq's leaders delay in forming a unity government, the greater the risk that the terrorists and

former regime elements will succeed in their efforts to foment division and to stop the progress of an Iraq democracy.

The terrorists know that the greatest threat to their aspirations is Iraqi self-government. And we know this from the terrorists' own words. In 2004, we intercepted a letter from Zarqawi to Usama bin Laden. In it, Zarqawi expressed his concern about "the gap that will emerge between us and the people of the land." He declared, "Democracy is coming." He went on to say, this will mean "suffocation" for the terrorists. Zarqawi laid out his strategy to stop democracy from taking root in Iraq. He wrote, "If we succeed in dragging the Shi'a into the arena of sectarian war, it will become possible to awaken the inattentive Sunnis as they feel imminent danger. The only solution for us is to strike the religious, military, and other cadres among the Shi'a with blow after blow."

The advance of democracy is the terrorists' greatest fear. It's an interesting question, isn't it: Why would they fear democracy? What is it about freedom that frightens these killers? What is it about a liberty that causes these people to kill innocent women and children? To defeat them, Iraq needs a democratic government that represents all Iraq, that reins in illegal militias, and earns the trust and confidence of all Iraqi communities. When Iraqis have such a government to lead and unite them, they will be in a stronger position to defeat their enemies and secure the future with a free country. When Iraqis have a democratic government in place, it will be a major victory for the cause of freedom. It will be a major defeat for the terrorists' aspirations to dominate the region and advance their hateful vision.

Once a Government is formed, the international community must also do its part to help this young democracy succeed. Iraq needs greater international support, particularly from its Arab neighbors. Arab leaders need to recognize that the choice in Iraq is between democracy and terrorism, and

there is no middle ground. Success of Iraqi democracy is in their vital interests because if the terrorists prevail in Iraq, they will target other Arab nations.

The broader international community has responsibilities as well. So far, other nations and international organizations have pledged more than \$13 billion in assistance to Iraq. Iraqis are grateful for the promised aid, and so is the United States. Yet many nations have been slow to make good on their commitments. I call on all Governments that have pledged assistance to follow through with their promises as quickly as possible so that the people of the—across the Middle East will see that democracy leads to a better life and a brighter future. The success of a free Iraq is in the interests of all free nations, and none can afford to sit on the sidelines.

Formation of a unity government is a critical step, but it's not going to bring an immediate end to the violence Americans are seeing on their TV screens. The terrorists are going to continue to spread chaos and carnage in Iraq because they know the images of car bombs and beheadings horrify the American people. They know they can't defeat us on the battlefield and that the only way to win in Iraq is to break our will and force us into an early retreat. Our enemies know what's at stake, and they are determined to stop the rise of a democratic Iraq, and I am equally determined to stop them.

The decision to go to war is one of the most difficult a President can make. And in 3 years since our forces liberated Iraq, we've seen many contradictory images that are difficult for Americans to reconcile. On the one hand, we've seen images of great hope—boys and girls back in school and millions of Iraqis dipping their fingers in purple ink or dancing in the streets or celebrating their freedom. On the other hand, we've seen images of unimaginable despair—bombs destroying hospitals and hostages bound and executed. And this raises

the question in the minds of many Americans: Which image will prevail? I'll give you my opinion. I believe that freedom will prevail in Iraq. I believe moms and dads everywhere want their children to grow up in safety and freedom. I believe freedom will prevail because the terrorists have nothing to offer the Iraqi people. I believe freedom will prevail because once people have tasted freedom, they will not accept a return to tyranny.

It's important for Americans to understand the stakes in Iraq. A free Iraq will be an ally in the war on terror. A free Iraq will be a partner in the struggle for peace and moderation in the Muslim world. A free Iraq will inspire democratic reformers from Damascus to Tehran and send a signal across the broader Middle East that the future belongs not to terrorism but to freedom. A free Iraq will show the power of liberty to change the world. And as the Middle East grows in liberty and prosperity and hope, the terrorists will lose their safe havens and recruits, and America and other free nations will be more secure.

Today, Iraq is free and sovereign, and that freedom and sovereignty has come at a great price. Because Americans and Iraqis and troops from 17 other nations gave up their own futures so the Iraqi people could have a future of freedom, this world is better off because of their sacrifice. America will honor their sacrifice by completing the mission in Iraq. And Iraqi leaders have a responsibility to the fallen as well. By working together, we'll build a future of freedom for both our people. We're laying the foundation of peace for generations to come.

I appreciate your attention, and now I'll be glad to answer some questions. Please.

#### *President's Decisionmaking/War on Terror*

Q. Mr. President, thank you very much for coming. We appreciate it. I'm a strategic studies concentrator here at SAIS. My question to you, Mr. President—I'll preface it with a comment. Many of us here are

aspiring policymakers. Many of us here hope to one day be in positions of leadership. And some of us may be faced with decisions, very difficult decisions on the use of force and engaging in war. I was hoping that from your experience, you could share with us some wisdom or some insight, not necessarily on tactics but something we can take with us through our careers, that we can apply maybe at some point. Thank you.

*The President.* Thanks. Thanks for the question. I would encourage those of you studying here to be a part of policymaking for our Government. It is a high honor to serve your country. And my first advice is never use force until you've exhausted all diplomacy. I—my second advice is if you ever put anybody in harm's way, make sure they have got all the support of the Government. My third advice is don't make decisions on polls. Stand your ground if you think what you're doing right.

Much of my decision about what we're discussing these days was affected by an event. Look, I—during the 2000 campaign, I don't remember ever discussing with people what—could I handle war, or could my opponent handle war. The war wasn't on our mind. War came unexpectedly. We didn't ask for the attack, but it came. And so much of the statements I make and have made since that war were a result of that attack.

I vowed then that I would use all assets of our power to win the war on terror. That's what I vowed. It—the September the 11th attacks affected me. It affected my thinking deeply. The most important job of the Government is to protect the people from an attack. And so I said, we were going to stay on the offense two ways: One, hunt down the enemy and bring them to justice, and take threats seriously; and two, spread freedom. And that's what we've been doing, and that's what I'm going to continue to do as the President.

I think about the war on terror all the time. Now, I understand there's a difference of opinion in a country. Some view

the attack as kind of an isolated incident; I don't. I view it as a part of a strategy by a totalitarian, ideologically based group of people who've announced their intentions to spread that ideology and to attack us again. That's what they've said they're going to do. And the most dangerous—the biggest danger facing our country is whether—if the terrorists get a weapons of mass destruction to use. Now, perhaps some in our country think it's a—*that's a pipedream*; I don't. I think it is a very real threat and, therefore, will spend my Presidency rallying our assets—intelligence assets, military assets, financial assets, diplomatic initiatives—to keep the enemy off balance and to bring them to justice.

Now, if you're going to be the President or a policymaker, you never know what's going to come. That's the interesting thing about the world in which we live. We're a influential nation, and so therefore, many problems come to the Oval Office. And you don't know what those problems are going to be, which then argues for having smart people around. That's why you ought to serve in Government if you're not going to be the President. You have a chance to influence policy by giving good recommendations to the President.

You got to listen in my line of work, and I listen a lot. Ours is a complex organization that requires a management structure that lets people come into the Oval Office and explain their positions. And I think it's to my interest, by the way, that not everybody agree all the time. You can't make good decisions unless there's a little—kind of a little agitation in there. *[Laughter]* And sometimes we have.

But anyway, good question. I guess my answer to your question is, is that you got to be ready for the unexpected. And when you act, you base your decisions on principles. I'll tell you one principle—I'm not going to filibuster, I promise—but you got me going here, so—*[laughter]*. I want you to understand this principle, and it's an important debate, and it's worth debating here

in this school, as to whether or not freedom is universal, whether or not it's a universal right of all men and women. It's an interesting part of the international dialog today. And I think it is universal. And if you believe it's universal, I believe this country has—should act on that concept of universality. And the reason I do is because I do believe freedom yields the peace.

And our foreign policy prior to my arrival was, "If it seems okay, leave it alone." In other words, if it's nice and placid out there on the surface, it's okay; just let it sit. But unfortunately, beneath the surface was resentment and hatred, and that kind of resentment and hatred provided ample recruitment, fertile grounds for recruiting people that came and killed over 3,000 of our citizens. And therefore, I believe the way to defeat resentment is with freedom and liberty.

But if you don't believe it's universal, I can understand why you say, "What's he doing? Why is he doing that?" If there's no such thing as the universality of freedom, then we might as well just isolate ourselves and hope for the best.

And so—anyway, kind of rambling here. *[Laughter]* Yes.

*Iran*

Q. Mr. President, thanks very much for your visit today. We're honored by your visit. I'm a first-semester MA student. You mentioned the confluence of terror and weapons of mass destruction as the greatest threat to American security. Will the United States allow Iran to develop nuclear weapons?

*The President.* Ah—*[laughter]*—we do not want the Iranians to have a nuclear weapon, the capacity to make a nuclear weapon, or the knowledge as to how to make a nuclear weapon. That's our stated goal. It's also the goal, fortunately, of other—of friends and allies, starting with Great Britain, Germany, and France.

One of the decisions I made early on was to have a multinational approach to

sending messages, clear messages to the Iranians that if they want to be a part of the—an accepted nation in the world, that they must give up their nuclear weapons ambitions. And we're making pretty good progress.

By the way, if you're studying how to achieve diplomatic ends, it might be worthwhile noting that—I think at least—with the United States being the sole interlocutor between Iran, it makes it more difficult to achieve the objective of having the Iranians give up their nuclear weapons ambitions. It's amazing that when we're in a bilateral position, or kind of just negotiating one on one, somehow the world ends up turning the tables on us. And I'm not going to put my country in that position—our country in that position. Also, I think it's more effective that the three of us—the four of us work closely together.

We've also included Russia into the dialog. A couple of months back, you might remember, there was a discussion about whether or not the Russians should be allowed to build—or encouraged to build a civilian nuclear powerplant, but the fuel of which would be provided and collected by the Russians. I supported that initiative. I thought it was difficult, on the one hand, to say that civilian nuclear power is a sovereign right of a nation, and on the other hand, not to then support the Russian initiative. And I did so. I also did so because I want Russia to be a part of the team, trying to convince the Iranians to give up its nuclear weapons program.

Now, I want to emphasize this point, and that is, is that we're not only making sure they don't have the means to develop the weapon but the knowledge. And that's why I was very strong in saying that they should not have—that there should not be a research component involved with the Russian deal that will enable the Iranians to learn how to better enriched—enrich uranium.

But our objective is to prevent them from having a nuclear weapon. And the

good news is, is that many in the world have come to that conclusion. I got out a little early on the issue by saying, “axis of evil.” [Laughter] But I meant it. I saw it as a problem. And now many others have come to the conclusion that the Iranians should not have a nuclear weapon.

The doctrine of prevention is to work together to prevent the Iranians from having a nuclear weapon. I know here in Washington prevention means force. It doesn't mean force, necessarily. In this case, it means diplomacy. And by the way, I read the articles in the newspapers this weekend. It was just wild speculation, by the way. What you're reading is wild speculation, which is—it's kind of a—happens quite frequently here in the Nation's Capital.

Yes. Please.

#### *Reconstruction in Iraq*

Q. Thank you, Mr. President. It's an honor to have you here. I'm a first-year student in South Asian studies. My question is in regards to private military contractors. The Uniform Code of Military Justice does not apply to these contractors in Iraq. I asked your Secretary of Defense a couple months ago what law governs their actions. Mr. Rumsfeld—

*The President.* I was going to ask him. Go ahead. [Laughter] Help. [Laughter]

Q. I was hoping your answer might be a little more specific. [Laughter] Mr. Rumsfeld answered that Iraq has its own domestic laws which he assumed applied to those private military contractors. However, Iraq is clearly not currently capable of enforcing its laws, much less against—over our American military contractors. I would submit to you that in this case, this is one case that privatization is not a solution. And, Mr. President, how do you propose to bring private military contractors under a system of law?

*The President.* Yes, I appreciate that very much. I wasn't kidding—[laughter]. I was going to—I pick up the phone and say,

“Mr. Secretary, I’ve got an interesting question.” [Laughter] This is what delegation—I don’t mean to be dodging the question, although it’s kind of convenient in this case, but never—[laughter]. I really will—I’m going to call the Secretary and say you brought up a very valid question, and what are we doing about it? That’s how I work. I’m—thanks. [Laughter]

Yes, ma’am.

### Public Opinion/Democracy

Q. Hello, Mr. President. I have a followup question on your comments about polls. Your Presidency has been a rather polarizing period in America. And occasionally, your attitude towards protesters and dissenters has been perceived as being dismissive and occasionally, then, cavalier. And I’m wondering how you feel that’s contributed to the polarization in politics today and if that approach will change, given that you have fallen somewhat in the polls?

The President. Yes. Well—[laughter]—I take protest seriously. I mean, I—by the way, I get protested all the time. [Laughter] And I welcome it. I think this is the great thing about a democracy. There needs to be an outlet. If people feel like their government is not listening to them or doesn’t agree with them, there ought to be an outlet for their discontent.

And so the protests really don’t bother me. I hope that’s not viewed as cavalier, but it’s just the way I feel. And it’s a—in terms of polls, you cannot have a President make decisions based upon the latest political survey. It’s just—you got to have people making decisions based upon principle. And my attitude is, I’m going to do what I think is right.

I’ve got to be able to look at myself, by the way—after the Presidency—in the mirror and say, I didn’t come to Washington, DC, to try to chase political opinion; I came to lead this country in a very historic time.

And you heard my discussion about my reaction after 9/11. That’s what I believe. And that’s what I’m going—those are some of the beliefs on which I’m going to continue to make decisions.

But, no, I hear voices of discontent, and I’m just going to do the best I can do based upon what I think is right. There’s too much flattery, too much ego, too much criticism, too much noise, too much politics, too much that, for a President to try to kind of grope his way around looking at the latest public opinion poll. In my judgment, it doesn’t serve the Nation well.

A while ago at a press conference, I remember uttering one wonderful piece of wisdom: It’s like a dog chasing his tail. It actually didn’t fly that good. But nevertheless, my point—[laughter]. But thank you; it’s a legitimate question. And so to answer your question, yes, I hear the protests. And I can understand why. I can understand why people are concerned about war. Nobody likes war, particularly me. I knew exactly what was going to happen when I committed these troops into harm’s way. I knew there would be—people would lose their life. And I knew I’d be trying to comfort mothers and fathers and grieving wives. I knew exactly what was coming. And if I didn’t think it was the right thing to do, I wouldn’t have sent them. And if I didn’t think we could succeed in Iraq, I’d pull them out.

And the good thing about a democracy is people can express themselves. We’re fixing to have a huge immigration march today. And it’s a sign that there’s a—this is an important issue that people feel strongly about. And I repeat to you: I strongly believe that societies in which you’re not allowed to express yourself are societies which do breed resentment, and, kind of, bottled-up anxiety causes people to become very frustrated. And that’s not healthy for a society.

Yes.

*CIA Employee Identity Disclosure Investigation*

Q. First, let me say, thank you very much for being here, and thank you for taking questions. I know we appreciate that. I'm a second-year master's student studying international energy policy.

*The President.* International?

Q. Energy policy.

*The President.* Oh, good.

Q. Sorry. [Laughter] My question, sir, is, well, as Anthony alluded to earlier and as you're aware, we have many students at SAIS who are currently working for or considering working for the State Department, the various intelligence agencies, and such. And how do you respond to recent—the recent report by Prosecutor Fitzgerald that there is, in his words, “a concerted—evidence of a concerted effort by the White House to punish Joseph Wilson,” who himself has a distinguished record of Government service?

*The President.* Yes. No, I—this is—there's an ongoing legal proceeding which precludes me from talking a lot about the case. There's also an ongoing investigation that's a serious investigation. I will say this, that after we liberated Iraq, there was questions in people's minds about the basis on which I made statements, in other words, going into Iraq. And so I decided to declassify the NIE for a reason. I wanted to see—people to see what some of those statements were based on. So I wanted to see—I wanted people to see the truth and thought it made sense for people to see the truth. And that's why I declassified the document.

You can't talk about—you're not supposed to talk about classified information, and so I declassified the document. I thought it was important for people to get a better sense for why I was saying what I was saying in my speeches. And I felt I could do so without jeopardizing ongoing intelligence matters, and so I did.

And as far as the rest of the case goes, you're just going to have to let Mr. Fitzgerald complete his case. And I hope you understand that. It's a serious legal matter that we've got to be careful in making public statements about it.

Yes, please.

*Asia-Pacific Countries*

Q. Good morning, Mr. President. Thank you for coming here today. I'm a second-year SAIS student studying strategic studies. And I'd like to briefly turn you a moment—turn your attention to the Asia-Pacific, the security situation in Asia right now. Secretary Rice, last March, met with her counterparts in Japan and Australia in a security dialog, discussing security issues in Asia-Pacific. And this made many countries in the region very uncomfortable. They felt that this security dialog may have been an effort to contain the quote unquote “China threat.” And mostly our alliance partners in South Korea, Singapore, and Thailand have felt this uneasiness. Could you possibly elucidate for us your administration's strategy towards Asia-Pacific, ahead of President Hu Jintao's visit to Washington? And was the dialog a prelude to a NATO-like security structure in Asia-Pacific?

*The President.* Thanks for the question. We have worked hard to make sure relations with Japan, China, and South Korea are on firm footing, and they are. First, the Japanese relationship is a close relationship. I'm personally fond of Prime Minister Koizumi. We have a close relationship, and I've worked very closely with him on a variety of matters, starting with making sure our force posture is such that can—that the Japanese are comfortable with.

I don't know if you saw the recent announcements about Okinawa, for example. You're beginning to see a defense relationship and alliance that stays intact but is more attuned to the future. Secondly, he's committed troops into Iraq. He believes, like I believe, that democracy helps keep

the peace. We've worked closely in Afghanistan. In other words, we're partners in peace.

The South Korean issue is one, obviously, that's dominated primarily by North Korea. And I made the decision early on in the administration to change the dynamics in that negotiation from the United States and North Korea to the United States, China, Russia, South Korea, and Japan—called the six-party talks, all aiming to get people who have got a stake with North Korea at the table, all aiming, again, to send a united voice to the North Koreans.

I'm a little—the North Korean nuclear issue disturbs me, but also equally disturbs me is the fact that people are being starved to death. And it should disturb the world. It should disturb all of us. The North Korea issue dominates my discussions with South Korea. However, there's a—South Korea and America has committed ourselves to the peace that comes—or the balance that comes with the U.S. force presence there in South Korea, although it's been reduced as well. We did not reduce force; we reduced manpower, as you probably know since you study it.

The issue that is on most Americans' mind, and the issue that really is the issue of the future in many ways, is China. And I would call our relationship with China very positive and complex. It's positive because we do have dialog. It's positive because the Chinese leadership—Hu Jintao and his predecessor—were able to sit down, and we had pretty frank discussions about a variety of issues.

On our agenda, of course, is trade—fairness in trade, as well as human rights and freedom of religion. On their issue—on their agenda has been, in the past, Taiwan, of course, which is a predominate issue. I've worked hard on that issue to make it clear that our position has not changed, and we do not expect either party to unilaterally change the status quo.

And one of the things, of course, we work on is to—would be very helpful if the Japanese and the Chinese had better relations, and the Japanese and the South Koreans. So we're spending time on that issue, as well, to try to bring a sense of—to encourage more dialog with—amongst those parties.

Our presence in the Far East is really important. And so therefore, my administration has been active in making sure we stay active in the region. The visit of Hu Jintao will be an interesting and important visit. He's coming into a country where there's an over \$200 billion trade deficit, and a lot of Americans are wondering, where's the equity in trade? And therefore, I think he could help the Americans understand the importance of a free trading world if he were to maybe make a statement on his currency, for example.

I believe it's important for Americans to see a society that goes from being a—have its economic growth driven by exports to one having its economic growth more by consumer demand inside the country. That's an important part of our dialog with China.

It's very important for him to make a declaration on international property rights—IPR. It's difficult for a nation that likes to trade, like ours, to go into a country uncertain as to whether or not patents will be protected or product will be protected from copy. And so it will be a wide agenda.

The Far—the Pacific area is a very important part of our foreign policy. It's one where we've got a very active presence, and we'll continue to keep one. We've got a free trade agreement—you mentioned Singapore—we've got a free trade agreement with Singapore. And it's our—my relationship with these countries is based more than on just trade and commercialism. Mine is to work toward more democracy and freedom, as well, in the region, so that we can keep the peace in the long run.

I keep repeating this, I know, but I firmly believe that one way you lay the foundation for peace is to spread liberty and freedom. And there—again, I understand there’s a debate. There’s a legitimate debate. I’m just telling you what my position is. And I got something to say about it.

Yes.

### *Human Trafficking*

Q. Good morning, President Bush. I also feel very strongly about freedom, although I see it in terms of human trafficking. Your administration takes a very strong stance against prostitution. And because of that, you do not disperse funds to a lot of very effective NGOs around the world who pragmatically combat sex trafficking by working with existing prostitution networks. There’s no evidence right now that proves either legalizing prostitution or criminalizing prostitution has any effect in the change of sex-trafficking cases. Have you considered changing your ideas about prostitution for the purposes of helping either save or keep people from being enslaved in sex prostitution?

*The President.* No, I appreciate it. I’m—it sounds like I’m dodging here, but again, you know more about this subject than I, and I will be glad to call Condi and talk to her about our policy. I thought we had a very robust strategy on exploitation of women and children, particularly around the world. I think I addressed this subject at the United Nations and was the only world leader to do. But as specifically about our position on prostitution, I’m going to have to talk to the Secretary about it.

Yes.

### *Spread of Democracy*

Q. Morning, Mr. President. I have a more general question about the United States work to democratize the rest of the world. Many have viewed the United States effort to democratize the world, especially nations in the Middle East, as an imposition or invasion on their sovereign rights.

Considering that it was, in fact, the Prophet Mohammed who established the first known constitution in the world—I’m referring to the constitution he wrote for the city of Medina—and that his life and the principles outlined in his constitution, such as the championing of the welfare of women, children, and the poor, living as an equal among his people, dissolving disputes between the warring clans in Arabia, giving any man or woman in parliament the right to vote and guaranteeing respect for all religions, ironically parallel those principles that we hold most precious in our own Constitution. I’m wondering how might your recently formed Iraq Study Group under the U.S. Institute for Peace explore these striking similarities to forge a new relationship with Iraqis and educate Americans about the democratic principles inherent in Islam?

*The President.* Great question. I believe that the terrorists have hijacked a peaceful religion in order to justify their behavior. I thank you for bringing that to my attention.

I will pass on your comments to James A. Baker, who is one of the chairmen of the group going to Iraq.

See, you said something really interesting. Initially, you said people view America imposing its beliefs. And I hearken back to what I said earlier—this fellow’s question here—that if you believe that freedom is not universal, then it could be viewed as an imposition of beliefs. I’m not saying to countries, “You’ve got to look like us or act like us,” but I am saying, you know, “Give your people a chance to be free.” And I think it’s necessary for America to take the lead on this issue. I think it is—I think it is vital for our future that we encourage liberty and—in this case, the Middle East. And as you said, it doesn’t necessarily run contrary to what the Prophet Mohammed said.

It’s a—and so how do you advance freedom? I mean, well, one thing you do is you make sure that the Lebanese have a

chance to self-govern freely without Syrian interference. It's one thing you can do.

Another thing you can do is work for the establishment of a Palestinian state, which I'm doing. I believe that there will be a Palestinian state that is at peace with Israel. I believe it's going to have to be a democracy—again, a Palestinian-style democracy—to achieve that. But in my—early in my Presidency, I said, it's in our interest that there be two states, side by side in peace, and we're working toward that end.

You know, part of the debate here that I'm sure you're discussing is whether or not the United States should insist upon elections before everything is right. You hear the—the civil society has to be just right before you can have elections. I disagree strongly with that. I think elections are the beginning of the process, not the end.

And I found the elections that Hamas won very instructive and very interesting. It was—to me, it was a final condemnation of the Arafat era, where people said, "We're sick of corruption. We want better health care and better education; we want—we actually want our leaders to focus on the people, not on their self interests."

And because I believe in two states, side by side in peace, and therefore, expect the Government of both to be peaceful toward each other, we're not going to deal with a Government that has announced that they want to destroy Israel. On the other hand, we will help the Palestinian people. And I believe a democracy will eventually yield the state necessary to be side by side with Israel in peace.

The success of a democracy in Iraq—and as I told you, I think we're going to succeed; as a matter of fact, I know we are, if we don't lose our nerve—will send a powerful signal. Imagine the signal it will send to people in Iran that are not free right now. I believe the women's movement is going to be the leading edge of changing the Middle East. I don't believe women want to live as second-class citizens. I be-

lieve it's—I believe there's a universal desire to be treated fairly and equally.

And so I think—look, I'm pleased with the progress. I was reading the other day where Kuwaiti women are running for office. It's a positive sign, you know? We've got to be realistic about what's possible, but we've got to be firm in our belief that freedom is possible and necessary. Otherwise—I'll repeat to you—a system that says, "Okay, let's just tolerate the tyrant so long as everything seems okay," didn't work.

That's one of the lessons of the attack on the United States. You know, the world seemed fine, didn't it? It seemed kind of placid—there was a bubble here, a bubble there. But everything seemed all right. And yet, beneath the surface, there was tremendous resentment. And it's now come to full, and so how do you defeat their—now, if you don't think they have a ideology or a point of view, and/or a strategy to impose it, then I can understand why you think the United States ought not to be as active as we are.

But I believe differently. I believe they're bound—these folks are bound by an ideology. I know that they have got desires. They say it. This is one of—this is a different—this is a war in which the enemy actually speaks out loud. You heard the letter I wrote—read from—they didn't speak out loud on this one, but nevertheless, it's a—we've got to take their word seriously. When the enemy speaks, it makes sense for our military, our intelligence, the President to take the word seriously so we can adapt and adjust.

Anyway, very interesting question. Thanks for bringing that to my attention. Yes, ma'am.

#### *Millennium Challenge Account*

Q. Hi, Mr. President. Thank you very much for coming to speak with us. I am studying international development. And you have alluded much to tensions beneath the surface of countries. A lot of times,

this comes from economic underdevelopment and lack of economic opportunities. You haven't spoken directly about economic development this morning, and I would like to know where economic development lies on your priority list.

And also, looking at countries that maybe haven't, in your words, gotten everything right in terms of political stability or democratization, is holding development funds—keeping development funds from those countries actually counterproductive? Because if you can help the country to develop economically, maybe some of these underlying tensions might dissipate.

*The President.* No, it's a great question. First of all, I'm a—matter of fact, I met this morning with Rob Portman, head of the USTR, about the Doha round of—for the WTO. And the reason I did is because I'm a big believer that trade helps lift people out of poverty. As a matter of fact, if you really study the relationship between development aid versus capital and the movement of capital and who—and how a society benefits more, it's because of trade and commerce.

And so we've been very active in this administration. AGOA, for example, is a free trade agreement with Africa. President Clinton passed it. I was more than happy to sign its extension, and we've been very hard in implementing it on the recognition that trade is a vital way for—to help people get their economies up and running.

And so, no question, the economy is important. In the Palestinian Territories, Jim Wolfensohn went over with a plan—prior to the election, by the way—with a plan to help the Palestinians develop their economy on the exact premise that you talk about. Economic development provides hope.

And so, you bet it's an integral of our policy. We give a lot of aid out, by the way. We give aid to countries that may like us, may not like us, except in few instances. I have changed the development program, however, from—let me say, I

added on to the development program through what's called the Millennium Challenge Account. And that is a conditional-based aid program. It's condition-based upon poverty level, but it's also condition-based upon behavior of government.

We should not be—we should insist that governments fight corruption. It seems like to me, it's a rational thing to do with taxpayers' money. And so part of the—one of the criterion for the Millennium Challenge Account, it says, "You don't get money if you don't fight corruption." We should insist that people invest in the health and education of their people. We should insist on marketplace reforms, open markets, so that people have a chance to realize the benefits of a growing economy. And we do. And so we give aid.

But the Millennium Challenge Account is an additional program that is, no question, conditional-based, based upon, I think, rational criterion. I remember having the discussion with some friends of mine from another part of the world. They said, "How can you insist upon conditions for the aid?" I said, "How can you not?" Why does it not make sense to say, get rid of your corruption? Unless you people think—unless people think that maybe the corruption is normal and necessary. It's not. A lot of people—a lot of countries have suffered as a result of governments that didn't care about them.

The other thing we're doing aggressively is to fight hunger and disease. Part of making sure that an economy can take hold is a—for example, for AGOA to be effective, there's got to be—we got to do something about HIV/AIDS, and we are. We're spending about \$15 billion—or will have spent \$15 billion over 5 years. And it's beginning to make a difference. And I'm real proud of our country, and I'm real proud of our friends and partners on the ground to get antiretroviral drugs to people, to help with prevention, to help take care of the orphans. And we feed a lot of people too. Ours is a generous nation.

So the development program is more than just passing out aid. It is trade. It is insistent upon habits of Government, and it's also fighting disease and hunger.

Yes.

*2008 Elections/President's Second-Term Agenda*

Q. Thank you, Mr. President, for coming to SAIS today. I'm a first-year master's candidate. In 2 years, the American political system will face a unique moment in its history, for, in fact, a sitting Vice President will decline the nomination for the Presidency. What are the implications for the Republican Party, your legacy, and, if you could choose, who would your successor be? Thank you. [*Laughter*]

*The President.* I'm not through yet, you know. [*Laughter*] It is—I'm glad my Vice President is not running for President. Not that he would make a great President, but that it certainly changes the dynamics inside the White House. And it is an amazing moment; you're right. I guess it's the most wide-open race ever. Oh, it can't be "ever." "Ever" is too long. [*Laughter*] But in a long time. [*Laughter*]

I am going to spend 2½ years charging as hard as I possibly can—I want to sprint out of office. And I will be a interested observer, and I'm sure I'll be roped into moments after our party nominates a candidate, but I'm just going to let the politics run its course.

And I've got a lot to do. We've got—listen, here are some of the challenges we face. We got to get off Middle Eastern oil, and therefore, we need to stay focused on a research and development initiative that helps us get away from fossil fuels but also helps countries like India diversify away from fossil fuels. And that's why the agreement I reached with India is a very important agreement—I thought that's what you were going to ask. [*Laughter*]

And many of you are—you look a lot younger than me—[*laughter*]—and so therefore, you better be worried about So-

cial Security and Medicare. Our balance sheet is, no question, affected by a current account deficit. But a looming issue is the unfunded liabilities inherent in Social Security. And the Government needs to deal with it. The problem is, Washington is so political that it's—so far, it's—well, if somebody looks good, somebody looks bad. And so I'm going to stay focused on that, as well, and hopefully, get a bipartisan solution up on Social Security and Medicare, so that we can say to a younger generation, "We did our duty; we did something that's really hard to do." But we'd better get it done. The system is going broke, and you're going to pay a lot.

The immigration debate is an important debate. I don't—my point is—and I'll be glad to opine on it if you like. I think we need to be a—understand that we're a nation of immigrants, that we ought to be compassionate about this debate and provide a—obviously, we've got to secure the border and enforce the law. But one way to do so is to make sure that people who are coming in here to work have a legal—get a card so they don't have to try to sneak across the border, which takes pressure off our border.

People ought to be here on—be able to work on a temporary basis, and if they want to become a citizen, after a series of steps they got to take—they get in line like everybody else—not at the head of the line but the end of the line. And if Congress wants to say, "Well, we need more people from a certain country," they expand the number of green cards available.

My point to you is I got a lot to do, and you're the beginning—you're the leading edge of what's going to happen. I know—particularly from our friends in the press corps, they're going to be asking these questions a lot, "So-and-so said this; what do you say about that, or so-and-so—who are you for on this?" And I'm going to do my job as the President.

Yes.

*Spread of Democracy/Trade*

Q. Good morning, Mr. President. Thank you for coming. I agree with your assertion that Iraq is going to serve as a model for reformers, democratic reformers in the Middle East. But at the same time, I believe that whenever the seas are rough, the despots of the Middle East keep their heads down until the winds blow, and then they continue to do the exact same thing they've been doing for generations. I'm wondering, what pressures are we putting—or planning to put on these despots, some of whom are allies?

And one point of correction to Kent—the first constitution was written by Hammurabi in Samaria, modern-day Iraq. [Laughter]

*The President.* I was going to say that, you know, but I wanted to—[laughter]. Each President has his own style about how we deal with different leaders. I believe that it's very important for people to be—to listen. And therefore, I'm a person who does a lot of my work in private with these different leaders.

I talk frankly with people, but you can't have a frank discussion with somebody if you—if they feel like you're going to hold them up for public ridicule or public criticism. And so for those of you who are thinking about being President or being involved with diplomacy, you've got to think about how you deal with somebody you don't necessarily agree with and how best to be effective.

And so I just will tell you, however, I'm constantly talking about the need for there to be democracy and reform. And there's plenty of leverage throughout our Government. The President is not the sole voice when it comes to advancing the democracy agenda. You might notice Madam Secretary occasionally is outspoken in her—as she travels the world, which is positive. But there are other ways to send the message, as well, that we believe strongly that countries ought to adapt democratic habits.

I mentioned to you the notion of the women's movement in the Middle East. There is a way where the United States can effectively use NGOs—and I recognize—let me just say, I recognize sometimes if it says "Made in the USA" on it, it makes it more difficult to achieve certain reforms. And so we got to be wise about how we convince others to understand the importance of freedom. But we're—I can just assure you that we're constant dialog.

And I have had a lot of dialog with the leaders that come to see me and reminding them that whole societies are those that recognize the importance of giving people a chance to express themselves. And you'll find in the Middle East, there's—some people will say, "Well, what about such and such a group; they appear to be dangerous."

My answer is, if they've got support on the street, there's a reason. And if I were you, I would listen to the people better than they listen to the people. There's a reason why grass roots movements start. And one thing about democracy is, is that it forces the grass roots movement out in the open so people compete for ideas and for the will of the people in an open forum, not a closed forum. And it's those leaders that say, "I fear the grass root movement," are those that eventually are going to get whipped unless they outcompete them—outcompete them in a good sense, outcompete them for services, outcompete those who are stirring up the anxieties on the street by listening to the people and actually responding.

I know that's a foreign concept at some times, but nevertheless, it's a concept that ends up leading to a more whole society. And it's not easy work. We live in a world today where everything is supposed to happen yesterday. If you really think about Iraq—and it's tough; I fully recognize it's difficult. And I know people are anxious and their hearts break when they see the loss of innocent life. But it was 4 months

ago that there was one of the most amazing elections in the history of the Middle East—4 short months ago. It seems like a decade, doesn't it? At least it does to me. [Laughter]

And so we're in a world where everything is, like, supposed to happen that way. But that's not the way it works. I believe what we're doing is putting those seeds in the ground. And it's important for future administrations to follow up, it seems like to me. And I said—I thought I laid out a pretty good marker for the United States in my second Inaugural Address, that said, why don't we work to end tyranny—it's a noble goal—under the belief that people desire to be free. And people should live in freedom.

I told you, listen, I'm deeply concerned about societies in which people are starving to death, in which people are ravaged by HIV/AIDS. That's why we've taken the initiative in this country. And it's very important for the American people to feel good about that initiative as well. It's not George Bush's initiative; it's the American people's initiative.

One of the principles that guides my policy is, to whom much is given, much is required. And I believe that's an essential part of the United States foreign policy.

I'll tell you another issue, now that I'm getting wound up, that you better consider and think about as future policymakers, is whether or not this country is going to succumb to protectionism and isolationism. And it's an interesting moment in our country's history. I put it in the State of the Union for a reason. I decided not to go with "here's the 42 things we're going to do to you or for you." [Laughter] It's—I talked about—I talked about the themes. I'm serious about this now. And as young policymakers, you need to seriously consider whether or not this country of ours is going to be confident enough to continue to lead. If we become isolationist, then we basically say, "Let them suffer." If we become isolationist, then we say, "It doesn't

matter if people live in freedom or not." If we become protectionist, we say, "Trade is okay, but we're more worried about competing in the world stage than we are helping developed nations grow."

And this is a serious debate that needs to be taken—my position is clear. I'm absolutely for this United States of America staying engaged to the world. And we've got to be confident in the values—listen, we were formed on the natural rights of men and women. Those weren't American rights. They were natural rights. There's something greater in our founding that speaks to, kind of, the universality of liberty.

And we ought to be confident about our ability to compete in trade. And I know it's difficult. I know it's hard if you're living in the Midwest and you lost your job, and somebody tells you, "You lost your job because of free trade." It's difficult for people. I know that. On the other hand, my judgment is if we put up walls and aren't willing to have free and fair trade, it will hurt the world economy, and it will cause people to suffer here at home and abroad.

But this is a defining moment, in my judgment, on these debates. I've got a pretty good antennae. I'm able to—see, I get a pretty good sense of how people are trending. And it's—and I would hope that out of this school comes people who are confident in American values and confident in our ability to compete.

Now, we've got to do smart things, and we've got an economic debate going on here. I think if we run up taxes, it will hurt our economy and make us less competitive. I know we've got to do something about energy to make us competitive in the 21st century. We really have to make sure we've got kids who've got the skill set necessary to fill the jobs of the 21st century. I mean, there are things we've got to do to make sure we remain competitive. It just doesn't happen. But nevertheless, we shouldn't fear it. We shouldn't fear competition. Competition is good.

And so I just hope—I hope—look, I'm not telling you what your curriculum is, but it's something worth talking about. These are—these happen to be the big trends of our society. And it's going to take, in my judgment, a future generation of people standing up, not losing our confidence. Look at the 1920s in our country's history. We shut down immigration; we had huge trade tariffs; and we were isolationist. And it didn't serve our country well, in my judgment.

All right, I've got to go to work. [*Laughter*] This isn't work; this is enjoyable. I want to thank you all for giving me a chance to come by and visit with you. Thanks for considering serving our country. It's a noble calling. It's a noble calling and worthwhile.

God bless you.

NOTE: The President spoke at 10:36 a.m. at Johns Hopkins University. In his remarks, he

referred to William R. Brody, president, Johns Hopkins University; Jessica P. Einhorn, dean, Paul H. Nitze School of Advanced International Studies, Johns Hopkins University; Lt. Col. Fred M. Padilla, USMC, commander, 1st Battalion, 5th Marines; senior Al Qaida associate Abu Musab Al Zarqawi; Usama bin Laden, leader of the Al Qaida terrorist organization; Patrick J. Fitzgerald, U.S. Attorney for the Northern District of Illinois and Department of Justice CIA leak investigation special prosecutor; Prime Minister Junichiro Koizumi of Japan; President Hu Jintao of China; James A. Baker III, cochair, Iraq Study Group, U.S. Institute for Peace; and James D. Wolfensohn, Quartet Special Envoy for Gaza Disengagement. A participant referred to former Ambassador Joseph C. Wilson IV, who served as CIA envoy to Niger in February 2002.

## Remarks in a Discussion on Medicare Prescription Drug Benefits in Jefferson City, Missouri April 11, 2006

*The President.* Thank you all. Thanks for coming. Please be seated. Thank you. Cindy, thanks for the kind introduction. I want to thank the chamber for inviting me here, to what I think you'll find to be an interesting educational event; at least I hope so. As you can see, I mean, there's several ways to have an educational event. One is to put a podium out there and let me blow away for an hour, kind of talk and talk and talk. Another way is to have fellow citizens sit up here and discuss important policy issues. And that's what we're here to do today. We're here to discuss health care, particularly for our seniors. And so I want to thank you all for joining me.

Most important, thank you all for a warm welcome. It's good to be back here in Mis-

souri. My only regret is that Laura is not with me. She's actually in Midland, Texas. That's where I was raised and she was born and raised. She's doing a little event there, picking up her mom, bringing her up to Washington. Mother and Dad are coming too, so we're going to have Easter at Camp David. A little family affair which is—[*applause*]. And I'm looking forward to it.

But I've also been looking forward to coming here as well. We just came from the Lutheran Senior Service Center. Carl Rausch—[*applause*—yes, there you go. Thank you all. And we're about to have one of your fellow workers up here, as you'll note. The reason we were there is we were watching seniors sign up for the new Medicare drug benefit. In other words, we were at a facility where seniors had—

where seniors were, and there were good souls from this part of the world saying to people, "Here's what's available for you if you want to sign up."

What we're here today is to talk about health care for seniors. But before we get there, I do want to recognize Members of the United States Senate who have joined us—first, your senior Senator Kit Bond. Funny thing happened when we were crossing the river. [*Laughter*] He reminded me of how important that Missouri River is for getting farm product to market. I see the hat back there—thank you. Yes, sir. Kind of reminds me of home. [*Laughter*]

And also traveling with us is a fellow who I've come to admire a lot as a straight shooter, Senator Jim Talent—and the Congressman from this district, Kenny Hulshof. Kenny, I appreciate you. Thank you. Peter Kinder, Lieutenant Governor, has joined us; Governor, thanks for being here. Proud you're here. It's good to see you again.

Most of all, thanks for coming. Health care is a vital issue for this country. In my judgment, the best health care plan is one that says, "We'll help the poor; we'll help the elderly; and we'll make sure the doctor-patient relationship is solid for the rest of us." In other words, we don't want the Federal Government—we really don't want the Federal Government telling folks who—what to buy and how to buy it and what price to pay. We want there to be a relationship between doctors and patients. That's what we want.

But our Government made a commitment to our seniors, and it's a commitment that I intended to keep when I went to Washington, DC. In other words, our commitment is our seniors should have first-class health care. That commitment, interestingly enough, was first signed by a fellow citizen from Texas named Lyndon Baines Johnson. And so I came to Washington, DC, and said, "Are we doing as good a job as possible to provide modern medicine for our seniors?" You see, once the Govern-

ment makes a commitment, it ought to be a solid commitment; it ought to be a good commitment. There's no need to have a health care system for our seniors that doesn't meet needs. And one of the things I noticed in the analysis of the health care system for seniors, analysis of Medicare, was that medicine had changed but Medicare hadn't.

I'll give you an example. Medicare would pay thousands and thousands and thousands of dollars for ulcer surgery but not a dime for the prescription drugs to help prevent the ulcer from occurring in the first place. That didn't make sense. It certainly didn't make sense for the seniors, did it? In other words, if you're going to have a modern system, you ought to have a system that says, pharmaceuticals have helped change medicine. And it certainly didn't make sense for the taxpayers. After all, if you would spend \$50 a month to prevent ulcer surgery, and the surgery costs thousands to begin with, it saves money.

And so I said to the people in Washington, DC, "Let's modernize the system. Let's figure out how to make it work better for our seniors." A commitment made is a commitment we've got to keep. And we finally got a deal done, finally put aside needless politics. I must confess to you, Washington is full of needless politics. We can do a better job.

We need to focus on big problems, and a big problem was that Medicare wasn't living up to its expectations. And I signed the bill, and I proudly signed it. And so this bill helps all seniors afford prescription drugs. It really helps a lot. It gives seniors choices.

I knew this would be a problem at first. Some people just simply don't want to be confronted with choice. You kind of get settled in and everything seems to be going fine, and all of a sudden, up pops a new Medicare plan, and you've got 42 choices to choose from here in Missouri. And that can be a little confusing. I knew that would be the case.

On the other hand, I also knew there were thousands of fellow citizens who would be willing to go out and help people determine what choice suited their needs. See, I believe that people ought to be trusted. I don't think the Government ought to be making every decision on behalf of the citizens. I think the more that people—citizens are given choice in life, the better off it is to meet their needs. See, when you have the Government say, "This is for you," sometimes it doesn't meet a person's needs. When you have a person say, "Here's some options for you to choose from," it means you could design a program to meet your health care needs. And that's what we did in this new Medicare plan.

And thirdly, one of the things the Medicare plan didn't have was catastrophic coverage. One of the things this drug plan says is that something may happen, out of your control, and therefore, you may have a big expenditure. And therefore, it seems to make sense that there would be catastrophic, kind of, stopgap coverage. And so over \$3,600, the Government will pay 90 percent in this new plan. To me that makes sense. It gives somebody peace of mind. People say, everything seems to be going okay right now, but if something goes bad, the Government will help you. And so the new drug benefit that we're describing today has got a catastrophic component. And when people sign up, it should give you peace of mind, give your family peace of mind.

Fourthly, it's—I recognize that certain people need help in our society. And therefore, if you're a low-income senior—about a third of the seniors qualify—the Government is going to pay over 90-something percent of your—95 percent of the bill. In other words, we recognize people need help in this society; we're a compassionate society. And so the drug benefit, if you're a low-income senior, is really going to help. It's going to help all seniors. Matter of fact, it's estimated that all seniors' drug bills are

cut in half under this program. And if you're a low-income senior, it's especially beneficial. And that's the way it should be.

I remember the debate in Washington, DC—the language gets a little rugged up there. We had people say, "The prescription drug plan is just simply a hollow promise," or, "The bill will leave millions of seniors worse off." That's not the facts. See, when you cut through all the rhetoric and look at the results, I think people are going to be amazed at what's available.

One the reasons I'm here is that even though 29 million people have signed up, there's still about 7 million people who are qualifying for this program, and they ought to take a look. One way to convince people to take a look is to have others talk about the benefits of the program. They've probably got a little more credibility than I do. [Laughter] You don't have to agree with that. [Laughter] I'm just telling you, it's a good deal.

As a matter of fact, we estimated the premiums to be \$37 a month. They're down to \$25 a month for the seniors—for most seniors. When people have choice, the 42 plans helps bring cost-effectiveness into medicine. You got one choice, you don't get cost-effective. You got 42 programs to choose from—it's amazing what happens when somebody kind of competes for your business, that says, "I'm going to try to make the plan attractive for you." And that's the difference between a government-dictated program and a program that trusts seniors to make choice.

We've got up until May 15th for folks to get the best benefits. If you haven't signed up—if you're listening on TV and haven't signed up, please take a look, call 1-800-MEDICARE or go to [medicare.gov](http://medicare.gov) if you want to find out what's available.

If you're a son—or if you've got a mom or a dad who is eligible for Medicare, a son or a daughter has a duty, in my judgment, to the parent to find out what's available for your mom or dad. That's your duty. This is a good deal. It costs nothing

to look at it. I think you're going to find it's an amazing opportunity to really help your mom or dad with prescription drugs, make sure they get modern medicine. Isn't that what a son or a daughter wants, to make sure the mom or dad gets the best possible medicine? Well, here's the plan that will make sure you get the best possible medicine.

If you're a church, in a part of a church or community center, find somebody who's eligible for Medicare and help them. It's not all that hard. It's a pretty simple program. It may be hard for the senior who's not necessarily computer-literate, but if you're computer-literate, it's pretty easy. The steps are easy to follow. And you'll be doing somebody a favor.

If you're a senior wondering whether or not this makes sense, you ought to take a look. It doesn't cost a dime to look, and you're going to save money. Seniors are saving about half on the prescription drug charges already. If you're a poor senior, the Government is going to pay over 95 percent of the deal.

I'm here to, kind of, cut through all the politics and cut through all the rhetoric and help people understand what's available. No better place to come than the State of Missouri, kind of the "Show-Me" State. So we're about to show you. And I'm going to start with Dr. Mark McClellan, fellow Texan. McClellan is an unusual fellow; he's got a lot of degrees.

What are your degrees, McClellan?

*Mark B. McClellan.* Mr. President, I have a medical degree, also a Ph.D.

*The President.* Yes. One of the things I like to remind people of is this fact: He's a Ph.D., and I was an okay student. [Laughter] Look who the adviser is, and look who the President is. [Laughter] I've used it before with him. He's a good sport. His job is—what?

*Dr. McClellan.* I'm the head of the Medicare and Medicaid programs, and we are working with groups all over the country to help people find out about the most

important new benefit in Medicare in 40 years—that's the drug coverage that you're talking about, sir.

*The President.* See, we have got a duty at the Federal level to help people find out what's available. That's our duty. Mark is in charge of it. He works with Mike Leavitt, who's the Secretary of Health and Human Services, and they've done a fine job. By the way, when you put 29 million people, right off the bat, into a system, you're going to have glitches, but they've handled the glitches. They're working with your Governor. They're working with the State government to work on dual eligibles. I know you read initially about the issues related to the signups—we're dealing with them. His job is to run them down, find those problems, and solve them.

His job is also to help rally the country, others to help explain the program. And how are we doing? Give us—

*Dr. McClellan.* Well, now over 29 million people are already participating, hundreds of thousands more seniors and people with a disability are signing up every week. But we want to make sure, Mr. President, that everybody gets the support they need to make a competent decision. Some of the things that we do in that include our Medicare help line. People can call us anytime, day or night, at 1-800-MEDICARE, and get personalized help, finding out about what the drug benefit means for you. If you like to go online, or you've got a son or daughter or grandchildren who do, you can go to medicare.gov and get personalized help as well.

But what we've really found is that events all over the country help us connect with beneficiaries, make sure we're reaching them where they live and work and play and pray, so that they can find out, face to face, what the new drug benefit means for them. We've been working with pharmacists and other health professionals—like at the event that you visited earlier today here in Jefferson City—many

advocacy groups that advocate on behalf of seniors, people with a disability—

*The President.* AARP.

*Dr. McClellan.* —AARP, church groups, the NAACP—very diverse range of groups that don't agree on everything, don't agree sometimes on much of anything, but they all agree that seniors and people with a disability should find out about the most important new benefit in Medicare in 40 years.

*The President.* One thing that's important, that people with disability also qualify—some people do—and they need to make sure that they take a look at what's available.

Give me some of the day—we got a timeframe here we're working in.

*Dr. McClellan.* That's right. We've got until May 15th—that's the end of the enrollment period. And we're urging people to take a look now so they avoid the rush that's probably going to come as we get very close to that May 15th deadline. This week, there are going to be more than a thousand events all over the country that include many senior officials from your administration, that include health professionals, that include all of these groups that we're collaborating with all over the country to help people find out about the program. We're doing it here in Jefferson City and at events all over the State of Missouri. We're doing it all over the country.

*The President.* Yes, change isn't easy. It's hard to change, particularly a system that's been in place since the 1960s. And yet we felt it was necessary to encourage change for the sake of our seniors. But we also understand that it requires a massive effort to show people—get it, “show me”—to show people—[laughter]—what's available. And old Mark is in charge of it. But it requires an army of compassion to help.

And one thing before we go to Linda, who's a soldier in the army of compassion, by the way—is tell me about the low-in-

come benefit. Describe that to the folks who are listening.

*Dr. McClellan.* Well, as you said, Mr. President, everybody in Medicare can take advantage of this new drug coverage, whether they've got a retiree plan now—we can help with that—whether they like to get their care through a Medicare Advantage Plan—that's the HMOs or PPOs in Medicare. Lots of people like to get help in different ways. But there is extra help available for people with limited incomes.

And so if you're living month to month on a Social Security check or some other limited fixed income, or if you know someone who is, it's very important to look into the extra help. You apply for this extra assistance. As you said, you can get 95 percent of your drug costs paid for, on average. That's a benefit worth about \$3,700 a year on average.

Now, for a typical senior, you're getting about \$1,100 worth of help with drug costs on average. So that's important right there. But there's extra help available for people of limited means, and we're making some extra efforts to reach out to people who may not be able to find out about this program otherwise. Here in rural parts of the States, we're working with the Grange; we're working with the USDA to get out into the community and, at a grassroots level, help people find out—

*The President.* We're working with Heisinger Bluffs Senior Living Center, as well.

*Dr. McClellan.* That's right.

*The President.* Weren't we?

*Dr. McClellan.* That's right; we sure are.

*The President.* Linda Detring, welcome.

*Linda Detring.* Good morning, Mr. President.

*The President.* Thanks for coming. Lutheran Senior Services.

[At this point, Ms. Detring, vice president of operations, Lutheran Senior Services, made brief remarks, concluding as follows.]

*Ms. Detring.* During that time, I also became a Reserve officer in the United States Navy Reserves, as a Nurse Corps officer.

*The President.* Fantastic, thanks.

*Ms. Detring.* I retired 2 years ago as a captain.

[*Ms. Detring made further remarks.*]

*The President.* See, it's interesting; when you listen to what Linda said, she said "educate" about three or four times. And that's what we're doing. That's why I've asked these people to come sit up here with me, which isn't easy, by the way, is it? [*Laughter*] Wait until she speaks; you're not going to believe it. [*Laughter*] Anyway, we want people to know what's available. And I bet you people, when they take a look at the 40-plus choices here in Missouri, get a little nervous at first.

*Ms. Detring.* This is a little overwhelming at first. But if you help them through it—and I went on the Internet to choose my mother's plan, and it was very simple once I got on there and understood it.

*The President.* Well, I appreciate you. Thanks.

*Ms. Detring.* Welcome.

*The President.* Thanks for serving as a good example two times: one, as a loving daughter, and two, as a person who is involved with the faith community, all extending a helping hand to somebody who needs a little help. Thanks for doing it.

Another person who is involved with senior citizens happens to be Jodie Baker. Isn't that right?

*Jodie Baker.* Yes, it is.

*The President.* And what do you do?

*Ms. Baker.* Thank you, Mr. President. I am a pharmacist. I work here in Jefferson City at Kmart Pharmacy, so I get to see a lot of seniors.

*The President.* You see people coming to buy—yes, exactly. That's good. So tell us about—tell me about your involvement with the Medicare Part D program.

*Ms. Baker.* Well, I was very excited to be involved at my place of work in trying

to get the word out. And I like to talk. I think most of my customers would agree with that.

*The President.* We're about to find out, aren't we?

[*Ms. Baker made brief remarks, concluding as follows.*]

*Ms. Baker.* That's one thing; as a pharmacist, it's heartbreaking to me because I see people come in, and I know their conditions, and I know maybe not all their finances, but the medications are so expensive. I have people ask me, "Can you help me pick which prescription I can get this month?" And that's very hard—

*The President.* Yes, it's got to be. Listen, there were people literally choosing between the electricity bill and pharmaceuticals.

*Ms. Baker.* Yes, or food.

*The President.* And that's not right in this country. And this program fixed it. And one of the things you told me earlier—this, by the way, isn't the first time we've seen each other. Well, it's the first day we've seen each other but not the first time, on the stage. Tell me about what you find with the low-income seniors. And give people a sense—if you're a low-income senior, you need to listen.

[*Ms. Baker made further remarks.*]

*The President.* Isn't that neat? I appreciate it. There's pharmacists all over the country who, obviously, interface with seniors. And I want to thank those in the pharmaceutical—I mean, in the pharmacist industry who are explaining what's available. And it's an interesting example, isn't it, of somebody who is combining her work with her care for seniors and helping people see what's available.

I appreciate you coming and explaining that.

*Ms. Baker.* Thank you very much.

*The President.* Jerry, welcome. Jerry Sooter, thanks for coming.

Gerald “Jerry” Sooter. Thank you, Mr. President.

*The President.* Appreciate you.

*Mr. Sooter.* We appreciate you being here very much, and thank you. I retired as a funeral director in June of 2003. I was born and raised in north Missouri, northwest Missouri. And, by the way, my wife and daughter and son-in-law and grandson are here.

*The President.* Yes. Looking forward to meeting them afterwards.

*Mr. Sooter.* I’m sure they’re looking forward to that too. [*Laughter*]

*The President.* It would be kind of rough if you said they weren’t looking forward—[*laughter*].

[*Mr. Sooter made brief remarks.*]

*The President.* That’s great advice. Isn’t it interesting, the society in which we live, word gets out; Jerry gets on the computer and taps into the system which, for some, can be complicated—obviously wasn’t for you.

*Mr. Sooter.* I found it extremely easy, and it’s perplexing to me to hear people say it’s difficult.

*The President.* Well, some people are computer-literate, and some aren’t, for starters. But I like the self-starter—you’re a self-starter. You said, “I’m going to look.” People need to take a look. That’s what you need to do. Jerry is saving 65 percent on his drugs. That’s pretty healthy savings. I bet you could use the savings.

*Mr. Sooter.* Well, that’s correct, because last week, when the computer went out on my automobile, it came in handy. [*Laughter*]

*The President.* That’s good. Well, we appreciate you joining us. Thank you for being willing to tell people your story. You’re a lot more credible at telling people your story than I would be. In other words, it’s important for people to hear that. Here’s Jerry sitting here; he doesn’t have anything to—any ax to grind; all he wants to do is tell people what’s available. And

that’s why we’ve asked him to come. And you’re very articulate about it. Thanks for coming. Looking forward to meeting the grandkids. Appreciate you.

Helen Robinette—isn’t that right?

*Helen Robinette.* Yes, that’s right, Mr. President. [*Laughter*]

[*Mrs. Robinette, senior citizen, made brief remarks, concluding as follows.*]

*Mrs. Robinette.* I save approximately 200 a month on my drugs.

*The President.* Isn’t that interesting?

*Mrs. Robinette.* Yes, I save approximately 200 a month.

*The President.* You mean you were paying 300 a month, and now you’re paying about 100?

*Mrs. Robinette.* Yes, yes. It’s probably—sometimes it’s not even 100. Then also I had—

*The President.* So your insurance friend laid it out for you?

*Mrs. Robinette.* Yes.

*The President.* Explained it?

*Mrs. Robinette.* Yes, she did. She did. She was very nice, very nice.

*The President.* Well, she’s supposed to be. [*Laughter*]

*Mrs. Robinette.* We were kind of dense and didn’t understand it.

*The President.* No, listen, but you’re not alone. When you’re—this can be confusing to folks.

*Mrs. Robinette.* It is.

*The President.* And that’s why we’ve asked people to help—step up and help somebody who needs some explanation. Jerry figured it out, but you, fortunately, had somebody who said, “Look, I want to help you see what’s available.” And you’re saving now over \$2,000 a year, sounds like.

[*Mrs. Robinette made further remarks.*]

*The President.* Babying that inhaler.

*Mrs. Robinette.* I was babying that inhaler. [*Laughter*] And only took it when I couldn’t walk across the floor.

*The President.* I got you.

*Mrs. Robinette.* And then all my allergies—if the doctor didn't have any samples, I didn't take it because it was very expensive, and I couldn't do that.

*The President.* Yes.

*Mrs. Robinette.* So now with your program, my inhaler is \$5. And I get to take the allergy medicine too, and I love it. [Laughter]

*The President.* I'm glad you came. Good job.

All right, we're going to end here with Bob Vanderfeltz. Got the Vanderfeltz family here. When I first met him, I said, "I like a guy with a snap-on shirt." [Laughter] Tell everybody about yourself right quick.

*Bob Vanderfeltz.* Your people asked me when they called me, "Are you going to wear a suit?" I said, "No, I'm not going to buy one; I don't have one."

*The President.* Yes. [Laughter] Yes, I wish I didn't have to wear them, believe me. [Laughter]

*Mr. Vanderfeltz.* I wish to acknowledge my family. My beautiful wife and four of my children are here. One of them is a little bit far away. We've got a lieutenant colonel, battalion commander, serving in Iraq at the present time.

*The President.* Really? Gosh, thank you. Yes, tell him thanks. You tell him. That's great. You know how to e-mail?

*Mr. Vanderfeltz.* No, sir, I'm one of those illiterate computer boys. I don't even own one.

*The President.* Yes, well, get one of your sons to e-mail him, and tell him the Commander in Chief is proud.

How do you make a living?

*Mr. Vanderfeltz.* How do I make a living?

*The President.* Yes.

*Mr. Vanderfeltz.* Well, at the present time, I'm retired. I was born and raised right here in central Missouri. The apple didn't fall far from the tree. I live still on the dairy farm I was born and raised on.

*The President.* Really?

*Mr. Vanderfeltz.* Yes, sir.

*The President.* A man of the land. That's great.

*Mr. Vanderfeltz.* Nothing like it.

*The President.* You got big hands. [Laughter]

*Mr. Vanderfeltz.* I know how to milk.

*The President.* Yes, I bet you do. [Laughter]

*Mr. Vanderfeltz.* It's kind of like riding a bicycle. You never forget that. [Laughter]

Getting back to what we're here for—[laughter]—well, I went about mine a little differently, like I said, being computer-illiterate—well, what did I have to lose; I called my local Social Security office. And surprising to me—I was lucky I knew someone there, and I was talking to them, and in less than 10 minutes, they had me signed up on a program, in less than 10 minutes time. And from that point, I said, well, I'll find out what it is to get into a program, so I attempted to call the 1-800 number in the middle of the day, and I found out that sometimes automated machines work better at nighttime when they aren't so busy. [Laughter]

*The President.* Bring that up with McClellan. [Laughter] We did have a problem initially on the 1-800 number. A lot of people were calling, and then they ended up putting a lot more operators on there. Now, I'm not making excuses. Look, I understand. But thank you.

*Mr. Vanderfeltz.* But I went, like I said, earlier—or later in the evening, at that time, and it was, push the buttons and right straight through.

[*Mr. Vanderfeltz made further remarks.*]

*The President.* Yes, hear that—\$140 a month, now he's paying \$7 a month. Here's a guy—he may not be computer-literate, but he's smart enough to call and ask advice for a program that's saving him a lot of money. Isn't that right?

*Mr. Vanderfeltz.* Right.

*The President.* You recommend people look at this thing? That's a leading question—I'm not even a lawyer. [Laughter]

*Mr. Vanderfeltz.* No, I appreciate it very much. Needless to say, I didn't have to go to school very far to find out that it saved me money. [Laughter]

*The President.* I bet you're plenty smart; you know what I'm saying? [Laughter] I bet you know what you're doing.

I hope you all have found this interesting. You may not believe me, but you'll believe Bob, or you'll believe Helen, or you'll believe Jerry. These are real-life examples of people who said, "I think I'll just take a look." Twenty-nine million Americans have signed up so far. There's 7 million more we're trying to reach. If you're one of the 7 million who have not signed up, at least take a look—take a look at what's available for you.

This Government of ours has modernized Medicare so that we can look seniors in the eye and say, "We're doing the best we can to make sure your medicine is modern." We don't want people choosing between electricity bills or food and their pharmaceuticals, like that was happening a while back.

This program makes sense for our seniors. It makes sense for our taxpayers. Do you realize that because there's choice in the marketplace, because we've trusted seniors to pick a plan that meets their needs, the estimated costs in the first year to the Federal Government are 20 percent less

than thought. In other words, one of the things that's important for our society to understand is that when you trust people, good things happen. It happens for them, and it happens for society as a whole.

I'm proud to be here in Missouri. I want to thank you all for giving us a chance to come by and say hello. We're dealing with big issues. We're dealing with health care; we're dealing with keeping the peace; we're helping our small businesses thrive. It is a fantastic opportunity to come and thank you all for really being, however, the—representing the true strength of America. And the true strength of this country is not in the size of our armies or in the size of our wallets; it's in the size of our hearts.

And for those of you who are helping a neighbor in need, helping a child to learn how to read, or providing shelter for the homeless or food for the hungry or advice to the seniors, I want to thank you from the bottom of my heart for helping to make this Nation the greatest nation on the face of the Earth.

Thanks for coming, and God bless.

NOTE: The President spoke at 12:37 p.m. at the Etta and Joseph Miller Performing Arts Center. In his remarks, he referred to Cynthia Brinkley, president, AT&T—Missouri; Carl Rausch, president, Lutheran Senior Services; and Gov. Matt Blunt and Lt. Gov. Peter D. Kinder of Missouri.

## Remarks Following a Visit With Senior Citizens in Des Moines, Iowa April 11, 2006

Senator Grassley and I are thrilled to be here. One of the things that's happening is that people around the country are beginning to realize there's a new prescription drug benefit for folks on Medicare. And

it's very important for people to understand that this is a very beneficial program.

And so I'm spending time today and tomorrow, as I have in previous months, reminding people that it doesn't cost anything to look—that people ought to take a look

and see what this good program does for people.

I want to thank Senator Grassley. He was very instrumental in getting this important piece of legislation through the Congress. One of the things I remember him saying to me is that “as we pass a Medicare bill, let’s make sure that Iowa rural hospitals are taken care of.” In other words, he was deeply concerned to make sure Medicare was modernized, so seniors have choices and a prescription drug coverage, but he was also concerned to make sure that rural health was available for the citizens of Iowa and around the country. And Senator Grassley has been a strong leader in this effort.

I strongly urge the seniors here in Iowa to take a look. So far about 29 million seniors have signed up around the country. I met with some folks today that have saved good money. Today, for example, I met with Helen and Debbie. Helen saved \$200 a month in her prescription drug coverage, and she convinced her friend, Debbie, to take a look at the Medicare prescription drug plan. Debbie now saves \$1,200 a month—saves \$1,200 a month.

So I urge people not to listen to the noise and all the politics—just get that out of the system—and see whether or not the prescription drug coverage makes sense. If you’re a poor senior, this program will help you a lot. As a matter of fact, the Government pays nearly—over 95 percent of the benefits for poor seniors.

Every senior is saving money, and that’s what people have got to know. There is an easy way to find out how the program works, and that’s to call 1-800-MEDICARE, or you can go on the computer systems at [medicare.gov](http://medicare.gov). Here we’re seeing some of our fellow citizens reaching out to seniors to explain the program. And this

is happening all across the country. I want to thank those who are here for helping our fellow citizens understand what’s available. I fully recognize that when you have a variety of choices from which to choose, it can be a little confusing at first. In other words, people get on the computer and say, “Look at all these different options.”

But the good thing about the programs and the people who are willing to help is that they can design a program that meets your needs. And that’s really important. Now, if you’re a son or a daughter whose mom or dad is Medicare-eligible, please help your parent; please do your duty. If you’re in a church or a community center, find an elderly citizen who has yet to sign up for Medicare and show him or her what is possible. This is a good program for our seniors. It is a good deal, and it’s very important for seniors to sign up prior to May 15th.

And so I’m thrilled to be back in your State, Senator. Iowa has got a special spot in my heart. I bring greetings from the First Lady Bush. And I also, again, encourage the citizens here in Iowa and around the country who are eligible for Medicare, to make sure you look at the program. And again, I remind you of the examples of Helen and Debbie. Debbie’s case is an extraordinary case, where she is receiving a lot of help. And that’s what we want this program to do, is to provide people with a lot of help.

So thank you very much. The Senator and I look forward to greeting you personally. Appreciate you letting us come by to say hello.

NOTE: The President spoke at 3:20 p.m. at Wesley Acres retirement community. A tape was not available for verification of the content of these remarks.

## Remarks at a Reception for Gubernatorial Candidate Jim Nussle in Des Moines

April 11, 2006

Thank you all. Please be seated. Thanks for coming. Governor, I appreciate that introduction. I can't tell you how delighted I am to support Jim Nussle as the next Governor of the State of Iowa. He was there—he was there in Amana. No question about it. He introduced me. What he forgot to tell you was, he actually sang. [Laughter] He'll be known as the singing Governor of Iowa. [Laughter]

I've gotten to know this man real well. I've seen him when the heat's on. You know, you can judge a person in Washington by how they react to pressure. Jim Nussle stands strong when there's pressure. You need a Governor of Iowa who can take the heat and lead this State to a better future, and that man is Jim Nussle.

He's a proven leader. See, that's what the people of Iowa need. They need somebody to lead. He's proven himself to be a leader. He's got a record, something people can look at. The thing I like about him is when he gives your word, he keeps it. When he looks you in the eye and says, "Mr. President, I'm with you," he means it. What the people of Iowa need is a Governor who looks the people in the eye and says, "This is what I intend to do," and then does what he says he's going to do in office, and that man is Jim Nussle.

I like the fact he's getting Democrat support. I think you need a Governor who can reach across party lines to get things done. I was pleased to see Terry Duggan, the former mayor of Dubuque, is here tonight. He's a Democrat who's switching so he can support his friend Jim Nussle. That's the kind of Governor Nussle will be—he's the kind of person who sets clear agendas and clear goals and brings people together to achieve the goals. People in Iowa, like they are all across the country, are sick and tired of needless politics. What they

want is leadership. And they'll get strong leadership in Jim Nussle as the Governor.

And I'm proud to be with his wife, Karen, the next first lady of the State of Iowa. I know something about First Ladies—I'm married to one. [Laughter] And Laura sends her love. Nussle came out to the airport, and he said, "Fine, I'm glad to have you here this time of the year, but when we're coming down the stretch, make sure you send the A Team." [Laughter] I said, "Which one, Mother or Laura?" [Laughter] He said, "Both." [Laughter] They both want Jim Nussle to be the Governor of this important State. They know him well, and they admire him and like him. And, Jim, Mother and Laura send their best.

It's also a thrill to be here with your parents, Mark and Lori. You know, there's nothing better than having a strong family, coming down the stretch in a political campaign. And nothing, also, better than having a good runningmate, and it's an honor to be here with Bob Vander Plaats and his wife, Darla. Thank you all for being here. Good luck to you.

I'll never forget campaigning in Iowa, and particularly in the caucuses in 2000. And I had the honor of campaigning with your United States Senator. And so we're driving down the road, and he said, "Old Bill lives in that house, and Jim lives in that house. That's the Smiths' house over there." I've never been with a person who understands the grassroots and the people of Iowa better than Chuck Grassley. Senator, I'm thrilled to be here with you. Oh, there he is.

And so we land at the airport, and Senator Grassley says, "I want you to meet the next member of the statehouse from the 17th District." I said, "I'm looking forward to that, Senator. Who is he?" He said,

“Well, it just happens to be my grandson, Pat Grassley.” You’re following the footsteps, Pat, of a really fine man in your grandfather. Good luck to you. All I can tell you is they had Grassley in to talk about key issues facing the country, and he said, “Before we talk about the key issues, I just want you to know, my grandson is going to be elected.” [Laughter] The guy puts his family first, and I appreciate that.

I’m also honored to be here with Congressman Steve King of Iowa. Where are you, Steve? There he is. Thanks for coming. I know when Nussle gets elected to be the Governor, he’s going to be smart enough to call upon former Governor Bob Ray for advice. Bob Ray is here—thrilled you’re here, Governor. Thanks for coming—one of the real class acts in Iowa politics.

State Senator Jeff Lamberti, who’s going to be the next United States Congressman from the Third Congressional District, is with us.

You know, one of the people that has impressed me the most here in Iowa politics is a fellow who’s served as a State senator, but he left the party chairmanship of Iowa to go to Iraq. His country called; he said, “Yes, sir, I want to serve”—and that’s Chuck Larson.

It’s good to see the speaker is here. It’s a good sign, Governor. When the speaker starts showing up before the elections, it’s always a good sign something is in the air. And by the way, this is a huge crowd for a person running for Governor. And I want to thank you all for coming to support this good man. It’s a good sign this early in the campaign to have such a big crowd.

Speaker Chris Rants is here. Thanks for coming, Speaker. And I want to thank Chuck Gipp as well, the majority leader. You’re going to have you a Governor you can work with and get some stuff done. I want to appreciate the State auditor—David, thanks for coming. It’s proud to be with you again.

I want to thank the party chairman; I want to thank the grassroots activists; I want to thank those who are getting ready to turn out the vote next fall for what you’re going to do. You got to help this good man. You got to start manning the phones and putting up the signs at the right time. He’s going to count on you to win this election. He cannot do it alone. And I want to thank those of you who have contributed to his campaign. It’s hard to have a fundraiser this successful this early in the campaign season. It means you put together a good organization. And I want to thank those who put this fundraising dinner on. You know, it’s nothing better than to be a candidate running for office and know that there’s a lot of good folks standing with you. It’s going to be the kind of thing that empowers the candidacy as it gets closer to the election. The fact that he’s had this many folks show up is a good sign. And I want to thank you all for contributing to the next Governor of your State.

You know, I’ve gotten to see Nussle during some interesting times in our country; we are living in historic times. I wish I could report to you that this was a nation that wasn’t at war, but we are. And it’s a deadly serious war. It’s a war that requires strong leadership and resolve. The war came to us on September the 11th, 2001, and we didn’t ask for it, but it came unexpectedly. We lost more people on that day than we lost at Pearl Harbor. It’s a day I’ll never forget. And it’s formulated how I think about foreign policy.

I said to myself on that day that I would use all assets of national power to protect the American people. The most important job Jim and I have in Washington, DC, is to protect our country. And the best way to do that is to stay on the offense, is never relent, is never give in, is never hope for the best but to pursue the enemy until we bring them to justice.

And Iraq is the central front on this broad war on terror. You know, I said

this—I gave a speech the other day, and in it, I said something—I said, you know, I wonder why people—what kind of people is it who wants to stop democracy? In our country, we got to think about the nature of the type of person that can't stand liberty. What kind of people is it, when they see a chance for people to live in a free society, they do everything in their power to stop the advance of freedom? I'll tell you what kind of people it is—these are the kind of people who think the opposite of—they adhere to an ideology that's dark and dangerous.

The enemy that we face has got plans. They got ambitions. They believe that democracies are weak. They believe it's a matter of time for the United States to withdraw, and by withdrawing, they would find safe haven from which to launch attacks again. We're not going to be intimidated by thugs and assassins. We will achieve victory in Iraq, and by achieving victory in Iraq, we will make it more secure for a generation of Americans.

They hope that we lose our nerve. We will not lose our nerve. We will stand with the brave freedom fighters and democracy—democrats in Iraq—[*applause*].

These are difficult times for the American people, and I understand that. The enemy cannot defeat us on the battlefield. The only thing they can do is kill innocent life and hope we retreat. We're not going to retreat. Victory in Iraq is vital for our security. We got one powerful weapon going for us besides our brave military, and that is liberty. Jim Nussle and I understand that liberty is universal, that there is an Almighty, and the Almighty's gift to each man and woman on the face of the Earth is freedom, that deep in everybody's soul is the desire to live in a free society. And we understand that as democracy takes hold in parts of the world that is desperate for freedom, we are laying the foundation of peace for a generation to come.

The temptation in Washington, DC, is to try to make decisions based upon polls

or focus groups. You cannot lead the Nation, nor can you lead a State, if you rely upon polls to tell you what to think. The thing I like about Jim Nussle is he stands on principle. Principles will be the bedrock for his decisionmaking. You don't have to worry about this man—kind of drift, trying to figure out what he thinks or what he believes. He'll lead this State to a better tomorrow because he's a man willing to stand on principle and make the hard decision and stand by it.

I've got to see him when it comes time to spending your money. And he's pretty good about it. You know, the temptation—every program sounds great in Washington, by the way. And believe me, those appropriators in Washington, they love to appropriate. And that's why it's been important to have an ally on the budget in Jim Nussle. We have passed some lean budgets in Washington, DC, because we want to cut the deficit in half. But he's not going to fall into that trap that you hear coming out of the halls of legislatures all around the country that say, "In order to balance the budget, let's raise taxes." That's what you're going to hear out of Washington, DC. But that's not how Washington works. Yeah, they'll raise your taxes all right, but they'll also figure out ways to spend your money. The best way to balance this budget is to keep your taxes low so this economy grows and be wise about how we spend your money. And Jim Nussle is doing just that as the budget chairman of the House.

He's got a plan to reform the taxes of Iowa. He's got a plan to keep this State on the leading edge of economic vitality. And he's the kind of fellow that can take a plan and put it into action. You know, we were talking about education behind the stage. When I was the Governor of Texas, I used to say, education is to a State what national defense is to the Federal Government. Nussle says, "You bet, education is going to be my number-one priority." And it should be. It's really important to get it right. It's important to have a Governor

who's willing to challenge the status quo when he sees failure and mediocrity. It's important to have a Governor set high standards. I love the idea of hearing a Governor-to-be who says, "I'm going to make sure that Iowa is the center of excellence for public education in the United States of America." And there's no doubt in my mind he can get it done.

Senator Grassley and I went over to watch some seniors sign up for Medicare. Jim Nussle and Senator Grassley and I have got a vision for health care for this country, and he's got a good vision for the State. We believe that the Government ought to fulfill its promises to seniors and the poor. But we also believe that Government shouldn't be telling the rest of us who our doctor ought to be and what the procedures ought to be. We believe in the doctor-patient relationship. It's going to be important to have a Governor who understands the power of health savings accounts and association health plans, who understands you can't have good medical care if you're driving good doctors out of the practice of medicine because of frivolous and junk lawsuits.

You know, it's really interesting; I remember coming in the 2002 campaign—we were talking about Medicare, and both Senator Grassley and Congressman Nussle said to me—they said, "If you're going to write that law and modernize Medicare so that seniors have got prescription drug benefits, you make sure we do something about rural health care in Iowa and across the country." They were instrumental in making sure that Iowa hospitals were taken care of. You're about to have yourself a Governor who understands the importance of rural health care in the State of Iowa.

I was trying to find Jim Nussle when I was giving my State of the Union. It's pretty close-in at the State of the Union. It looks like a big hall, but it's not. As a matter of fact, you can look them in the eye when you're giving the speech. And so I was trying to seek him out when I

said, "We got a problem; we're addicted to oil." See, he's been—he and Grassley have both been working on me for a long time about making sure that renewables become the centerpiece of our energy policy. I agree with them wholeheartedly. For the sake of economic security and for the sake of national security, we got to get off of Middle Eastern oil. And the best way to do so is with Iowa corn. [*Applause*]

A couple of corn growers popped up. [*Laughter*] And I'm earnest about this, and I look forward to working with Jim throughout the remainder of this congressional term to make sure we got ample money in our budgets for research and development. And we want to be using corn for ethanol; we want to be using cane; we want to be using biomass. He's got a vision for Iowa that makes sense, and it's a vision that's important for our country as well. And we got to put our mind to it. I'm looking forward to working with this Governor in this important agricultural State. I can't wait for the day for some President to say, "Look, the crop—look at the crop report. We got a lot of corn, which means we're less dependent on foreign sources of energy." It is vital for this Nation to get off oil if we expect to be a competitive nation in the 21st century. And I'm looking forward to working with Jim Nussle.

I think it's important to have you a Governor who understands that every life is precious and works to promote a culture of life in the State of Iowa. And that will be Jim Nussle. And I think it's important to have a Governor who understands the government can't do everything when it comes to helping heal broken hearts. The way I like to put it is government can hand out money, but it can't put hope in a person's heart or a sense of purpose in a person's life. I think it's important to have a Governor who is able to elevate and capture that great compassion of the people of Iowa to help solve seemingly intractable problems. I think it's important to have a Governor who says, "Fine, government has

got a role, but a primary responsibility of the citizens is to love a neighbor who hurts, is to feed the hungry, find shelter for the homeless.”

I think it’s important to have a Governor who is willing to call upon the faith-based institutions of a State to say, “Why don’t you help us heal the addicted, find love for the person who needs love?” Governments are law and justice; government isn’t love. But fortunately for places like Iowa, there are thousands of loving people who look forward to be called to action, who look forward to rallying behind a Governor who says, “Let us make this State the best

State it can possibly be.” And that Governor-to-be is Governor Jim Nussle.

It’s an honor to be with this good man. Thank you all for supporting him. God bless.

NOTE: The President spoke at 5:05 p.m. at Hy-Vee Hall. In his remarks, he referred to Robert Vander Plaats, candidate for Lieutenant Governor of Iowa, and his wife, Darla; Christopher Rants, speaker, and Chuck Gipp, majority leader, Iowa State House of Representatives; Iowa Auditor of State David A. Vaudt; and Ray Hoffman, chairman, Republican Party of Iowa.

## Message on the Observance of Passover, 5766 April 11, 2006

*Say therefore to the people of Israel, “I am the Lord, and I will bring you out from under the burdens of the Egyptians, and I will deliver you from their bondage, and I will redeem you with an outstretched arm and with great acts of judgment.”*

EXODUS 6:6

I send greetings to those observing Passover, beginning at sundown on April 12.

The story of the Jewish people throughout history reflects the triumph of faith, the importance of family, and the power of hope. During Passover, Jewish people across America and around the world gather together with family and friends to celebrate the liberation of the Children of Israel from slavery. By reading the Hag-

adah, singing traditional songs, and sharing the Seder meal, Jewish people relive the story of their redemption and ensure that their values and heritage are passed on to future generations.

During this celebration of faith and hope, we are reminded that freedom is the Almighty’s gift to every man, woman, and child. We pray for a more peaceful and hopeful world where the blessings of liberty are bestowed upon all mankind.

Laura and I send our best wishes for a blessed Passover.

GEORGE W. BUSH

## Remarks Following Discussions With President John Agyekum Kufuor of Ghana

April 12, 2006

*President Bush.* Mr. President, welcome. It's good to have you back. We just had a wonderful discussion about our bilateral relations and a great discussion about the world. I really enjoy talking to a man of vision and strength and character. President Kufuor has done a fantastic job for Ghana. He's told the people of his country he'd bring honesty to government, and he has. He told the people of his country that he would work on a—create a stable economic platform for—and he has done that as well. And he's a man of peace. He cares deeply about peace in the region.

As a result of his leadership and our confidence in his Government, we're very happy to work with his country to promote what we've called the Millennium Challenge Account. It's a statement of our respect, and it's a statement for our appreciation for somebody who is willing to invest in his people, is willing to fight corruption, who is willing to help a market economy grow.

Mr. President, congratulations on your record of leadership. Thank you for being a man of peace. Thank you for coming to Washington.

*President Kufuor.* I want to thank the President for understanding Africa. His works, for the past 5 years or so, have done so much in terms of contributing to the fight against HIV/AIDS on two fronts—the fund you set up, \$15 billion fund, some of which has helped to, in a way, save

and also make life easier for over 400,000 afflicted people.

Then on the education front, I was honored with a visit from Mrs. Bush just about 2 months ago, during which she launched a program towards linking the messages of the United States and Africa, to work out curriculum for primary and basic education, and also for supplying textbooks and education materials for children, and also helping with education for girls.

And then there's AGOA, which Ghana is benefiting from, even though there we need more help. [*Laughter*] And then there's the TIFA, Trade and Investment Framework law. I believe this is a President that is helping Africa help itself. And we count on your support.

On the MCA front, everything going to plan, Ghana and the United States will sign a compact by July. And that would enable Ghana pursue modernized agriculture. We are largely an agricultural country, and these projects that would free hundreds of millions of dollars to help modernize our agriculture would affect as many as 3 million people, help reduce poverty, and also push growth for the economy.

So we see the President as a friend of Ghana's and, I can say, of much of Africa. Thank you.

*President Bush.* Thank you, Mr. President. Let's go have lunch.

NOTE: The President spoke at 11:57 a.m. on the South Lawn at the White House.

Remarks in a Discussion on Medicare Prescription Drug Benefits in  
Annandale, Virginia  
April 12, 2006

*The President.* Thanks for coming. I first want to thank Bob Templin, who is the president of Northern Virginia Community College, for hosting us again. This is a place of educational excellence, and what you're about to watch is a seminar on the new Medicare benefit. And the reason why we've got to conduct seminars on education about what's available is because there is a lot of people who haven't signed up yet for the Medicare benefit, and we want people to pay attention to what's available.

And one of the interesting things about this meeting is, I'm trying to show that our Government is reaching out to people from all walks of life and all neighborhoods. And so this is my job. I'm the Commander in Chief, but I'm sometimes the educator in chief, and that's what I am here to do today. So thank you for coming.

As you can see, we've got a different way of doing this—it's not going to be just a speech, but it's going to be—I'm going to rely upon our fellow citizens to help share what's available and why you ought to take a look, if you're eligible for the Medicare program. We want everybody around our country who's eligible for Medicare to take a look and see if it will make your life better. What I'm saying is, it will.

So, Bob, thanks for having us. I want to thank Vellie Dietrich-Hall, the Commissioner of the President's Advisory Commission on Asian Americans and Pacific Islands. Thank you, Vellie. Clayton Fong, who is with us—he is the National Asian Pacific Center on Aging executive director. I want to thank all the community leaders here.

I particularly want to thank the veterans who are here with us today. We have been joined by a special group of people, the veterans from the 442d Regimental Combat Team. By the way, Senator Inouye of Ha-

waii was a member of that very important regimental combat team. And I want to thank you all for being here today, and thanks for serving our country. Welcome.

I also want to thank the Secretary of Labor, Elaine Chao, who is going to have some remarks here.

So we're talking about Medicare. Our Government made a commitment to our seniors to provide health care. My attitude is, if Government makes a commitment, then we better make sure we make a good commitment. And I was worried that the commitment we made to our seniors was not as good as it could be. And so I went to the United States Congress and said, "Let's work together to make sure the medicine we provide for our seniors is modern and is up to date."

One of the things that we didn't do through the Medicare system prior to this reform was, we didn't provide prescription drugs. But prescription drugs was an important part of medicine. I'll give you an example. If you would have ulcer surgery under Medicare, the Government would pay about \$28,000, but the Government wouldn't pay one dime for the medicine that would help you prevent the ulcer surgery in the first place. Now that didn't make any sense. It didn't make any sense to not pay \$500 to save 28,000.

And so I said, well, we can do better than this. Let's make sure the medicine we deliver to our seniors is modern. Let's make sure the program works as well as it possibly can. And we passed a bill.

And so one of the things that this bill does is it says to seniors, here's a new plan for you to look at. As a matter of fact, in the State of Virginia, there's over 40 plans to look at—40 different options for a senior to choose from. I thought that was very important to have available for

seniors. Government tends to say, sometimes, “I’ll choose for you.” I believe Government ought to say, “We trust you with your choice, and here are some options from which to choose.”

The problem with that is that can be confusing to some seniors. Some people reach the stage in life where they just simply don’t want a choice. They’re happy with the way things are. And I knew that would be the case when we started to bring out the Medicare program. So we put in place—and you’ll hear from some people who have been involved with outreach to our senior citizens. That means, we’ll go out and explain to people why the different options may make sense to a senior, so a senior can design a program to meet his or her needs, that makes the medicine modern. This program helps all seniors with their drug benefits. That’s important to know. This program provides choices for seniors. And although that can be somewhat confusing, it’s an important part of the program.

As a matter of fact, it’s part of my philosophy. My philosophy is, let’s trust the consumer. Let’s trust the taxpayer. Let’s give people different options from which to choose. Let them design the program, not have the government design the program for them.

By the way, they estimated the cost at something like \$34 per month premium for the drug program for the typical senior, because there are choices. It now costs about \$25 a month. In other words, choices mean people are going to compete for your business, and that’s an important part of helping to hold the cost down for the people we’re trying to help, as well as the taxpayers who are paying the bills.

This program provides what’s called stopgap insurance. In other words, when you reach \$3,600 for drug costs, the Government pays 95 percent of the bills for you. I think that makes sense. It makes sense for a senior to know that he or she doesn’t have to worry if something out of the ordi-

nary were to occur; kind of, a catastrophic plan would be available to help. It makes sense for a son or daughter who might be worried about his or her parents’ finances. And so this new plan has got what we call catastrophic care or stopgap care which is very important.

And, finally, if you’re a low-income senior—about a third of the people eligible for Medicare are low-income—or incomes are such that they qualify, the Government will pay over 95 percent of all the costs. If you’re a low-income senior, you really need to look at this program. Any senior needs to look at this program. The average cost savings per senior on the Medicare program, on these pharmaceuticals, is one-half. People’s drug bills have been cut by half because they have signed up for this program. And that’s really important. It’s important for peace of mind. It’s important for the person’s pocketbook.

Now, I know that sounds too good to be true, but it’s happening all across the country. As a matter of fact, 29 million people have signed up for this program. There are 42 million seniors eligible for Medicare, and 29 million people have signed up since January. And that’s positive.

And by the way, when 29 million people show up for a new program, there’s going to be some glitches. And you’re about to hear from a man whose job it is to make sure that he takes care of the glitches. That’s what Presidents do—they delegate. [Laughter]

We straighten out problems as they occur. Twenty-nine [million]\* people have signed up. There are 6 million people who are eligible who have got a job, and they don’t need the Medicare. I’m about to talk to a good man in that situation. And there’s 7 million people who are eligible who have yet to sign up. And so the reason I’ve come today is to urge every senior here in the room and around the country who might be listening on TV that if you have not

---

\* White House correction.

signed up for the Medicare Part D program, you really need to do it. That's the seminar part. That's trying to educate people.

And by the way, there's a lot of other people helping. It's not just me. We've got the National Asian Pacific Center on Aging helping. We've got the Organization of Chinese Americans helping. AARP is helping seniors realize what's available. The Federation of Korean Associations is helping to sign up people. Other Asian American groups all around the country are helping. Faith-based programs are helping people realize what's available. If you're a son or a daughter whose parent is eligible for Medicare, you need to do your duty. Be a good—be a good, loving child and explain to your parents that which is available for them.

And how do you do it? You can get on the computer, [medicare.gov](http://medicare.gov), and look and see whether or not your mom or dad ought to sign up for a program. I'm just telling you what's happening so far. People are saving a lot of money when it comes to their prescription drugs.

By the way, prior to this bill, we had people in this country who had to choose between food and pharmaceuticals, and that wasn't right. We had people who had to choose between paying their utility bill and whether or not they could pay for their prescription drugs. And that's not right.

This bill I signed and this program we're discussing helps change that. If you're eligible—and a third of the seniors are eligible—the Government will pay over 95 percent of your pharmaceuticals. We're a compassionate country. We want our program for Medicare to work well for our seniors.

I fully understand some of the seniors say, "I don't want any choices." And that's okay. But somebody ought to at least help you look. It doesn't cost a dime to look and see whether or not this program is meant for you. It doesn't cost one penny to see whether or not you can save money—and I bet you can. So part of the

outreach here is to say to those of you who are helping our senior citizens realize what's available, thank you for what you're doing.

We've set a deadline for May 15th for people to sign up in order to get the discounts involved in the program. And so we're going to spend—"we" being the Government and people involved in the Government—are going to spend a lot of time traveling around the country explaining to our senior citizens, the 7 million who have yet to sign up, take a look. It's a good deal.

So I've got with me today some people who are involved in the program. First, Elaine Chao, she just spoke. She's the Secretary of Labor. She's been in my Cabinet since day one; she's doing a fine job. I'm proud to call her friend. Do you have some words of wisdom here?

*Secretary of Labor Elaine Chao.* Mr. President, I sure do. Number one, remember—please remember May 15th is the deadline date for the first enrollment. If you don't take advantage of the benefits by May 15th, your premiums will increase if you register by the second date, which is in November. Please remember, May 15th is very important.

Second of all, it's not that difficult to sign up. There are many organizations in your communities that can be of help. Also, call on your children, ask your children to help you sign up. Now, we know that there are many people who speak different languages, so the Department of Health and Human Services has actually toll-free numbers—now, I'm going to see whether I have them here—we have booklets and brochures in all different languages, including Chinese, Spanish, Tagalog, Vietnamese, Japanese. And if you are a non-native speaker and you want some help, let me give you some toll-free numbers as well.

If you speak Chinese—that's Cantonese and Mandarin—the toll-free number is 1-800-582-4218. Don't bother taking it down; there will be these numbers available

at the desks, but I do want to tell you now just in case. The Korean number is 1-800-582-4259. And the Vietnamese toll-free number is 1-800-582-4336.

So as the President mentions, this is a good deal. For the majority of people, you're going to save money. So take a look at the Medicare Part D program, and please, do remember, May 15th is the signup date.

*The President.* Thank you, Madam Secretary. Okay, so here's the way this works. You're the President; you say to the Secretary of Health and Human Services, "Make sure the plan gets implemented." That's called delegation. He then turns to another guy, who happens to be a Texan named Dr. Mark McClellan. He's the administrator of the Centers for Medicare and Medicaid Services. It's a long word for, he's in charge of making sure people know what's available.

So when there's not enough operators to answer the phones—which took place earlier this year; as we said, call 1-800-MEDICARE—a lot of people called 1-800-MEDICARE, and they got a busy signal. So we said, wait a minute, make sure you've got enough operators. We had a problem with dual-eligible citizens, and he worked it out with the States. He's a troubleshooter.

He's also responsible for making sure that enough information gets out so that people can realize what's available. And I want to thank him; I want to congratulate him, even before he talks, for recognizing ours is a diverse nation. And this is an interesting meeting, isn't it, when you think about it. In other words, there are seniors from all walks of life, some of whom require a little special help to learn what's available—maybe a little assistance with the language. Maybe a special group, they've got confidence in a special group that might represent their heritage and their culture, and that group will help explain. We're reaching out to everybody. We want

every senior eligible for Medicare to realize what's available.

Anyway, McClellan, you're doing a fine job. Why don't you explain to me what your responsibilities have been and what you intend to do to make sure people know what's available.

*Dr. Mark B. McClellan.* Well, thank you, Mr. President. As you said, this is the most important new benefit in the Medicare program in 40 years. And while prescription drug coverage is really important, this is part of making Medicare work in a new way to help people stay well and live longer, and not just pay the bills when they get sick. We can't afford that anymore.

To do that effectively, we need to collaborate. And you talked about delegation; well, what I've done is help—worked together with many partners around the country so that people can find out about what Medicare offers today. We're not just a program to think about when you get sick. Medicare can help you stay well and live much longer through prescription drugs, preventive benefits, and other help.

So we've started a new approach of reaching out at the grassroots level, we're partnering with more than 10,000 organizations around the country to reach all of our diverse beneficiaries where they live and work and play and pray.

That includes groups like the ones represented here, like the National Asian Pacific Center on Aging. Clayton Fong works very closely with me to help provide some of those translation services that you mentioned. It involves many local partners, like the Asian Service Center in Washington, DC, has worked closely with Qien, who is on my staff at CMS, and many of our other partners to help get the word out locally.

We want to make sure people know about this important new benefit, and if they have questions, there are lots of places to go to get the personal information they need to make a good decision and start saving. That includes the medicare.gov web

site, which many of the sons and daughters of our beneficiaries are using, as well as the beneficiaries themselves. It includes our 1-800-MEDICARE, 24/7 customer service line, which has around 7,000 trained representatives now and can provide help in multiple languages for people who call in.

And it includes events like this one, that are taking place all over the country, more than 1,000 a week, where people like me, many of your other senior officials, are helping to get the word out and helping people find out about how they can take advantage of this new assistance.

*The President.* Back me up here on the low-income part of the program.

*Dr. McClellan.* Well, the benefit for prescription drugs is important for everyone with Medicare. A typical senior can save about \$1,100 compared to not having drug coverage. That's more than half of their drug costs. And for people with limited incomes—that's about one in three of our seniors who are living month to month on a fixed income—they can qualify for extra help, they can get their prescriptions for no premium and usually just a few dollars for each drug—paying 95 percent of their drug costs. And that's a very important extra help to sign up for as well. And we can put you touch with the application process and get you into that program as well. It's very important extra help. It's worth about \$3,700 a year.

So for people—if you're on Medicare, if you've got a parent who is, someone you care about who is looking into this program between now and May 15th means, literally, \$1,100 worth of help, at least; \$3,700 worth of coverage if you have a limited income; and protection for the future against those high drug costs that you mentioned earlier, Mr. President.

*The President.* Yes, this is a good deal. And it's really worth people looking at. I'm going to repeat: If you're a son or a daughter and your mother or dad is eligible for Medicare, you need to help your parent. You really do. You need to get on the

phone or get on the computer, medicare.gov, or 1-800-MEDICARE.

Now, Qien He is with us. Qien, where were you born—yes, I know where you are. [Laughter] Where were you born?

*Qien He.* I was born in China.

*The President.* Isn't that interesting? Now he is a part of making sure that people realize the opportunities of Medicare. Born whereabouts in China?

*Mr. He.* Okay. First of all, on behalf of Asian—

*The President.* No, where were you born in China?

*Mr. He.* In China, in Beijing.

*The President.* Beijing. See, I'm asking the questions. [Laughter]

*Mr. He.* Okay.

*The President.* And you're a doctor?

*Mr. He.* Yes.

*The President.* Of what?

*Mr. He.* Doctor of social linguistics.

*The President.* Social linguistics. And when did you come to the States?

*Mr. He.* Nineteen-ninety.

*The President.* Nineteen-ninety. And here you are sitting on the stage with the President. You're welcome. We're glad you're here.

*Mr. He.* Thank you.

*The President.* And so what is your job?

*Mr. He.* Okay, I'm a health insurance specialist for the Centers for Medicare/Medicaid Services. My office is in Philadelphia.

*The President.* Your office is in Philadelphia?

*Mr. He.* Yes.

*The President.* So you've come all the way from Philadelphia to be here?

*Mr. He.* Yes, I come here last night. Tomorrow and tonight—I have to come back and organize a similar event tomorrow for seminar for people in Philadelphia. It's called Market Closure Enrollment event, in Philadelphia. Actually, Secretary Chao will go with—

*The President.* Okay. So your job—one of the jobs is to continue to reach out to

people in the Asian American community to convince them to pay attention to this program. So are you having any success?

*Mr. He.* Well, we have a lot of success. But here, I would like to share some successful stories with you.

*The President.* Okay, let me hear some.

[*At this point, Mr. He made brief remarks.*]

*The President.* See, one of the interesting things about America is that there are thousands of people who work in the grassroots to make the communities in which they live a better place. It's really one of the great things about our country, isn't it, when neighbors help neighbors. And what he's really saying is his job is to convince a neighbor to help a neighbor. That's called grassroots. That's what—it's kind of an odd word, maybe, for some to understand. It means at the local level, that people are willing to help somebody who needs help.

And that's what your job is, isn't it?

[*Mr. He made further remarks.*]

*The President.* Well, thank you. Listen, well, I appreciate it. [Applause] Hold on, hold on. Thank you. Save your energy. Thank you very much for that, Qien; thanks for your kind words.

What Qien is saying is, is that we recognize there are some people out there that sometimes aren't able to get the message like other people. And so we want this message to go throughout all the neighborhoods. Here, we're talking to Asian Americans, but we want people in every neighborhood to hear the message.

So, for example, we're working with the AARP to get the word out. The NAACP has been helpful to make sure that certain seniors who are eligible for this program get the message. That's what we want.

And so if you know somebody or if you're listening on TV and know somebody who's eligible for Medicare, make sure you call their attention to the program. And remember, there's a lot of seniors who might be a little confused at first over the

number of choices. But convince them to be patient and look at what's available and help them design a plan that meets their needs. And what you will find is there will be savings. People benefit from this program. It's worthwhile to look at.

I'm talking to Dr. Yining Wang. Welcome, Dr. Wang. Thank you for being here, sir. Got to speak into the mike. You're a doc?

*Yining Wang.* Yes, I'm doctor in the research area.

*The President.* Where were you born?

*Dr. Wang.* I'm born in Shanghai.

*The President.* Shanghai. And here he sits, as well, talking to the President of the United States. We're glad you're here.

*Dr. Wang.* Yes. Thank you very much, Mr. President.

*The President.* Proud you're here. When did you come to the United States?

*Dr. Wang.* Well, it's 1988.

*The President.* Nineteen eighty-eight.

*Dr. Wang.* Yes.

*The President.* That's a fine year.

*Dr. Wang.* No.

*The President.* Yes, it was. [Laughter] Well, maybe not for you, but for, you know—my dad got elected President in '88. Anyway—[laughter]—so you were a doctor. Where did you work?

*Dr. Wang.* I'm sorry?

*The President.* Where did you work?

*Dr. Wang.* I work in the cardiovascular area for the physiology and pathology.

*The President.* Oh, fantastic. And you're now retired?

*Dr. Wang.* I'm retired at the end of year 2004.

*The President.* That's good.

*Dr. Wang.* That's good. [Laughter]

*The President.* And so what happened? So you hear—how did you hear about the Medicare program?

[*Dr. Wang made brief remarks.*]

*The President.* Very good. Interesting story, isn't it? So here's a man, he's a well-

educated fellow. The first reaction, however, to the program was, "There's so many choices; I don't think I want to get involved." That's a natural reaction, by the way. And yet, nevertheless, as he said it, "patience" was the word I think he used—but somebody helped you understand. AARP gave you some advice.

*Dr. Wang.* AARP, yes.

*The President.* You can get good advice from AARP; you can get good advice from somebody who works for the CMS; you can get good advice from somebody from your church; you can get good advice from your son or daughter. There are all kinds of ways to get good advice.

What we're doing here today is explaining to seniors, there's a lot of people willing to give you advice. And it's worthwhile taking a look. And the reason it's worthwhile taking a look is—you just heard the reason. The man said he's going to save about \$200 a month. That's good savings.

[*Dr. Wang made further remarks.*]

*The President.* That's great. You did a good job, doc. Thank you. Very good job.

*Dr. Wang.* Okay.

*The President.* I appreciate you. Thank you. Good job, sir.

*Dr. Wang.* Thank you so much.

*The President.* Bob Nakamoto, third generation American. Welcome.

*Robert Nakamoto.* Thank you.

*The President.* Look, this is a guy still working. Remember I said there's 6 million people still working who get good health care? He's one of the 6 million. Working strong at age 74, and he's not going to slow down a bit.

*Mr. Nakamoto.* That's right.

*The President.* Isn't that right? What do you do, Bob?

*Mr. Nakamoto.* I'm a chairman of a company called Base Technologies. We do IT consulting work, primarily with the Federal and State government, based in McLean, Virginia, and third generation Japanese American.

*The President.* Congratulations. And how is your company doing?

*Mr. Nakamoto.* We're doing well. We could do better with your help. [*Laughter*]

*The President.* Give a man a mike, there's no telling what he's going to say. [*Laughter*] Give us your experience. You took a look at what was going on, didn't you?

*Mr. Nakamoto.* Pardon?

*The President.* You took a look at the Medicare.

[*Mr. Nakamoto made brief remarks.*]

*The President.* See, here's the reason why we've asked Bob—one, is we like to be around successful people, don't we? Secondly, he is a fellow who is eligible, but has chosen to stay on the current program provided by his company, but recognizes that upon leaving the company, there's a good program available. And that's important for people to understand.

Twenty-nine million people have signed up. Here's one right here. There are 6 million people who have not signed up because they're working—and that's Bob. I bet there's somebody out there who represents that part of the 7 million people who are eligible, yet who haven't signed up. And it's really important for you to look.

So you've been looking around at these things, taking a look. You find it okay? I mean, you're a computer guy, so it's a little unfair to say whether—you know, whether or not—

*Mr. Nakamoto.* We're okay with that.

*The President.* Using friendly—it's user-friendly?

*Mr. Nakamoto.* Right.

*The President.* Yes. See, we try to design this program so it's called user-friendly. That means you can get on there if you're—you don't have to be a computer genius like Bob—and take a look.

*Mr. Nakamoto.* Right.

*The President.* Your advice is? Retire and get on it.

*Mr. Nakamoto.* Right.

*The President.* Well, not retire, but when retire.

*Mr. Nakamoto.* Yes. I don't know when that's going to be, but when that time comes, you'll know about it.

*The President.* There you go. [Laughter] Well, listen, I hope you get the feeling for why we're here. We're here to explain a really interesting opportunity for our seniors. If you don't want to sign up, by the way, you don't have to. The Government is not making you do anything you don't want, but what the Government is doing is giving you a lot of opportunities. In the case of Virginia citizens, over 40 opportunities to choose a program that suits your particular needs.

And by that I mean, there's all different kinds of structures for the programs. You might be taking this kind of drug or that kind of drug. You might be taking a lot of drugs a month or no drugs a month. And therefore, you can design a program that says, this is best for me.

I strongly urge our fellow citizens to take a look. I want to thank those of you who are helping our seniors see what's available—and keep doing it up until May 15th and even after May 15th. I repeat: If you're a son or a daughter and your parent is eligible for Medicare, do them a favor and do your duty by getting on [medicare.gov](http://medicare.gov) or calling 1-800-MEDICARE and find out what's available. Just get people to send the forms to you and look. Ask your parents

questions, or ask your parents' doctors questions, or ask your parents' pharmacist questions about what program they need. If you're a senior and you're going to your local pharmacy, many of the pharmacists are helping our seniors design a program that meets their needs.

Is it worth it? I really think it is. If you're a poor senior, the Government will pay most of your drugs. We really don't want to be a society where seniors have to choose between food and medicine. It's worth it even if you're not in that income category because you'll save money.

And saving money is good after you retire. It'll help you. If you're a son or a daughter—again, I repeat: Do your duty. It will give you peace of mind to know that your mom or dad are taken care of.

We worked hard to get this bill passed. It's a good piece of legislation. It's one of those times where people are going to be able to say, "Well, the Government actually did a good thing for us."

And so I want to thank you all for coming. I particularly want to thank our panelists. I want to thank my fellow citizens who've come. I particularly want to, again, thank the vets—veterans who are here. Bob, thanks for your hospitality. Thank you for paying attention.

May God bless you all. Thank you.

NOTE: The President spoke at 2:07 p.m. in the Richard J. Ernst Community Center at Northern Virginia Community College.

## Remarks at the Small Business Week Conference

April 13, 2006

*The President.* Thank you all. Please be seated. Thanks for coming. So I see Eric behind the stage. I said, "Congratulations on being the Small Business Owner of the Year." And he said, "You know, if I thought part of the prize was having to stand in

front of those cameras and introduce you, I might not have accepted it." [Laughter] But I appreciate your introduction, Eric. Thanks.

I want to thank you all for allowing me to come by to celebrate the Small Business

Week with you. You know, I'm an MBA, but I got to tell you, the most instructive part of my understanding about how the economy works—when I was trying to meet a payroll. The entrepreneurs of this country not only create and run their own businesses, they work hard. But I've learned that it's a calling to run your own business. I mean, there's something special about somebody who stands up and says, "I got a dream; I got a hope."

The great thing about the entrepreneur in the small-business sector of our economy is that you provide great steam and strength to the growth of our economy. And today I want to talk to you about why the small-business owner is at the cornerstone of our progrowth economic policies and what we intend to do to make sure that the environment for taking risk is strong and viable here in this country.

Before I do, I want to say thanks to Eric's wife, as well, for being here. I appreciate my friend Hector Barreto. He's the Administrator of the SBA. Thank you for being here, Hector. Thanks for serving. I also had the honor of congratulating Andrew Field, who is the founder and president of printingforless.com, Livingston, Montana, for being the runner-up; as well as Barbara and Leroy Shatto, owners of Shatto Milk Company, Osborn, Missouri, for also being the runner-up to the SBA Small Business Persons of the Year.

This economy of ours is good. It's strong. It's a good time to be a small-business owner in America. After all, we grew at a healthy rate of 3.5 percent last year. That's the fastest rate of any major industrialized economy. We've now had 17 straight quarters of economic expansion. Real after-tax income has grown by more than 8 percent since 2001. After-tax means money in your pocket, that's what that means. That means, on average, Americans have an income that is \$2,100 higher this year than it was the beginning of 2001—that's after adjusting for inflation.

More Americans own a home today than ever before in history; more minorities own a home today than ever before in history. And that's positive news for this economy. Consumer confidence is at its highest point in nearly 4 years. Productivity is high, and it's on the rise. And that's good news for American entrepreneurs and really good news for American workers. Productivity increases improves the lives of our fellow citizens over time. Manufacturing activity is strong. This economy is going well, and the small-business owner is leading the way.

It's really important for our country to understand this fact: Small businesses are vital for our workers. Small businesses create two out of every three new jobs, and they account for nearly half of the country's overall employment. Think about that. Two out of every three new jobs are created by the entrepreneur. That's why it makes sense to have the small business at the cornerstone of a progrowth economic policy.

Recently our economic reports showed that this economy added 211,000 jobs in the month of March. Over the last 2½ years, we've added 5.1 million new jobs. This is the 31st straight month that the American economy has added jobs. The national unemployment rate is down to 4.7 percent. That's lower than the average rate of the past four decades. When small businesses grow, the American economy benefits.

Small businesses are vital for our communities. You sponsor Little League teams, and you donate to local charities and community drives, and you serve on your school boards and hospital boards and different community groups. Without our small businesses and entrepreneurs, our communities would be less vibrant and less welcoming. I appreciate the fact that you're close to your customers. Your hard work and investment is the lifeblood of our cities all across the country.

Small businesses are vital to building a more hopeful future for this country. When you open up a shop or lease a factory or offer a new service, you take a risk. Risk-taking takes vision, and risk-taking takes courage. And it's the risk takers—are people who help define the vibrancy of an economy.

I thought Ronald Reagan put it best when he said, the entrepreneurs are the “explorers of the modern era.” Welcome to exploration, and thank you for betting on a brighter future, and thank you for adding optimism into the soul of this country.

Opening a small business is a great opportunity for a lot of folks to realize their dreams. I believe that we should promote an ownership society in America. We want people owning something in this society. Women now own more than one-quarter of the businesses in our country. The number of women-owned businesses is growing strongly. Hispanic Americans are opening their own businesses, and those businesses are opening at a rate—at three times faster than the national average. And those are positive developments for a society.

It's been said that having your own business means working 80 hours a week so you can avoid working 40 hours a week for somebody else. [*Laughter*] Owning your own business is a great responsibility. But there is a strong reward in being independent. And I hope there's a strong reward in your understanding that you're contributing mightily to this great Nation.

And so how do we continue to help people realize this sense of independence? My philosophy of government is this: Government's role is not to create wealth; the job of the government is to create an environment in which people are willing to take risk, in which entrepreneurship flourishes. And that's a strategy I've been pursuing and I'm going to continue to pursue. And so today I want to talk to you about three broad areas where we can continue to work to make sure this environment is good for

the small-business owner. And that includes taxes and spending and health care and expansion of opportunities here and abroad.

First, creating an environment where small businesses can flourish begins with keeping taxes low and spending your money wisely. We've overcome a lot in this economy, and I want to thank you for your hard work in helping us overcome a lot. The history of the past 5 years has—the economic history of the past 5 years has shown this country's capacity to overcome some pretty major hurdles. We've overcome a stock market correction, a recession, a vicious attack on the United States of America. We've overcome war, and we've overcome natural disasters.

I told you what the statistics were about, how fast this economy is growing. It's really amazing when you put it in the context of what you've helped us overcome. And I believe one of the reasons we've overcome these hurdles is because we put progrowth economic policies in place, starting with real, substantial tax cuts.

We cut the taxes for everybody who paid taxes. It wasn't one of these tax deals where, you know, “Okay, you're okay; you're not. Therefore, you get tax relief; you don't.” That's—I didn't think that was fair. You might remember, we lowered taxes on families by cutting the rates and by doubling the child credit. We reduced the marriage penalty. It didn't make much sense to tax marriage. [*Laughter*] We passed something else that I think makes a lot of sense for the small-business owner and the farmer and the rancher, is that we put the death tax on the way to extinction.

The problem with that is that it comes back to life in 2011. Congress needs to set aside politics and get rid of the death tax, for the sake of our small-business owners. It makes no sense for you to have to pay taxes while you're alive, and then they pay taxes on the same business after you die.

We cut the taxes on the small-business owners. If you want the small-business sector to grow, if you recognize two-thirds of new jobs are created by small businesses, it makes sense to let small businesses keep more of the money they make. After all, when a small-business owner has got more money in his or her treasury, you're likely to expand your business. You talk to some of these business—the folks who won the business award. I said, “How many jobs—how many employees did you have 5 years ago, and how many do you have today?”

You had how many 5 years ago?

*Eric Hoover.* Twenty-four.

*The President.* Twenty-four 5 years ago, and over 100 and—

*Mr. Hoover.* —107.

*The President.* —107. His business expanded. That's what we want. Two-thirds of new jobs are created by small-business owners, and when small-business owners have more money in their treasuries, they're likely to expand. I also recognize that many small-business owners are either a sole proprietorship or—a small business is a sole proprietorship, or a subchapter S corporation, or a limited partnership, which means that the principals pay tax—the business pays tax at the individual income tax level. So when we reduce taxes on individuals, we are really reducing taxes on small businesses as well.

There's a healthy debate in this town about cutting taxes; I understand that. And some in this town said cutting taxes would ruin the economy. Some of them said, “If you cut taxes, this economy is going to look like the Great Depression.” As a matter of fact, on the day when the Republicans in the House and the Senate were finalizing the 2003 tax cuts, one of the Democrat leaders said these tax cuts would do nothing to create jobs. That person was wrong 5.1 million times over in the last 2½ years.

And there's an ongoing debate about the taxes. Some in Washington proposed that we raise your taxes, either by repealing the tax cuts or letting them all expire. These

are the same folks who said, “If you keep your own money, that would be irresponsible and reckless policy.” Those folks were wrong then, and they're wrong now. To keep the small-business sector strong and creating jobs, Congress needs to make the tax relief permanent.

And they can start when they get back by sending me a bill that extends the tax cuts we delivered on dividends and capital gains, so that our businesses and investors can plan with confidence. Uncertainty in the Tax Code makes it hard for investors to plan. Uncertainty in the Tax Code makes it hard for small-business owners to plan. We need certainty in this Tax Code, and Congress needs to make those tax cuts permanent.

Oh, I know you'll hear the argument that says, “Well, we got to raise your taxes in order to balance the budget.” That's not the way Washington, DC, works. I've been here long enough to tell you, it's not going to work that way. What will end up happening is they're going to raise your taxes, and then they're going to figure out new ways to spend your money. The best way to balance this budget, the best way to cut the deficit in half by 2009, is to keep the progrowth economic policies in place and be wise about how we spend your money.

And that starts with setting priorities. I think you know something about setting priorities. When you run your business, you got to set priorities, and we got to set them here in Washington. So long as we've got people in harm's way, so long as we've got men and women in our uniform in a time of war, the number-one priority of this Government is to make sure they got all what it takes to be victorious in the war on terror.

We're making progress on what's called discretionary spending. The last two budgets I've submitted has actually cut discretionary spending, except that which is applied for our military and homeland defense. And that required hard work by the

Congress. But it's not enough, in order to get this deficit cut in half by 2009 and keep this economy growing. One way Congress can help is to pass the line-item veto. It's an important tool to help bring fiscal discipline here to Washington, DC.

And the idea has received bipartisan support. I was very pleased that my opponent in the 2004 campaign, Senator John Kerry, came down to the White House the other day and expressed his support for a line-item veto. He campaigned on a line-item veto, and now he's supporting the administration with a line-item veto. And other Democrats and Republicans must give the President the chance to trim out that part of the budget which does not meet our priorities. And I hope Congress passes this important piece of legislation quickly as a sign of reform.

In the long-term, though, the biggest challenge facing our—facing the budgets of the United States are those inherent in mandatory programs. And that would be Social Security and Medicare. We got a problem in these programs because there's a lot of people just like me getting ready to retire. [Laughter] As a matter of fact, my retirement age—my eligibility age for Social Security just happens to come in 2008. [Laughter] I hate to admit, I'm turning 60 this year. I can see some other folks out there fixing to turn 60 this year as well. [Laughter] And there's a lot of us. There's a lot of baby boomers who are living longer and are promised more benefits than the previous generation. And the system can't be sustained. It's just not going to work.

And there's an unfunded liability problem that faces this generation today, and it's going to be especially acute for a generation coming up. And Congress needs to take my offer to sit down at the table in good faith. We need people from both political parties putting their ideas on the table about how we can deal with Social Security and Medicare, how we can do our job. I tell people, the job of a President

is to confront problems and not to pass them on to future Presidents and future Congresses. And that's what the Congress ought to do—set aside needless politics and do what's right for the American people. And I'm going to work with them to do so.

To create an environment where small businesses flourish means that health care has got to be affordable and available, is a health care system that needs to make sure that we've got high-quality care at reasonable prices for our people. The Federal Government has made a strong commitment to the elderly, and we're going to keep that commitment. And by the way, if you've got a mother or father who's eligible for Medicare, you need to make sure he or she sees the new—the benefits of this new drug—prescription drug coverage we've got. This is a good deal for the American seniors. And we're working hard to make sure that American seniors realize that there is a fine opportunity for them to improve their lot in life.

Listen, I couldn't stand the thought of seniors having to choose between an electricity bill and pharmaceuticals. That didn't make any sense in our country. And if you're a low-income senior listening today, you ought to make sure you get ahold of a representative from Medicare or a friend or a churchmate, or call 1-800-MEDICARE, or get your son or daughter to get on medicare.gov and find out the benefits inherent in this program. If you're one-third of the seniors who are income-qualified, the Federal Government is going to pay 95 percent or more of your prescription drug benefits.

And the Federal Government can keep its commitment to the poor, as well, by making sure Medicaid works well and by continuing to expand community health centers. It makes sense for the taxpayers to help us build community health centers for the poor and the indigent to take the pressure off of our emergency rooms in

America's hospitals—a place where people can get reasonable primary care.

But for the rest of us, we have got to make sure that the system is affordable and available without empowering the Federal Government to make all the decisions for the businessowners and the consumers and the providers. There's a debate here in Washington, DC, about who knows what to do best about health care. And there's some folks who said, "The Federal Government can handle it all," and I'm not one of them. I believe the best health care system has the patient and the doctor central to the decisionmaking of this important industry. And I also understand that small businesses are hit hard by health care costs. As a matter of fact, many of the working uninsured work for small businesses, because small businesses cannot afford the health care they want to provide for their employees.

And so here are some ideas to help. One, I think it's important to, as I said, make sure the patient and the doctor are central to the health care systems. And therefore, I believe strongly in what's called health savings accounts. And I think it's very important for the small-business owners to pay attention to the benefits of a health savings account for your particular company.

Health savings accounts stand in contrast to the traditional insurance system. The traditional insurance system, as you know, the employer provides their employee with a plan that they pay for the deductible and a small copayment, and somebody else pays the bills. It's a third-party payer system. And when somebody else pays the bills, you really don't care about the cost, unless you're having to pay for the rising premium.

Here's the way health savings accounts work. It says that, on the one hand, you buy catastrophic insurance coverage at a low price, and on the other hand, there is a cash account that covers the deductible of the catastrophic plan, that's contributed

into the plan by employer, employee, or combination of both, tax-free. And that's—you use that to pay for your ordinary medical expenses, until the catastrophic plan kicks in. If you don't spend the money, the interest on that money is tax-free, and you roll it over to the next year that you—in which you can contribute again.

It turns out that the combination of the contribution—the cash contribution into the tax-free health savings account, plus the premium on the insurance plan, is generally less than third-party payer systems. Small businesses can save money under this plan.

The plan also empowers the employee to make rational decisions about health care. The more the consumer is involved in the quality and price of a product, the more likely it is the product is not going to be increasing at double-digits rates. Consumer involvement is an important aspect of quality health care at affordable prices.

Over the past few years, the number of Americans who own health savings account has gone from 1 million to 3 million. More than a third of those who have chosen HSAs were previously uninsured. You know, if you're a young person feeling relatively healthy, you may decide, "I don't want any health insurance; I'm never going to get sick." You might remember those days. [Laughter] Doesn't it make sense to be able to set aside money on a tax-free basis—that you earn tax-free to cover future medical costs? Health savings accounts do just that. Forty percent of those who own an HSA have family incomes below \$50,000 a year. It's a really good idea, and I strongly urge you to look into them.

In Connecticut earlier this month, I met a small-business guy who runs a retirement community. He said a third of his employees now have HSAs—health savings accounts. It's given them good coverage, and it saved the company \$78,000 on health premiums. Health savings accounts make a lot of sense, and we've got to make them stronger, not weaker here in Washington, DC.

One obstacle to expanding health savings accounts is the Federal Tax Code. Under current law, employers and employees pay no income tax or payroll tax on any health insurance provided through the workplace. But if you buy insurance on your own, you don't get the same tax break. And that means that the self-employed or the unemployed or workers at companies that don't provide health insurance are at a great disadvantage. So Congress needs to end discrimination in the Tax Code and give Americans who buy HSA policies on their own the same tax breaks that those who get their health insurance from their employers.

Another problem with this Tax Code is that it limits the amount you can contribute to your HSA tax-free. The limit is usually tied to your deductible. Buy a high-deductible catastrophic plan, and you can contribute up to the deductible, by current law. But sometimes your out-of-pocket expenses are greater than your deductible. It's especially important for those with chronic illnesses. They often have expenses that go well beyond their deductibles. And so we need to fix the Tax Code by raising the cap on the amount of money you can put into your HSA tax-free. Raising this cap is going to help Americans cover all their out-of-pocket expenses. And equally important, raising this cap will help make sure this product is attractive to people. We want people being able to have different options in the marketplace. We want people directly involved in the decision-making of their health care.

And by the way, I got another idea for small businesses, and that is business—small businesses ought to be allowed to pool risk across jurisdictional boundaries so they can buy insurance at the same discount big companies get. So I'm a strong believer in health—association health plans.

Congress needs to act on this idea; it's a good idea for small businesses. I mean, if people want the small-business sector to flourish, then they ought to help small busi-

nesses be able to afford health care. This is a rational idea. It makes a lot of sense. The House has done its part, and now the United States Senate needs to do its part as well.

Here's another idea to make sure health care is affordable and available. We got too many junk lawsuits running docs out of business and running up the cost of your medicine. When it looks like you might get sued, if you're a doctor, then you practice what's called defensive medicine. In other words, you prescribe more than you should, more procedures than necessary, because you're constantly thinking about how to make sure you can make your case in front of a jury. These frivolous lawsuits, this plethora of lawsuits, is running up the cost of health care for you. It's not only causing your premiums to go up, but it's causing the cost of medicine to go up, as doctors try to protect themselves against a lawsuit.

And it affects the Federal budget, by the way. As you know, we've got a lot of health care here in Washington. We've got a Medicare system and a Medicaid system and a veterans system. It is anticipated—it is estimated that we spend \$28 billion extra a year because of the defensive practice of medicine. And that's why I believe this issue is a Federal problem that requires a Federal response, and the United States Congress needs to pass medical liability reform this year.

A couple of other points I want to make on health care. In other words, we've got a comprehensive strategy that says, "We've got a better vision than having the Federal Government make all the decisions for you." It's a vision that says, "We're going to take care of the elderly, and we're going to help the poor." But it's also a vision that says, "We trust consumers, and we want the marketplace to function, and we want there to be reasonable policy to help deal with the rising cost of health care."

One such way is to promote transparency, so patients know exactly what their options are. When you really think about

it, the health care field is not a very transparent place when it comes to price and quality. I mean, how many of you really ever shopped for health care? How many of you have ever actually gotten on the Internet and tried to compare price before you make a health care decision? Not many, because, one, the system has somebody else paying the bills for you, and, two, there's not a lot of transparency. So this Government is going to continue to work with folks in the health care field to make sure that price and quality are available to you as a consumer. It's amazing what happens when people have information at their fingertips before they make decisions.

And another way to help wring out the costs in health care is to help encourage and expand the health care industry to adopt information technology as an integral part of its industry. Many of you have done that. Many of you have used the—information technology to help enhance the productivity of your business. That's generally not the case in health care. I mean, think about the guy who goes to the hospital, and he's carrying the file with him where all the pages are handwritten. It's kind of a problem in health care, since most doctors can't write legibly to begin with. *[Laughter]*

And so I believe we ought to work to make sure we have electronic health records for each individual here in America that, one, protects your safety, but, two, carries your history with you so that we help wring out additional costs in medicine and, at the same time, reduce errors. So there's a comprehensive vision to make sure health care is available and affordable, particularly for our small-business owners.

I want to talk about something else, and that is how to make sure that small businesses can expand here at home and abroad. First, at home, the Small Business Administration is working hard to make it easier for people to start up companies. We understand that sometimes people have

got a good idea, but they're not sure how to get something started. They're a little worried about the startup. And so we've doubled the number of small-business loans out of the SBA since I came to office. And we've increased the number of loans to minority entrepreneurs by 175 percent. I told Hector I want people from all walks of life benefiting from Government programs, and he's done his job, and I appreciate that.

Another important fact is this: We've lowered the cost of running the SBA by more than 20 percent. And so we've increased the amount of our loans to the entrepreneurs by 80 percent. By reducing the cost of granting a loan, it makes the loan less expensive for you.

I'm also going to continue working up markets—working to open up markets overseas. I don't know if you realize this, but we're home to 5 percent of the world's population. That means 95 percent of the potential customers live outside of the United States. If you're good at making something or growing something, it seems like you'd want to make sure your customer base is expanded, that you have an opportunity to be able to access those markets.

Today, small businesses account for about a quarter of this country's exports. I find that to be an encouraging and interesting statistic. The problem is that a lot of small businesses in certain markets find it very difficult to navigate the bureaucracies and paperwork required to sell their good or their service in a particular country. Big businesses have got staffs of people who can do that; small businesses don't. And therefore, I think it is very important for the American citizen to understand that when we work to expand free and fair trade, in one way, we're helping to make sure the small-business sector of this country remains strong. The easier it is for somebody to sell a product in somebody else's market, the more likely it is people will be able to find opportunity here in the United States of America.

When I took office, we had three free trade agreements; now we've got free trade agreements with 11 countries and 18 more pending. I'm also pushing for an ambitious conclusion to the Doha round of the world trade talks so we can lower barriers and reduce regulations to make it easier for people to be able to sell in foreign markets. So we need to be confident in our ability to compete. I believe the United States can outcompete anybody, anytime, anywhere, so long as the rules are fair.

And so one of the places—one country that can show the world that it means to be a trading partner that plays by the rules is China. This coming week, next week, I'm going to meet with President Hu Jintao, and I look forward to welcoming him to the White House. America values China as a trading partner, but we expect China to live up to its commitments. China needs to make itself more transparent. China needs to enforce intellectual property rights. China needs to take additional steps to address the trade imbalance between our countries. And China needs to move to a flexible market-based currency.

This country needs to be confident about the future, and we need to shape the future. And one way we can shape the future is to make sure that we stay on the leading edge of technology and research. And so I've called on Congress to double funding for basic—vital, basic research. I think that's a proper role for the Federal Government, to be involved with helping the basic sciences expand new horizons. Congress needs to make the research and development tax credit a permanent part of the Tax Code to encourage private sector to do its part about making sure this country is technologically advanced and innovative.

And our education system must make sure we set high standards and measure and make sure that we're just not passing kids through the schools that can't read and write. And I'm calling on Congress to encourage school districts to have a special emphasis on math and science. We want

our children to be educated so they can lead the world. We want them educated with the skills necessary to fill the jobs of the 21st century.

I also recognize that in order for us to be competitive, we've got to get off oil. I said in my State of the Union that the United States has a problem—we're addicted to oil. Now, I know you probably thought that was kind of weird for a Texan to say. [Laughter] But I'm telling you, we've got an economic security problem because of our reliance upon fossil fuels, and we've got a national security problem because of our reliance on fossil fuels.

And I'm looking forward to working with Congress when they get back to make sure we invest wisely in new technologies that will encourage additional use of ethanol to power our automobiles; new technologies that will enable us to develop plug-in batteries so that hybrid vehicles are able to drive the first 40 miles on electricity, without using any gasoline; new technologies that will encourage solar energy; and technologies that will enable us to develop a safe nuclear power industry. We're spending a lot of money right now on clean coal technologies. What I'm telling you is we've got a comprehensive agenda and plan to take this country into a different era when it comes to consuming energy, an era that will make us less dependent on foreign sources of oil, enable us to be wise stewards of the environment.

I want to talk to you about another issue to make sure this country remains competitive, and that's immigration. This is a highly emotional issue; it's a vitally important issue. It's an issue that we need to conduct a debate on in a way that is worthy of this country's best traditions. We are a land of immigrants. Any immigration reform has got to improve the ability to secure our borders and enforce our laws. We are a nation of laws. I don't know if you realize this, but since 2001, we have turned back 6 million folks trying to come into this country illegally. There are a lot of people

working hard down on our borders, and we're going to continue to modernize the borders to enable them to do—better do their jobs. But any effective immigration reform must include a temporary-worker program that includes a legal way to match willing foreign workers with willing American employers to fill the jobs Americans will not do.

This immigration program should not provide automatic citizenship or amnesty. It should provide a chance for people to work here legally on a temporary basis. Encouraging people to abide by the law is a necessary part of our country—the history of our country. Recognizing that people are doing jobs here that nobody else will do is important for, perhaps, some of you here in this audience. Making sure there are tamper-proof identification cards so people can't cheat on the system makes sense to me. Treating people with dignity makes sense to me. Making sure the system doesn't force people into the shadows of our society, changing that system for the better—for security and for decency—makes sense to me. And the Congress needs to set aside partisan differences and get a good bill to my desk.

I was encouraged last week when Members of the United States Senate reached a promising bipartisan compromise on comprehensive immigration reform. That was a hopeful sign. Unfortunately, the compromise was blocked by the Senate Democratic minority leader. He refused to allow Senators to move forward and vote for amendments to the bill. It was a procedural gimmick that meant he was singlehandedly thwarting the will of the American people and impeding bipartisan efforts to secure this border and make this immigration system of ours more humane and rational. This town has got too much politics to it. It's time to set aside needless partisan poli-

tics and focus on what's right for the United States of America.

I appreciate being with people who are the entrepreneurs of this country. The entrepreneurial spirit of America is strong, and I intend to keep it strong. Look, I can't make you take risk; I can't make you dream. It's up to you. But I can keep your taxes low to make it easier for you to realize your dream. We can do something about health care costs so that you can realize the dream of making sure your employees have got health care coverage. We can open up markets for you. We can make sure the environment is strong, so people continue to realize their dreams.

I love a society in which people are able to pursue their dreams, no matter who they are or where they're from. I think this really speaks to the greatness of the United States of America—a place where a person can start with nothing and end up with something, a place where a small-business owner can grow to be a big-business owner, if that's what he or she desires. A society in which people are able to accomplish their dreams is a whole society and a complete society.

Ours is a remarkable country because of the entrepreneurial spirit of America. And I want to thank you for being a part of this great land of ours. Thanks for what you do. Thanks for expanding the job base. May God bless you, and may God continue to bless your families.

NOTE: The President spoke at 10:46 a.m. at the Ronald Reagan Building and International Trade Center. In his remarks, he referred to Eric Hoover, president and chief executive officer, Excalibur Machine Co., and his wife, Annette; and President Hu Jintao of China. The Office of the Press Secretary also released a Spanish language transcript of these remarks. A portion of these remarks could not be verified because the tape was incomplete.

## Message on the Observance of Easter 2006 *April 13, 2006*

*“He is not here; for He is risen, as He said.”*

MATTHEW 28:6

I send greetings to those observing the joyous holiday of Easter. On Easter, Christians around the world join together with family and friends to celebrate the Resurrection of Jesus Christ and the triumph of love over death. This is a season of renewal, a time for giving thanks and praise and for remembering that hope overcomes despair.

Christ’s extraordinary sacrifice and compassion continue to inspire people around

the world. His promise of new life gives hope and confidence to His followers. His service and love for His neighbors offer a profound lesson for all people.

During this Easter season, we celebrate God’s gifts of freedom and justice. We pray for peace and ask for God’s blessings on the brave men and women who wear our Nation’s uniform and their families.

Laura and I wish you a Happy Easter.

GEORGE W. BUSH

## Statement Supporting Secretary of Defense Donald H. Rumsfeld *April 14, 2006*

Earlier today I spoke with Don Rumsfeld about ongoing military operations in the global war on terror. I reiterated my strong support for his leadership during this historic and challenging time for our Nation.

The Department of Defense has been tasked with many difficult missions. Upon assuming office, I asked Don to transform the largest department in our Government. That kind of change is hard, but our Nation must have a military that is fully prepared to confront the dangerous threats of the

21st century. Don and our military commanders have also been tasked to take the fight to the enemy abroad on multiple fronts.

I have seen firsthand how Don relies upon our military commanders in the field and at the Pentagon to make decisions about how best to complete these missions.

Secretary Rumsfeld’s energetic and steady leadership is exactly what is needed at this critical period. He has my full support and deepest appreciation.

## The President’s Radio Address *April 15, 2006*

Good morning. Monday is tax day, and that means many of you are busy finishing up your tax returns. The good news is that this year, Americans will once again keep

more of their hard-earned dollars because of the tax cuts we passed in 2001 and 2003.

An important debate is taking place in Washington over whether to keep these tax cuts in place or to raise your taxes. For

the sake of American workers and their families, and for our entrepreneurs, I believe Congress needs to make the tax relief permanent.

Our economy prospers when Americans like you make the decisions on how to spend, save, and invest your money. So the tax relief we passed cut taxes for everyone who pays income taxes. We cut taxes on families by lowering rates and by doubling the child credit. We also reduced the marriage penalty, because our Tax Code should encourage marriage, not penalize it. We cut taxes on small businesses, allowing them to expand and hire more workers. And we worked with Congress to phase out the death tax, because Government should not tax farmers or small-business owners twice—once when you make your money and the second time when you try to pass the fruits of your life's work on to your loved ones.

So far, the tax relief I signed has left \$880 billion with America's workers and small-business owners and families, and you have used that money to fuel an economic resurgence. Our economy has added jobs for 31 months in a row, creating more than 5.1 million new jobs for American workers. And the unemployment rate is now down to 4.7 percent, below the average rate for each of the past four decades. Real after-tax income per person has grown by more than 8 percent since I took office. And that means, on average, Americans have an income that is \$2,100 higher this year than it was at the beginning of 2001, after adjusting for inflation.

Not everyone agrees that we should let you keep more of your money. Some in Washington said that by cutting taxes, we were ruining our economy. On the day that the House and Senate were finalizing the 2003 tax cuts, one Democratic leader said these cuts would do nothing to create jobs. Since then, the facts have proven that critic wrong—5.1 million times over.

Tax relief has done exactly what it was designed to do: It has created jobs and growth for the American people. Yet some here in Washington are now proposing that we raise taxes, either by repealing the tax cuts or letting them expire. These are the same politicians who told us that letting you keep more of your own money would be irresponsible and reckless and shameful. They were wrong then, and they are wrong now. To keep our economy creating jobs and opportunity, Congress needs to make the tax relief permanent.

There's more to do to maintain America's economic strength. We're working to address rising energy prices and health care costs, which puts pressure on family budgets and the bottom lines of our small businesses. I have proposed practical reforms that would make health care more available and affordable, and I put forward an energy initiative that would make our dependence on Middle Eastern oil a thing of the past. I urge Congress to act on these important priorities, so we can keep America the economic leader of the world and allow more families and small businesses to realize the American Dream.

America's economy is strong and benefiting all Americans. By keeping taxes low and adopting sound policies that help our workers to compete and our businesses to grow and expand, we will keep the economy moving forward and extend prosperity and hope in our country.

Thank you for listening.

NOTE: The address was recorded at 7:36 a.m. on April 13 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on April 15. The transcript was made available by the Office of the Press Secretary on April 14 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following a Meeting on Taxes and the National Economy in Sterling, Virginia

April 17, 2006

I want to thank Carlos and Owen and Adam for inviting us to their business. I also want to thank the other folks that we had a discussion with for coming over. We've got folks that have benefited from the tax relief, both as a small-business owner and/or an employee—except for Mike; he's a firefighter. And it's been a good discussion.

Here's what I come away with: One, the tax relief helped small businesses a lot. And since small businesses create two-thirds of the new jobs of America, it is no wonder that our job base is expanding. When you help the small-business owner with tax relief, you're helping to create employment. And that's what we're seeing across the country. We've added 5.1 million new jobs in the last 2½ years. A lot of it has to do with the fact that our small-business owners are confident, and they're investing, and they're expanding the job base.

I talked to Shannon Bennett. She's a single mom with one young son who saved about \$1,200 or \$1,300 on her taxes this past year. And it's important for her family that she has got some additional money. Owen—I mean, Mike has got three children. He's a firefighter. The tax relief helped. In other words, tax relief helped the small-business owner; it's helped our families.

And what's interesting is, the tax relief is set to expire. Actually, there's some Democrats in Congress who would like to raise taxes now. And if that happens, it

will be a tax increase no one expects, no one wants. It will be like getting hit by one of these granite rocks.

And so I strongly urge the United States Congress to understand the positive effects of the tax relief and to keep the taxes low—keep the taxes low on the working people, keep the taxes low on these small-business owners, so that we continue—so that we can continue to be the—an economy that leads the world.

And I want to thank you for your time, letting us come by. It's tax day, and it's a day to recommit ourselves to low taxes. It's a day that understands that when these people filing out their forms and writing checks to the Government, that it's the people's money that's coming to Washington, DC. And we intend to let people keep more of their own money, for the sake of the economy and for the sake of our families.

So thanks for letting us come by. Appreciate your hard work. I love the fact that you're living the American Dream.

NOTE: The President spoke at 11:12 a.m. at Europa Stone Distributors, Inc. In his remarks, he referred to Carlos Varela, co-owner and president, Owen Werthmann, co-owner and vice president, and Adam Mahmud, co-owner and vice president, Europa Stone Distributors, Inc.; and Miguel Obleas, firefighter, Fairfax County Fire and Rescue Department.

Remarks on the Nomination of Robert J. Portman To Be Director of the Office of Management and Budget and Susan C. Schwab To Be United States Trade Representative and an Exchange With Reporters

April 18, 2006

*The President.* Good morning. Today I'm announcing my nomination of two outstanding individuals to serve in my Cabinet and on my economic team.

First, I will nominate Rob Portman to be the Director of the Office of Management and Budget. Rob will replace Josh Bolten, who this week started in his new role as my Chief of Staff. The Office of Management and Budget is one of the most essential agencies of our Government. The OMB has a central responsibility of implementing the full range of my administration's agenda, from defense programs that will keep our people secure, to energy initiatives that will break our dependence on oil, to tax policies that keep our economy growing and creating jobs.

In these and other areas, the job of the OMB Director is to ensure that the Government spends the taxpayers' money wisely or not at all. He is the person in charge of meeting our goal to cutting the budget deficit in half by 2009. And he is responsible for managing Federal programs efficiently. The American people deserve results for every hard-earned dollar they send to Washington.

The job of OMB Director is really an important post, and Rob Portman is the right man to take it on. Rob's talent, expertise, and record of success are well-known within my administration and on Capitol Hill. For the past 11 months, Rob has served as United States Trade Representative. When he took the job, I told him to focus on opening new markets for American exports to ensure that our producers and farmers are treated fairly and to get Congress to pass the Central American-Dominican Republic Free Trade Agreement. He's accomplished those goals.

I signed CAFTA into law last summer, and Rob Portman and his staff completed trade agreements with Bahrain, Oman, Peru, and Colombia. He also re-energized the Doha trade talks at the World Trade Organization. Before joining my Cabinet, Rob represented the Second District of Ohio in the United States Congress for more than a decade. He was a key part of the House leadership. He was an influential member of the Ways and Means Committee, and he served as vice chairman of the Budget Committee.

His legislative achievements range from reforming the Internal Revenue Service, providing tax relief for working families, to encouraging retirement savings. Rob's leadership in Congress was also marked by an ability to work across the aisle and bring people together to get things done. And he's going to bring that same skill to his new post.

As Director of OMB, Rob will have a leading role on my economic team. He will be part of daily senior staff meetings led by Josh Bolten. He will consult often and work closely with legislators on Capitol Hill. He will be a powerful voice for progrowth policies and spending restraint.

Rob is a man of deep integrity. He knows the priorities of my administration; he can get things done. And the Senate should confirm him promptly as Director of the Office of Management and Budget.

I'm also pleased to announce that I'm going to nominate Deputy U.S. Trade Representative Susan Schwab to succeed Rob Portman as the new U.S. Trade Representative.

Trade is one of the most powerful engines of growth and job creation. America accounts for about 5 percent of the world's

population, and that means that 95 percent of our potential customers live overseas. So my administration has taken an aggressive agenda to break down barriers to American exports across the world.

When I took office, we had three free trade agreements. Now, we have free trade agreements with 11 countries, and 18 more are pending. Susan will work hard to conclude these agreements and ensure that American goods, services, and crops are treated fairly in overseas markets.

Last year, the countries with which we have free trade agreements represented about 7 percent of the economy abroad but about 42 percent of our exports. Lowering trade barriers to the sale of our goods and services helps provide a level playing field for American workers and farmers and ranchers. And that means more jobs and opportunity, because our workers and ranchers and farmers can compete with anybody, anytime, anywhere, so long as the rules are fair, and Susan Schwab understands that.

As Deputy U.S. Trade Representative for the past 5 months, Ambassador Schwab worked tirelessly to open up new markets, and at the same time, making sure our people were treated fairly. Her trade portfolio covered several continents, and she led USTR efforts in a number of vital policy areas, including intellectual property enforcement.

Susan also worked closely with Ambassador Portman to advance the Doha negotiations. Now she will use her experience to help complete the Doha round and create other new opportunities for American exporters.

Ambassador Schwab started her career as an agricultural trade negotiator in the Office of the U.S. Trade Representative, and she served our Nation overseas as a trade policy officer in our Embassy in Tokyo. In the 1980s, she worked as a trade specialist and then legislative director for Senator Jack Danforth, who chaired a key Senate subcommittee on trade. In the ad-

ministration of former President Bush, she led a staff of more than a thousand as Director General of the U.S. and Foreign Commercial Service. Susan has also served as an executive in the private sector at Motorola and as a professor and administrator at the University of Maryland.

Throughout her distinguished career, Susan has earned the respect of her colleagues, and she has my confidence as well. The Senate should promptly confirm her nomination to be United States Trade Representative.

I appreciate the service that Rob and Susan have given the American people, and I'm really grateful they've agreed to take on new responsibilities. I also thank Rob and Susan's families today. I'm really glad that Rob's wife, Jane, is with us; and it's my pleasure to have welcomed Susan's parents, Gerald and Joan, to the Oval Office and to the Rose Garden. Glad you all are here.

I look forward to the Senate confirming Rob and Susan and welcoming them to be new members of my Cabinet.

Congratulations, and thank you for your willingness to serve.

*[At this point, Director-designate Portman and Ambassador-designate Schwab made brief remarks.]*

*Iran*

*Q.* Mr. President.

*The President.* Hold on for a second, please. I'll take a couple of questions. Nedra [Nedra Pickler, Associated Press], Patsy [Patricia Wilson, Reuters], and Kelly [Kelly O'Donnell, NBC News], in that order.

*Q.* Thank you, Mr. President.

*The President.* A little louder, I'm getting older.

*Q.* Sir, when you talk about Iran and you talk about how you have diplomatic efforts, you also say all options are on the table. Does that include the possibility of a nuclear strike? Is that something that your administration will plan for?

*The President.* All options are on the table. We want to solve this issue diplomatically, and we're working hard to do so. The best way to do so is, therefore, to be a united effort with countries who recognize the danger of Iran having a nuclear weapon. And that's why we're working very closely with countries like France and Germany and Great Britain. I intend, of course, to bring the subject up of Iranian ambitions to have a nuclear weapon with Hu Jintao this Thursday. And we'll continue to work diplomatically to get this problem solved.

Patsy.

#### *Israel-Palestinian Authority Relations*

Q. Sir, are you encouraging Israel to show restraint in reaction to yesterday's Palestinian bombing? Or would a measured military response be appropriate?

*The President.* I have consistently reminded all parties that they must be mindful of whatever actions they take and mindful of the consequences. Our goal is to have two states living side by side in peace. I strongly deplore the loss of innocent life in the attack on the folks in Israel yesterday. It is unjustified, and it is unnecessary. And for those who love peace in the Palestinian Territories, they must stand up and reject this kind of violence.

Kelly.

#### *White House Staff/Fuel*

Q. Morning, Mr. President. Do you expect that there will be some changes that were not voluntary? Today you've highlighted openings in your administration, but will Mr. Bolten ask some people to leave? And would you accept his counsel for Cabinet changes, as well as White House staffers?

*The President.* I understand this is—you know, this is a matter of high speculation here in Washington. It's the game of musical chairs, I guess you'd say, that people love to follow. My instructions to Josh Bolten was that I expect him to design

the White House structure so that it will function so that he can do his job, function in a way so he's more likely to be able to do his job. And, of course, he will bring different recommendations to me as to who should be here and who should not be here.

And I'm the person who believes in aligning authority and responsibility. I've given him enormous responsibility and authority and expect the White House to work well. And it did under Andy Card, by the way. I'm most proud of his tenure as the Chief of Staff. But with a new man will come some changes. And Josh has got all the rights to make those recommendations to me. And, of course, I listen to advice as to my Cabinet as well. I must tell you that I'm—I've got strong confidence in my Cabinet officials, all of them, and I appreciate the service they've rendered.

But I also understand what happens in Washington. You know, a little flicker of gossip starts moving hard, and people jump all over it. The thing the American people have got to know is we'll structure this White House so it continues to function to deal with major problems. And we're dealing with major problems. We're dealing with a war on terror. We're dealing with high gasoline prices.

And let me remind people that these high gasoline prices are caused by primarily three reasons: one, the increase in the price of crude oil. It's one of the reasons I stood up in front of the Congress and said, we've got to have strong and active research and development to get us to diversify away from crude oil. It's tight supply worldwide, and we've got increasing demand from countries like India and China, which means that any disruption of supply or perceived disruption of supply is going to cause the price of crude to go up. And that affects the price of gasoline.

Secondly, there's increasing demand. At this time of year, people are beginning to drive more, getting out on the highways,

taking a little time off, and they're moving around. And that increasing demand is also part of the reason the price of gasoline is going up.

And thirdly, we're switching fuel mixes. The summer fuel mix is different from State to State and is different from what is being used in the winter. And therefore, the combination of these creates higher gasoline prices. And I'm concerned about higher gasoline prices. I'm concerned what it means to the working families and small businesses, and I'm also mindful that the Government has the responsibility to make sure that we watch very carefully and to investigate possible price gouging. And we'll do just that.

Q. Is there going to be rationing, do you think?

*The President.* No, I don't—that's your word.

*Secretary of Defense Donald H. Rumsfeld*

Q. Mr. President, you've made it a practice of not commenting on potential personnel moves—

*The President.* Of course I did.

Q. —of calling it speculation—

*The President.* You can understand why, because we've got people's reputations at stake. And on Friday, I stood up and said, I don't appreciate the speculation about Don Rumsfeld; he's doing a fine job; I strongly support him.

Q. But what do you say to critics who believe that you're ignoring the advice of retired generals, military commanders, who say that there needs to be a change?

*The President.* I say, I listen to all voices, but mine is the final decision. And Don Rumsfeld is doing a fine job. He's not only transforming the military; he's fighting a war on terror. He's helping us fight a war on terror. I have strong confidence in Don Rumsfeld. I hear the voices, and I read the front page, and I know the speculation. But I'm the decider, and I decide what is best. And what's best is for Don Rumsfeld to remain as the Secretary of Defense.

I want to thank you all very much.

NOTE: The President spoke at 9:27 a.m. in the Rose Garden at the White House. In his remarks, he referred to President Hu Jintao of China; and former Senator John C. Danforth of Missouri.

## Remarks Following Discussions With Prime Minister Fuad Siniora of Lebanon April 18, 2006

*President Bush.* It's been my honor to welcome the Prime Minister of Lebanon to the Oval Office. Prime Minister, thanks for coming.

*Prime Minister Siniora.* Thank you very much for giving us the opportunity.

*President Bush.* Well, we just had a really interesting discussion. I told the Prime Minister that the United States strongly supports a free and independent and sovereign Lebanon. We took great joy in seeing the Cedar Revolution. We understand

that the hundreds of thousands of people who took to the street to express their desire to be free required courage, and we support the desire of the people to have a government responsive to their needs and a government that is free, truly free.

We talked about the need to make sure that there is a full investigation on the death of former Prime Minister Hariri, and we'll work with the international community to see that justice is done. We talked about the great tradition of Lebanon to

serve as a model of entrepreneurship and prosperity. Beirut is one of the great international cities, and I'm convinced that if Lebanon is truly free and independent and democratic that Beirut will once again regain her place as a center of financial and culture and the arts.

There's no question in my mind that Lebanon can serve as a great example for what is possible in the broader Middle East; that out of the tough times the country has been through will rise a state that shows that it's possible for people of religious difference to live side by side in peace; to show that it's possible for people to put aside past histories to live together in a way that the people want, which is there for to be peace and hope and opportunity.

And so, Mr. Prime Minister, we're really glad you're here. I want to thank you for the wonderful visit we've had, and welcome you here to the White House.

*Prime Minister Siniora.* Thank you very much, Mr. President. I would like to really thank President Bush for giving us the opportunity to be here at the White House and to discuss matters of mutual interest to the United States and Lebanon and matters that has to do with the developments that have been taking place in Lebanon.

For the past—over 16 or 18 months, Lebanon has been undergoing major

changes. And Lebanon has really been committing itself that we want the change to happen to—in a democratic and a peaceful manner, but at the same time, to really stay course—on course; that we are there to meet the expectations of the people to have a united, liberal, free country and, at the same time, prosperous economy.

So that are the matters that we have discussed with President Bush. And I really would like to seize this opportunity to thank President Bush and the United States for the support that they have been extending to Lebanon throughout the past periods and with all the resolutions that were taken since the assassination of Prime Minister Hariri. The United States has been of great support to Lebanon.

I am really convinced that President Bush and the United States will stand beside Lebanon to have Lebanon stay as a free, democratic, united, and sovereign state. And the United States is really of great importance in this regard, whether this can be done directly or indirectly. So I would like once more to express our great thanks for President Bush and the United States for this.

*President Bush.* Thank you, sir. Appreciate it.

NOTE: The President spoke at 11:51 a.m. on the South Lawn at the White House.

## Remarks at Parkland Magnet Middle School for Aerospace Technology in Rockville, Maryland April 18, 2006

Thanks for having me. Please be seated. Madam Secretary—I never thought I'd be saying that 10 years ago, I might add. Of course, she never thought I'd be President. [Laughter] It is good to be here with you all. Thanks to Parkland Magnet Middle School for having us. We just had an amazing tour. I say "amazing tour" because we

saw what a unique place Parkland is, and we saw a really diverse student body. There's people from all kinds of backgrounds here.

We saw some—three really wonderful teachers, people who are dedicated to their profession, who deeply care about the students they teach. And for all of you here

who are teachers, thanks for carrying on a really noble profession. We saw two scientists who are here from NASA. These are good, hard-working folks who said, "I kind of want to lend my expertise to try to convince a child that science is cool." You know, sometimes—you might remember those days, when you were in middle school, people say, you know, "Science isn't cool." Science is not only cool, it's really important for the future of this country. And it's great to have people we call adjunct professors here, to help lend their real-life experiences to stimulate junior high students to the wonders of science.

We saw robotics. When I was in the seventh grade, I don't think we spent much time on robotics. [Laughter] Of course, Mr. Jones, the teacher, probably said, "You didn't spend much time paying attention at all, did you, Mr. President." [Laughter] We saw people using little devices to look for sun spots. We saw the analysis of a parabola curve for sixth and seventh grade students. We saw a school that is setting high standards in the firm belief that every child can learn. That's what we saw.

And I want to thank the principal, Kevin Hobbs, for welcoming us here today. You know, Kevin skipped a vacation—at least he claimed he skipped a vacation—[laughter]—to be here. And I am so grateful you did so, sir. But more importantly, I am grateful that you're a principal. Great schools—the really good schools in our country have at its center an educational entrepreneur who is able to rally a teacher group to set high standards and follow through. And I want to thank you, Kevin. Again, I want to thank all the principals.

I appreciate Chris Van Hollen joining us today. Mr. Congressman, I'm pleased you took time to be here. Thank you so much. It's a joy to be in your district.

I want to thank Nancy Grasmick, who is the Maryland State superintendent of schools. Margaret was telling me coming—I've known Nancy for a while—Margaret was talking about the implementation of

No Child Left Behind—which, by the way is—I'll talk a little bit about. But it requires people who are dedicated to this firm belief that through accountability, you can determine whether or not every child is getting a good education. And I appreciate Nancy's philosophy and her service to the State of Maryland.

I want to thank—I thank Dr. Jerry Weast, who is the superintendent of schools here in Montgomery County. Jerry, thank you for your—for the tour, and thank you for your service as well—Dr. Charles Haughey, who is the board president. I don't know what's a harder job, Dr. Haughey, President of the United States or board president of a local school. [Laughter] Yes, I suspect board president of the Montgomery Country schools. [Laughter] Frank Stetson, the community superintendent—I want to thank the other State and local officials. I want to thank the parents who are here.

The truth of the matter is, the parent is really the child's first teacher. And every school I have been to as Governor or President, I have always found that parental involvement makes a significant difference in the quality of the education. So thank you for supporting the teachers and the principal who are here. Thank you for, more importantly, encouraging your children to aim high and work hard.

Here's the question that faces the country: Will we become a nation that is isolationist and fearful of competition from around the world, or will we be—continue to be a bold and innovative country?

We've got a good economy right now. And it's growing at rapid paces, and there's a lot of new jobs being added, and productivity is high, and people are owning homes, and that's all positive. The fundamental question is, how do we make sure that that's the case next year, 5 years, and 10 years from now? That's really what we're confronted with.

As you know, Hu Jintao is coming to Washington—or maybe you don't know—

but the President of China is coming to Washington on Thursday. It's a very important visit. China is a very important strategic friend in many ways, and in many ways, they pose competition to us. It's a growing economy. They've got folks that are beginning to realize the benefits of a marketplace. Their entrepreneurship is strong. And we can either look at China and say, "Let's compete with China in a fair way," or say, "We can't compete with China," and therefore, kind of isolate ourselves from the world.

I've chosen the former route for the United States. I tell our people, we shouldn't fear the future; what we ought to do is shape the future. We ought to be in charge of our future. And the best way to do so is to make sure that we're the most innovative country in the world. We have been the most innovative country in the world for the past decades, and that has helped raise our standard of living. We need to always be on the leading edge of technological change. We need to be the center of research and development.

And so here are two ideas that I intend to work with Congress on to make sure that we're still the technological capital of the world—for the benefit of our people, by the way, so that the standard of living in America continues to improve for everybody. One is that we must increase Federal support for vital, basic research.

I don't know whether you realize it or not, but the Internet began as a Defense Department project to improve military communications. In other words, that was an area where the Federal Government spent research money, and out of that research and development came the Internet, which has substantially changed the way we live. The iPod, interestingly enough, was built on years of Government-funded research in microdrive storage and electrochemistry and signal compression. Isn't that interesting? I find it interesting.

In other words, investment at the Federal level in research has led to practical

applications which improve the lives of our citizens. And so I proposed to the Congress that we double the Federal commitment to the most critical basic research programs in physical sciences over the next 10 years. One way to make sure this country is the economic leader of the world so that our people benefit and can find work is for there to be a Federal commitment to research.

A second thing we can do is recognize that most research and development takes place in the private sector. That's about \$200 billion a year is spent in private sector research. In other words, we've got some of the leading companies in our country doing research as to how to develop new products that will make sure that not only their company and their shareholders benefit but that it ends up in order to the benefit of the United States.

One way to encourage people to invest corporate funds is through the research and development tax credit. In other words, it's the use of the Tax Code to say, this is in your interest the—by the way, it's in our collective interest as well—but it's in your interest, your corporate interest to invest so that your product line remains modern, so that your scientists that work for your company are able to have funds necessary to continue to think anew.

The problem we have in America is that the research and development tax credit expires on an annual basis. And if you're somebody trying to plan for your—for the next 5 years or the next 10 years, which a lot of smart people do, it's difficult to do so if every year you're wondering whether or not the Congress or the President is willing to stand up and support the research and development tax credit. So another way to make sure that this country of ours is competitive, where we don't have to fear the future because we intend to be the leader, is to make sure that the research and development tax credit is permanent, to add permanency to that in through the Tax Code.

And thirdly—and one of the reasons we're here—is to make it clear to the American people that in order for us to be competitive, we've got to make sure that our children have got the skill sets necessary to compete for the jobs of the 21st century. We live in a global world, and that creates uncertainty in some; I understand that. There's a sense of, well, the world is so big and so connected that it's—maybe we're really not in charge of things here.

In a global economy, for example, if our children do not have the skill sets for the jobs of the 21st century, the jobs are going to go somewhere else. And it's a fact of life. It's a part of the real world we have to deal with. It's a lot different from the 1950s, for example. There wasn't that sense of global competition—at least there wasn't that sense in Midland, Texas, let me put it to you that way. [Laughter] But there is today. If you're living in Midland, Texas, or living in Montgomery County, Maryland, it's important to understand, if children don't have those skill sets needed to compete with a child from India or a child from China, the new jobs will be going there.

And so in order to make sure we remain the leader of the world, we have got to continue our focus in education on high standards, accountability, and a new focus—an intense focus on math and science—just like what's happening in this school. I saw the children being taught the skills for the jobs of the 21st century—today. See, it's possible. As a matter of fact, it's happening in a lot of places all across America, just not enough. And this school is the kind of school that we've got to have in neighborhoods throughout the country.

And so here are some things—first of all, let me just remind you that—what the No Child Left Behind Act, as far as I'm concerned, means. It means, one, you believe every child can learn; two, you refuse to accept a system that just shuffles kids

through school because they happen to be a certain age. In other words, you use an accountability system—and by the way, we've insisted upon measurement in return for Federal money. We didn't say, "We'll develop the test for you"—you develop your own accountability systems, but we expect there to be results when we spend money. And if you believe every child can learn, then you shouldn't be worried about measuring.

Some of you might remember the old reading curriculum debates, by the way—they were pretty ugly, at least when I was the Governor of Texas. People dug in on both sides of the issue: "I'm right. You're wrong; I'm right." And the best way to determine what works is to measure. So the accountability system, which we should expect, says this: One, we believe every child can learn; therefore, let's measure to make sure every child is learning. And two, we understand there can be differences of opinion on what works and what doesn't work, so let's measure to determine what works. And third, it also makes sense to figure out how we're—how you're doing. How's Parkland doing? Are you doing well compared to other schools in the neighborhood? If not, why? And if so, keep doing what you're doing.

The accountability system is an important tool upholding people to high standards. It makes a lot of sense, as far as I'm concerned. One of the important parts of No Child Left Behind, by the way, particularly in the reading program, if you've fallen behind early, here's extra money to help you catch up. It's called supplemental services. It's a really important part of a program that says every child can read, and when we detect a child not reading, let's correct the problem early, before it's too late. In essence, we've ended social promotion, and we're having high standards. And that's what's going to be necessary to lay the foundation for the skill sets for the jobs of the 21st century. That's important.

And by the way, we're beginning to see marked improvement. How do we know? Because we're measuring. In 2005, America's fourth graders posted the best scores in reading and math in the history of the reading and math tests. And, oh, by the way, I've heard every excuse not to measure—you know, "You're teaching the test." No, you're teaching a child to read so he or she can pass the test, that's what you're doing. Or, "All you do is test." No, good schools are those who've got a curriculum that enables a child to be able to pass a standardized test. That's what we're talking about.

African American fourth graders set record scores in reading and math. That's important, and that's positive. Hispanic fourth graders set records in reading and math. That's important, and that's positive. I'm able to report this to you because we measure. If you didn't measure, you'd just have to guess, right? Maybe they're doing well; maybe they're not doing well. That system didn't work. It doesn't work very well when you end up with a high school kid graduating, who can't read, and you go, "What went wrong? Where did we fail the child? What did we do wrong for the parent?" Measurement is an important way to make sure that children are not left behind.

The National Report Card showed eighth graders earned the best math scores ever recorded; eighth grade Hispanic and African American students achieved their highest math scores ever. We're beginning to make important strides. We're closing an achievement gap in America, an achievement gap that is wrong and important for the future of this country.

But we also know through measurement that our high school students, by the time they reach high school, have fallen behind most of the developed world in math and science. So there's been some positive results that ought to encourage us, but there's some warning signs. If we want to be a competitive nation, if we want our children

to be able to have the jobs of the 21st century, those jobs that are high-paying, high-skilled jobs, we better do something about the fact that we're falling behind in math and science today. Now is the time to act.

And here's some ideas. One, one of the great programs that has been proven to work is Advanced Placement. It is a—I went to an amazing school in downtown Dallas, a really diverse school. It's a school where you walk in—at least you used to walk in, and say, "Well, these kids aren't supposed to do well." They just happen to have set the records for passing AP science and math tests in the United States. Of course, we Texans are always saying we—you know—[laughter]. Just telling you, that's what they told me. [Laughter] The point is, they're doing well because there's an AP program that helps set high standards and makes a difference.

And so what needs to be done to make Advanced Placement work? Well, one thing, the Federal Government needs to help train 70,000 high school teachers on how to teach AP and how to administer the program and how to make sure it's a viable part of school districts all around the country.

Second, we ought to have 30,000 math and science professionals in our classrooms over the next 8 years. Today I met two; they're called adjunct professors. As I told you earlier, it's really important for students to see firsthand what it's like to be a scientist. Margaret and I didn't do a very good job of teaching what it's like to be a scientist. The two guys from NASA did an excellent job of teaching them what it is like to be a scientist. It is—there's just something that's important for a child to connect with a role model.

And I'm not kidding when I said we need to make sure that people realize math and science are cool subjects. Now, coolness, I think, is—I think it's still prevalent in the junior high, you know? [Laughter] Well, there's nothing better than somebody

to say, “This is important,” than somebody that’s actually living it—living the field, living the dream of being a scientist.

And so we’ve got a goal of 70,000 AP teachers and 30,000 adjunct professors in classrooms. The House of Representatives reauthorized the Higher Education Act, which included the AP program and the adjunct teacher program. And I want to thank them for that. And I look forward to getting the Senate—[*applause*].

I signed an Executive order this morning establishing what is called the national math panel. Let me describe that to you. It’s a part of our strategy to make sure that we achieve the objective of laying that foundation for our children in math and science. By January 31st, 2007, the national math panel will report their assessments of the best practices for teaching math. Those experts will come together and help advise school districts about what is working and what’s not working, what skills the students need at what grade to master algebra and higher mathematics. In other words, starting to set those—help set realistic standards—the standards and accountability that will be needed to ensure students are learning math. That will be a part of their mandate. They will look at the teaching methods that are most effective for students of different abilities and backgrounds. They will look at the programs and learning materials that work best.

A lot of times, school districts need a little advice on how to—what works. It’s—the purchasing, at least it was in my State—there’s a lot of different decisionmakers around the State. And I’m pretty confident it will make sense to have a national panel of experts make recommendations—not mandates—but recommendations about how school districts can achieve the objective of making sure math is properly taught and what needs to be used to make sure that it works.

They’ll be coming up with recommendations on the most effective ways to train and select and place math teachers, which

will be a very important recommendation. I’m not saying all teachers need extra help, but some teachers do. When they get out of a teachers’ school, they’re going to need the extra—the tools necessary to make sure we meet the goals. And so the math panel will be convening here shortly and reporting back to the country.

And I’m also proposing a new program called Math Now, which will be used to apply the recommendations. And here’s what Math Now means: Teachers will be able to use the math panel’s recommendations to ensure they’re using the best techniques. And there will be money to help. Math Now is similar for No Child Left Behind’s Reading First Initiative, which uses scientific findings compiled by the National Reading Panel to help local and State districts achieve their objectives. And by the way—sorry—it’s working. The reading initiative is working. It’s making an enormous difference in the lives of students from all walks of life.

Math Now for elementary school students will promote research-based practices. Math Now for middle school students will target students struggling with math.

One of the things in Reading First is that, as I told you, we use supplemental services to detect reading problems early and make sure a child gets extra help early, before it’s too late. We intend to apply the same rigor in middle school for math students. The tests show we’re fine in the fourth grade in math, and we’re okay in eighth grade. They start to slip up prior to going to high school. That is the time to intervene in a child’s academic career to make sure he or she has that skill set necessary to become the mathematicians or the scientists or the engineers by the time they get out of college.

And so that’s what I’ve come to talk about. It’s like setting realistic goals. It’s understanding—it is telling this country how important public schools are to the future of our country and working with the public school system to make sure that we

achieve a national objective. And that objective is to make sure that the United States of America remains the economic leader of the world, for the good of our people. And it recognizes that we have got to educate our children now for the skill sets necessary for tomorrow. And this is a better place—there's no better place to talk about that—and there is no better

place to talk about that right here at Parkland Magnet Middle School for Aerospace Technology.

Thanks for letting us come by. God bless.

NOTE: The President spoke at 2 p.m. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

### Statement on the Resignation of H. James Towey as Director of the Office of Faith-Based and Community Initiatives *April 18, 2006*

Jim Towey is a dedicated public servant who has served as a vital member of my administration for more than 4 years. Under his leadership, the Office of Faith-Based and Community Initiatives has applied the compassion of America to help solve some of our most challenging problems. His office has held 23 conferences around the country, assisting tens of thousands among America's armies of compassion. Eleven Federal departments and agencies now have Centers for Faith-Based and Community Initiatives that are building

upon and expanding their good works in neighborhoods across the country.

Throughout his life, Jim has worked for Democrats and Republicans as an advocate for those in need. He served as Mother Teresa's legal counsel for many years. His work on behalf of the poor and the sick has improved lives. I admire Jim for his compassion, his faith, and his sense of humor. He is a man of great integrity, and I thank him for his service. Laura and I wish Jim, Mary, and the Towey family all the best.

### Remarks Following a Meeting With Governors Who Traveled to Kuwait, Iraq, and Afghanistan *April 19, 2006*

*The President.* I just had breakfast with four Governors who have returned from Kuwait, Iraq, and Afghanistan. I invited Secretary Rice and Secretary Rumsfeld, as well as Steve Hadley and Josh Bolten, to breakfast so that we could hear from these Governors.

First of all, I want to thank the four of them for traveling overseas. I particularly want to thank them for going to see our men and women who are helping secure

freedom and peace. I thank them for sending a message from home that we care about them—that we care about our troops; that we'll support our troops; that we appreciate the fact that people are willing to make sacrifices.

I assured them that our goal in Afghanistan and Iraq is victory. And victory will be achieved when there is a democracy in both countries that are able to sustain itself and defend itself.

Secretary Rice brought the Governors up to date about a conversation she had with Ambassador Khalilzad. We fully recognize that the Iraqis must step up and form a unity government so that those who went to the polls to vote recognize that a Government will be in place to respond to their needs. In other words, we also recognize that vacuums in the political process create opportunity for malfeasance and harm. And so we assured these Governors that we understand full well that the political process in Iraq must occur soon, and we're working toward that end.

I again want to thank the Governors for coming. I thought—I asked them if they wouldn't mind saying a few words. We—I don't expect everybody to agree with my decision to go into Iraq, but I do want the people to understand—the American people to understand that failure in Iraq is not an option, that failure in Iraq would make the security situation for our country worse, and that success in Iraq will begin to lay the foundation of peace for generations to come.

Governor Daniels.

[*At this point, Gov. Mitchell E. Daniels, Jr., of Indiana, Gov. Joe Manchin III of West Virginia, Gov. Tom Vilsack of Iowa, and Gov. Jeb Bush of Florida made brief remarks.*]

*The President.* Yes. Again, I want to thank the four Governors for coming. Thank you for your eloquent statements. I appreciate your service to our Nation. I assured the Governors that the United States will complete the mission; that we will honor those who've paid the ultimate price, by completing the mission; that we will help those who desire to live in freedom, and in so doing, we will lay the foundations of peace for a generation to come.

I appreciate you all coming.

NOTE: The President spoke at 9:05 a.m. on the South Lawn at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Governors Daniels, Manchin, Vilsack, and Bush.

## Remarks Announcing the Resignation of Press Secretary Scott McClellan April 19, 2006

*Press Secretary McClellan.* Good morning, everybody. I am here to announce that I will be resigning as White House Press Secretary.

Mr. President, it has been an extraordinary honor and privilege to have served you for more than 7 years now, the last 2 years and 9 months as your Press Secretary.

The White House is going through a period of transition. Change can be helpful, and this is a good time and good position to help bring about change. I am ready to move on. I've been in this position a long time, and my wife and I are excited

about beginning the next chapter in our life together.

You have accomplished a lot over the last several years with this team, and I have been honored and grateful to be a small part of a terrific and talented team of really good people.

Our relationship began back in Texas, and I look forward to continuing it, particularly when we are both back in Texas.

*The President.* That's right. [*Laughter*]

*Press Secretary McClellan.* Although, I hope to get there before you. [*Laughter*]

I have given it my all, sir, and I've given you my all. And I will continue to do so as we transition to a new Press Secretary

over the next 2 to 3 weeks. Thank you for the opportunity.

*The President.* First of all, I thank Scott for his service to our country. I don't know whether or not the press corps realizes this, but his is a challenging assignment dealing with you all on a regular basis. And I thought he handled his assignment with class, integrity. He really represents the best of his family, our State, and our country. It's going to be hard to replace Scott. But nevertheless, he's made the decision, and I accept it.

One of these days, he and I are going to be rocking on chairs in Texas, talking about the good old days and his time as the Press Secretary. And I can assure you, I will feel the same way then that I feel now, that I can say to Scott, "Job well done."

*Press Secretary McClellan.* Thank you, sir.

NOTE: The President spoke at approximately 9:39 a.m. on the South Lawn at the White House.

## Remarks at Tuskegee University in Tuskegee, Alabama April 19, 2006

Thank you all. Please be seated. Thanks for having me. Mr. President—[laughter]—got a nice ring to it. [Laughter] I respect President Ben Payton for his commitment to education and his commitment to the United States of America, and I'm proud to be on this campus.

I was telling President Payton that I knew about Tuskegee before I knew about most other universities when I was a kid. When I was growing up, believe it or not, in Midland, Texas, which is way out in the desert, I knew about Tuskegee. I knew Tuskegee was a center of excellence, has been for a long period of time. And I saw firsthand, it is still a center of excellence.

George Washington Carver—you've heard of him; so did I as a young guy. [Laughter] Booker T. Washington—when you think Tuskegee, you think Booker T. Washington. And when you hear about Booker T. Washington, you think about Tuskegee—Ralph Ellison, or the music of Lionel Richie. I mean, Tuskegee has been a center for educational excellence and a place for opportunity for a long period of time here in the United States of America.

When I was the Governor of Texas—Governors are heads of the National Guard,

and I had the opportunity and honor to name the person that headed our Guard. And I picked a fellow named Danny James—General Danny James. It just turns out his father was a man named Chappie James. As a matter of fact, Tuskegee—I was in the Chappie James Building a little while ago. You named the building after a fine person.

I appreciate the role that Tuskegee has had in the 20th century to break down racial barriers, to provide hope, and to help build a better America. What I'm here to talk about is the role Tuskegee will continue to play in the 21st century, and it is to prepare our students and our kids for the jobs of the 21st century. Tuskegee is a really important part of making sure the United States of America provides hope and opportunity for all people.

I want to thank Dr. Shaik Jeelani, who is the director for the Center for Advanced Materials. I don't know if you have seen that facility before. I'm sure some of you have who work here, but if you haven't, I strongly urge you to go there. It's a really interesting center of the—where you'll see the future being explored and developed. There's a lot of science going on there.

I appreciate being joined by Governor Bob Riley. Riley is a friend. Riley cares deeply about educating every child. I'm going to talk about the No Child Left Behind Act as part of the foundation to make sure every child gets educated, but in case I forget, Riley is willing to set high standards and hold people to account and provide help so no child gets left behind. And I want to thank you for your leadership.

Margaret Spellings is with us. She's the Secretary of Education. I've known her for a long time. I know this: She's committed to the public school system and the higher education system of the United States of America. I look forward to working with her to make sure that every child gets a good education and every child has a chance to succeed.

I appreciate being here with the congressman from this district, Congressman Mike Rogers. Thank you for coming, Congressman. I appreciate your service. Although he's not here, we better say something nice about Senator Shelby. [Laughter] The reason why is, is that he is the chairman of the Commerce, Justice, and Science Appropriations Committees. And what I'm going to talk about requires appropriations. [Laughter] That's why I'm being nice to him. [Laughter] Plus, I like him. He's a fine United States Senator—as is Senator Jeff Sessions.

I appreciate all the State folks who are here and the local officials who are here. I want to say something about my friend Johnny Ford. I'm proud that the mayor—there he is—city of Tuskegee mayor. Thank you, Johnny. Thanks for being here. I know you didn't ask me—my advice is, fill the potholes. [Laughter] If anybody can get them filled, it's Johnny. [Laughter] He's a good man.

Listen, I flew into Montgomery; I choppered over to the airfield. And what I found interesting was, that is the airfield where the Tuskegee Airmen trained. Now, Tuskegee Airmen have led an important part of the reputation of this facility. A

lot of people know about the Tuskegee Airmen, and more people are going to know about it when we finish that museum.

With us today is Lieutenant Colonel Herbert Carter, Tuskegee Airman. Where are you, Colonel? Yes, sir. Thank you, sir. Did you bring Mildred? [Laughter] Oh, there she is. Hi, Mildred. Thank you for coming. And so is Major Carrol Woods, member of the Tuskegee Airmen. Thank you for coming, Major Woods. Proud you're here. Thank you, sir.

I appreciate the members of the Tuskegee Board of Trustees. I want to thank the university leaders. I particularly want to say something about the faculty. I thank you for teaching. Yours is a noble profession, and yours is an important profession, and I thank you for answering the call. And I want to say something about the students. I hope you're proud of this fine institution. And I know you'll bring honor to it by not only studying hard but by going out and being people of accomplishment after you graduate. And so I thank you for having me. It's such an honor to be here.

So here's the problem we face. The problem is this: Can we compete? Are we going to be a nation in which we can compete in a globalized world? Tomorrow I'm welcoming President Hu Jintao of China to the South Lawn of the White House. Last month, I traveled to India to set the stage for new relations with that important country. These countries are emerging nations. They are growing rapidly, and they provide competition for jobs and natural resources. And it's really an interesting thought, when you think about it. The world has really changed, since at least when I was growing up, where competition might have been around, but it didn't really nearly affect the lives of our citizens as much as it does today.

I'll give you an example of the effects of globalization. When India buys more fossil fuels, it causes the price of crude oil to go up, which causes our price of gasoline

to go up. That's an example of globalization. As these new jobs of the 21st century come into being, people are going to hire people with the skill sets. And if our folks don't have the skill sets, those jobs are going to go somewhere else. That's one of the effects of the world in which we live.

And there are several ways to look at the world in which we live. We can say, "We understand the world the way it is, and we're confident in our capacity to shape the future," or, "We don't like the way the world is, and we're going to withdraw and retreat." Withdrawing and retreating is not the right thing to do, in my judgment. America has always been able to compete. As a matter of fact, America should not be afraid of competition; we ought to welcome it and continue to be the leader of the world—the world's economy. We ought to continue to be the leader in research and development. We need to continue to be the leader in higher education. We shouldn't lose our nerve. We shouldn't see the future and fear the future; we ought to welcome the future.

And here are some things we need to do to make sure we shape the future. First is to make sure we're always on the leading edge of research and technology. I saw some amazing things happening today. I was a history major, so maybe they were really amazing because I didn't know what I was looking at. [Laughter] It seemed amazing. [Laughter] I was at the Center for Biomedical Research—I was really at the Center for Advanced Materials called T-CAM, a sister organization to the Center for Biomedical Research and for the Center for Aerospace Science Engineering. Isn't that interesting, that those three centers exist right here in Tuskegee? I think it's a hopeful part of making sure we're a competitive nation and a confident nation, to be able to say out loud those three centers of excellence, the centers of science right here on this campus.

We spent some time talking about nanotechnology. I don't know if you know much about nanotechnology—[laughter]—but I met some students who knew a lot about nanotechnology—Ph.D. candidates who knew a lot about nanotechnology. By the way, Tuskegee produces Ph.D. candidates. I think you produced five last year. You're on your way to five more over the next year or so. That's important.

But also as important is the research that's being done here. It's research that will keep the United States on the leading edge, keep the United States competitive. And that's important for our fellow citizens because so long as we lead, our people are going to have a good standard of living. So long as we're the leader, people will be able to find good work. If we lose our nerve and retreat, it will make it hard for us to be able to provide those jobs people want. The more productive a society is—and by the way, research and development leads to higher productivity—the higher standard of living we'll have. And that's what we want. We want our people to be able to realize their dreams, to be able to get good work.

So here's the first thing that I intend to work with Congress on to make sure that we're on the leading edge of change and technology, and that is to increase Federal support for vital, basic research. I don't know if you realize this, but because of Defense Department spending in the past and because of the research that the Defense Department was doing to enhance communication, to improve military communications, the Internet came to be. In other words, the Defense Department said, "We need to figure out how better to communicate." And therefore, they spent some research dollars at institutions like Tuskegee. And out of that research came the Internet, which has helped change our society in many ways.

Here's another interesting example of where basic research can help change quality of life or provide practical applications

for people. The Government funded research in microdrive storage, electrochemistry, and signal compression. They did so for one reason. It turned out that those were the key ingredients for the development of the iPod. I tune in to the iPod occasionally, you know. [Laughter] Basic research to meet one set of objectives can lead to interesting ideas for our society. It helps us remain competitive. So the Government should double the commitment to the most basic—critical research programs in the physical sciences over the next 10 years. I look forward to Congress—to doubling that commitment.

Secondly—and by the way, those centers of excellence I went to are funded by—some of them are funded by grants from the Federal Government on this type of research money. So obviously, it helps your institution flourish, but more importantly, it helps our country. It helps our country in two ways. There's no telling what's going to come out of this basic research. As a matter of fact, I saw nanotechnology applied to what could conceivably be the next airplane wing. Boeing is funding research into nanotechnology here at Tuskegee, which may end up yielding a lighter, more firm material which could become the basis for the new airplanes that you fly in. It's lightweight stuff, but it's really strong. It's right here on this campus that people are making research into this—[applause].

But you notice I said Boeing. See, the Federal Government has got a role to play, in my judgment, in basic research. But the private sector spends twice as much money on research and development that the Federal Government does. So I think it's important for us to put policy in place to continue that kind of research. If you were to ask the president and the folks involved with the scientific and the engineering departments here, you'll find that private companies are providing research and development money to help meet certain objectives. And one of the things we got to do is continue to provide incentive for cor-

porate America to make these investments. They spend about \$200 billion a year. If we want the country to be competitive, if we don't want to fear the future, and shape it, then there needs to be incentive for corporate America to continue to make these research and development investments.

We do that, by the way, through what's called the research and development tax credit. It's fancy words for saying that if you spend the money, there's going to be a—you'll get a credit on your income. It makes sense to me. It makes sense to a lot of other countries, too, by the way. A lot of countries, in trying to be competitive in this global world, are doing the same thing to encourage research and development, because they know what we know, that if you come up with new products and are constantly on the leading edge of change and innovation, the standard of living for the people in the country in which these investments are made goes up.

The problem we have is that the research and development tax credit expires every year. Now, if you're somebody trying to plan an investment strategy and you're uncertain as to whether or not the research and development tax credit is going to be around for the next year, then you're less likely to be aggressive in your research and development spending. It's logical. It makes sense.

So I think Congress needs to make sure there's certainty in the Tax Code, so as to achieve an important social objective—by the way, and an objective which helps Tuskegee—and that is they need to make the research and development tax credit a permanent part of the Tax Code.

Thirdly, and perhaps the most important way that this United States of America can remain the leader when it comes to economic development and opportunity, is to make sure our education systems work well. And so here are some ideas as to how to set in motion a strategy that says, we

shouldn't fear the future; we ought to welcome it. We ought to be a nation that says, we can compete. And the way to compete in the 21st century is to make sure that our children have got the skills necessary to fill the jobs of the 21st century.

I said earlier—and this is practical—if we don't get the children the skills in math and science and engineering, those jobs are going elsewhere. That's just the way it is. And therefore, we've got to deal with it head on. We can't hope the world changes. We've got to be confident in our capacity to achieve an objective. And it starts with making sure younger children know how to read and write and add and subtract.

I want to describe to you, if you don't mind, the theory and the strategy and the vision behind the No Child Left Behind Act. And here it is: One, I believe every child can learn; two, I believe it is important for people to show us whether or not every child is learning; and three, if a child is not learning early, there ought to be extra help to make sure he or she does not get left behind. That's the theory behind No Child Left Behind Act.

We spend a fair amount of money at the Federal level, particularly on Title I students. It's money directed toward a certain segment of our population, as it should be. But I think in return for money spent, we ought to—we have said to the States, "You develop an accountability system to let us know whether or not a child can read," for example. All the talk about science and engineering and math matters nothing if the children cannot read. The first step toward making sure our children have the skills of the 21st century is to insist upon a solid reading program that works. How do you know whether a program works or not—really depends on whether or not you're willing to measure.

I was the Governor of Texas; I remember the big debates over the—how to properly teach reading. If you've ever been on a school board, I'm confident you were involved in that debate. And it was quite

a philosophical argument. The way to cut through all the rhetoric is to say, "Let's measure and—to see." I've heard every excuse why not to measure, by the way. I don't know if you've heard them, but excuses ranging from, "All you're doing is teaching to test." No. My attitude is, when you teach a third grader to read, he or she can pass the test. "All you do is spend time worrying about tests. It makes me nervous, tests." Well, what ought to make you nervous is a school system that simply shuffles children through without understanding whether or not they've got the basics.

I remember being told that testing is discrimination. I said, no, the system that's discriminatory is one that doesn't care and just says, "If you're so-and-so age, you belong here." I believe a compassionate society is one which says, let us find out early, before it's too late, and provide extra money for after-school tutoring or—help to make sure children get up to grade level.

Now, if you believe certain children can't learn, then it's justifiable that you just pass them through. I believe every child can learn. And therefore, our school systems must make sure we focus on individual children. And so we're beginning to see some improvements, by the way, in the public school systems around America. How do we know? Because we measure.

In 2005, America's fourth graders posted the best scores in reading and math in the history of the test. That's positive. People are beginning to learn. African American fourth graders set records in reading and math. How do we know? Because we measure.

The Federal Government, by the way, didn't design the test. I'm a local-control-of-school guy; I don't think the Federal Government ought to be telling you how to run your schools. And one way to tell you how to run your schools is if the Federal Government designed the test. We said to the Governor, "Design your test, but make sure you measure; make sure we

know.” It’s in your State’s interest that people know whether or not the curriculum is working or whether children are learning to read and write.

The Nation’s Report Card showed that eighth graders earned the best math scores ever recorded. And that’s a positive development if you’re worried about making sure our children have the skills to fill the jobs of the 21st century. Eighth grade Hispanic and African American students achieved the highest math scores ever. In other words, there’s improvement. It’s positive development. But here’s the problem: By the time our kids get into high school, we’ve fallen behind most of the developed world in math and science. In other words, we’re closing the achievement gap, and there’s improvement in the public school system around America, but what ends up happening is, is that there is a—is we’re beginning to fall off. And that’s where the challenge exists.

And so how do we make sure that our high school students are coming out of high school so they can go to a place like Tuskegee with a skill set necessary to even go farther, so we remain a competitive nation? Here are some ideas.

First, one of the programs that works well is the Advanced Placement program. I don’t know if you’ve heard of the Advanced Placement program—I hope you’ve heard of the Advanced Placement program. It is a rigorous course study program. It basically says, it’s possible for children from all walks of life to meet high standards. I went to an AP school in Texas, in inner-city Dallas. It wasn’t one of these suburban deals; it was inner-city. And there’s more children graduating from that high school with—passing AP than any other high school in America—at least, that’s what they told me. Texans sometimes, you know, might—[laughter]—I believed the principal. [Laughter]

But nevertheless, it is important to set high standards, particularly in math and science, and to have rigorous academia.

And a good way to do that is through the Advanced Placement program. Therefore, the Federal Government needs to provide money to train 70,000 high school teachers on how to teach AP. In other words, take a system that’s worked and see to it that it’s spread all across the United States of America.

Secondly, yesterday Margaret and I went to a high school—a middle school outside of DC, in Maryland, and we met two NASA scientists that were there in the classroom exciting these kids about math and science and engineering. There’s nothing better than having somebody in the classroom who actually knows what they’re talking about, in terms of the practical applications of science and math and engineering, to excite somebody.

I don’t know what it’s like now, but when I was coming up, it wasn’t too cool to be a chemist—[laughter]—or a physicist, or science wasn’t exactly—it just didn’t ring. We need to make it ring for our kids in high school by having people who know what they’re doing. Therefore, part of this program to make sure we’re competitive is to bring 30,000 math and science professionals to teach in our classrooms. They’re called adjunct professors. I think it’s a smart way and a practical way to excite children to take the courses that are necessary to make sure this country is a competitive country.

I want to repeat to you again: If we don’t have the skill sets necessary to compete for the jobs of the 21st century, they’ll go somewhere else. If our kids do have the skill set necessary to compete for the jobs of the 21st century, the standard of living of our country is going to improve.

And that’s the challenge we face. So I set up—recognizing that we need to do better in math and in science, I set up what’s called a national math panel. It’s a way to analyze—we got experts coming together, and they’re going to analyze the best teaching methodology for math, the best curriculum for math. We did the same

thing for reading, by the way. We set up a group of experts on reading. And they helped States and local districts understand what works, how best to make sure every child can read. And it's working. I just told you; it's working because we're measuring.

We need to do the same thing for math. We need to make sure that our teachers, our school boards, our principals, our superintendents, our Governors understand what works. You cannot set an objective and achieve that objective unless you have the tactics necessary to do that. And so we're going to call the experts together. They'll be presenting a report to Margaret and myself by January 31st of 2007. It will be a really important study, because, again, it will give—it will help States and local school districts have the methodology, the teaching methods necessary to help achieve an important objective.

And then we're going to implement what's called a Math Now program that will get those recommendations into the teacher's hands. But there's also another interesting aspect of Math Now, which I think is vital, and that is, when we measure and find a child slipping behind in math in the eighth or ninth grade, that child gets extra help. We do that in the third and fourth grades when it comes to reading; we need to apply that same standard of help for a child as they head into the high school.

If you want to deal with the problem of the United States of America falling behind in math and science, you focus on the problem, and you focus on it with what works and money and extra help. And that's exactly what we intend to do to make sure that we begin to lay that foundation for a competitive tomorrow.

I also understand that the Federal Government has a role in helping people go to college, see. It's one thing to make sure the students have got the skill set, but if there's not the financial means to get to a university, then that skill set could conceivably be wasted. And we don't want to

waste it. We want to make sure we've got a strategy that works in the early grades and in the high school, and then make it more likely a child can afford coming to a place like Tuskegee.

Of course, we have helped the Historically Black Colleges and Universities. I want to thank the good doctor for serving on the panel. I pledged a 30-percent increase of Federal help to Historically Black Colleges, and we met that commitment. I also said that it's really—the Pell grant system is a very important program. And since 2001, there have been 1 million additional students on the Pell grant program. So there are now 5 million students across the United States of America on Pell grants, which is an important part of making sure our students get to go to a higher education.

I want to talk about a new program that I hope will interest you. It caught the good president's fancy when I described it to him, and it's this. I've always believed that it's—if you have an objective, like encouraging people to take rigorous courses, particularly in math and science, which lays the foundation for our engineers and our chemists and our physicists of the future, then there ought to be incentives to do that. And Congress this year listened and passed a bill which I signed into law, which Margaret is now going to implement, and it's this: There are two new grants associated with Pell grants. This will be a \$4.5 billion program over the next 5 years, and here's the way it works.

One is called the Academic Competitiveness grant, which will provide additional money to first- and second-year students, college students, who have completed a rigorous high school curriculum and have maintained a 3.0 GPA in college. There will be up to 750 for first-year students and up to \$1,300 for second-year students. The idea is to encourage rigorous courses and to provide incentive. I'm not talking about impossible; I'm talking about raising the standard—saying to somebody, "Here's

your chance. Apply yourself in the fields that we know are necessary to be able to compete in the 21st century, and we'll help you more."

And then third, we've got what's called SMART grants. Now, these grants are for college students, third- and fourth-year college students who have maintained a 3.0 GPA and who major in math, science, or critical foreign languages. What we're trying to do is to make sure that people have got that skill set, and it makes sense to provide incentives for people. And by the way, these grants will be up to an additional \$4,000 per person.

So the Federal Government needs to play a vital role. One, a vital role is to set the goals and strategies, to make it clear to the American people we've got a choice to make: Do we compete or do we retreat; do we become isolationists and protectionists as a nation, or do we remain a confident nation and lead the world?

The Federal Government has got a role in making sure that there's research dollars available for places like Tuskegee. The Federal Government has got a role to provide incentive for private corporations to continue to invest in research and development.

I want to remind you that the research being done today in this university will end up somewhere in our society 10, 20, or 30 years from now. That's what's hap-

pening. And at the same time, that research is helping a young man or woman realize his or her dream, making sure that person gets the skill sets necessary to become the leaders.

We should never cede any educational territory to anybody anywhere in the world. We need to be the centers of excellence all around the United States. And one way to do that is to continue to provide financial help and to encourage people to take math and science through additional financial help. And another way to do it is to make sure the public school system provides excellent education early in a child's life, laying that foundation for children from all walks of life, all across our country, so that we can continue to be the country of hope.

I am very confident about the future of this country. There's nothing we can't do if we don't put our mind to it. And this is a step in putting our mind to making sure the United States of America is the finest country on the face of the Earth. I'm honored to be at one of the finest institutions in the United States of America to talk about this initiative. Thanks for letting me come. God bless.

NOTE: The President spoke at 12:20 p.m. in the Kellogg Conference Center. In his remarks, he referred to Benjamin Franklin Payton, president, Tuskegee University; and Gov. Bob Riley of Alabama.

## Remarks at a Welcoming Ceremony for President Hu Jintao of China *April 20, 2006*

Good morning. Laura and I are pleased to welcome President Hu Jintao and his wife, Madam Liu, to the White House.

The United States and China are two nations divided by a vast ocean yet connected through a global economy that has created opportunity for both our peoples.

The United States welcomes the emergence of a China that is peaceful and prosperous and that supports international institutions. As stakeholders in the international system, our two nations share many strategic interests. President Hu and I will discuss how to advance those interests and how China

and the United States can cooperate responsibly with other nations to address common challenges.

Our two nations share an interest in expanding free and fair trade, which has increased the prosperity of both the American people and the Chinese people. Trade in goods between our two nations has grown to \$285 billion a year, and U.S. exports to China grew nearly 21 percent in last year alone. Our trade relationship can become even stronger as China adopts policies that allow U.S. companies to compete in China with the same freedom that Chinese companies are able to compete here in the United States. So we welcome China's commitments to increase domestic demand, to reform its pension system, to expand market access for U.S. goods and services, to improve enforcement of intellectual property rights, and to move toward a flexible, market-based exchange rate for its currency. These policies will benefit the Chinese people and are consistent with being a responsible member of the international economic system and a leader in the World Trade Organization.

Prosperity depends on security, so the United States and China share a strategic interest in enhancing security for both our peoples. We intend to deepen our cooperation in addressing threats to global security, including the nuclear ambitions of Iran; the genocide in Darfur, Sudan; the violence unleashed by terrorists and extremists; and the proliferation of weapons of mass destruction.

I appreciate China's role as host of the six-party talks, which will be successful only if North Korea makes the right strategic decision: to abandon all its nuclear weapons and existing nuclear programs as pledged to the other five parties. I will continue to seek President Hu's advice and cooperation and urge his nation to use its considerable influence with North Korea to make meaningful progress toward a Korean Peninsula that is free of nuclear weapons.

The natural world also generates threats to international security, and the United States and China share a strategic interest in meeting these challenges as well. We will continue to cooperate to fight avian flu and other pandemic diseases. We will continue to cooperate to respond to natural disasters. We will continue to cooperate to develop alternatives to fossil fuels. New technologies can drive economic growth on both sides of the Pacific and help us become better stewards of our natural resources.

As the relationship between our two nations grows and matures, we can be candid about our disagreements. I'll continue to discuss with President Hu the importance of respecting human rights and freedoms of the Chinese people. China has become successful because the Chinese people are—experience the freedom to buy and to sell and to produce. And China can grow even more successful by allowing the Chinese people the freedom to assemble, to speak freely, and to worship.

The United States will also be candid about our policy toward Taiwan. The United States maintains our "one China" policy based on the three communiques and the Taiwan Relations Act. We oppose unilateral changes in the status quo in the Taiwan Strait by either side, and we urge all parties to avoid confrontational or provocative acts. And we believe the future of Taiwan should be resolved peacefully.

The United States and China will continue to build on our common interests; we will address our differences in a spirit of mutual respect. We have made progress in building a relationship that is candid and cooperative, and President Hu's visit will further that progress.

And so, Mr. President, welcome to the White House. We're really glad you're here. I'm looking forward to our meetings, and I'm so thrilled to welcome Madam Liu as well. Thank you for coming.

NOTE: The President spoke at 9:44 a.m. on the South Lawn at the White House, where President Hu was accorded a formal welcome with full military honors. In his remarks, President Bush referred to Liu

Yongqing, wife of President Hu. The transcript released by the Office of the Press Secretary also included the remarks of President Hu.

## Remarks Following a Meeting With President Hu Jintao of China and an Exchange With Reporters April 20, 2006

*President Bush.* The President and I will make opening statements. We'll be glad to answer two questions from each side.

Mr. President, welcome. We've just had yet another constructive dialog. I enjoy my visits with President Hu. He tells me what he thinks, and I tell him what I think, and we do so with respect.

China has important relations with the United States. We, obviously, have commercial relations that are important. We're working on issues like Iran and Sudan. We've got a mutual interest in seeing that the Korean Peninsula is nuclear weapons-free. We spent time talking about Taiwan, and I assured the President my position has not changed. I do not support independence for Taiwan.

We don't agree on everything, but we're able to discuss our disagreements in a spirit of friendship and cooperation. So it's a very important relationship.

And, Mr. President, thank you for your frankness and for our discussions.

*President Hu.* To begin with, I would like to thank President Bush for his kind invitation and the generous hospitality accorded to me. And just now I had a pragmatic and constructive dialog with President Bush, and during that meeting, President Bush and I had in-depth exchange of views on the China-U.S. relationship and major regional, as well as international, issues of mutual interest.

We have reached important agreement at the meeting. We both agreed that under

the new circumstances, given the international situation here, that China and the United States share extensive, common strategic interests, and there is a broad prospect for the mutually beneficial cooperation between the two countries. A good China-U.S. relationship is of strategic significance to the maintenance and promotion of peace, stability, and development in the Asia-Pacific region and in the world at large.

We both agreed to view and address the bilateral relationship from a strategic and long-term perspective, and we both agreed to comprehensively move forward the constructive and cooperative China-U.S. relationship in the 21st century, to the benefits of the Chinese and American peoples and peoples around the world.

And during the meeting, I stressed the importance of the Taiwan question to Mr. President. Taiwan is an inalienable part of Chinese territory, and we maintain consistently that under the basis of the "one China" principle, we are committed to safeguard peace and stability in the Taiwan Straits, and to the promotion of the improvement and development of the cross-straits relations. We have the utmost sincerity, and we will do this to our utmost, with all sincerity, to strive for the prospect of peaceful reunification. This being said, we will by no means allow Taiwan independence.

President Bush gave us his understanding of the Chinese concerns. He reiterated the

American positions and said that he does not hope that the moves taken by the Taiwan authorities to change the status quo will upset the China-U.S. relationship, which I highly appreciate.

We both agreed to work together to promote the development of the economic ties and trade between the two countries on basis of a mutual benefit in seeking win-win outcomes. As for the differences, or even frictions between the two countries in this regard, we both believe that they may be properly resolved through consultations on an equal footing. Both Mr. President and I spoke highly of the outcomes from the 17th JCCT meeting which was held not long ago.

President Bush and I also agreed that the two countries need to further increase their exchanges and cooperation in the military, law enforcement, science and technology, culture, education, and other fields. We also both agreed to further step up our dialog and cooperation in such fields as counterterrorism, nonproliferation, the prevention and control of the avian influenza, energy, environmental protection, disaster prevention and relief, and other major issues.

Both sides agreed to continue their efforts to facilitate the six-party talks to seek a proper solution to the Korean nuclear issue. And both sides agree to continue their efforts to seek a peaceful resolution of the Iranian nuclear issue.

I assured Mr. President that China is willing to work together with the United States and other countries in the world in a joint endeavor to build a harmonious world featuring enduring peace and shared prosperity.

*President Bush.* Jennifer [Jennifer Loven, Associated Press].

#### *Chinese Currency/Democracy in China*

*Q.* Thank you, sir. President Hu, when will China become a democracy with free elections?

And President Bush, why have you not been able to persuade China to more quickly revalue its currency?

*President Bush.* Last July, the Chinese made a major decision on their currency. There's been some appreciation in the currency. We would hope there would be more appreciation in the currency.

*Q.* President Hu?

*President Hu.* I don't know—what do you mean by a democracy? What I can tell you is that we've always believed in China that if there is no democracy, there will be no modernization, which means that ever since China's reform and opening up in the late 1970s, China, on the one hand, has vigorously promoted economic reforms, and on the other, China has also been actively, properly, and appropriately moved forward the political restructuring process. And we have always been expanding the democracy and freedoms for the Chinese citizens.

In the future, we will, in the light of China's own national conditions and the will of the Chinese people, continue to move ahead the political restructuring and to develop a socialist democracy. And we will further expand the orderly participation of the Chinese citizens in political affairs so that the Chinese citizens will be in a better position to exercise their democratic rights in terms of democratic supervision, democratic management, and democratic decisionmaking.

*President Bush.* Do you want to call on somebody from the Chinese side?

#### *China-U.S. Relations/Trade*

*Q.* I have a question for President Hu Jintao. And how do you view the problems and disputes between China and the United States in the field of economic ties and trade? And in your view, what kind of measures shall we take to properly resolve these issues?

*President Hu.* The economic ties and trade between China and the United States are an important component—the China-

U.S. relationship as a whole. And in this economic ties and trade, I think that mutually beneficial cooperation and win-win outcomes represent the mainstream.

Although the two countries do have different opinions or sometimes even frictions in this relationship, what has happened has proven that all these issues or differences can be properly resolved through consultations on a equal footing and further expansion of the mutually beneficial cooperation.

We understand the American concerns over the trade imbalances, the protection of the intellectual property rights, and market access. We have taken measures, and we'll continue to take steps to properly resolve the issues.

China pursues a policy of boosting domestic demand, which means that we'll mainly rely on domestic demand expansion to further promote the economic growth of the country. We do not pursue a excessively high trade surplus.

We have already launched the reform of the RMB Chinese currency exchange rate regime, which has paid off initially. And in the future, we'll continue to make efforts to improve the RMB exchange rate regime.

We'll continue to expand the market access and increase the import of American products. As a matter of fact, lately, a delegation composed of Chinese businesspeople have been to the United States, and during their trip, they have totally signed 107 commercial contracts or agreements with a total value of over 16.2 billion U.S. dollars.

The U.S. technology products export to China, particularly in the field of the export of high-tech products, are quite incompatible with the economic might of the United States. I hope that the United States Government will be able to relax or ease the restrictions imposed on its export, particularly high-tech export to China. And we also hope that the U.S. Government will be able to create a level playing field for Chinese businesses who want to enter the American market. And this will certainly help bring down the trade deficit of the

United States. And this will also contribute to the further sound and stable growth of the trading ties and economic cooperation between the two countries.

*President Bush.* Let me say something on this. First of all, it was a very comprehensive answer, and I appreciate that, Mr. President. I am heartened by the President's answer, because he recognizes that a trade deficit with the United States as substantial as it is, is unsustainable.

I appreciate his statement very much, because the American people—all we want to do is be treated fairly in the international marketplace. He's used the word "win-win," and that's a very important concept when it comes to economics that are mutually beneficial. Market access is very important, and I appreciate your commitment to that, Mr. President.

What also is very much important is that for the—as the Chinese society evolves, that it becomes an economy that is not export-driven but consumer-driven. I appreciate the Government's commitment to that evolution, because as there's more consumers and market access, it will mean that U.S. small businesses and businesses and farmers will have a chance to be able to find new markets. Obviously, the Chinese Government takes the currency issue seriously, and so do I. And finally, I want to remind our citizens, as the President said earlier, exports to China are up by 21 percent. And that means jobs.

And so we're going to continue to work on this very important relationship to make sure the playing field is level.

Steve [Steve Holland, Reuters].

#### *Iran/North Korea*

*Q.* Thank you. President Bush, have you presented President Hu to go along with tougher actions against Iran, if necessary, such as sanctions?

And President Hu, is there more you can do to influence North Korea to give up nuclear weapons?

*President Bush.* The first goal of any dialog with a partner with whom we're trying to create peace is to have a common objective, a stated goal. And we have a common goal, and that is that Iran should not have the nuclear weapon, the capacity to make a nuclear weapon, or the know-how to how to make a nuclear weapon.

And the second goal is to be in a position where we can work on tactics. And one of the tactics that I've been talking to the President about is the use of the United Nations Security Council Chapter VII to send a common message to the Iranians that China and the United States and EU-3 countries, all deeply are concerned about the Iranian ambition.

China is an important voice in international affairs. And I will continue to work with the President to strategize as to how best to achieve our important goal, which is a—an Iran without the capacity, the know-how, or a nuclear weapon.

*President Hu.* As our friends may know, that the nuclear issue on the Korean Peninsula, China has always been persuading the parties for their reconciliation and promote the talks for peaceful solution. And we have always been making constructive efforts to denuclearize the Korean Peninsula.

It is exactly thanks to the concerted efforts of the parties involved that in September last year, the six parties had their fourth-round talks and successfully concluded a joint statement as a initial result, which has not come easily.

The six-party talks have run into some difficulties at the moment. I hope that the parties will be able to further display flexibility, work together, and create necessary conditions for the early resumption of the talks.

### *China-U.S. Cultural Exchanges*

*Q.* Mr. President, good morning. I would like to know, what is on your mind and what kind of things you can do to facilitate the people-to-people and cultural exchanges between the two countries?

*President Bush.* I remember giving—well, the first graduation speech I ever gave as President was to Notre Dame. And I was—I distinctly remember the—a number of Chinese students that were there who had gotten advanced degrees. And it's a vivid reminder that one of the best ways for there to be exchange is for there to be exchange of students. I think the more U.S. students who study in China and the more Chinese students who study in the United States will lead to lasting understanding, which is very important for future relations.

Obviously, there will be exchanges in the arts. There's a great interest in the United States about the Chinese arts and the history of Chinese arts. There's going to be sports exchanges. Yao Ming, I mean, he's a perpetual exchange. He's a great player, and he's here all the time. The Olympics will bring a great opportunity for us to have interchange. There's all kinds of ways for the United States and Chinese people to get to know each other, and I look forward to encouraging those kind of avenues of dialog. Presidents can talk, but sometimes the best way to have lasting friendship is for there to be a lot of people-to-people exchanges.

Thank you very much.

NOTE: The President spoke at 11:16 a.m. in the Oval Office at the White House. In his remarks, he referred to Yao Ming, center, National Basketball Association's Houston Rockets. President Hu and two reporters spoke in Chinese, and their remarks were translated by an interpreter.

## Remarks at a Luncheon Honoring President Hu Jintao of China April 20, 2006

Mr. President, Madam Liu, Laura and I are honored to welcome you to the—and your delegation to the White House. It's a pleasure to have you here, along with our other distinguished guests.

China is home to an ancient civilization, and it is helping to shape the modern world. In a single generation, China's economy has moved from isolation and stagnation to engagement and expansion. As China has grown, our two peoples have come to know one another better.

Thirty-five years ago this month, the Chinese Government welcomed the United States ping-pong team to Beijing. [*Laughter*] It's an event that marked the beginning of renewal—renewed cultural exchanges between our two nations. Today, Chinese athletes compete professionally in the United States, and Americans appreciate the opportunity to see them play.

In 2008, China will welcome athletes from all over the world as your great nation hosts the summer Olympics. Beijing will showcase China's transformation and demonstrate China's commitment to the international institutions that make fair and peaceful competition possible for all nations.

Mr. President, I thank you for the constructive and candid conversations we had this morning. I appreciate the opportunity to expand the dialog between our two great nations. And, Mr. President, I'm pleased to offer a toast to you and to your gracious wife and to the people of China.

NOTE: The President spoke at 1:20 p.m. in the East Room at the White House. In his remarks, he referred to Liu Yongqing, wife of President Hu. The transcript released by the Office of the Press Secretary also included the remarks of President Hu.

## Remarks at the President's Environmental Youth Awards Ceremony April 20, 2006

*The President.* Thank you. Please be seated. Thanks for coming. Welcome. Glad you're here. Sorry I'm a little late. I just finished having a lunch with President Hu Jintao of China, a very important lunch. I hope you forgive me for running a little late. But thanks for letting us come by to say hello. I'm proud to join Steve Johnson in honoring young Americans who have given time and energy to help make this country a better place. We're really glad you're here.

You're serving as young stewards of the environment, which means you're setting a good example for what it means to be a citizen. It's, like, what we call citizenship

in action. And you're helping make America a wonderful place. And so we're really glad you're here. I'm glad to be a part of the award ceremony.

I want to thank all the Administrators from the EPA who are here, but I particularly want to thank Steve and Debbie for joining us as well. We're here to honor, Steve, in case you don't know it yet—[*laughter*]*—*49 young Americans who are helping to protect the natural heritage of our country. I appreciate the fact that you're setting good examples too, by the way, and doing what you're doing. You're showing people how to lead and how to be a responsible citizen.

I appreciate the rain gardens that were built in places like Massachusetts and Michigan to catch runoff and prevent it from polluting local rivers and streams. That's a smart idea; thanks for doing it. In New York, folks here have organized volunteers to stencil warnings near neighborhood sewers. That's a good way to help protect the environment, isn't it?

In Pennsylvania, folks here built an environmental demonstration house to showcase environmental products and technologies. It makes a lot of sense to showcase new technologies. After all, technologies are going to help change the world in a positive way so that we can be good stewards of the environment.

As a matter of fact, one of the technologies that are—a part of the technological revolution that we're pushing hard here is to change the way we drive our automobiles. One of these days, we're going to have what they call hybrid plug-in batteries. You'll be able to drive your car for the first 40 miles on electricity. That seems to make sense. It does a couple of things. One, it helps to improve the environment, but it also makes us less dependent on oil. And one of my hopes is that one of these days, the cars you drive won't be using any oil but will be using hydrogen, as a way to protect the environment. So those of you who are working on new technologies, thanks. It's a smart thing to do. That's exactly what this Government needs to be doing more of as well, and will be doing more of.

I'm proud to welcome folks from Georgia and your club called "The Creek Freaks." [Laughter] When I first heard the name, I thought it might be like a band or something, you know? [Laughter] I welcome the folks from Arkansas, who are clearing trash. By the way, the Creek Freaks are helping to protect wetlands. I don't know if you know this, but we've increased the wetlands by a half a million acres over 2 years. That's a really important initiative. And for those

of you who are helping do that, I want to thank you very much.

In Arkansas you've cleared trash and developed projects to stabilize the banks of a local stream. Thanks for coming, welcome. If you happen to get close to Texas, tell them hello.

In Missouri, you restored a portion of a park—adjacent to a school—to a native prairie. I don't know if you know this or not, but Laura and I are fortunate to own some property in central Texas, near a town called Crawford. You've heard of it, Richard. [Laughter] One of our projects is to restore as much of our land as possible to native grasses and wildflowers. We've got buffalo grasses, bluestem—little bluestem grass. And interestingly enough, we've converted about 50 to 60 acres of our land to—so we can provide seed for people so they can then plant little bluestem. And it's a neat project, and I would encourage ranchers and farmers to be able to find ways to help plant native grasses, just like the kids from Missouri have done here.

In Alaska, you built a grated wall that provides access to a local creek. That makes sense, you know. People ought to be allowed to have access to nature, but you want to do it in a way that protects the environment. It's one of the reasons why I proposed that we spend \$5 billion on making sure that the maintenance issues in our national parks are improved, and we're on the way to making sure that happens. I believe in national parks, and I believe people ought to have access to national parks. After all, it's the people's parks; it's not a handful of people's parks. It's everybody's park. And the Federal Government has a role to maintain those parks, and we're doing a good job of that.

In California, 8-year-olds here launched a composting and recycling effort called, "The Wonderful Weird World of Worms." [Laughter] That's kind of hard for me to say. [Laughter]

Got some folks from Utah that built a hybrid land speed racer which he drives

to school and races at the nearby salt flats to raise awareness about alternative fuel vehicles. I just talked to you about the hybrid plug-in battery and hydrogen. There's another alternative fuel that we need to use in our vehicles, and that's ethanol. I don't know if you study that in your schools, but it's possible to make fuel for automobiles from corn. As a matter of fact, we're doing quite a bit of that in the Midwest—or sugar. Sugarcane is pretty good for making fuel—ethanol.

But we're close to some breakthroughs, some technological breakthroughs that will enable us to make ethanol from wood chips and compost. And when we hit that, all of a sudden, you're going to see ethanol all across the country. It makes sense to drive our cars from agricultural products, doesn't it, as opposed to oil?

And so thank you for setting such a good example. We're really glad you're here. You know, good environmental policy requires Federal effort, but it also requires State effort and local effort and volunteer effort. All of us need to pitch in to make—to conserve the land and make this country as beautiful as can be. And by being here

today, you're showing a strong commitment for the future of our country. And we're blessed that we've got people like you that are willing to do what you did.

So I want to welcome you. I want to welcome you all; I want to welcome your teachers. Thank you for being here. Thanks for teaching. I want to welcome your parents. I really appreciate you raising such good folks. And I want to welcome the EPA Administrator to announce the awards. God bless; thanks for coming.

[At this point, Administrator of the Environmental Protection Agency Stephen L. Johnson introduced the award recipients from each region, and the President congratulated them.]

*The President.* Thanks for coming. Congratulations.

NOTE: The President spoke at 2:59 p.m. in Room 450 of the Dwight D. Eisenhower Executive Office Building. In his remarks, he referred to Debbie Johnson, wife of EPA Administrator Johnson; and Richard E. Greene, Environmental Protection Agency Region VI Administrator.

## Remarks in a Discussion at Cisco Systems, Inc., in San Jose, California April 21, 2006

*The President.* I'm thrilled, John. Thanks for coming. This is going to be an interesting discussion, I hope, for you, because it's going to talk about how America intends to shape our future and not fear the future. That's what we're really here to talk about—interesting challenges facing the country.

Yesterday—one reason you're so nice is because I invited him to lunch at the White House yesterday. [Laughter]

*John T. Chambers.* Thank you.

*The President.* He and Elaine came, and we had lunch with Hu Jintao, the President

of China. And sitting there during the lunch, I was thinking about people's fears about whether or not we can compete against a country like China. If you really think about a global economy and a global world—there's some folks that say, "Well, maybe we can't compete in the long run." My attitude is just the opposite. Not only can we compete, we must compete and remain a leader of the world.

And that's what we're here to talk about—how you do that. And before we do that, I do want to thank John and the good folks here at Cisco for hosting us.

It's not easy to host the President. [Laughter]

Mr. Chambers. That's for sure. [Laughter]

The President. Our entourages are quite large. [Laughter] But I thank you for having me. I am excited to be at one of America's most innovative companies. And I was asking John—20 years ago, how many employees were there? There were zero. Ten years, maybe 6,000; today, 47,000 highly trained, highly competent, skilled folks that are helping to change America and countries around the world as well. So thanks for having us. It's wonderful to be in entrepreneurial heaven.

I also am honored to be here with the Governor. I cannot thank you enough for coming, Arnold. It's really thoughtful of you to be here. He is a—really an interesting man, a person—[laughter]. He didn't have to run for office but chose to do so, and I admire that in you. I admire somebody who doesn't always take the comfortable way in life, in order to serve something greater than himself. And I appreciate your service; I really do.

Traveling with me today is Norm Mineta, a Cabinet Secretary. Mr. Secretary, thank you for coming. Norm Mineta is a person who has been able to—[applause]. He said, "I'm glad to fly on Air Force One; I just wished you would have landed at Mineta Field." And his son, David, is here today. More importantly than son David being here, is tomorrow, I think, is David's daughter's birthday. So we've got the grandfather and the father. Thank you all for coming, and thanks for serving the country so well, Norm.

I appreciate Mayor Ron Gonzales of the city of San Jose joining us. Mr. Mayor, thank you for being here. I appreciate your time. I want to thank my friend Floyd Kvamme, who is the cochair of the President's Council of Advisers on Science and Technology, as well as George Scalise, who is with us as well. Thank you all for serving. I appreciate—there is Floyd; thanks for

coming. And Lezlee Westine—it's good to see you, Lezlee. Thank you for coming; appreciate your service in my administration.

Our economy is good. It's real good, and we intend to keep it that way. The fundamental question is, though, can it be that way 5 years from now or 10 years from now? And my answer is, absolutely, if we do some wise things. I happen to believe it's wise to keep taxes low so that people have incentive to invest and save and spend.

I know we're going to have to do something about energy. I aim to be a competitive nation. Part of a competitive agenda means that we have got to deal with problems short-term and long-term, and we've got a problem when it comes to our dependence on oil. I know the folks here are suffering at the gas pump. Rising gasoline prices is like taking a—is like a tax, particularly on the working people and the small-business people.

I pledge to the people here of California that if we find any price gouging, it will be dealt with firmly.

I also recognize that our dependence on oil, and in the fact that we live in a global economy, is causing gasoline prices to go up. And the fundamental strategy to keep us competitive is to get off oil. Tomorrow I'm going to be in Sacramento to talk about your very innovative idea of hydrogen-powered automobiles. I'll be talking about plug-in hybrid automobiles that will enable people to drive on electricity for the first 40 miles. I'm going to be talking about our investment in ethanol to make sure—all of it, by the way, is aimed to making America competitive by changing our driving habits and our dependence upon oil.

We have got to do so for not only economic reasons but for national security reasons as well. It's really important for people to understand that as the Indian economy grows or the Chinese economy grows, they need fossil fuel. And as they buy fossil fuel, it affects our price. And therefore, it's in

our national interest to diversify as quickly as possible away from our reliance upon hydrocarbons—particularly oil—when it comes to our automobiles. And I'm convinced we can do so when we put our mind to it.

A flexible economy, an economy that is not overregulated is going to be necessary to keep us competitive. But the most important thing, in my judgment, to keep us competitive is for the United States to remain on the leading edge of technology and to make sure we've got an education system that works.

First, let me talk about technology. I do believe it is a proper use of Federal taxpayer money to double the R&D commitment in—to physical sciences at the Federal level. I believe it makes sense to spend taxpayers' money on research and development out of the Federal Government, because I have seen what expenditure of that kind of money has done in practical ways. And so have you. You may not realize it, but it was investment by the Defense Department that ultimately led to the Internet, which has kind of helped your business a little bit, John. [Laughter]

Interestingly enough, tomorrow I'm going to be riding my bike in Napa Valley. I can't wait. I'll be plugged into an iPod. A lot of the reason the iPod exists is because of Federal research dollars. And therefore, I think it makes sense to spend your money on research at the Federal level in the basic sciences to make sure that the United States of America remains the innovative center of the world.

Secondly, I recognize that most money spent on research comes from the private sector. I suspect you spend a lot of money on research.

*Mr. Chambers.* About \$3 billion a year.

*The President.* Three billion a year. I think it makes sense to encourage the private sector to spend the \$200 billion a year we do total—\$3 billion right out of Cisco.

One way to do so is through the Tax Code. The research and development tax

credit makes a lot of sense. Interestingly enough, the research and development tax credit expires on a regular basis. And therefore, people have to come, hat in hand, to Congress and say, "Oh, save us." Unfortunately, it is difficult to plan for some companies if you're worried about whether or not the research and development tax credit exists.

Therefore, to keep us on the leading edge of change, to make sure we're the innovative capital of the world, Congress needs to make the research and development tax credit a permanent part of the Tax Code.

People have got to understand that if we don't educate our children in math and science, jobs are going to go to other countries. It's as simple as that. The jobs of the 21st century are going to require a skill level much different from when you and I got out of college. You did get out of college, yes? [Laughter] Look, I don't need to be talking; I barely got out myself. [Laughter]

I mean, face it, we've got to have a different set of skills. History may not cut it. Math and science are going to be vital to make sure that this country educates the engineers, the chemists, the physicists—the types of folks that John Chambers and Francois are going to be looking for to hire. That's what we're really talking about.

It starts, however, with making sure the public school system does its job in early grades. If I might, I'd just like to take a second to talk about the spirit behind the No Child Left Behind Act. I believe that the Federal Government should continue its role of providing money for Title I students, the poor students. I think that is a good use of your money.

However, I do believe that in return for the expenditure of that money, it makes sense for us to ask whether or not we're getting our money's worth. That means whether or not a child is learning to read and write and add and subtract. I believe strongly that every child can learn, and

therefore, I believe there must be an accountability system in place to make sure that every child is learning.

And so we passed the No Child Left Behind Act. Believe it or not, it was a bipartisan measure. Sometimes that can happen in Washington, DC—not enough, I fully concede. But it happened in this case, where we passed the No Child Left Behind Act that says to California or Texas or any other State: “Develop an accountability system in return for this money to show us whether or not a child can read at grade level by the third grade and remain at grade level.” That’s not too much to ask, is it?

And so measurement is a central part, in my judgment, of holding people to account, of being able to figure out whether curriculum is working. We had all kinds of debates in Texas over the reading curriculum—what worked, what didn’t work. The best way to determine what works is to have an accountability system. And that means the Governor or this local school board can say, “We were doing just fine when we compare how we’re doing to the school district next door.” Or if you’re not doing just fine, it gives, at least, parents and those concerned citizens a tool to say, “You’ve got to change. Mediocrity is unacceptable. We’re not going to accept the fact that children can’t read by the fourth grade anymore in America.”

If you’re a reformer—Chambers is a reformer; he is unwilling to accept the status quo; he can’t afford to accept the status quo in order to be competitive in this world. The accountability system gives people the opportunity to say, “We demand change.”

Interestingly enough, there is an achievement gap in America, but it’s narrowing. Our fourth grade African American kids and our fourth grade Hispanic kids are beginning to improve in measurable ways, and that’s really positive for the future of the country. And for the teachers who are working hard to meet the challenges of No

Child Left Behind, the Governor and I both thank you a lot.

We’re doing fine in eighth grade math, by the way, because we measure. But when kids start heading into high school, the position of the United States relative to other countries for our beginning high school kids in math and science is not good enough. Like, we’re 15th in the world, or something like that. We don’t want to be 15th in the world; we want to be first in the world when it comes to teaching our children math and science.

So here are some ideas. First, we ought to apply the same rigor to math that we’ve applied to reading. In reading, we measure early, and we’ve got supplemental service money, which means after-school tutorial money available for children who are not meeting standards. In other words, we measure, and we correct. That makes a lot of sense. We need to do the same thing in junior high math. So the Federal Government is going to make supplemental service money available for students who are falling behind in math right before they get into high school.

That’s one way to correct the problem, is to measure, to identify, and to solve. And that’s what we intend to do through the new math initiative.

Second, we’ve got to make sure that we understand what works. And so I put together a national math panel with math experts that will help develop curriculum and teaching tools so that we can say to the States and local school districts, here’s what the experts think. Instead of kind of grasping for what might be relevant and might work, we’re actually calling people together who know what they’re talking about—just like we did in reading—and say, here, here’s what you need to try in order to meet the standards.

Thirdly, there are programs which work—and I bet you’ve got them here in California—and it’s called the Advanced Placement program. It’s a program that sets high standards and has classroom rigor.

One of the problems we have is not enough teachers know how to teach AP. I'm going to ask the Congress to fund enough money to help train 70,000 teachers so they can become prepared to teach Advanced Placement.

I went to a great school in Dallas that—inner-city school; it's not one of these suburban deals; it's inner-city. And the principal claimed that they were the leading high school in the country in terms of kids passing AP. You know, Texans tend to, kind of, put it out there in a way that—[laughter]. Whether it's first or not, what mattered was, there was a group of kids from all walks of life, different neighborhoods, all of them passing AP in math and science. They are going to be the leaders of the future. They're going to be our scientists and our chemists and our physicists. And we've got to make sure that that opportunity is available in more classrooms.

Secondly, we went to a school the other day in suburban Maryland. There were two NASA employees there. These guys, as part of their job at NASA, were detailed to junior high classroom. And the reason why is—we call them adjunct professors—and the reason why is, is that sometimes it's not cool to be in the sciences. And these people make it at least seem relevant. And so we're going to attract 30,000 adjunct professors around the country to go into classrooms to say, "This is why science and math are not only cool but are the ticket to a great future for you."

We've expanded our Pell grants. There's now 5 million kids in America getting Pell grants. It's a million more than 5 years ago. And I'm a believer in Pell grants; I think they make sense. But at Tuskegee the other day, I announced a new initiative that provides additional incentive for high school kids who qualify for Pell grants to take rigorous course loads. As a matter of fact, in the first 2 years of college, if you take a rigorous course load in high school and maintain a 3.0 GPA, you'll get \$750—up to \$750 additional on your Pell grant

and up to \$1,500 additional in your second year. If you take math and science or a critical language in college and maintain a 3.0 GPA, you can get up to an additional \$4,000 on top of your current Pell grant. And the idea is to say that we believe everybody can learn, and there ought to be tangible incentives to encourage children to get the skills necessary to fill the jobs of the 21st century.

One of the reasons I'm so pleased the Governor is here is because there needs to be a collaborative effort between the Federal Government and the State government and the community college system and the private sector in order for us to achieve this important national objective, and that is for there to be excellence in math and science all throughout our society. And so the Governor is here to talk about California's role in—to making sure that not only California is competitive, but that the country is competitive. When California does things well, it affects the country. And so when you are a part of this competitive initiative, it will help give confidence to others that we're doing the right thing.

And so, welcome. Why don't you share with us some of your thoughts about what you're doing here.

*Governor Arnold Schwarzenegger.* Well, thank you, Mr. President. First of all, I want to say congratulations on—

*The President.* On what?

*Gov. Schwarzenegger.* —on really paying attention—

*The President.* Oh. [Laughter]

*Gov. Schwarzenegger.* —to the competitiveness initiative.

[At this point, Gov. Schwarzenegger of California made brief remarks.]

*The President.* One part of the infrastructure that John Chambers and I talked about today was to make sure that broadband is available, high-speed broadband is available to nearly every American. And we're working it hard; we're making progress. I asked

John today how we're doing. He said, "There is momentum, but we've got a lot of room to catch up in terms of being competitive. Other countries are doing—have done a better job than we have."

We're making progress. And the reason I bring it up is I just want you to know that I know it's important that we've got broadband highways all throughout the country so people can have access to it.

One of the interesting things that the Governor and I just saw was some of the amazing innovation that's taking place here in Cisco. So we get on—we're looking in the camera, and all of a sudden, up comes four people, and it's like they're right here. [Laughter] It was an amazing innovation that you're doing. And it just reminded me how important innovation is and why Cisco is doing well—it's because it's an innovative company with innovative people and an innovative CEO.

And so, again, thanks for having me. I'm interested in your thoughts.

*Mr. Chambers.* Mr. President, I think you said it right. The economy is good; jobs are good; and what we have today is because of our education from before. But we use network academies, and we put them around the world. It's a program that trains young people for getting jobs in the high-tech industry and using it in a practical way.

*The President.* Network academy—what does that exactly mean? Some guy listening out there isn't going to know—

*Mr. Chambers.* Well, there's a little bit of sizzle to it. [Laughter] What it is, is it trains people to build that highway that you talked about. And it trains people—instead of getting jobs in areas that really don't have much demand, you get jobs where there's a lot of demand. In fact, we can't meet it in this country. And they usually get 30 to 50 percent higher pay because they've done that.

The neat thing is, we're training 100,000 Americans in this area. The challenge is—

*The President.* Cisco is training—

*Mr. Chambers.* —in network academies, with our colleges and high schools—so we generate the program. The challenge, however, is our competition globally is even moving faster on the math and science. China and India graduate 10 times the number of Ph.D.s we do. They have a population four times our size in each of those countries. We all—do the math; that creates a challenge for us. So it's about being the best and brightest in each of our organizations, and we have one of the students here who is just awesome at that. We've got to do better.

*The President.* Yes. Again, so you took it upon yourself as an interested corporate citizen to provide employees to train others?

*Mr. Chambers.* Started with a university system, an idea with one single employee, and we wired all of our schools, but nobody maintained it. So we began to train the students to maintain the system. It worked in one area, and then it spread globally.

*The President.* What John said is really interesting. It is very important for our citizens to understand that education helps you get higher pay.

*Mr. Chambers.* And jobs.

*The President.* And a job, yes. It's hard to get higher pay without the job. [Laughter]

*Mr. Chambers.* You got me. [Laughter]

*The President.* I know, you're building—[laughter].

Anyway, but people have got to understand that, one, it's not too late to go back to school. And secondly, there's a lot of really interesting opportunities to get the skills necessary to have the jobs that are going to be available in the 21st century. John Chambers just described one such avenue. You're doing 100,000 people—educating 100,000 people here?

*Mr. Chambers.* In this country—400,000 worldwide.

*The President.* I appreciate that. One of the interesting things about America is the

fact that there are corporate citizens who understand the problem that America faces, and they're doing their part. It's amazing how much training goes on within corporate America, and I appreciate your leadership on this. And I hope others who are interested in making sure this country is competitive do their part, as well, to reach out and train people. Use your skills and your expertise to give people the skills necessary, so we can remain a competitive nation.

I suspect here in Silicon Valley there's a lot of job training going on, which is really important.

*Mr. Chambers.* There is. We train locally, but we also are taking something. Mr. President, I think you would find extremely interesting. We took the terrible hurricane experience in our gulf coast, and we're working with Mississippi to redo their education system. We're putting \$40 million of our own money into building a 21st century education system. We'll start with 52,000 students, 7 school districts, and take one of the States who's probably 49th in terms of math and science and see if we can't make an example of where it goes, with the teachers becoming the innovators, with the students not having—[*inaudible*]. We'll put a wireless mesh over top of the whole community. And, literally, building our students not just to catch up but to lead in math and science.

*The President.* I appreciate it. It's a great gesture, thanks.

Added value in education can come in all different ways, as I said. And one such place is in our community college system. You've got a great community college system here in California. I know you're a strong supporter. Dr. Fong is with us, who is—tell us what you do, Doc. [*Laughter*]

*Bernadine C. Fong.* A lot of things.

*The President.* Well, you're the president of?

*Ms. Fong.* I'm president of Foothill College in Los Altos Hills. It's right near here.

*The President.* Right. Close friend, by the way, of Condoleezza Rice.

*Ms. Fong.* That's right—and Stanford buddies.

*The President.* She's doing well.

*Ms. Fong.* Yes, she is. [*Laughter*] Please say hello to her for me. And we'll keep her out of the NFL, if possible.

*The President.* That's right, yes. Please. [*Laughter*] I need her advice. [*Laughter*]

[*Ms. Fong made brief remarks.*]

*The President.* Explain the academy, how Cisco works with you. I think people will be interested in this—I'm interested in it. [*Laughter*]

*Ms. Fong.* The Cisco Academy is basically a degree program, and they will get a degree in network enterprise, and they will also get a Cisco certificate, and it trains individuals. We start, actually, with high school students. You've met two our students today who are Foothill students, but they're actually, currently also enrolled in high school. They want to be computer engineers ultimately, but they wanted to get a head start, so they're in our Cisco Academy.

[*Ms. Fong made further remarks.*]

*The President.* And it's called Cisco Academy because you helped design the curriculum?

*Mr. Chambers.* We designed the curriculum, but it's implemented through the colleges and high schools. There is no social promotion. The grades—everyone knows how you compare, both within the States and globally.

*The President.* See, what's interesting about the community colleges—and I know the Governor knows this—is that they're about as market-oriented as you can get. Community colleges are available; they're very flexible. In other words, the curricula can adjust depending upon the local needs. They're innovative. They're willing to take a Cisco program, implement it in the community college. They're very practical. In

other words, they train people for jobs which actually exist.

And it's—[laughter]—it's vital, and I appreciate it. And I know the Governor understands that, and we understand at the Federal level. We've got pretty good grant money—\$150 million in the '07 budget, coming to help train workers. I just want people to understand that if you're wondering whether or not you're too old to go back to college, you're not. There is plenty of money available to help you go back. And 2 years of additional education can enhance your salary a lot. It makes you more productive, and a more productive worker is one whose standard of living will go up.

The community college system is, I think, one of America's greatest treasures, and I appreciate you, Dr. Fong, for being here. Thanks for your—[applause].

*Ms. Fong.* Well, the Governor is also a product of our community college system.

*The President.* Is he?

*Gov. Schwarzenegger.* Absolutely, yes. Actually, I also want to just add that our community colleges are doing an extraordinary job with career tech and vocational education. It's really amazing the kind of things that they do. Because I think it is so important to recognize that, yes, we want to stress 4-year college, and, yes, we want to inspire kids to go to higher education and all this. But there are many kids that want to do—get into different professions. They want to be a carpenter or plumber, or they want to be a chef or a computer technician or a nurse—great professions with a great future and great salaries and all this. I think that community colleges here in the State are really doing an extraordinary job to prepare them for those jobs.

*The President.* Good. Thank you. Good job.

Temp Keller.

*Temp Keller.* Yes, Mr. President.

*The President.* You know, you probably don't want to answer this question, but,

like, how does a guy get named "Temp"? [Laughter]

*Mr. Keller.* She's actually sitting right over there in the third row.

*The President.* Is she? [Laughter] Well, that's a good answer. You know what, I'll just wait and ask her behind the stage. [Laughter]

Welcome. Tell people what you do. Tell people what you have done with your program. It's really interesting.

*Mr. Keller.* It would be my honor, and thank you all for having me.

I'm the founder and president of an organization called RISE: Resources for Indispensable Schools and Educators. And the fundamental idea behind RISE is we are going to revolutionize the way that this country recognizes and retains good, effective teachers in public schools serving low-income communities.

[*Mr. Keller made further remarks.*]

*The President.* And so how does your deal work?

*Mr. Keller.* What we do—two very simple things. We essentially, one, identify good, effective teachers in low-income communities. Now, I'm sure there's a lot of people here in the room and listening that say, "Well, that's not an easy thing to do."

The way that we do it, though, and what makes RISE truly innovative and truly unique is that we ask teachers. We say to them, "How do you know you're any good at what you do? You went into teaching to make a difference. Demonstrate that you're making a difference."

[*Mr. Keller made further remarks.*]

*The President.* Nothing better than being around a social entrepreneur. [Laughter]

*Mr. Keller.* That's right.

*The President.* Here's your chance. How do you raise money? [Laughter]

*Mr. Keller.* Well—

*The President.* Does corporate California support your program?

*Mr. Keller.* They do. We have—

*The President.* It's in corporate California's interest that you succeed.

[*Mr. Keller made further remarks.*]

*The President.* God, I love a guy who is enthusiastic about what he's doing. [*Laughter*] Thanks. By the way, I also know East Palo Alto—Vermeil, my buddy Vermeil. Actually, the students came to the South Lawn one time. It's a great school. Thanks. Thanks for doing what you're doing.

Francois, step up to the mike here, my man.

[*Francois J. Henley, president and chief executive officer, Silicon Genesis Corporation, made brief remarks.*]

*The President.* We want people coming here, or who live here, to feel comfortable starting their own business. I love the fact that I am the President of a country where people can start with nothing except an idea and desire and hard work, and end up owning your own business. And Arnold is right—we've got to make sure the environment for entrepreneurship remains strong throughout our country if we want to be on the leading edge.

How fantastic is it that a guy comes from Montreal to realize his dreams? And you're employing people—who knows, you may hit on the thing that makes solar energy the source—I actually believe one of these days, we're going to have homes that become little power generating units unto themselves, and if you don't use electricity, you'll feed it back into the grid. And maybe you're the guy. Maybe one of these days—[*laughter*]. Don't take this marketing too far, you know. [*Laughter*] One camera bank, and he goes crazy. [*Laughter*]

Thanks for coming. I love your story. Good luck. I wish you all the best.

He talked about patents. Basically he's talking about making sure it's easy to protect his ideas. What—also, I want you to know that I talked to President Hu Jintao about—and I know John Chambers says,

as well, over in China—is we expect the same treatment for our products that are patented here in the United States, overseas. Intellectual property rights is a vital part of making sure a trading world is a fair trading world. And I spent time yesterday with the President, in a very respectful way, but a firm way, reminding him that if he's to be a good trading partner with the United States, that when Cisco sells a product there or Francois eventually sells a product there, that property needs to be—that intellectual property inherent in that property needs to be protected and respected.

Final person. We're saving probably the best for the last, wouldn't you say, Arash? [*Laughter*]

*Arash Shokouh.* Absolutely. Thank you, Mr. President. [*Laughter*] That's right.

*The President.* You are a dash student?

*Mr. Shokouh.* Yes.

*The President.* Where?

*Mr. Shokouh.* I'm a computer engineering student at San Jose State University. I'm also minoring in mathematics, as well as film acting.

*The President.* Interesting. [*Laughter*] I got the strategy. [*Laughter*] Why did you major in the first two subjects? [*Laughter*]

*Mr. Shokouh.* That's the first time I've been asked that. [*Laughter*] Well, I decided to do computer engineering because all my life I've been a complete computer nerd, always playing with computers, electronics, taking them apart, destroying them. I mean, my parents wouldn't really let me go too close to the television without somebody to supervise. But that's basically why. [*Laughter*]

*The President.* And your dreams?

*Mr. Shokouh.* I hope to—after I graduate from San Jose State University, I want to go on to pursue an MBA degree and, hopefully, start a small business designing consumer electronics components—plan A. Plan B, to go into a small startup where I can help lead the direction of the product, design the product.

*The President.* And so when did you start having this kind of notion about where your life would like to go?

[*Mr. Shokouh made brief remarks.*]

*The President.* You know what's interesting—why don't you tell folks your family history real quick, if you don't mind.

*Mr. Shokouh.* Absolutely. I'm an Iranian American, and my parents, who are sitting right back there, are from Iran. My mom and dad came here at around 1980, and me and my sister were born here in San Jose.

*The President.* I love America, a country that welcomes people. We've got to be a welcoming society. And our soul is renewed when people escape societies that can be really repressive and have a son like Arash, who sits here with the President and the Governor talking about dreams. See, this is a country that has always got to be a place where people can dream big dreams and achieve them.

The question facing America is, will we lose our confidence and become an isolated nation? Will we lose our confidence and our ability to compete in the global marketplace and become a protectionist nation? And the answer is, absolutely not. We will not lose our confidence. And here is part of our strategy to make sure that the United States of America continues to be the leader. And it's important for people

to understand that being the economic leader of the world means that it's more likely you'll have a better job, and it's more likely you'll be able to realize your dreams, and it's more likely our standard of living will continue to rise.

And that's the challenge ahead of us. It truly is. And I want to thank those who are here to help make the case why our citizens have got to be confident about the United States of America's place in the world and why we should never relinquish our standing in the world because we fear the future. We welcome it. We welcome competition, and we know we've got to put a strategy in place to be able to deal with that competition. And you're hearing the foundation for that strategy here today.

I want to thank you all for lending your expertise. Thanks for joining me. God bless you all.

NOTE: The President spoke at 1:57 p.m. In his remarks, he referred to John T. Chambers, president and chief executive officer, Cisco Systems, Inc.; George Scalise, member, President's Council of Advisers on Science and Technology; Lezlee Westine, Deputy Assistant to the President and Director of Public Liaison; and Donald E. Vermeil, member, J. William Fulbright Foreign Scholarship Board. The transcript released by the Office of the Press Secretary also included the remarks of Gov. Schwarzenegger.

## The President's Radio Address *April 22, 2006*

Good morning. This weekend I am traveling in California, where I'm focusing on important issues for our Nation's future, including our economy, energy prices, the war on terror, and immigration reform.

America's economy is strong, and we need to keep it strong in an increasingly competitive world. The talent and innova-

tive spirit of our people have driven America's economic growth. To maintain our economic leadership, our Nation must stay on the leading edge of innovation. So I have proposed the American Competitiveness Initiative.

One important part of this initiative is improving math and science education for

our young people, so they have the right skills to succeed in the 21st century economy. On Friday in San Jose, I had the chance to visit Cisco Systems, a company that understands the importance of preparing the next generation for the high-tech jobs of tomorrow.

Through its Networking Academy Program, Cisco is helping to train high school students in math, science, and information technology skills. By ensuring that we have a skilled workforce for the future, companies like Cisco are helping America compete with confidence and keeping our economy growing and creating new jobs for our citizens.

Saturday is Earth Day, and many of you are asking how we can meet our growing energy needs while protecting our environment. The key is technology. So I have proposed the Advanced Energy Initiative to change the way we power our homes, businesses, and cars. I will visit the California Fuel Cell Partnership to take a closer look at hydrogen fuel cells, one of the exciting new technologies supported by my initiative. These fuel cells have the potential to revolutionize the way we power our cars by giving us vehicles that will emit no pollution and will be more efficient than gas-powered cars.

My Advanced Energy Initiative will also help improve hybrid vehicles, cars and trucks that run partly on electricity and help drivers save gas. We're funding research into a new generation of plug-in hybrid vehicles that could be recharged in electrical outlets and could allow many drivers to make their daily commute using no gasoline.

By developing these and other new sources of clean renewable energy like ethanol, we will continue growing our economy, reduce energy prices and protect our environment, and make America less dependent on foreign oil.

Americans are asking about our progress toward victory in the war on terror. I have confidence in the outcome of this struggle

because I know the character of the people who wear our Nation's uniform. On Sunday, I will attend church and have lunch with Marine Corps and Navy personnel and their families at the Twentynine Palms base. I will tell them how honored I am to be their Commander in Chief and express the gratitude of all Americans for their service in the cause of freedom.

Since September the 11th, 2001, the men and women of our military have overthrown a cruel regime in Afghanistan, captured or killed many Al Qaida terrorists, liberated Iraq, and made America more secure from terrorist dangers. We're fighting the terrorists abroad so we do not have to face them here at home. By taking the fight to the terrorists and bringing liberty and hope to a troubled region, our courageous troops are making the world a safer place.

On Monday, I'll visit Irvine, California, to discuss immigration reform with the local community. Immigration is an emotional issue, and it's sparked passionate debate. When we discuss immigration, we're talking about the integrity of our borders, the enforcement of our laws, and the character of our Nation.

Here's what I believe: America does not have to choose between being a welcoming society and being a lawful society. We can be both at the same time. In the coming weeks, I'll press Congress to pass comprehensive immigration reform that secures our border, enforces our laws, meets the needs of our economy, and upholds our highest ideals.

We must also ensure that all immigrants assimilate into our society and learn our customs, our values, and our language. America is a land of immigrants and a nation of laws, and we must stay true to both parts of this great heritage.

As Congress returns from its recess, its Members have important and consequential work before them. I urge them to act on my initiatives to keep America competitive, to promote alternative sources of energy,

reform our immigration system, and continue their support of our troops fighting in the global war on terror.

By taking these steps, we'll maintain America's strength. And a strong America will help lead the world to a future of greater freedom and prosperity and peace.

Thank you for listening.

NOTE: The address was recorded at 7:49 a.m. on April 21 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on April 22. The transcript was made available by the Office of the Press Secretary on April 21 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks at the California Highway Patrol Academy in Sacramento, California *April 22, 2006*

Today the Iraqi people reached an important milestone in their journey on democracy. Iraqi leaders announced agreement on the top leadership posts for a national unity government. This agreement represents compromise and consensus among many different Iraqi groups, and it came after months of patient negotiations.

The agreement reflects the will of the Iraqi people, who defied the terrorists by voting to choose the men and women who will lead their nation forward. And this historic achievement by determined Iraqis will make America more secure.

Iraq is a nation made up of many different ethnic and religious groups, and Iraq's new leaders represent their country's great diversity. The Iraqi people have rejected the terrorists' efforts to divide them, and they have chosen the path of unity for their free nation.

The new Iraqi leadership now has 30 days to finalize the makeup of the Iraqi Cabinet. Once inaugurated, the new Government will hold power for up to 4 years. Unlike the interim and transitional governments that came before, the new Iraqi Government will have full constitutional authority. And because it expresses the will of 12 million Iraqis who went to the polls last December, it will have the popular

mandate to address Iraq's toughest long-term challenges.

Iraq's new leaders have important responsibilities to the people who chose them. The new Government has a responsibility to deploy the growing strength of the Iraqi security forces to defeat the terrorists and insurgents and establish control over the militias. The Government has the responsibility to rebuild infrastructure that makes commerce possible and that supports the education and health needs of the Iraqi people. The Government must strengthen the economy and encourage job creation and enforce the rule of law. The new Government must ensure that improvements in prosperity and security occur throughout the country so that all Iraqis share in the benefits of their new democracy.

These are major challenges, and the new Iraqi Government will not face them alone. America is helping Iraq's young democracy move forward. Iraqis and Americans are fighting side by side against a common enemy. We're going to defeat the terrorists in Iraq. We will deny them safe haven. And a free Iraq in the heart of the Middle East will be a powerful blow to the terrorists and a beacon of liberty for people across that region.

Formation of a new Iraqi Government is an opportunity for America to open a

new chapter in our partnership with the Iraqi people. The United States and our coalition partners will work with the new Iraqi Government to reassess our tactics, adjust our methods, and strengthen our mutual efforts to achieve victory in this central front in the war on terror.

The new Iraqi Government will assume growing responsibility for their nation's security. And as more Iraqi forces stand up, American forces will stand down. I want to thank all the brave Americans, both in our military and the diplomatic corps, who have served the cause of freedom in Iraq over the past 3 years. I thank their families who have sacrificed time with loved ones serving far from home. I want to thank our wounded service men and women, who have given so much to make this moment possible. And our Nation remembers the fallen heroes who gave their lives to bring liberty to Iraq and security to America. And we will honor their sacrifice by completing this mission.

There's going to be more tough fighting ahead in Iraq, and there will be more days of sacrifice and struggle. Yet the enemies of freedom have suffered a real blow today. And we've taken a great stride on the march to victory. The Iraqi people have defied the terrorist threats; Iraqi soldiers and police have fought with valor for the freedom of their country; and Iraqi leaders have laid the foundations for a democratic government of, by, and for the Iraqi people.

On behalf of all Americans, I congratulate the Iraqi people and their new leaders. The Iraqis are showing the world that democracy is worth the wait, that liberty is worth the sacrifice, and that freedom is the future of every man, woman, and child on this Earth.

Thank you very much.

NOTE: The President spoke at 2 p.m.

## Remarks at the California Fuel Cell Partnership in West Sacramento, California

April 22, 2006

Thank you all. Mr. Secretary—I'm really pleased to have Norman Mineta in my Cabinet. He is a really good guy. And I thank you for your service, friend, and thank you for being here to share in this testimony to what technology is going to do for our country to make it a better place for all of us to live.

First of all, happy Earth Day to you. It's a good place to spend Earth Day, here in California. I got to spend the first part of my day riding a mountain bike in Napa Valley. It's a good place to ride—[laughter]—a little hillier than I would have liked. [Laughter] But it's a spectacular way to commune with nature. And I really appreciate you coming. I want all of us to under-

stand that we have a serious responsibility to be good stewards of our land. And this is a day we unite together to recommit ourselves to be good stewards of our land.

I appreciate the good stewardship—commitment to good stewardship at the heart of the California Fuel Cell Partnership. I bet a lot of our citizens don't understand what goes on here. This is a really interesting collaborative effort between automakers and energy companies and fuel cell technology companies and State and Federal agencies, all united toward a great mission, which is to make hydrogen-powered automobiles and trucks and buses a reality for American drivers. And that will help us be good stewards of the environment,

and that will help us become less dependent on foreign sources of oil.

Today I saw cars and buses that run on hydrogen instead of gasoline and that emit pure water instead of exhaust fumes. This Nation does not have to choose between a strong economy and a clean environment; we can have both at the same time. And investing in new technologies like hydrogen will enable this economy to be strong, people to be able to afford fuel, this country's national security not dependent on parts of the world that are unstable. And technology will once again make this country the leader in the world, and that's what we're here to celebrate.

And I want to thank Catherine Dunwoody, the executive director of the California Fuel Cell Partnership. I appreciate your commitment. You know, you can tell when somebody is pretty enthusiastic about what she's doing, a true believer. And she's a believer because she's not only a person with vision, but she is a practical person. And she has seen firsthand the progress being made.

I want to thank Congressman John Doolittle and Julie for being here. And I also want to thank Congressman Dan Lungren. Thank you all for joining us today. I appreciate your interest.

I thank the members and representatives of the California Fuel Cell Partnership. I want to thank the three guys from Ford Motor Company for giving me a tour. One guy was here; he's been 40 years, I think, at Ford. And here he is, describing what it's like to maintain a hydrogen fuel cell vehicle. I bet you didn't think you'd be talking about that 10 years ago, 20 years ago, maybe 5 years ago. Things are changing for the better, and we're here to celebrate this Nation's desire to improve the quality of life.

I would like to report to you on Earth Day that America's air is cleaner, our water is purer, and the land is better cared for. And that's important for people to know. Over the past 5 years, things have improved

with air, land, and water. And we're setting tough standards when it comes to air quality. We're implementing clean air rules that will reduce powerplant pollution by 70 percent. We've established the first-ever national cap on mercury emissions from powerplants, which will result in nearly a 70-percent decrease in those emissions as well.

Two years ago, I announced an important goal, and that is to end the no net loss policy of wetlands in the United States and increase wetlands in this country. I set a goal to restore, improve, and protect at least 3 million acres of wetlands over the next 5 years. So far we've restored, improved, and protected 1.8 million acres of wetlands. We're doing our part in the Federal Government. We have a responsibility to be good stewards of our air and our water and our land.

You know, flying in here, Congressman Lungren pointed out all the different farms. And I want to thank the farmers and ranchers for being good stewards of the land as well. They've got a lot at stake when it comes to being mindful of maintaining good land practices. I don't know if you realize this or not, but in the farm bill we—I signed and Congress passed, we provide about \$40 billion over a 10-year period to encourage our farmers and ranchers to protect wildlife and conserve our natural resources.

Flying over the mountain ranges we saw the forests. In Washington, we passed the Healthy Forest Initiative, which will help us clear out dangerous underbrush that will help reduce the risk of catastrophic fires. We've got some commonsense, practical things we're doing in Washington that I think the—I know the American people expect us to do.

You know, riding my bike today in the park reminded me of how important it is to make sure those parks are maintained and accessible to the American people. After all, it's your park system. We pledged 5 billion—\$4.9 billion over 5 years to reduce the maintenance backlog in national

parks, and we're honoring that commitment.

I'll tell you something I find very interesting. In the 36 years since the first Earth Day, air pollution in America has been reduced by 50 percent—yet our economy has tripled in size during that time. And there's one main reason why, and that's because of technology. We're a technologically competent nation. We must always be on the leading edge of research and development in this country if we expect to be good stewards of the environment and make sure our people are able to find good work. That's the challenge.

And so today we're here to honor a group of folks who are employing technology, using new ideas to help change the face of America. And it's important work we're doing here, because we've got a real problem when it comes to oil. We're addicted, and it's harmful for the economy, and it's harmful for our national security, and we've got to do something about it in this country.

And so I want to try to share some ideas with you about what we can and must do. First of all, I understand the folks here, as well as other places in the country, are paying high gas prices. And you are because the primary component of gasoline is crude oil. And we live in a global marketplace, and when the demand for crude oil goes up in China or India, fast-growing economies, if the corresponding supply doesn't meet that demand, the price of gasoline is going to go up here in America. The American people have got to understand, what happens elsewhere in the world affects the price of gasoline you pay here.

When that price of gasoline goes up, it hurts working people. It hurts our small businesses. And it's a serious problem that we've got to do something about. The Federal Government has a responsibility, by the way, to make sure there is no such—there is no price gouging, and we're watching real careful to make sure that people are treated fairly.

We're going to have a tough summer because people are beginning to drive now during tight supply. The Energy Department predicts gas prices are going to go up. Part of the reason, of course, is the escalating price of crude oil. Another reason why is, we haven't had any refinery capacity in the United States in a long period of time. When you don't have refining capacity and demand goes up, you're going to see a price increase. And so this country has got to be wise about how we permit refineries and encourage additional refining capacity as well as, you well know here in this State, we're changing the fuel mixes from MPBE to ethanol.

It was right to get rid of MPBE—MPBE was polluting water. It's a product that wouldn't biodegrade. It was a—its a terrible pollutant. And we're replacing that with ethanol, but there's a transition period that has to take place. And all these factors remind us that we got to do something about our dependence on oil. That's what the lessons at the pump say today.

I told you about national security. Let me talk a little bit about that. We get a lot of our oil from places that are unstable, and we get our oil sometimes from people that don't particularly care for us. That's what I mean about national security problems. We do not want to be reliant upon unstable parts of the world. We don't want the lives of our people affected because some nation may not like us.

And so here's a strategy to deal with it: One, we're spending a lot of money at the Federal level to encourage research and development, with the goal of getting away from oil. Spent \$10 billion over the last 5 years to develop cleaner and cheaper and more reliable energy sources. The goal is, as I mentioned in my State of the Union, to promote hydrogen and hybrid vehicles and ethanol. In other words, what technology will enable us to do is change our driving habits, is to figure out new ways to utilize fuels so that they're not—so we can get away from oil-based fuels.

I strongly believe hydrogen is the fuel of the future. That's what we're talking about. Hydrogen is used in a fuel cell that can power a car that uses no gasoline, produces no pollution or greenhouse gas emissions. Hydrogen vehicles can be twice as efficient as gasoline vehicles. Hydrogen can be produced from domestic energy sources, which means it has the potential—a vast potential—to dramatically cut our dependence on foreign oil. Hydrogen is clean; hydrogen is domestically produced; and hydrogen is the wave of the future. And the people here at the California Fuel Cell Partnership understand that.

What's interesting is that they're—because of this collaborative effort, there are now 100 hydrogen-powered vehicles on California roads. That may not seem a lot to some of you, but what you're witnessing here is the beginning of a major change in the driving habits of the American people. That's what you're seeing. We're in a facility that is just at the beginning stage of some of the most exciting technological changes this country will ever see. Hydrogen cars are being used by companies like UPS, the governments of San Francisco and Los Angeles, UC-Davis and Irvine.

I met the bus man here and—where is bus man? There he is, yes. He is one enthusiastic guy. [*Laughter*] He is—he truly believes that urban America is going to be transformed in a very positive way because of hydrogen-powered buses. And if you don't believe me, just ask him. [*Laughter*]

We saw a fueling station today where vehicles come—the drivers drive in here to get hydrogen. About 6,000 automobiles have been fueled at this station since it's been up and running. I appreciate Governor Arnold Schwarzenegger's declaration that California plans to build a hydrogen highway. Of all the States in the United States that has been on the leading edge of technological change, it's been California. That's a positive declaration on his part. Basically what he's saying is we want California to continue to lead this country

when it comes to innovative change. And we support him.

I believe that today's children will one day take a driver's test in a hydrogen-powered, pollution-free car. That's the goal of the United States. And it's a big goal, but it's an attainable goal. All you got to do is look at the progress that has been made thus far. In 2003, I pledged that we would spend \$1.2 billion over 5 years for hydrogen research and development, and we're on track to meet that goal.

One of the reasons I have come here is because I want the American people to understand that their tax dollars are yielding important results, that we are making progress, that the idea of having a hydrogen-powered automobile is not a foolish dream. It's a reality that is going to come to be. The funding is getting results. Since 2003, researchers have used Federal funding to double the lifetime of the hydrogen fuel cell stacks that power cars. In order for this to work, there has to be longevity—you just can't be changing your fuel cell stacks all the time. There has to be durability in order for this to be a product that people will want to buy.

We've cut the cost of manufacturing hydrogen fuel cells in half. That's pretty rapid progress when you think that the funding started in 2003, and the cost of the fuel cells have been reduced in half. And that is important. In order for this to become a part of life, these fuel cells have to be affordable. People have got to be able to buy them in order for them to be able to function properly. And we're making progress. We're heading for a hydrocarbon economy—from a hydrocarbon economy to a hydrogen economy. And that's a very positive development.

There's another positive development taking place in America today, and that's the advent of the hybrid vehicle. And it's a good way to reduce our oil consumption right now. Hybrid vehicles have both a gasoline-powered engine and an electric battery, and they travel about twice as far on

a gallon of fuel as gasoline-only vehicles. We can affect our dependence on oil by encouraging people to purchase hybrid vehicles. And that's why the Federal Government passed a law that says you get a tax credit of up to \$3,400 for a hybrid vehicle purchase. In other words, we're trying to make it worthwhile for you to go out and purchase a hybrid vehicle, through the use of a tax credit.

What's really going to be interesting, however, is what's called plug-in hybrid vehicles. And we're spending \$31 million annually to speed up research into these battery technologies. And what this means is, is that we're trying to develop a battery that will power your vehicle, where you plug it in at night, and you drive the first 40 miles on electricity alone. Now, think about what that means for big cities. A lot of people don't drive more than 40 miles a day in big cities. So all of a sudden, you've now—we're developing a technology that says, you'll drive by the use of electricity, and you won't use gasoline at all.

And one way to affect consumption is to speed up the development of these plug-in hybrids, and we're doing just that at the Federal level. It's a promising technology that will help people change the way they drive. It'll be a transition to the hydrogen fuel cell batteries.

Finally, I want to talk a little bit about ethanol. I'm a big proponent of ethanol. I like the idea of America's farmers being able to grow fuel. I like the idea of people saying, "My corn crop is up, and therefore, we're less dependent on oil from somewhere." And that's what we're beginning to do. We're beginning to change driving habits of the American people by changing the fuel mix in their cars. Any vehicle can use ethanol with a concentration of less than 10 percent. With minor modifications, cars and trucks can become what's called flex-fuel vehicles that run on a fuel blend called E-85, which is a mix of 85 percent ethanol and 15 percent gasoline.

And there are a lot of E-85 fueling stations now, particularly in the Midwest where they grow a lot of corn. But the idea is to be able to use your money to figure out how to use other materials to be able to manufacture ethanol. And we're close to some interesting breakthroughs. We're close to breakthroughs to be able to make ethanol from wood chips and stalks and switchgrass and other natural materials. And it makes a lot of sense if we're trying to get off oil, and it makes sense to use taxpayers' money to research ways to use switchgrass, for example, to become a fuel for your automobile. I think it does.

Catherine reminded me, however, in my discussions with her, that switchgrass can also be used to manufacture hydrogen. She wanted me to make sure—[laughter]—that in my description of what is possible in the United States that we—make sure one technology does not pirate money for another technology. And it's not going to happen. What's going to happen is we'll have research on all fronts to achieve a grand national objective. And there's no doubt in my mind we'll be able to achieve this objective.

We've done a lot of things in this country in the past. We've changed ways of life in—to make life qualitatively better for American people because we're innovators, and we're thinkers, and we get things done. And on this Earth Day, what I wanted to come to California to say is, we're in the process of dreaming big dreams for the American people but dreams that will be accomplished. We can't lose our nerve. We shouldn't lose our vision. We should remember where we've been and where we're going. And we're going to a day—and no doubt in my mind—where the United States of America will not be dependent on oil, will be good stewards of the environment, which will benefit the quality of life of the American people.

Thank you for letting me come by to talk to you. God bless.

NOTE: The President spoke at 2:41 p.m. In his remarks, he referred to Julia Harlow, wife

of Rep. John T. Doolittle of California; and Gov. Arnold Schwarzenegger of California.

## Remarks at a Republican National Committee Reception in Indian Wells, California

April 22, 2006

Please be seated. Thanks for coming. The lesson of the 1994 fundraiser is I should have had a better chairman. [*Laughter*] I want to thank you all for coming. I really appreciate your support for the Republican Party. We're the party that is the party of ideas, a party of optimism, and a party of people who know how to solve problems, which is exactly what we're doing.

I, first, wish Laura were here; she's not, of course. About four people go through the photo-op line indicated that they kind of would rather have Laura here than me. [*Laughter*] Yes, well—I can understand why. She is really a fine person, and she sends her best to all her friends here.

I thank my friend Brad. You know, one of the great things about our life is that we've had friends before I got into politics, and they're going to be our friends after we're in politics. And Brad Freeman is such a person, and I value his friendship. I want to thank him for organizing this event.

I want to thank all the folks who helped make this a very successful event. One reason why we are successful as a party is because we've got a great party chairman who understands that our message is one that should reach into every neighborhood; ours is one that is inclusive; ours is one that is hopeful—and that's Ken Mehlman. I want to thank you for coming, Ken.

I appreciate Duf Sundheim, party chairman here in California. I saw Duf yesterday at Cisco Systems, saw him here in the desert. What are you doing tomorrow, Duf? [*Laughter*] But thank you for your service; appreciate it very much.

I'm confident that Arnold Schwarzenegger will be reelected to Governor of this important State.

I am always a better person after I've been in the presence of Mary Bono. She is the Congresswoman from this district; she is smart; she's capable; she's doing an excellent job for the constituents here. I don't know if you realize this, but today is Earth Day, and Mary has led the way to make sure that some of the most valuable territory, some of the most valuable country in this part of the world are preserved for generations to come, and I want to thank you for your leadership. I also want to thank you for your strong stand in the war on terror. You're doing a fine job.

Connie Mack, from the great State of Florida, is with us. Congressman, good to see you; thank you for coming. Proud you're here. Good friend of the brothers, and mine too.

Bruce McPherson, the secretary of State is with us. Bruce, thank you for coming. Appreciate you being here, sir. I call him Senator; now we call you Secretary. It's good to see Mary as well.

Chuck Poochigian is with us. Chuck is running for the State attorney general. Chuck, good luck to you. Thank you. My old buddy, proud to see you. Thanks for coming. Thanks for bringing Debbie with you as well.

Steve Poizner is with us, running for the insurance commissioner. Steve—there he is. Good luck to you.

I just said hello to Congressman Brian Bilbray. Where are you, Brian? Thanks for

coming. Good luck on your race. We're pulling for you. Finally, Ben Stein is with us. Appreciate you coming, Ben. I think he's with us. Maybe he's not with us.

I'd like to make a couple of points, and then we'll sit down for a second, and then visit some more with you. Today we had an important day in the war on terror. The elected leaders of Iraq came together and formed a unity government for the sake of people—[*applause*]. The formation of a unity government is a blow for the terrorists who have tried to divide Iraq and prevent Iraq democracy from emerging forward.

And the United States of America will continue to stand with the brave citizens of Iraq as this democracy grows. It is in our interests that democracy succeed in Iraq. We must defeat the terrorists by denying them safe haven, and we will defeat the terrorists with an ideology that is hopeful and optimistic and positive, and that's an ideology based upon liberty.

I've also had a wonderful time traveling your beautiful State. Yesterday I talked about a really important initiative for our country, and that is the Competitiveness Initiative. And the reason it's—I started talking about it in my State of the Union is because it is very important for the United States of America to feel confident about our future, and not to fear it.

There are some in our country that feel like we should isolate ourselves from the world. There are some who fear trade with other countries and, therefore, want to throw up walls and protective barriers—not me. I believe the United States, in order to make sure our people have got a standard of living that improves, must be a leader in the world, must not fear competition, must be willing to continue to put policies in place that will mean that other generations of Americans coming up can realize a great quality of life. And it starts with making sure that the United States of America is the leader of research and technology.

And so yesterday at Cisco Systems, I talked about our desire to double Federal funding for the basic sciences so as to continue to make sure we're technologically advanced. I also talked about making sure the research and development tax credit is a permanent part of the Tax Code to encourage private investment when it comes to research.

But I spent a lot of time yesterday talking about education. I proudly signed the No Child Left Behind Act, which changed the way people should view education, from one in which it was okay just to move kids through to one that said we're going to measure, and we're going to hold people to account. We're going to set high standards, and we're going to measure to determine whether our children are learning to read and write and add and subtract. And if we find out they're not able to read and write, we'll correct problems early, before it's too late. I want to extend that same rigor that we've applied in reading to math and science so that our children have got the skills necessary to fill the jobs of the 21st century.

And today I had the honor of being in West Sacramento, after my bike ride, by the way, in Napa Valley, which—good place to ride, by the way. I talked about an issue that I know is on people's minds here in California, and that is high energy prices. And I reminded our folks that we live in a global world, and when China's demand for energy goes up, it affects the gasoline prices here. When India's demand for energy goes up, it affects the gasoline prices here, which says to me, we've got to be smart about using energy—using investment technology to get away from use of oil.

And I talked about plug-in hybrid vehicles, the research going into that, so that one day you'll be driving your first 40 miles on electricity, electric batteries. And I talked about ethanol. But I also talked about hydrogen fuel cells, which I believe

will be the wave of the future for how we drive our cars.

What I'm telling you is, ours is a party that has got a vision and a plan to make sure the United States of America is the leader in the world. Our message to the American people is, don't fear the future because we intend to shape the future.

Thanks for coming. I'll answer a few questions in a little bit. Thank you for being here.

NOTE: The President spoke at 6:05 p.m. at the Toscana Country Club. In his remarks, he referred to Bradford M. Freeman, California State finance chairman, Bush-Cheney '04, Inc.; Gov. Arnold Schwarzenegger of California; California Secretary of State Bruce McPherson, and his wife, Mary; Charles S. Poochigian, candidate for California State attorney general, and his wife, Debbie; Brian Bilbray, candidate for Congress in California's 50th Congressional District; and entertainer Ben Stein.

## Remarks to Military Personnel and Their Families in Twentynine Palms, California

*April 23, 2006*

Thanks for the warm welcome. Sergeant Major, thanks for the introduction. It's an honor to be here. I've been really looking forward to coming to Twentynine Palms. The general told me that I'm the first President ever to have come. It's an honor to be the first President, but he also reminded me that my mother beat me to the punch. [*Laughter*]

I want to share some thoughts with you right quick. One, I'm incredibly proud of the United States Marine Corps. You bring honor to our country. You represent the very best of America. You represent men and women who volunteer to serve during dangerous and historic times. And because of your service, we're defeating an enemy overseas so we do not have to face them here at home. Because of your service, we've liberated people from the clutches of a tyrant. And because of your service, we're laying the foundation of peace for a generation of Americans to come. These are historic times, and your service makes me incredibly proud.

And I also want to say something to your families. It's hard when your loved one is overseas. I respect your sacrifice and want

to thank you very much for your service to our country as well.

Today I—this morning I was—had three phone calls I think that you might find of interest. I spoke to the President of Iraq, the Speaker of the Iraqi Assembly, and the Prime Minister-designate. It was a remarkable phone call. First, they expressed their deep appreciation for the United States of America and our soldiers. They understand the sacrifices that you are making on their behalf, and they are grateful for those sacrifices. And the reason why they are is because they represent the 12 million people who went to the polls in the face of incredible terrorist threats, and said, "We want to be free; we desire to live in a free society."

I told them—I said that they have awesome responsibilities to their people. They have the responsibility of improving the lives of men and women regardless of their religious status and nature; they have responsibilities to defeat the terrorists; they have a responsibility to unite their country. And I believe they will.

The formation of this Government is an important milestone toward our victory in Iraq. A lot of times people ask me about

my attitude about things, and here's my attitude: The only way we can lose in Iraq is if we lose our nerve. And I'm not losing my nerve, and I know that the United States Marine Corps will not lose their nerve, either.

Yesterday was an important day, but I recognize we still have more work to do. Democracy in Iraq will be a major blow for the terrorists who want to do us harm. Democracy in Iraq will deny them safe haven. Democracy in Iraq will set a powerful example for people in a part of the world who are desperate for freedom.

It is such an honor to be here with the mighty United States Marine Corps and their families. May God bless you all, and

may God continue to bless our country. Thank you.

NOTE: The President spoke at 12:34 p.m. in the Mess Hall at the Marine Corps Air Ground Combat Center. In his remarks, he referred to Sgt. Maj. James M. Ricker, USMC, and Brig. Gen. Douglas M. Stone, USMC Reserve, commanding general, Marine Air Ground Task Force Training Command; President Jalal Talabani, Speaker of Parliament Mahmoud al-Mashhadani, and Prime Minister-designate Nuri al-Maliki of Iraq. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Visit With Former President Gerald R. Ford in Rancho Mirage, California

April 23, 2006

*President Bush.* It's such an honor to be with President and Mrs. Ford. The country has produced a lot of fine citizens, and there's no two finer people than these two. Thank you for your hospitality, sir.

*Former President Ford.* We solved all the problems, didn't we? [*Laughter*]

*President Bush.* That's right; we sure did.

*Former President Ford.* Well, thank you for stopping by, George.

*President Bush.* God bless you.

*Former President Ford.* Same to you, sir.

NOTE: The President spoke at 6:01 p.m. at President Ford's residence.

## Remarks on Immigration Reform and a Question-and-Answer Session in Irvine, California

April 24, 2006

*The President.* Thank you all. Please be seated. Thanks for letting me come by. Tom, thanks for the invitation. What I thought I would do is share some thoughts with you on some issues that kind of, like, may be on the TV screen these days—[*laughter*]—and then answer some of your

questions. I'm interested to know what's on your mind.

First, I've had a fabulous trip to your unbelievably beautiful State. It started off in northern California—Cisco; then I went to Stanford; then I went to Napa Valley. Then I rode my bicycle on Earth Day in

Napa Valley. Then I found out the mountains are a little steep in Napa Valley. [Laughter] I then went down and spent a fantastic time in Palm Springs. What an unbelievably diverse State, and it's a fantastic place to end my journey, here in Orange County. I want to thank you for giving me a chance to come by and visit with you.

Laura sends her very best. I, of course, checked in with her this morning before I headed over here, to see if she had any additional instructions for me for the day. [Laughter] She said, "Keep it short." [Laughter] I'm a lucky man to have Laura as a wife. You can imagine what it's like to be President—there's some pressure on your family, as you can imagine. The good news is I've got a 45-second commute. [Laughter] And the better news is I've got a wife who is a fantastic First Lady, who shares a passion with me to do the best we can for our country.

I want to thank Lucy Dunn, as well as thanking Tom for putting this event together. I appreciate the members of the Orange County Business Council. I want to thank Congressman John Campbell for his service; appreciate you. He's the Congressman from this district, by the way. And Catherine is with us. Thank—Congresswoman Mary Bono is with us today. Mary, thank you for being here. I just spent some quality time in her district, and I forgot to tell you that I had the privilege of riding my mountain bike in the desert as well. The national monument that she helped put together to preserve open spaces—she's got a lot of humility; she didn't name the national monument after herself. If I were to name it, I would say, "Really Hard Bike Ride Monument." [Laughter]

I want to thank Congressman Ken Calvert for joining us today. Ken, it's good to see you; proud of you. Congressman Gary Miller is with us today. Congressman, thank you. Mayor Beth Krom of city of Irvine—Madam Mayor, thank you for being

here. Thanks for serving. There you are, Mayor. Thank you; appreciate you coming. Thanks for serving. I had—last night—by the way, I had dinner last night with the mayor of Los Angeles and mayor of Long Beach and mayor of Anaheim and some other mayors that came.

Real important for the President to pay attention to people, what's on their mind, and that's what I'm here to do today. I want to share some things that's on my—first of all, Rick Warren, by the way, is here. Where are you, Rick? There you go. I appreciate you. Still got the calendar in the desk. [Laughter] Ambassador Argyros—good to see you, George. George served our country as the Ambassador to Spain. Thank you.

I got a lot on my mind these days. I want to share two thoughts with you. First, I want to talk about the war on terror. I wish I could report to you that the war on terror was over. It's not. There is still an enemy that wants to do us harm. And the most important job of the President of the United States is to protect the American people from that harm. That's—and I think about it all the time.

As you know, well, I make a lot of decisions, and at the core of my decisionmaking when it comes to protecting America is the lessons learned from September the 11th, 2001. My job is to use the resources of the United States to prevent such an attack from happening again. And the first lesson of September the 11th, 2001, is that we face an enemy that has no regard for innocent life, an enemy which has hijacked a great religion to suit their political needs.

And therefore, the only way to deal with them is to stay on the offense, to pressure them, and to bring them to justice, which is precisely what the United States of America is doing and will continue to do for the safety of the American people.

The second lesson is we must deny these folks safe haven. They need to find safe haven from which to plot and plan. We

denied them safe haven in Afghanistan, and we're denying them safe haven in Iraq.

One of the important things that a President must do is to take the words of the enemy very seriously. And when the enemy speaks—and they speak quite often—we listen carefully. We listen to their aims and their objectives. These are not a kind of isolated, angry people. These are folks bound together by an ideology that is totalitarian in nature. They believe that capitalism produces weak societies. They want to spread their idea of life throughout the Middle East; they have stated so—in word after word. And they believe that with time, they can establish a safe haven in Iraq.

And here's the danger of having an enemy with a safe haven in Iraq: Iraq has got wealth; Iraq has—had weapons of mass destruction and has the knowledge as to how to produce weapons of mass destruction. And the confluence of a terrorist network with weapons of mass destruction is the biggest threat the United States of America faces. They have said it's just a matter of time.

And they've got a powerful weapon, by the way—the enemy does, and that is the willingness and capacity to kill innocent people. And they understand the United States of America is a compassionate nation. They view—I'm sure they view this as a weakness of our country; I happen to view it as a strength, that we value every life, that every person is precious. But they know, and it doesn't take much to realize that when you put carnage on our TV screens, it causes us to weep. It causes people, rightly, to say whether or not the cause is worth it. It's a legitimate question for the American people.

But it's very important for the American people to understand that they're trying to run us out of Iraq for a purpose. And the purpose is to be able to have safe haven from which to launch further attacks. And I understand it. And we've got a strategy in place to achieve victory.

Yesterday I went over to Twentynine Palms—I want to tell you something about the United States military. These young men and women are incredibly dedicated. They are motivated. They understand that we must defeat the enemy over there so we do not have to face them here at home. Most of them raised their hand to volunteer after September the 11th. Many of them have said, "I want to continue to serve our country." We're lucky to have people like them willing to serve. And the United States Government, whether you agree with my policy or not, must stand by our troops. When they're in harm's way, they deserve the best pay, the best equipment, and the best possible support.

And I told them—I told them they didn't have to worry about me. I believe we're going to win in Iraq. And a victory in Iraq will be a major blow to the totalitarian vision of bin Laden and his lieutenants—a major blow. One, it will be a tactical blow. We'll deny them that which they want. But secondly, it will be a major blow because, in the long term, the best way to defeat an ideology of hatred is with an ideology of hope.

I base a lot of my foreign policy decisions on some things that I think are true: One, I believe there's an Almighty; and secondly, I believe one of the great gifts of the Almighty is the desire in everybody's soul, regardless of what you look like or where you live, to be free. I believe liberty is universal. I believe people want to be free. And I know that democracies do not war with each other. And I know that the best way to defeat the enemy, the best way to defeat their ability to exploit hopelessness and despair is to give people a chance to live in a free society.

You know, the Iraqis went to the polls last December for the third time in one year. It seems like a decade ago, doesn't it? It seems like it was just an eternity ago that 12 million people defied terrorists, threats, and said, "We want to be free. We're sick and tired of a society that had

been suppressed by a brutal tyrant. We want to go to the polls. We want to be self-governing." I wasn't surprised; I was pleased, but not surprised. If you believe that liberty exists in the soul of each person on the face of the Earth, it shouldn't surprise you that, given the chance, people will say, "We want to be free." And now the role of the United States is to stand by the courageous Iraqis as their democracy develops.

It's not easy work, by the way, to go from tyranny to democracy. We had kind of a round go ourself, if you look back at our history. My Secretary of State's relatives were enslaved in the United States even though we had a Constitution that said all were—that believed in the dignity, or at least proclaimed to believe in the dignity of all. The Articles of Confederation wasn't exactly a real smooth start for our Government to begin. And what you're watching on your TV screens is a new democracy emerging. And I had the privilege of calling the President of Iraq, the new Speaker of Iraq, and the Prime Minister-designee of Iraq, there at—in the comfort of my hotel room in Palm Desert—Palm Springs. And I can't tell you how heartened I was to hear their words.

First of all, they expressed great appreciation for the American people and our troops and the families of our troops. Secondly, to a person—this is a Kurd, a Shi'a, and a Sunni I'm talking to—each one of them said, "We want to have a national unity government. We're sick of the sectarian violence. We believe if you stand with us, we can achieve our objective of becoming a democracy that listens to the people." And I believe them. And I believe them. And I told them—I said, look, it's going to be up to you to make it work, but you can count on the United States of America because we believe in liberty and the capacity of liberty to change lives and to change the neighborhood for a more peaceful tomorrow.

This is a new chapter in our relationship. We had an important milestone when the unity Government was formed, and now there's a new chapter in the relationship, and we're moving forward.

You know, it's really important for people to be able to connect the concept of freedom to our security. And it's hard. It's hard, particularly in a day and age when every act of violence is put in your living room. And I know that. I fully understand the challenge I face as the Commander in Chief to describe to the American people why the sacrifice is worth it.

And perhaps the best way to do so is to share one of my favorite lessons of history with you, and that is that my relationship with Prime Minister Koizumi of Japan is a special relationship. He's an interesting guy. He's a—and he's a friend, and we work to keep the peace. We sit down—when we sit down, we talk about the importance of democracy developing in Iraq. The Japanese had troops, by the way, in Iraq to help this young country. We talked about North Korea. We talk about issues of peace. I find it so interesting and so ironic that those are the conversations I have with him, especially since 60 years ago, my dad and, I suspect, many of your relatives fought the Japanese as the enemy.

And so what happens between 18-year-old George H.W. Bush, Navy fighter pilot, signing up to fight the sworn enemy of Japan and his son sitting down to talk about the peace? What happened was, Japan adopted a Japanese-style democracy. Democracy can help change the world and lay the foundation for peace. And that's what's happening today. These are historic times. My job is to lead this Nation to protect you, and my job is to lay the foundation of peace for generations to come. And that is why I told those marines yesterday that we're going to complete the mission.

I got a lot of other things to talk about. I want to talk about immigration. So I saw my friend Brulte, ex-politician, you know?

Always a friend—he said, “People are wondering why you would come to Orange County to talk about immigration.” [*Laughter*] And the answer is because that’s what a leader does.

And I want to talk to you, tell you my thoughts about the subject. First of all, I understand it is an emotional subject. And it’s really important that those of us who have microphones and can, you know, express ourselves, do so in a respectful way that recognizes we are a nation of immigrants, that we have had a grand tradition in this country of welcoming people into our society. And ours is a society that is able to take the newly arrived, and they become equally American. I believe that immigration has helped reinvigorate the soul of America. I know that when somebody comes to our country because he or she has a dream and is willing to work hard for that dream, it makes America a better place.

Now, first and foremost, the Federal Government has the role to enforce our border. The American people are right in saying to the Government, enforce the border. Listen, I was an old border Governor. I understand it’s important to enforce our border, and we are. We got a lot of good people down there working hard on the border to keep people from coming—and contraband, or whatever—from coming into this country illegally. We’ve increased the number of Border Patrol. And I want to thank the Congresswoman and Congressmen here for being wise about providing resources to increase the number of patrol on the border. But that’s not enough.

We’ve got to have modern equipment to be able to help people find people that are coming across a very long and difficult border—to protect; so we got infrared. Unmanned vehicles are being—aerial vehicles are being—UAVs are being deployed. I mean, we’re now beginning to modernize our border so that the people we’ve asked to enforce the border have got the tools

necessary to do so. In parts of the rural border, there needs to be berms to prevent people from flying across in their SUVs, smuggling people into America. And we’re strengthening this border. I’ll tell you something that’s interesting. Since 2001, 6 million people have been caught illegally trying to get in this country, and turned back—6 million people. So people are working down there, and they’re working hard.

And I’m going to continue to work with Congress. I know these people from Congress are interested in providing the Border Patrol and those responsible for enforcing the border the tools necessary to do their job, and I thank you for that.

Secondly, we have got a problem with—we have a problem we’re going to solve this year, by the way, of catching people from—non-Mexican illegal immigrants, and just sending them back into society. There wasn’t enough detention beds. So you got the people down there working hard and 6 million people caught since 2001 and sent home. Well, most of the Mexican citizens who were caught trying to illegally come in the country just sent back to their country. But if you catch somebody from Central America coming back, you just can’t send them back for a while, so there needs to be a place to detain them. We didn’t have enough bedspace, and so we had catch-and-release. We’re asking people to go down there and do their job, and they find somebody from Central America sneaking in, and they say, “Check back in with us in 45 days; come and see your immigration guy down there.” [*Laughter*] And they weren’t checking back in after 45 days. [*Laughter*] They were coming to work, see. They wanted to put food on the table for their families, and they weren’t interested in checking back in.

And so it meant there was a lot of wasted effort by the Border Patrol. We’re going to change that. One of the things that Congress has done, it’s done a good job of providing additional money for bedspace

and money to make sure that we can send people back home. You got people coming up who want to work, see. They're going broke at home; they want to put food on the table; they go to unbelievable lengths to come and feed their families. We're catching them; we're putting them back in—we're stopping that. Our job is to enforce this border—6 million people have been turned back. And we got a strategy in place to make sure that this border is as tight as it possibly can be.

Secondly, in order to make sure immigration laws work, you got to enforce the laws on the books, see. If it's illegal to hire somebody, then the Federal Government has got to enforce those laws. We're a nation of law. And by the way, you can be a nation of law and a compassionate nation at the same time. You don't have to be—[*applause*].

Now, the problem we have is, is you got some person out there in central Texas needing a worker, and he can't find a worker, an American. And so he says, "Look, is anybody—help me find somebody? I got something to do." This economy is growing, see—4.7 percent unemployment rate nationwide—pretty good numbers. And people are having trouble finding work that's—Americans won't do, and that's a fact of life. And so he says, "Why don't you send somebody over to help me?" And they show up, and they put a Social Security card out there, and it looks real. You know, our small-business owners are not document checkers. These are people trying to get ahead, and it's impossible to—[*applause*]. It's impossible to really effect the enforcement of our laws if people are able to use forged documents.

Now, we've increased the amount of manpower there to hold people to account for hiring illegals, but it is difficult to hold somebody, an employer to account if they're putting false papers on—the truth of the matter is, what's happened is, people are trying to come in this country, and we got smugglers smuggling them in. And

they're putting them in the back of 18-wheelers, stuffing human beings in the back of trucks, because they're come—people are coming to do jobs Americans won't do. They're putting people out in deserts. We've lost a lot of people, a lot of decent, hard-working people, trying to come in this country in the desert—losing their lives. These smugglers are *coyotes*; they're, kind of, preying on innocent life. And they've got a whole document forgery industry going on.

See, we made it such that an underground industry thrives on human beings, people coming to do work that the Americans will not do. And so I think that the best way to enforce our border—and the best way, besides making sure it's modern and we've got manpower and equipment down there, which we do, and it's increasing every week—is to come up with a rational plan that recognizes people coming here to work and let them do so on a temporary basis. That's why I'm for a temporary-worker program that will—that says to a person, "Here is a tamper-proof card that says you can come and do a job an American won't do, fill a need." Tamper-proof card, all of a sudden, makes interior enforcement work. In other words, we now know who's getting the cards, and we know they can't be tampered with. So when somebody—the guy says, "Show me your tamper-proof card before I hire you." And if they do, fine. But if they don't, say, "I'm not hiring you. You got to have the card to get work."

Secondly, we got a lot of people sneaking across the border to do jobs. It is really hard to enforce the border with people sneaking across to do jobs. Doesn't it make sense to have a rational, temporary-worker plan that says, you don't need to sneak across the border; you can come on a temporary basis to do a job Americans won't do? So you don't have to sneak across—so you don't have to pay money to a *coyote* that stuffs you in the back of a truck; so you don't have to burden our borders.

Look, we want our Border Patrol hunting down gun smugglers and dope runners. And it just seems rational to me and logical to me that says, okay, fine, you can come and do a job Americans won't do for a temporary period of time with a tamper-proof card.

All of a sudden, we've kind of taken this smuggling industry and dismantled it through rational policy. All of a sudden, we recognize that we want to treat people with respect. I know this is an emotional debate. And I can understand it's emotional. But one thing we cannot lose sight of is that we're talking about human beings, decent human beings that need to be treated with respect.

Massive deportation of the people here is unrealistic. It's just not going to work. You can hear people out there hollering, it's going to work. It's not going to work. It just—it's—and so therefore, what do we do with people who are here? And this is one of the really important questions Congress is going to have to deal with.

I thought the Senate had an interesting approach by saying that if you've been here for 5 years or less, you're treated one way; and 5 years or more, you're treated another. It's just an interesting concept that people need to think through, about what to do with people that have been here for quite a period of time.

Now, my attitude is this: I think that people ought to be, obviously, here to work on a temporary basis. The definition of temporary will be decided in the Halls of Congress.

Secondly, I believe that a person should never be granted automatic citizenship. And let me tell you why I believe that—that if you've been here, broken the law and have been here working, that it doesn't seem fair, to me, to say you're automatically a citizen, when somebody who has been here legally working is standing in line trying to become a citizen as well. In other words, there's the line for people.

But what I do think makes sense is that a person ought to be allowed to get in line. In other words, pay a penalty for being here illegally, commit him or herself to learn English, which is part of the American system, and get in the back of the line. In other words, there is a line of people waiting to become legal through the green card process. And it's by nationality. And if you're a citizen here, who has been here illegally, you pay a penalty; you learn English; and you get in line, but at the back—not the front. And if Congress wants a shorter line for this—for a particular nationality, they increase the number of green cards. If they want a longer line, they shrink the number of green cards per nationality.

This is an important debate for the American citizens to conduct. It's a debate that requires clear, rational thought. And it's really important for those of us in positions of responsibility to remember that we're a nation of law, a welcoming nation, a nation that honors people's traditions no matter where they're from, because we've got confidence in the capacity of our Nation to make us all Americans, one Nation under God.

And so that's what's on my mind today—got a lot of other things, if you're interested. But I got some time for some—I'd like to answer some questions, if you got any, or hear from you.

Yes, sir.

#### *President's Analysis of First Term*

Q. Morning, sir. [*Inaudible*]

*The President.* Pretty good. I think I'm doing all right, yes. [*Laughter*]

Q. I understand you get a lot of tough questions, and you're very candid person, so assuming that you agree with the fact that no one's perfect—

*The President.* I agree with that.

Q. Good.

*The President.* Especially me. [*Laughter*]

Q. I'd like to get your candid response to your perspective from the outside looking in, and now the inside looking out. Before you became President, obviously, you had some perceptions based on your family history, being Governor, what it would be like to be President of the U.S. Now that you are President and you've had a chance to go through the experience and you're in your second term, candidly, if you had it to do over, would there be anything that you'd do differently?

*The President.* I appreciate it. The fundamental question—the threshold question is, would I run in the first place? That's really the first question that one would ask. Now that I'm here, seeing what it's like, would I do it again? And the answer is, absolutely.

I have enjoyed this experience in a way that's hard for me to describe to you. Listen, there have been some rough moments. But it is an incredible honor to serve our country.

The second threshold question is, would I commit troops to protect the American people? It's really a fundamental question. Knowing what I know today, would I have done anything differently with our troops?

First, you got to know that the hardest decision for a President is to put anybody in harm's way—because I fully understand the consequences of making such a decision. I was at church yesterday in Twentynine Palms. In the pew that I was sitting in was a mother and stepfather grieving for a guy who lost his life, and I knew that I would have to deal with this as best as I possibly can.

I also wanted to let you know that it's before you commit troops that you must do everything you can to solve the problem diplomatically. And I can look you in the eye and tell you, I feel I've tried to solve the problem diplomatically to the max, and would have committed troops both in Afghanistan and Iraq knowing what I know today.

Obviously, as we look back—and every war plan is perfect until it meets the

enemy. It's fine on paper until you actually start putting it into practice. And there is a—decisions like preparing an Iraqi Army for a—external threat. Well, it turns out, there may have been an external threat, but it's nothing compared to the internal threat. We got in and started trying to build some big reconstruction projects right off the bat. And it didn't make any sense, because it was easy for—they were—became convenient targets for the enemy. And so we started to decentralize our reconstruction—this kind of—I'm getting down to the minutia. But there are some tactics that—when I look back—that we could have done differently.

The fundamental question on the Iraq theater, though, is, did we put enough troops in there in the first place? That's the debate in Washington. I'm sure you've heard about it. It's a—here, let me just tell you what happened. I called Tommy Franks in with Don Rumsfeld and said, "Tommy, if we're going in, you design the plan, and you got what you need." I said—I remember the era when politicians were trying to run wars, people trying to fine-tune this or fine-tune that. One of the lessons of Vietnam, it seemed like to me—still does—is that you can't—people tried to make decisions on behalf of the military, which, I think, is a terrible precedent to make if you're the Commander in Chief. By the way, you can't run a war, you can't make decisions based upon polls and focus groups, either.

And so I told Tommy, I said, "You know you got what you need." And then it's my—then the fundamental question is, when I'm looking him in the eye, do I think he's comfortable telling the Commander in Chief what's real and isn't real? So I spent a lot of time with Tommy, and the first time I'm with him I'm trying to figure out whether or not he has got the ability to walk in the Oval Office—which can be kind of an intimidating place—and say, "Here's what I think, Mr. President."

I was comforted by the fact that Tommy and I were raised in the same part of the world. He went to Midland Lee High School with Laura, by the way. I felt like that there was kind of a kinship to begin with, and I'm confident, sir, that Tommy told me exactly what was on his mind. I believe that. And so therefore, the troop level that he suggested was the troop level necessary to do the job. And I support it strongly.

And I fully understand people are going to think back and, could you have done something different, or not different? And that's fair, and it's worthwhile. And we still have Members of Congress who are coming in—and they should—are coming in and say, “Mr. President, have you thought about this, or are you going to do that?” And we're constantly adjusting on the ground to meet an enemy which changes. But on the big decisions of sending the troops in, I'd have done it again.

Thank you. Great question.

Yes, sir.

### *Vision for the Future*

Q. Good morning—I'm 14 years old, and I was wondering what America is going to be like in 10 years. [Laughter]

*The President.* Here's what America needs to be like—maybe 20—[laughter]—10 to 20. You need to be driving an automobile with hydrogen as the main source of power. And at the very least, with a hybrid—a plug-in battery of a hybrid vehicle that will you get—let you get the first 40 miles without using gasoline. In other words, between 10 to 20 years from now, we got to get off Middle Eastern oil. It's a problem.

You'll be able to see a technology, a technology that will be able—enable you to converse with somebody on long distance, and it seems like the person is right there in the room with you. I saw that at Cisco. It's an amazing technology that will mean that education changes to the better. You can hire a—you've got a—if

you got yourself a State like we got in Texas, that's rural, you can get a chemistry professor from one of the urban centers and put them on the screen, and it's like the professor is right in the room, teaching. There's a way to husband resources.

You'll have the capacity to interface with people around the world in a real-time basis. You'll be able to talk more clearly. Information will become even more powerful than it is today. And the fundamental question is, what do we do with that information? You'll be confronted with very difficult choices when it comes to science. The first choice we all have to deal with right off the bat is whether or not it's okay to destroy life to save life. In other words, as technology progresses, as this country of ours is more technologically advanced, you're going to be confronted with serious ethical choices. It's just—there will be a clash between morality and science that will present some really difficult decisions for people.

You'll be able to have a leader that can go and sit down with a duly elected leader of a major Middle Eastern country, saying, “How can we keep the peace together?” I believe you'll see there's a democracy movement moving across the Middle East over the next 10 years. Much of it's going to be led by women who don't want to be a second-class citizen in any society. I think you'll see a relationship between the United States and other great powers that will enable us to work together to be able to provide a stable platform.

What I hope you don't see is a nation that loses its nerve and becomes isolationist and protectionist. That's one of my concerns, so I put it in the State of the Union. It was such a concern that, instead of going with the—here are the 29 things we're going to do either for you or to you, it was—[laughter]—I talked about isolation and protectionism. It's very important for this Nation to be a confident nation and to remain a leader of the world. You cannot win the war on terror if you kind of pull

back and say, let somebody else deal with it.

You can't do your duty as a nation that should subscribe to the theory that to whom much is given, much is required—and that duty is to help deal with HIV/AIDS, for example, on the continent of Africa. We have a duty to help feed the hungry, in my judgment.

What I hope you don't see is a nation that loses its confidence in the capacity to trade with countries like China. Hu Jintao was—came to visit, and we had a wonderful visit with him. But I know there are some Americans who wonder whether or not it's worth the effort to try to outcompete with China. They look at the statistics, and they worry about whether or not it is possible to compete with China. I say, you bet it's possible to compete with China. And not only can we compete with China, if we have a level playing field, we'll do just fine.

And so what I'm telling you is, I hope you have a nation that, at home, is one that is able to balance technology and ethical concerns, a nation, by the way—I hope those taxes remain low, see. One of the things you got to make sure—you got to have that proper balance between what Government really needs and money in your pocket.

And anyway—great question, by the way, for a 14-year-old guy. I'm not so sure if I were 14, I'd have been able to get that question out. I might have been a little nervous. [Laughter]

Let's see—yes, ma'am.

### *Community Health Centers*

*Q.* First of all, I want to thank you for coming to Orange County. I don't know who said it wasn't a good idea, but I think it's a great idea. And we love you, so thank you for being here. I very much support your immigration plan. I think it's a good framework. But the one question I have—last year, my daughter fell and broke her hip—she's 12. And it was 5 hours in the emergency room at the hospital before she

could see a doctor. And a lot of people in the ER were there because it was their primary medical facility—

*The President.* Correct.

*Q.* So in your plan, how do you plan to address health care and schools and so forth that are really impacted?

*The President.* Community health centers—we—this administration, working with the Congress, has funded the expansion of what's called community health centers. Community health centers are places for the poor and the indigent to get primary care so to do exactly what—to address the problem that you described, which is primary care in emergency rooms are costly. They are—it's not a cost-effective treatment—I guess it is once you get the treatment, but it's not cost-effective overall and, therefore, the advent of community health centers.

And I don't know if you've got them here in Orange County; I hope you do. I bet you do. You don't have any? Well, get to working, Congressman. [Laughter] But that's the best way, really, to be able to address the issue, whether it be for an immigrant who is here or anybody else that cannot afford health care. The best place to get primary care is not the emergency rooms. And so we've got a comprehensive strategy. And we're expanding them all across the country, and I'm surprised you don't have one here. I bet you do, and you just don't know it. And therefore, what needs to happen is there needs to be a campaign to explain what's available for people so that they don't go to the emergency rooms.

Yes, sir.

### *Cuba*

*Q.* Mr. President, I emigrated from Cuba when I was about 9 years old—legally, I might add.

*The President.* Pedro Pan? Were you Pedro Pan?

*Q.* No.

*The President.* No? Okay.

Q. But anyway, besides marrying a wonderful woman and having two great sons, coming to this great land is the best thing that has ever happened to me, and I appreciate your comments on immigration. And my question to you, Mr. President, is that I would like to go to Cuba, to travel, to see—I want to go see my front door that was bullet-riddled when they were fighting Batista’s guys. And I can’t go there legally. And I don’t understand, how can we trade with Vietnam—we lost over 50,000 Americans there—how can we trade with Communist China, we can’t even go to Cuba? And I think that if the borders were opened up with Cuba and American enterprise got to go down there, I think Castro would fall like a rock off a cliff. And my question to you, sir, is why can’t we open—

*The President.* Okay, here’s why—

Q. Yes.

*The President.* Here’s why: Fidel Castro has got the capacity to arbitrage your dollars to the advantage of his administration. You pay in dollars; he pays in Cuban money and collects the difference. So you go to a hotel in Havana. The money goes to the hotel, which has kind of got a deal with the Government in order to be there in the first place, and the workers get paid in a currency that’s worthless compared to the U.S. dollar. And he makes the balance. And so, in all due respect, I have taken the position that trade with the country enables a tyrant to stay in power, as opposed to the opposite. If it’s honest disagreement of opinion—I fully recognize—but that’s why I made the decision I made. And anyway, my preacher, by the way, at St. John the Divine Church is a guy who came from Cuba at about the same age you did. You look a little younger than he is—but, nevertheless, that’s why. That’s why.

Yes, sir.

### *Immigration Reform*

Q. As you said, you make a lot of important decisions on a day-by-day basis. I’m

interested in the personal, as well as political, aspects of your counsel. Do you know any illegal-status individuals coming from Midland, Texas? What do they feel? And how do they counsel you on this? And also, politically, it’s an intensely State-specific issue. Are the States most affected by illegal immigration speaking in a collective voice?

*The President.* Really good question. No, I don’t believe I know anybody who is in Texas illegally. Had I hired somebody who had been here illegally, I guarantee you’d have read about it. [*Laughter*] Isn’t that right, Elisabeth [Elisabeth Bumiller, New York Times]?

The interesting thing about this issue is—I want to be respectful in correcting you about the nature of the immigration debate—it is more widespread than you think. It really is. It’s a—there’s a lot of States who have been affected and maybe impacted in a much more different way than California and Texas has been. Texas and California are—have had a history of Latino presence. It’s been a part of our heritage. And there’s a—but there are many communities in the United States that for the first time are getting to become acquainted with the Latino heritage. And that probably impacts people even more significantly than parts of California and Texas; it really does. And so there is a universal concern about the issue. And what’s really important about this issue is to try to set aside all the emotion and think about how to solve the problem in a rational, calm way.

But, no, it’s—people—obviously, if you’re from—I was talking to a Congressman from—I don’t want to—they’ll start trying to find the guy, so I’m not going to give them any hints, but—[*laughter*]. It’s a guy. Anyway, but he said, “My town was, like, a small number of minorities, and now it’s 50 percent Latino, and we don’t know what to do.” And this is a new phenomenon. This isn’t something that’s been around for decades. This is a brand new phenomenon.

And so there is a national concern about this issue; it really is. And obviously, it takes—it reflects the nature of the local community, gets—flares up one way or another around the country. But it's—there's a lot of people talking about it. And it's—we've got to get something done. I want a comprehensive bill. I don't want a—[*ap-  
plause*].

Yes, sir, back there in the end zone.

### *Education*

Q. Mr. President—for us to compete globally, we need to get better in math and science. What do you see as the role of the Federal Government in that regard?

*The President.* Yes, thanks. First, the role of the Federal Government is to make sure that we get it right at the early grades. And that's why I worked hard for and was extremely proud to sign the No Child Left Behind Act. And the No Child Left Behind Act starts with these basic premises: One, children can learn, and we ought to expect them to learn. And I know that sounds simple, but that's not the way it was in certain school districts. You look like a vet, and you know full well that in certain school districts—just move them through, man. What mattered was the age, not what—the level of knowledge.

Secondly, that accountability can be used effectively, particularly if it's designed at the local level. In other words, you can use an accountability system to determine whether a curriculum is working, or you can use an accountability system to determine how your school district is doing relative to the school district next door to you. You can use an accountability system to determine whether or not we're closing an achievement gap that needs to be closed if America is going to be a promising place for all people—not just some, but all people.

And so I worked with both Republicans and Democrats—it actually can happen sometimes in Washington that we're able to work together—and passed the No Child

Left Behind Act, which said, in return for Federal money—in increasing amounts, by the way—on particularly Title I money, we expect you just to show us. We expect you to measure. You notice I didn't say, we expect you to administer the test we designed. I'm a local-control-of-schools person, and I knew that if a Federal test were designed, it could force people to behave according to the tests. In other words, you can cause people to lose their independence if you're the test designer. And so I said, California, design your own test and measure three through eight and post the results for everybody to see so that concerned citizens, when they saw failure, would have something to say to the—to you: “Change,” or, “Thank you for doing what you're doing.”

And as a result of measuring, I can report to you that math scores and science scores for fourth graders and reading scores—math and reading scores for fourth graders and eighth graders is on the rise, particularly amongst African American and Latino students.

Things are changing. It's amazing what happens when you say, there's accountability in the system. The problem is, as you know full well, but others may not, is that when a child gets to high school, our math and science skills, relative to other countries in the world, is abysmal. And it's not right. And we're not going to be able to compete successfully for the jobs of the 21st century. So here's the strategy: Apply the same rigor in math that we've applied in reading.

And here's what happens in early grades in reading: If you don't pass the test, there is supplemental service money to enable a child to get up to speed. In other words, we diagnose the problem, and we're actually providing money to solve the problem, and it's paying off. They ought to apply the same rigor to eighth grade math and ninth grade math—measure, find deficiencies, and provide extra money for

school districts to make sure children get back up to speed.

Secondly, it is very important for there to be role models in classrooms that basically says, science and math are cool. They weren't too cool when I was going to school, you know. And therefore, one of the things we can do is have adjunct professors in classrooms. I went to a school with Margaret Spellings, who is the Secretary of Education, in Maryland the other day, and there were two NASA scientists there. And part of their job was not only to work at the NASA facility close by but to go into classrooms, to say to children, math and science are really important for you.

Thirdly, AP works—Advanced Placement. I bet you've got some good AP teachers. The Advanced Placement program is the way to set high standards for our children. And so therefore, the Federal Government ought to help train 70,000 AP teachers in classrooms. That says, we believe in setting high standards; we ought not to accept a system that doesn't continue to raise the bar and measure and to hold people to account.

Finally, there's—we've got an additional 1 million students on Pell grants. These are grants to help people who can afford—can't afford college, go to college. And they're very important—it's a very important tool to help people realize dreams. But I think we ought to enhance the Pell grants for those who take rigorous academics in high school for years one and two. And if you maintain a 3.0 grade point average and take science, math, or critical languages in third and fourth year of college, you ought to get an additional \$4,000 on top of your Pell grant.

There is a strategy; the strategy of the Federal Government is a part of the strategy. The local school district is an integral part of the strategy. Thanks for being a superintendent; appreciate it.

Yes, sir.

### *Highway Infrastructure/Levees in California*

Q. I'm a civil engineer, and we recently put out a report card for the Nation's infrastructure and—by the American Society of Civil Engineers. It was abysmal, is a word that you've used. And we're really concerned that our Nation is coming to a crisis on its infrastructure. And yet we seem to have problems with the Federal Government coming up with the funds that we need for the various parts of our transportation and our water resources.

*The President.* Well, I appreciate that very much. We passed a pretty good sized highway bill—like really big. And it's a 6-year bill, and so it's—we've got 5 more years to run on it. But it was a pretty interesting struggle about how much to spend and how much not to spend. And I think if you look at the history of that highway bill, pretty much the bill I signed was more than some thought was necessary.

I did talk to your Governor about an important subject, and that's the levees. And I appreciated his time the other day when I was in—up there in Cisco Systems. And we talked about the levees, and I said, we want to help. He's committed, by the way, to the—to rebuilding the infrastructure of California. It's a good, strong commitment. And it's what Governors do; they lead. But he said, "Look, we need to work together on this," and what he wanted—what they—his office suggested is that we allow the State of California to use the Corps of Engineers to pay the Federal share of levee rebuilding when the water goes down, and then through the budget process, reimburse the State of California. I agreed to that.

In other words, he—the Governor is concerned about being able to get started enough on levee—quick enough on levee repairs so we don't waste time. And part of the concern is there's a sharing arrangement between the Federal Government and the State government. And so I said,

advance the State share—advance the Federal share through State money, and we'll reimburse you. That's an important beginning. In other words, the funding match is not an excuse. And secondly, he needs regulatory relief from Federal law and State law in order to be able to take advantage of the dry season to get the levees done. And so we're working with him on that.

And—but, no, I appreciate your concern. It's a—infrastructure is always a difficult issue. It's a Federal responsibility and a State and local responsibility. And I, frankly, feel like we've upheld our responsibility at the Federal level with the highway bill. There are other infrastructures we got to get built. We need a broadband highway all across America if we're going to end up being a competitive nation. I talked about the ability to be able to converse in real-time—speedy and very fast ways. But that requires us to make sure that broadband is effectively distributed all across the country—not just in big cities but out in rural America as well. And we're working hard to—on right-of-way issues and other issues to get broadband extensively spread throughout the country.

Yes, sir.

#### *Immigration Reform*

Q. Mr. President, I want to thank you for being here in Orange County. In your first term you came to Santa Ana, if you recall—

*The President.* Yes.

Q. —we met with you at the Bowers Museum—it was a wonderful chat we've had with several of the leadership. Your honor, I—I'm calling you "your honor" already—[laughter]—anyway, we believe, as you know, the Latino community is America.

*The President.* Por cierto.

Q. Por cierto, exactamente. And we believe that the effort that you're putting forth as a comprehensive legislation is what we need in this country. We believe that the economy is going to be great. We be-

lieve that the issue that has been raised about the possible changes and possible funding for many infrastructures as well as emergency services will be there, because we're going to make these people to pay taxes, just like you and I. So we thank you for that.

We just want to ask you a question. What is it that we need to do, and you need to do, to make sure Congress will pass this comprehensive immigration bill?

*The President.* Well, that's starting right here. You know, they've been on vacation and now starting to work the issue. And one way to work it: Stand right here in front of these cameras in California, talking about it in a candid way. And I'm going to do my part to continue to call this Nation to responsible dialog and remind the United States Congress, we need to get a comprehensive bill passed.

The state of play right now is the Senate reached an important compromise, I thought, and it was—they had a chance to get a bill; it just got caught up in, in my judgment, needless politics. One of the problems we face in Washington is we've got too much needless politics. We got people who aren't willing to—they want to play—they want to make the other person look bad, as opposed to make the country look good. And I'm going to continue to call people, whether it be on Social Security reform or immigration reform, to think about the country first and put our political parties aside. And I'm confident, if we can do that, we'll come up with a rational plan that will make the country proud.

I'd like to stay here all day, but I got to go to Vegas. [Laughter] Something about what goes on there, stays there—or something like that. God bless you. Thanks for letting me come.

NOTE: The President spoke at 9:14 a.m. at the Hyatt Regency Irvine. In his remarks, he referred to Thomas Phelps, chairman of the board, and Lucetta Dunn, president, chief executive officer, and secretary, Orange

County Business Council; Catherine Campbell, wife of Representative John Campbell; Mayor Antonio R. Villaraigosa of Los Angeles, CA; Mayor Beverly O'Neill of Long Beach, CA; Mayor Curt Pringle of Anaheim, CA; Richard D. "Rick" Warren, pastor, Saddleback Church, Lake Forest, CA; Usama bin Laden, leader of the Al Qaida terrorist organization; President Jalal Talabani, Speaker of Parliament Mahmoud al-Mashhadani,

and Prime Minister-designate Nuri al-Maliki of Iraq; former California State Senator James L. Brulte; Gen. Tommy R. Franks, USA, (Ret.), former commander, U.S. Central Command; President Hu Jintao of China; President Fidel Castro of Cuba; and Gov. Arnold Schwarzenegger of California. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

Remarks at a Luncheon for Congressional Candidate Jon C. Porter in Las Vegas, Nevada  
*April 24, 2006*

Thank you all very much. Please be seated. Thank you, Jon, for your kind introduction. First of all, I want to thank you all for supporting Jon Porter. I've gotten to know him well. He's the kind of person who does in office that which he says he's going to do on the campaign trail. He's a straight shooter, plain talker, who is getting the job done for the people of Nevada, and you need to send him back to the United States Congress.

You know, when you find somebody who can get the job done, somebody who focuses on results, somebody who doesn't play that Washington, DC, game of empty rhetoric and harsh talk and severe condemnation, it seems like it makes sense to give him a chance to continue to serve you in the United States Congress. This is a man who has performed while in office. And there's no doubt in my mind, he's one of the rising stars in the United States Congress. Jon Porter deserves to be re-elected.

I not only feel that way, but Laura feels that way. She sends her very best. The truth of the matter is Porter said, "Why don't we invite Laura and leave you at home, George W." [*Laughter*] The guy has got good taste. But Laura is doing great. She sends her very best to our friends here

in Nevada. I'm a lucky man to have her by my side during these incredibly important times. And I'm lucky to have a fellow like Jon Porter in the United States Congress to work together to make this country more secure, more prosperous, and more hopeful for all our citizens.

So I appreciate the elected officials from this great State being here, starting with your Governor. Governor, it's great to see you. Thanks for serving—Kenny Guinn, good buddy, good friend, who's done a fine job for this important State. I also am proud to be here with the United States Senator, John Ensign. Senator Ensign, I appreciate you being here. Thanks for bringing Darlene. Appreciate you coming, Darlene. Ensign is a straight shooter too. He's a really good man. He deserves to be re-elected to the United States Senate from this important State.

Congressman Jim Gibbons from up north—good to see you, Jimmy. Thanks for coming. Proud you're here. The Lieutenant Governor, Lorraine Hunt, is with us. Madam Lieutenant Governor, thank you. The secretary of State, Dean Heller—it's good to see you, Mr. Secretary. Thanks for coming. Former Governor Bob List and his son Robert is here. Governor, thanks for

coming. Party Chairman Paul Adams—I'm glad you're here, Mr. Chairman.

I want to thank all the grassroots activists who are here. You're the people who are going to be putting up the signs and making the phone calls and turning out the vote. See, what matters in these elections is, obviously, ability to get yourself on TV, but equally important is the need to make sure people go to the polls. And it's really important to rally those at the grassroots. And I want to thank you for the work that you have done, and I thank you for the work you're going to do to make sure this good man gets reelected to the United States Congress.

I also thank you all very much for contributing to Jon's campaign. Those of us who have run for office know full well that you can't possibly win without the support of people. And I've been blessed to have a lot of good folks here in the State of Nevada support my candidacies, for which I am most grateful. As I look around the room, I see many of you who have been to some of these fundraisers before on my behalf, and I thank you for keeping coming back for Jon's sake. But I really appreciate you helping him. It's not easy to serve in public office these days, but it makes it a lot easier when good folks such as yourself are willing to stand by good people who are willing to run for office. And so thanks for coming. Thanks for supporting Jon.

We've got some things to do. I appreciate a person who runs for office because he wants to get some things done. The most important thing we've got to do is to protect the American people. Our most important job—[*applause*—as we learned firsthand on September the 11th, there's an enemy that lurks, that would like to destroy America because of what we stand for. And they're tough, and they are vicious. There's no need to try to ration with them or sit down and have discussions with them. The only way to deal with this enemy is to stay on the offense and bring them to

justice, which is precisely why I need Congressmen like Jon Porter by my side.

Today we saw again that the terrorists are willing to try to define the world the way they want to see it. There was bombings today in Egypt. I strongly condemn the killings that took place, the innocent life lost in Egypt. It was a heinous act against innocent civilians. The United States sends our condolences to the families of those who were killed. We keep those who were injured in our thoughts and prayers. And I assure the enemy this: We will stay on the offense; we will not waver; we will not tire; we will bring you to justice for the sake of peace and humanity.

I need people in Congress who understand the nature of this enemy. There are some that kind of feel like maybe these folks are just kind of angry citizens of the world who occasionally lash out. No, these folks are bound by a common ideology. They're totalitarian in nature. They've usurped a great religion to justify their acts of murder. They have territorial ambitions. They have designs. They believe that those of us in free societies are weak, and it's just a matter of time before we lose our nerve and withdraw. I am not going to lose my nerve. I'm going to stay on the offense. I will protect the American people. And I need people like Jon Porter who understand the stakes and stands by my side.

The central front on the war on terror is now Iraq. It is the place that the enemy has decided to fight the forces of freedom and liberty and peace. It's really important for those of us who represent you to take seriously the words of the enemy. The enemy has made it clear that it's just a matter of time before the United States leaves Iraq so that they're able to achieve their objective, which is to have a safe haven from which to launch attacks against moderate Muslim nations, and from which to launch attacks against the United States of America and our allies. That's what they have said.

The bad news for the enemy is that there are thousands and thousands and thousands of Iraqis who want to be free, who want to live in a unified society free of violence so their children can grow up in a hopeful world. I happen to believe—and a lot of my foreign policy is driven by my strong belief that liberty is universal, that all people desire to be free, and that when you free people, it is the best way to defeat an ideology of hate and hopelessness. Free societies will be peaceful societies. Free societies will listen to the hopes and aspirations of their people. And one of the most amazing things that's happening now is that a country that was under the thumb of a brutal tyrant is now emerging as a young, strong democracy. And the United States of America stands with them.

When I was in Palm Springs, I had the opportunity and the privilege to speak to the President of Iraq, the new Speaker of the Iraqi Assembly, and the Prime Minister-designate. One is a Kurd, one is a Sunni, and one is a Shi'a—all three of whom expressed their great appreciation for America and the sacrifices this country has made. All three of them talked about unifying their country to achieve a grand objective, and all three of them talked about the responsibility they have to make sure that the 12 million people who went to the polls are represented by a government of, by, and for the Iraqi people.

We're on our way to victory. The only way that we will lose in this central front on the war on terror is if we lose our nerve, is if we don't understand the great values that can help transform the world. It's important for me to have people in the United States Congress who don't listen to polls and focus groups but stand strong for what they think we're doing right. What we have done in Iraq is right, and we will achieve victory in Iraq, and Jon Porter understands that.

And finally, it's really important to have people in Congress who understand that when we put a man or a woman in harm's

way, they deserve the full support of the United States Government. I want to thank Congressman Porter for standing strong for those who wear our uniform. We will make sure our troops have got the best training, the best pay, the best possible equipment so they can achieve their mission. The people of the Third Congressional District of Nevada must make sure you have a Congressman like Jon Porter who understands the obligations of the Government to support the United States military.

We've not only had some big challenges abroad, challenges that we will continue to confront head on, but we've had challenges here at home too. You might remember, although it may seem like a long time ago, but this country's economy has been through a lot. We went through a recession, a stock market correction, corporate scandals, a terrorist attack on our country, a war in Afghanistan and Iraq, major natural disasters. But we acted. Some of them like to talk in Washington, but we acted. We cut the taxes on the American people. We cut the taxes on small-business owners. We understand most jobs are created by small-business owners and that when somebody has more money in their pocket to save, invest, and spend, this economy grows. Our progrowth economic policies are working.

Today, the United States of America is growing faster than any major industrialized nation in the world. Our unemployment rate nationwide is 4.7 percent; the unemployment rate in the State of Nevada is 3.8 percent; 5.1 million new jobs have been added since August 2003. Real after-tax income, the income in the working people's pockets, is up over 8 percent for Americans since 2001. Productivity is high. Small businesses are growing. More people own a home than ever before in our Nation's history. This economy is strong, and we intend to keep it that way.

Oh, you're going to hear all kinds of talk out of Washington, DC, in this campaign—"Oh, don't worry, all we're going to do is just tax the rich." We've heard that kind

of rhetoric before. Here's what I think we ought to do to keep this economy growing. I think we need to make the tax cuts we passed permanent, and Jon Porter understands that. You wait till these campaigns get going here around the country—"Well, we need to balance the budget by raising your taxes." That's not the way it works in Washington, DC. Yes, they'll raise the taxes all right, but they'll figure out new ways to spend your money. The best way to balance this budget is to keep progrowth economic policies in place and be wise about how we spend your money, and Jon Porter understands that.

I also want to thank you for helping on the line-item veto. That makes a lot of sense, doesn't it, to give the President the chance to make sure that the taxpayers are well represented in Washington, DC. I need fiscally sound people in our Nation's Capital, and Jon Porter is just such a Congressman.

Let me talk about another issue right quick. I spent a little time in California, which, by the way, was a fantastic experience. One of the problems that I'm concerned about is a nation that loses our nerve—that we become isolationist and protectionist, that we don't want to have any competition with anybody else, that we begin to wall ourselves off. That's not what I think. I think it's really important that we remain the economic leader in the world, for the sake of our folks, that we want to be preeminent when it comes to economic policy.

And so I was spending time talking about two issues that I think you'll find interesting. I know Jon is a strong supporter. One is to make sure that we're the technology country of the world, that we're on the leading edge of change. The Federal Government needs to double its commitment to basic research—research in the basic sciences, so that we're continuing to be the innovative—innovators of the world. We've got to be technologically competent. We've got to continue to lead.

We need to make the research and development tax credit a permanent part of the Tax Code. And we got to make sure that our kids have got the basics in math and science, so that the jobs of the 21st century stay right here in America. And Jon Porter understands the call.

We also got to do something about oil. You know, I know gas prices are high. There's no magic wand to wave. We'll make sure that the energy companies are pricing their product fairly. If we catch them gouging, if we catch them—unfair trade practices, we'll deal with them at the Federal Government. That's what you expect the Federal Government to do. But it's a sign for the American people to understand that we got to do something about our dependence upon oil.

Now, I appreciate Jon supporting the energy bill that we passed, which is a good, comprehensive approach. But there's more to do. I'm absolutely convinced that we're on the breakthrough of major technologies that will enable us to have plug-in batteries and hybrid vehicles that will enable you to drive your first 40 miles without using a drop of gasoline; that we'll be fueling our cars as a result of fuels made from switchgrass—we're already doing it from corn—but from other raw materials; that we'll have hydrogen-powered fuel cells within a 10-year period of time. I need people in the United States Congress who are farsighted, who understand the power of technology to make sure we become less dependent on foreign sources of oil.

Finally, let me talk right quick about health care, and then I'll liberate you. There's a stark choice in Washington, DC, amongst the elected officials there. There's a group of folks up there who believe that the Federal Government ought to make all the decisions for health care. They ought to tell you who the—what doctor you see and what procedures you can get. And they'll pay for it, of course. And that sounds really attractive, but I strongly reject that federalizing medicine will make our health

care system better. And Jon joins me in that. The best health care system is one that takes care of the elderly and the poor and leaves the decisions in health care between the patients and the doctors. And that's the kind of health care system we strongly support.

Now, I understand hospitals being crowded, emergency rooms being crowded with people, and that's not a good use of our health care system. And that's why Jon and I are strong supporters of community health care centers. These are really important facilities where the poor and the indigent can get primary care without straining the emergency rooms of the hospitals.

We also understand we got a commitment to our seniors. Listen, the Medicare system was really an important system, but it needed reform; it needed a change. We'd pay \$28,000 for ulcer surgery but not a dime for the pharmaceuticals that would prevent the ulcer surgery from being needed in the first place. It made no sense to have a health care system that was stuck in the past when medicine was becoming so modern.

I joined with people like Jon and the other Senators and Congressmen here to modernize the system. And thanks to our leadership, seniors now have got prescription drug coverage in Medicare.

But there are some other—there are practical things we need to do to deal with the cost of health care. One of them is to make sure that information technology becomes a crucial part of our medical systems all across our country. Jon Porter is one of the leaders in helping to modernize medicine. They say that we can probably trim the costs of health care by 30 percent when we bring information tech—now, think about this. We got doctors writing down their words on paper—they don't write very well to begin with—[laughter]—and they're passing the paper from one file to the next. Things get lost. Things are illegible. It's a very inefficient system, and we need to introduce information tech-

nology, starting at the Federal Government. And we're doing that, and Jon Porter is leading the way.

Secondly, health savings accounts work. Health savings accounts are a way for small-business companies to be able to afford health care. The uninsured—I remember the debate, Jon, when we were proposing health savings accounts, which are tax-free savings accounts coupled with catastrophic health care—with low-premium catastrophic health care. And they were saying, "This is only good for the rich." It's typical rhetoric out of Washington, of course, you know. It's just everything is kind of trivialized. They said, "Well, this is only good for the rich." Well, as a result of reforming health care, we now have got 3 million people who are now owners of health savings accounts, most of whom have got incomes of \$50,000 or less, about a third of those who've signed up. The uninsured are finding a good product and a good way to insure themselves at affordable costs.

Thirdly, we've got to make sure small businesses, many of whom are having trouble paying—getting health care for their employees, have the capacity to pool risk across jurisdictional boundaries so they can buy insurance at the same discount big companies get to do. We're strong supporters of association health plans.

And finally, if you want to have a medical system that is affordable and available, we have got to do something about these junk lawsuits that are running good doctors out of business and running the prices of medicine up.

We got ideas about how to solve our Nation's problems. We do more than just think, though; we act. We get things done. We see problems, and we solve them. And I need people in the United States Congress who get rid of all the silliness in Washington, DC, and focus on solving our Nation's problems, and John Porter is such a man.

Thank you for coming, and God bless.

NOTE: The President spoke at 12:42 p.m. at the Venetian Resort Hotel Casino. In his remarks, he referred to Gov. Kenny C. Guinn of Nevada; Darlene Ensign, wife of Sen. John

E. Ensign of Nevada; President Jalal Talabani, Speaker of Parliament Mahmoud al-Mashhadani, and Prime Minister-designate Nuri al-Maliki of Iraq.

## Message on Armenian Remembrance Day *April 24, 2006*

Today, we remember one of the horrible tragedies of the 20th century—the mass killings and forced exile of as many as 1.5 million Armenians in the final days of the Ottoman Empire in 1915. This was a tragedy for all humanity and one that we and the world must never forget.

We mourn this terrible chapter of history and recognize that it remains a source of pain for people in Armenia and for all those who believe in freedom, tolerance, and the dignity and value of every human life. It is a credit to the human spirit and generations of Armenians who live in Armenia, America, and around the globe that they have overcome this suffering and proudly preserved their centuries-old culture, traditions, and religion.

We praise the individuals in Armenia and Turkey who have sought to examine the historical events of this time with honesty and sensitivity. The analysis by the International Center for Transitional Justice, while not the final word, has made a significant contribution toward deepening our understanding of these events. We encourage dialogues, including through joint commis-

sions, that strive for a shared understanding of these tragic events and move Armenia and Turkey towards normalized relations.

Today, we look with hope to a bright future for Armenia. Armenia's Millennium Challenge Compact reflects our confidence and the importance we place in Armenia making progress on democratic reform and advancement of free markets. We seek to help Armenia bolster its security and deepen its inclusion in the Euro-Atlantic family. We remain committed to securing a peaceful and lasting settlement of the Nagorno-Karabakh conflict and hope the leaders of Armenia and Azerbaijan will take bold steps to achieve this goal.

On this solemn day of remembrance, Laura and I express our deepest condolences to the Armenian people. Our nations stand together, determined to create a future of peace, prosperity, and freedom for the citizens of our countries and the world.

GEORGE W. BUSH

## Remarks to the Renewable Fuels Association *April 25, 2006*

Thank you all. Bob, thanks for the introduction. It's always good to be introduced by somebody who is referred to as the "promoter in chief." [*Laughter*] For 25 years, the Renewable Fuels Association has

been a tireless advocate for ethanol producers. Your advocacy is paying off. Renewable energy is one of the great stories of recent years, and it's going to be a bigger story in the years to come.

I like the idea of talking to people who are growing America's energy security. I like the idea of policy that combines agriculture and modern science with the energy needs of the American people. I'm here to talk to you about the contributions you are making, and I'm here to talk to you about the need for this country to get off our dependency of oil.

And so I want to thank Bob for the invitation. I want to thank Ron Miller, the chairman of the Renewable Fuels Association. I want to thank the board of directors and the members of the Renewable Fuels Association. I thank the members of my administration who are here—Clay Sell is the Deputy Secretary of Energy, who has joined us. I see Members of the United States Congress who are here. I appreciate Jack Kingston of Georgia, Jerry Weller of Illinois, and Gil Gutknecht of Minnesota for joining us. Thank you all for your interest in this very important subject.

Before I talk about energy, I do want to share with you some thoughts about the war on terror. I just got off of a conference—a videoconference with our strong ally Tony Blair, and we were talking about a major development that has taken place in the war on terror. After months of patient negotiations, Iraqi leaders reached an agreement on a unity government. And that's positive. This is a Government—this new leadership reflects the diversity of Iraq, and it reflects the will of the Iraqi people who defied the terrorists and killers and went to the polls last December. This new Government is an important milestone for a free Iraq.

And it's the beginning of a new chapter in our relationship with the Iraqi people. When I was in California over the weekend, I had the opportunity to speak to the three leaders—the President, the Speaker, and the Prime Minister-designate. I congratulated them on their courage and encouraged them to stand strong for the Iraqi people. I reminded them the people had voted, the people had expressed their de-

sire for democracy and unity, and now there's a chance for these leaders to stand up and lead.

I told them that they have important responsibilities to their people to rebuild infrastructure and to improve their economy and enhance security. I was pleased with the response I got. It's important for the American people to know that these three leaders appreciate the sacrifice that our troops have made and that our taxpayers have made to help them realize a dream. And the dream is to live in a unified, free society. A free Iraq is in the interest of the United States of America. A free Iraq will be a part of laying the peace for generations to come. And a free Iraq will be a major defeat for the terrorists who still want to do us harm.

We've got good news here at home on the economic front too. This economy of ours is growing, and the entrepreneurial spirit in America is strong. We've cut the taxes for everybody who paid income taxes, and that tax relief is getting results. Last year, our economy grew faster than any major industrialized nation. Since August of 2003, this economy of ours has created 5.1 million new jobs. The unemployment rate nationwide is 4.7 percent. That's lower than the average rate of the sixties, seventies, eighties, and nineties. The American people are working.

Farm income is up. Agricultural exports are growing. Real after-tax income is up over 8 percent per American since 2001. Productivity is high. More people own a home than ever before in our Nation's history. This economy is strong, and we intend to keep it that way. And one way to keep it that way is to make the tax cuts permanent.

Yet amongst this hopeful—these hopeful signs, there's an area of serious concern, and that is high energy prices. And the prices that people are paying at the gas pumps reflect our addiction to oil. Addiction to oil is a matter of national security concerns. After all, today we get about 60

percent of our oil from foreign countries. That's up from 20 years ago where we got oil from—about 25 percent of our oil came from foreign countries. Now part of the problem is, is that some of the nations we rely on for oil have unstable governments or agendas that are hostile to the United States. These countries know we need their oil, and that reduces our influence, our ability to keep the peace in some areas. And so energy supply is a matter of national security. It's also a matter of economic security.

What people are seeing at their gasoline pumps reflects the global economy in which we live. See, when demand for oil goes up in China or India, two fast-growing economies, it affects the price of oil nation—worldwide. And when the price of crude oil goes up, because it's such an important part of the price of gasoline, the average citizen sees the price of gasoline go up at the pump.

Gasoline price increases are like a hidden tax on the working people. They're like a tax on our farmers. They're like a tax on small businesses. Energy prices are—energy experts predict gas prices are going to remain high throughout the summer, and that's going to be a continued strain on the American people.

And so the fundamental question is, what are we going to do? What can the Government do? One of the past responses by Government, particularly from the party of which I am not a member, has been to have—to propose price fixing or increase the taxes. Those plans haven't worked in the past. I think we need to follow suit on what we have been emphasizing, particularly through the energy bill, and that is to encourage conservation, to expand domestic production, and to develop alternative sources of energy like ethanol.

Signing the energy bill was one thing, and I want to thank the Members of Congress for getting a comprehensive energy bill to my desk, but there's a lot more to be done. First thing is to make sure

that the American consumers are treated fairly at the gas pump. Americans understand, by and large, that the price of crude oil is going up and that the prices are going up, but what they don't want and will not accept is manipulation of the market. And neither will I.

The Federal Trade Commission is investigating whether price of gasoline has been unfairly manipulated in any way. I'm also directing the Department of Justice to work with the FTC and the Energy Department to conduct inquiries into illegal manipulation or cheating related to the current gasoline prices. The FTC and the Attorney General are contacting 50 State attorney generals to offer technical assistance, to urge them to investigate possible illegal price manipulation within their jurisdictions. In other words, this administration is not going to tolerate manipulation. We expect our consumers to be treated fairly.

To reduce gas prices, our energy companies have got a role to play. Listen, at record prices, these energy companies have got large cash flows, and they need to reinvest those cash flows into expanding refining capacity or researching alternative energy sources or developing new technologies or expanding production in environmentally friendly ways. That's what the American people expect. We expect there to be strong reinvestment to help us with our economic security needs and our national security needs.

Record oil prices and large cash flows also mean that Congress has got to understand that these energy companies don't need unnecessary tax breaks like the write-offs of certain geological and geophysical expenditures or the use of taxpayers' money to subsidize energy companies' research into deep-water drilling. I'm looking forward to Congress to take about \$2 billion of these tax breaks out of the budget over a 10-year period of time. Cash flows are up. Taxpayers don't need to be paying for certain of these expenses on behalf of the energy companies.

Second part of a good plan is to confront high gasoline prices, is to promote greater fuel efficiency. And the easiest way to promote fuel efficiency is to encourage drivers to purchase highly efficient hybrid or clean diesel vehicles which, by the way, can run on alternative energy sources. Hybrid vehicles run on a combination of a traditional engine and an electric battery. The twin sources of power allow hybrid cars and trucks to travel about twice as far on a gallon of fuel as gasoline-only vehicles. When people are driving hybrids, they're conserving energy.

Clean diesel vehicles take advantage of advances in diesel technology to run on 30 percent less fuel than gasoline vehicles do. More than 200,000 hybrid and clean diesel vehicles were sold in the United States last year. It's the highest sales in history. Congress wisely, in the energy bill, expanded a tax credit for purchases of hybrids and clean diesel vehicles up to—as much as up to \$3,400 per purchase. That made sense.

If we're trying to conserve energy, if we want to become less dependent on oil, let's provide incentives for consumers to use less energy. The problem is that these tax credits apply to only a limited number of hybrid and clean diesel vehicles for each manufacturer. If the automakers sell more than their limit, new purchasers are not eligible for the full tax credit. And so here's an idea that can—gets more of these vehicles on the road, and that is to have Congress make all hybrid and clean diesel vehicles sold this year eligible for Federal tax credits. We want to encourage people to make wise choices when it comes to the automobiles they drive.

Third part of the plan to confront high gas prices is to boost our supplies of crude oil and gasoline. It makes sense when—the supply-and-demand world, if prices are high, it means demand is greater than supply. One way to ease price is to increase supply. One immediate way we can signal to people we're serious about increasing

supply is to stop making purchases or deposits to the Strategic Petroleum Reserve for a short period of time. I've directed the Department of Energy to defer filling the reserve this summer. Our strategic reserve is sufficiently large enough to guard against any major supply disruption over the next few months. So by deferring deposits until the fall, we'll leave a little more oil on the market. Every little bit helps.

We also need to ensure that there are not needless restrictions on our ability to get gasoline to the pump. Under Federal quality—air quality laws, some areas of the country are required to use fuel blend called reformulated gasoline. Now, as you well know, this year, we're going—undergoing a rapid transition in the primary ingredient in reformulated gas—from MTBE to ethanol. And I appreciate the role the ethanol producers are playing to meet this challenge. You're playing a vital role.

Yet State and local officials in some parts of our country worry about supply disruption for the short term. They worry about the sudden change from MTBE to ethanol—the ethanol producers won't be able to meet the demand. And that's causing the price of gasoline to go up some amount in their jurisdictions.

And some have contacted us to determine whether or not they can ask the EPA to waive local fuel requirements on a temporary basis. And I think it makes sense that they should be allowed to. So I'm directing EPA Administrator Johnson to use all his available authority to grant waivers that would relieve critical fuel supply shortages. And I do that for the sake of our consumers. If Johnson finds that he needs more authority to relieve the problem, we're going to work with Congress to obtain the authority he needs.

Secondly, we also need to confront the larger problem of too many localized fuel blends, which are called boutique fuels. The number of boutique fuels has expanded rapidly over the years, and America

now has an uncoordinated and overly complex set of fuel rules. And when you have a uncoordinated, overly complex set of fuel rules, it tends to cause the price to go up.

And so I'm asking Director—directing Administrator Johnson to bring the Governors together to form a task force on boutique fuels. And the mission of this task force will be to find ways to reduce the number of boutique fuels and to increase cooperation between States on gasoline supply decisions. I want to simplify the process for the sake of our consumers. And then I'm asking them to get these recommendations to my desk, and I look forward to working with the United States Congress to simplify the process.

Listen, we need to expand our refining capacity. One of the problems we face is that we've got tight supplies because we haven't expanded refining capacity. There hasn't been a new refinery built in 30 years. If you're worried about the price of gasoline at the pump, it makes sense to try to get more supply to the market. That will be beneficial for American consumers, to get more supply to the market.

Part of the reasons why we haven't expanded or built new refineries to the extent we need to is because the permitting process in this country is extremely complicated. Companies that want to upgrade their equipment or expand their existing refineries or build new ones often have to wade through long, bureaucratic delays and/or lawsuits. To make this gasoline supply more affordable and more secure, Congress needs to allow refiners to make modifications on their refineries without having to wait for years to get something—to get their idea approved. I mean, if we want more supply, let's reduce the paperwork and the regulations.

Congress also needs to simplify and speed up the permitting process for refinery construction and expansion. And so I'm going to work with Congress. It's important for Congress to cut through the red tape

and guarantee refinery construction permits will be processed within a single year.

We also need to be mindful of the fact that we can find additional crude oil in our own country in environmentally friendly ways. The technology is such that we're capable of environmentally sensitive exploration. We got tight crude oil supplies, and it seems like it makes sense for us to use our new technologies to find more crude, particularly crude here at home.

One of the issues that you know, that has been confronting Congress is ANWR. And I fully recognize that the passage of ANWR will not increase the oil supply immediately. But it's also important to understand that if ANWR had been law a decade ago, America would be producing about a million additional barrels of oil a day, and that would increase our current level of domestic supply by 20 percent. We've got to be wise about energy policy here in America. We've got to make sure that we protect the environment, but we've also got to make sure that we find additional supplies of crude oil in order to take the pressure off the price of crude, which takes the pressure off the price of gasoline at the pump.

And all I've outlined here today are interim strategies—short-term and interim strategy. The truth of the matter is, the long-term strategy is to power our automobiles with something other than oil, something other than gasoline, which is derived from oil.

And we're making progress. In my State of the Union Address, I talked about the Advanced Energy Initiative. And this is an aggressive plan, a wise way of using taxpayers' money to get us off our addiction to oil. We have a unique opportunity to continue forward with this plan.

Technology is the way, really, to help us—to help change America for the better. Years of investment in fuels like ethanol have put us on the threshold of major breakthroughs. And those breakthroughs are becoming a reality for our consumers.

I set a goal to replace oil from around the world. The best way and the fastest way to do so is to expand the use of ethanol.

The Advanced Energy Initiative is focused on three promising ways to reduce gasoline consumption. One is increasing the use of ethanol; another is improving hybrid vehicles; and finally, one is developing hydrogen technology. All three go hand in hand; all three are an important part of a strategy to help us diversify away from hydrocarbons.

Ethanol is—has got the largest potential for immediate growth. Most people may not know this, but today, most of ethanol produced in America today is from corn. Most vehicles can use 10 percent ethanol—in their automobiles.

What's interesting that Americans don't realize, with a little bit of expenditure, we can convert a—kind of, the standard automobile to what's called a flex-fuel automobile. And that flex-fuel vehicle can use ethanol that is—or fuel that is 85 percent ethanol. It's amazing, isn't it? Without much cost, your automobile can be converted to be able to burn fuel with 85 percent ethanol, or a product made from corn grown right here in America.

Ethanol is a versatile fuel, and the benefits are easy to recognize when you think about it. One, the use of ethanol in our automobiles is good for the agricultural sector. I'm one of these people who believes when the agricultural sector is strong, America is strong. The way I like to put it, it would be a good thing when a President can sit there and say, "Gosh, we've got a lot of corn, and it means we're less dependent on foreign sources of oil."

Years back, they'd say, "Oh, gosh, we've got a lot of corn, worried about the price." Ethanol is good for our rural communities. It's good economic development for rural America. New biorefinery construction creates jobs and local tax revenues. When the farmer—when the family farmer is doing well, it's good for the local merchants.

Ethanol is good for the environment. I keep emphasizing that we can be good stewards of our environment and, at the same time, continue with our economic expansion. And ethanol will help meet that strategy. You don't have to choose between good environment and good economics. You can have both by the use of technology. And ethanol is an example of what I'm talking about. And ethanol is good for drivers. Ethanol is home-grown. Ethanol will replace gasoline consumption. It's a good—ethanol is good for the whole country, and we've been—[*applause*]. I thought you'd like that. [*Laughter*]

The ethanol industry is booming. It must be exciting to have worked for as long as you have on encouraging alternative sources of energy and then all of a sudden see the work come to fruition.

Last year, America used a record 4 billion gallons of ethanol. There are now 97 ethanol refineries in our country, and 9 of those are expanding. And 35 more are under construction. The ethanol industry is on the move, and America is better off for it.

Many of these refineries are in the Midwest, the Midwest because that is where the source of that—the feedstock for ethanol comes from. That happens to be corn. But what's really interesting is there are new plants springing up in unexpected areas like the Central Valley of California or Arizona or, of course, in the sugar fields of Hawaii. After all, sugar is also an important—can be used for ethanol. As a matter of fact, it's a very efficient feedstock for ethanol.

Ethanol required our support. In other words, to get this new industry going, it required a little nudge from the Federal Government. Since I took office, we've extended the tax credit to 51 cents per gallon for suppliers. We've created a new 10-cent per gallon tax credit to provide extra help to small ethanol producers and farmers, provided \$85 million of loans and grants for the ethanol business ventures.

In other words, this is a collaborative effort. The Federal Government has got a role to play to encourage new industries that will help this Nation diversify away from oil. And so we're strongly committed to corn-based ethanol produced in America. Yet there—you got to recognize there are limits to how much corn can be used for ethanol. After all, we got to eat some, and the animals have got to eat.

And so I am committed to furthering technological research to find other ways, other sources for ethanol. We're working on research—strong research to figure out cellulosic ethanol that can be made from wood chips or stalks or switchgrass. These materials are sometimes waste products and are just simply thrown away. And doesn't it make sense for us—I think it does—to use taxpayers' money to determine whether or not we can use these new—these raw materials to make something out of nothing, so that we continue the advance of ethanol, so the market for ethanol expands throughout the United States.

We're spending—I proposed, and I'm working with these members of the Renewable Caucus—\$150 million in next year's budget for research in advanced forms of ethanol. And that's a significant increase over previous levels. I think it makes sense. And surely the prices at the gas pump should say to the taxpayer, it makes sense for this Government to spend money on research and development to find alternative sources of energy.

I also support biodiesel fuel, which can substitute for regular diesel in cars, trucks, buses, and farm equipment. Last year, I went out to see a biodiesel refinery in Virginia that's making clean-burning fuel from soybean oil. And it was a really interesting process to watch. I don't know if you know this or not, but they're able to use waste products like recycled cooking grease to manufacture biodiesel. In other words, research and development has led to new alternative sources of energy like biodiesel. So that's one of the reasons why I signed

into law the first ever Federal tax credit for biodiesel producers. In other words, we're interested in addressing our energy security needs on a variety of fronts. It makes sense for the United States to have a comprehensive strategy to help us diversify away from oil.

And so we also have got to understand that we got to research not only to find—to invest in ethanol and biodiesel, but part of a comprehensive strategy is to spend money on researching new battery technologies. And one of the really interesting opportunities available for the American consumer will be the ability to buy a plug-in hybrid vehicle that will be able to drive up to 40 miles on electricity. Seems to make sense to me, if we're trying to get us off gasoline, with crude oil as the main—as its main feedstock, then why wouldn't we explore ways to be able to have vehicles that use less gasoline? And one way to do so is to use electricity to power vehicles.

And we're pretty close to a breakthrough. We believe we're close to a technology that will make it possible to drive up to 40 miles on electricity alone. And then if you have to drive more than 40, then your gasoline kicks in.

But you can imagine what that will mean for a lot of drivers in big cities who, on a daily basis, they don't drive over 40 miles. And so therefore, a lot of drivers that are going back and forth from work in big cities won't be using gasoline. And that's going to help. We've got \$31 million in our budget to speed up research and development into advanced battery technologies.

And finally, one other opportunity that is more long-run than ethanol or biodiesel or plug-in hybrid vehicles or encouraging people to buy the hybrids that are on the market today is hydrogen. We're spending about \$1.2 billion over 5 years to research the use of hydrogen to power vehicles. And it makes a lot of sense when you think about it, because hydrogen produces zero emissions. The only emission it produces

is water. And when I was out there in California, I visited the California Fuel Cell Partnership and saw buses and cars and SUVs that are driving on the highways out there powered by hydrogen. And the research and development money that we have spent has lowered the cost of hydrogen fuel cells; it's helped make them lighter. In other words, there's an industry coming, and it's an industry that will enable consumers to drive to work, just like we're doing today, but not rely on foreign sources of oil.

What I'm describing to you today is a strategy that recognizes the realities of the world in which we live. Our dependency on oil has created economic security issues for us and national security issues for us. And therefore, this country must use our brainpower and entrepreneurial spirit to diversify away from the hydrocarbon economy. You all have known this a lot longer than most Americans. You've known that we've needed to have this strategy, and that's why you're on the forefront of incredible changes that are taking place in this country.

You know, there's no doubt in my mind that one of these days, instead of people driving up to a gas station, they're going to be going up to a fueling station. And they'll be able to have choices to choose

from. Got a hydrogen-powered car, you'll be able to have that choice. If you want 85 percent, maybe someday 100 percent ethanol, that will be an option available too.

We owe it to the American people to be aggressive on price gouging now. We owe it to the American people to be promoting alternative ways to drive their car so as to make us less dependent on foreign sources of oil. We owe it to the American people to be aggressive in the use of technology so we can diversify away from the hydrocarbon society. And that's precisely what we're doing, and I'm glad to stand with you.

I appreciate your work for the United States of America. Thank you for letting me come by and talk to you, and may God bless you.

NOTE: The President spoke at 10:10 a.m. at the Marriott Wardman Park Hotel. In his remarks, he referred to Robert M. Dinneen, president and chief executive officer, Renewable Fuels Association; Prime Minister Tony Blair of the United Kingdom; and President Jalal Talabani, Speaker of Parliament Mahmoud al-Mashhadani, and Prime Minister-designate Nuri al-Maliki of Iraq. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Briefing on the War on Terror *April 25, 2006*

I want to thank the leadership of the United States Senate for joining me today. We have just been briefed from Baghdad about the formation of the unity Government. Not everybody around this table has agreed with certain aspects of this war on Iraq, but all of us agree that the formation of the unity Government is a very important moment in the history of a new Iraq.

I want to thank the Members for their strong support of our diplomatic mission and the United States military, who are engaged in heroic efforts to help this young country succeed. We're on our way to victory.

We've got more work to do. But the people—our troops need to know, and those working in the field need to know, there is a bipartisan desire for us to be

successful in this very important theater in the war on terror.

I want to thank you, Senators, for coming. I appreciate your time. Thank you for your interest in this vital subject.

NOTE: The President spoke at 12:24 p.m. in the Roosevelt Room at the White House. A tape was not available for verification of the content of these remarks.

## Remarks on Presenting the Commander in Chief's Trophy to the United States Naval Academy Midshipmen *April 25, 2006*

Thank you. Be seated. Welcome to the White House. For you Navy fans, it's welcome to the White House again. [*Laughter*] I am so honored to welcome the Midshipmen from the United States Naval Academy here to the Rose Garden, and I congratulate you for winning your third straight Commander in Chief Trophy.

I also want to announce that Coach Johnson is now a member of the White House Frequent Visitors Club. [*Laughter*]

I appreciate, like a lot of Americans, the football rivalry between our military academies. It's truly one of the country's great traditions.

This season the Midshipmen have pretty well handled that rivalry in good shape, set a good standard by winning their games against the Air Force and the Army. But the greatest achievement for the Midshipmen will be when they join their counterparts from West Point and Colorado Springs to help us win the war on terror. So we're glad you all are here.

I'm particularly pleased to see members of the Naval Academy Board of Visitors who are also in the United States Congress, starting with Congressman Steny Hoyer. Thank you for coming, Steny. Congressman Mike McIntyre, proudly wearing that Navy hat; Congressman John Kline; as well, we have Congressman Ben Cardin. Thank you all for coming; proud you're here.

I appreciate the Secretary of the Navy, Don Winter, is with us. Mr. Secretary, thank you for coming. Admiral Ed

Giambastiani—and for those of you who don't speak English too well, we call him Admiral G—happens to be the Vice Chairman of the Joint Chiefs of Staff and a fine man.

Vice Admiral—I mean, Admiral Mike Mullen, Chief of Naval Operations—we're proud you're here, Admiral Mullen. Thanks for the job you're doing. As well as Vice Admiral Rod Rempt—Rod, it's good to see you. Thank you for your service.

I appreciate the members of the Naval Academy football team who are here. I thank the members of the Naval Academy coaching staff who are here, particularly the head coach, who seems to have done a pretty good job. Might deserve a little pay raise if I might make a suggestion, you know what I'm saying? [*Laughter*] I don't know if you agree with that or not, Coach? Yes. [*Laughter*]

This team is a source of great pride for the brigade of Midshipmen and Navy fans everywhere. It will hold a special place in Navy football history. Nothing like making history.

This team showed great resilience. After losing its first two games in heartbreaking fashion, the team went on to win 8 of the next 10, and 5 of those were come-from-behind wins.

It took a little bit to be a Navy fan this year, a little patience, a little faith. But the faith paid off. The Poinsettia Bowl victory in San Diego was the first time a Navy team has ever won bowl games in back-

to-back years. And we congratulate you for that feat. Pretty good deal to win big bowls and study hard and prepare to serve your Nation.

I appreciate the fact that the Navy offense led the nation in rushing. And second place to the Navy rushing record was the mighty Texas Longhorn team—[laughter]—whose offensive lineman only weighed about 40 pounds per person more.

Seniors on this team have led one of the most dramatic turnarounds in college football history. Navy has won 26 games in the past 3 seasons after winning just 3 games during the previous 3 years. The seniors are the sixth class in Academy history to have beaten Army all 4 years.

The lessons learned on the football field are preparing you all well for your next mission, which is winning the war against the terrorists. Every player on this team works hard to win on Saturday afternoons, but like the rest of your Midshipmen, your top priority is preparing to defend this Nation.

The thing I appreciate about the folks here is that when it came time to serve our country, they said, “I volunteer to serve. I recognize there’s something more important than life, than serving myself. I want to serve my nation.” And for that the American people are really grateful.

The leadership and discipline and teamwork you have learned not only on the field of play but at the Naval Academy will serve you well as you become commissioned officers in the world’s finest military. And I assure you, and I know the Members

of Congress assure you, we intend to keep our military the world’s finest military.

This Nation is at war, a war we are going to win. And many of your teammates are serving and sacrificing at this very hour. And we send our prayers and best wishes to them. I appreciate the service of people like Marine First Lieutenant Brian Stann, a former Navy linebacker who was awarded the Silver Star last month for his actions and his bravery in Iraq.

Today, there are sailors and marines who are leading vital missions in Afghanistan and in Iraq and around the world. Graduates from the Naval Academy patrol the world’s oceans to keep deadly weapons out of the hands of the terrorists and are maintaining America’s command of the seas.

You protect our Nation, and equally importantly, you’re laying the foundation of peace for a generation of Americans to come. And so we’re here to first and foremost honor a really fine football team and present the Commander in Chief Trophy. But as well, we pay tribute to men and women who wear the uniform of the United States and say, thank you from the bottom of our collective hearts for protecting us.

My God bless the Midshipmen, and may God continue to bless our country.

NOTE: The President spoke at 2:05 p.m. in the Rose Garden at the White House. In his remarks, he referred to Paul Johnson, head coach, U.S. Naval Academy football team; and Vice Adm. Rodney P. Rempt, USN, Superintendent, U.S. Naval Academy.

## Remarks Following a Meeting With Members of the Senate *April 25, 2006*

I want to thank the Members of the United States Senate for joining on a very important discussion, and the discussion

was how to get a comprehensive immigration bill out of the United States Senate.

I will report to the American people that there is a common desire to have a bill

that enforces the border, a bill that has interior enforcement—in other words, a bill that will hold people to account for hiring somebody who is here illegally but a bill that also recognizes we must have a temporary-worker program, a bill that does not grant automatic amnesty to people but a bill that says, somebody who is working here on a legal basis has the right to get in line to become a citizen.

I thank the Members, both Republicans and Democrats, for taking on this really hard, hard assignment. It's important that we reform a system that is not working. It's important that we uphold the values of the United States of America. It's important that we treat people with dignity.

And I strongly believe that we have a chance to get an immigration bill that is

comprehensive in nature to my desk before the end of this year.

And again, I want to thank both the Republicans and Democrats for the spirit of hard work. I particularly want to thank Senator Kennedy and Senator McCain for taking the lead on this important bill on the floor of the United States Senate. And I assured the Members that I look forward to working with them as they try to get a bill out of the Senate by Memorial Day and into conference.

Thank you all.

NOTE: The President spoke at 4:23 p.m. in the Cabinet Room at the White House. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Letter to the Speaker of the House of Representatives Transmitting a Request for Additional Funds To Support Recovery Efforts in the Gulf Coast

*April 25, 2006*

*Dear Mr. Speaker:*

To provide additional resources to assist the greater New Orleans region to continue its recovery from the devastation of Hurricane Katrina, I ask the Congress to consider the enclosed requests for an additional \$2.2 billion for the Army Corps of Engineers (Corps), which is in addition to amounts requested on February 16th. This additional amount is offset by a \$2.2 billion reduction in the amount requested on February 16th for the Federal Emergency Management Agency's Disaster Relief Fund.

The revised Corps request, which now totals \$3.7 billion, replaces the previous supplemental request for the Corps that

was submitted on February 16th. This revised request supports the Administration's commitment to further enhance the levee system in parts of the New Orleans area to meet Federal 100-year standards of protection.

I designate these proposals in the amounts requested herein as an emergency requirement.

The details of these requests are set forth in the enclosed letter from the Acting Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

Remarks Announcing the Appointment of Tony Snow as White House  
Press Secretary  
*April 26, 2006*

Good morning. I'm here in the briefing room to break some news. I've asked Tony Snow to serve as my new Press Secretary.

Tony already knows most of you, and he's agreed to take the job anyway. [*Laughter*] And I'm really glad he did. I'm confident Tony Snow will make an outstanding addition to this White House staff. I am confident he will help you do your job. My job is to make decisions, and his job is to help explain those decisions to the press corps and the American people.

He understands, like I understand, that the press is vital to our democracy. As a professional journalist, Tony Snow understands the importance of the relationship between Government and those whose job it is to cover the Government. He's going to work hard to provide you with timely information about my philosophy, my priorities, and the actions we're taking to implement our agenda.

He brings a long record of accomplishment to this position. He has spent a quarter of a century in the news business. He's worked in all three major media: print, radio, and television. He started his career in 1979 as an editorial writer for the Greensboro Record in North Carolina. He's going to—went on to write editorials for the Virginian-Pilot in Norfolk. He ran the editorial pages in both the Daily Press of Newport News and the Washington Times. He's written nationally syndicated columns for both the Detroit News and USA Today.

During his career in print journalism, he's been cited for his work by the Society of Professional Journalists, the Associated Press, and Gannett. For 7 years, he served as the host of "FOX News Sunday." Most recently, he reached Americans all across our country as the host of "The Tony Snow Show" on FOX News Radio and "Weekend

Live with Tony Snow" on the FOX News Channel.

He's not afraid to express his own opinions. For those of you who have read his columns and listened to his radio show, he sometimes has disagreed with me. I asked him about those comments, and he said, "You should have heard what I said about the other guy." I like his perspective; I like the perspective he brings to this job, and I think you're going to like it too.

Tony knows what it's like to work inside the White House. In 1991, he took a break from journalism to serve as Director of Speechwriting and Deputy Assistant to the President for Media Affairs. He's taught children in Kenya. He belongs to a rock band called Beats Workin'. He's a man of courage; he's a man of integrity; he loves his family a lot. He is the loving husband of a fine wife and the father of three beautiful children.

He succeeds a decent and talented man in Scott McClellan. I've known Scott since he worked for me in Texas. We traveled our State together; we traveled our country together; and we have traveled the world together. We have also made history together. Scott should be enormously proud of his service to our Nation in an incredibly difficult job. I've always—I will always be grateful to him. I will always be proud to call him friend.

I appreciate Scott's offer to help Tony Snow prepare for his new job. And I'm proud to welcome Tony as part of our team.

*Tony Snow.* Well, Mr. President, I want to thank you for the honor of serving as Press Secretary. And just a couple of quick notes—I'm delighted to be here. One of the things I want to do is just make it clear that I—one of the reasons I took the job is not only because I believe in the

President, because believe it or not, I want to work with you. These are times that are going to be very challenging. We've got a lot of big issues ahead, and we've got a lot of important things that all of us are going to be covering together.

And I am very excited, and I can't wait. And I want to thank you, Mr. President, for the honor, and thank all you guys for

your forbearance. And I look forward to working with you.

Thanks.

NOTE: The President spoke at 9:10 a.m. in the James S. Brady Press Briefing Room at the White House. In his remarks, he referred to Jill Snow, wife of Tony Snow, and their children, Kendall, Kristin, and Robbie.

## Remarks Honoring the 2006 National and State Teachers of the Year April 26, 2006

I was going to say, thank you, Laura, for those kind remarks. [*Laughter*] Please be seated. Thank you all. Welcome.

This is one of the great afternoons for Laura and me. We love to recognize our teachers. We really appreciate you coming. Actually, this is an annual event started by Harry Truman. And I'm glad to be a part of a tradition here at the White House, saying thanks to our teachers.

I admire teachers and like teachers so much, I married one. [*Laughter*] Laura is a great advocate for literacy and a strong supporter for America's teachers, and I'm really proud to have her by my side during these unbelievable times and this great experience of serving our country—other than being a fine introducer. [*Laughter*]

The thing I like about teaching is, teaching is such an optimistic profession. I know when teachers look out at their classrooms, you see more than a child at play or at study. You're able to see a child with big dreams and big hopes. You see future doctors and scientists and entrepreneurs and inventors, and I hope you see even a teacher or two.

You dedicated your lives to the formation of young minds. You're giving our children the skills they need to succeed in life and equally important, the courage and the drive to realize those dreams. Our Nation is grateful for your hard work. We appre-

ciate what you do, and we are honored you're here at the White House.

I want to thank our Secretary of Education, Margaret Spellings. She's been a long-time friend. She believes strongly in the classroom teacher, and she believes in the potential of every child.

I'm pleased to recognize Senator Sam Brownback, for the State of Kansas. Welcome. I'm glad you're here—and his wife, Mary; thank you for coming. As well as Congressman Dennis Moore from Kansas and Stephene, thank you all for taking time to honor the teachers who are here.

I appreciate the National Teacher of the Year Finalists: Sam Bennett from Florida—say hello to the Governor—[*laughter*]—Ron Poplau of Kansas—no wonder you all are here—and Susan Barnard of Washington State. We're really glad you're here. Congratulations on setting such a fine example.

Everybody here has been introduced to Kim Oliver, but you haven't met her parents, Vincent and Veronica. Thank you all very much—brothers, cousins, and significant other. [*Laughter*]

I want to thank all the Teachers of the Year from around our country who are here. I really—Laura and I really enjoyed having our picture with you. It's just a brief moment to say thanks. But nevertheless, it's thanks from the bottom of our hearts. And it really means a lot you're here.

I thank Dr. Tom Houlihan, who is the executive director of the Council of Chief State School Officers. That's one of the sponsoring organizations. Thank you for your service, Tom.

Margery Mayer, of the Scholastic Education—Scholastic Inc. I want to thank Margery for being here. That's also a sponsoring organization of this event.

Kathleen Murphy is the president of ING, is here with us, as well as Tom Waldron, who is the executive vice president. These are the sponsoring groups of this important occasion.

I also want to thank the chief state school officers who are with us. Good to see you all. Nice going. Hiring and promoting good teachers is a really important part of your job. I want you to know that we know that being a teacher is difficult work. It's a hard job. It's a job that requires compassion and determination and extraordinary patience. And as Laura hinted, or maybe didn't hint, I was probably one of those kind that tested your patience. [*Laughter*]

You're helping young people to learn the basics of reading and writing and adding and subtracting. You're serving as mentors and, probably most importantly, as role models. You help kindle young imaginations, and you inspire a love of learning. It's a pretty significant job description, when you think about it. And the teachers we honor here today are excelling at that job.

Your daily efforts help young Americans grow into successful adults. In other words, you're building the future for the country. We ask a lot of our teachers, and we owe you a lot in return. Education is my top domestic priority. And when I first came to office, I worked with members of both political parties—believe it or not, it's possible here in Washington to occasionally do that—to increase funding from the Federal level but also to pass the No Child Left Behind Act. The spirit of the No Child Left Behind Act basically says, society has

a deep obligation to challenge the soft bigotry of low expectations, that we believe every child can learn, and therefore, we believe it makes sense to determine whether or not every child is learning. And if not, there ought to be extra help so that no child in our society is left behind.

We're beginning to see good results, thanks to our Nation's teachers. The 2005 Nation's Report Card showed America's fourth graders are posting the best scores in reading and math in the history of the test. African American and Hispanic fourth graders set records in reading and math last year. America's eighth graders earned the best math scores ever recorded. Eighth grade Hispanic and African American students achieved their highest math scores ever. We're making really important strides toward closing an achievement gap in America, and I want to thank our teachers for your hard work.

There's more work to be done, obviously. I've recently launched the American Competitiveness Initiative, which will help our students do better in math and science. We need to train 70,000 high school teachers to lead AP courses in math and science. I know we've got some AP teachers here, and I want to thank you for that.

We need to bring 30,000 math and science professionals into our classrooms to send a message to our children: It's okay to be a mathematician or a scientist—as a matter of fact, it's cool. We want to make sure that we help students who struggle with math get extra help to make sure that—to make sure they have a chance to be able to earn the high-wage jobs of the 21st century. If we ensure that America's children have the skills they need to succeed in life, we will make sure America succeeds in the world.

Improving the quality of education for young Americans requires good laws and good policies, but ultimately it depends on good teachers. And that is why we're here on the South Lawn, to honor really good teachers.

The Teacher of the Year, Kim Oliver, teaches kindergarten at Broad Acres Elementary School in Silver Spring, Maryland. Broad Acres is Montgomery County's highest poverty school, a place where 90 percent of the children qualify for federally-subsidized meals and about 75 percent have parents who do not speak English at home.

It's a school filled with the kind of students that inspired Kim Oliver to become a teacher. Kim decided to become a teacher at a young age. It's really interesting for teachers to hear what she said. She said, "As a young child, I loved and admired my day care teacher, Mrs. Chandler. I wanted to be just like her. Mrs. Chandler made me feel special, as if I were the only child in her class."

Kim Oliver had many friends growing up who came from unstable and impoverished homes. She says, "I watched so many of my friends live up to the low expectations that were set for them. To this day, I find myself wondering, what if my disadvantaged friends had 12 years worth of Mrs. Chandlers in their lives?" Kim went on to say, "I chose to become a teacher to motivate and inspire the neediest students, who many have written off, and let them know they can achieve and succeed in life regardless of what the statistics may show."

I love that attitude. I think you're beginning to get the drift of why she's the Teacher of the Year. When Kim Oliver arrived at Broad Acres in 2000, the school was threatened with forced restructuring by the State as a result of poor academic performance. Ms. Oliver took a leadership role at the school. That's what good teachers do; they take the lead. She became a teacher-leader and helped lead a collaborative effort to improve the curriculum, instruction, and assessment. She helped establish instructional planning sessions and formal procedures to examine student work and improve student performance.

She noticed that many parents at the school lacked the language skills to be able to read to their children and to be able

to help with their school work. And so she and her colleagues purchased cassette players and recorded books on tape for the students to take home and share with their families, which made it a lot easier for parents who struggle with English to help their children.

Kim Oliver also organized a regular "Books and Supper Night," where families could check out books from the library and read together before sharing a dinner, which fostered learning and family involvement in their children's education. She knows what good teachers know: If you can get the parents involved in the child's education, you have a much better chance of succeeding. She set high expectations. Good teachers set high expectations. She provided needed assistance. She involved families, and she helped turn that school around.

Within 2 years of her arrival, kindergarten students at Broad Acres were mastering early reading skills at higher rates than other schools in the district. After 3 years, Broad Acres students were meeting or exceeding all requirements of the No Child Left Behind Act. There were dramatic increases in reading and math scores for the school's second graders.

The Superintendent of Schools in Montgomery County says this about the impact Kim Oliver has had: "She has a rare gift for touching hearts and minds, inspiring in her students to aim high and believe in their potential." A Broad Acres parent says, "She knows how to talk to the children so they will listen." And all her students know that she cares about them. She made them all feel like they were smart and could learn anything. One of her colleagues says, "When you walk into Ms. Oliver's classroom, one cannot help but notice that this is a special place." She is dedicated to her school community and committed to excellence, and she has been an instrumental force in improving student achievement at her school.

Kim says the reason her students are achieving is simple: “I have high expectations for each of them. I teach them that they can accomplish anything with hard work and persistence.”

Kim Oliver understands that the key to helping children succeed is fighting the soft bigotry of low expectations. When a teacher believes that a child can learn, it’s amazing what happens; a student believes that he or she can learn.

America is blessed to have teachers like Kim Oliver. We’re blessed to have teachers like all those who are gathered here at the White House. We thank you for the love and devotion you’ve shown our children each day.

May God continue to bless your work, and may God continue to bless our country. Thank you for coming.

NOTE: The President spoke at approximately 1:46 p.m. on the South Lawn at the White House. In his remarks, he referred to Stephene Moore, wife of Congressman Dennis Moore; Gov. Jeb Bush of Florida; Margery W. Mayer, executive vice president and president, Scholastic Education; and Jerry D. Weast, superintendent, Montgomery County Public Schools. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady, who introduced the President.

## Message to the Congress Transmitting an Executive Order Blocking Property of Additional Persons in Connection With the National Emergency With Respect to Syria

April 26, 2006

*To the Congress of the United States:*

Pursuant to the International Emergency Economic Powers Act, as amended (50 U.S.C. 1701 *et seq.*) (IEEPA), I hereby report that I have issued an Executive Order blocking property of persons in connection with the terrorist act in Beirut, Lebanon, on February 14, 2005, that resulted in the assassination of former Lebanese Prime Minister Rafiq Hariri and the deaths of 22 others, and other bombings or assassination attempts in Lebanon since October 1, 2004, that are related to Hariri’s assassination or that implicate the Government of Syria or its officers or agents. I issued this order to take additional steps with respect to the national emergency declared in Executive Order 13338 of May 11, 2004, concerning certain actions of the Government of Syria. In Executive Order 13338, I determined that the actions of the Government of Syria in supporting terrorism, continuing its occupation of Lebanon, pursuing weapons of

mass destruction, and undermining United States and international efforts in Iraq constituted an unusual and extraordinary threat to the national security, foreign policy, and economy of the United States, and declared a national emergency to deal with that threat.

The United Nations Security Council, in Resolution 1595 of April 7, 2005, established the international independent investigation Commission (the “Commission”), reiterated its call for the strict respect of the sovereignty of Lebanon, and reaffirmed its unequivocal condemnation of the February 14, 2005, terrorist bombing that killed Lebanese Prime Minister Rafiq Hariri and 22 others. The Commission’s charter included identifying the bombing perpetrators, sponsors, organizers, and accomplices. United Nations Security Council Resolution (UNSCR) 1636 of October 31, 2005, called

upon all States to provide necessary assistance to the Commission concerning its investigation into the February 14, 2005, terrorist bombing and to freeze the assets of those persons designated by the Commission or the Government of Lebanon as suspected of involvement in this terrorist act, upon notification of such designation to, and agreement of, the Committee of the Security Council established by UNSCR 1636. United Nations Security Council Resolution 1644 of December 15, 2005, condemned other terrorist attacks in Lebanon since October 2004 and reaffirmed that all those involved in these attacks must be held accountable for these crimes, and in doing so, authorized the Commission to extend its technical assistance to Lebanese authorities with regard to their investigations regarding the terrorist attacks perpetrated in Lebanon since October 1, 2004.

In view of UNSCR 1636, my new order takes additional steps with respect to the national emergency declared in Executive Order 13338 by blocking the property and interests in property of persons determined by the Secretary of the Treasury, after consultation with the Secretary of State, to be, or to have been, involved in the planning, sponsoring, organizing, or perpetrating of the terrorist act on February 14, 2005, that resulted in the assassination of former Prime Minister Rafiq Hariri and the deaths of 22 others, or any other bombing, assassination, or assassination attempt in Lebanon since October 1, 2004, that is related to Hariri's assassination or that implicates

the Government of Syria or its officers and agents, or to have obstructed or otherwise impeded the work of the Commission. The order further authorizes the Secretary of the Treasury, after consultation with the Secretary of State, to designate for blocking those persons determined to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services in support of, any such terrorist act, bombings, or assassination attempts, or any person designated pursuant to this order, or to be owned or controlled by, or acting or purporting to act for or on behalf of, directly or indirectly, any person designated pursuant to this order.

I delegated to the Secretary of the Treasury, after consultation with the Secretary of State, the authority to take such actions, including the promulgation of rules and regulations, and to employ all powers granted to the President by IEEPA and the United Nations Participation Act, as amended (22 U.S.C. 287c), as may be necessary to carry out the purposes of my order. The order was effective at 12:01 a.m. eastern daylight time on April 26, 2006.

I am enclosing a copy of the Executive Order I have issued.

GEORGE W. BUSH

The White House,  
April 26, 2006.

NOTE: The Executive order is listed in Appendix D at the end of this volume.

## Remarks Following a Visit to a Hurricane Damaged Home in New Orleans, Louisiana

*April 27, 2006*

*The President.* Mrs. Williams has invited myself and the mayor and the Governor and Congressman into her home, which had been wiped out by the storm. And

she went to Texas for a while, and she made it clear to me she was glad to be out of Texas and back home. [*Laughter*]

But the amazing thing that's happened in her home is that there are people from across the country here who are helping to rebuild it. Catholic Charities, in this case, has provided the volunteers to help Ms. Williams reclaim her life. And so I'd like to first start by thanking the volunteers who are here in the home. I want to thank them for setting such a good example.

The man who's running the site here said that they need 2,500 more volunteers to come down to New Orleans to help people get back on their feet. If you're interested in helping the victims of Katrina, if you're interested in helping them get back on their feet, come down here and volunteer. A good place to start is in Catholic Charities. You can get right there on the web page; they'll find work for you. They'll give you a chance to contribute something to your country.

This is National Volunteer Week, and there are people like the good folks standing behind me here who are volunteering all across the country, making a difference. And for those of you who are volunteering, thank you from the bottom of our hearts for making our society a better place.

I had a good visit with the Governor and the mayor as well. One of the things that we're working on is to make sure that we've learned the lessons from Katrina—we've learned lessons at the Federal level and State level and the local level. And we're now working closely together in preparation of the upcoming hurricane season. Secretary Chertoff was down here working with the Governor just to make sure that communications are clear, that equipment will be prepositioned, that the communications system, which failed last time, will be up and running should there be another catastrophic storm.

Listen, all of us in positions of responsibility appreciate those who are working to help us understand how to do our jobs better. And we pray there is no hurricane this coming year, but we are working to-

gether to make sure that if there is one, the response will be as efficient as possible.

I'm also talking to the Governor and the mayor about the reconstruction effort going on here in Louisiana. I applaud the Governor for putting forth a housing plan that she'll be submitting to the legislature soon. I call upon the Congress to make sure that the \$4.2 billion of CDBG money in the supplemental appropriations is held intact for the people of Louisiana. This money is going to be vital to making sure that the vision of the Governor and the mayor gets implemented as people are able to come back and start reclaiming their lives.

We talked about the levees, and I told the Governor and the mayor earlier on that we would work to have these levees pre-Katrina—better than pre-Katrina by June 1st. We are. There's still money in the supplemental that needs to be passed to make sure that we're able to fulfill our promise, to make sure that the levees, by September of '07, are even better than pre-Katrina. We've got a strategy to help the good folks down here rebuild. Part of it has to do with funding; part of it has to do with housing; and a lot of it has to do with encouraging volunteers from around the United States to come down and help people like Ms. Williams.

So we're proud to be here with you, Ms. Williams, and God bless you.

*Ethel Williams.* I'm proud to be here, Mr. President. And I won't ever—I can't ever forget you.

*The President.* You need to forget—remember those people a lot quicker than you're remembering me, because they're the ones who are going to help. She promised to cook me a meal—

*Ms. Williams.* Oh, yes—[laughter]—

*The President.* Once you get the house up and running.

*Ms. Williams.* —and I thank all the volunteers and everybody that is helping to make everything work.

*The President.* Thank you all very much.

NOTE: The President spoke at 11:58 a.m. on Pauline Street. In his remarks, he referred to Mayor C. Ray Nagin of New Orleans, LA;

and Gov. Kathleen Babineaux Blanco of Louisiana.

Remarks During a Visit to the Hands On Gulf Coast Civic Action Center  
in Biloxi, Mississippi  
*April 27, 2006*

*The President.* I've come to the conclusion that I'm at a terrific place, where people are here bound by a common desire to show compassion to their neighbors in need. I really thank you. It's a compassion commune—[laughter]—where people are united by a singular purpose and setting a great example. Everybody—most people I talk to say, “Well, it makes me feel better.” The truth of the matter is, when you

volunteer to serve somebody in need, it does make you feel better.

So for all those in our country who are wondering whether or not they can make a difference in somebody's life, the answer is, all you have to do is look at these people here.

*Audience member.* Volunteer!

*The President.* All right. Thank you.

NOTE: The President spoke at 3:17 p.m.

Remarks During a Visit to a BP Gas Station in Biloxi  
*April 27, 2006*

Listen, we've got people like this that are working for a living, who are paying higher prices for their gasoline—it's like a tax. And I talked the other day about things we can do. The first thing is to make sure that nobody is getting cheated. One of the roles of the Federal Government is to make sure that you're taken care of.

We need more refining capacity. One of the reasons why you've got high prices is the demand is greater than supply. And when demand is greater than supply, the price goes up. They've got in Pascagoula a really fine refinery. I remember coming over with the Governor, the place was shut down. They got it up and running, and we hope we can put a law in place that will encourage them to expand refining capacity. We've got a problem because we're dependent on oil from overseas. And oil

is the main reason—the price of oil is the main thing that drives the cost of gasoline.

One of the things we've got to do is make these trucks run on ethanol—and batteries that won't require gasoline. That's what the future is going to be.

Congress is debating some other ideas. And one idea is to give me the capacity to raise CAFE standards on automobiles. I encourage them to give me that authority. It's an authority that I'd use for light trucks. And I intend to use it wisely, if Congress would give me that authority.

Again, I want to thank you for letting me come by and say hello. It seems like everybody is getting better down here. Thank you.

NOTE: The President spoke at 3:33 p.m. In his remarks, he referred to Gov. Haley Barbour of Mississippi.

Statement on the Framework Agreement With Canada on Softwood  
Lumber Trade  
*April 27, 2006*

I am pleased that the United States and Canada concluded a framework agreement today to resolve the long-standing dispute on softwood lumber trade. This agreement shows how NAFTA partners can overcome differences and work together. The United States close ties with our good friend and

northern neighbor made this agreement possible. I applaud Prime Minister Harper's leadership in resolving this issue, and I am grateful to the lead negotiators on both sides, Ambassador Susan C. Schwab for the United States and Ambassador Michael Wilson of Canada.

Message to the Congress Transmitting an Executive Order Blocking  
Property of Persons in Connection With the Conflict in Sudan's Darfur  
Region  
*April 27, 2006*

*To the Congress of the United States:*

Pursuant to the International Emergency Economic Powers Act (IEEPA), I hereby report that I have issued an Executive Order (the "order") blocking the property of persons in connection with the conflict in Sudan's Darfur region. In that order, I have expanded the scope of the national emergency declared in Executive Order 13067 of November 3, 1997, with respect to the policies and actions of the Government of Sudan, to address the unusual and extraordinary threat to the national security and foreign policy of the United States posed by the actions and circumstances involving Darfur, as described below.

The United Nations Security Council, in Resolution 1591 of March 29, 2005, condemned the continued violations of the N'djamena Ceasefire Agreement of April 8, 2004, and the Abuja Humanitarian and Security Protocols of November 9, 2004, by all sides in Darfur, as well as the deterioration of the security situation and the negative impact this has had on humanitarian assistance efforts. I also note that the United Nations Security Council has strongly condemned the continued viola-

tions of human rights and international humanitarian law in Sudan's Darfur region and, in particular, the continuation of violence against civilians and sexual violence against women and girls.

United Nations Security Council Resolution (UNSCR) 1591 determined that the situation in Darfur constitutes a threat to international peace and security in the region and called on Member States to take certain measures against persons responsible for the continuing conflict. The United Nations Security Council has encouraged all parties to negotiate in good faith at the Abuja talks and to take immediate steps to support a peaceful settlement to the conflict in Darfur, but has continued to express serious concern at the persistence of the crisis in Darfur in UNSCR 1651 of December 21, 2005.

Pursuant to IEEPA, the National Emergencies Act, and the United Nations Participation Act (UNPA), I have determined that these actions and circumstances constitute an unusual and extraordinary threat to the national security and foreign policy of the United States, and have issued an Executive Order expanding the scope of the

national emergency declared in Executive Order 13067 to deal with this threat.

The order blocks the property and interests in property in the United States, or in the possession or control of United States persons, of the persons listed in the Annex to the order, as well as of any person determined by the Secretary of the Treasury, after consultation with the Secretary of State,

- to have constituted a threat to the peace process in Darfur;
- to have constituted a threat to stability in Darfur and the region;
- to be responsible for conduct related to the conflict in Darfur that violates international law;
- to be responsible for heinous conduct with respect to human life or limb related to the conflict in Darfur;
- to have directly or indirectly supplied, sold, or transferred arms or any related materiel, or any assistance, advice, or training related to military activities to the Government of Sudan, the Sudan Liberation Movement/Army, the Justice and Equality Movement, the Janjaweed, or any person operating in the states of North Darfur, South Darfur, and West Darfur, that is a belligerent, a nongovernmental entity, or an individual; or
- to be responsible for offensive military overflights in and over the Darfur region.

The designation criteria will be applied in accordance with applicable domestic law, including where appropriate, the First Amendment of the United States Constitution.

The order also authorizes the Secretary of the Treasury, after consultation with the

Secretary of State, to designate for blocking any person determined to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services in support of, the activities listed above or any person listed in or designated pursuant to the order. I further authorized the Secretary of the Treasury, after consultation with the Secretary of State, to designate for blocking any person determined to be owned or controlled by, or acting or purporting to act for or on behalf of, directly or indirectly, any person listed in or designated pursuant to the order. The Secretary of the Treasury, after consultation with the Secretary of State, is also authorized to remove any persons from the Annex to the order as circumstances warrant.

I delegated to the Secretary of the Treasury, after consultation with the Secretary of State, the authority to take such actions, including the promulgation of rules and regulations, and to employ all powers granted to the President by IEEPA and UNPA, as may be necessary to carry out the purposes of the order. All Federal agencies are directed to take all appropriate measures within their authority to carry out the provisions of the order.

The order, a copy of which is enclosed, was effective at 12:01 a.m. eastern daylight time on April 27, 2006.

GEORGE W. BUSH

The White House,  
April 27, 2006.

NOTE: The Executive order is listed in Appendix D at the end of this volume.

## Remarks Following Discussions With President Ilham Aliyev of Azerbaijan April 28, 2006

*President Bush.* Mr. President, welcome. We've just had a really interesting visit. And we talked about the need to—for the world to see a modern Muslim country that is able to provide for its citizens, that understands that democracy is the wave of the future. And I appreciate your leadership, Mr. President.

We, obviously, talked about Iran. I assured the President of my desire to solve this problem diplomatically and peacefully. I appreciate so very much the Government's contribution of support in troops to the new democracy in Iraq. I spent time describing to the President a meeting I had today via video conference with our Ambassador and General Casey—very important for me to bring our ally up to date on the progress that's being made on the ground there. I shared with him my hope that the national unity Government will help achieve the objective we all want, which is peace and democracy.

And we, of course, talked about energy. And I appreciate the vision of the Government and the vision of the President in helping this world achieve what we all want, which is energy security. Azerbaijan has got a very important role to play. And we discussed internal politics, and we discussed politics of the neighborhood as well, particularly relations with Armenia.

I appreciate very much the candid discussion. I thank you for sharing your thoughts with me, and thank you for our alliance. And welcome.

*President Aliyev.* Thank you very much, Mr. President. I am very grateful for the invitation. I'm very glad to be in Washington and have an opportunity to discuss with you the issues of bilateral relations. I'm sure that our relations of strategic partnership will strengthen in the future.

We covered all the aspects of our bilateral relations. We are very grateful for the

leadership of the United States in promotion of the energy security issues in the region, in assisting us to create a solid transportation infrastructure which will allow to develop a full-scale Caspian oil and gas reserves and to deliver them to the international markets.

We are allies in the war on terror. We've been, from the very first day, shoulder to shoulder with the United States in the peacekeeping operations in various parts of the world, and will continue to contribute to the creation of peace and stability in the region.

Of course, the issues of resolution of Armenia and Azerbaijan, Nagorno-Karabakh are also in the center of our discussions. And we—I informed Mr. President with the latest status of the negotiations and expressed my hope that a peaceful settlement of the conflict will happen and will serve to the peace and stability in the whole region.

In general, I'd like to say that I'm very satisfied with my visit, and I consider this as instrumental in the future development of Azerbaijan as a modern, secular, democratic country. We share the same values. We are grateful for United States assistance in promotion of political process, process of democratization of our society, and very committed to continue this cooperation in the future.

Thank you very much, Mr. President.

*President Bush.* One final word I forgot to mention. I do want to congratulate the President and the First Lady on the marriage of their daughter this weekend. It's a major sacrifice for the President to be here during the planning phases of the wedding. And we wish you and the First Lady all the best, and more importantly, we wish your daughter all the best.

*President Aliyev.* Thank you, Mr. President.

*President Bush.* Thank you.

NOTE: The President spoke at 10:49 a.m. in the Oval Office at the White House. In his remarks, he referred to U.S. Ambassador to

Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; and President Aliyev's wife, Mehriban Aliyeva, and daughter, Leyla Aliyeva.

## Remarks Following a Meeting With North Korean Defectors and Family Members of Japanese Abducted by North Korea *April 28, 2006*

I have just had one of the most moving meetings since I've been the President, here in the Oval Office. I met with a mom and a brother who long to be reunited with her daughter and his sister. They're apart because the North Korean Government abducted the child when she was a teenager. And all the mom wants is to be reunited with her daughter.

It is hard to believe that a country would foster abduction. It's hard for Americans to imagine that a leader of any country would encourage the abduction of a young child. It's a heartless country that would separate loved ones, and yet that's exactly what happened to this mom as a result of the actions of North Korea. If North Korea expects to be respected in the world, that country must respect human rights and human dignity and must allow this mother to hug her child again.

I talked to a family, a young North Korean family that escaped the clutches of tyranny in order to live in freedom. This young couple was about to have a child, and the mom was 5 months pregnant when they crossed the river to get into China. They wandered in China, wondering whether or not their child could grow up and have a decent life. They were deeply concerned about the future of their child; any mother and father would be concerned about their child.

They had to wander because they did not want to have their child grow up in a society that was brutal, a society that did

not respect the human condition. By the grace of God, they found safe haven. Their child was born and now safely sits here in the Oval Office.

I talked to a courageous man who escaped from North Korea. He was in the North Korean military. He saw firsthand the brutal nature of the regime, and he couldn't—his heart could no longer take it. He followed his conscience and escaped. He speaks for thousands who have escaped North Korea and thousands who live inside the country; he speaks eloquently about the need for their freedom and for them to be treated decently.

The world requires courage to confront people who do not respect human rights, and it has been my honor to welcome into the Oval Office people of enormous courage: a mom; a mother and dad of a young child; a former soldier; a brother. And so I welcome you here. We're proud you're here. I assure you that the United States of America strongly respects human rights. We strongly will work for freedom so that the people of North Korea can raise their children in a world that's free and hopeful and so that moms will never again have to worry about an abducted daughter.

May God bless you all. Thanks for coming.

NOTE: The President spoke at 11:39 a.m. in the Oval Office at the White House. In his remarks, he referred to Sakie Yokota, mother, and Takuya Yokota, brother, of Megumi

Yokota, who was abducted by North Korean authorities; Kim Guang Choel and Lee Seong Hee, who defected from North Korea,

and their daughter, Kim Han Mee; and Chung Seong-san, who defected from North Korea.

## The President's News Conference April 28, 2006

*The President.* Thank you very much for joining us today. I'm joined by my two top White House economic advisers. The reason why is because we've had some very positive economic news today. The Commerce Department announced that our economy grew at an impressive 4.8 percent annual rate in the first quarter of this year. That's the fastest rate since 2003. This rapid growth is another sign that our economy is on the fast track.

The good news comes on the heels of two other important economic indicators reported earlier this week: New home sales surged forward by nearly 14 percent last month; consumer confidence reached its highest level since May of 2002. This confidence is largely driven by the many jobs being created in our country—5.1 million since August of 2003.

This good news cannot be taken for granted. With gas prices on the minds of Americans, we need to keep our foot on the pedal of this strong economy. The surest way to put the brakes on our economic growth would be to raise taxes or spend too much of the people's money here in Washington. That's why I'm going to continue to work with Congress to make the tax relief that helped spur this economic growth permanent. That's why I'm going to work with Congress to restrain the Federal Government's appetite for spending. And that's why I'm going to work with Congress to make this country less dependent on foreign sources of oil.

I commend America's workers and small-business owners, innovators and educators for contributing to the strong economic

health of our Nation. I will continue to pursue progrowth policies so that opportunity reaches every American neighborhood and every American family.

With that, I'll be glad to take a couple of questions.

*Q.* Mr. President—

*The President.* Excuse me, please. Jennifer [Jennifer Loven, Associated Press].

### *Iran*

*Q.* Thank you, sir. The IAEA says that Iran is not in compliance with the Security Council. What sort of sanctions do you—would you like to see and—that could bring Russia and Chinese support?

*The President.* The IAEA statement is an important statement. It reminds the nations of the world that there is an ongoing diplomatic effort to convince the Iranians to give up their nuclear weapons ambitions. It reminds—it should remind the Iranians that the world is united and concerned about their desire to have not only a nuclear weapon but the capacity to make a nuclear weapon or the knowledge to make a nuclear weapon, all of which we're working hard to convince them not to try to achieve.

I will consult and continue to consult with our allies on this issue. I spoke to Chancellor Merkel this morning about this issue. She will be coming to Washington next week. We will continue discussions about how we can continue to maintain a united front. It's very important for the Iranians to understand there's a common desire by a lot of nations in this world to convince them, peacefully convince

them, that they ought to give up their weapons ambitions.

Steve [Steve Holland, Reuters].

#### *Fuel/Energy*

*Q.* Thank you, sir. You mentioned gas prices. Would you go along with an effort by some Senate Republicans that could levy a significant tax on oil companies' profits? And does it bother you that the oil companies are racking up these record profits when people are paying \$3 a gallon?

*The President.* My attitude is that the oil companies need to be mindful that the American people expect them to reinvest their cash flows in such a way that it enhances our energy security. That means pipeline construction for natural gas deliveries. That means expansion of refineries. That means exploration in environmentally friendly ways. It also means investment in renewable sources of energy. And that's what the American people expect. They also expect to be treated fairly at the pump, and that's why the Federal Trade Commission is going to monitor the situation very carefully to make sure the American people are treated fairly.

*Q.* So "no" to a tax on profits?

*The President.* Look, the temptation in Washington is to tax everything, and they spend the money—"they" being the people in Washington. The answer is, is for there to be strong reinvestment to make this country more secure from an energy perspective.

Listen, these oil prices are a wake-up call. We're dependent upon oil, and we need to get off oil. And the best way to do so is through technology. And I've been traveling the country talking about the need to develop alternative sources of energy, such as ethanol, and to spend money to advance technologies, such as new battery technology that will enable us to have plug-in hybrid vehicles. We signed a good energy bill a while ago, and that encouraged—for example, one thing it's got in there is a tax credit to encourage people

to purchase hybrid vehicles so that the consumptive patterns of the American people change.

And the American people have got to understand that we're living in a global economy, and so when China and India demand more oil, it affects the price of gasoline at the pump. And therefore, it's important for us to diversify away from oil.

But it's also important for the people to understand that one of the reasons why the price is gasoline is up is there's tight gasoline supplies. And one reason there's tight gasoline supplies is because we haven't built any new refineries since the 1970s. And therefore, Congress needs to provide regulatory relief so people can expand their refineries.

So it's a combination of people investing the cash flows as well as regulatory relief to enhance the ability for people to achieve the objective, which is more gasoline on the market, which will help our consumers.

Dick Keil [Richard Keil, Bloomberg News].

#### *Sudan*

*Q.* Thank you, Mr. President. You have a meeting later today on Darfur, and the Sudanese Government continues to thwart efforts by the U.N. and other multinational organizations to take a firmer control of the situation there. Is there anything you can do to leverage the Sudanese Government, and what's your message to them?

*The President.* My message to them is, we expect there to be full compliance with the international desire for there to be peace in the Darfur region. We have taken the situation to the United Nations Security Council. My belief is that the AU forces that are on the ground—and by the way, we helped the AU forces get in there in the first place—we think that force needs to be expanded and blue-helmeted with the NATO overlay, with NATO help.

And so therefore, the message to the Sudanese Government is, we're very serious about getting this problem solved. We don't

like it when we see women raped and brutalized. And we expect there to be a full effort by the Government to protect human life and human condition.

We also recognize there's a parallel political track taking place, and that we urge the rebels as well as the Government to forge a consensus at Abuja, so that there is a way forward from this—from the impasse, political impasse that has taken place thus far in Sudan. There is a good go-by for people to look at, and that is the north-south agreement that this Government helped fashion under the leadership of Secretary of State Colin Powell as well as Special Envoy Jack Danforth. The north-south agreement shows that political solutions are possible.

And so we expect the Sudanese Government to be good-faith bargainers; we expect the rebels to be good-faith bargainers. But we also expect people to—particularly the Sudanese Government, to make a more concerted effort to control the Janjaweed and protect human life. The meeting today and the rallies around the country are a clear signal that the United States is committed to peace in Darfur.

Mark Smith [Associated Press Radio].

*Iran*

Q. Mr. President, let's come back to Iran, if we can. The Iranians have said they're going to ignore what happens at the U.N. Security Council. Doesn't that mean the diplomatic options are dwindling?

*The President.* No, I think the diplomatic options are just beginning. As you might recall, about 6 or 7 months ago, you were asking me questions about the United Nations Security Council vis-a-vis Iran, and now we're headed to the United Nations Security Council. And I look forward to working with all interested parties to make sure that there's a common voice.

Listen, the first thing that has to happen diplomatically for anything to be effective is that we all agree on the goal. And we've agreed on the goal, and that is the Iranians

should not have a nuclear weapon, the capacity to make a nuclear weapon, or the knowledge as to how to make a nuclear weapon. And now that we've got the goal in mind, we're working on the tactics. And today's IAEA report should remind us all that the Iranian Government's intransigence is not acceptable.

David Gregory [NBC News].

*Second-Term Agenda*

Q. Mr. President, we're seeing some turnover and some change within your administration, and I wonder what it says about what you think is necessary to turn your Presidency around at this point?

*The President.* I think it's necessary to continue doing—to achieving results for the American people. We've got big challenges for this country, and I've got a strategy to deal with them.

The biggest challenge we face is winning the war on terror and to protect the American people. And we'll continue to keep on the offense, to keep the terrorists off balance, to find them and bring them to justice. And at the same time, we'll continue to work to spread democracy, understanding that democracy is the best way to defeat an ideology of hatred.

At home, it's important to make sure this economy continues to grow, and that's why I'm working with Congress to make the tax cuts permanent. I fully understand there are some here who would like the tax cuts to expire, or raise taxes. In my judgment, that would be bad for the economy. It would hurt small-business formation and hurt the entrepreneurial spirit. So I will continue to work with Congress to make these tax cuts a real part of economic life for a long time coming.

And we've also got to be wise about spending. I issued a veto threat the other day because I was deeply concerned that the supplemental was getting out of hand. And I recognize that in order for us to cut the deficit in half, we've got to keep

progrowth economic policies in place, as well as control Federal spending.

I talked about the need for this country not to fear the future but to shape it. In other words, we shouldn't worry about competition from China and India. And because—we can outcompete those countries if we're wise about what we do here at home. And one of the most wise things we can do is to make sure our children have got the skills necessary to fill the jobs of the 21st century.

I've been talking about energy independence for a long period of time. You might remember, last summer, I was urging Congress to pass a comprehensive energy bill so that we could deal with conservation and new technologies and diversification. And so I'm going to keep working hard for the American people to get results.

By the way, we're in the midst of implementing now a Medicare bill which is helping our seniors a lot. And if you—if a senior has not signed up, I urge you to take a look at the Medicare prescription drug program, particularly if you're a low-income senior. It's an enormous benefit, and it's a necessary benefit.

So there's a lot to do today, but we'll continue to be results-oriented.

Martha Raddatz [ABC News].

Q. Sir, I'm sorry, but I asked you about your internal changes and what that says about how you think things need to be changed. They've been very public, your internal changes.

*The President.* Well, David, I'm a results-oriented person, and my job is to achieve things for the American people, positive results that make us more secure and more prosperous. And of course, I will have people by my side that work toward that objective.

Thank you for your penetrating question.

Q. Thank you.

*The President.* Plus, I'm not going to hire you, if that's what you were suggesting. [Laughter]

Q. I was not suggesting that. [Laughter]

*The President.* I would, except you can't pass the background check. [Laughter] Okay, an unnecessary cheap shot; I take it back.

Martha.

*Iran/Iraq*

Q. You often say Iran is not Iraq.

*The President.* Yes, I do say that.

Q. There are many people who fear that this will turn into a military confrontation. Why is Iran not Iraq? There's WMD—

*The President.* Iraq went through 16 different Security Council resolutions. There was resolution after resolution after resolution. Iraq had invaded its neighbors. Iraq was shooting at U.S. aircraft. Iraq had actually used weapons of mass destruction on its people before. There's a difference between the two countries.

Iran's desire to have a nuclear weapon is dangerous, in my judgment. The diplomatic process is just starting.

Q. But when you talk about that, how many resolutions are you going to let go here? How far—

*The President.* We haven't had one yet.

Q. I know, but how far can you let them go? If you really fear that they're building a nuclear—

*The President.* Wait until we even get one resolution first, before you ask me about the second resolution. The diplomatic process is just beginning. We're forming a strong coalition of like-minded countries that believe that the Iranians should not have a nuclear weapon. And I've told the American people that diplomacy is my first choice, and it should be the first choice of every American President in order to solve a very difficult problem. There are significant differences between Iran and Iraq.

Kelly [Kelly O'Donnell, NBC News].

*Spanish Version of National Anthem*

Q. Mr. President, a cultural question for you. There is a version of the national anthem in Spanish now. Do you believe it

will hold the same value if sung in Spanish as in English?

*The President.* No, I don't.

*Q.* Why, sir?

*The President.* Because I think the national anthem ought to be sung in English. And I think people who want to be a citizen of this country ought to learn English, and they ought to learn to sing the national anthem in English.

Axelrod [Jim Axelrod, CBS News].

*Iran*

*Q.* Mr. President.

*The President.* Yes.

*Q.* I just want to follow up one more time on Iran. Mr. Ahmadi-nejad was quoted this morning as saying, those who want to prevent Iranians from obtaining their right should "know that we do not give a damn," his words, sir, "about such resolutions."

*The President.* Okay.

*Q.* When you're talking about diplomacy, sir, a question of tactics at this point, not goals. If you have, for instance, Russia saying they don't want a Chapter VII resolution, if you're dealing with a gentleman who uses this kind of rhetoric, what kind of tactics can you possibly come up with?

*The President.* I guess the first thing I would do is refer those comments to our partners and get their reaction, to see what they say, see how they react to those kind of comments. And I haven't had a chance to do that yet, since it just happened today. But I will continue to work with our friends and allies.

Listen, key—step one is to have a common goal. I know that sounds simple to you, probably, but it wasn't always that way. The world wasn't always of like mind that the Iranians were, you know, headed for a weapon, and that that would be a dangerous course of action. And now we are of like mind. And so we are in the stage now of formulating a strategy to achieve a diplomatic solution to this problem.

*Q.* But Mr. President, given everything you've been hearing from Mr. Ahmadi-nejad over the past several weeks and months, in your estimation, is this someone you can work with?

*The President.* That's going to be his choice, eventually. And it's going to be very important for Mr. Ahmadi-nejad to recognize the world is united in our desire, and it's his choice to make.

Carl Cameron [FOX News].

*Fuel*

*Q.* Thank you, Mr. President. Good morning.

*The President.* Thank you.

*Q.* Back to gas prices just a moment ago. Insofar as you directed some of your Cabinet this week to look into the possibility of price gouging, do you have a suspicion yourself, do you have evidence here at the White House? And should the American consumer believe that you think they're being ripped off?

*The President.* I have no evidence that there's any rip-off taking place, but it's the role of the Federal Trade Commission to assure me that my inclination and instincts is right. More importantly, it's up to the Federal Trade Commission to assure the American people that they're being treated fairly at the pump.

Let's see—Mark Smith.

*Q.* Another one?

*The President.* Oh, you already asked one?

*Q.* Call on my colleagues.

*The President.* Did you ask one?

*Q.* Yes, sir.

*The President.* Oh, you did ask one. [Laughter]

*Q.* It was a memorable question.

*Q.* Really a great question. [Laughter]

*Q.* Can I follow up on the energy question, Mr. President?

*The President.* No, you can't, because I just embarrassed myself by calling on Smith twice. [Laughter] That's right; it was that brilliant question. How could I forget?

VandeHei [Jim VandeHei, Washington Post].

*Energy/Alternative Fuel Sources*

Q. In talking about gas prices, in 2001, when you did your first energy policy and gas prices were about \$1.50, a lot of people were saying, you know, you have to push CAFE standards higher for the entire fleet of vehicles; you have to scrutinize oil companies more closely; you have to spend a lot more in alternative fuels than even you were proposing. Do you have any regrets now that gas is \$3 that you didn't do enough in your first term to prevent these prices?

*The President.* As you know, in order for there to be a CAFE standard increase on cars, it requires congressional action. I think it's a good idea to give the President, through the Secretary of Transportation, the opportunity to raise CAFE standards, just like I did on light trucks. And we're spending—I think it's about \$10 billion since I've been President on alternative sources of energy, and we're making progress; we're close to some significant breakthroughs.

The point is, is that it's very important for us to diversify away from oil. You might remember, when I first came in, I think the price of oil was like—I know it was below \$20, and it's all of a sudden—now that the price of oil is up, alternatives become much more economically viable, and therefore, I think the American people are going to see a lot of technological development happen quickly, which will enable people to have different options and different choices.

The hybrid vehicle has just hit the road recently, as you know. There's a big demand for hybrids. I think it makes sense to have tax credits to encourage people to buy hybrids. Increase in demand will cause producers to produce more. And as you know, that there's limitations on the number of—the amount of tax credit issued per manufacturer. I think we ought to just

make sure the tax credit is applied to all people purchasing hybrid vehicles.

Herman [Ken Herman, Austin American-Statesman].

*Dubai Holding LLC*

Q. Thank you, sir.

*The President.* Yes. Glad to work you into a national press conference for the first time in a long time.

Q. Proud to be here, sir. Are there inherent and unavoidable risks in allowing the sale of a defense firm to interests owned by Dubai?

*The President.* That question has been looked at very carefully, has been analyzed by a CFIUS committee. I signed off on it this morning because I'm convinced, at the recommendation of the CFIUS committee, as well as our military, that it's a sale that should go through.

April [April Ryan, American Urban Radio Networks].

*Elections in New Orleans, LA*

Q. Mr. President, some have questioned your efforts in having every vote count in this Nation, especially after the April 22d New Orleans elections. Now with that, what are you looking to do with the three sections of the Voting Rights Act that are set to expire in 2007? How are you planning to enhance those sections, because we understand that you want to study it prior to any passing of a bill by the Senate.

*The President.* I think I'm on record—as a matter of fact, I'm pretty clearly on record, particularly at the Rosa Parks—signing of the Rosa Parks bill, that I'm for the extension of the Voting Rights Act, right?

Q. Yes, yes you are on record. But there is word that you want to enhance it, or people within your administration want to look at it to tweak it.

*The President.* I wanted to make sure the Voting Rights Act is strong and capable. I'm not exactly sure what you're talking about. But my statement is my statement:

The Voting Rights Act ought to be extended. The Voting Rights Act is a very important part of the civil rights legislation. Everybody ought to be encouraged to vote. Voting is a valuable part of democracy, and we want people voting.

*Q.* Do you think it was valuable in April—for the April 22d elections in New Orleans?

*The President.* I'm not going to second-guess the Federal judge. I was just down there yesterday; I didn't hear much complaining about it, though, when I was there. And obviously, it's a more difficult election with people scattered around, but the State worked very hard to encourage people to vote. And I was with Mayor Nagin and Governor Blanco, and the subject, frankly, didn't come up. That's not to say it's not on their minds. It's on Mayor Nagin's mind because he wants to win; he wants people voting.

But the State bent over backwards to encourage people to participate in the mayoral election. And it looked like the process, given the circumstances the city had been under, pretty smooth process, which is not necessarily a given.

Yes, sir.

#### *Emergency Management/Gulf Coast Recovery*

*Q.* Mr. President, yesterday Senators Lieberman and Collins said they want to see FEMA abolished. I'd like you to comment on that. But also, with hurricane season only a month away, can you assure the American people that your Government has learned the lessons of Katrina?

*The President.* Thanks for the question. That was obviously on people's minds when I went down to New Orleans and Mississippi. The lessons of Katrina are very important. We've learned a lot here at the Federal level: One, there needs to be better coordination between local and State governments; secondly, that there needs to be a communications package that will be available to help deal with the situation that

happened last time, which was total destruction of communications capabilities; third, that there needs to make sure that there is a law enforcement alternative in case there's a local—a breakdown of local law enforcement; fourthly, there needs to be a prepositioning of assets so that if a major storm were to come, we'd be able to move equipment in faster.

But most important, there needs to be a coordination and an understanding of the evacuation and relief plans. And I talked to the mayor and both Governors that I met with yesterday about our seriousness in working with them to make sure that the plans are as effective as possible.

The communications, obviously, this time around are a lot better than last time around. And so the lessons are being learned. And my attitude toward the recommendations by Fran Townsend, who is a part of my administration, or the Congress is we ought to take them all seriously. The objective is to respond to these natural disasters as well as we possibly can.

The other issue down there for New Orleans, of course, are the levees. And we've got money in the sup to make sure that these levees are pre-Katrina or better prior to June 1st. I think we'll achieve that objective. Additional money will be spent so that the levees are improved significantly by September of '07. The levees are important—the rebuilding of the levees, or improving of the levees are very important to assure the people of New Orleans that if there is a storm, they're built to pre-Katrina levels, as least in the initial stage. But also, it's important to convince people that it's okay to risk capital in New Orleans.

The amazing thing in the area down there—I don't know if you all went with me—but it was—there's this totally different attitude from when we were there before, early on, obviously, after the storm. People are coming back. Sales taxes along the gulf coast of Mississippi are higher today than they were a year ago this date. And that's positive.

But look, there's still a lot of work to be done, a lot of reconstruction. The CDBG money—and it's very important for the Congress to pass the CDBG money I requested so that the housing issue can get—people can get back to rebuilding their homes. And Mississippi, the CDBG money will be coming out pretty quick; New Orleans, they've still got a little work. The Governor has proposed a plan that will be in front of the legislature, I think, this weekend. It's a very important step to getting this process moving.

And so, got a lot of work to do. But, yes, we're much more ready this time than last time. And we're taking very seriously the lessons learned from Katrina.

Q. Abolish FEMA?

*The President.* I've looked at all suggestions, but my attitude is, let's make it work. We're about 6 weeks away from—we're getting pretty close.

Who are you again? [Laughter]

Q. I got a few more, if you like.

*The President.* You've had a big day. [Laughter]

Q. That's three. That's three.

*The President.* Butting in once, called on unnecessarily once.

Cooper [Christopher Cooper, Wall Street Journal].

#### *Emergency Response Preparation*

Q. Yes, sir, regarding FEMA, do you think that they're prepared for the season? And is there any way to measure that at this point?

*The President.* I think preparation is—Chris, preparation is preparation at all levels of government. Most Governors will tell you that the main responsibility for disaster relief is at the State level. And the job of the Federal Government is to step in and help. And so Chertoff has been down there. Secretary Chertoff has been down there working with these local governments to review their plans and to analyze where the Federal Government can help if there's any breakdown whatsoever.

One of the key issues, of course, again, in New Orleans, is transportation. We remember those pictures of those buses—people looking to get out, and yet there were these buses in flooded areas. And so one of the areas where Homeland Security Department, working with the State and local governments, is to make sure there's a transportation plan that will work.

It's going to be interesting—let's pray—first of all, pray there's no hurricanes. That would be, like, step one. Step two, if one is coming, I suspect people are going to take hurricane warnings very seriously and that evacuation orders will be heeded very seriously. And so it's going to be a—and therefore, there's a need to make sure that the forecasting is accurate—and this is pretty much the way it is these days, been very accurate forecasting—and that the response by all of us is in a timely fashion to give people time to prepare.

But now is the time to put these plans in place, and we're doing it. And I feel pretty good about the coordination and the sessions that have been taking place down there. And as I understand, Secretary Chertoff will be going back down there again.

And, by the way, the plans are not just for New Orleans and Mississippi; they're for Alabama and Florida and Texas as well. In other words, it's for Hurricane Alley.

Yes. Dallas Morning News man [G. Robert Hillman, Dallas Morning News].

#### *Immigration Reform*

Q. Yes, Mr. President. On Monday, several million illegal immigrants, worried about some forms of immigration legislation in the Congress, are going to walk off the job and keep their kids home from schools. What is your view of this call for a national boycott on Monday?

*The President.* I'm not a supporter of boycotts; I am a supporter of comprehensive immigration. I understand how difficult this issue is for some people here in Washington and around the country, but there

is—my judgment, that enforcing our border requires a—and by the way, I think most Americans agree that we’ve got to enforce our border. I don’t think there’s any question about that—

Q. Do you think—

*The President.* Let me finish, please, Bob, thank you—that there needs to be interior enforcement as well. But I recognize it’s hard to enforce the border and have interior enforcement if there is a smuggling network that’s bringing people across and there’s a forgery network that’s providing people false documents. And therefore, I believe a temporary-worker program will make it easier to enforce the border, as well as have interior enforcement.

And if somebody is coming across to do a job on a temporary basis, they don’t need to sneak across. They don’t need a *coyote* to stuff them in the back of an 18-wheeler. They don’t need to walk across the desert and risk their lives. And so a rational way to make sure our border is enforced is to have a temporary-worker program. And that’s what I support.

I think it’s very important for people, when they do express themselves, they continue to do so in a peaceful way, in a respectful way—respectful of the—how highly charged this debate can become. One of the things that’s very important is when we debate this issue that we not lose our national soul. One of the great things about America is that we’ve been able to take people from all walks of life bound as one nation under God. And that’s the challenge ahead of us.

And I look forward to working with members of both political parties to get a bill out of the United States Senate and into conference, which would then mean we have a chance to get a comprehensive bill to my desk. And I want a comprehensive bill, one that enforces the border, one that makes sure that we’ve got interior enforcement procedures in place that actually work, one that provides a temporary-worker process for people, one that does not provide automatic citizenship—I don’t think anybody really wants there to be automatic amnesty for people—one that allows somebody here to be able to get in—if they want to be a citizen, to be able to get in line, but not the front of the line but the back of the line.

And that’s what I’m for, a comprehensive plan. I think we can get one done if people would set aside politics and focus on what’s best for the United States of America.

Thank you for your time. I’ve enjoyed this. I will see you all tomorrow night, I guess. Looking forward to it. I hope you are as well.

NOTE: The President spoke at 11:47 a.m. in the Rose Garden at the White House. In his remarks, he referred to Edward P. Lazear, Chairman, Council of Economic Advisers; former Secretary of State Colin L. Powell; former Senator John C. Danforth of Missouri; Chancellor Angela Merkel of Germany; President Mahmud Ahmadi-nejad of Iran; Mayor C. Ray Nagin of New Orleans, LA; Gov. Kathleen Babineaux Blanco of Louisiana; and Gov. Haley Barbour of Mississippi.

## Remarks Following a Meeting on Sudan April 28, 2006

I just had an extraordinary conversation with fellow citizens from different faiths, all of who have come to urge our Govern-

ment to continue to focus on saving lives in Sudan. They agree with thousands of our citizens—hundreds of thousands of our

citizens that genocide in Sudan is unacceptable.

And there will be rallies across our country to send a message to the Sudanese Government that the genocide must stop. Those rallies will also be an indication that thousands and hundreds of thousands of our citizens urge the world to unite with the United States in concerted action.

We have got AU troops on the ground; those troops need to be augmented and increased through strong United Nations action. And the United States strongly supports a U.N. resolution to do that. I believe it's important for the United States to be involved, and the best way to be involved with the AU troops is through NATO. I've worked with the Secretary General of NATO and our allies in NATO to provide a firm response to the actions that are taking place on the ground. I want the Sudanese Government to understand the United States of America is serious about solving this problem.

I'm proud of our Nation's generosity when it comes to aid, and the American people ought to be proud of the taxpayer dollars that have gone to provide much needed aid for those who suffer. But this Government must understand that we expect the aid to get to the people, and we

expect there to be a solution to this problem.

There will be rallies all across the country. And for those of you who are going out to march for justice, you represent the best of our country. We believe every life is precious, every human being is important. And the signal you send to the world is a strong signal, and I welcome your participation. And I want to thank the organizers for being here.

I want to thank this good man right here; he sits here next to his President, and it wasn't all that long ago that he was a slave inside Sudan. He sits here to represent the thousands of lives who have been affected by a Government that must honor human rights.

And, Simon, I'm proud to have you here as a fellow American, proud to have you here as a friend.

Thank you all for coming.

NOTE: The President spoke at 1:50 p.m. in the Roosevelt Room at the White House. In his remarks, he referred to Secretary General Jakob Gijsbert "Jaap" de Hoop Scheffer of the North Atlantic Treaty Organization; and Simon Deng, founder of the Sudan Freedom Walk.

## Letter to Congressional Leaders on the Proposed Acquisition of Ross Catherall US Holdings Inc., by Dubai International Capital LLC April 28, 2006

*Dear Mr. Speaker: (Dear Mr. President:)*

Attached is a classified report on my decision to take no action to suspend or prohibit the proposed acquisition of Ross Catherall US Holdings Inc., by Dubai International Capital LLC, a subsidiary of Dubai Holding LLC.

I have made this decision under the authority vested in me as President by section 721 of the Defense Production Act of 1950

(the "Exon-Florio amendment"), 50 U.S.C. App. 2170, and on the basis of the recommendation from senior officials who make up the Committee on Foreign Investment in the United States.

The attached report, prepared by my Administration, is submitted consistent with subsection (g) of that amendment and is subject to the provisions of subsection (c) regarding confidentiality of information.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Rep-

resentatives, and Richard B. Cheney, President of the Senate. An original was not available for verification of the content of this letter.

## The President's Radio Address *April 29, 2006*

Good morning. Last weekend, the people of Iraq formed a national unity government. This is an important milestone on the road to democracy in Iraq, and it marks the beginning of a new chapter in America's involvement. Last Sunday, I talked to the President, Prime Minister-designate, and Speaker of the new Government. And this week, I sent Secretary of State Rice and Secretary of Defense Rumsfeld to Baghdad to meet face to face with the new Iraqi leadership. We've all been impressed by the Iraqi leaders' commitment to maintain the unity of their country and effectively represent the Iraqi people.

The new Iraqi Government will face many challenges. Iraqi leaders agree that the new Government must continue to build up the Iraqi security forces to defeat the terrorists and must establish control over militias. They also agree that the new Government must rebuild critical infrastructure, strengthen the Iraqi economy, and ensure that all Iraqis benefit as their nation grows in security and prosperity.

During their meetings in Baghdad, Secretaries Rice and Rumsfeld made clear that Iraq will have the continued support of America and our coalition partners as we begin the new chapter in our relationship. We will help the new Iraqi Government assume growing responsibility for the Nation's security. And as Iraqis continue to make progress toward a democracy that can govern itself, defend itself, and sustain itself, more of our troops can come home with the honor they have earned.

The terrorists clearly recognize the threat that the new unity Government poses to their dark plans for Iraq and the broader Middle East. This week, the terrorist Zarqawi, leader of Al Qaida in Iraq, released a video in which he denounced the new Government and promised further acts of terrorist violence. Zarqawi lashed out at what he called "this rotten play of democracy" and declared that Iraq's new Government will become "a poisoned dagger" in the heart of his plans for the Muslim world.

On Wednesday, Iraq's leaders united to strongly condemn Zarqawi's statements. One Iraqi official declared that the terrorists and insurgents, quote, "are feeling this might be the last chance they have to survive. They're fighting everyone in Iraq—every Iraqi. I think that shows how weak they are," end quote. A newly appointed first Deputy Speaker of the Iraqi Parliament said that Zarqawi fears the new Government will unify Shiites and Sunnis and Kurds. He said, quote, "I believe that Zarqawi was caught off guard by the new Government taking shape, because it will be a very strong one representing all Iraqis," end quote.

The new leaders of Iraq are showing great courage in the face of terrorist threats. In recent weeks, terrorists have assassinated three siblings of top Iraqi politicians, but the new leaders of Iraq remain determined to lead their nation toward a future of democracy and peace. These

brave leaders deserve our continued support, and I have told them they can count on America to stand with them.

The enemy is resorting to desperate acts of violence because they know the establishment of democracy in Iraq will be a double defeat for them. First, it will deny the terrorists their immediate aim of turning Iraq into what Afghanistan was under the Taliban—a safe haven where they can plot and plan more attacks against free nations. Second, in the long term, a democratic Iraq will be a major blow to the terrorists' hateful ideology, because it will send a powerful message across the region that the future of the Middle East belongs to freedom.

There will be more tough fighting ahead in Iraq and more days of sacrifice and struggle. Yet the enemies of freedom have suffered a real blow in recent days, and we have taken great strides on the march to victory. Iraq's leaders now have laid the

foundations for a democratic government of, by, and for the Iraqi people. By helping the Iraqi people build their democracy, America will deal the terrorists a crippling blow and establish a beacon of liberty in the Middle East. And that will make our Nation and the world more secure.

Thank you for listening.

NOTE: The address was recorded at 7:52 a.m. on April 28 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on April 29. The transcript was made available by the Office of the Press Secretary on April 28 but was embargoed for release until the broadcast. In his address, the President referred to President Jalal Talabani, Prime Minister-designate Nuri al-Maliki, Speaker of the Parliament Mahmoud al-Mashhadani, and First Deputy Speaker Khaled Atea of Iraq. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following a Meeting With Secretary of State Condoleezza Rice and Secretary of Defense Donald H. Rumsfeld *May 1, 2006*

I want to thank Secretary Rice and Secretary Rumsfeld. And General Pace, thank you for being here as well. Thank you for joining me this morning.

They came by the Oval Office to brief me on their recent trip to Iraq. First of all, I appreciate them both going over there to send my best wishes to the new Government and to Prime Minister-designate Maliki, as well as the new Speaker and the President. I had spoken to them on the phone, but I thought it was very important for both Secretaries to go firsthand, to be there with the leadership to say we're supporting them. It's very important for these two senior officials to sit down with these new folks and say, "You have our support, and we want you to succeed."

And they brought back interesting impressions from the three new leaders. They said they were optimistic people, that they're full of energy, and they're very eager to succeed. And that's really important for the American people to know, that we've got partners in this effort who are dedicated to a unified Iraq and dedicated to putting a Government together that is one that will represent all the Iraqi people.

This new Government is going to represent a new start for the Iraqi people. It's a Government that understands they've got serious challenges ahead of them. And the three leaders spoke to Secretary Rice and Secretary Rumsfeld about their need to deploy the growing strength of the Iraqi security forces in such a way as to defeat

the terrorists and the insurgents. And we will continue to support them in that effort that they talked about: the need to establish control over the militias and other unauthorized armed groups and enforce the rule of law. And we will support them in these efforts to achieve that important objective. They talked about the need to rebuild infrastructure and strengthen their economy, and we agree with that assessment.

And finally, they talked about the need to make sure that all Iraqis share in the benefits of this new democracy. A new Iraqi Government represents a strategic opportunity for America—and the whole world, for that matter. This Nation of ours and our coalition partners are going to work with the new leadership to strengthen our mutual efforts to achieve success, a victory in this war on terror. This is a—we believe this is a turning point for the Iraqi citizens, and it's a new chapter in our partnership.

The Secretaries began building this new partnership during their trip. In other words, the Iraqi leaders saw that we are committed to helping them succeed. They need to know that we stand with them. And the Iraqi people need to know that we stand with them, that we understand the strategic importance of a free Iraq in the Middle East, and that we understand the need to deny safe haven to the terrorists who have caused such turmoil and havoc inside of Iraq.

There's going to be more tough days ahead. These Secretaries know that. They're realistic people. They have brought

an assessment of what they saw on the ground, and some of it's positive, and obviously, there's some difficult days ahead because there's still terrorists there who are willing to take innocent life in order to stop the progress of democracy. But this Government is more determined than ever to succeed, and we believe we've got partners to help the Iraqi people realize their dreams.

Last December, the Iraqi people voted to have a free government. I know it seems like a long time ago for the American people, but what we have begun to see now is the emergence of a unity government to represent the wishes of the Iraqi people. Last December, millions of people defied the terrorists and killers and said, "We want to be free; we want a unity government." And now what has happened is, after compromise and politics, the Iraqis have come together to form that Government. And our Secretaries went over there to tell them that we look forward to working with them as partners in peace.

So I want to thank you all for going. I appreciate your dedication to the cause of peace. Thank you.

NOTE: The President spoke at 9:36 a.m. in the Rose Garden at the White House. In his remarks, he referred to Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff; and Prime Minister-designate Nuri al-Maliki, Speaker of the Parliament Mahmoud al-Mashhadani, and President Jalal Talabani of Iraq.

## Remarks on Presenting the Preserve America Presidential Awards May 1, 2006

Thank you all. Thanks for the introduction. [Laughter] Laura and I welcome you here to the White House. We are privileged to have some of our country's really great community leaders and preservation-

ists here in the Rose Garden. This is a fitting place, we think, to honor those who work hard to preserve our Nation's history and protect the natural beauty of the country.

This is a—this Rose Garden is one of America's historic treasures. I spend a lot of time mowing out here. [Laughter] The commitment of the folks here to preserve the unique treasures in your own communities means that you celebrate our Nation's history, and you help instill a love of our Nation's natural beauty for future generations. And that's why we have such an event, to encourage people to preserve and instill—preserve what is important and instill love for the—for our natural treasures.

I appreciate not only the First Lady of the United States being here, but I appreciate the first lady of Florida being here—*mi cunada*. Thank you. Give Brother my best. [Laughter] Tell him he's doing a fine job. [Laughter]

I want to thank Administrator Steve Johnson of the EPA. Thank you for being here, Steve. Lynn Scarlett, who's the Acting Secretary of the Department of Interior; Fran Mainella, who is the Director of the National Park Service; and Senator Craig Thomas of Wyoming—thanks for coming. Appreciate you being here, Senator. Thanks for taking time out of your busy schedule.

I appreciate Bruce Cole, who's the Chairman of the National Endowment for the Humanities, joining us. And it's good to see my old friend John Nau. He's the Chairman of the Advisory Council on Historic Preservation; he's the chairman of the Texas Historical Commission—and he's a fine lad. [Laughter] It's good to see Bobbie too. Thanks for coming. And we appreciate all the members of the Advisory Council on Historic Preservation. Thank you for serving. Thank you for your dedication to our country.

Laura and I want every American to have a chance to learn about this country's history, and one of the best ways to do so is to visit our country's great historical landmarks. So in 2003, we created—actually, she created—she told me to create, which I did—[laughter]—the Preserve America Presidential Awards, to recognize outstanding contributions to America's cultural

and natural heritage. By the efforts—their efforts, today's award winners have drawn tourists to historic sites and towns; they've revitalized communities and our natural spaces; and they've opened up new opportunities for learning.

The first Preserve America award winner we honor this year is Mission San Luis. It's a project that has reconstructed the former western capital of Spanish Florida in Tallahassee. The mission was burned to the ground over 300 years ago. And the State of Florida, in partnership with local and private groups, successfully recreated nearly every detail of the mission. The reconstruction team used original mission documents to ensure the highest level of historical accuracy. By their painstaking effort, they have helped Mission San Luis rise from the ashes to an educational, cultural, and historical resource reflecting Florida's beginnings. Congratulations, and welcome.

Our second award recipient is the State of Maryland. Through a new program called Maryland Heritage Areas, the State is protecting areas of historical significance and increasing heritage, tourism, and educational opportunities. State and community leaders are investing in projects to highlight special parts of American history, including the location where Harriet Tubman's Underground Railroad helped slaves escape to the North and Fort McHenry, the site that inspired Francis Scott Key to write America's national anthem. And I appreciate the good folks of Maryland for highlighting the amazing sites you've got in your State. And welcome; thank you for coming.

Our third award recipient is a company named Tauck World Discovery, which is helping protect one of America's most precious natural resources. Since 2003, this company has been running an innovative volunteer program in Yellowstone National Park. Under this program, tourists who come to appreciate the scenic landscape can also help keep those vistas beautiful by contributing a good day's work. Pretty

interesting concept, isn't it? Since the program began, guests have donated almost 10,000 hours of labor on projects throughout the park. By their good work, the good people at Tauck are inspiring Americans to lend a hand in preservation and making sure that Yellowstone is a natural wonder for the years to come. And we welcome you both. Thank you for coming.

Our fourth award recipient is Hampton Hotels. Probably surprises you, doesn't it? Under their "Save-a-Landmark" program, Hampton Hotels is helping communities rehabilitate roadside attractions along America's great highways. Their efforts have helped preserve landmarks along Route 66, to restore the Jesse Owens Park in Alabama, to refurbish one of the country's classic theme parks in New Jersey, and to save the world's largest Santa Claus in Alaska. [*Laughter*] Each of these landmarks represents a piece of cultural and regional history. By saving them for future generations, they are helping to celebrate the diversity of America and provide educational opportunities for families as they travel across our great land. Thank you very

much; appreciate what you're doing. Congratulations.

All of these award winners set such a wonderful example for our fellow citizens. You've taken the lead in preservation, and we appreciate it. You're showing what is possible when local citizens decide to make a difference in the community in which they live, and your work is preserving America for generations to come.

And so Laura and I welcome you to the Rose Garden. We thank you for your efforts. May God continue to bless our country. Thank you all.

NOTE: The President spoke at 10:22 a.m. in the Rose Garden at the White House. In his remarks, he referred to Columba Bush, wife of Gov. Jeb Bush of Florida; Barbara E. "Bobbie" Nau, wife of Advisory Council on Historic Preservation Chairman John L. Nau III; and Robin Tauck, president and chief executive officer, and Arthur Tauck, chairman of the board, Tauck World Discovery. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady, who introduced the President.

## Remarks to the American Hospital Association May 1, 2006

Thank you very much. It was on this stage 2 nights ago that I had the pleasure of showing up with a George W. Bush look-alike. [*Laughter*] So I walked in, and Dick said, "Is it really you?" [*Laughter*]

Thanks for your introduction, Dick. Thanks for the invitation to be here. I want to, first, thank all the good people of the American Hospital Association. I appreciate the important voice that you provided for our hospitals, but more importantly, I appreciate the compassionate care you give to our citizens.

I have come to talk about a comprehensive health care strategy that will make health care more affordable and available for all our citizens. And I appreciate you giving me a chance to use this forum as an opportunity to discuss our vision for moving forward.

I do want to thank George Lynn, who is the chairman of the American Hospital Association board of trustees. I want to thank all the trustees who are here. I appreciate the leadership of the American Hospital Association. I want to thank the

members of the American Hospital Association.

I understand—there he is—my friend Charlie Norwood is here. Good to see you, Congressman. Thank you so much for being here. You're looking pretty good. *[Laughter]* Looking real good, as a matter of fact. *[Laughter]*

This economy of ours is strong, and that's important for health care. It's important for the hospitals. And the economy is getting stronger. We put our trust in the American people by cutting taxes, and the tax relief we passed is saving—is helping people save and spend and invest. And when people save, spend, and invest, it causes our economy to grow. Thanks to tax relief and pro-growth economic policies, we're now in our fifth year of uninterrupted economic growth.

In the first quarter of this year, the economy grew at 4.8 percent. We've had 18 straight quarters of economic expansion. Last year our economy grew faster than any other major industrialized nation. Over the past 2½ years, we've created 5.1 million new jobs, and that's more than Japan and the 25 nations of the EU combined. Productivity is high; the unemployment rate is 4.7 percent; consumer confidence is at its highest point ever—in nearly 4 years. The new economic report out today contains good news on income growth.

Things are looking good for this economy, but we cannot be complacent. One of my concerns is that the United States of America loses our nerve, fears competition, and we become an isolated and protectionist nation. And health care plays a vital role in making sure this nation remains competitive.

One of the best ways to make sure that we're a competitive nation is to continue to invest in research and technology. If America wants to be the leader of the world, we've got to remain on the leading edge of change. As many of you know, when I came into office, I pledged to continue the doubling of the funding for the

National Institutes of Health, and we kept that commitment. And it's one of the many reasons why our health care system leads the world. And we need to keep—we need to understand the importance of research at the Federal level, and that's why I have proposed that the United States Congress double Federal investment in basic scientific research.

In other words, for this country to be competitive, we've got to invest in the future. See, I don't think we ought to fear the future; I don't think we ought to become protectionists and isolationists. I think we need to continue to lead, and one way to lead is to lead in research and development.

To keep this economy competitive with other nations around the world, we've got to do something about our dependence on oil. Dependency on oil creates an economic problem for us, and it creates a national security problem for us. So I look forward to working with Congress to change—to help speed up research and development so we can change our habits, so we can drive cars fueled by ethanol, or so we can have batteries that enable cars to drive for the first 40 miles on electricity.

To keep this country competitive, we've got to have a health care system that provides our people with good quality care at affordable prices. In other words, you're a part of an industry that must be reformed in order for the United States to continue to be an economic leader.

America has the best health care system in the world, pure and simple. We got the best medicines; we got the best doctors; and we have the best hospitals. And we intend to keep it that way. Yet we are challenged by the fact that health care costs are rising sharply. In the past 5 years, private health insurance premiums have risen 73 percent. And as a result, some businesses have been forced to drop health care coverage for their employees. You know that as well as anybody. Others have been forced to raise copayments and premiums.

Some have been paying increasing health care costs and, therefore, have been unable to give workers the pay raises they need to cope with rising health care costs.

With rising costs, many Americans are concerned. They're concerned they're not going to be able to afford health care. As you well know, millions of our fellow citizens have no health insurance at all. And as you know, that places burdens on our Nation's hospitals. This is unacceptable, for this country to have health care costs rising as fast as they are. If we want to be the leader of the world, we must do something about it. And my administration is determined to do something about it.

To make our health care system work for all Americans, we have to choose between two philosophies: one that trusts government to make the best decisions for the people's health care or one that trusts the people and their doctor to make the best decisions for their health care.

We know from experience which of these systems works best. Other nations that have adopted for bigger government and more centralized control now have long waits for treatment for their people. The quality of care is lower; there's less technological innovation. In America, as you know, we follow a different path. We lead the world in health care because we believe in a system of private medicine that encourages innovation and change.

And the best way to reform this health care system is to preserve the system of private medicine, is to strengthen the relationship between doctors and patients and make the benefits of private medicine more affordable and accessible for all our citizens.

Government has a role to play; don't get me wrong. We're kind of—we're big in the health care field, as you may know. [*Laughter*] We have a major role to play in strengthening and reforming this health care system, but in a way that preserves the doctor-patient relationship.

And that's what I want to talk to you about today. The first goal of our health care strategy is to meet the obligation the Federal Government has made to take care of the elderly and the poor. We have said, as a Federal Government, we will help the elderly and the poor, and I intend to keep that obligation. We're meeting that obligation, that responsibility through Medicare, Medicaid, and community health centers.

More than four decades ago, the Federal Government established Medicare to provide health coverage for older Americans. The bill was signed by Lyndon Baines Johnson. He came from a State I know pretty well. [*Laughter*] When I came into office, I found a Medicare program that was outdated, a Medicare program that was not meeting the needs of America's seniors. The way I tried to explain it to the American people was this: We had a system that would pay \$28,000 for an ulcer surgery but not the \$500 it would cost for prescription drugs that would prevent the ulcer from being—with taking hold in the first place. And that didn't make any sense—\$28,000 for the surgery but not a dime of prescription drugs to prevent the surgery from being needed. To me, that's an outdated system. It's one that's not very cost-effective, and it's one that does not provide quality care for our seniors.

So I decided to do something about it. And I worked with the Congress, and we passed critical legislation that modernizes Medicare and provides seniors with more choices through the private sector and has given our seniors better access to the prescription drugs they need.

The benefit allows seniors to choose from a number of private prescription drug plans to find the one that is right for them. It encourages plan providers to compete for the seniors' business, and that helps lower costs. The new Medicare prescription drug benefit is a good deal for America's seniors. The typical senior will end up spending about half of what he or she used to spend on prescription drugs each year.

In addition, we've provided extra help for low-income seniors. About a third of seniors are eligible for prescription drug coverage that includes low or no premiums, low deductibles, and no gaps in coverage. On average, Medicare will pay for more than 95 percent of the costs of prescription drugs for low-income seniors. I know you shared my concern when we heard the stories of low-income seniors having to choose between food and medicine. And because of this reform, those days are over with.

The Medicare prescription drug benefit went into effect in January. More than 30 million people now have prescription drug coverage through the Medicare program, and hundreds of thousands more are signing up each week. We want every senior who needs coverage to sign up.

The May 15th deadline for seniors to sign up at the lowest cost is approaching. Over the next 2 weeks, this administration will encourage our Nation's pharmacies—pharmacists and doctors and hospitals and others in the medical community to continue to get the word out to seniors about the benefits of this important program. There are some seniors who are risk-averse; they don't want to change. It is really important for those of us who are involved in health care in this country to get the word out that, at the very minimum, seniors ought to look and see what's available. Americans need to take advantage of this opportunity to choose a plan.

We're also—I also recognize that we got a problem with the long-term viability of Medicare. Today the trustees for our Medicare and Social Security systems will release their annual report. Each year the trustees remind us that these programs are not structured in a way that they will be financially sound for our children and our grandchildren.

The problem is pretty basic. There's a lot of baby boomers like me getting ready to retire—[laughter]—in my case, 2½ years. [Laughter] And there's a lot of baby boomers who are living longer, and there

are fewer workers per beneficiary paying money in the system to support future retirees like me. And so the systems are going broke, and now is the time to do something about it. We've got too much politics in Washington, DC. It's time to set aside politics and restructure Social Security and Medicare for generations to come.

We're honoring our Nation's commitments to take care of the poor by strengthening Medicaid. Medicaid is a program administered in conjunction with the States that provides health care for low-income families with children, poor seniors, and disabled Americans. To help improve Medicaid, earlier this year, I signed legislation to restructure Medicaid and give States more flexibility in designing better programs to cover their citizens.

Under the reforms I signed into law, it's now easier for States to offer alternative benefit plans, provide coverage to more people, and design their Medicaid program to meet their State's needs and budgets. In the coming months, my administration will be encouraging States to adopt commonsense reforms. Our health care system must be guided by the needs of patients, not by rules emanating out of Washington, DC.

Another way we're meeting our commitment to Americans in need is through community health centers. These centers provide primary health care for the poor, so they don't have to go to the emergency room of a hospital to get routine care. This is a really good use of taxpayers' money. It makes a lot of sense to have community health centers so that we can cut down on unnecessary visits to the emergency rooms. Health centers help lower the cost of health care for everyone.

Since I took office, we've funded about 800 new or expanded health centers, bringing our total to more than 3,700 health centers serving more than 13 million Americans a year. And over the next 2 years, we will fund the opening and expanding of 400 more health centers. And Congress

needs to fully support these health centers in the budget that I have submitted.

And so we have got a strategy to take care and help our elderly and the poor and the disabled. The second part of our strategy is to make care and coverage more affordable and available for Americans. And here are five key policies to support this goal.

Our first policy is to expand health savings accounts to help improve health care and to help lower costs. Under the current system, as you well know, most Americans have no idea what the actual cost of their treatment is. Third-party insurers pay their bills, so patients have no reason to demand better prices, and the health care industry is under little pressure to lower prices. When somebody else pays the bills, it seems like everything is just fine. The result is that health care costs are skyrocketing. The insurance companies pass these rising costs on to their workers—on to workers and their employees in the form of higher premiums.

Now, health savings accounts transform what I believe is an outdated system by putting patients in control of how their health care dollars are spent. And when patients and consumers see how their health care dollars are spent, they demand more value for their money. The result is better treatment at lower costs.

HSA's have two components: low-cost catastrophic insurance coverage and tax-free savings accounts. The catastrophic coverage protects you and your family in the event of a devastating medical illness. The health savings account allows your—or your employer to contribute to a tax-free account to pay for your routine medical needs. The money that goes into your account is tax-free, the interest earned on your account is tax-free, and the money withdrawn from your account is tax-free. It means that you own your money in your account, and that you can build your savings by rolling over contributions that you do not spend in any given year.

HSA's can help us move toward a health care system that is no longer dominated by third-party payers, to a system in which consumers make their own decisions. And we see strong evidence that HSA's are making health care more affordable and accessible. From March 2005 to January 2006, the number of HSA's tripled from 1 million to more than 3 million. This is a new product. People are getting—taking a look at it. They're beginning to see the merits of a tax-free savings system coupled with catastrophic care.

Forty percent of the people who bought HSA's have family incomes below \$50,000. HSA's are making health care more accessible for those without insurance. More than a third of those who bought HSA's on their own had previously been uninsured. HSA's are good for small-business owners. HSA's, in my judgment, will mean that Americans who do not have coverage will be able to get coverage and afford coverage, which is good for America's hospitals. You see, by making health care coverage more affordable, more Americans can afford insurance. And with more Americans insured, fewer people will show up at our Nation's hospitals needing uncompensated care.

HSA's also create an incentive for patients to become more informed about their medical options and more involved in their treatment as they shop for the best value for their health dollar. This involvement strengthens the doctor-patient relationship.

Equally importantly is that HSA owners can see the benefits of changing risky behavior. They can follow doctors' preventative recommendations. The healthier you are, the less money you're going to spend out of your savings account. And there will be a tangible return—more of your own money, tax-free. Some employers are even offering employees financial incentives to get regular checkups and lose weight and

get fit. By encouraging preventative medicine, HSAs save lives and save health care dollars.

HSAs will benefit hospitals, doctors, and patients, and they can also benefit hospital workers. Today, only a handful of hospitals offer HSAs to their employees. I encourage the members of the American Hospital Association to consider the benefits of offering health savings accounts to your employees. HSAs will provide your workers with better care and lower your health care costs.

For decades, America's hospitals and health care professionals have led the world in innovation and quality medical care. Now you have an opportunity to help America transform our health care system by choosing the innovation and quality of health savings accounts. As HSAs continue to grow in popularity, my administration is working to expand them to even more Americans.

One way to make HSAs more attractive is to make them portable so they can meet the practical needs of today's workers. Many people are changing jobs, and one of their greatest fears is that they will lose their health care coverage. We believe that no American should have to remain locked in a job to get health insurance. Today, the savings in your health account are portable, and that means you can take your savings accounts from job to job. However, the health insurance within your HSA account is often not portable, and this is because of outdated laws and practices that prevent insurers from offering portable policies. I believe health insurers should be allowed to sell portable HSA policies nationwide.

Another obstacle to expanding HSAs is the Federal Tax Code. Under current law, employers and employees pay no income or payroll tax on any health insurance provided through the workplace. If you buy your own insurance, you do not get the same tax break. That means that the self-employed or the unemployed or workers

at companies that do not provide health insurance are at a great disadvantage. Congress needs to end this discrimination in the Tax Code and give Americans who buy HSA policies on their own the same tax breaks as those who get their health insurance from their employers.

The current Tax Code also limits the amount you contribute to your HSA tax-free. The limit is usually tied to your deductible. Sometimes your total out-of-pocket expenses are greater than your deductible. Those with chronic illnesses often have expenses that go well beyond their deductibles. So we need to fix the Tax Code by allowing Americans to cover their out-of-pocket expenses with tax-free dollars and make HSAs even more practical for more American families.

In addition to these efforts to fix the code, I've proposed a refundable tax credit to help low-income Americans purchase health coverage on the individual market. Under my proposal, low-income families can receive up to \$3,000 in a refundable tax credit to purchase HSA-qualified insurance. By working together, we can reform our Tax Code and make it easier for American families to get health care.

And this week, Congress takes an important step in these efforts. Congressman Eric Cantor of Virginia will introduce a bill that would end many of the biases in the Tax Code, provide a tax credit of up to \$3,000 for low-income families, and make HSAs more attractive. It's a bill called the "Tax-Free Health Savings Act."

I also want to thank Senators Burns and Allen, Ensign, and DeMint for introducing bills to improve HSA options for all Americans and Senators Santorum and Murkowski for introducing legislation supporting the low-income tax credit. Congress needs to pass these reforms and make sure the doctor-patient relationship remains central to our health care system.

The second policy for making health care more affordable and accessible is to increase transparency in our health care system. To be smart consumers, we need to be informed consumers, and this is especially true for patients with HSAs who have an incentive to spend their HSA dollars wisely. They need to know in advance what their medical options are, the quality and expertise of the docs and the hospitals in the area in which they live, and what their medical procedures will cost.

My administration is working with the AHA and other health care associations to provide patients with reliable information about prices and quality on the most common medical procedures. And I want to thank the AHA board for adopting a resolution this week supporting transparency. I appreciate your leadership on this vital issue.

We must work together to get patients the information they need so they can get the best quality care for the best price. If you're worried about increasing costs, it makes sense to have price options available for patients. That's what happens in a lot of our society; it should happen in health care as well. By increasing transparency, the idea is to empower consumers to find value for their dollars and to help patients find better care and to help transform this system of ours to make sure America remains the leader in health care.

Secretary Leavitt has met with leaders in the health care industry in 13 cities to encourage them to work with the Department of Health and Human Services to increase transparency in the marketplace. We're asking doctors and hospitals and other providers to post their walk-in prices to all patients.

I directed the Department of Health and Human Services to make data on Medicare's price and quality publicly available on the Internet. The first data will be available to all Americans by June 1st. We're also asking insurance companies to increase health care transparency by providing their

negotiating prices and quality information to their enrollees. And the Federal Government will do the same. My administration will be requiring transparency from insurance plans participating in Federal programs. Beginning this year, the Federal Employees Benefit Program and the military's Tricare system are asking contractors to begin providing price and quality information.

Today I'm asking for your help. Every hospital represented here should take action to make information on prices and quality available to all your patients. If everyone here cooperates in this endeavor, we can increase transparency without the need for legislation from the United States Congress. By working together, transparency—to increase transparency, we can help lower costs.

Third policy is to provide modern information technology to our medical system. Too many doctors' offices and hospitals have the most advanced technology in the 21st century but still use last century's filing systems. Doctors are still writing out files by hand, and that's kind of dangerous because most doctors don't write too well. [Laughter] In hospitals, there's more risk of medical error and duplicate tests when records are handwritten on paper instead of cross-checked on a computer.

So in 2004, I set a goal that most Americans would have an electronic health record within 10 years. And we're making good progress toward that goal. The first thing is, we needed to develop a common standard of language so that health care providers in Los Angeles and health care providers in New York knew what the—knew what we are talking about.

Imagine how valuable this access to information will become. If you had someone who had an epileptic seizure outside their hometown and ended up in a hospital in a nearby town, these electronic records would help save lives. Information would be valid and clear. There wouldn't be any

confusion amongst those who are working hard to provide compassionate care.

As we develop an information network—nationwide information network, we will make sure that we protect the privacy of a patient's medical record. But make no mistake about it, bringing information technology into our health care system is going to reduce costs and increase quality care for American people.

And I hope you're aggressive on this front. I urge you to work with the AHA to come up with a plan to help develop a nationwide information system that is modern and helps you do your job better.

Fourth policy is to make it easier for small businesses to obtain the same discounts that big companies get when obtaining health care insurance. Unlike big businesses, small companies cannot negotiate lower health insurance rates because they can't spread their risk over a larger pool of employees. So we proposed association health plans that will allow small firms to band together across State lines and buy insurance at the same discounts available to big companies. The House has passed a bill. The Senate hasn't acted, and now it's time for the United States Senate to do something good for the small-business employers of this country.

Our fifth policy to confront high-cost health care and to make sure private medicine is central in the United States is to confront the glut of frivolous lawsuits that are driving good doctors out of practice and driving up the cost of health care. To avoid junk lawsuits, professionals in the health care field are forced to practice defensive medicine. They order tests and write prescriptions that are not necessary so they can protect themselves from trial lawyer lawsuits. One hospital CEO in New York said, "Fear of liability does nothing but threaten patient safety by discouraging open discussion of medical errors and ways to prevent them."

The total cost of defensive medicine to our society is estimated at 60 to a 100

billion dollars a year, and that includes \$28 billion billed directly to the American taxpayers through increased costs of Medicare, Medicaid, Veterans Affairs, and other Federal health programs. The costs of frivolous litigation are more than financial; they hurt patients all across America.

Most Americans are shocked when I cite the fact there are nearly 1,500 counties in the United States without an ob-gyn. We want our doctors focused on providing compassionate care, not fighting junk lawsuits. We want our hospitals pursuing innovative and promising ways to heal, not battling lawyers who second-guess them in the courts. This is a national issue that requires a national response. The House of Representatives have passed a good bill; the Senate has done nothing on medical liability reform. For the sake of affordable and accessible health care, we need medical liability reform this year.

I'm looking forward to working with the Congress to enact these reforms. This is a commonsense way of dealing with rising health care costs. And by dealing with rising health care costs, we will strengthen private medicine and fight off the calls of those in Washington, DC, who want the Federal Government making all the decisions for health care.

The story of America's hospitals is a story of America's commitment to be a nation of care and compassion. America's strength and its goodness and prosperity is built on a trust in the extraordinary wisdom and power of the American people. And so I believe that by giving more Americans more control over their health care decisions, we will strengthen the doctor-patient relationship, and we will preserve the system of private medicine that has made our Nation's hospitals and health care the best in the world.

People here in Washington need to trust the people. People here in Washington need to do commonsense things to address the rising costs of health care. And this person in Washington has come to thank

you for your compassion and what you do for the communities all around America. May God continue to bless your work, and may God bless our country. Thank you.

NOTE: The President spoke at 1:17 p.m. at the Washington Hilton Hotel. In his remarks, he referred to Richard J. Davidson, president, American Hospital Association.

## Remarks to the American Council of Engineering Companies May 3, 2006

Thanks for the warm welcome. Thanks for inviting me. [Laughter] I was looking for something to do this morning. [Laughter] I'm really thrilled to be here. I thank you, Mr. Chairman, for letting me come by. I've got something to talk to you about, about the economy. What I'm really thrilled is, is that the American Council of Engineering Companies would allow a history major to come by to speak to you. [Laughter]

I want to first say, I appreciate the good work you do for the country. I want you to know that I know how vital your contribution to America is. And it means a lot, and thanks a lot for doing what you're doing. I remember the work you did to help repair the Pentagon after September the 11th. I know full well the work that members of your group do to help construct schools and hospitals in some of the world's newest democracies, particularly Afghanistan and Iraq. And for those of you who encourage your employees to do that or if you've done that yourself, thank you from the bottom of our Nation's collective hearts.

I know that members have been down to help rebuild the communities along the gulf coast. And for those of you who have been down there or may live down there, you know what that storm did. I mean, you talk about wiping out a part of our country; it just flat did. And it makes a difference in people's lives when good-hearted citizens come down and lend their talents and expertise to help rebuild. I've been down there quite a bit; Laura, as a

matter of fact, was down in New Orleans last night, and she's there this morning and heading over to Mississippi. And it's amazing what the collective compassion of America has done to help lift the spirits of our fellow citizens. And some of our Nation's engineers were down there helping.

I also want to thank you for helping to build on this country's prosperity. Through your hard work, your vision, your ingenuity, you're helping this economy of ours. You know, I like to remind people that the government's role is not to engineer the economy. The government's role is to create an environment in which people can find work, risk capital, grow their companies, so that, collectively, we all benefit.

I appreciate the entrepreneurial spirit represented here in this room. One of the most important jobs of government is to make sure the entrepreneurial spirit remains strong. We want America to be entrepreneurial heaven, the place where people can come and realize their dreams.

Laura sends her best. I'm a lucky man to have her as my wife. I believe the country is lucky to have her as the First Lady. She is a—[applause]—she's pretty busy. She's busy telling me what to do and not what to say. [Laughter] It's an interesting life in the White House, as I'm sure you can imagine. There's nothing better, to have somebody by your side who you love, right here in the middle of Washington, DC. [Laughter] And Laura is that way. You

know, people—my friends from Texas always ask me what it's like to be the President, living in the White House and everything, and it's pretty interesting. I've got a 45-second commute. [Laughter] And the good news is, I commute to a house that's warm, and that's because of Laura.

So she sends her very best to you. I wish she were here, but she's, as I said, down in New Orleans helping the people on the gulf coast get their lives back together. As you might remember, she's a librarian, and she's talking about her foundation to help rebuild the libraries down there in the gulf coast of our country. Anyway, she's doing just good. I know you didn't ask, but I'm telling you anyway. [Laughter]

I want to thank—not only thank Ed, but I also want to thank the chairman-elect of the ACEC, Jeff Daggett. I want to thank Dave Raymond. I want to thank all the members for letting me come by.

Let me start by telling you, look, I understand there's a lot of, kind of, different opinions about our economy. And you'll hear a lot of different opinions, particularly as the political season approaches. Let me just give you some facts so you can draw your own conclusions, so the American people can draw their own conclusions about whether this economy is strong or not.

In the first quarter of this year, America's economy grew at an impressive rate of 4.8 percent. The strong start follows a strong 2005 when our economy—American economy grew at 3.5 percent. Now, let me put that in perspective for you. Our economy's growth in 2005 was faster than Japan, more than twice as fast as France, and more than three times as fast as Germany.

The American economy is the fastest growing of any major industrialized nation in the world. Productivity has been growing at the highest rate in decades. An economy that is productive is one that will help increase the standard of living for our Amer-

ican people, and we are a productive nation.

We've added jobs for 31 months in a row. We've added more than—[applause]—and that's totaled 5.1 million new jobs for the American people, and that's good news. The national unemployment rate has fallen to 4.7 percent. That is lower than the average of any decade since the 1950s. The job market for college graduates is the best it's been in 5 years. The American people are going to work in record numbers, and that's important. Construction spending is at an alltime high. Business confidence is strong, and business investment is growing. Business investment is an indication of confidence in the future. People invest because they think the future is going to be brighter. And when people invest, it helps this country remain productive, and it helps people find work.

Small businesses are flourishing. I know many of you all are small-business owners, and I applaud you for having the courage to start your own business and manage your own business. But small businesses are flourishing in America, and that's important. Most new jobs in America are created by small businesses, and when the small-business sector is strong, it means people are going to find work. The number of Hispanic-owned businesses is growing at three times the national rate, and that's a positive development.

One of the things I try to do is promote an ownership society. We want people owning their own business. There's something that encourages somebody to think about the future of the country when they own their own company. The number of African American-owned businesses is growing at four times the national rate. Real after-tax income has grown by almost 9 percent per person since I took office.

Homeownership recently reached record levels. That's important. I mean, I love the idea, when somebody opens a door to where they live, says, "Welcome to my house; welcome to my piece of property."

It is good for our society to encourage ownership.

Consumer confidence is at its highest point in nearly 4 years. Household wealth is at an alltime high. These are the facts which say to me, this economy is powerful, productive, and prosperous. And we intend to keep it that way.

One of the most important explanations for this strong economy is low taxes. When I came to Washington, taxes were too high, and this economy of ours was headed into a recession. Not only did we have a recession; there was a stock market correction, corporate scandals, an attack on the United States of America. This country went to war to defend ourselves; we had natural disasters. It's amazing the statistics I just read are as strong as they are, given what we've been through. But I believe a lot of the reasons why the statistics are strong is because we let people keep more of their own money under the theory that if you have more of your own money in your pocket to save, invest, or spend, this economy will do just fine.

Part of creating a wealth in which—an environment in which the entrepreneurial spirit is strong is to let people have more of their money, is to unleash the great creative talent of the American people. And that's what we did. I worked with Congress to cut the taxes on everybody who pays taxes. It wasn't one of these tax cuts where, you seem okay, you get a tax cut, and you're not, and you don't. My attitude was, the only fair way to treat people is if you pay taxes, you get tax relief.

So we reduced taxes for every American who pays taxes, and that's more than 110 million people in all. And I want to remind you about the tax relief. First of all, we doubled the child tax credit. We thought it made sense to help people who've got children. Secondly, we put—we reduced the marriage penalty. We did not think it made sense to penalize marriage. We cut the taxes on capital gains and dividends to encourage business investment.

I understand, with more investment, this economy of ours will grow. That's what you want to encourage; you want to encourage people to invest. And it's important for people who watch the economy and try to figure out why we make decisions we make to understand that the more investment there is in the private sector, the more likely it is someone will be able to find work. And so we created incentives in the Tax Code for our small businesses to purchase equipment. We rewarded family businesses and farmers and ranchers by putting the death tax on the way to extinction.

The cumulative effect of these tax cuts left \$880 billion in the hands of American workers and businesses. And they have used that money to fuel our economic resurgence. It's the American people, people such as yourself, that used your own money to help make this economy as strong as it is.

There's a business owner today named Gregg Ten Eyck. You know old Gregg. I just named him. Where are you? There he is, right there. *[Laughter]* I hope you're okay with—is that your son? Your son? Yes. Is it okay to mention the old man's name in public? *[Laughter]* Good, because I just did. Gregg is—runs an engineering company in Denver, Colorado. He brought his family. Thank you all for being here. He files as a subchapter S corporation. Most of you know what that means. For those of you who don't, it means that he pays taxes on business income at individual income tax rates.

See, most small businesses are subchapter S corporations or limited partnerships, and therefore, the business pays tax at an individual income tax rate. And so by cutting individual income taxes—rates across the board, we cut taxes on small businesses like Gregg. And there's a reason why you would want to do that. If most new jobs are created by small businesses in the United States and a primary objective is to help people find work, it then makes sense to leave more money in

Gregg's hands so he can spend it to expand his business.

He also took advantage of the new investment opportunities to purchase computers and software that help make him more competitive. Not only did it make him more competitive, but somebody had to make the computers that he purchased. There's an effect throughout the economy when government provides incentives for people to invest. And the fundamental question facing our country is, who do you want making decisions with his own money? Do you want Gregg making the decisions, or do you want somebody in the Halls of Congress? This administration thinks the money is better left in Gregg's hands.

The most important connection for the American people to what I just said about encouraging investment and reducing taxes is this: Gregg's added—Gregg's business added employees for the past 5 years in a row. And this year, he plans to add a few more. Stories like Gregg's prove the tax cuts are doing what we want them to do, and that's to get this economy growing so people can find work. That's what we want.

The problem is that these tax cuts are scheduled to expire in the next few years. So when Congress passed them, they didn't make them a permanent part of the Tax Code. They said, we'll give you some tax relief for a while, but the tax relief is scheduled to go away. And of course, if that were to happen, it means your taxes are going to go up. The prospect of higher taxes, the notion that there's uncertainty in the Tax Code makes it difficult for small-business owners and company execs to plan. How can you plan if you're uncertain about what the future is going to be when it comes to the Tax Code?

Obviously, if you think a big tax crease is incoming—a big tax increase is coming, it will make you less likely to invest. Investment leads to a more productive society; investment leads to job. The lack of invest-

ment will make us less competitive and make it more likely there won't be new jobs created.

And so there's uncertainty in the Tax Code because the Congress made sure that the tax cuts would expire. At a time of high gasoline prices—I know energy prices is on your mind, like a lot of other folks—at a time when there's growing competition in the world, the last thing the American people need is a tax hike. And so my message to the Congress is this: In order to keep this economy strong, Congress needs to make the tax relief permanent.

By the way, there's a struggle here in Washington about who best can spend your money. [Laughter] Some are very anxious for the tax cuts to expire; some want to repeal the tax cuts now. Many of those are members of the loyal opposition here in Washington, DC, who've objected to tax relief all along the way. When Congress first cut taxes back in 2001, most of the Democrats in Congress voted against it. One leading Democrat said that tax cuts were a huge mistake. We have a philosophical difference here in Washington; nothing wrong with that. There's nothing wrong with having differences of opinion. Another predicted that the tax cuts would do nothing to create jobs. A year-and-a-half ago, a Democrat Senator informed us the economy may be on the brink of collapse. The Democrats' record of pessimism has been consistent; it's been consistently wrong.

If the people have their way—who want this tax relief to expire—the American people will be hit with \$2.4 trillion in higher taxes over the next decade. That's 2.4 trillion that would be taken out of the pockets of firms like Gregg, taken out of the pockets of those who are raising their children. It would be handed over to Government; that's where the money would go. It would be taken out of the economy and given to people here in Washington, DC, to spend. A tax increase would be disastrous

for business, disastrous for families, and disastrous for this economy.

Congress has an opportunity to pass a progrowth measure that would keep key elements of the tax relief in place. The House and the Senate are close to completing a bill that would extend the tax cuts on dividends and capital gains for two more years, through 2010. The bill would also extend incentives for small businesses to purchase new equipment. All these provisions have been successful over the past few years. By improving access to capital, the tax cuts on capital gains have led to more investment, more growth, and more job creation.

The tax cuts on the dividends has resulted in more dividend payments to investors and large savings for our seniors who rely on fixed incomes. The small-business expensing incentives have helped many businesses like yours expand and hire new workers. There is no reason for Congress to allow taxes on the job creators to go up. So the House and the Senate have got to resolve their differences and pass progrowth legislation, so I can sign it into law.

Congress also needs to take action on the other side of the ledger as well. And by that I mean, we've got to restrain spending. See, what you'll hear in Washington is, we must balance a budget by raising your taxes. The problem is, that's not the way Washington works. What happens is, they'll raise your taxes and figure out new ways to spend your money. [*Laughter*] The best way to reduce our deficit is to keep progrowth economic policies in place so the economy expands, which will yield more tax revenues, and be wise about how we spend your money.

It's difficult in Washington for people to set priorities when it comes to spending your money. I have set priorities, and our number-one priority is to make sure that the men and women in our uniform have what it takes to defend America and win the war on terror—[*applause*]

—which means we must show discipline in other areas of the budget. You know what that means. You can't spend every—your money on everything you want to spend it on. You have to set priorities. And that's what Congress needs to do.

We're actually making good progress on spending restraint. There are two types of spending: discretionary spending and mandatory spending. Mandatory spending, which I'll talk about a little bit later on, is relief programs that escalate based upon formula. Medicare and Social Security are the two programs that you're most familiar with.

Discretionary spending is where the Congress can decide whether or not to increase or decrease a particular budget. Every year since I took office, we've slowed the growth of discretionary spending that's not related to the military or homeland security. The last two budgets have actually had cuts in this kind of spending. We've reduced the spending.

What we've asked Congress to look at is, we said, look, why don't you analyze whether or not a program is working? See, every program sounds great; they all have got good titles, but sometimes they don't deliver results. And when they don't deliver results, we shouldn't spend taxpayers' money on it. In 2007 budget, we've identified 141 programs that are performing poorly or not fulfilling essential priorities. We've asked Congress to get rid of them. If they're not working, eliminate them.

With a disciplined approach to spending, we're on our way to cutting the deficit in half by 2009, and that's a positive goal. Congress is considering a piece of legislation that will test its commitment to spending restraint. I've requested a bill that would provide emergency funds for the war on terror and hurricane relief. Unfortunately, there are some here in Washington trying to load that bill up with unnecessary spending. This bill is for emergency spending, and it should be limited to emergency measures.

And so I've told the Congress—I'd like to reiterate it here for you—that anything above \$92.2 billion for this emergency spending bill, plus the funding to prepare for a pandemic flu emergency, will be vetoed. The Congress needs to hear me loud and clear: If they spend more than 92.2 plus pandemic flu emergency funds, I will veto the bill. It's important for there to be fiscal discipline in Washington, DC, if we want to keep this economy strong.

There are other ways to make sure we're wise about how we spend your money. I'm going to work with Congress to reduce the number of what's called earmarks for special projects. [Applause] Sounds like you know what an earmark is. [Laughter] Earmarks are often an award of Federal funds to projects without a proper hearing. In other words, people just kind of slide them in there in these bills. And as a result, I don't think the taxpayer gets the best result for their money. It's not—I don't think you can prioritize if you have a system of people just slipping spending in bills without proper hearing.

I appreciate the Senate work on sensible earmark reform. Today the House of Representatives is taking up a measure that includes earmark reform. And I encourage both bodies of Congress to get the job done, to have meaningful, real earmark reform. I look forward to signing such a bill if it comes to my desk.

Congress also can pass the line-item veto. By the way, earmark reform may not require—it's really a matter of Congress having the will to do what's right; same with the line-item veto. A line-item veto would allow me to eliminate wasteful spending items without having to veto the entire bill. And this will be a useful way to help bring fiscal discipline to Washington, DC. The Congress needs to pass a line-item veto quickly. I look forward to working with members of both political parties to achieve budgetary reform so we can do the job you expect us to do.

The biggest problem we've got, however, is—for our budgetary health—is the entitlement spending programs like Social Security and Medicare. If we're wise about keeping progrowth policies in place and fiscal restraint, we can get this deficit down. We're on a trajectory to do so by—cut it in half by 2009. But there's a large problem looming out there, and it's because baby boomers like me and you—[laughter]—well, some of you—are getting ready to retire. We're getting to that age where the Government has made us a promise. And there's a lot of us. There's a lot of baby boomers. There's a baby boomer bulge—in more ways than one. [Laughter] And we're living longer than anybody thought when they first designed these programs.

And I don't know about you, but I like to get exercise; I'm wise about the choices I make in terms of drinking and all that. And as a result—and medicine has improved—we're living longer lives. So you've got a lot of people getting ready to retire who are going to live longer lives, and we've been promised greater benefits than the previous generation. People running for office say, "Vote for me; I promise to increase your benefits in these entitlement programs." And sure enough, they won and did what they said they were going to do.

But the problem is, is that there are fewer payers per beneficiary into the system than ever before. In other words, there is a heavy burden on a young generation of Americans coming up to pay the promises that Congress has made. And I really, really think that Congress has got to address this issue with me.

I tried last year. I took it on, Social Security in particular, and went around the country saying, "Folks, we got a problem"—on the theory that when the people said we got a problem, Congress would respond. Well, I got half of it right. [Laughter] People said, "We got a problem." And it's so political up here that it's difficult at this stage of the game to get people to come together, to come with a bipartisan

solution. Look, we don't have to cut programs. It's like making sure you slow your car down to the speed limit. You don't have to put it in reverse. There are common-sense ways to keep the promises to the generation that is fixing to retire but make sure that future generations will have a sound Social Security and Medicare system.

So I just want to assure you this issue is on my mind a lot. I like to remind people that the job of a President is to confront problems, no matter how difficult they may look, and not pass them on to future Presidents. I also believe—[*ap-  
plause*]. So we're in the process of working with Democrats and Republicans to come together to forge a bipartisan solution so that we can say we did our duty, that we came and we made the system work better. It's a really important issue.

And so when you hear people talking about the budget, the current account deficit is important; it's really important. But these unfunded liabilities will serve to be a major drag on our economy if we don't do it now. Now is the time to do it. The longer we wait, the more difficult it's going to be for people to come together. So you'll see me working with Democrats and Republicans, hopefully, to come up with a solution that will address this problem.

One of the interesting challenges we face is whether or not this Nation will lose its confidence or not. We live in a global economy, as you well know. And some people in the country really wonder whether it's worth the competition, whether it makes sense to try to compete with these new and growing economies like China and India. I, first of all, know it's important for us to compete and to be confident. If we want to remain the economic leader of the world, which I happen to believe is good for our people, we shouldn't fear the competition. We ought to welcome it, and we ought to develop a strategy so that we can remain the leader. And here's some ideas.

Obviously, we've got to do something about energy. A global economy means that when demand for energy goes up in India and China, which it is, it causes our gasoline prices to go up. When the price of crude goes up, because of international demand increase is greater than the supply, your gasoline prices go up. And so it's—and my attitude about this is to make sure you're not being mistreated at the pump, you're being treated fairly, but also recognize now is the time to spur strong research and development into using other ways to power our cars, such as hydrogen or ethanol or batteries that can give the first 40 miles on electricity, as opposed to gasoline. Now is the time.

And so I look forward to working with Congress to press ahead hard on research and development. And we're close to some amazing breakthroughs. Cellulosic ethanol may be on the verge of becoming commercially viable. We're close to these new battery technologies that will enable people to drive the first 40 miles in a city not using gasoline. Ethanol is on the move. We must, as a nation, in order to stay competitive, diversify away from crude oil. I know it sounds weird for a Texan to say—[*laughter*—]but I'm telling you, it is essential for our economic security and national security to do so.

We've got a challenge when it comes to making sure our health care is available and affordable. There is a debate here in Washington. There are some who say, "Let's let the Government run it, set the price, set the supply." I'm strongly against that. I believe we've got to empower the doctor-patient relationship. And we put out a lot of good ideas, two that I think will interest you. One is to make sure the small businesses can pool risk across jurisdictional boundaries so they can buy insurance at the same discounts—[*applause*].

And secondly, do something about these junk lawsuits that are running up the cost of medicine. Do you realize there are over

1,500 counties in America—about, they estimate—that do not have an ob-gyn? That is harmful for our health care system. It's discouraging to the America people. A lot of it is because of these lawsuits. And the lawsuits not only make medicine less accessible, but docs practice defensive medicine. If you think you're going to get sued, you prescribe more drugs than necessary or more procedures than necessary so that you can make your case in a court of law. And this is—these lawsuits harm medicine. It makes the cost of medicine difficult for you, and it makes it hard for you to afford it for your employees.

When I came to Washington, I said, this isn't really a national issue; States ought to deal with it. Then I realized that the cost of defensive medicine and the cost of raising premiums costs our Government—you—about \$28 billion a year because of Federal health programs such as Medicare, Medicaid, veterans' benefits. And so I've called upon Congress to get a bill to my desk that is rational, reasonable, and common sense, that does something about these junk lawsuits.

Another initiative I think you'll be interested in is this: To stay competitive, we got to make sure our children have the skill sets necessary to fill the jobs of the 21st century. That skill set happens to be based upon math and science. I think you know what I'm talking about. And as well, in order to be a competitive nation—one that doesn't fear the future, but welcomes the competition and says, look, we can compete, recognizes the importance of research and technology—the research and development tax credit needs to be a permanent part of our Tax Code in order to make sure that people invest in the future, come up with new ideas.

As well, I've committed the Government to double research in basic sciences over the next 10 years. The Government has got a vital role to play. People say to me, why should the Government invest in basic sciences, basic research—research for the

basic sciences? And the answer is, is because it's amazing what happens, what research can bring, such as the Internet. The Internet came to be as a result of Government research monies spent at the DOD. There's unbelievable things that can happen when we unleash the creativity of the American people, and the Federal Government ought to be a rational part of that.

But the other answer—the other real challenge we face is whether or not our kids can compete. And the American people have got to understand that if our children do not have the basics in math and science, they will then not have the skill sets necessary for the jobs of the 21st century. And in a global economy, those jobs will go somewhere else.

And now's the time to get it correct. And we're making pretty good progress, in my judgment. First of all, as people who are results-oriented people, I think you'll appreciate the approach we took in the No Child Left Behind Act, which basically said, in return for spending Federal money, particularly for Title I students, the poor students—which I support—why don't you show us whether or not we're getting results? It's kind of an odd concept, isn't it—[laughter]—we spend; you measure.

You notice I didn't say, the Federal Government will design the test. I don't believe in federalizing schools. I believe in local control of schools, but I do believe in accountability. And so therefore, we said to the States, in return for Federal participation, develop accountability systems so we know. There's all kinds of debates that take place in public education. One of them is, does the curriculum work that you're using? The best way to figure it out is to measure.

The second part of this system is that when we find children falling behind early, there's extra money—supplemental service money we call it—to get tutoring so that the children are not left behind. In other words, we're tired of this business about socially promoting students. We want to make sure that people get promoted based

upon knowledge. And our system is working.

There's a—there's an achievement gap in America that's got to be closed for the future of this—to make sure this country's future is bright. And we're closing it. How do we know? Because we measure. And we need to apply the same rigor, by the way, that we apply to reading to math and science. It turns out that we're doing fine in fourth grade math, and we're doing fine in eighth grade math, but when kids get into high school, when it comes to the rest of the world, we're falling down. And so therefore, it makes sense to measure in junior high and provide supplemental services for math to make sure that our children have got the skill base necessary to become the engineers and scientists.

AP works—Advanced Placement program works. If it's—if you're involved with your schools in your community, you know what I'm talking about. It's important to set high standards. The Government ought to help train 70,000 teachers to become Advanced Placement teachers to raise the standards for our children. We need 30,000—30,000

scientists and engineers to become adjunct professors, so to speak, in the classrooms to make sure that—[*applause*]. I can go on forever.

Here's the deal, though. Here's what I'm trying to explain to you: We don't need to fear the future because we're going to shape the future. We'll make sure our children are educated. We're going to make sure we do something about these junk lawsuits. We're going to make sure that we do something about energy. Why I wanted to talk to you today, though, is to make sure that you understand that in order for this country to be competitive, in order for us not to fear the future, we got to keep your taxes low.

I appreciate you for what you do for our country. Thanks for letting me come by and share some thoughts with you. God bless you.

NOTE: The President spoke at 11:25 a.m. at the Grand Hyatt Hotel. In his remarks, he referred to Edward J. Mulcahy, chairman, and David A. Raymond, president, American Council of Engineering Companies.

## Remarks Following a Meeting With Members of Congress May 3, 2006

I want to thank the Members of the House and the Senate, members of both parties, for a really constructive and important dialog. We talked about ways to deal with America's energy problem. And we talked about it in a very constructive way, and I want to thank the Members for joining us.

We talked about the need to make sure our consumers are treated fairly, that there be fairness in the marketplace. And there was common consensus that we need to hold people to account if they're not dealing squarely with the American consumer.

We talked about ways to help mitigate demand, and one way to do so is to encourage alternative automobiles, like hybrid automobiles. And there seemed to be an agreement that we ought to extend the tax credit for these kind of automobiles to encourage our consumers to purchase the hybrid automobile.

We talked about ways to—the need to research, to spend money for research and development, to change the fuels that we use in automobiles. One of the great promising sources of fuel is ethanol, and we talked about ways to encourage not only

the production of ethanol but the distribution of ethanol.

We talked about the need to continue research and development into new types of batteries so that the American consumer will be able to drive the first 40 miles on electricity. We talked about the need to increase supply of energy. One of the things that is necessary to help relieve price is to increase the amount of gasoline.

We talked about regulatory relief, to see to it that we can expand refining capacity and build new refineries. If the American people want there to be a lower price of gasoline, we need more gasoline on the marketplace.

And so we talked about commonsense ideas. And I really do appreciate the mem-

bers from both political parties thinking strongly about how we can work together to serve the American consumer and make us less dependent on foreign sources of oil. The prices of gasoline should serve as a wake-up call to all of us involved in public office that we have got an energy security problem and a national security problem, and now is the time to deal with it in a forceful way. And I am heartened by the fact that we were able to have such a constructive dialog, and that there's a commitment to get good legislation out of the Congress.

Thank you all very much for coming.

NOTE: The President spoke at 2:31 p.m. in the Cabinet Room at the White House.

## Statement on Zacarias Moussaoui May 3, 2006

One year ago, Zacarias Moussaoui pled guilty in Federal court to six counts of terrorism, including conspiracy to murder innocent Americans. He openly rejoiced at their deaths. This afternoon the jurors in his sentencing trial concluded that this man should spend the rest of his life in prison.

Our thoughts today are with the families who lost loved ones on September 11th, 2001. Our Nation continues to grieve for the men, women, and children who suffered and died that day. We are still deeply touched by the memory of rescuers who gave all, the passengers who ran a hijacked plane into the ground to prevent an even greater loss of life, and the frightened souls who comforted one another during their final moments on Earth.

The end of this trial represents the end of this case but not an end to the fight against terror. The enemy that struck our shores on September 11th is still active and remains determined to kill Americans. We will stay on the offensive against the terror-

ists. We will end their ability to plot and plan. We will deny them safe haven and the ability to gain weapons of mass murder. In these 4½ years, with good allies at our side, the United States has killed or captured many terrorists, shut down training camps, broken up terror cells in our own country, and removed regimes that sponsored terror. We have many dedicated men and women fully engaged in this fight—in the military, intelligence, and homeland security; law enforcement personnel; and Federal investigators and prosecutors who gather the evidence, make the case, and ensure that justice is done. They are doing superb work every day to remove this danger and to protect our country.

We have had many victories, yet there is much left to do, and I will not relent in this struggle for the freedom and security of the American people. And we can be confident. Our cause is right, and the outcome is certain: Justice will be served;

evil will not have the final say; this great Nation will prevail.

## Remarks Following a Meeting With Chancellor Angela Merkel of Germany and an Exchange With Reporters

May 3, 2006

*President Bush.* There will be a couple of opening statements and then a couple of questions per side.

Welcome back. Thank you for coming. I've been really looking forward to this visit. Chancellor Merkel has got a very good grasp of the international issues. She's a clear thinker. She speaks very plainly. And I'm honored that you came to visit.

I'm looking forward to taking the Chancellor upstairs to my private residence after this press availability to continue our discussions and to have a dinner that is a continuation of a personal relationship that is developing, where we're able to speak in such a way that we're—can understand our—what we're trying to say and understand our mutual desire to work together to make this world a peaceful place. German-U.S. relations are very important. They're—and I'm just honored you came back.

I do want to mention that we did talk about a couple of very important subjects. Obviously, we spent a lot of time on Iran. After all, we're close allies in trying to make sure that the Iranians do not develop a nuclear weapon. We talked about the WTO round, the Doha round for the WTO, and I appreciated the Chancellor's willingness to work with not only the Europeans but with a country like Brazil and others to see if we can't bring this round to a favorable conclusion.

This evening I'm going to talk to the Chancellor about Sudan and the progress that's being made in Iraq. We've got a lot to talk about because we're friends and al-

lies. And so I welcome you; glad you're here.

*Chancellor Merkel.* Well, let me say that I am indeed very pleased to be here. And I am also very gratified to know that over the past few months, we have been able to strike up indeed a very, very good rapport, very good relationship, indeed a friendship. And we bolster that friendship mostly by frequent telephone calls; we've been in constant contact.

We addressed a number of issues here today that—of mutual concern, chief among them is Iran, where we are in total agreement, saying that under no circumstances must Iran be allowed to come into possession of nuclear weapons. We are in agreement, also, that a diplomatic solution needs to be found, and we do see good chances for bringing this about. But we also think that it is essential in this context that the clear resolve of the international community is shown by standing united, by showing cohesion on this matter. And what is also essential and indeed crucial in this context is that we try to draw as many partners as possible into the fold and to clearly show to the Iranians that this is unacceptable.

We also addressed the issue of the WTO, the negotiating round, and we said that we want a success of WTO. I explained to the President of the United States that we will use the upcoming EU-Latin American summit in order to get together again with our partners there in bilateral talks and try to impress also the Latin American countries that it is, indeed, necessary for all of us to come to a successful outcome here

and that all of these countries need to lend their contribution to bringing that about.

Well—and I trust that this evening we're going to continue discussing other important foreign policy issues. We also, I think, have a number of bilateral issues that we would like to discuss over dinner. Also, because tomorrow one of my stops during this trip will be a stop to New York, where I will meet with representatives of the American business community—so German-American business will also be on the agenda there.

And in conclusion, let me thank you yet again for the very warm and gracious reception here to the White House.

*President Bush.* Thanks. Deb [Deb Riechmann, Associated Press]. Hold on a second. One at a time. Deb.

*Zacarias Moussaoui*

Q. Mr. President, are you satisfied with the Moussaoui verdict? He didn't get the death penalty that the Government was seeking. Were you worried that a death sentence might have turned him into a martyr?

*President Bush.* Mr. Moussaoui got a fair trial; the jury convicted him to life in prison, where he'll spend the rest of his life. In so doing, they spared his life, which is something that he evidently wasn't willing to do for innocent American citizens.

As I think about the trial, I can't help but think about the families who lost a loved one on September the 11th. I think about the rescuers who tried to save lives in the burning buildings. And I know that it's really important for the United States to stay on the offense against these killers and bring them to justice. And those are my thoughts about the Moussaoui trial.

*Iran*

Q. Mr. President, what kind of sanctions should be taken against Iran, and when?

*President Bush.* That's the kind of question that allies discuss in private.

Q. You discussed it just this afternoon.

*President Bush.* Hold on a second. It's very important that the international community send a clear message to the Iranians that a nuclear weapon is unacceptable. We are pleased that the EU-3 has taken such a strong role in this measure. It is part of having a unified message. The United States is actively involved with our partners in achieving this important objective.

The first important thing that must be done in achieving an issue diplomatically is for everybody to share a goal. And the goal is clear, and that is, the Iranians should not have a nuclear weapon or the capacity to make a nuclear weapon. And that in itself is a important diplomatic achievement.

We—the Chancellor and I, of course, obviously, agree on that, but so do other partners in this effort, such as the Russians. They agree that the Iranians should not have a nuclear—it's a good starting point. And now we're talking about the tactics, as to how to achieve that objective. One such tactic is to go to the United Nations Security Council, and today we laid down a resolution. And we will continue to consult with our partners as to how to achieve a diplomatic solution to this issue. And the timing of resolutions and what they should say and—is all—what allies do. And we will come to a common agreement as to how to proceed, because this is a common effort.

And the Iranians must understand that we won't fold, that our partnership is strong, that for the sake of world peace, they should abandon their nuclear weapons ambitions. And we're resolute on that matter. And so that's what Angela and I talk about. We talk about how to make sure this coalition continues to send a common message. And I appreciate her steadfast—and her strength on this issue.

Let's see, we've got Toby [Tabassum Zakaria, Reuters], yes.

*Chancellor Merkel.* Let me just add one remark. I think in a situation, just as the one that we have now, it is crucial, if one

wants to see this matter through to a diplomatic success, to actually do this on a step-by-step basis. Quite often, attempts are being made to rush matters, to actually preempt what should be at the end of the process, and to take the next—the over—next step before the next one. And I really do think that on this one, in order to pursue this diplomatic process successfully, we need to pursue this on a step-by-step basis.

And I mean, it's happening now. We now have an agenda. What is on the agenda now is looking at this matter and then the Chapter VII of the Security Council resolution. And what we need to do further is discuss what we want to pursue further in this process with all of our partners and try to keep them all together.

*President Bush.* Right. Toby.

*Q.* Madam Chancellor, do you want the United States to talk directly with Iran on this issue? And did you tell that to President Bush today?

*Chancellor Merkel.* What I want is to achieve this together, to be successful in this together, in what we are trying to do here, and that is to see to it that Iran is not in possession of a nuclear weapon, persuading them that they will not be allowed to get possession of a nuclear weapon and that they need to abide by international rules.

And I think in this overall process, we have shown that there is very good interaction between us. What we have been doing, we've been doing together, and we shall continue to do so. And I think it is right in this overall process to say, it's important what the European Union has done in this process. They've played a very crucial role. And I must say that I'm fully behind the attempts that have been made by the EU-3, and—together with the United States, because right from the start, we have been in on this together, and we shall continue to be so.

*Germany-U.S. Relations*

*Q.* Mr. President—

*President Bush.* Nice to see you again.

*Q.* Yes. Thank you very much. Nice to see you too.

*President Bush.* It's a face a fellow can't forget. [Laughter] Okay.

*Q.* We can talk about this. [Laughter] Seriously, we've learned that you have been talking a lot with Madam Merkel, and you've been on the phone for—six times. You've been—you've seen each other a lot. So how has this relation, German-American relation developed since she took office? Are we back into partners in leadership? And when are you planning to come to Germany, maybe to the soccer World Cup?

*President Bush.* I'm going to come to Germany before the G-8 and—am I supposed to say that? [Laughter] Breaking news.

Last time I had a press conference with the Chancellor, I did talk about her predecessor, and, you know, I had a lot of meetings with her predecessor, and I remember them fondly. And I thought our relations—look, the Iraq war made relations difficult. People—it's just—the Government didn't agree, and I understand that.

And the Chancellor is a—I wouldn't call it a new chapter in German-U.S. relations because I did feel we had, you know, we were still writing chapters. But I find the Chancellor to be a—one, a fascinating person who brings a unique perspective. A lot of us who grew up in the West take our liberties for granted, that freedom is something that's just—is prevalent everywhere, and where it's not prevalent, don't worry about it.

Well, I'm talking to a very sophisticated leader who knows what it's like to live in a world that isn't free. And there's just something, to me, that is intriguing and important to have a partner in peace who brings that kind of perspective, who knows the discomfort of what it means to live under the iron hand of a Communist ruler.

So our relationship—the way I view the relationship is, it's growing, and it's

strengthening. Any time you have a relationship like this, there has to be a certain degree of trust—and you trust the person when they say something. And I appreciate Chancellor Merkel's straightforward judgment. And I hope that I've created the condition where she tells me what's on her mind, and she expresses her beliefs—and I certainly will express mine—and we're able to find common ground.

And we do disagree, of course. And she—but the disagreements are always in such a way as to make sure that there's a positive relationship, because we both understand relations between Germany and the United States are important for our respective people, important for the relationships in Europe, for the United States. In other words, it enhances the transatlantic relationship. And by working together, we can help solve major problems. And this is a troubled world. We're dealing with Iran. We're dealing with Sudan. And it's very important for diplomacy to work, and it works better when you have a partner in peace, a partner—an ally with—a Germany that understands it can really make a difference in the international community.

And so I value this relationship, and I thank her for her friendship. And I'm looking forward to going to Germany again.

Thank you all.

*Chancellor Merkel.* Well, to put this in a nutshell, I invited the President to come over before the G-8 summit and to visit me in my constituency, simply because I wanted to show him around and show him a little bit of what has been achieved in what we call the new Linder, to get to know, also, people who, like me, lived on the other side of that wall. And let me say that I'm very much looking forward to his coming over.

*Q.* When?

*Chancellor Merkel.* Since the G-8 summit—that was the question as to when you would come over—the G-8 summit is from the 15th through the 17th, so it will, in all probability, be the day before that—the 14th.

*President Bush.* Yes, somewhere around there. I want to keep it somewhat of a mystery. [*Laughter*] Thank you all.

NOTE: The President spoke at 6:16 p.m. in the Oval Office at the White House. In his remarks, he referred to Zacarias Moussaoui, an Al Qaida operative who was sentenced on May 4 for helping to plan the September 11, 2001, terrorist attacks; and former Chancellor Gerhard Schroeder of Germany. Chancellor Merkel spoke in German, and her remarks were translated by an interpreter.

## Remarks on the National Day of Prayer May 4, 2006

Welcome to the White House. I am really glad you're here. Thanks for coming. And I'm honored to join you for the National Day of Prayer. On this special day, we give thanks for the many ways that America has been blessed, and we acknowledge the Almighty, who is the source of these blessings.

I appreciate the chairman of the National Day of Prayer, Shirley Dobson. I notice

you brought your old husband with you too. [*Laughter*] Thank you for organizing this event here at the White House and around the Nation.

Mrs. Bright, it's good to see you. Thank you; welcome. I'm glad you're back again. Dr. Blackaby, thank you very much, sir, for being the honorary chairman of the National Day of Prayer Task Force. And we welcome Marilynn as well.

I want to thank the members of the Cabinet who are here. Thank you all for coming. Appreciate you taking time out of your day to be here to join.

I'm glad to see my friend Archbishop Demetrios. How are you, sir? Thanks for coming. I appreciate the military chaplains who are here. Thanks for administering to the needs and souls of the men and women who wear the uniform. Yours is an important job, and I'm grateful, as your Commander in Chief, for what you do.

I want to thank Rabbi Ciment, Father Connor, and Jay Dennis for joining us. Thank you for your prayers and your strong statements.

I thank Rebecca St. James for your beautiful music. We're proud you're here. I want to thank those who accompanied you. About the coat—[laughter]—your answer is, it's the voice that matters—[laughter]—and the spirit behind the voice.

And, Gail, thank you for coming as well. We're proud you're here. Thanks for sharing with us.

America is a nation of prayer. It's impossible to tell the story of our Nation without telling the story of people who pray. The first pilgrims came to this land with a yearning for freedom. They stepped boldly onto the shores of a New World, and many of them fell to their knees to give thanks.

At decisive moments in our history and in quiet times around family tables, we are a people humbled and strengthened and blessed by prayer. During the darkest days of the Revolutionary War, the Continental Congress and George Washington—I call him the first George W.—[laughter]—urged citizens to pray and to give thanks and to ask for God's protection.

More than two centuries since our first National Day of Prayer and Thanksgiving, we continue to ask for God's guidance in our own lives and in the life our Nation. Each year, thousands of citizens write letters and send cards to the White House that mention their prayers for this Nation and this Office.

In my travels across the great land, a comment that I hear often from our fellow citizens is, "Mr. President, I pray for you and your family." It's amazing how many times a total stranger walks up and says that to me. You'd think they'd say, "How about the bridge?" or, "How about filling the potholes?" [Laughter] No, they say, "I've come to tell you I pray for you, Mr. President."

And the only thing I know to do is to look at them in the eye and say, "That is the greatest gift that a fellow citizen can do for those of us who have been entrusted to lead our country." And for that—[applause]. And so I thank thanks—I say thanks to the millions of Americans who pray each day for our Nation, our troops, and our elected leaders.

Prayer is a gift from Almighty God that transforms us, whether we bow our heads in solitude or offer swift and silent prayers in times of trial. Prayer humbles us by reminding us of our place in creation. Prayer strengthens us by reminding us that God loves and cares for each and every soul in His creation. And prayer blesses us by reminding us that there is a divine plan that stands above all human plans.

In the stillness and peace of prayer, we surrender our will to God's will, and we learn to serve His eternal purposes. By opening ourselves to God's priorities, our hearts are stirred, and we are inspired to action—to feed the hungry, to reach out to the poor, to bring aid to a widow or to an orphan or to the less fortunate.

On this day, we also remember that we are a people united by our love for freedom, even when we differ in our personal beliefs. In America, we are free to profess any faith we choose—or no faith at all. What brings us together is our shared desire to answer the call to serve something greater than ourselves.

Over the past 5 years, I have watched the American people answer this call. Some serve their fellow man on distant shores, placing themselves in harm's way so that

others might live in freedom. Others serve in our Nation's armies of compassion, bringing comfort and kindness to suffering communities at home and abroad. In millions of acts of service, the American people have shown the good heart of our Nation.

From our Nation's prayerful beginnings, America has grown and prospered. Through prayer, we humbly recognize our continued dependence on divine providence.

I want to thank you all for keeping prayer a part of our national life. May God bless each one of you, and may God continue to bless our Nation.

And now it is my honor to welcome Reverend Jay Dennis.

NOTE: The President spoke at 9:44 a.m. in the East Room at the White House. In his

remarks, he referred to James Dobson, husband of National Day of Prayer chairman Shirley Dobson; Vonette Bright, former chairman, National Day of Prayer Task Force; Marilyn Blackaby, wife of Henry T. Blackaby, honorary chairman of the National Day of Prayer Task Force; Archbishop Demetrios Trakatellis, Primate of the Greek Orthodox Church in America; Rabbi Sholom Ciment, director, Chabad Lubavitch of Greater Boynton, Boynton Beach, FL; Father Charles P. Connor, pastor, St. Rose of Lima Church, Carbondale, PA; Rev. Jay Dennis, pastor, First Baptist Church at the Mall, Lakeland, FL; entertainers Rebecca St. James and Gail Richardson. The National Day of Prayer proclamation of May 3 is located in Appendix D at the end of this volume.

## Remarks Following Discussions With President Tabare Vazquez of Uruguay May 4, 2006

*President Bush. Bienvenidos.* It's been a distinct pleasure to welcome the President to the Oval Office. We've had a very extensive conversation about—we talked about a lot of subjects. We talked about the human condition. We talked about our mutual desire to improve lives through good education and health care. I assured the President that the billions of dollars of aid that we spend in the neighborhood are all aimed at justice and giving people a chance to realize their dreams.

We talked about ways to make sure there's better student exchanges between our countries. It made a lot of sense. After all, the President was educated—or received some education in my home state of Texas, at M.D. Anderson.

We talked about extending our commercial relations. One of the interesting topics

that the President brought up was renewable energy, a subject that is very dear to my heart and necessary for our country. And finally, I shared some thoughts with the President about my deep desire to help countries become free, so that this world is more peaceful.

I—in short, it was a very extensive dialog. And finally, he shared with me the joy of being a grandfather. Obviously, he's a good man because he's got such pride in his family.

And so I welcome you here, sir. Thank you for coming.

*President Vazquez.* Mr. President, thank you very much for your kindest attention. It's, for us, a great opportunity to speak—but I speak Spanish.

*President Bush. Si. [Laughter]*

*President Vazquez. Y tu tambien.*

Thank you very much, Mr. President. I want to thank you very much for your welcome. This is one more show of friendship that has been a very deep friendship between our countries from the very beginning.

We've had a very kind and extensive exchange of opinions with President Bush. First of all, we recalled the bilateral investment treaty that was recently signed by our two countries in which we have—and we have now also agreed to work to expand, intensify, and strengthen our trade relations. In fact, our technical people are going to be meeting within the framework of our joint commission in a few months in Montevideo, and we've agreed that we are going to be kicking off work at that time.

I will not extend on the points that have—the items that have already been re-

ferred to by the President, but I do want to thank you very much.

And to the Uruguayan people who are listening to me, I want to say to all of you: Without exception, without exclusions, together we will continue to work jointly on this path that we have undertaken in order to further the standard of life with our people, through education, through health care, through more and better jobs, and through decent salaries for all our people, and to truly insert Uruguay on the path of globalization.

Thank you very much.

*President Bush. Gracias, senior. Gracias.*

NOTE: The President spoke at 11:09 a.m. in the Oval Office at the White House. President Vazquez spoke in Spanish, and his remarks were translated by an interpreter.

## Remarks at a Cinco de Mayo Celebration May 4, 2006

Thank you. Please be seated. *Bienvenidos*. Welcome to the White House. I'm honored to have so many distinguished Hispanic and Mexican American leaders here for the Cinco de Mayo celebration. You may have noticed this celebration is not on the *cinco de Mayo*—[laughter]—it's on the *cuatro de Mayo*. [Laughter] It's such an important holiday, we thought we would start early. [Laughter]

I appreciate Hector; good to see you—head of the SBA is with us today. Gaddi Vasquez, thank you for coming. Thank you both for bringing—thank you for bringing your wife, Hector. I want to thank Anna Cabral, who is the Treasurer, and glad you brought Victor. Thanks for coming.

I appreciate the Ambassadors who have joined us. Ambassador *de Mexico* is with us today—*Embajador, gracias—y tambien, mi amigo*, the Ambassador from the United

States to Mexico, Antonio Garza. Welcome you both. Glad you're here. I appreciate Eduardo Aguirre, Ambassador to Spain. Thank you for coming, Eduardo—Hans Hertell, the Ambassador to the Dominican Republic. Thank you all very much for coming. Thanks for serving the country, and thanks for serving your country, Ambassador, as well.

I appreciate the military personnel who are here today. We're proud of you. Thanks for wearing the uniform of the United States of America.

Before I introduce our entertainer, I do want to share some thoughts with you about the importance of Cinco de Mayo, for it commemorates a joyful moment in Mexican history. Americans must understand that it was a time when Mexican soldiers won the Battle of Puebla and defended their independence. So obviously,

Cinco de Mayo is a day of special pride for citizens of Mexico, but it is, as well, for Americans. It is a reminder of a proud heritage we share with our neighbor to the south. That's how I view the day.

We pay tribute to that heritage, and we honor the warmth and importance of the friendship between our two nations. The United States and Mexico are united by ties of family and by commerce and by history and by culture and by values. Both nations believe in the rights and the dignity of all people. We share an important trade relationship. We have discovered that trade between our nations is good for our peoples. We believe in the ideals of freedom and independence that Cinco de Mayo represents.

Here in the United States, Mexican Americans have helped build our country and helped shape our culture. Mexican Americans have made our Nation more vibrant and more hopeful *cada dia*. Mexican Americans have enriched the American experience with contributions to business and the arts and music and sports. Latino entrepreneurs are creating jobs across the country; the number of Hispanic-owned businesses is growing at three times the national rate. More Hispanic Americans own their homes than ever before in our Nation's history.

Many Mexican Americans have also shown their devotion to this country by defending it. More than 600,000 of our veterans are of Mexican descent. I see some of our veterans back—I'm sure—we got a lot of veterans here, as a matter of fact. I want to thank you for setting such a good example for those who wear the uniform today.

Many Mexican Americans are wearing the uniform of the United States military, and they're defending our country with valor. They're making America more secure and, at the same time, laying the foundation of peace for generations to come.

I know our citizens have enormous pride in the Mexican heritage, and rightly so. We

also know that America has thrived as a nation because we've always welcomed newcomers who, in turn, embrace our values and our way of life. Becoming an American is a great privilege, and it carries with it responsibilities. Those who come here to start new lives in our country have a responsibility to understand what America is about and the responsibility to learn the English language so they can better understand our national character and participate fully in American life. That's what we want. Making this effort is also key to unlocking the opportunities of America, allowing new folks to rise in society and realize the American Dream.

In this country, we're now having an important debate about immigration. And it is really important that we discuss this issue in a way that is worthy of this country's best traditions. Our Nation does not have to choose between being a compassionate society and a lawful society. A lawful society is one that enforces its laws and enforces its border; that's what a lawful society does. A compassionate society rejects a system that treats people as if they're something to be traded, honors human rights and human dignity, helps people out of the shadows of society, treats people in a decent and humane way.

So I support strengthening our borders, and I support a temporary-worker program that would match willing workers with American employers. See, I think we need to create a secure and legal channel for people to come to this country to work. It will reduce the number of people trying to sneak across our border. It will treat people humanely. It will get rid of the *coyotes* and the document forgers. It will affirm our belief that every person has got dignity and every person has got value, and at the same time, it will make it easier for us to be a nation of law and to protect our border.

Immigration reform needs to be comprehensive because all elements of this problem must be addressed together, or

none of them will be solved at all. The American people must conduct this debate with dignity. They must remember that we're a nation of immigrants. They must understand—they must remember that throughout our history, people have come to America because this is a place where they can pursue their dreams no matter who they are or where they're from.

Mexican Americans have brought with them a culture based upon faith in God, a deep love for family, and a belief that hard work leads to a better life. Every immigrant who lives by these values makes the United States a better country, makes our future brighter as one nation under God.

Across America tomorrow, there will be many celebrations of Cinco de Mayo. The performances we're going to see today represent some of the very fine talent. It reminds us that we're a nation that is strong because of our diversity. There's going to be a lot of traditional music, a lot of pretty

good Mexican food too, I bet you. [*Laughter*] Kind of reminds us of Texas, doesn't it, Ambassador?

May God continue to bless all of us who are fortunate enough to live in this land, and may God continue to bless our country and the many sons and daughters of Mexico who call our Nation home. Happy Cinco de Mayo. And now it is my pleasure to introduce one of Mexico's great talents, Graciela Beltran.

NOTE: The President spoke at 1:57 p.m. in the East Room at the White House. In his remarks, he referred to Robin Barreto, wife of Small Business Administration Administrator Hector V. Barreto, Jr.; Victor G. Cabral, husband of Treasurer of the United States Anna Escobedo Cabral; Mexico's Ambassador to the U.S. Carlos Alberto de Icaza Gonzalez; and entertainer Graciela Beltran of Mexico. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Statement on House of Representatives Passage of Port Security

### Legislation

May 4, 2006

I am pleased that the House of Representatives today passed a bill to enhance the security of our Nation's ports. I look

forward to working with Congress on passage of legislation that will make our people safer and facilitate trade.

## Remarks at the American Jewish Committee's Centennial Dinner

May 4, 2006

[*The President's remarks are joined in progress.*]

—I want to thank the Members of Congress who are here. I appreciate the members of the diplomatic corps who have joined us today. I want to pay a special tribute to a friend of mine from Texas who

has done a superb job as the Chairman of the U.S. Holocaust Memorial Council, and that's Fred Zeidman.

My administration shares a strong commitment with the AJC to make sure relations between Israel and America remain strong. We have so much in common.

We're both young countries born of struggle and sacrifice. We're both founded by immigrants escaping religious persecution. We have both established vibrant democracies built on the rule of law and open markets. We're both founded on certain basic beliefs: that God watches over the affairs of men and that freedom is the Almighty God's gift to every man and woman on the face of this Earth. These ties have made us natural allies, and these ties will never be broken. America's commitment to Israel's security is strong, enduring, and unshakable.

I'm looking forward to my meeting with Prime Minister Olmert in a couple of weeks. And as he comes to America, I cannot help but think about my friend Ariel Sharon. Ariel Sharon is a friend who remains in our thoughts and prayers. He is a man of courage and a man of peace. And so tonight we pray for his recovery; we rededicate ourselves to the cause to which he devoted his life, the peace and the security of Israel.

As you know, I'm a strong believer in democracy and free elections, but that does not mean we have to support elected officials who are not committed to peace. Hamas has made it clear that they do not acknowledge the right of Israel to exist, and I've made it clear that so long as that's their policy, we will have no contact with the leaders of Hamas. Democratically—leaders cannot have one foot in the camp of democracy and one foot in the camp of terror. Hamas must accept the demands of the international community to recognize Israel, disarm and reject terrorism, and stop blocking the path to peace.

Many of the AJC leaders who have come to know me understand how my thinking was profoundly affected by the attacks on our country on September the 11th, 2001. The security of our Nation is foremost in my mind. I vowed that day and I vow to you today that the United States of America will stay on the hunt and bring the killers to justice.

And one of the lessons of September the 11th is that this Nation must take threats seriously before they fully materialize. And I saw a threat in Saddam Hussein. He had invaded a neighbor; he had used weapons of mass destruction against his own people; he had the capability of making weapons of mass destruction; he harbored terrorists; he was shooting at U.S. aircraft. He was a threat, and the world is better off without Saddam Hussein in power.

Our goal in Iraq is to have an ally in the war on terror and to help that young country establish an Iraqi-style democracy. Last December, 12 million people defied the car bombers and the killers and the terrorists and said that "We want to live in liberty." Recently a unity government has formed in Iraq. They reached an agreement on their top leadership posts. This new Government represents a turning point in Iraq, a new chapter in our engagement there, and an opportunity for progress. We will form a new partnership with these leaders. We will adjust our methods to support their priorities. We will strengthen our mutual efforts to achieve victory.

But I want you to understand that the new Government is yet another blow to those who hate liberty. First, it will deny the terrorists their immediate aim of turning Iraq into a safe haven from which they can plot and plan attacks against the United States and our allies. And secondly, a democratic Iraq will be a major blow to the terrorists' hateful ideology, sending a powerful message across the region that the future of the Middle East belongs to freedom. The only way we can lose in Iraq is if we lose our nerve, and I am not going to lose my nerve.

The AJC, the American Government, and most of the nations of the world are concerned about Iran. We're concerned because the Iranian regime is repressing its people, sponsoring terrorists, destabilizing the region, threatening Israel, and defying the world with its ambitions for nuclear

weapons. America will continue to rally the world to confront these threats.

We're making progress. The first goal is to reach a common objective, and the objective amongst America, our European allies, Russia, and China is to deny Iran a nuclear weapon. I spent time with Chancellor Merkel yesterday talking about this important issue. I can assure you we have a strong ally in Chancellor Merkel when it comes to uniting the world to speak with one clear voice.

We will continue to press the Iranian Government to comply with IAEA as well as U.N. Security Council resolutions. America respects and admires the people of Iran. We respect their history and culture. We respect their right to choose their own future and win their own freedom. And America looks forward to the day when our Nation can be closest of friends with a free and democratic Iran.

Before I introduce the Chancellor, I do want to talk about another subject that I know is important to you, and it's important to me, and that's Darfur. Last weekend, thousands rallied on our National Mall to call for justice in Darfur. And among the speakers was a man who understands the meaning of evil. You know him well. Elie Wiesel put it this way: "We refuse to be silent because silent helps the killer, never his victims."

America is not silent. The United States is the only country to have called the crimes taking place in Sudan what they are—genocide. To end these atrocities, we've developed a clear standard. First, there must be a political course. Right now as we speak, we're negotiating to bring a political settlement so that all sides will lay down their arms, a settlement between the

Government and the rebels. These conversations are taking place in Abuja.

But, as well, we must understand that the rape and the murder and the suffering must be stopped. And that's why I believe strongly that we must augment AU forces with a blue-helmeted U.N. force, with a NATO overlay, so that we can send a clear message to the leaders of Sudan: We will not tolerate the genocide taking place in that country.

My remaining time in office, I look forward to working with AJC leaders. I appreciate your steadfast strength when it comes to dealing with terror. I appreciate your strong belief in the power of liberty to transform the world we have. I look forward to working with you to continue to lay the foundations of peace so that generations after our time will look at all of us and say, job well done.

And now it's my pleasure to introduce a leader who understands the importance of freedom. Angela Merkel grew up in East Germany during the dark days of the cold war. She understands what it means to live in a free society. She understands the power of liberty. She's a straightforward person; she tells me what's on her mind. She's a woman of good judgment. She's a strong leader. It's my privilege to welcome her here and to our friends at the AJC.

NOTE: The President spoke at 6:57 p.m. at the National Building Museum. In his remarks, he referred to Prime Minister Ehud Olmert and former Prime Minister Ariel Sharon of Israel; former President Saddam Hussein of Iraq; Chancellor Angela Merkel of Germany; and Nobel prize winner and author Elie Wiesel.

## Remarks on the National Economy May 5, 2006

*The President.* Listen, I thank you for your hospitality. I'm here to talk about our economy. Today we've got some good news: 138,000 additional Americans found jobs over the last month, which is good. The national unemployment rate is 4.7 percent. This economy is strong.

And one of the hopeful things about our economy is, small businesses are doing well. Small businesses provide most of the job growth in our country. The small-business sector is doing well; so is the American economy.

One thing we've got to make sure is that we keep the people's taxes low to keep this economy growing. Raising taxes will hurt small businesses; raising taxes will hurt consumers; raising taxes will particularly affect working people, now that the price of gasoline has gone up. So one of the things Congress has got to do is be mindful that the economic growth we're seeing, the strong economic growth, is dependent upon good tax policy.

At the same time, Congress should be wise about how they spend the people's money. They've got to make sure the supplemental comes to me at a rate that I'll accept—\$92.2 billion—plus money for the pandemic flu.

We've got a plan to make sure this economy keeps growing, but today's news is good news for the American people.

And I want to thank you—let me thank you for coming by here to say hito you.

*John Weintraub.* All right, I thank you.

*The President.* It's a good place to shop, by the way. I just spent some of my hard-earned money on Barney. I bought him a couple of toys to chew on—but don't let him know until I get over there; it's a surprise. [*Laughter*] Thanks for letting me come by.

*Mr. Weintraub.* Okay. Thank you, Mr. President.

NOTE: The President spoke at 10:08 a.m. Participating in the visit was John Weintraub, coowner, Frager's Hardware.

## Remarks Announcing the Resignation of Porter J. Goss as Director of the Central Intelligence Agency May 5, 2006

*The President.* This morning Director Porter Goss offered his resignation as the Director of the Central Intelligence Agency. I've accepted it.

During the course of his tenure, I've established a very close personal relationship with Porter, which is very important for the Director of the CIA. He's spent a lot of time here in the Oval Office. He's told me—he's given me his candid advice. I appreciate his integrity. I appreciate the

honor in which—that he brought to the job.

Porter's tenure at the CIA was one of transition. He's helped this Agency become integrated into the intelligence community, and that was a tough job. And he's led ably. He's got a 5-year plan to increase the number of analysts and operatives, which is going to help make this country a safer place and help us win the war on terror. He's instilled a sense of professionalism. He honors the proud history of

the CIA, an organization that is known for its secrecy in accountability. I am confident that his successor will continue the reforms that he's put in place, and as a result, this country will be more secure.

We've got to win the war on terror, and the Central Intelligence Agency is a vital part of that war. And so I want to thank you for your service.

[At this point, Director Goss made brief remarks.]

*The President.* God bless. Thank you. I appreciate you. Thank you very much.

NOTE: The President spoke at 1:44 p.m. in the Oval Office at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Director Goss.

## The President's Radio Address May 6, 2006

Good morning. Today I want to talk with you about the new Medicare prescription drug coverage that went into effect at the start of this year. Everyone on Medicare is eligible for this new coverage, but the enrollment deadline of May 15th is just over a week away. For those of you with Medicare who have not yet signed up, it is important for you to review your options and choose a plan. By enrolling before the deadline, you can ensure the lowest possible premiums and start saving on your prescription drug bills.

Many of you have already made the wise decision to enroll. Since the new coverage went into effect, more than 30 million Americans now have prescription drug coverage through the Medicare program, and more are enrolling each week. Recent surveys show that the vast majority of seniors are satisfied with the program and for good reason.

Competition in the prescription drug market has been stronger than expected, and costs for seniors are lower than expected. The average premium that seniors pay is a third less than had been expected—just \$25 per month instead of \$37 per month. The typical person with Medicare who previously had no drug coverage will now spend about half of what he or

she used to spend on prescription drugs, saving an average of \$1,100 per year.

Low-income seniors receive extra help. For them Medicare will now cover, on average, more than 95 percent of the costs of their prescription drugs. Thanks to this new coverage, America's seniors are now getting the modern medicine they need at prices they can afford.

Prescription drug coverage under Medicare is also giving our seniors more and better choices for their health care. Instead of having to accept a one-size-fits-all plan, seniors are now choosing from a variety of drug plans, and they're finding the one that best fits their needs. Most seniors are able to choose their plans that have low premiums, low or no deductibles, fixed copayments for most drugs, and affordable coverage to fill in coverage gaps.

Medicare prescription drug coverage is a great deal for seniors. So today I am encouraging those of you who still have not enrolled to take a look at your options and sign up before the May 15th deadline, in order to ensure the lowest premiums. Even if you do not have significant drug expenses now, you should consider joining a Medicare drug plan to protect yourself against high prescription drug bills down the road.

There are many ways you can get help to choose a drug plan and enroll. You can ask your doctor or pharmacist for help. You can speak with a Medicare counselor 24 hours a day at 1-800-MEDICARE. You can enroll online by visiting the official Medicare web site at [medicare.gov](http://medicare.gov). If you need help enrolling, citizens' groups like AARP and NAACP, faith-based organizations, health professionals, and pharmacies are working to answer questions. Between now and May 15th, events will be held across the country to answer your questions and help you enroll for the new drug coverage. And if you have family or friends on Medicare, you can help too. Helping can be as simple as showing an older neighbor how to fill out a form, helping a senior use the Internet, or making a call for your mom or dad.

I was proud to sign Medicare prescription drug coverage into law. Because we

acted, America now has a Medicare system to fit the needs of the 21st century, and millions of American seniors and persons with disabilities are now saving a lot of money and receiving the modern health care they deserve. Over the coming days, we will continue working to make sure that everyone with Medicare has a chance to save money and enjoy the peace of mind that this new drug coverage brings.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on May 5 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on May 6. The transcript was made available by the Office of the Press Secretary on May 5 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Commencement Address at Oklahoma State University in Stillwater, Oklahoma May 6, 2006

Thank you all very much. President Schmidly, thank you. Members of the Oklahoma State faculty and administration; Governor; people in the statehouse; Members of the United States Congress; distinguished guests; parents, friends, family, and, most important, the class of 2006: Thanks for the warm welcome to this great State and to this fine campus. I'm honored to be here.

Laura sends her greetings, and she's disappointed that she couldn't be here with me. She was even more disappointed when she found out I had planned a romantic dinner for two—at Eskimo Joe's. She also said she had one question to ask the students here today: How orange are you? If you read the papers, you know that when some would criticize me, they call me a

cowboy. This cowboy is proud to be standing here in the midst of a lot of other cowboys.

I want to thank the moms and dads here for the sacrifice and for the love you've shown your children. I want to thank the faculty for your hard work and dedication. I congratulate the class of 2006. Some of you are graduating with honors that involved much sacrifice and achievement. Others perhaps spent a little less time in the library. *[Laughter]* For all of you, I bring a message of great hope: There's life after English Comp. *[Laughter]* Someday, you'll appreciate what you've learned here; you're going to make your teachers proud. I know the professors who taught me English marvel at my way of words. *[Laughter]*

The last few months before graduation are busy ones. Amid all the excitement, there's one thing that probably eluded a few of you—you haven't had time to find a job. I speak for your parents when I say, now is the time to start looking. Some good news for you: The job market for college graduates is the best it's been in years. The economy of ours is strong, and so you'll have more jobs to choose from than previous classes, and your starting salaries will be higher. And the opportunities beyond are only limited by the size of your dreams.

You're privileged to live in the world's freest country at one of the most hopeful moments in human history. Soon you'll leave this university to take your place in our society. And as you do, you'll witness dramatic changes, and these changes will present you with opportunities and choices and great challenges.

Your generation will enjoy unimagined opportunities because of education. You know, when this university was founded in 1890, it was called the Oklahoma Territorial Agricultural and Mechanical College, one of the Nation's land-grant colleges. And the investment has paid off many times over. Some of the oldtimers remember that after the Dust Bowl hit Oklahoma in the 1930s, this university responded by helping the farmers and ranchers with innovative soil conservation techniques. OSU is still committed to the land-grant mission of high-quality teaching and advanced research and outreach to the communities it serves. But the school has moved far beyond its original focus on agriculture, and Oklahoma State University is now a comprehensive public university with eight degree-granting colleges that offer more than 350 programs to more than 21,000 students.

This fine university has adapted, and to succeed in the 21st century, you're going to have to adapt as well. Your degree marks the successful end of your undergraduate education, and when you leave this university, you're going to enter a dynamic world

and an economy that is constantly creating new opportunities that will require you to learn new skills. I urge you to rise to these challenges. Take charge of your future; be open to new ideas; be willing to take risks. Treat the degree you receive today as the first step in a lifetime of learning, and your lives will be rich in purpose and reward.

Your generation will face unprecedented choices because of technology. When I was in college, we listened to music on 45 rpm records as opposed to the iPod. We used manual typewriters instead of the personal computer. When we made a mistake while writing a paper, we didn't have the luxury of spell check. As a matter of fact, we used something that maybe some of you have heard of—it was big and bulky—it's called a dictionary. [Laughter] Technology has helped improve almost every aspect of your life on campus—except maybe the cafeteria food. [Laughter]

Just as technology is making life better for college students, it's making all of us more productive. If you take a job in an office, the technology you use will make you more efficient than earlier generations. If you decide to open a small business, technology can help you lower your costs or reach more customers through the Internet. If you're a farmer or a rancher, technology gives you instant access to expert advice from specialists who may live thousands of miles away. By helping each of us do our jobs better, technology is improving life for all of us.

Some of the most exciting advances in technology you'll see will be in the field of energy. When I graduated from school, cars drank gasoline. Last month in California, I saw cars powered by hydrogen that use no gasoline and emit no pollution. Within your lifetime, advances in technology will make our air cleaner and our cars more efficient. The gasoline engine will seem as antiquated as the rotary phone and the black-and-white TV.

Technology holds promise for extending and improving our lives through dramatic

breakthroughs in the field of medicine. In recent times, we've gone from x rays to MRIs, from eyeglasses to laser eye surgery, from major operations that would keep you in the hospital for weeks to miracle drugs that can prevent the need for the operation in the first place. In the decades ahead, you're going to witness incredible changes in health care that will even be more revolutionary.

These advances in technology will transform lives, and they will present you with profound dilemmas. Science offers the prospect of eventual cures for terrible diseases and temptations to manipulate life and violate human dignity. With the Internet, you can communicate instantly with someone halfway across the world and isolate yourself from your family and your neighbors. Your generation will have to resolve these dilemmas. My advice is, harness the promise of technology without becoming slaves to technology. My advice is, ensure that science serves the cause of humanity and not the other way around.

Your generation will confront the challenges of a world that is now at our doorstep. When Oklahoma was settled in the late 19th century, this was America's frontier. Now the whole world is within your reach. You can e-mail friends in Central America, or you can fly nonstop across the Atlantic or Pacific, or you use your Bank of Oklahoma card and withdraw money from an ATM in Australia.

At the same time, we're seeing the rise of new competitors like China and India, and this competition creates uncertainty. Some look at the changes taking place all around us, and they worry about the future. Their reaction is to wall America off from the world and to retreat into protectionism. This is a sure path to stagnation and decline. I ask you to reject this kind of pessimism.

We should welcome competition. We should welcome competition, because it makes our country stronger and more prosperous. Today, the citizens of Oklahoma

export wheat to Mexico or pork to Japan or liquid pumps to Russia. For your generation, even more opportunities will come from overseas. Government must help, but it is up to you to take advantage of what you have learned here and meet the future with confidence in your ability to compete and succeed.

A country that shuts itself off from competition will be a country that isolates itself from the duties and opportunities of our world. One of the greatest opportunities of this young century is the advance of human freedom. The advance of liberty is the story of our time, and we're seeing new chapters written before our eyes. Freedom is taking root in places where liberty was once unimaginable. Just 25 years ago, there were only 45 democracies on the face of the Earth. Today, there are 122 democracies, and more people now live in liberty than ever before. The advance of liberty gives us hope in the future because free societies are peaceful societies. As freedom spreads, the threat of tyranny and terror will recede, and the rise of democracy will bring peace to the world and security to the United States of America.

No, this changing world presents you with a lot of exciting opportunities. Yet a changing world also needs the anchor of old-fashioned values and virtues, like courage and compassion. These are the virtues that sustain our democracy and make self-government possible. These virtues are what we will need to build a more hopeful future. And these virtues are present in the Oklahoma State class of 2006.

We see these virtues in an extraordinary young woman named Melissa Unwin. Melissa has been studying in your College of Education. Back in 2001, she was diagnosed with cancer, and the doctors doubted she would ever finish college. If you know anything about educators, you know that when they tell you—when somebody tells them something is impossible, they're going to work harder to prove you wrong. And

that's just what Melissa has done. The degree that Melissa has earned today is an example of courage in the face of adversity, and she represents a spirit necessary for your generation to succeed.

We see the spirit of compassion in the members of the class of 2006 who've stepped forward to serve their community. As part of your "Into the Streets" volunteer effort this past fall, one fraternity helped build a playground at the local homeless shelter. They probably realized it was better to help somebody else than go to the bar. [Laughter] Other members of your class traveled down the gulf coast after Hurricane Katrina to help clean up debris and deliver comfort and relief. They didn't have to do that, but they felt the calling to go help somebody in need.

I met seniors who have volunteered in a wide variety of ways, upon my landing. They build houses for the underprivileged and visit nursing homes and tutor fellow students. One of these volunteers says this about her service: "I feel I've been very fortunate, and any way I can help other people to have a house to live in, to have food on the table, or even a clean yard, means I'm making a difference."

We see the spirit of service in the members of the class of 2006 who've stepped forward to defend our freedom. In this graduating class, there are 27 new lieutenants who are receiving their Army and Air Force commissions along with their OSU degrees. They're carrying on the proud tradition of service in uniform exemplified by an OSU graduate named Luke James. After earning his commission at OSU in 2002, Luke had the world at his feet; he had a wife and infant son that he adored. Yet Luke had chosen a life of service, and in 2004, Second Lieutenant Luke James, graduate of OSU, was deployed to Iraq as a member of the Army's 82d Airborne. Short-

ly after arriving in that country, Luke was killed while leading his troops on patrol. He was awarded the Bronze Star. He's buried at Arlington National Cemetery.

On the anniversary of her son's death, Luke's mom went to visit her son's grave. And afterward, a young soldier came up to her and thanked her for the way she had raised her son. He said that Lieutenant James had saved his life. Luke's mom says this of her son's service: "All of Luke's life, he was very dedicated to the concept of freedom. While no soldier wants war, he understood the necessity of war, that it can ensure the freedoms we enjoy in America." Luke James is part of a generation who are every bit as selfless and dedicated to liberty as any that has ever come before. And the future of the United States of America is better because of the character of young Americans like Luke James.

In this time of technological change and global competition, ultimately the character of America will be determined by your willingness to serve a cause larger than yourselves. The day will come when you'll be asked, what have you done to build a better America than the one you found? I'm confident that you will answer the call to service. I'm confident that your lives will be more fulfilling and your country more hopeful. And I'm confident that you'll look back and say, "Job well done."

Congratulations to you all. May God bless you, the class of 2006, and may God bless the United States of America.

NOTE: The President spoke at 10:10 a.m. in Boone Picket Stadium. In his remarks, he referred to David J. Schmidly, president, Oklahoma State University; Gov. Brad Henry of Oklahoma; and Arleen James, mother of 2d Lt. Luke S. James, USA, who was killed in Iraq on January 27, 2004.

## Interview With Sabine Christiansen of ARD German Television May 4, 2006

### *President's Upcoming Visit to Germany*

*Ms. Christiansen.* Thank you very much, Mr. President, for joining us. We feel very honored by this. Mrs. Merkel invited you to Germany, as we heard, this summer, just before the G-8 summit. And we feel very honored in Germany that you would come and visit us. And as I heard, you're going to visit for the first time the former GDR. Are you looking forward to that?

*The President.* Yes, I am. It was very kind of Chancellor Merkel—who I call Angela, by the way—to invite me to her residence. It's a gesture of friendship that I appreciate. And Laura and I are looking forward to it. And it will give me a chance to continue our dialog on important issues. I'll get to know her a little better, and she'll know me better. It will make the relationship be stronger over time. So I'm looking forward to it, and I really appreciate it.

### *German Chancellor Angela Merkel*

*Ms. Christiansen.* Your father helped to make German reunification possible. And Chancellor Merkel told me that you've shown a lot of interest in her life, in her former life in the former GDR. What was the point of interest for you?

*The President.* Well, last night we were sitting around in the private dining room upstairs here, and I thought it would be interesting for her to describe what it was like to grow up in a Communist world. Laura and I certainly don't know what that's like, nor did Condi Rice or Steve Hadley, the members of my team. And I thought it would be good for all of us to hear what it was like.

It was very interesting. She talked about—you know, her dad was a pastor, and she talked about the different pioneer clubs and the schools. It also gave me a chance to get a glimpse into her soul. As

I said in the Oval Office yesterday, there's something really refreshing, to work with somebody who understands firsthand what it means to be free. And certainly Angela Merkel has gone from a society which was repressive to a society which is open and free. So I wanted to hear the history, her history, and I also wanted to get a better feel for what she's like and why she thinks the way she thinks.

### *Germany-U.S. Relations*

*Ms. Christiansen.* That sounds more like a real transatlantic friendship than a partnership—well, with difficulties we had before.

*The President.* Well, listen, first of all, I had a good relationship with Chancellor Schroeder. The problem was, of course, that there was a disagreement over a very difficult decision I had to make, and that was Iraq.

I fully understand why a government or a people would be, you know, I guess, disappointed in me in a way, and not understand why somebody would commit troops to achieve an objective. And I like to remind people that September the 11th, for us, was a change in our history, and it certainly changed the way I thought. And for others, it was just a moment in passing. So there was a disagreement.

On the other hand, U.S.-German relations were always important, and now we have a chance to turn a new chapter in our relationship, strengthen that alliance, strengthen that relationship, and work on matters that will make this world a better place.

So I'm thrilled with my relationship with Chancellor Merkel. She's a really interesting person. She is—first of all, I found her to be confident, not overconfident, but confident in her beliefs, and that's very important—for me, at least—to be dealing

with someone who has got strength of character and confident in her capacity to work to make things better.

Iran

*Ms. Christiansen.* Now there is Iran on the agenda, and there you seem to be a team that plays together, in that. Are you confident after your meeting with Mrs. Merkel that the Europeans and others will support a resolution that might even open the door to sanctions?

*The President.* Look, first of all, the most important thing in achieving a diplomatic solution—and I want the German people to understand I want this issue to be solved diplomatically, and I think it can be solved diplomatically. And that—the first objective of trying to get different countries to come together in a diplomatic front is to agree that Iran—in this case, Iran—should not have a weapon. And we’ve agreed—Germany, France, the United States, certainly agree with that, but so does Russia; so does China. And that’s a really important part of putting together a coalition of people saying with a universal voice, or unified voice, “no” to Iran.

*Ms. Christiansen.* Okay. At the——

*The President.* Well, that’s right.

Secondly, we’re working with our allies to—now that the Iranians, by the way, have basically said, “We don’t care,” what next? And “what next” is to go to the U.N. Security Council. And that’s what we’re working on now. And we’re working on the language of the resolutions and the consequences. And as I told the press yesterday, it’s best not to be describing the negotiations amongst ourselves on TV—simply because the Iranians will be listening to everything we say.

But the point is, is that we want a unified front. Iran must hear that the free world is unified in saying, “No weapon, no knowledge of how to build a weapon, no capacity to make a weapon.” It’s almost a matter of will at this point in time. In other words, they’re watching to see whether or not our

coalition will crack, whether or not they can create different factions within our coalition.

And as I’ve described to people here in this country, is that we must not crack. If we want to solve this diplomatically, there must be a common front with a common strategy to achieve the objective.

#### *Diplomatic Negotiations With Iran*

*Ms. Christiansen.* If this doesn’t work with the U.N., you trying to find wide coalition that is going against Iran——

*The President.* Expand the coalition.

*Ms. Christiansen.* Exactly. Exactly.

*The President.* And they’re not mutually exclusive. And first of all, I think we ought to assume it can work in the U.N. We want it to work in the U.N. Therefore, the strategy will be to see to it that it does work in the U.N. And that’s why—you know, I talked to Putin, President Putin the other day, right before Angela came. And she talked to President Putin in Siberia, as you know. And a lot of our conversations, obviously, revolve around Iran, since this is the most dangerous threat to peace right now.

*Ms. Christiansen.* And sanctions?

*The President.* Possibility—absolutely.

*Ms. Christiansen.* But regarding Russia and China? That will be difficult——

*The President.* No. It may seem difficult at this point in time, but there’s time. As I explained, again, to people in our country, we’re at the beginning of the diplomatic process, not the end of the diplomatic process. I know—we live in a world where everything has to be solved instantly. I wish problems could be solved instantly, but that’s not how the world works, particularly when you’re dealing with a nontransparent regime.

See, they have an advantage—“they” being the Iranians. They don’t have a press, like the German press and the United States press, that is constantly reporting.

They don't have democracies that are holding leaders to account. They're nontransparent. So therefore, their negotiating position is much stronger than ours in many ways.

So we must double our efforts, constantly talking to each other, reminding each other about the need to stay unified, and that's what Angela and I spent a lot of time talking about yesterday.

#### *U.S. Role in Diplomatic Negotiations With Iran*

*Ms. Christiansen.* Why isn't Washington talking directly to the Iranians?

*The President.* Well, because it's much better to have a united front. In other words, we will achieve this diplomatically. If there's more than one country involved—we are very much involved. Yesterday we were part of putting down a U.N. Security Council Resolution. The Iranians know we're involved. But what I don't want to have happen is this unified effort fall apart because everybody depends upon one country to solve the problem.

*Ms. Christiansen.* If all diplomatic efforts fail, what's worse at the end, a nuclear-armed Iran or an American military action?

*The President.* You're asking me the classic hypothetical question. I believe we can achieve this diplomatically. And that's what I want to do. I want to achieve this diplomatically, because it's—and it's necessary we do so. And an armed Iran will be a threat to peace. It will be a threat to peace in the Middle East; it will create a sense of blackmail; it will encourage other nations to feel like they need to have a nuclear weapon. And so it's essential that we succeed diplomatically.

#### *Israel*

*Ms. Christiansen.* Are you worried that Israel might not try to solve this diplomatically? Because Mr. Olmert already said, "We can defend ourselves."

*The President.* Well, if I were an Israeli, I'd be concerned about the combination

of a President that said, "I want to wipe Israel off the map," and had a nuclear weapon. And so obviously, Israel is a factor. It's a little country that will defend herself. Again, I keep repeating this, but that's why it's essential we continue to work together, like we're doing now, to convince the Iranians to give up their weapon.

They will be isolated. What they need to understand is that they're going to be isolated from the rest of the world, and that will harm their people, in my judgment. And it's a tough issue, and it's why I ran for office, to solve these problems.

#### *Iraq*

*Ms. Christiansen.* Let's go over to Iraq. Two German hostages who were held in Iraq for months, they just returned home safely, but Iraq remains a major terrorist base. Despite more than, I think, 130,000 U.S. soldiers there, are in the country, what do you say to the many Europeans who feel the Iraq war has made the world a less safer place?

*The President.* I would say that they need to look at the facts, that Saddam Hussein was a very dangerous person in the world. Saddam Hussein had used weapons of mass destruction. Obviously, we didn't find them like everybody thought we would, but we did know he had the capacity to make them. He had harbored terrorists. He had invaded his neighborhood. And the removal of Saddam Hussein was the right thing to do.

And now there's a new democracy developing. And the best way to defeat the terrorists in the long run is to defeat their ideology with an ideology based upon liberty. And one of the most amazing events in modern history took place in December of last year, when 12 million Iraqis went to the polls. It's just a—it's a joyous moment for them.

Now what's happened is, is there's a unified government formed. Obviously, it took a little longer than we wanted, but nevertheless, they are together. There is a tough

Shi'a as the Prime Minister-designate. There's a Sunni rejectionist who is now reconciled with the country. And what you'll see is a democracy that will grow to be an example for others and a country that will deny safe haven to the terrorists.

I disagree with the assessment that there are more terrorists in Iraq now. As a matter of fact, slowly but surely, we're defeating them. But what's important for people in Germany to listen to is what I listen to, which is the voices of an enemy. Zarqawi and Al Qaida has announced that it's just a matter of time for America and the coalition to leave so we can have our safe haven from which to plot and plan further attacks on America and free nations.

And the only way we can lose Iraq is if we lose our nerve, if we retreat, if we pull out before the job is done. And that's not going to happen so long as I'm the President.

#### *Spread of Democracy*

*Ms. Christiansen.* So the development in Iraq, in Palestine, hasn't made you stop half-way, let's say, in the democratization process—

*The President.* Oh, quite the contrary. I really believe it's necessary to promote democracy. One of the interesting examples in history is democracies don't fight each other. And Europe today is whole, free, and at peace. You have your disagreements, but those disagreements are not determined on a battlefield anymore.

Japan was a country that my nation fought with, and today, one of my best friends in keeping the peace is the Prime Minister of Japan. What happened between World War II and today is, Japan took on a Japanese-style democracy. What's really interesting is when you go back and look at some of the writings and musings of people after World War II, there was great criticism about trying to help the Japanese become a Japanese-style democracy: "We can't do that; they're the enemy." Well, today, the enemy is the friend. So I think

all the more reason to promote democracy is the elections in Iraq.

I was not pleased that Hamas has refused to announce—its desire to destroy Israel. On the other hand, the elections did say to people in the Palestinian Territories, "We're sick and tired of corruption. We want leaders who don't steal from us. We want leaders who help us educate our children and provide health for our citizens."

And so elections can be good signals of what people are really thinking. I believe that there's still work after elections to be done, but there's no doubt that we've got to spread liberty and freedom if we're going to defeat this ideology that really says, "There should be no rights for women; there should be no religious freedom; and by the way, we'll carry out our foreign policy through acts of violence and murder."

#### *Germany-U.S. Relations/Intelligence*

*Ms. Christiansen.* We Germans seem to be more involved—have been more involved in the Iraq war than anybody else knew—involuntarily, I would like to say. Because the U.S. intelligence services used German airports for secret rendition flights and interrogated, even, German citizens—hardly what you'd expect, I would say, from a friend and ally.

*The President.* Well, first of all, on intelligence matters, it's my policy not to talk about them; otherwise, they're not intelligence matters anymore. And the questions you ask will be all—in some cases, analyzed through courts, in some cases, through press inquiry. But Germany is a friend.

*Ms. Christiansen.* But the behavior itself? Is it behavior for an ally—

*The President.* Well, like, what are you talking about?

*Ms. Christiansen.* I mean, that you do this, that you don't ask for help for some of the ally, that you don't inform the ally and so on.

*The President.* On, like, what subject, for example?

*Ms. Christiansen.* Like these flights, for example.

*The President.* Well, again, you're asking me to talk about intelligence matters that I'm not going to talk about. And people can say whatever they want to say, but we work closely with Germany on all kinds of fronts in order to protect ourselves.

#### *War on Terror*

*Ms. Christiansen.* Then let me ask you about the image of the United States. Especially for us Germans after the war, the United States stood as the symbol of liberty, for democracy. And then we saw these—we saw Abu Ghraib; we saw Guantanamo. And these seemed, suddenly, to be signals that you're abandoning these values of democracy and liberty. And how do you want to repair them?

*The President.* Well, first of all, it's absurd to say America is abandoning our values. No question, Abu Ghraib was a disgrace for our country. But I think people ought to take a look at what happened afterwards—and those who are responsible for that disgraceful behavior have been held to account, have been tried, have been, in some cases, dismissed from our military.

We're at war with an enemy, and we've got to protect ourselves. And obviously, the Guantanamo issue is a sensitive issue for people. I very much would like to end Guantanamo; I very much would like to get people to a court. And we're waiting for our Supreme Court to give us a decision as to whether the people need to have a fair trial in a civilian court or in a military court.

But in either case, they will get a trial, which they, themselves, were unwilling to give to the people that they're willing to kill—"they," the enemy.

And so it's—no, listen, our country is strong on human rights and civil rights. That's why we're leading the case in funding for HIV/AIDS in Africa. That's why we're trying to rally the Nation to do something about Darfur—the genocide in

Darfur. That's why we provide food for the hungry. That's why we try to liberate people when we find them in the clutches of tyranny.

*Ms. Christiansen.* So you said you had to do more?

*The President.* Yes, we are doing a lot.

#### *Iraq*

*Ms. Christiansen.* I understand, like, \$320 billion that the Iraq war cost—a lot of people are saying—

*The President.* It's worth it. It's worth it. I wouldn't have spent it if it wasn't worth it. Any time we put a troop in harm's way, they will get support. We're not going—I'm not going to ask a parent—I'm not going to be able to tell a parent, nor will I tell a parent, "Your son who volunteered or your daughter who volunteered is not going to get the full support of the Federal Government." And so long as we've got people in harm's way, this Government is going to support them.

#### *Dependence on Foreign Sources of Oil/ Gasoline*

*Ms. Christiansen.* Let me ask you another question to the war on terrorism. How do you want, really, to fight terrorism when you are so dependent on Arabian oil?

*The President.* That's an interesting question. I've never thought of it that way. The first thing we ought to do is get off oil.

*Ms. Christiansen.* That's what you said.

*The President.* And I mean that. Yes, I know.

*Ms. Christiansen.* Do you mean that, really?

*The President.* Absolutely. Oil has become—it's an economic risk for us. I mean, after all, if the oil—if the demand for oil goes up in India or China, fast-growing economies, it affects the price of gasoline in the United States and in Germany. It's also a national security issue, obviously. Oil comes from unstable parts of the world, so I'm absolutely serious about getting off of oil.

*Ms. Christiansen.* Because we, in Europe, we asked this when we heard your speech, and we said oil is now—

*The President.* You don't believe old George W.?

*Ms. Christiansen.* Gasoline is now, let's say \$70 a barrel. And we said, if we look at the United States, your gasoline is still so—I mean, the prices are so low, and we are paying so much money. Why haven't you raise taxes, energy taxes or something, if you really mean it?

*The President.* Well, because the best way to do it is through technological change. You don't have to tax the working people. And, well, in order—what?

*Ms. Christiansen.* That's what we do. [Laughter]

*The President.* Well, we don't. We try not to. Listen, the price of gasoline just went up from \$2.70 to \$3 a gallon, which is about, I guess, 40 percent of what it costs in Germany. And people are screaming, because it's like a tax. And it affects low-income Americans.

And so the best way to solve the problem is to spend money on research and development and come up with alternative ways to drive our automobiles. And we're making interesting progress. We think we're close to a breakthrough, to have a battery in our vehicles that will enable an urban dweller to drive the first 40 miles without using gasoline. So it's that effect of reducing demand for gasoline that will ultimately help our consumers. Obviously, we're trying to do all we can to make sure that supplies of gasoline don't get interrupted in the short term, but in the long term, I can see cars being powered by hydrogen, for example.

#### *Environment/Energy*

*Ms. Christiansen.* Let me ask one more question to that climate topic. After Katrina and after a lot of new evidence of rapid climate change, are you now convinced that this is really a serious problem?

*The President.* No, I've always said greenhouse gases are a problem. There is an argument there as to whether or not they're naturally made or manmade. And my attitude is, let's just get beyond that argument and do something about it. I believe that we need more nuclear power. If you're really interested in solving greenhouse gas problems, nuclear power is one of the great renewable sources of energy. I know it's controversial.

*Ms. Christiansen.* Very interesting and controversy debate in Germany as well.

*The President.* And here in America. But if people are genuinely serious about solving greenhouse gas problems around the world, countries like the United States and India and China ought to be promoting civilian nuclear power.

There's other things we're doing. One, as I just told you, we've got to change our habits when we're driving our cars. One of the real promising areas besides battery research is ethanol research, you know; use corn to be able to fuel automobiles in the United States. Solar energy can work and is becoming more economically feasible. Wind energy is making a marginal difference in the United States but, nevertheless, a difference.

And so my—what I'm saying is, is that we're spending a lot—clean coal technology, for example, we're spending billions of dollars on clean coal technology to figure out how to have zero-emission coal-fired plants. And all this research is going to pay off. And the United States will be able to make sure our economy continues to grow and, at the same time, be good stewards of the environment.

The debate—let me just cut to the chase. I said I didn't support Kyoto, and all of a sudden, everybody said, "Well, George W. Bush doesn't care about clean air"—it's just rubbish. Of course I care about the quality of the air. As a matter of fact, the quality of the air has improved since I've been the President of the United States. But what I didn't want to do is

wreck our economy, nor did I think it made sense to sign on to a treaty that didn't include countries like India and China. And so my attitude is, let's get beyond the debate and work in a cooperative fashion to share technologies, to share that which we're researching with each other, and have a new era of energy that is wise about how we treat the environment too.

#### *Russia-U.S. Relations*

*Ms. Christiansen.* I'm very mindful of our time, but I would like to have a look to the G-8 summit and Russia and about the Russian-American friendship as well. Perhaps another question. You had felt quite warm about President Putin, but there is rising criticism from the Vice President, for example, in the moment, and others on a lack of democracy in Russia. Have you talked to Putin directly about this? And will you, perhaps, raise any obstacles regarding the G-8?

*The President.* Yes, of course, I've talked to him—a lot.

*Ms. Christiansen.* About this problem?

*The President.* Oh, absolutely. Yes, a lot.

*Ms. Christiansen.* What does he say?

*The President.* Well, first, let me—let me share how I conduct my relations with people. I like Putin, but that doesn't mean I have to agree with some of the decisions he's made. I know this, that if I stand up and constantly criticize Putin publicly, he's not going to be interested in listening to what I have to say—and neither would I. When somebody feels like they can lecture to me publicly and doesn't do me the courtesy of coming to tell me what's on their mind, one-on-one, then I may not be interested in listening to them—if you know what I mean.

So I'm the kind of person that tries to establish a good personal relationship with somebody, and then we can sit down and talk, and I tell them what's on my mind, and they tell me what's on his. And I have expressed our Nation's concerns about—for example, when they shut down parts of the

press corps. I said, "Vladimir, people are wondering why you're making the decision you're making. A free press is an indication of a healthy democracy." And he had an answer.

But nevertheless, as you know, I'm a religious person, and I believe religious liberty is an important part of a society. And I've got friends in the Catholic Church who asked me to talk to him about Catholic bishops being allowed to move in the country and to practice their faith. And so I bring up all these issues with him.

But there's a difference in scolding somebody to try to gain editorial approval, and somebody who is in a position to be effective. I'd much rather be an effective person than a popular person; let me put it to you that way.

#### *Family Values*

*Ms. Christiansen.* As I said, we're very mindful of your time; it's been a great conversation. If you have 2 minutes—because I would like to have two questions, one on women and one on football. Do you agree to that?

*The President.* Okay, I will.

*Ms. Christiansen.* Very short ones. [Laughter] You seemed to get along very well Angela Merkel, a lot of women, strong women around you, here around the Oval Office. We're—have a big debate in Germany about women working and having children and the family. And your wife, for example, you seem to be a very good team in working together—

*The President.* Thank you.

*Ms. Christiansen.* And how do you strike this balance?

*The President.* Yes. First of all, I have been raised by an incredibly strong woman who I love, and that's my mother. And I'm married to an incredibly strong woman who I love, and that's my wife. I hope that Laura and I have raised two incredibly strong women who will have confidence to go out and explore life and to achieve. I don't think that encouraging my daughters

to live life to its fullest means that they can't be good mothers at the same time. As a matter of fact, I think a good mother is somebody who is strong in her own right, confident, and independent.

And one of the things I do try to remind people is that the most important responsibility a person can have is to love their child with all their heart. That is by far the most important thing. I'll never forget—I'll give you one quick—we're fine on time. I'll tell you a quick anecdote. One of my dearest friends in political life is Karen Hughes. She was one of the most powerful women ever in the White House, simply because she had complete access to the President and I trusted her. At the same time, by the way, in an office down the hall was Condoleezza Rice, also a very strong woman who I am very fond of and very close to.

And Karen, one time, came in to see me, and she said, "Mr. President, I'm having trouble at home"—not that she—she wasn't having trouble with her husband or her son—but, "My son is unhappy." And my reaction instantly was, "Karen, do whatever is necessary to make your family happy. That's the most important thing." And so she left, and she went back to Texas, and I missed her dearly. But priorities matter in life, and people are able to set priorities and, at the same time, live life to the fullest.

And Karen is a good example. She got her son squared away; he's now at Stanford University. She's now back in Washington, working with Condi at the State Department. And my only advice is to, one, welcome women in society. I welcome them in the White House. My Presidency is more complete because some of my top advisers are very strong, capable women.

Angela Merkel is somebody who is a joy to deal with. She bring an interesting—

*Ms. Christiansen.* Why?

*The President.* Well, because she's got a straightforward manner about herself that is—when she says something, you know she

means it. She is what she is. She's not a fake. And when I sit there talking to Angela, I'm not saying I'm talking to—I don't think gender; I think strength of character. I think reliability. I think clear-headed thinking. I think of a fellow strategist as to how to solve problems.

So, anyway, that's a long answer to a short question.

### 2006 World Cup

*Ms. Christiansen.* I think for the two of us, we don't have soccer expert teams sitting here together, but anyway, I think you're a baseball fan—

*The President.* I am a baseball fan; you're right.

*Ms. Christiansen.* You are. Do you think you've turned a little bit into a soccer fan? I mean, your team is doing so well at the moment and—

*The President.* That's what they tell me. I do know a little bit about the World Cup because I read a very interesting article about the German coach. And evidently he's a dynamic—you know, he's spending some time in California. And the World Cup is such a huge event that I think most Americans like me, who weren't raised on soccer, are beginning to pay attention to it. Now, I know that sounds like heresy in Germany.

*Ms. Christiansen.* In Germany, yes. But think of just—I mean, that the American team could meet the Iranian team.

*The President.* Yes, could be.

*Ms. Christiansen.* What then?

*The President.* Well, I don't view it that way. I view it as, I hope the American team does well. But this is a big event for Germany, and Germany will be a great host for the games. And obviously, I hope the American team does well—they're supposedly a good team.

*Ms. Christiansen.* If they get world champion, you're coming for the final game?

*The President.* I don't know. Do you think I possibly would be invited? I don't know.

*Ms. Christiansen.* We're very happy that you come over in July.

*The President.* I'm looking forward it, and I want to thank you for this good interview.

NOTE: The interview was taped at 1:21 p.m. in the Diplomatic Reception Room at the White House for later broadcast. In his remarks, the President referred to former Chancellor Gerhard Schroeder of Germany; President Vladimir V. Putin of Russia; Presi-

dent Mahmud Ahmadi-nejad of Iran; former President Saddam Hussein of Iraq; Prime Minister-designate Nuri al-Maliki, and Speaker of Parliament Mahmoud al-Mashhadani of Iraq; senior Al Qaida associate Abu Musab Al Zarfawi; Prime Minister Junichiro Koizumi of Japan; and Jurgen Klinsmann, head coach, Germany's 2006 World Cup men's soccer team. Ms. Christiansen referred to Prime Minister Ehud Olmert of Israel. The transcript was released by the Office of the Press Secretary on May 7. A tape was not available for verification of the content of this interview.

## Interview With Kai Diekmann of Bild May 5, 2006

*The President.* Have you ever been in the Oval Office before?

*Mr. Diekmann.* Once, a long time ago—

*The President.* I'll give you a quick tour before our interview. So the first thing that a President does, which I didn't realize, was pick a rug. I've have no idea about rugs. And so in this job, you've got to delegate. The American President is in a position where there's just unbelievable complexities to the job—Darfur, Iran—a whole lot of issues. So I delegated the decision about the rug to my wife.

The second thing a President has got to do is have a strategic mind. In order to be successful, in my judgment, as the President, you've got to constantly think strategically. And so I said to her, "You pick out the colors; you be the tactical person; but I want it to say, 'optimistic person.'" That's all I wanted it to say. Here is the result. Isn't it beautiful?

*Mr. Diekmann.* Yes, it is very beautiful.

*The President.* There's a sense of optimism when you come in here. And there's a reason why. You cannot lead people un-

less you're optimistic about what you're doing. You've got to believe it in your very soul. One of the interesting things about the Presidency is people watch me like a hawk. They're looking at my moves. And if I'm going to be wringing my hands and if I'm all worried about the decisions I make—are not going to lead to a better tomorrow, they'll figure it out.

And so when you talk to me today, I just want you to know, I not only strongly believe in the decisions I make, I'm optimistic that they're going to work—very optimistic.

These are all Texas paintings. That's west Texas; those are other Texas paintings. At least if you're a Texan, it reflects a way of life and a way of thinking. The interesting thing about Washington is that they want me to change—"they" being the—and I'm not changing, you know. You can't make decisions if you don't know who you are and you flip around with the politics. You've got to stay strong in what you believe and optimistic about that—you'll get good results.

And so—the other thing I want you to know about me is that no matter how pressurized it may seem, I’m not changing what I believe. Now, I may change tactics, but I’m not going to change my core beliefs—a belief that freedom is universal or the belief that private markets work, a belief in ownership—when people own something, society is better off; a belief that there’s a role for government, but it’s limited in nature. And I’m not changing. I don’t care whether they like me at the cocktail parties or not. I want to be able to leave this office with my integrity intact.

That’s George Washington, the first President, of course. The interesting thing about him is that I read three—three or four books about him last year. Isn’t that interesting? People say, “So what?” Well, here’s the “so what.” You never know what your history is going to be like until long after you’re gone—if they’re still analyzing the Presidency of George Washington—[laughter]. So Presidents shouldn’t worry about the history. You just can’t. You do what you think is right, and if you’re thinking big enough, that history will eventually prove you right or wrong. But you won’t know in the short term.

Lincoln—this is the place on the Oval Office wall where the President puts the most—the best President, and I put Lincoln here, and I don’t think there’s any question—now, people will have their—but I think he was the most influential President ever. And the reason why is because that in the midst of a difficult Presidency, needless to say—the Civil War, thousands of people dying, with Americans killing Americans—he had a vision of a United States. It’s conceivable this country would have ended up being two countries had he not had a clear vision, even though all around him was seemingly falling apart. He was a great President.

That’s called “A Charge to Keep,” based upon a religious hymn. The hymn talks about serving God. The President’s job is never to promote a religion. The great

thing about America—and Germany, for that matter—is that you should be able to worship freely. I like to tell people, you’re equally American whether you’re a Jew, Muslim, Christian, or atheist—you’re equally all Americans—and that if we ever lose that, we begin to look like the Taliban.

I understand, in parts of Europe, some scoff at my faith. It doesn’t bother me. But I happen to believe, for me at least, faith is one way to make sure that my values stay intact and that I keep life in proper perspective, which is a very important part, in my judgment, of being a good decisionmaker.

Finally, the desk, where we’ll have our picture taken in front of is—nine other Presidents used it. This was given to us by Queen Victoria in the 1870s, I think it was. President Roosevelt put the door in so people would not know he was in a wheelchair. John Kennedy put his head out the door.

*Mr. Diekmann.* Yes, the very famous picture—

*The President.* That’s it—the most famous picture. And then Reagan, interestingly enough, put the bottom on there. He was a big guy; he didn’t want to bump his knees under the desk.

Anyway, this is the Oval Office. It’s a shrine to democracy. And we treat it that way. When people walk in here, they don’t come in here in bathing suits and flip-flops. They come in here dressed like they’d come to a shrine. It is to be respected and honored because the Office of the President is bigger than the person who occupies it. It’s one of the great things about a true democracy, is that the institutions outlast the individuals, and therefore, there’s stability in the process.

Some Presidents forget that they’re not bigger than the Office. But all Presidents must always honor the Office and remember it is a sacred trust to uphold the honor of the Presidency.

*Mr. Diekmann.* Thank you for taking the time.

*The President.* Yes, glad to do it.

*Mr. Diekmann.* Bild has 12 million readers. It's the largest newspaper in Germany. And there's one thing which is really special about our newspaper—every German who wants to work for the newspaper, he has to sign in his working contracts some beliefs—and there's the belief you have to be for reunification; you have to be against totalitarianism from riots on the right side and the left side; and you have to be for the peace and for the understanding with Israel. And since September 11th, we have a new belief—you have to be for partnership with America. Otherwise, you can't work for us, you can't come—you have to sign it in your contract.

*The President.* My kind of guy. [*Laughter*]

#### *War on Terror*

*Mr. Diekmann.* Okay, so I would like to start. Mr. President, the fifth anniversary of the terrible 9/11 attack is nearing. Has the Western world really learned the right lessons from 9/11?

*The President.* Yes. The Western world, by and large, understands that we face an enemy that is coldblooded and will kill innocent life to achieve an objective. That killing not only took place on September 11th here in our country, but it has taken place in other countries around the world since then.

Secondly, the governments of the Western world understand that in order to protect our respective peoples, there must be intelligence sharing. We must be willing to converse with each other in ways that might not have happened before. In other words, if we know something is going to happen in Germany, it's very important for the United States Government to call up its counterparts and to share that information. And there's a lot of that information sharing.

Thirdly, we understand that money is what fuels these terror cells. And the idea of sharing intelligence about the movement

of money is necessary to make sure we protect our people.

The degree of understanding about September the 11th varies, however. For some people around the world, September the 11th was just a terrible moment. For me and a lot of other people in America, September the 11th was a change of attitude; it was a call to arms in the sense that this is the first—for America—the first battle of the war in the 21st century.

One of the things that I hope people come to understand is that there are two ways to defeat this enemy: One is to bring them to justice so they don't harm people, which means we've got to be constantly on the offense, finding them where they hide and bringing them to justice. And secondly is that the way to defeat their hateful ideology is by the spread of liberty. That notion—some understand that, and some don't. But I want your readers to understand, I fully understand it—that liberty will yield peace that we all want.

And so part of our strategy is to work with countries, particularly in the Middle East, to encourage the spread of liberty and freedom. And we're making progress there.

*Mr. Diekmann.* But still we see bombs in Tel Aviv—

*The President.* Yes.

*Mr. Diekmann.* —suicide bombers. And just a couple of days ago, even the U.S. Government delivered a warning that there could be attacks and strikes at the World Cup in Germany.

*The President.* Yes.

*Mr. Diekmann.* Do you really believe we have a chance to win the war against terrorism?

*The President.* Absolutely. I know this: That if we don't try to win the war on terrorism, the world will be a lot worse off; that if we believe these are just isolated incidents and people are maybe just temporarily angry, it is an attitude that will ultimately lead to more catastrophe, more danger.

This is an enemy which is—has clearly stated they have ambitions. They want to spread their ideology throughout—starting in the Middle East. They want to topple moderate government. They want to—they believe capitalists and democrats are soft—by democrats, I mean people living in democracies—are soft. They believe it's just a matter of time before the Western world tires. They have stated clearly they want weapons of mass destruction and that they want safe haven from which to launch their attacks. This is what the enemy has said. And I think those of us in positions of responsibility must take the words of the enemy very seriously.

They can be defeated, and they will be defeated, so long as we don't lose our nerve. And so the United States is committed to finding these folks where they hide, to bringing them to justice, which we're doing, and to—but recognizing that the world has changed from the world of the past because of the spread of liberty. Just look at Europe; it's whole, free, and at peace, because democracies live side by side in peace. That's one of the great lessons of the 20th century. And it's a lesson that must be applied to the 21st century.

And so, absolutely, we can win this war on terror. The victory in the war on terror won't come with a signing ceremony. The victory in the war on terror will come as the enemy becomes more and more marginalized. You cannot judge defeat or victory on whether or not a suicide bomber is able to pull off an attack. You can see progress in the war on terror as new democracies take hold around the world and deny—which denies an enemy a safe haven.

And one such democracy that's now evolving and getting stronger is Iraq. Another such new democracy is Afghanistan—50 million people who once lived under the thumb of a tyrant—or two tyrants now are free. And I strongly believe the world is better off for it, and I know that those two democracies are a major defeat for the terrorists.

### *Relations With the Muslim World*

*Mr. Diekmann.* We have to learn in dealing with the Muslim world. Do we learn the right lessons? Do we have to deal in a different way with the Muslim world?

*The President.* There is a—there needs to be more understanding between the Muslim world and the Western world. There needs to be a better understanding of the true beliefs of their respective religions. We must understand, words mean things to different people. There's got to be a better way to communicate with ourselves. Sometimes my own messages send signals that I don't mean to send—but stirs up anxieties in the Muslim world.

On the other hand, I take great comfort in knowing that the true Muslim—Islam, itself, is a peaceful religion, and those who adhere to Islam are people that respect the rights of others. And there's common values in the great religions. And what we cannot allow happen is for these totalitarians, these Islamic extremists, to distort a great religion and define the nature of that religion.

And so there's a lot of work that needs to be done between America and the West and the Muslim world, but we can do that work without sacrificing the need to defend ourselves and without condemning people to tyranny.

### *Europe-U.S. Relations*

*Mr. Diekmann.* How important is the partnership between the United States and Europe when it comes to the war on terror?

*The President.* The partnership between the United States and Europe is a vital partnership that transcends the war on terror. Part of our relationship is working together in the war on terror, but there are many other areas where we can and will continue to work together.

One such area is, obviously, trade. Europe and the United States benefit from free and fair trade. Another area is to help those who are afflicted with disease, like

HIV/AIDS on the continent of Africa. Another is to deal with suffering that we see in the world. And hopefully, we'll be very strong in our determination to end the genocide in Darfur of Sudan.

But when the United States and Europe cooperate, we can achieve security for our people and enhance the prosperity for our people as well—as well as do our duty. See, I believe there's a duty to help ease the suffering in the world. I believe in the admonition that to whom much is given, much is required. And the United States—the people of the United States have been given a lot. We're a blessed nation—and same for the people of Europe. And we have a duty to work together to help relieve the suffering of those who are less fortunate.

#### *Russia-U.S. Relations/Democracy in Russia*

*Mr. Diekmann.* In this context, is Russia a reliable democratic partner?

*The President.* Russia is a country in transition. And if you really think about where our fathers, at our age, if they had been sitting around talking about Russia—maybe a little younger—they would have been talking about an enemy, the great Soviet Union. And by the way, that enemy at that point in time bound the relationship between Germany and the United States—at least a part of Germany and the United States—very closely. It gave us a common front.

So Russia no longer is that enemy, and that's a major change. Secondly, Russia is a country that has made some signals that are mixed signals, signals that allow—cause us to question their commitment to whether or not they intend to become a true democracy, where there's a freedom of the press or freedom of religion, all the different freedoms that are inherent in democracy.

I, personally, have a working relationship with Vladimir Putin, and that's very important. I've got a warm relationship with him. It's a relationship where I can sit down

with him and ask him direct questions as to why he's made the decisions he's made. It's a relationship where he questions me about what the intentions of the United States may be. It's one that I value, and I think it's an important relationship not only for the United States to have, but it's an important relationship for countries in Europe, for the United States to have a relationship with Vladimir Putin.

One of our concerns is economic nationalism, to a certain extent, where he's using his oil companies to achieve what appears to be political objectives. And we make our concerns known when someone uses natural gas, for example, to effect—to send signals to government. As you might recall, Secretary Rice was in Europe, and she spoke out loudly about the gas contracts with Ukraine. And the reason she did that is it's—we have a duty to express our concerns, but in such a way that the relationship is one that—where, at my level, I'm able to be comfortable in discussing concerns with Vladimir Putin.

We've got commonality when it comes to dealing with proliferation. It's very important that the United States and Russia work closely to make sure that nuclear materials are stored as safely as possible. We've got commonality when it comes to fighting the war on terror. And we've now got a new, important issue to work together on, as well as working together with Germany and others, and that's Iran.

#### *Germany's Role in the War on Terror*

*Mr. Diekmann.* What role must Germany play in the war on terror?

*The President.* Germany plays a vital role in the war on terror. Germany is in the heart of Europe. Germany is—whether it's this current administration or the previous administration, we have had a—amongst our intelligence services as well as our law enforcement services—a close coordination and a close discussion. Germany's will is important. When the German Chancellor stands up and says, “The war on terror

must be won,” or—“is a vital part of the security of our peoples,” people around the world listen. Germany plays a very important role.

### *Iraq*

*Mr. Diekmann.* Taking a look at the past, do the Americans feel that the Germans abandoned them when they went to war with Saddam Hussein?

*The President.* I've come to realize that the nature of the German people are such that war is very abhorrent, that Germany is a country now that is—no matter where they sit on the political spectrum, Germans are—just don't like war. And I can understand that. There's a generation of people who had their lives torn about because of a terrible war.

I felt like—I made the decision I made based upon my full understanding that threats must be dealt with before they come to fruition. And I fully understood during that period of time not everybody would agree with me. And so we put together a significant coalition and followed through on a difficult decision.

The point now is not what went on in the past; the point now is, how do we work together to achieve important goals? And one such goal is a democracy in Germany. And I appreciate the German Government's—previous Government's support and this Government's support of helping the Iraqis rebuild their lives. Training missions are important. Debt relief was important. Gerhard Schroeder relieved the debt on Iraq. And all those gestures are very important gestures that say that even though people disagreed with the decision to go into Iraq, we now agree that it's important that a democracy in Iraq succeed. And that's how I view the relationship.

### *Democracy in Iraq*

*Mr. Diekmann.* The dictator is on trial now, but at the same time, the violence in Iraq is getting worse. Is it really a vic-

tory? Is the war against Iraq really a success?

*The President.* Oh, yes, it's going to be a success, absolutely. When 12 million people go to the polls—listen, these people lived under a brutal tyrant. People seem to forget, quickly forget, the nature of Saddam Hussein. This is a man who had used weapons of mass destruction on his own people. He had invaded his neighbors—Kuwait. He was shooting at U.S. aircraft. He was violating sanctions. He had—as we now know, he had been using the Oil-For-Food Programme to enhance his own standing inside the country. We didn't find the weapons of mass destruction that everybody thought he had, but we do know he still had the capacity of making weapons of mass destruction. He had ties to terrorist groups.

Removing Saddam Hussein has made the world a safer place. We found—particularly for Iraqis. We found graves stuffed full of Iraqi men, women, and children. This guy was a brutal, brutal tyrant.

But it is hard work to go from a tyranny to a country based upon liberty. We've been there 3 years. And I think if you look at the history of—in post-World War II, it took a long period of time to recover. And yet we live in a world where there's supposed to be instant success. And my work and the work of those of us in Iraq require patience, and the need is to give the Iraqi people a chance. And they haven't let us down.

Just think about what happened in December: 12 million people voted. That's a lot of people going to the polls in the face of intimidation and threats. These are people that had no chance to express themselves at a ballot box during Saddam Hussein—in free elections. And yet when given a chance, they went to the polls. And now what you're seeing is the formation of a unity government. You've got Shi'a, Sunni, and Kurds, all committed to a unity government, all willing to fight off the terrorists, to get rid of the militias, and to form a

government that the Iraqi people can be proud of.

And no question, there's still Al Qaida, which has said they want Iraq as a base from which to attack, willing to recruit suicide bombers. Those are hard to stop. But slowly but surely, the Iraqis, with American help, are reconciling their differences politically, are marginalizing those who are still loyal to Saddam, and are bringing the Al Qaida and the foreign fighters to justice.

*Iran*

*Mr. Diekmann.* But Iraq—it's still a long journey to peace, and now there's a new threat. You already mentioned it; that is Iran.

*The President.* Yes.

*Mr. Diekmann.* Iran is on the way to a nuclear program. How are we going to prevent them from making true what they threaten us, for example, in destroying Israel?

*The President.* You know, it's interesting; the world in which we live is one that requires great confidence in our values and strength of purpose. And we are challenged with the Iranian issue. And I want your readers to know that it is my desire and my belief we can solve this diplomatically. And the best way to solve this issue diplomatically is for there to be common purpose amongst the nations of the world.

Any diplomatic solution requires agreement on the goal. And there is solid agreement that the Iranians should not have a nuclear weapon or the knowledge and capacity how to make a nuclear weapon. That agreement—when I say that's the agreement, it's the agreement amongst Germany, France, Great Britain, the United States, Russia, China, and a lot of other nations. We all agree. And that's the most important step. If we didn't agree on the goal, it would be impossible to put together a coalition, a group of nations anxious to say to the Iranians with one voice, "You're not going to have a weapon."

The way forward diplomatically, because of the intransigence of the Iranian Government, is to go into the United Nations Security Council. And that's where we're headed, and we are working closely with our counterparts to develop the tactics to move forward once in the United Nations Security Council. Our message there is, the Iranians have defied the world, and you're now isolated, and it's your choice to make. They must make the choice to give up their weapons.

People have said to me, "Well, why aren't you at the negotiating table?" We are at the negotiating table—in this sense: We're with our partners on a regular basis. I think about this issue a lot. I talk to respective leaders a lot; the United States laid down the Security Council resolution, along with others. I speak to Angela Merkel quite frequently on this subject. It is the number-one item on our agenda when it comes to international coalitions. And the thing that we've got to do is be effective. And what the Iranians are looking forward is weakness among our group. They want to see how firm we are. So one of my jobs is to keep people firm in our resolve. And it's easy, by the way, with your Chancellor. She is firm in her resolve.

*Threat of Terror/Iran*

*Mr. Diekmann.* The German Chancellor and the new head of state, Olmert, of Israel, they said the Iranian President is as dangerous as Adolf Hitler. Do you share their view?

*The President.* I think that it's very important for us to take his words very seriously. When people speak, it is important that we listen carefully to what they say and take them seriously. For example, when Al Qaida speaks, I take their words seriously. When bin Laden says, "We'll bring harm to the West," I take them seriously. When Zarqawi says, "It's just a matter of time for the U.S. to get out of Iraq so we can have safe haven," I take him seriously. Zawahiri, the number-two man in

Al Qaida, he's constantly speaking about their grand designs to spread their ideology.

And when Ahmadi-nejad speaks, we need to take it seriously. And when he says he wants to destroy Israel, the world needs to take that very seriously. It's a serious threat. It's a threat to an ally of the United States and Germany. But what he's also saying is if he's willing to destroy one country, he'd be willing to destroy other countries. And therefore, this is a threat that has got to be dealt with in a way that—where the world—this is an important moment for the world to come together and deal with this in a way that's diplomatic, so that the next person who thinks or the next country that thinks they can threaten will understand that there is an effective response.

*Mr. Diekmann.* Do you rule out, as a last resort, a military intervention against Iran?

*The President.* As you know, I have said this on German soil; I've said it on U.S. soil, that my first choice is to solve this diplomatically. I think we can, but all options are on the table.

#### *President's Relationship With Foreign Leaders*

*Mr. Diekmann.* Mr. President, it seems that since Chancellor Angela Merkel took office, the ice age between Washington and Berlin is over. Are good personal ties really so important for the relationship between America and Germany?

*The President.* I've always felt like it's important to establish personal ties with my counterpart. And the reason why is, is that the role of a President is to be a strategic thinker as well as to be able to understand the tactics necessary to achieve the strategic objectives. And in order to be able to work strategically with my counterparts, I've got to have a personal relationship with them. I've got to be in a position such that when they speak, I listen, and when I speak, they listen, so they know that there is a compatibility to the point where we're comfortable

sharing ideas as we try to work together to solve problems.

And this world is full of problems. You're in the Oval Office during this interview—there are—Sudan, North Korea, Iran, Iraq, Israel-Palestine—I mean, that's just to name a few of the problems that come to this desk that I deal with on a regular basis. In order for us to be effective, I've got to have a personal relationship with other leaders so that we can work together to achieve common objectives.

#### *Germany/Leadership*

*Mr. Diekmann.* During a state visit in 1989, your father described Germany as “partner leadership.”

*The President.* Yes.

*Mr. Diekmann.* Does this statement still apply today?

*The President.* Absolutely. Absolutely. And it's manifesting itself on the Iranian issue. Chancellor Merkel has been strong. It's very important for the Iranians to know that there is a Germany committed to working with others to send the strong message to the Iranians that their nuclear ambitions, their nuclear weapons ambitions, will cause them isolation in the world in which we live.

#### *President's Upcoming Visit to Germany*

*Mr. Diekmann.* You will visit Germany in July. What would you—did Angela Merkel ask what you would like to see in Germany?

*The President.* It's really interesting. She felt like it was important for me to go to East Germany—old East Germany. There is no East Germany now—the old East Germany. And, one, I appreciated that a lot. You know, we're all products of how we are raised and, in many ways, where we were raised. If people want to get to know me better, they've got to know my parents and the values my parents instilled in me and the fact that I was raised in west Texas, in the middle of the desert, a long way away from anywhere, hardly.

There's a certain set of values you learn in that experience.

I was very intrigued by dealing with a very strong woman who had been raised in a Communist country and what it meant—what it meant. I spent some time with her upstairs in the private dining quarters here in the White House complex, listening to her. I asked her what it was like to grow up as a child. And the interesting thing—she first described her mother and father, which said a lot to me about the kind of person she is. I thought that was really insightful. She talked about her dad, the pastor, and her mom. She talked about going to school in a Communist system. And she told me she wanted me to come to her home, which, in my part of the world, at least where I'm from, inviting somebody to your home is a gesture of generosity. It's hospitality that is very gracious.

And so I'm really looking forward to going. I'll let her plan my itinerary once I get there. And it's going to be a very fascinating moment for me. And I thank her very much for her invitation.

#### *President's Views on Germany*

*Mr. Diekmann.* Are there things that bother you about the Germans? And are there things that you envy about the Germans?

*The President.* I am—look, I mean, Germans have always been incredibly efficient, capable businesspeople, and when they make a product, it is always of the highest of quality. The only thing that interests me about Germany is—it's not bothersome, but it's just a challenge for Germany—is the absorption of East and West, and the difficult assignment it is to really help the eastern Germany develop an economy that will be able to give people hope. But, again, I have great respect for Germany.

#### *Trade With Germany*

*Mr. Diekmann.* What kind of role does Germany play in the world?

*The President.* Germany is vital for the European Union's vitality. And Germany—and that's important for the United States. Listen, we want our trading partners to be strong. If you—if we have trade between one another, it really helps when there's economic vitality with your partner. You want your partner doing well. Trade is not a zero-sum game. Trade is an opportunity for a mutually beneficial relationship. And therefore, we want the European Union's economy as a whole to be doing well. And Germany has a great—when Germany's economy is vibrant, it has a chance to really help all the countries around her to grow well.

#### *National Economy*

*Mr. Diekmann.* The U.S. economy is booming.

*The President.* Yes, it is, thankfully.

*Mr. Diekmann.* Yes. It is booming because you made big tax cuts.

*The President.* True.

*Mr. Diekmann.* What do you think about the Germans—are you—they acting correctly if they increase taxes now?

*The President.* We have—our economy is booming for several reasons. One is, no question, the tax cuts help, and I intend to keep our taxes low. Secondly, our work rules are very flexible, and so is our economy.

We've got some issues that put us at a competitive disadvantage, and one is we've got too many lawsuits. And we're trying to do something about that. I am smart enough, however, to allow each country to make its own fiscal decisions as suits the needs of their constituents and the people.

#### *Pope Benedict XVI*

*Mr. Diekmann.* You are a practicing Christian. Does having a German Pope 60 years after World War II have a special meaning to you?

*The President.* You know, it's interesting that the last two Holy Fathers were from the same neighborhood. The Holy Father

who just passed away, who was a great man, came from Poland and really helped rally the spirits of the people to challenge the tyranny of communism. And the current Holy Father came from a country torn asunder by war and is witness to a renewal of a united Germany. And I think it helps the world to have that perspective in a very important position of leadership. I admire the two Popes. These are strong, capable men who challenge the concept of moral relevancy.

### *The Presidency*

*Mr. Diekmann.* Three last very short questions. What was the most wonderful moment in your terms of being President so far, and what was the most awful moment?

*The President.* The most awful moment was September the 11th, 2001.

*Mr. Diekmann.* The famous picture, when somebody gave you the information?

*The President.* Yes, that. I think, like all of us, it took a while for the—it was more than a moment. It was the event and the aftermath. On a situation like that, it takes a period to understand exactly what was going on. When somebody says, “America is under attack,” and—you’ve got to fully understand what that meant. And the information coming was haphazard at best for a while. We weren’t sure if the State Department got hit. I’d heard the White House had got attacked. Of course, I was worried that—my family was here.

And so I would say the toughest moment of all was after the whole reality sunk in, and I was trying to help the Nation understand what was going on, and at the same time, be empathetic for those who had lost lives.

The best moment was—you know, I’ve had a lot of great moments. I don’t know, it’s hard to characterize the great moments. They’ve all been busy moments, by the way. I would say the best moment was when I caught a 7½ pound largemouth bass on my lake. [*Laughter*]

### *2006 World Cup*

*Mr. Diekmann.* Perfect. Very last question—you’re a great sports fan.

*The President.* Yes, I am.

*Mr. Diekmann.* How important is the international World Cup in Germany? And what is your personal take on who will be at the end, the world champion?

*The President.* Listen, the World Cup is a—first of all, most Americans, up until recently, didn’t understand how big the World Cup is. And we’re beginning to understand. And the reason why is, a lot of us grew up not knowing anything about soccer, like me. I never saw soccer as a young boy. We didn’t play it where I was from. It just didn’t exist. I can’t even—I’m thinking about all the—between age 6, when I can remember sports, and 12 or 13, I just never saw soccer being played.

And so there’s a generation of us that really weren’t fanatic. There’s a new generation of Americans that did grow up on soccer. And there’s obviously a huge interest amongst that crowd in the World Cup. And some of us older guys are now beginning to understand the significance of the World Cup around the world. It is the major sporting event worldwide, and it’s got to be a great honor for Germany to host the event. And I’m confident that the German people will do a magnificent job of welcoming people from around the world.

And, of course, my team is the U.S. team. They tell me we’ve got a good team. Now, whether it’s good enough to win it all, who knows? But I know they’ll try their hardest.

*Mr. Diekmann.* Mr. President, thank you very much.

NOTE: The interview was taped at 1:55 p.m. in the Oval Office at the White House for later broadcast. In his remarks, the President referred to President Vladimir V. Putin of Russia; former President Saddam Hussein of Iraq; former Chancellor Gerhard Schroeder and Chancellor Angela Merkel of Germany;

Usama bin Laden, leader of the Al Qaida terrorist organization; senior Al Qaida associate Abu Musab Al Zarqawi; and President Mahmud Ahmadi-nejad of Iran. Mr. Diekmann referred to Prime Minister Ehud

Olmert of Israel. The transcript was released by the Office of the Press Secretary on May 7. A tape was not available for verification of the content of this interview.

## Remarks Announcing the Nomination of General Michael V. Hayden as Director of the Central Intelligence Agency *May 8, 2006*

*The President.* Good morning. Today I'm pleased to nominate General Mike Hayden as the next Director of the Central Intelligence Agency. Mike Hayden is supremely qualified for this position. I've come to know him well as our Nation's first Deputy Director of National Intelligence. In that position, he's worked closely with our Director of National Intelligence, John Negroponte, to reform America's intelligence capabilities to meet the threats of a new century.

Mike has more than 20 years of experience in the intelligence field. He served for 6 years as Director of the National Security Agency and thus brings vast experience leading a major intelligence agency to his new assignment. He also served as Commander of the Air Intelligence Agency, as Director of the Joint Command and Control Warfare Center, and as Deputy Chief of Staff of the United States and U.N. Forces in Korea.

He's held senior positions at the Pentagon, the U.S. European Command, the National Security Council, and served behind the Iron Curtain in our Embassy in Bulgaria during the cold war.

Mike knows our intelligence community from the ground up. He has been both a provider and a consumer of intelligence. He's overseen the development of both human and technological intelligence. He has demonstrated an ability to adapt our intelligence services to the new challenges of the war on terror. He's the right man

to lead the CIA at this critical moment in our Nation's history.

It's my honor to welcome Mike's wife, Jeanine, and their family to the Oval Office. I want to thank them for their willingness to support Mike Hayden in his long service to the United States.

With the agreement of the Senate, Mike will succeed a great patriot in Director Porter Goss. Under Porter's leadership, the CIA launched a 5-year plan to strengthen the Agency's human intelligence capabilities. This plan involves increasing the number of operatives and sources in the field and building up the Agency's analytical capabilities, so the hard-working men and women of the CIA have the resources they need to penetrate closed societies and secretive organizations.

Porter also played a vital role in shaping the new relationship between the CIA and the new Director of National Intelligence. And this process benefited greatly from the decades-long friendship between him and Director Negroponte.

Porter took on a critical job at a critical moment in our Nation's history. He instilled a sense of professionalism in the CIA and maintained the high standards of this vital agency at a time of transition and transformation. Throughout his public life, Porter Goss has been a man of accomplishment and integrity, and America appreciates his service.

I'm confident that Mike Hayden will continue the reforms that Porter has put

in place and provide outstanding leadership to meet the challenges and threats of a dangerous new century. Mike Hayden was unanimously confirmed by the Senate last year for his current post, and I call on the Senate to confirm him promptly as the Director of the Central Intelligence Agency.

The work of the CIA has never been more important to the security of the American people. America faces determined enemies who struck our Nation on September the 11th, 2001, and who intend to attack our country again. To stop them we must have the best possible intelligence. The men and women of the CIA are working around the clock and around the world in dangerous conditions to gain information that is vital to securing our Nation. I appreciate their dedicated service, and so does Mike Hayden.

In Mike Hayden, the men and women of the CIA will have a strong leader who will support them. He will ensure they have the resources they need to do their jobs. He will enforce the secrecy and accountability that are critical to the security of the American people.

Mike, I appreciate your many years of service to our country. We're grateful that you've agreed to step forward and serve once again. Thank you very much.

[At this point, Director-designate Hayden made brief remarks.]

*The President.* Congratulations, Mike. Thank you very much. Appreciate it.

Thank you all.

NOTE: The President spoke at 9:31 a.m. in the Oval Office at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Director-designate Hayden.

## Remarks on a Peace Agreement in Sudan

May 8, 2006

I want to thank the Secretary of State, Condoleezza Rice, for joining me, and I also want to thank Deputy Secretary of State Bob Zoellick. He has just briefed me on his trip to Abuja, where he has played a very important role in setting up a peace agreement between the Government of Sudan and a major rebel group in the Darfur region.

Congratulations on a job well done, Bob. Thank you.

Last week, we saw the beginnings of hope for the people of Darfur. The Government of Sudan and the largest rebel group signed an agreement and took a step toward peace. Many people worked hard for this achievement. I'm particularly grateful for the leadership of President Obasanjo of Nigeria and President Sassou-Nguesso of

Congo. Deputy Secretary Zoellick told me of their really fine work, and I had the honor of calling both of them to thank them over the phone the other day. Their personal hands-on involvement was vital.

We're still far away from our ultimate goal, which is the return of millions of displaced people to their homes so they can have a life without fear. But we can now see a way forward.

Sudan is one of the most diverse nations in Africa and one of the most troubled countries in the world. A 22-year-old civil war between north and south took more than 2 million lives before a peace agreement was made that the United States helped to broker. About the same time, another conflict was raging in the west, and that's in Sudan's vast Darfur region.

Darfur rebel groups had attacked Government outposts. To fight that rebellion, Sudan's regime armed and unleashed a horse-mounted militia called the Janjaweed, which targeted not only rebels but the tribes thought to be supporting them. The Janjaweed murdered men, and they raped women, and they beat children to death. They burned homes and farms and poisoned wells. They stole land to graze their own herds. Hundreds of villages were destroyed, leaving a burnt and barren landscape.

About 200,000 people have died from conflict, famine, and disease. And more than 2 million were forced into camps inside and outside their country, unable to plant crops or rebuild their villages. I've called this massive violence an act of genocide, because no other word captures the extent of this tragedy.

A cease-fire was declared in this conflict in April 2004, but it has been routinely violated by all sides. The Janjaweed continued to attack the camps and rape women who ventured outside the fences for food and firewood. The Government took no effective action to disarm the militias, and the rebels sometimes attacked food convoys and aid workers.

An African Union force of about 7,200 from the region has done all it can to keep order, but they're patrolling an area nearly the size of Texas, and they have reached the limits of their capabilities. With the peace agreement signed on Friday, Darfur has a chance to begin anew. Sudan's Government has promised to disarm the Janjaweed by mid-October and punish all those who violate the cease-fire. The main rebel group has agreed to withdraw into specified areas. Its forces will eventually be disarmed as well, and some of its units will be integrated into the national army and police. The African Union will meet a week from today, urge its members to help implement this new agreement.

Our goal in Darfur is this: We want civilians to return safely to their villages and

rebuild their lives. That work has begun and completing it will require even greater effort by many nations. First, America and other nations must act to prevent a humanitarian emergency and then help rebuild that country. America is the leading provider of humanitarian aid, and this year alone, we account for more than 85 percent of the food distributed by the World Food Programme in Sudan.

But the situation remains dire. The World Food Programme has issued an appeal for funds necessary to feed 6 million people over the next several months. The United States has met our commitment, but other major donors have not come through. As a result, this month, the World Food Programme was forced to cut rations by half.

So I proposed in the emergency supplemental before Congress to increase food aid to Sudan by another \$225 million. I hope Congress will act swiftly on this true emergency. To get food to Darfur quickly, I've directed USAID to ship emergency food stockpiles. I've directed five ships and ordered them to be loaded with food and proceed immediately to Port Sudan. I've ordered the emergency purchase of another 40,000 metric tons of food for rapid shipment to Sudan. These actions will allow the World Food Programme to restore full food rations to the people of Darfur this summer.

Americans who wish to contribute money to help deliver relief to the people of Darfur can find information about how to do so by going to the USAID web site at [www.usaid.gov](http://www.usaid.gov) and clicking on the section marked "Helping the Sudanese People."

Moving forward, we cannot keep people healthy and fed without other countries standing up and doing their part as well. The European Union and nations like Canada, the United Kingdom, the Netherlands, and Japan have taken leadership on other humanitarian issues, and the people of

Darfur urgently need more of their help now.

In addition, the Government of Sudan must allow all U.N. agencies to do their work without hindrance. They should remove the visa and travel restrictions that complicate relief efforts. And all sides must cease attacks on relief workers.

And finally, the United States will be an active participant in the Dutch-led reconstruction and development conference. And it's an important conference. It will take place within the next couple of months, to help the people get back on their feet so they can live normal lives in Darfur.

Second, America and other nations must work quickly to increase security on the ground in Darfur. In the short term, the African Union forces in Darfur need better capabilities. So America is working with our NATO allies to get those forces immediate assistance in the form of planning, logistics, intelligence support, and other help. And I urge members of the alliance to contribute to this effort.

In the longer term, the African Union troops must be the core of a larger military force that is more mobile and more capable, which generates better intelligence and is given a clear mandate to protect the civilians from harm. So I'm dispatching Secretary Rice to address the U.N. Security Council tomorrow. She's going to request a resolution that will accelerate the deployment of U.N. peacekeepers into Darfur. We're now working with the U.N. to identify countries that contribute those troops so the peacekeeping effort will be robust.

I've called on President—I just called President Bashir of Sudan, both to com-

mend him on his work for this agreement and to urge the Government to express clear support for a U.N. force. The vulnerable people of Darfur deserve more than sympathy; they deserve the active protection that U.N. peacekeepers can provide.

In recent weeks, we've seen drastically different responses to the suffering in Darfur. In a recent audio tape, Usama bin Laden attacked American efforts in Sudan and urged his followers to kill international peacekeepers in Darfur. Once again, the terrorists are attempting to exploit the misery of fellow Muslims and encourage more death. Once again, America and other responsible nations are fighting misery and helping a desperate region come back to life. And once again, the contrast could not be more clear.

In late 2004 in Darfur, the Janjaweed attacked a village of a woman named Zahara. They raped her, murdered her husband, and set fire to their home. One of the attackers told her, "This year there's no god except us. We are your god now." But you and I know that at all times, in all places, there is a just God who sides with the suffering and calls us to do the same. America will not turn away from this tragedy. We will call genocide by its rightful name, and we will stand up for the innocent until the peace of Darfur is secured.

Thank you.

NOTE: The President spoke at 11:43 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Usama bin Laden, leader of the Al Qaida terrorist organization.

## Statement on Medical Liability Reform Legislation May 8, 2006

I am disappointed that the Senate has yet again failed to pass real medical liability reform legislation. Unwilling to take on their trial lawyer supporters, the Democrats led this effort to block these much-needed reforms.

Junk lawsuits are driving too many good doctors out of medicine. Women in nearly 1,500 counties are without a single ob-gyn, and frivolous and abusive lawsuits are encouraging the use of defensive medicine,

which imposes substantial and unnecessary costs on all Americans.

This is a national problem that deserves a national solution. I have called on Congress to pass responsible medical liability reforms, and the House of Representatives has acted. It is time for the Senate to put the needs of the American people ahead of the interests of trial lawyers and pass meaningful medical liability reform legislation.

## Message to the Congress on Continuation of the National Emergency Blocking Property of Certain Persons and Prohibiting the Export of Certain Goods to Syria May 8, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent to the *Federal Register* for publication the enclosed notice, stating that the national emergency declared in Executive Order 13338 of May 11, 2004, and expanded in scope in Executive Order 13399 of April 25, 2006, authorizing the blocking of property of certain persons and prohibiting the exportation and reexportation of certain goods to Syria, is to continue in effect beyond May 11, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on May 10, 2005 (70 FR 24697).

The actions of the Government of Syria in supporting terrorism, interfering in Leb-

anon, pursuing weapons of mass destruction and missile programs, and undermining United States and international efforts with respect to the stabilization and reconstruction of Iraq, pose a continuing unusual and extraordinary threat to the national security, foreign policy, and economy of the United States. For these reasons, I have determined that it is necessary to continue in effect the national emergency authorizing the blocking of property of certain persons and prohibiting the exportation and reexportation of certain goods to Syria and to maintain in force the sanctions to respond to this threat.

GEORGE W. BUSH

The White House,  
May 8, 2006.

NOTE: The notice is listed in Appendix D at the end of this volume.

## Remarks to Reporters in Coconut Creek, Florida May 9, 2006

*The President.* I want to thank you all for joining us. I'm proud to be here with Secretary Leavitt. We're traveling the country reminding people that there's a fantastic opportunity for our seniors, and that is, Medicare now offers a prescription drug benefit that will save people a lot of money.

We just visited with some of our citizens inside there, and they're talking about significant savings. And that's what we want; we want our seniors to be able to have modern medicine. So far a lot of seniors have signed up. It's coming down the stretch toward the May 15th deadline; we want everybody to sign up. We want people to understand that they're going to save a lot of money when it comes to prescription drugs.

And I appreciate Secretary Leavitt's hard work. One of the things that our seniors have got to understand, that if you qualify for extra help in the program, if you're a low-income senior that qualifies for extra help, the May 15th deadline doesn't apply to you; you'll have time to take a look—we want everybody signing up. And if you're a low-income senior, you get—the Government pays about 95 percent or more of your prescription drug benefit. So it's worthwhile for people to look.

I want to thank groups like the AARP, NAACP, many in the faith community, community-based groups, all for working hard to educate seniors as to what's available. This is a good deal for America's seniors, and I'm proud to have signed a law to modernize Medicare, and I'm proud to be working with Michael.

I also want to thank Congressman Foley and Congressman Clay Shaw for joining us. They're strong backers of Medicare reform. They were informing me that a lot of their citizens have signed up. In south Florida, people are taking advantage of this program. And I strongly urge people to take a look and see what's available.

[At this point, Secretary of the Department of Health and Human Services Michael O. Leavitt made brief remarks.]

*The President.* Thank you all for joining us. Thank you all very much, I appreciate it.

NOTE: The President spoke at 8:53 a.m. at Broward Community College. The transcript released by the Office of the Press Secretary also included the remarks of Secretary Leavitt.

## Remarks on the Medicare Prescription Drug Benefit and a Question-and-Answer Session in Sun City Center, Florida May 9, 2006

*The President.* Thanks for coming. Please be seated. Thanks for the warm welcome. It's great to be here in Sun City Center. Brother Jeb said, "If you want to come to a really good place, come here." First of all, I think it's a pretty neat deal when you get introduced by your brother, par-

ticularly since he's such a good Governor. We both share the same political adviser—Mom. [Laughter] I don't know if Mother is still telling you what to do, Jeb, but she's certainly telling me what to do all the time. [Laughter]

And both of us married well. The first lady of Florida is a fantastic woman, and so is the First Lady of the United States. Laura sends her very best. She sends her love. Yesterday she represented us in Costa Rica. They inaugurated a new President, and they sent the word back—please send the best in your family. [Laughter] So we sent Laura.

I'm also proud to be joined by Congressman Adam Putnam. Where's Adam? There he is. Thank you. He's a smart guy. He's a smart person, and he's a good guy to work with, and I appreciate you being here, Adam.

I want to thank the WCI Communities' leadership and staff for having me here.

What I thought I would do is spend a little time talking about the new Medicare program. The reason I'm doing this, because I want people to sign up. And then I'll answer some questions, if you have some. And then I'm going to go over to Orlando and do the same thing tomorrow morning—just like I did earlier in south Florida. And the reason why I'm doing this is because we have changed Medicare for the better, but sometimes change creates anxieties. In other words, people say, "Well, maybe I don't want to change. I kind of like it the way things are." And—but we have a duty to educate people and give them a chance to see what's available, and that's what I'm doing. That's what you want your President to do.

First thing, let me give you a little history. As you know, Medicare was signed by one of my predecessors—happened to be from the State of Texas, Lyndon Baines Johnson. And it's a vital program. It's a program that has worked. It's a necessary program. Medicare is a commitment of the Federal Government. And once you make a commitment, it seems like to me, it makes sense to make the commitment a good commitment. In other words, you want it to work. You want it to be a modern, excellent program.

Medicare had done a—provided a lot of comfort for a lot of people, but it was getting old and stale; it needed to be reformed. And one reason it needed to be reformed is because it did not provide prescription drug coverage. And you know that. In other words, Medicare would pay for a surgery, say, like ulcer surgery, for \$28,000 but wouldn't pay \$500 for the prescription drugs that would have prevented the ulcer in the first place. See, medicine had changed with the advent of prescription drugs, but Medicare hadn't.

So I thought it made sense to make Medicare work better, to keep our commitment to our seniors. And we passed legislation that modernized Medicare, and we are now explaining to people what the modernized system means. Nobody is going to say, "You've got to sign up for this," but I think we have a duty to say to people, "Please take a look at it. Take a look and see what's available."

The first thing that's in the new system I think is important is that every senior now entering Medicare is eligible for a "Welcome to Medicare" physical exam. That wasn't the case prior to the reform. Now it is. And that makes a lot of sense, it seems like to me, to say, "Here's a physical for you." The best way to cure disease is to anticipate it and prevent it from happening in the first place, is to be able to catch illnesses early through screenings. Part of a modern, effective health care says that we'll encourage prevention. Helping to prevent disease is going to be a really important part of a modern system, whether you're on Medicare or not on Medicare; whether you're a guy like me, or whether you're a person who's eligible for Medicare.

There is a new prescription drug coverage in Medicare. And that's important for people to understand. The prescription drug coverage, first of all, helps all seniors pay for prescription drugs, no matter how they've paid before. In other words, everybody should take a look at the prescription drug coverage.

Secondly, what's interesting about the new program is it provides choices for seniors. You know, I knew that when we put—laid out the idea of giving seniors choices, it would create a little confusion for some. I mean, after all, up to now there hadn't been much—many choices in the system. And all of a sudden, a senior who feels pretty good about things says, "Here's old George W. or Mike Leavitt or Jeb or somebody say, 'Take a look.'" And all of a sudden, 40 choices pop up.

The reason why we felt it was necessary to provide choices is because we want the system to meet the needs of the consumer. The more choices you have, the more likely it is you'll be able to find a program that suits your specific needs. In other words, one size fits all is not a consumer-friendly program. And I believe in consumers. I believe in trusting people. I did know that there would be some worries about having to choose from 40 different plans, but I thought it was worth it because I know that 40 different plans here in Florida will mean that each individual can tailor a plan to meet his or her needs. And I thought that was important.

So how do we handle the 40 different programs? Well, we encouraged all kinds of people to help. AARP is helping, NAACP is helping, sons and daughters are helping, faith-based programs are helping people sort through the programs to design a program that meets their needs. I readily concede some seniors have said, "There are so many choices, I don't think I want to participate." My advice is, there is plenty of help for you.

Thirdly, seniors with the highest drug costs are going to get extra help in this modernized Medicare. We have catastrophic protection for the first time. And that's important. Drug costs over \$3,600 a year will be—any costs over that will be picked up by 95 percent for the Federal Government. It's called catastrophic care. Part of the reason you modernize medicine this way is to give people peace of mind.

You know that if you sign up for the program and something goes terribly wrong and your prescription drug bills skyrocket, the Government is there to help, after \$3,600. And that's important for families and its important for our seniors, to have that notion that there's stopgap insurance, that there's help beyond a certain level of costs.

And third—and fourthly, there's extra help for low-income seniors. If you qualify as a low-income senior—this is about a third of our seniors here in America—the prescription drug coverage includes little or no premiums, low deductibles, no gaps in insurance. On average, the Government will pay more than 95 percent of the cost for prescription drugs for low-income seniors.

It's really important for people to take a look and see whether or not there's a program that meets your needs. A lot of people are signing up. There's about 42 million folks eligible for Medicare in the United States, a little more than that. More than 31 million thus far have signed up. That's a lot. In other words, since January, people have said, "I think I'm going to take a look and get involved in this new program."

There's 6 million more who have an alternative source of coverage. In other words, they're plenty happy with the plans they have. And this program—by the way, nobody forces anybody to do anything. You know, this is our country; you're free to choose. So there's 37 million of the little more than 42 million people that have got coverage, and we're working hard to sign up the remaining eligible seniors. And they're signing up—a lot of people signing up, as we head toward a May 15th deadline.

I want to make this very clear. If you are eligible for extra help, if you're a low-income senior, the May 15th deadline does not apply to you. In other words, you can apply after May 15th without penalty. And that's important for low-income seniors to understand. We want everybody to sign up.

We want people to understand that there are really good benefits for—the average senior is going to save one-half on his or her cost—one-half on the cost of prescription drugs.

We were meeting, as I said, in south Florida earlier, and some of the stories down there for people who signed up were really strong stories—people saving money, people got a little extra money in their pocket. The system is modernized, and it saves you money. And that's what we want. Now, some say, "It's too good to be true." If you haven't looked at the program, take a look. Take a look. I think you're going to find what I said is true.

The other interesting thing that's happened is—just so the people out there who are wondering whether or not this is cost-effective, whether or not this makes sense to do—first of all, I think it makes a lot of sense to do. We don't want seniors choosing between food and medicine. We're a compassionate society. Secondly, because there's competition for you—in other words, somebody said, here's some different options for you, the average premium seniors pay for the prescription drug benefit is \$25 a month on average. And that's down from an anticipated cost of \$37 a month. In other words, when somebody bids for your business, it tends to be—it helps on price.

In Florida, the lowest cost option is about \$10 a month. There are many zero-dollar premium Medicare advantage plans available for our seniors to choose from. The program is saving seniors a lot of money. And as a result of people competing for your business, it's saving the taxpayers money. In other words, people said, "Well, it's going to cost X." Well, it's costing 20 percent less. This is a good deal for America's seniors.

And so over the next week, Secretary Leavitt and myself and others in the administration are reminding people that there's a good opportunity for you. And so I would suggest, if you haven't signed up yet, if

you're living in Florida and watching this TV program—or anywhere in the country watching the TV program, I'd call 1-800-MEDICARE, and there's somebody there who'll help you. Or if you've got some—if you're computer-literate or have a friend who's computer-literate, get on the web page, medicare.gov, and take a look—take a look at what's available.

Seniors all across the country are saving money because of this plan. It's—if you're a son or a daughter and your mom or dad is eligible for Medicare and he or she hasn't signed up, I believe the son or a daughter has a duty to help the mom or dad understand what's available. That's what sons and daughters are supposed to do. That's called love. And a loving son or daughter should take a look and help their folks realize what's possible, help design a drug benefit program that meets your mom or dad's needs.

Churches all across the country are reaching out—synagogues, people from different faiths understand that it makes sense to help their parishioners realize the benefits of this plan. I mentioned earlier AARP, NAACP, groups all across the country are out trying to find the folks who haven't signed up yet and encourage them to do so. And so that's why I'm here. I'm here doing my duty as Educator in Chief. [Laughter] It's to say to people from around this part of the world and those who may be watching over the airwaves, this is a good deal for the American seniors. And it's the right thing to do for the Government. If the Government makes a promise, we want to make sure that promise lives up to what we've told you. We've said, we're going to get you a modern health care system, and we have.

And that's what I've come to talk about. I'll be glad to answer any questions anybody has on any subject that may be on your mind. But in the meantime, thanks for letting me come by, and God bless.

All righty—[*applause*—no, no—thank you. I'll be over—we'll get a little picture-taking in a minute. Yes, sir.

*Availability of Literature on Medicare Benefits*

Q. I find there's a dearth of literature about the new program. I just don't see any pamphlets or books around, which there should be.

*The President.* True.

Q. Secondly, I want to ask, if you do sign up, and I don't know what it's all about—I'm, truthfully, computer-fearful and so I'm not—I'm computer-illiterate. And I'd like to know, when—if I do sign up, can I quit, can I get out of it?

*The President.* Yes, you can. [*Laughter*] I think if you sign—first of all, that's a great question. Literature—there's all kind of literature. I can't answer the question as to why—

Q. I haven't seen it.

*The President.* No, I know, there's not any—you haven't seen it yet, I know. But I will try to find out why you haven't seen any here. Secondly, you're not alone when it comes to saying, "I'm a little frightened about getting on the computer." You're not the only person I've heard say that. And therefore, one of the things that centers such as this do is provide help with people who are computer-illiterate. And it's—with somebody explaining how it works and what you're watching, I think you'll find it to be a lot less intimidating than you think.

And thirdly, I wouldn't sign up, if I were you, unless you were comfortable that it saves you money. This is an add-on to Medicare. It is a part of Medicare. It's called Medicare Part D. In other words, the rest of Medicare exists, but what this does is it provides an additional benefit. And as I said, across the country, people are saving half on their prescription drug bills. People say to me, "Well, I'm feeling pretty healthy, and I'm not taking a lot of prescription drugs; I'm not going to sign up." My advice is, sign up, because you

don't know when you're going to have to start taking prescription drugs.

But at the very minimum, take a look. You seem like an inquisitive person, somebody who wants to know the facts, and there should be people here at this center that will help you find the facts out front. And there's going to be some literature, I hope—there is? Brother said there's literature. Now, there had better be literature, because the man—[*laughter*]—the man in the hat is going to walk out there, and if he doesn't see any literature, I'm cooked. [*Laughter*] Good looking hat too.

Yes, sir. Thank you for your question.

*Iran*

Q. Mr. President, my question concerns the Iranian situation.

*The President.* Yes.

Q. I'm very worried about it, and I don't think I'm alone. I know that you and Secretary Rice and Ambassador Bolton are doing everything humanly possible to unite the global community in persuading the Iranians that getting the bomb is not in their own interest. And even if you get the Chinese and the Russians to come around eventually on meaningful sanctions, my fear is it's liable to take so long it will be too little and too late. So I assume there's a good possibility, given their attitude, they're going to get the bomb. And my question is, if they do, what next?

*The President.* Yes. First of all, it's a great question, because he is bringing to the front here a question of international significance. Our objective is not to let them get the bomb, first of all. And I am an optimistic person and, therefore, believe—I'm going to rephrase your question a different way: How are you going to stop them from getting it in the first place—not what are you going to do if they get one.

And the first goal—first of all, all options—the first option and the most important option is diplomacy. As you know, I've

made the tough decision to commit American troops into harm's way. It's the toughest decision a President can ever make, but I want you to know that I tried diplomacy. In other words, a President has got to be able to say to the American people, diplomacy didn't work. And therefore, the first choice, and a choice that I think will work with the Iranians, is diplomacy. And I believe we can accomplish this through diplomacy.

Any diplomatic effort must have a common goal. And the common goal here is precisely what you said, sir, which is the Iranians should not have a nuclear weapon or the capacity to make a nuclear weapon.

Now, that wasn't always the case during my Presidency. In other words, people have come together around that goal. And the countries that have come around that goal are not only our allies in Europe but China and Russia agree. So the first step toward good diplomacy is to have different countries agree to a common goal, which is that the Iranians should not have the capacity and/or a nuclear weapon. So that's positive.

Secondly, we're now working on the tactics as to how to convince the Iranians through—to get rid of their ambitions through a united front. And so what you're watching play out—by the way, because we live in a transparent society, everything, of course, is in the newspapers—which is fine; that's healthy. But that's not the case when you're dealing with a nontransparent society.

And so we got six countries—Condi was up there dealing with them last night, sitting around the table saying, how are we going to achieve our common goal? So what you're watching is, of course, all the guessing and speculating about the different positions of the six countries sitting around the table. But I believe that through hard work, we will continue to keep people bound together because there is a common interest to prevent the Iranians from getting that weapon. They understand—the countries understand the danger inherent

with the Iranians having a weapon. They understand the consequences of a nuclear Iran, particularly when you have a President who's threatening people.

And so we're at an early stage of diplomacy at this point in time. And one of the options, of course, is to go to the United Nations Security Council. And once in the United Nations Security Council, we're trying to reach—what does the resolution say. My objective—and thank you for your kind words about Condi and myself working hard to keep the common front. It's very important for the Iranians to know they will be isolated in the world; that the rest of the world, much of the world, shares the same demands that those of us who are heading the—involved in the negotiations say.

But you're right; this is a very difficult issue. And we will continue to work through diplomatic channels to make it clear that we mean what we say. And obviously, part of making the diplomacy work is, what will be the consequences if the Iranians decide maybe not to listen to the rational demands of the world? And you mentioned one, economic sanctions. But we're—and I'm not going to comment on that, because I think it's very important for good negotiators to keep their cards close to the vest, and then at the appropriate time, make it clear what our intentions are.

This is a serious issue; it's taking a lot of our time, as it should. Ultimately, of course, I would hope that an American President is able to say to the Iranian people, "You're free, and we look forward to having good relations with you." Liberty has got an amazing way of changing the world. I speak to a group of people who know that better than most. You have seen liberty transform the world during your lifetime. You've seen—and one of my favorite ways of explaining the effects of liberty and my belief in what liberty can do is to explain the relationship I have with the Japanese Prime Minister.

I bet I've got some World War II vets here. I'll bet there's some people who know World War II vets, who are here. I bet people are here who know somebody who was called into action to fight the Japanese in World War II. And today I can—I report to you that the Japanese Prime Minister is my friend in keeping the peace. And there's a reason why—is because after World War II, one of my predecessors, Harry S. Truman, had the belief that the United States should help that country, our enemy, become a democracy, not styled—an American-style democracy but a Japanese-style democracy. And because of the faith in the capacity to freedom to change people's way of thinking, because he felt strong to that conviction, today, a Japanese-style democracy is a friend of America.

Freedom has the capacity to change enemies into friends. And so in the long run, the best way to deal with problems such as the Iranian problem is to encourage people to be free. And the fundamental question is, do people want to be free? And the cornerstone of my foreign policy is my strong belief that freedom is universal. People desire to be free.

One of the lessons that your generation has taught our generation is that staying strong to the values that America subscribes to—human rights, human dignity, the universality of freedom—has changed parts of the world in incredible ways. Just look at Europe—this is a long answer—[laughter]—to an important question. And the reason I'm framing it this way is I want you to understand how I think about laying the foundation of peace so we can deal with not only the issue that you asked about, sir, but other issues that will inevitably come up during the course of the 21st century.

But freedom has the capacity to lay the foundations for peace, and we must not lose sight of the historical examples. Take Europe, for example—there was two major conflicts in Europe, World War I and World War II. Today, Europe is whole,

free, and at peace because democracies don't war. It's one of the historical lessons.

And so in the short term, on the issue you described, we will keep our diplomacy going. We'll be knitted up as best as we possibly can with different—with as many nations as possible—six of them at the table last night in New York, by the way. And in the meantime, it is—we will continue to advance the freedom agenda.

Good question. Yes, sir.

### *Health Care Reform*

*Q.* Thank you. First, let me say, I think a lot of people will be helped by this program.

*The President.* They will—

*Q.* A lot of people will be helped by the Medicare Part D program.

*The President.* Oh, thank you.

*Q.* But I think there's major deficiencies in it that I think we'd like to hear some comments from you on. The first major issue—I think the program is going to be a lot more expensive both to the user and to the taxpayer than it needs to be, because we don't allow Medicare to negotiate directly with the pharmaceutical companies. This could wind up costing the taxpayers hundreds of billions of dollars over the next 10 years.

Another thing, the insurance companies are allowed to change their formulary once a person is in the program; a person is not allowed to get out until the end of the year. This is a legalized bait and switch operation by the insurance companies. How many of them are doing it, I don't know, but it's a danger for our seniors.

Third, I have a report here from Families USA indicating that the poorest people that are affected by this program are not being helped.

*The President.* Well, I just—

*Q.* Not helped—either they're not signed up, they're not being helped compared to the benefits they were getting under a combination of Medicare and Medicaid.

So, finally, I think there are several major changes that should be made in the program. Number one, let Medicare negotiate with the pharmaceutical companies. Number two, stop the formulary switch. If we do that, by reducing the costs, I think we can possibly reduce the size or even eliminate the doughnut hole that people are exposed to.

*The President.* Okay, thanks.

*Q.* And I think—[laughter]. One last thing—okay. If we don't bring our costs down this way, we're never going to control health care costs in the U.S. And we're subsidizing the pharmaceutical companies, and we're subsidizing health costs in every other country around the world, because every other country negotiates directly with the pharmaceutical companies.

*The President.* Yes, I'll be glad to give you some comments. First of all, if a senior takes a look at the program and doesn't think it saves his or her money, they shouldn't sign up.

Secondly, in terms of the low-income seniors, I don't know what the report is that you cite—people cite reports all the time. I will tell you this, that a lot of people are working hard to find the low-income seniors, to give them the chance to sign up for an incredibly beneficial program—including AARP, the NAACP, as I mentioned. I've met with their representatives. They realize this is a good deal for low-income seniors. But if your premise is right, that the low-income senior won't benefit from the program, they shouldn't sign up to it. I just strongly disagree that this isn't good for low-income seniors.

Thirdly, one of the reasons why—we're trying to make individual choice available for seniors, as opposed to having the Federal Government making the decisions on behalf of seniors. And so the idea of having the Federal Government negotiate price keeps the Federal Government squarely in the middle of the program. There's a philosophical difference, evidently, between me and you. All I can tell you is, is that the

program is costing less than anticipated, and this program is going to benefit a lot of seniors because there is more choice for seniors.

Now, the idea of, "This won't help us control health care costs," one, I disagree with that. I think more choices for consumers, the better off we are.

Secondly, health care costs are on the rise. A lot of it has to do with these lawsuits that are driving good doctors out of practice, that are causing people to practice defensive medicine, and running up the premiums for consumers. We need to modernize health care, as well, by introducing information technology so that, kind of, the system of writing files by hand, which leads to errors and inefficiency, is replaced by a modern system of information technology.

Thirdly, we need transparency in pricing. People need to know that which they're purchasing and the quality of that which they purchase so that consumers are able to make more rational decisions.

Fourthly, at the center of the health care needs to be the doctor-patient relationship—not bureaucracy, either government or private bureaucracy. And that's why I'm such a strong believer in health savings account, which are now being—now available for a lot of folks in America.

So I think you and I may have a different vision of health care. I thank you for bringing it up, but, look, if people don't like it, they don't have to sign up for it. People have got the right to pick what they want to pick. And therefore, I know you would agree with me in saying that seniors ought to take a look and see whether or not it meets their needs.

Thank you, sir, very much. I appreciate that.

Yes, ma'am.

#### *Medicare Prescription Drug Benefit May 15th Deadline*

*Q.* Mr. President—[inaudible]—to live in this country, and I'm very proud of it.

*The President.* Good. Where were you from initially?

Q. East Germany.

*The President.* Very good.

Q. I've been through a lot, and I appreciate this country. And also I just signed up—I belong to AARP supplement, and I just signed up for Medicare Complete Choice Rx United Healthcare with zero monthly premium, and I'm saving 140 some dollars a month.

*The President.* Good.

Q. Thank you.

*The President.* How long have you been in the country?

Q. I've been in this country longer than I lived in Germany because I was in East Germany, and we had a lot of problems. You couldn't speak up for anything. My brother was arrested. My sister almost was, for saying something. So I got out pretending I'm performing at the opera house in Nuremberg, and I broke my contract interest, and I stayed in West Germany. And I've been here since 1959. And I'm an American citizen. I'm very proud of it.

*The President.* Great. Welcome.

Q. Thank you.

*The President.* Yes, ma'am. By the way, I met with Chancellor Angela Merkel the other day, and she was—she, too, was raised in East Germany. It's interesting to be dealing with a world leader who was raised in a Communist country. She brings an interesting perspective to the idea of people being free. I mean, she understands freedom as well as anybody understands freedom. And she's going to be a—she's a good ally and a good person. When I see her, I'll tell her I saw you. [Laughter]

Q. Welcome, Mr. President. Thank you for coming here. One of my questions is, May 15th, I believe, is the sign-up date.

*The President.* Yes.

Q. If people cannot make a decision by May 15th, will they be penalized, or will there be another time period where they can sign up?

*The President.* It depends upon whether you're a—eligible for extra benefits, a low-income senior or not. If you're a low-income senior, there will be no penalties. If you're not a low-income senior, sign up before May 15th.

Q. Oh, okay. So then there will be—there will not be another sign-up date?

*The President.* You can continue to sign up, but there won't be sign-up at the same rates at which you could—the same rates at which you'll get your prescription drug benefits prior to May 15th. Deadlines are important. Deadlines help people understand there's finality, and people need to get after it, you know? And so the idea is, there's the deadline. Now, low-income seniors, as I mentioned to you, will be able to sign up after May 15th without penalty.

Let's see—yes, ma'am.

Q. I appreciate everything you've said. I think you're great.

*The President.* Thank you. Well, we'll leave it at that. [Laughter]

Q. No, I'm just like your mother. I do want to suggest—this is a community. Our motto is "Neighbors Helping Neighbors." We're volunteers. There are many, many seniors here who need help. We procrastinated and finally made the decision to sign up through AARP, because you can always change. And if they start increasing costs, we'll change to another one. You can have influence on people you buy from more than if the Government is handling it. And so I appreciate your approach.

However, I would beg, not for myself—because there were logjams; they were shuffling the phone calls directly to Medicare. I got an ID number; my husband got, in the afternoon, a confirmation number. No one knows whether they're actually recorded. The Internet was so bogged down, you couldn't get information, because everyone is doing it at the last minute. Now, when we pay our taxes, there's a deadline. But we can apply for a 6-months reprieve. I think—[laughter]—

*The President.* I think I know where you're headed. [Laughter]

*Q.* All right, I don't have to continue it. We could go out and help our neighbors. There's a Medicare bus—we just found out this week—going to a Catholic church in Tampa to help people sign up. There's a Medicare bus going to a hospital in Sarasota, but we didn't think about getting one to come here for our people, and we need some time to give them some help. Thank you.

*The President.* Yes, I appreciate that, thanks. In other words, what you're saying is, there's a lot of people beginning to come in at the last minute, and you're afraid they're not going to be able to access the system and/or have their numbers and names filed properly before May 15th. I'll check with the local people to make sure that—see what the strategy is in dealing with that.

Yes, ma'am. There you go.

#### *Medicare Benefits for Individuals With Disabilities*

*Q.* Is this the same Medicare plan—

*The President.* You're doing fine, just keep cranking it up.

*Q.* Is this the same Medicare plan for people that are on disabilities?

*The President.* Disabilities, yes. It applies to people with disabilities as well.

*Q.* So if you're under 65—then I would have to still go and apply under this?

*The President.* For the additional help, yes, ma'am.

*Q.* For additional help on this. And also, I just want to say, thank you very much for the way that you run the Government with the beliefs of—your Christian beliefs and not letting others bring you down when you're standing behind on your beliefs. It's very important. All the Christians stand behind you.

*The President.* Thank you. Yes, ma'am.

#### *Trade/Energy*

*Q.* —be able to tell you from the same point of view that I'm very concerned about the growing fields, the products that are now being sent and brought back from other countries, that we've eroded our own economics in America, that we're too trusting of other countries, instead of being able to build up from within. And it's a very great concern, because we live in this area—being Ruskin—a tomato growing area for the State of Florida—going into other countries, other States than Florida. We've lost our fields. We're losing the orange groves. We're losing so much that this whole country was built on, and we're now relying on beef from Australia. We're relying on produce from South America. We're now looking at China to come in and supplement Hewlett Packard and all these other companies that have now said, "We can't afford to keep the Americans employed." This is a very big concern for me, at my age, let alone for the kids who are coming up behind me.

*The President.* You know, it's an interesting—that's a very interesting question. She—or statement—there's a lot of people that are concerned about a global world in which there is fierce competition. My attitude about this is that I don't think we ought to fear the competition; I think competition is good and healthy. But I think we ought to be smart about how we deal with it. In other words, one of the options to deal with that global fear is to wall ourselves off; is to say, we're not going to accept products; is to go through protectionism; is to say, we'll put high tariffs on products because we don't want other people selling their product in the American market. That's one way to deal with your concern. And it's—I, frankly, think that would lead to economic problems for the country.

I am, as you know, a person who believes in free trade. I also believe in making sure companies treat us fairly—in other words,

so that we can compete on a level playing field. And so here's some ideas as to how to deal with it. And by the way, yours is not an isolated concern. It's a legitimate question for policymakers—is, how do you deal—how can you assure us that we can continue to be the economic leader of the world with such competition?

Wait, let me finish. Let me finish my answer. And here's some practical things to do. One, make sure our children have got the job skills necessary—the skills necessary to fill the jobs of the 21st century. One of the things that Brother Jeb has done is he's brought strong accountability in the public schools to make sure that there's high standards and people are measured. And when we find failure, you do something about it, so that we're just not shuffling kids through the system.

And I want to extend those high standards and extra help for Title I students who may not be measuring up to standards in math and science. Because I'm going to tell you what's going to happen in a global world, that if we do not educate our children with the skills necessary to fill the jobs of the 21st century—math, science, engineering—jobs that will help lead this country forward—if we don't do that, the jobs are going to go to other countries. The good, high-paying jobs are going to go to other parts of the world.

So step one is education. Step two is to make sure we're always the leader in innovation and research and development. And the way to do that is to spend Federal money, which we're going to do, in the basic sciences, as well as make sure the research and development tax credit which encourages the private sector to invest in research and technology, make sure that's a permanent part of the Tax Code. In other words, make sure America is the leader in innovation. If we're not the leader in innovation, other countries will be the leader of innovation. So there's competition. We can try to wall ourselves off, but it will still be a competitive world.

Thirdly, we got to do something about energy. The gas prices, as you know, are affecting you; they're high. Part of the reason why they're high is because the price of crude oil is high, and part of the reason the price of crude oil is high is because the demand for crude oil has been outstripping supply. And I'm not sure supply will ever catch up with demand in the short term, so one of the things we need to do is to figure out how to drive our cars differently—different fuels like ethanol grown right here in—the core product of which can be grown right here in Florida.

Hybrid automobiles is the second. And we've got incentives in Federal law that provides incentives for people to buy hybrids. Hybrids mean you're running on a combination of electricity and gasoline. And I'll tell you an interesting breakthrough that's about to come, though, because of research as a result of the Federal Government and private sector, is that we're going to have batteries that will be able to last for the first 40 miles when somebody drives. That's good for urban America, for example. A lot of people don't drive 40 miles in a day. It would be pretty good if they could drive those first 40 without using gasoline.

We got to be wise about our energy policy. I happen to believe in nuclear power. I believe in nuclear power—I know nuclear power is renewable, and it protects the environment. We got to make sure we continue to develop technologies that allow us to burn coal in environmentally friendly ways. Solar technology is becoming more advanced, and the Government is helping with the research there.

My point to you is that on the energy front, we've got to be wise if we're going to compete. We got to do something about junk lawsuits that are making it hard here in America not only for the medical profession but for the business sector, if we want to compete. We got to keep taxes low if we want to compete. If we want to compete in the future, we got to do something

about Social Security. Social Security is fine for you. You all are in good shape. It's fine for my generation, but it's not so fine for the people who are going to be trying to pay for my generation. And it's time to put aside all that business—the political business in Washington, DC—and come up with a solution so younger generations of Americans—[*applause*]. My answer to the country is, we shouldn't fear the future; we ought to shape it.

And the alternative is to shut ourselves off, and I think that would be a huge mistake. It's really interesting when you look at the 1920s. During that period of time, the American people became isolated with high protective tariffs, and it eventually was part of the reasons why we had a Great Depression. And I think we always must be mindful of the lessons of history.

Anyway, excellent question. Thanks for giving me a chance—you're not through yet, I take it. [*Laughter*] You want to debate?

#### *Alternative Fuel Sources/Energy*

Q. Forty years ago—

*The President.* Go ahead.

Q. Forty years ago, we had the red flag flying about the oil shortage. We were all told, let's do something. That was 40 years ago. Solar power was supposed to be the future for us. The Government was participating and literally supplying people with the money to put solar power into their homes. It all stopped. Why don't we continue to look at these resources instead of now stopping people because they can't get to their jobs—

*The President.* No, no, say that again. Look at what now?

Q. Why don't we continue to look at these sources of solar power—

*The President.* We are.

Q. —these houses around here, literally, if you put up a solar power panel, somebody is coming up to say, "Hey, wait a minute. It's not okay." Down in Fort Myers, they did it 20 years ago, so it has

been accepted, and it's fine. But 40 years ago, we had these red flags flying—

*The President.* Yes.

Q. —why did we waste 40 years? Now we're scared.

*The President.* No, I appreciate—I actually am not—I don't think "scared" is the right word to describe how I feel. I feel that we need to rise to the challenge. I'll remind you, in 2001, the price of crude oil was like \$17 a barrel, is one reason why. In other words, it—the low price of crude oil kind of lulled people into a sense that maybe things we're going to—the supply would be greater than demand. But it also made it more difficult for alternatives to compete.

And I'm not sure what you mean, people aren't encouraged to put up solar panels. I think people can put up solar panels if they want to. But the interesting thing about—and we're spending research money on advanced solar technology. In other words, there's not going to be "a" answer for diversifying away from foreign sources of oil. There's going to be a series of answers on a series of fronts that will enable this country to diversify away from oil, and we need to. I completely agree we need to. And the question is, are we spending money at the Federal level to do so? And the answer is, absolutely. Since I've been President, we've spent about \$10 billion on ways to help us diversify away from oil, through research and development.

Yes, sir.

#### *Hurricanes*

Q. We put out a patent to control hurricanes, and we sent it to—[*laughter*]—Senator Burr, and he thought it was great, and he—

*The President.* Give him a mike that works, please. [*Laughter*]

Q. We sent it to Senator Burr, and he thought it was great, and he gave it, I understand, to Karl Rove.

*The President.* What now? I missed your question, sir.

Q. A patent to control hurricanes.

*The President.* To control hurricanes?

Q. Right.

*The President.* Where were you last year?

[*Laughter*]

Q. I'm here this year, okay. And Senator Burr thought it was good enough, from North Carolina, and he gave it—I understand it was given to Karl Rove, okay. We want—we tried to get in touch with you, and we hope you get the description of this patent, because we feel sure it's the one thing that can stop hurricanes when they're young and vulnerable, okay. We can get at them, and we're using the coldest thing in the universe to do it. And planes—it's all planned on just how to do it, from MacDill or anywhere. And so we hope you get to read this. I gave it to a guy named Ryan here, that's an associate of yours, and I hope he gives it to you.

*The President.* Okay, good. What's his name?

Q. My name is Luther Hoffman. We sent you a letter, but I guess it may not have gotten through.

*The President.* Well, you know—[*laughter*].

Yes, sir.

*Gasoline*

Q. Yes, sir, can you hear me okay?

*The President.* Yes, sir.

Q. You mentioned gas prices, and I think everybody understands that this is being driven by economic imperatives. What I don't understand—what seems to violate common sense—is why the oil companies are also reporting record profits. It doesn't seem like people should get rich on somebody else's misery.

*The President.* Well, my attitude is, is that I believe in the markets; I believe in private enterprise; but I also believe people ought to reinvest. You know, we haven't built a refinery in this country since the early 1970s, not one refinery. And guess what? When you have shortage of supply and demand stays strong, price goes up.

So part of the reasons why we've got high gasoline prices is because the price of crude oil has gone up.

Part of it also is because we're not increasing the supplies of gasoline for the consumers. And so my call to the energy companies is: Reinvest in America; expand refinery capacity; build new ones. Part of the problem, though, is our own fault. We've got a lot of rules and regulations that prevent there to be—that stop people from investing capital in refinery expansion. So one of the things I'm working with Congress is to relax these regulations.

I mean, if we've got a problem, let's address it square on and figure out where the problem is. And there is a bottleneck when it comes to this paperwork. And we've got to be less regulatory in America to increase the supply of gasoline for our people.

We've got another problem, in that in a lot of States, they require different kind of fuel blends, which means that it's hard. When you have to change your gasoline supply on a seasonal basis to have specialized blends, it causes supply disruptions. And disruption in supply causes prices to go up.

And so I don't believe the Federal Government ought to be taking over businesses; I don't believe that. But I do believe that the Federal Government ought to be encouraging people to spend profits here in America, to build pipeline and expand capacity for the sake of consumers.

Yes, ma'am. We're kind of running out of air time, here, because I've got to go to Orlando. Brother, you need to get back to work. They're paying you a lot of money, and you're just sitting there. [*Laughter*]

*Arctic National Wildlife Refuge/Oil*

Q. First of all, Mr. President, I want you to know that you are in our prayers on a daily basis.

*The President.* Thank you.

Q. We pray for you and your Cabinet. Secondly of all, I would like to ask one

question about the Alaskan pipeline. My understanding is that most of that supply does not come to the United States, and I would like to know why that goes to other countries rather than to where it's needed here, so that we can——

*The President.* You mean the crude oil coming down the pipeline?

Q. Yes, sir.

*The President.* I don't know where it goes, to be honest with you. Sorry. I can find out. [Laughter]

Q. Okay. Could we just divert a little bit of that our direction, please? [Laughter]

*The President.* I thought you were going to ask, how come we don't have the gas pipeline coming down yet, because there's a lot of untapped oil and gas up there that can be explored in environmentally friendly ways. And I think we ought to be drilling in ANWR—it's called ANWR. I know we can do it and protect the environment at the same time. And I know there's a lot of untapped gas up there that we ought to get down through pipeline as well. I don't know where all the oil goes coming out of the pipeline now. I'll try to find out for you.

Okay, final question. Yes, sir.

#### *Social Security Reform*

Q. Morning, Mr. President.

*The President.* How are you?

Q. I'm a retired New York City fireman.

*The President.* Yes, sir.

Q. I appreciate the love and affection that you showed New York City after 9/11 on behalf of all them people that passed away at that time——

*The President.* Yes, thanks.

Q. ——and the 343 firemen, my brother firemen that died there that day. I think you're doing a fantastic job, and we'll always love and respect you.

You said before you'd like a solution for Social Security. I have it right here in my hand, Mr. President.

*The President.* I'll meet you right there at the corner, and you can hand it to me.

Q. I'd love to. [Laughter]

*The President.* The hurricane guy can show up here with his answer too. [Laughter]

Q. I wrote a solution to the Social Security reform a year ago. I sent it to every Congressman, every Senator, every newscaster, every station throughout this country. I sent 794 letters out, and I got about 5 replies. I think what's happening with Social Security is a disgrace. It's not going to affect us, like you say, but it's going to affect us because we're the parents of the baby boomers.

*The President.* That's right.

Q. And we're also the grandparents of the boomers' babies. [Laughter] And we're worried about them.

*The President.* Yes. I tell you what. I'm fixing to thank everybody and you stand right there.

Q. Thank you, Mr. President.

*The President.* And I'm—I tell you what I'm——

Q. Please give me two minutes with this letter.

*The President.* I'm going to get the photographer to take a picture of you handing me that letter.

Q. Thank you, sir.

*The President.* And that way I'll remember who you were when you handed it to me. [Laughter]

Q. I'll always remember you, Mr. President.

*The President.* Thanks for being a firefighter.

God bless, everybody. Thank you.

NOTE: The President spoke at 11:09 a.m. at the Kings Point Clubhouse. In his remarks, he referred to Gov. Jeb Bush of Florida, and his wife, Columba; President Oscar Arias Sanchez of Costa Rica; Prime Minister Junichiro Koizumi of Japan; and Chancellor Angela Merkel of Germany. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Visit to a Fire Station in Sun City Center May 9, 2006

*The President.* Jeb and I just were briefed by the firefighters here about the dry conditions that are creating hazards for the people—and Kelley, I appreciate your briefing. He was in charge of putting out that fire yesterday that consumed 450 acres. They think it was caused by a spark out of one of the utility lines.

I've always been impressed by those who are willing to get out and fight the fires and save lives and save property. I'm surrounded by people who made a career out of that. And I want to thank them for their dedication to service. I want to thank them for the briefing about the threat we find ourselves in; we've got dry and windy conditions.

The good news for the people of Florida is they've got people who are willing to serve and willing to put their lives at risk and willing to fight fires. There's one going on right now, as we speak. Kelley was briefing us on the equipment and manpower that's in place fighting the fire. This is one of these difficult periods for the State of Florida, in dealing with the climatic conditions as they are.

Obviously, the people need to be real careful, they need to be careful about starting fires, they need to be careful about throwing used cigarettes out, and they need to be mindful these are dangerous conditions. And they ought to be thoughtful about how to conduct their lives so they don't put others in the positions where a fire could destroy them or their property.

Do you want to say something, Jeb?

*Governor Jeb Bush.* Well, other than the fact, as the President said, it's actually right that if someone throws a cigarette out on the Interstate, it could create—first of all, it's a loss of life and property and puts a lot of people at risk. And it's a felony in our State. So we want to make sure that no fires are started because of human error or negligence or malfeasance.

*The President.* Anyway, I want to thank you all for joining me.

NOTE: The President spoke at 1:59 p.m. at Sun City Center Fire Station No. 28. In his remarks, he referred to Vincent Kelley, captain, Hillsborough County Fire Rescue.

## Remarks in a Discussion on the Medicare Prescription Drug Benefit in Orlando, Florida May 10, 2006

*The President.* Please be seated. Thank you. Thanks for letting me come by to say hello. I'm thrilled to be back in the State of Florida. Yesterday I checked in with my brother—[laughter]—to make sure everything is going all right. I'm real proud of Jeb. He's a good, decent man, and I love him dearly.

I also checked in with Laura this morning, to see how she's doing. She sends her

best to all of you all. She's doing just great, by the way.

I'm here to talk about Medicare. We've got an exciting program and an exciting opportunity for people to improve their lives. So this is an educational forum. This is a chance not only to speak to the folks here but to those who may be watching on TV about a really interesting opportunity for the seniors all around our country to

really improve their lives by signing up for a new opportunity in Medicare.

But before I do—and by the way, I’ve got some interesting helpers here to make the case. I thought it would be better to have others describe what the Medicare program means than me sitting up here just giving a long speech. [Laughter] You probably agree with that, but you’re too polite to say so. [Laughter]

I want to thank Tommy Martinez for welcoming us here. Tommy, thank you. I thank all the good folks who work here. Thanks for helping our seniors to improve their lives. You know, one of the great things about America is there’s a lot of citizens who have heard a call to help a neighbor, and there’s a lot of people that are willing to, kind of, help educate somebody or help somebody find help. That’s what we’re really here to honor today, in many ways. We’re not only here to talk about a new program for Medicare, but we’re here to thank people that have taken time out of their lives to help a senior improve their lives.

I want to thank Sylvia Caceres. She is the central Florida regional director. Thank you, Sylvia. Ramon Ojeda is the president of the Hispanic Chamber of Metro Orlando. Ramon, thank you. Finally, old Rich Crotty, he’s here somewhere. Hey, Rich, good to see you, buddy. I was thinking about Rich. You might remember, his son made him famous—[laughter]—made me famous too. [Laughter] The lad went to sleep in the middle of one of my stemwinders. [Laughter] Give him my best, Crotty.

Let me talk real quick about Medicare. First of all, my administration views Medicare as a vital—that Medicare is a vital program. It’s an important program that has worked well for many years. And therefore, when I got into office, I said, we’re going to not only commit ourselves to Medicare, but we’re going to make it better. See, the Federal Government has said to our seniors, “We’re going to provide a good

health care system for you.” And so we started looking at whether or not the Medicare system was delivering as good a health care system as possible. And I determined it wasn’t. I said it was good, but it could be better.

And the reason why it wasn’t as good as it could be is because the system was not helping seniors with prescription drugs. In other words, medicine had changed a lot since the sixties, obviously—that’s an obvious statement—but Medicare itself hasn’t changed along with the modernization of medicine. I’ll give you a good example. Medicare would pay for ulcer surgery, a surgery which might cost upwards of \$25,000, but it would not pay for the prescription drugs that could have prevented the ulcer from happening in the first place. And that didn’t make any sense. It didn’t make any sense for our seniors, and it didn’t make any sense for the taxpayers. And so it seemed like it made sense to me to modernize the system, which we did.

And so we created what’s called Part D, and basically Part D is a prescription drug benefit for not only our seniors but those who qualified who are disabled as well. Part D says this: It says that seniors have now got a prescription drug plan available to them. It’s your choice to make. One of the interesting things about the strategy we’ve employed is seniors now have over 40 choices to choose from in Florida. Now, that in itself created a slight problem, because 40 choices can create a sense of uncertainty among people. You know, people say, “I don’t think I want all those choices.” After all, there had been very little choice up to now. And so the idea of saying, “Well, here are 40 different plans to choose from,” I knew was going to create the need to encourage people to get involved to help people make the right choice for them.

I strongly believe that giving seniors choices is important to a good health care system. After all, not everybody’s needs are the same. And therefore, the more opportunity there is to pick a program that meets

your needs, the better off the health care system will be. That's why choice matters.

It also means there are people actually competing for your business. They're saying, "I want your business; therefore, I'm going to try to make it attractive for you." And the idea of giving choice to people has affected the cost of the plan. When we first got in there, we anticipated the cost for the average senior was going to be \$37 a month; now it's down to \$25 a month for the average plan. That's positive news. It's positive for our seniors, and it's positive for the taxpayers.

We also believe that peace of mind is important for our seniors. And so inherent in this reform plan is the notion of the Government stepping in after a certain level of expenditures have been made by the average senior. In other words, anything over \$3,600 in prescription drug coverage, the Government will pick up 95 percent of it. That's a catastrophic plan. It says that we recognize that we've got to help seniors after a certain level of expenditures, so as to help peace of mind.

That wasn't the case in the old plan, as you might remember. The new plan has got stop-loss; it's got catastrophic care. And that's a very important part of helping make sure the system was modern. The other thing that's important for people to understand is that this program is very generous for low-income seniors. About a third of the seniors qualify for extra help. And that's the way it should be in America, in my judgment. We want to help people who cannot help themselves. And so if you're a low-income senior, this plan will pay nearly 95 percent of all your drug costs, and that's important for our seniors to understand.

We've had good success at signing people up. There's about 42—a little more than 42 million people who are eligible for Medicare in the United States. Up to this point, a little over 31 million have signed up for the new Part D plan. There's about 6 million seniors who don't feel the need

to sign up because they're adequately covered elsewhere, and that's okay; I understand that. So there's about 37, more or less, million people have so far signed up since January for this new benefit. And our mission is to reach out for the final 6-plus million, is to encourage people to, at the minimum, take a look at what's available.

There is a May 15th deadline, unless you're a low-income senior, in which case you can sign up after May 15th without any penalty. And that's important for our seniors to understand as well.

And so we're here today to talk about a Medicare plan that I believe is a good deal for America's seniors. It's very important for people to understand that there are significant savings for you involved in this plan. There's—the average senior saves about one-half on his or her drug bills, and that's good news. This is a plan that helps people when there's a catastrophe in their lives, and this is a plan that means our low-income folks won't have to choose between food and medicine. And that's good for America.

Now, we're reaching out to people from all walks of life. First of all, if you're interested in finding out about the program, call 1-800-MEDICARE, and somebody will be there at the other end of the line explaining it to you. If you're computer-literate, call up [medicare.gov](http://medicare.gov), and you'll find a program that will help you—it will help explain to you what is available for you.

If you've got a—if you're a son or a daughter, and you've got a mother or dad who is eligible for Medicare and hasn't looked at this program, you have a duty, in my judgment, to be a good son or a daughter and help your mom or dad. You know, some of our seniors aren't that comfortable with using a computer, and I understand that. But your sons and daughters are comfortable, or your grandchildren are comfortable. Get them to help you. Get them to take a look at what's available.

A son or a daughter owes it to their mom and dad to do that. If you're a member of a church group and you've got seniors in your congregation, find help for them. If you're a member of AARP, an active member of AARP, help a friend see what's available. If you're a part of an outreach group such as this, continue doing your duty to give people knowledge.

And that's what we're here to do. We're working with the National Alliance for Hispanic Health, the Hispanic Business Roundtable, the National Coalition of Latino Clergy and Christian Leaders. I mean, we're talking to a lot of groups. We've reached out through Univision and Telemundo and Spanish radio. My point is, is that we're reaching out to all people in all societies. We're working with the NAACP, AARP. There are a lot of people trying to help. And for those of you here who are helping, thank you for doing what you're doing. I hope it makes you feel better. It makes me feel good to know there are millions of Americans who are willing to help a neighbor understand what's available in this important program.

So you're watching the President be Educator in Chief today. [Laughter] My job is to go around America and explain that which is available, but I can't do it alone. Yesterday, down in South Florida, Mike Leavitt was with me. He's the Secretary of Health and Human Services. He's doing a fine job. Josefina Carbonell works with Mike. Her title is Assistant Secretary for Aging, Administration on Aging, Department of Health and Human Services—a long title for a fine person. Josefina, tell us what's happening in the Department. Welcome.

*Assistant Secretary Josefina Carbonell.* Thank you, Mr. President. Yes, I'm known as the Assistant Secretary of Aging, but I've got the great honor to also have been coined in this campaign as "Senora Medicare." [Laughter] And we've gone across the country.

It's indeed a wonderful honor to serve you as the Assistant Secretary for Aging, but having worked in the aging field for over 35 years right here in the State of Florida, it is so gratifying and so historic for me personally to see the fine work of individuals and volunteers across this country that have made such a difference. And you'll meet—some of them are with us today, and many in the audience—how important the benefits are.

We've held over 47,000 events like this, assistance and enrollment events and information events. And we've ridden in buses, in our Medicare buses across this country and visited with people in towns small and big, rural and urban communities, in limited English-speaking communities. And we are so proud of the work that our inner-city and our community-based organizations and our volunteers in both the private non-profit sector, civic organizations, the business community, and our municipalities, and most importantly, our volunteers.

We've had a wonderful opportunity to have over 40,000 dedicated volunteers that have served to assist people on one-on-one as a backup to our 1-800-MEDICARE, to, of course, our web site, and our area agencies on aging, our senior centers, our Meals on Wheels programs, our home care agencies. But those 40,000 volunteers have made such a difference. I've been in communities where we've sat around somebody's dining room table in the middle of a little church hall—and being able to assist them one-on-one making that choice.

And that's so important. I know that having worked with seniors for so many years, it is so gratifying to see the difference that this new benefit takes on, not only in cost savings, but the most important thing for me, in many of the minority communities, have been the ability for them to access new preventive benefits—and cardiovascular and diabetes and other chronic conditions that are so prevalent in our minority communities. So that's another very important feature.

But help is there. Those that might still be afraid and have not set out—the 1-800-MEDICARE, we’ve staffed that Medicare line up with 6,000 operators, trained people. We’ve got volunteers like Sandra, 40,000 across this country, and the area agencies on aging and the elder help lines that are there to assist you. We also have help lines for minority communities. We know that in the Hispanic community, in addition to the 1-800-MEDICARE, we have the 1-800-SU-FAMILIA [1-866-SU-FAMILIA],\* run by the National Hispanic Council, the National Hispanic Alliance for Health, which is manned by grassroots organizations across this country, and many, many more that are there to help you.

So seek help. The 15th is the deadline. Don’t stay without that very important benefit that not only will give you the prescription drug benefits that you need but, most importantly, will be a lifesaving effort for many, many of our at-risk individuals.

*The President.* Yes, I knew one of the real challenges, once this bill had passed, was to convince people that change would be in their interests. There’s a lot of folks, frankly, at a certain point in their lives, where they’re just really aren’t interested in change. They’re happy with the way things are, and therefore, it would be hard to get people to, kind of, be alert to the new opportunities. And so therefore, we knew we’d have to rally a group of folks who were not political people, but just concerned about their neighbor, so that there was a human touch to convince somebody that change—it’s one thing to call a phone number; you’re talking to somebody you can’t see. But the most important contact is the one-on-one contact that many in this audience have helped others with. And for those of you doing that, I want to thank you.

Josefina also talked about an important part of the reform, and that is that there’s now a wellness exam for people entering

Medicare finally. It makes sense to detect problems early so it makes it easier to solve problems. That old Medicare system didn’t have, kind of, this sense of prevention as a part of our strategy to help our seniors, and now it does.

But for a senior who hasn’t signed up, call but also reach out to somebody. They’ll help you. This program is not as complicated as one would initially think. And there’s a lot of people that will help you, help you walk through the steps necessary to determine what is best for you.

Now, we’ve got some folks here who are being served. Pete, Pete Navarro, welcome; thank you for coming.

*Peter Navarro.* Good morning, Mr. President.

*The President.* You got to speak into the mike.

*Mr. Navarro.* Good morning, Mr. President.

*The President.* Where do you live?

*Mr. Navarro.* I live in Tavares, Florida.

*The President.* Very good—right around the corner.

*Mr. Navarro.* About 45 minutes.

*The President.* Well, it’s a large corner. [Laughter] Give people your circumstances, please.

[At this point, Mr. Navarro, retiree, made brief remarks.]

*The President.* One of the things people have got to understand—Pete, by the way, is not eligible for Medicare yet, just in terms of age.

*Mr. Navarro.* That’s correct.

*The President.* You’re 59?

*Mr. Navarro.* Fifty-nine, yes.

*The President.* So am I. [Laughter] I blame my gray hair on my mother. [Laughter] I don’t know who you blame yours on. [Laughter] I used to think 60 was old, didn’t you?

*Mr. Navarro.* When I was young, I thought that was way out.

*The President.* Now I think it’s young, don’t you?

\* White House correction.

Mr. Navarro. I think so. [Laughter]

The President. Yes. Anyway, people on disability can apply for this program as well. You have done so.

Mr. Navarro. I have done so.

The President. You're taking eight different medications a day.

Mr. Navarro. Eight different medications a day.

The President. So you're worried, obviously, about the cost.

Mr. Navarro. I was, and since I have it, I only pay a \$2 copay for generics and a \$5 copay for the regular drugs.

The President. Right. Are you able to estimate your monthly savings now?

Mr. Navarro. I'm saving between 500 and 600 dollars a month.

The President. I'm not surprised. We hear stories like this all the time, where this program is helping people. The average senior is going to save half on their drug bills. Here's a fellow who is saving a lot more than half.

Mr. Navarro. That's a lot of money.

The President. Yes. And that helps you, obviously—500 or 600 dollars a month gives you a little breathing room.

Mr. Navarro. Oh, yes. It really does. It eliminates that stress that you live when you don't know if you can get it or not.

The President. Yes. Well, I appreciate you sharing your story with us. It's—so, when are you turning 60?

Mr. Navarro. Next January.

The President. Oh, January. You're a lot younger than I am. [Laughter] We're baby boomers—[laughter]—which really leads to another issue, and that is whether or not the Congress will have the will to help restructure Social Security and Medicare so a young generation, your grandchildren who are going to be paying people like me to retire—whether or not the system is solvent for them. You're fine. I mean, the seniors are in great shape when it comes to Medicare and Social Security. The truth of the matter is baby boomers like old Pete and I here, we're in good shape.

It's just those who are going to be paying for us need to make sure the system is solvent.

It's not exactly the issue, but it is an issue that is of major importance. And, look, I'll work with Congress. Look, we need to just get rid of all the politics in Washington and focus on what's best for the country and do what's right.

All right, Pete, thank you very much.

Gloria Lavergne. Gloria, where do you live?

Gloria S. Lavergne. Good morning, Mr. President.

The President. Yes ma'am, thank you.

Ms. Lavergne. I live here in Orlando.

The President. Fantastic.

Ms. Lavergne. I was born and raised in Puerto Rico.

The President. *Que bueno.*

Ms. Lavergne. *Que bueno.* And I moved to Florida in 1982 with my family. I work as a legal assistant for 20 years, and unfortunately, on 2002, I became disabled. And like you, I suffer from that time until 2 months that I'm going to be able to get my supplemental, because I'm paying right now \$265 with an insurance. And I would say, when I heard about Medicare Part D, I start my own search. I look at different companies that I receive in the mail and compare, start calling. Don't be afraid to call; get the name of the medication that you are taking—I'm taking six medicines every day. One of them is Lidoderm—it's a patch—that cost me at regular price \$175 per month, and I'm paying \$28 is my deductible.

The President. Let's slow down for a minute. You're doing great. I just want to make sure everybody understands: This good woman is paying for six different medicines, one of which costs 175—speak in the mike, please—175. You signed up for Medicare Part D, and now it costs you 28?

Ms. Lavergne. My premium is \$26.60; my deductibles are \$28; and I'm saving \$550 per month. That's amazing.

*The President.* Yes. Now, I know it sounds too good to be true; like, if I had said it, everybody would have said, “Well, I think he’s just—you know—just talking.” [Laughter] So I asked Gloria to be here. It’s interesting what she said. She said she took the initiative to see what was available.

Was it that difficult?

*Ms. Lavergne.* No, it wasn’t difficult. I look at the brochures, check with the medication that I was taking, and I enrolled in AARP—for me is one of the best. And I’m very happy. I encourage everybody to join the program.

*The President.* See, she said—what you just heard her say is, she took the initiative, took a look, and found a program that met her needs. And that’s why choice is important. In other words, the Government didn’t say, “Here’s the program that meets your needs.” The Government said, “Here’s programs available. You pick the one that meets your needs.” It’s a little change of attitude, when you think about it—basically empowers the customers.

Now, there are some people, I readily concede, that aren’t that confident about picking a program that meets their needs. But there are people out there who are willing to help you. So therefore, please call in and let us know who you are. We’re trying to make sure that every senior has a chance to sign up for this program. And there’s going to be some people in society that are nervous about the program. They hear all the talk, and they hear this program, and they hear the advertisements, and I know they’re nervous. I know they’re concerned. But I assure you, it is worth your time to listen to somebody who wants to at least explain what’s available for you.

If you’re—I repeat, if you’re a son or a daughter and your mom hasn’t signed up or your dad hasn’t signed up, do your duty and—to find out what’s available and explain. You just heard the testimony of Gloria; she’s saving \$500 a month.

*Ms. Lavergne.* —\$550.

*The President.* —\$550 a month. Well, that’s a lot. And one of the things we want is the program to work, and it works well when people take advantage of the program.

So thank you both for sharing—you got something else to say? You’re welcome—you’re through?

*Ms. Lavergne.* Thank you so much.

*The President. Gracias.* Good job. Very good job. I told you you’d do a good job. You were great.

We got an interesting fellow here named Ramon Ortiz. Ramon is a pharmacist, as you can see. One of the most important groups of people who are helping our seniors realize what is available are our pharmacists. You can understand why. They’re the point of contact for a lot of our seniors.

How long have you been a pharmacist?

*Ramon Ortiz.* Well, 15 years. I’ve been 15 years—3 years which I served in the United States Air Force. I was stationed here at Patrick Air Force Base.

[*Mr. Ortiz, pharmacist, CVS Pharmacy, made brief remarks.*]

*The President.* One of the things he said that’s interesting is—CVS took corporate responsibility and said, we now understand—once President George W. signed the bill, we understand that a lot of our customers are now going to be wondering whether or not it makes sense for them to look at it. And the company became a part of the educational outreach by educating first the educators, who happened to be the pharmacists; that’s what you’re saying.

And then now—so you’ve got people coming, and saying, hey, Ramon, what’s up? Maybe they don’t put it that way—[laughter]—but they’re—

*Mr. Ortiz.* We knew it was going to be big. And also, we knew that we were going to be providers; we were going to be instrumental in their choices.

[*Mr. Ortiz made further remarks.*]

*The President.* It's hard for some Americans to believe, but there were seniors who were going out—without their drugs in the past. People had to choose, and that's not right. And this program really helps a lot of low-income seniors. It helps all low-income seniors. We don't want people making that choice between food and medicine. We want the health care system to be modern; we want it to work. If you're going to say to your seniors, "Let's have a good health care system," we need to make it good, and we've done that. And so—keep going; you're on a roll. [Laughter] Your mother?

*Mr. Ortiz.* I also—perhaps one of the most difficult patients that I had was my mom.

*The President.* Yes, I know the feeling. Does she tell you what to do?

*Mr. Ortiz.* Yes. For her, I'm the baby; I'm not a pharmacist.

*The President.* Yes, well, I know the feeling as well. Join the "aggressive mothers club." [Laughter]

*Mr. Ortiz.* So being a pharmacist, seeing how much this program had helped seniors, and I knew, because I was paying for my mom's prescriptions sometimes, and I knew that she was taking—paying over \$280 for prescriptions. Recently I called her, yesterday. She told me that she was not even taking some of the medications doctor prescribed because she could not afford it. I said, "Mom, why didn't you call me? I would have paid for your prescriptions."

Finally, I convince her—she's down in Puerto Rico in a small town, Ceiba; she enrolled. And she asked me, tell President Bush—[laughter]—this is the greatest thing ever happened. Now my father, at the age of 73, he's looking for retirement. He was working 40 hours just to pay—

*The President.* To help your mom.

*Mr. Ortiz.* —for the prescriptions. Now he can look into retirement. I'm not sure if my mom will allow him to retire. [Laughter] They cannot be in the same house. [Laughter] True story.

*The President.* Let's leave it at that, you know? [Laughter]

*Mr. Ortiz.* So I mean, I know there's a lot of complication, and I asked Anna, the first lady that I told you, "Anna, do you really need to understand the Medicare Plan D?" She said, "No, I don't have to; I'm saving money." [Laughter] That's what it's all about.

*The President.* Yes, it is. You know what I come away with? One, I want to thank you for your compassion. There's a lot of people who deeply care—a lot of people who care about our fellow citizens. We really are a compassionate country, aren't we? Here's Ramon. You know, he speaks with passion about people who come to his place of business worried about their health care and worried about their future. Thanks.

The other good lesson is, here's a good son. You know, he takes time to worry about his mom—and dad, by the way. Sons and daughters owe that to their parents. They have received a lifetime of love from a mother or father, and they need to repay it by helping understand what's available in this new program. So if you're—I keep saying this, I know, but I strongly believe it. I believe there's personal responsibility in society, and sons and daughters have a personal responsibility to help their mom or dad, just like Ramon did.

You did a fine job. Thank you. *Gracias.*

*Mr. Ortiz. Gracias.*

*The President.* Sandra Johnson. Now, Sandra Johnson works for the Serving Health Insurance Needs of Elders, known as SHINE. Is that right? Explain SHINE.

[Sandra Johnson, local coordinator, Serving Health Insurance Needs of Elders, made brief remarks.]

*The President.* You know what's a blessing? We got people like you in this country, like Sandra. She comes down here, she says, "What can I do to help. How can I help somebody?"

I love your spirit. Thanks for helping. She represents a lot of other people in this area and around the country who are volunteering.

*Ms. Bryan.* [Inaudible]—\$22 a month.

*The President.* There you go. [Laughter]  
From 350 to 22?

*Ms. Bryan.* Twenty-two.

*The President.* Testify. [Laughter]

*Ms. Bryan.* [Inaudible]

*The President.* There you go. We're glad you're here, Ms. Bryan. Thank you for coming.

Listen, I hope you've enjoyed this experience. I've asked these good folks to join us to help make the case: One, take a look at what's available; two, help somebody take a look at what's available. That's all we can ask. There's a May 15th deadline coming up, unless you qualify for extra help,

in which case you can sign up after May 15th with no penalty. If you don't qualify for extra help, sign up now. Now's the time. This is a good deal. It's the Government doing its duty to provide modern medicine for our seniors.

I want to thank our panelists. You all did a fantastic job. God bless you all, and God bless our country.

NOTE: The President spoke at 9:47 a.m. in the Asociacion Borinquena de Florida Central, Inc. In his remarks, he referred to Gov. Jeb Bush of Florida; Tommy Martinez, president, Asociacion Borinquena de Florida Central, Inc.; Sylvia T. Caceres, southern States regional director, Puerto Rico Federal Affairs Administration; and Mayor Richard T. Crotty of Orange County, FL, and his son, Tyler.

## Remarks Following a Meeting With Victims of Identity Theft May 10, 2006

Identity theft is a serious problem in America. I have just listened to the horror stories from fellow citizens who have had their identities stolen. I listened to their ideas about how the Federal Government can help in the response in not only dealing with those who commit the crime but helping those who have been victimized. And I want to thank you all for joining us. Thanks a lot.

I appreciate Al Gonzales and Chairman Majoras, Deb Majoras, of the FTC for being here, because I just signed an Executive order that has the Attorney General as the Chairman, the Chairman of the FTC as the Vice-Chairman of a coordinating group to make sure that this Government of ours uses our assets in a responsible way, in a good way, to not only put those people who commit identity fraud in jail but to help the victims of identity fraud.

I've signed two pieces of legislation which are important, one of which says that credit companies must issue a credit report once a year free of charge. We're very serious about upholding the law in this administration, and credit companies must look at the spirit and the letter of that law, so that when citizens ask for the free credit report on an annual basis, he or she should be given that free credit report.

I signed law enhancing penalties. Now what we're going to do is make sure that the 13 governmental agencies involved with identity theft have a well-coordinated strategy to help the victims and to put those who commit the theft behind bars.

Again, I want to thank you all very much for helping us understand the issues but, more importantly, telling a story of the emotions and the feelings that you went through during this—difficult periods of your life.

Thank you.

NOTE: The President spoke at 2:27 p.m. in the Roosevelt Room at the White House. A

tape was not available for verification of the content of these remarks.

## Statement on House of Representatives Passage of Tax Legislation *May 10, 2006*

The tax cuts we passed in recent years are working to fuel America's economic expansion. Our progrowth policies have helped the economy create more than 5.2 million jobs since August of 2003, and last year, our economy grew faster than that of any other major industrialized nation. By extending key Capital Gains and Dividends tax relief, the House has taken an important step to continue to help hard-working

Americans and to keep our economy strong and growing. I appreciate the House Leadership and Chairman Bill Thomas for their hard work.

I urge the Senate to vote swiftly so that I can sign this bill into law and put a stop to a massive tax hike that would be disastrous for small businesses, our economy, and all working Americans.

## Remarks on the Terrorist Surveillance Program *May 11, 2006*

After September the 11th, I vowed to the American people that our Government would do everything within the law to protect them against another terrorist attack. As part of this effort, I authorized the National Security Agency to intercept the international communications of people with known links to Al Qaida and related terrorist organizations. In other words, if Al Qaida or their associates are making calls into the United States or out of the United States, we want to know what they're saying.

Today there are new claims about other ways we are tracking down Al Qaida to prevent attacks on America. I want to make some important points about what the Government is doing and what the Government is not doing.

First, our intelligence activities strictly target Al Qaida and their known affiliates. Al Qaida is our enemy, and we want to

know their plans. Second, the Government does not listen to domestic phone calls without court approval. Third, the intelligence activities I authorized are lawful and have been briefed to appropriate Members of Congress, both Republican and Democrat. Fourth, the privacy of ordinary Americans is fiercely protected in all our activities.

We're not mining or trolling through the personal lives of millions of innocent Americans. Our efforts are focused on links to Al Qaida and their known affiliates. So far we've been very successful in preventing another attack on our soil.

As a general matter, every time sensitive intelligence is leaked, it hurts our ability to defeat this enemy. Our most important job is to protect the American people from another attack, and we will do so within the laws of our country.

Thank you.

NOTE: The President spoke at 12:03 p.m. in the Diplomatic Reception Room at the White House. The Office of the Press Sec-

retary also released a Spanish language transcript of these remarks.

## Commencement Address at Mississippi Gulf Coast Community College in Biloxi, Mississippi May 11, 2006

Thanks for the warm welcome. President Lott; members of the faculty, staff, and administration; distinguished guests; family, friends, and, most importantly of all, the graduating class of Mississippi Gulf Coast Community College: This afternoon, we celebrate commencement in a stadium that is still under repair, near streets lined with temporary housing, in a region where too many lives have been shattered, and there has never been a more hopeful day to graduate in the State of Mississippi.

I am proud to stand before some of the most determined students at college or university in America. Over these past 9 months, you have shown a resilience more powerful than any storm. You continued your studies in classrooms with crumbling walls. You lost homes and slept in tents near campus to finish courses. You cleared debris during the day, and you went to class at night. You worked past exhaustion to catch up. By your determination to reach this day, you have sent a message to our Nation and the world: Mississippi is coming back, and it's going to be better than ever before.

You have sent a message, and I've come with a message of my own: This Nation honors your dedication. We're inspired by your optimism, and we're going to help this great State of Mississippi rebuild.

I'm honored to be the first sitting President to address a community college commencement. Recognizing this is a grand occasion, I wanted some tips from the best speaker I know, so I went to the First Lady, Laura. [*Laughter*] I asked her what

I should talk about, and she said, "You ought to talk about 15 minutes." [*Laughter*] Listen, I've learned her advice is worth taking. She sends her best to you all.

Today I want to share a few thoughts on the history you've seen this year and the history you will make once you leave this fine college. For some of you, graduation day has been a long time in the making. Many of you have large responsibilities beyond school, such as jobs and families to care for, and none of those roles are part-time. Others here are taking a first step toward further education at one of Mississippi's fine universities. And on this special afternoon, some of you are fulfilling the dreams of generations by becoming the first person in your family to graduate from college.

This college is also part of a strong military community, and it's obvious some of you have earned your degree while serving your Nation in uniform. And I'm proud to be your Commander in Chief. There are also military family members in the graduating class, including the Levens family of Long Beach. Margaret Levens and her son, Matt, are getting their degrees, and they're both carrying pictures of a loved one who they remember today. Earlier this year, Donnie Levens, Margaret's son and Matt's brother, was killed in a helicopter crash while his Marine unit was fighting terrorists near the Horn of Africa. Margaret says Donnie's courage inspired her to complete her studies. She said, "I've never been a quitter. Donnie was never a quitter either. He had a job to do, and

he did it well. And I am graduating for him today.” America honors the service of Donnie Levens, and we honor the strength and the sacrifice of our military families.

This day of accomplishment would not be possible without the faculty and the staff and the administration of this college. They reopened this school just 17 days after the worst natural disaster in American history struck your campus and your State. All who work at this college have dedicated themselves to this school’s stated mission of making “a positive difference in people’s lives every day.” You have fulfilled that mission and so much more. Your students will always remember your unselfish service in an hour of need, and the United States of America is grateful for your service.

This is my 10th visit to Mississippi since Hurricane Katrina hit. I’ve seen firsthand the devastation in Gulfport and Gautier, Poplarville and Pascagoula and Pass Christian, Bay Saint Louis and Biloxi. This was the first city in your State I visited after the storm. I remember walking down the street with your fine mayor through a neighborhood where every house had been destroyed. I remember sitting on a doorstep that was surrounded by boards. I remember looking in the eyes of people who were stunned and saddened, longing for all they had lost.

I remember something else too—a quiet, unyielding determination to clear the wreckage and build anew. People who saw their own houses flattened rose to the aid of neighbors. One group of men tied themselves with a rope, dove into a flooded street, and pulled 20 others to safety. Churches and congregations gave to their limit of their resources and then found a way to give more. Thousands lost their homes, their cars, and their businesses, but not their faith in the future. Across this State, a powerful spirit has emerged, a Mississippi spirit that sees hope in adversity and possibility in pain and summons a strength that wind and water can never take away.

And that Mississippi spirit is embodied by your great Governor, Haley Barbour. Haley spoke for the State when he said, “People aren’t leaving. They’re hitching up their britches and rebuilding Mississippi.” That Mississippi spirit is carried to Washington by your superb United States Senators, Trent Lott and Thad Cochran, and by an outstanding congressional delegation. And the Mississippi spirit is sustained daily by your mayors and county officials and local leaders, and many of those leaders are here today. And I appreciate your service, and you can count on a steady partner in my administration.

Over the past 9 months, we have seen what the Mississippi spirit can achieve. The population of coastal Mississippi has returned almost all the way to full strength. Every school district that closed after the hurricane has reopened. More than 90 percent of the debris has been cleared. Highways and bridges are being repaired. Homeowners are rebuilding with the help from the State and the Federal Government. There are more jobs available in Mississippi today than before the storm, and the resurgence of this great State has only begun.

The renewal of the gulf coast is one of the largest rebuilding efforts the world has ever seen, and all of you will play a leading role. Your experience at this college has prepared you to shape the future of your State. I ask you to rise to the challenge of a generation: Apply your skill and your knowledge, your compassion and your character, and help write a hopeful new chapter in the history of the gulf coast.

A hopeful future for the gulf coast will require your skill and your knowledge. The destruction left by Katrina reaches beyond anything we could have imagined. Rebuilding will create an immediate need for workers with a wide range of skills. I appreciate how this college responded, by offering courses in carpentry and plumbing and electrical and drywall and other skills in

high demand. Federal funds allowed students to complete these courses for free, and many have moved straight into good jobs with Mississippi companies. When it comes to rebuilding this State, there is no question “if;” it is a matter of “when.” Mississippi will rebuild, and you will be the ones to rebuild it.

Ultimately, rebuilding this region will require more than the reconstruction of building and bridges that were destroyed. A renewal of the gulf coast will also require creativity and innovation and enterprise in every aspect of society. The growth and vitality of the gulf coast will come from people who open new stores, design new urban plans, create new jobs, teach children, and care for the sick. The key to unlocking these opportunities is knowledge, and millions who want to gain new knowledge come to community colleges just like the one you’re graduating from. In the gulf coast and beyond, community colleges are the centers of hope and the gateways to social mobility. At any stage in life, you can come to a community college, and you can learn something new, and you can put yourself on a course to realize your dreams.

The class of 2006 is filled with people determined to use their knowledge to revitalize the gulf coast. It’s full of people determined to realize dreams. Today I met Tracy Malosh, and she’s graduating with a degree in nursing. Tracy was born nearby at Keesler Air Force Base, and she has lived in this part of the country for her whole life. She married her high school sweetheart, Charles, 13 years ago, and they have three children who, by the way, are proudly watching their mom graduate today. After Tracy’s son Trevor was born with a heart condition, she decided to come to this college to become a pediatric nurse. When Hurricane Katrina hit, Tracy’s family lost everything they owned, but she kept coming to class. She was determined. The family is now looking for a new home in the area. Today Tracy gets a degree, and she’s planning to work in pediatrics at a

local hospital. And here is what she said, “I can’t even begin to describe to you how good it feels to finish this. I always knew I’d go back to school, but I never knew I’d face the difficulties that I did—and I conquered this.”

Tracy’s story is a clear lesson: It’s never too late to get a fresh start in life. And people all over the gulf coast are following her lead. Out of the devastation of Katrina will come great opportunities to get a fresh start in life. And for many in this great State, the road to a brighter future will run through a community college.

A hopeful future for the gulf coast will require your compassion and your character. Our whole Nation has been moved by the outpouring of kindness and decency shown by the people of this great State. Neighbors have joined forces to care for the weak and the vulnerable. Strangers have come together to help each other cope. Now you must work to sustain the compassion inspired by this storm long after the damage has been cleared away. I urge you to take the same determination you brought to rebuilding schools and use it to ensure that every school provides a good education. Use that same bravery it takes to rescue people from water to rescue communities from poverty. My hope is that one day, Americans will look back at the rebuilding of Mississippi and say that your work added not only to the prosperity of our country but also to the character as our Nation.

Earlier today I met one of your classmates who represents the character necessary for the gulf coast to succeed. Kendrick Kennedy grew up here in Biloxi. He’s a proud graduate of Biloxi High. At age 30, an illness caused Kendrick to go blind, and eventually he lost his job. So he decided to come to this college. He recorded each of his lectures on tape, and he scanned his books into a computer program, provided by the school, that reads them aloud. When the hurricane hit,

Kendrick opened his home to family members in need, and he returned to school as soon as possible. Today this good man is graduating at the top of his class, and he hopes to attend law school one day. Here is what Kendrick said: "I'd be doggoned if I was going to let Hurricane Katrina stop me. I thought, 'You started school when you were blind, and you can overcome this hurricane.'" Kendrick is right, and today we honor his inspiring example.

That same optimism is present in many of the graduates today, and so many others across the gulf coast. And optimism is justified. There is going to be a day when communities across Mississippi sparkle with new homes and businesses bustle with customers and this college is filled with more students than ever before. I plan to return one day to the Biloxi neighborhood I visited on my first trip and see beautiful homes with children playing in the yards. Across this entire region devastated by the storm, new vitality will emerge from the rubble,

and cities from Mobile to Biloxi to New Orleans will be whole again.

It's going to take time for that vision to be realized, and it will demand the skill and knowledge and character of all of you. Yet you can leave this college with confidence in your future and with certainty that you're not going to work alone. In these trying months, we have been aided by a Power that lightens our struggles, reveals our hidden strength, and helps conquer all suffering and loss. We can never know God's plan, but we can trust in His wisdom and in His grace. And we can be certain that with His help, the great State of Mississippi will rise again.

Congratulations to the class of 2006. May God bless you, and may God bless the United States of America.

NOTE: The President spoke at 2:29 p.m. in Mississippi Coast Coliseum. In his remarks, he referred to Willis Lott, president, Mississippi Gulf Coast Community College; and Mayor A.J. Holloway of Biloxi, MS.

## Statement on Senate Passage of Tax Legislation

*May 11, 2006*

I applaud the Senate for passing important tax relief that will help keep our economy strong and growing. This legislation prevents an enormous tax hike that the American people do not want and would not welcome. The bill will extend policies that have helped our economy flourish. We have had 18 straight quarters of growth,

including 4.8 percent growth in the last quarter, and the unemployment rate is 4.7 percent. I appreciate the Senate leadership and Chairman Grassley for their hard work on behalf of American taxpayers and small businesses, and I look forward to signing this important legislation into law.

## Remarks Following a Meeting With Military and Diplomatic Leaders

*May 12, 2006*

I've just completed a second meeting with former Secretaries of State and former

Secretaries of Defense on Iraq. We also discussed the broader Middle East as well.

I want to thank you all very much for sharing your thoughts not only with me but with the Vice President and Secretary Rice and Secretary Rumsfeld. It really means a lot to hear your thoughts and your concerns and your suggestions about the way forward in Iraq. We've had our disagreements in this country about whether or not we should be there in the first place. Now the fundamental question is, how do we achieve our objectives, which is a democracy which can defend itself, sustain itself, a country which is an ally in the war on terror, and a country which serves as a powerful example for others who desire to be free.

Since we last met, there has—a unity government is now in the process of becoming formed. I've got great hopes about this unity Government. We've got a Shi'a as the Prime Minister-designee, a Sunni as the Speaker, a Kurd as the President, all of whom have dedicated themselves to a country moving forward that meets the hopes and aspirations of the Iraqi people.

There are certainly challenges, and the Secretaries here discussed those challenges with us. Perhaps the main challenge is the militia that tend to take the law into their own hands. And it's going to be up for the Government to step up and take care of that militia so that the Iraqi people are confident in the security of their country. It's important to have a secure Iraq in

order for people to go about their daily lives. And we understand that.

I also assured the Secretaries here that this Government is committed to success. They've got good people on the ground. We've got brave troops that are working every day to help this country succeed and, at the same time, deny safe haven to Al Qaida.

And again, I want to thank the members for coming—the former Secretaries for coming. I think it's very useful for those of us who are helping to plot the strategies and the tactics to help secure this country, to hear from you. I'm optimistic about our successes. I know this: The only way we will not succeed is if we lose our nerve, we don't have faith in our values, and that we're constantly changing tactics on the ground to achieve our objectives.

So thank you for coming.

NOTE: The President spoke at 10:30 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Prime Minister-designate Nuri al-Maliki, Speaker of the Parliament Mahmoud al-Mashhadani, and President Jalal Talabani of Iraq. Participating in the meeting were former Secretaries of State Colin L. Powell, Madeleine K. Albright, Warren Christopher, James A. Baker III, and Alexander M. Haig, Jr.; and former Secretaries of Defense William S. Cohen, Frank C. Carlucci, James R. Schlesinger, Melvin R. Laird, and Robert S. McNamara.

## Remarks on the Observance of Asian Pacific American Heritage Month and a Presentation of the President's Volunteer Service Awards May 12, 2006

Thank you all. Welcome. Please be seated. Welcome to the White House. I like to call it the People's House. I'm glad you could join us today to celebrate Asian Pacific American Heritage Month. This is the month we recognize the many accomplish-

ments of Americans who trace their origins to the Asian-Pacific region, and we honor the contributions they make to our great land.

Across our country, Asian Pacific Americans are making their mark in all walks

of life, including business and law and politics and education, community service, the arts, and science. Today, more Asian Pacific Americans serve in my administration than in any other administration in history, and two of them serve in my Cabinet. And today—[*applause*—and I am delighted to recognize Secretary Elaine Chao and Secretary Norm Mineta and thank them for their great work for our country.

I want to thank Ray Pamintuan—he is the Chairman of the President’s Advisory Commission on Asian Americans and Pacific Islanders. And I want to thank all the other Commission members who are here. I enjoyed my visit. Thank you for serving.

I want to thank the members of the 442d Regimental Combat Team who are here today. Thank you all for coming. God bless you. Veterans who have set such a fine example for those who wear the uniform today. And I would like to welcome the men and women in uniform who have joined us today. Thank you all for being here. Thank you for your service.

These men and women are on the front-line of defending the United States of America, and in so doing, they’re laying the foundation of peace for generations to come. And we are really proud of your service.

Fourteen million Americans can claim ancestry from the Asian-Pacific region. Through a commitment to educational excellence, you help raise standards and show that the American Dream is within reach for all who study hard and persevere. Through your love of family and community, you help unite us as a people. Through entrepreneurship and innovation, you have strengthened our economy, creating jobs for other—and thereby contributing to the opportunity of this Nation.

In 2004, I created the President’s Advisory Commission on Asian American and Pacific Islanders to improve the opportunities for small-business development. And to keep this good work moving forward, I

signed an Executive order this morning that renews the Commission for another year.

America has thrived as a nation because we’ve always welcomed newcomers who, in turn, embrace our values and our way of life. Every immigrant who lives by these values makes our country better and makes our future brighter as “one Nation under God.”

We’re grateful to the many Asian Pacific Americans who serve our Nation in many ways. I just honored those who serve our Nation by wearing the uniform, but there are all kinds of ways to serve America. The President’s Volunteer Service Award is the highest honor given in recognition of those who have contributed their time and their talents to those in need.

I created this award because I understand the great strength of the United States of America is not found in our military, and it’s certainly not because of the size of our wallets. It’s because the strength of America is found in the hearts and souls of generous citizens who answer to a universal call to love a neighbor like you’d like to be loved yourself.

Five folks here today have earned this award by volunteering to improve the communities in which they live and thereby helping our fellow citizens. They’ve heard that call to serve something greater than themselves. And by the way, by answering the call, they’ve inspired others to serve; you just don’t know it.

Volunteers we recognize have brought care and outreach to veterans and men and women in uniform; they’ve helped children learn to read; they’ve extended food and shelter to hurricane victims in our gulf coast; they’ve helped underprivileged high school students prepare their SATs; and they’ve aided immigrants who have recently arrived in our country. They have served our Nation in distinct ways and, in so doing, have made America a better place to live.

I am proud of the achievements, the many achievements of our citizens of Asian

and Pacific Island heritage. You really have enriched America by your contributions. You've made us a better land. And the five we honor today have done so in a unique way. And so I join all Americans in congratulating you and wishing you continued success of your work. I want to thank you for what you've done. I ask God's blessings on all who are here and their families as well as our great Nation.

And now I ask the commander to please read the citations that will enable me to award the volunteer awards to you.

[*At this point, Lt. Cmdr. Geoff Gagnier, Coast Guard Aide to the President, read the citations, and the President presented the awards.*]

Now you can see why I love an event such as these. [*Laughter*] What a great country we have. And I want to thank you all for being active citizens in the greatest land on the face of the Earth.

May God bless you all.

NOTE: The President spoke at 2:07 p.m. in the East Room at the White House. In his remarks, he referred to Rudy Pamintuan, Chairman, President's Advisory Commission on Asian Americans and Pacific Islanders. The Asian/Pacific American Heritage Month proclamation of April 28 is listed in Appendix D at the end of this volume.

## Statement on the Death of G.V. "Sonny" Montgomery

May 12, 2006

Laura and I and the entire Bush family are saddened by the death of a good friend and patriot, Sonny Montgomery. Sonny Montgomery served during World War II and the Korean war, and he was a tireless advocate for America's veterans throughout his three decades in the House of Representatives. He sponsored the Montgomery GI bill, which has helped make

higher education and professional training accessible to millions of our veterans. In 2005, he was awarded the Presidential Medal of Freedom, the Nation's highest civil award, in recognition of his lifetime of service to the United States. We send our condolences and prayers to the Montgomery family.

## The President's Radio Address

May 13, 2006

Good morning. This week I nominated General Mike Hayden to be the next Director of the Central Intelligence Agency. The work of the CIA is essential to the security of the American people. The enemies who struck our Nation on September the 11th, 2001, intend to attack us again. And to defeat them, we must have the best possible intelligence. In Mike Hayden, the

men and women of the CIA will have a strong leader who will support them as they work to disrupt terrorist attacks, penetrate closed societies, and gain information that is vital to protecting our Nation.

General Hayden is supremely qualified to lead the CIA. For the last year, he's been our Nation's first Deputy Director of

National Intelligence and has played a critical role in our efforts to reform America's intelligence capabilities to meet the threats of a new century. He has more than 20 years of experience in the intelligence field. He served for 6 years as Director of the National Security Agency and has a track record of success in leading and transforming that large intelligence agency. He also has held senior positions at the Pentagon and the National Security Council, and he served behind the Iron Curtain in our Embassy in Bulgaria during the cold war.

Mike knows our intelligence community from the ground up. He's been both a producer and a consumer of intelligence and has overseen both human and technical intelligence activities, as well as the all-source analysis derived from those activities. Mike was unanimously confirmed by the Senate last year for his current post, and this week members of both parties have praised his nomination. I urge the Senate to confirm him promptly as the next Director of the CIA.

During General Hayden's tenure at the NSA, he helped establish and run one of our most vital intelligence efforts in the war on terror, the terrorist surveillance program. As the 9/11 Commission and others have noted, our Government failed to connect the dots in the years before the attacks of September the 11th. We now know that two of the hijackers in the United States made phone calls to Al Qaida operatives overseas, but we did not know about their plans until it was too late.

So to prevent another attack, I authorized the National Security Agency—consistent with the Constitution and laws—to intercept international communications in which one party has known links to Al Qaida and related terrorist groups. This terrorist surveillance program makes it more likely that killers like the 9/11 hijackers will be identified and located in time. It has helped prevent possible terrorist attacks in the United States and abroad, and it re-

mains essential to the security of America. If there are people inside our country who are talking with Al Qaida, we want to know about it. We will not sit back and wait to be attacked again.

This week new claims have been made about other ways we are tracking down Al Qaida—prevent attacks on America. It is important for Americans to understand that our activities strictly target Al Qaida and its known affiliates. Al Qaida is our enemy, and we want to know their plans. The intelligence activities I have authorized are lawful and have been briefed to appropriate Members of Congress, both Republican and Democrat. The privacy of all Americans is fiercely protected in all our activities. The Government does not listen to domestic phone calls without court approval. We are not trolling through the personal lives of millions of innocent Americans. Our efforts are focused on links to Al Qaida terrorists and its affiliates who want to harm the American people.

Americans expect their Government to do everything in its power under our laws and Constitution to protect them and their civil liberties. That is exactly what we are doing. And so far, we have been successful in preventing another attack on our soil. The men and women of the CIA are working around the clock to make our Nation more secure. I am confident that General Hayden will strengthen the CIA and integrate its vital work with our other intelligence agencies, so we can defeat the terrorists of the 21st century.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on May 12 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on May 13. The transcript was made available by the Office of the Press Secretary on May 12 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Statement on the Death of Eusebio Penalver Mazorra May 13, 2006

Eusebio Penalver Mazorra was a Cuban patriot who spent 28 years in Castro's prisons. His resistance to tyranny is a testament to the moral courage of all Cubans who

desire to see freedom return to their beautiful island nation. Laura joins me in sending our thoughts and prayers to his family and friends.

## Remarks During a Presentation of White House Trees With Prime Minister John Howard of Australia May 14, 2006

*President Bush.* Well, first of all, Ambassador, thanks for having us, and happy birthday.

*Ambassador Dennis Richardson.* Thank you very much.

*President Bush.* How old are you?

*Ambassador Richardson.* Well—

*President Bush.* Don't say, then. [*Laughter*] It's wonderful to be here with our dear friends the Howards. I think it is interesting that we're planting two trees, and this is a symbol of our enduring friendship. And I can't thank you enough, John, for your strong support for the liberty agenda, deep desire for the world to be a peaceful place. I really enjoy working with you for the common good. Thanks for having us.

*Prime Minister Howard.* Thank you. Well, George, you and Laura, not only for the offices that you hold but also for the people you are, are very welcome on this piece of Australian soil in Washington. I indicated to the President a moment ago that it was here on this lawn that I addressed a news conference on the 12th of September, 2001, when I said that Australia would stand side by side with the United

States in responding to the new threat of terrorism. And that resolve is as strong now as it was on the 12th of September, 2001.

These trees are a wonderful symbol of that friendship. This residence has a lot of history. It was, of course, the very first residence occupied by an Australian envoy to other than a then dominion or Commonwealth country. And when the then Prime Minister, R.G. Menzies, announced it, he said that having an ambassador—a representative or envoy to America represented the first time we were sending one to what he called a foreign country.

There has certainly been nothing foreign in the relationship between our two countries since then, and it's great to have you and Laura with us, and it's a wonderful symbol. The Ambassador has got to look after the trees—[*laughter*]—and to keep his two rottweilers away from them. [*Laughter*]

NOTE: The President spoke at 6:45 p.m. at the Australian Ambassador's residence. Participating in the event was Australia's Ambassador to the U.S. Dennis Richardson.

## Remarks at the National Peace Officers' Memorial Service May 15, 2006

Thank you all very much. Thank you. Thank you for the warm welcome, and thank you for the privilege of being able to join you today.

Every year on this day, our Nation flies flags at half-staff in grateful memory of the officers who have lost their lives in the line of duty. I emphasize the word "grateful," because we're a grateful nation for those who are willing to serve and to protect us all.

Once again, we added names to the National Law Enforcement Officers' Memorial. And once again, we are here to pay our most sincere respects to those whose names have been added.

I appreciate Chuck Canterbury's offer for me to come and speak—I really do—and I want to thank his service to the country by serving as president of the National Fraternal Order of the Police. I want to thank the members of my Cabinet who are here. I appreciate very much the Members of the United States Congress who have joined us, particularly Senator Frist and Senator Leahy. I want to thank Aliza Clark for her speech. I want to thank Ken Ford. I appreciate Vince Gill; he gave the best speech of the day. What a fantastic talent, and thank you for coming, Vince, to help heal the grief.

Family members of the fallen officers, you're welcome here to the Nation's Capital. We're really honored you're here. I wish there was some way I could heal the hurt in your heart. I wish there was a way that we could help dry up the tears. I guess the best way I can help is to say, we love you, and we thank you for the sacrifice of your loved ones. And as we thank you for the sacrifice of your loved ones, we've got to thank those law enforcement officers who are trying to help you deal with your grief.

The really interesting thing about the law enforcement community is there's such a strong bond between those who serve on the frontlines of fighting crime. They sit by your side here in this important event; they hold your hand; they put their arm around you; they're the brothers and sisters who are trying to help you overcome the pain you're going through. I want to thank those who wear the Nation's uniform, who are helping our families who are here deal with the grief, and I thank those who wear the Nation's uniform for working hard to make America a peaceful place for those of us who live here.

I know full well, as do all Americans, that in every community, whether it be a big community or a small community, there's a law enforcement officer on the job watching over the neighborhoods, ready for the next call. Each day in our country, more than 850,000 men and women go to work not knowing what the challenges might bring. Yet each day, they're committed to answering those challenges with courage and decisiveness.

One of those who answered the call was Harvey County, Kansas, Deputy Sheriff Kurt Ford. Though Kurt Ford had left the law enforcement in 2001, his heart really never left it. There's something about the law enforcement officer who is so committed to the job that his or her heart never leaves the job. He returned to service after the terrorist attacks on September the 11th.

In April, he and a team responded to a domestic violence call early on a Saturday morning. When they arrived at the scene, Officer Ford was shot. It turns out, Officer Ford had run toward danger to protect the vulnerable. And today we honor courage of people like Officer Ford.

The call came during the routine parts of the day, as it did to the Columbia, Missouri, Officer Molly Thomas-Bowden. When she was at a traffic stop, Officer Bowden was shot several times. Molly was married to a fellow police officer. She was known to all for her love of horses and her faithful and gentle spirit. Our Nation honors the service of people like Molly for her willingness to serve in making America a better place.

You know, the call can come when it's least expected, as it did for Officer Larry Cox of Chillicothe, Ohio. A 19-year-old veteran of the police force, Officer Cox was off-duty when he stepped up to help fellow officers in pursuit of a suspect. He wasn't even on duty, and yet he knew deep in his soul he needed to help fellow officers in need. And he was shot and killed.

Like many here who wear the uniform, Officer Cox worked with youngsters in the community in which they live. He was a DARE officer. One of the fifth graders he worked with said, "We feel like you're our best friend. We'll always remember you." "You're with God right now," is what the guy went on to say.

These officers are among the names of those we added. Every one represents an extraordinary person. Every one took an oath and carried a badge and committed his or her life to keeping the peace and protecting others. Every one has brought honor to our Nation. And together they live in our national memory as Americans whose courage and commitment has shown the true meaning of heroism.

And so this afternoon, on behalf of all Americans, I offer the respect of a grateful nation and pledge that their courage and sacrifice will never be forgotten.

May God bless you all.

NOTE: The President spoke at 12:43 p.m. on the West Grounds at the U.S. Capitol. In his remarks, he referred to Aliza Clark, president, National Fraternal Order of Police Auxiliary; Kenneth W. Ford, national chaplain, National Fraternal Order of Police; and entertainer Vince Gill. The Peace Officers Memorial Day and Police Week proclamation of May 11 is listed in Appendix D at the end of this volume.

## Address to the Nation on Immigration Reform May 15, 2006

Good evening. I've asked for a few minutes of your time to discuss a matter of national importance, the reform of America's immigration system.

The issue of immigration stirs intense emotions, and in recent weeks, Americans have seen those emotions on display. On the streets of major cities, crowds have rallied in support of those in our country illegally. At our southern border, others have organized to stop illegal immigrants from coming in. Across the country, Americans are trying to reconcile these contrasting images. And in Washington, the debate over

immigration reform has reached a time of decision. Tonight I will make it clear where I stand and where I want to lead our country on this vital issue.

We must begin by recognizing the problems with our immigration system. For decades, the United States has not been in complete control of its borders. As a result, many who want to work in our economy have been able to sneak across our border, and millions have stayed.

Once here, illegal immigrants live in the shadows of our society. Many use forged documents to get jobs, and that makes it

difficult for employers to verify that the workers they hire are legal. Illegal immigration puts pressure on public schools and hospitals; it strains State and local budgets and brings crime to our communities. These are real problems. Yet we must remember that the vast majority of illegal immigrants are decent people who work hard, support their families, practice their faith, and lead responsible lives. They are a part of American life, but they are beyond the reach and protection of American law.

We're a nation of laws, and we must enforce our laws. We're also a nation of immigrants, and we must uphold that tradition, which has strengthened our country in so many ways. These are not contradictory goals. America can be a lawful society and a welcoming society at the same time. We will fix the problems created by illegal immigration, and we will deliver a system that is secure, orderly, and fair. So I support comprehensive immigration reform that will accomplish five clear objectives.

First, the United States must secure its borders. This is a basic responsibility of a sovereign nation. It is also an urgent requirement of our national security. Our objective is straightforward: The border should be open to trade and lawful immigration, and shut to illegal immigrants as well as criminals, drug dealers, and terrorists.

I was a Governor of a State that has a 1,200-mile border with Mexico, so I know how difficult it is to enforce the border and how important it is. Since I became President, we've increased funding for border security by 66 percent and expanded the Border Patrol from about 9,000 to 12,000 agents. The men and women of our Border Patrol are doing a fine job in difficult circumstances, and over the past 5 years, they have apprehended and sent home about 6 million people entering America illegally.

Despite this progress, we do not yet have full control of the border, and I am deter-

mined to change that. Tonight I'm calling on Congress to provide funding for dramatic improvements in manpower and technology at the border. By the end of 2008, we'll increase the number of Border Patrol officers by an additional 6,000. When these new agents are deployed, we'll have more than doubled the size of the Border Patrol during my Presidency.

At the same time, we're launching the most technologically advanced border security initiative in American history. We will construct high-tech fences in urban corridors and build new patrol roads and barriers in rural areas. We'll employ motion sensors, infrared cameras, and unmanned aerial vehicles to prevent illegal crossings. America has the best technology in the world, and we will ensure that the Border Patrol has the technology they need to do their job and secure our border.

Training thousands of new Border Patrol agents and bringing the most advanced technology to the border will take time. Yet the need to secure our border is urgent. So I'm announcing several immediate steps to strengthen border enforcement during this period of transition.

One way to help during this transition is to use the National Guard. So in coordination with Governors, up to 6,000 Guard members will be deployed to our southern border. The Border Patrol will remain in the lead. The Guard will assist the Border Patrol by operating surveillance systems, analyzing intelligence, installing fences and vehicle barriers, building patrol roads, and providing training. Guard units will not be involved in direct law enforcement activities; that duty will be done by the Border Patrol. This initial commitment of Guard members would last for a period of one year. After that, the number of Guard forces will be reduced as new Border Patrol agents and new technologies come on line. It is important for Americans to know that we have enough Guard forces to win the war on terror, to respond to natural disasters, and to help secure our border.

The United States is not going to militarize the southern border. Mexico is our neighbor and our friend. We will continue to work cooperatively to improve security on both sides of the border, to confront common problems like drug trafficking and crime, and to reduce illegal immigration.

Another way to help during this period of transition is through State and local law enforcement in our border communities. So we'll increase Federal funding for State and local authorities assisting the Border Patrol on targeted enforcement missions. We will give State and local authorities the specialized training they need to help Federal officers apprehend and detain illegal immigrants. State and local law enforcement officials are an important part of our border security, and they need to be a part of our strategy to secure our borders.

The steps I've outlined will improve our ability to catch people entering our country illegally. At the same time, we must ensure that every illegal immigrant we catch crossing our southern border is returned home. More than 85 percent of the illegal immigrants we catch crossing the southern border are Mexicans, and most are sent back home within 24 hours. But when we catch illegal immigrants from another country, it is not as easy to send them back home. For many years, the Government did not have enough space in our detention facilities to hold them while the legal process unfolded. So most were released back into our society and asked to return for a court date. When the date arrived, the vast majority did not show up. This practice, called catch-and-release, is unacceptable, and we will end it.

We're taking several important steps to meet this goal. We've expanded the number of beds in our detention facilities, and we will continue to add more. We've expedited the legal process to cut the average deportation time. And we're making it clear to foreign governments that they must accept back their citizens who violate our immigration laws. As a result of these actions,

we've ended catch-and-release for illegal immigrants from some countries. And I will ask Congress for additional funding and legal authority so we can end catch-and-release at the southern border once and for all. When people know that they'll be caught and sent home if they enter our country illegally, they will be less likely to try to sneak in.

Second, to secure our border, we must create a temporary-worker program. The reality is that there are many people on the other side of our border who will do anything to come to America to work and build a better life. They walk across miles of desert in the summer heat or hide in the back of 18-wheelers to reach our country. This creates enormous pressure on our border that walls and patrols alone will not stop. To secure the border effectively, we must reduce the numbers of people trying to sneak across.

Therefore, I support a temporary-worker program that would create a legal path for foreign workers to enter our country in an orderly way for a limited period of time. This program would match willing foreign workers with willing American employers for jobs Americans are not doing. Every worker who applies for the program would be required to pass criminal background checks. And temporary workers must return to their home country at the conclusion of their stay.

A temporary-worker program would meet the needs of our economy, and it would give honest immigrants a way to provide for their families while respecting the law. A temporary-worker program would reduce the appeal of human smugglers and make it less likely that people would risk their lives to cross the border. It would ease the financial burden on State and local governments by replacing illegal workers with lawful taxpayers. And above all, a temporary-worker program would add to our security by making certain we know who is in our country and why they are here.

Third, we need to hold employers to account for the workers they hire. It is against the law to hire someone who is in this country illegally. Yet businesses often cannot verify the legal status of their employees because of the widespread problem of document fraud. Therefore, comprehensive immigration reform must include a better system for verifying documents and work eligibility. A key part of that system should be a new identification card for every legal foreign worker. This card should use biometric technology, such as digital fingerprints, to make it tamper-proof. A tamper-proof card would help us enforce the law and leave employers with no excuse for violating it. And by making it harder for illegal immigrants to find work in our country, we would discourage people from crossing the border illegally in the first place.

Fourth, we must face the reality that millions of illegal immigrants are here already. They should not be given an automatic path to citizenship. This is amnesty, and I oppose it. Amnesty would be unfair to those who are here lawfully, and it would invite further waves of illegal immigration.

Some in this country argue that the solution is to deport every illegal immigrant, and that any proposal short of this amounts to amnesty. I disagree. It is neither wise nor realistic to round up millions of people, many with deep roots in the United States, and send them across the border. There is a rational middle ground between granting an automatic path to citizenship for every illegal immigrant and a program of mass deportation. That middle ground recognizes there are differences between an illegal immigrant who crossed the border recently and someone who has worked here for many years and has a home, a family, and an otherwise clean record.

I believe that illegal immigrants who have roots in our country and want to stay should have to pay a meaningful penalty for breaking the law: to pay their taxes; to learn English; and to work in a job for a number of years. People who meet these

conditions should be able to apply for citizenship, but approval would not be automatic, and they will have to wait in line behind those who played by the rules and followed the law. What I've just described is not amnesty; it is a way for those who have broken the law to pay their debt to society and demonstrate the character that makes a good citizen.

Fifth, we must honor the great American tradition of the melting pot, which has made us one Nation out of many peoples. The success of our country depends upon helping newcomers assimilate into our society and embrace our common identity as Americans. Americans are bound together by our shared ideals: an appreciation of our history; respect for the flag we fly; and an ability to speak and write the English language. English is also the key to unlocking the opportunity of America. English allows newcomers to go from picking crops to opening a grocery; from cleaning offices to running offices; from a life of low-paying jobs to a diploma, a career, and a home of their own. When immigrants assimilate and advance in our society, they realize their dreams, they renew our spirit, and they add to the unity of America.

Tonight I want to speak directly to Members of the House and the Senate. An immigration reform bill needs to be comprehensive because all elements of this problem must be addressed together, or none of them will be solved at all. The House has passed an immigration bill. The Senate should act by the end of this month so we can work out the differences between the two bills, and Congress can pass a comprehensive bill for me to sign into law.

America needs to conduct this debate on immigration in a reasoned and respectful tone. Feelings run deep on this issue, and as we work it out, all of us need to keep some things in mind. We cannot build a unified country by inciting people to anger or playing on anyone's fears or exploiting the issue of immigration for political gain. We must always remember that real lives

will be affected by our debates and decisions, and that every human being has dignity and value, no matter what their citizenship papers say.

I know many of you listening tonight have a parent or a grandparent who came here from another country with dreams of a better life. You know what freedom meant to them, and you know that America is a more hopeful country because of their hard work and sacrifice. As President, I've had the opportunity to meet people of many backgrounds and hear what America means to them. On a visit to Bethesda Naval Hospital, Laura and I met a wounded marine named Guadalupe Denogean. Master Gunnery Sergeant Denogean came to the United States from Mexico when he was a boy. He spent his summers picking crops with his family, and then he volunteered for the United States Marine Corps as soon as he was able. During the liberation of Iraq, Master Gunnery Sergeant Denogean was seriously injured. And when asked if he had any requests, he made two: a promotion for the corporal

who helped rescue him and the chance to become an American citizen. And when this brave marine raised his right hand and swore an oath to become a citizen of the country he had defended for more than 26 years, I was honored to stand at his side.

We will always be proud to welcome people like Guadalupe Denogean as fellow Americans. Our new immigrants are just what they've always been, people willing to risk everything for the dream of freedom. And America remains what she has always been—the great hope on the horizon, an open door to the future, a blessed and promised land. We honor the heritage of all who come here, no matter where they come from, because we trust in our country's genius for making us all Americans—one Nation under God.

Thank you, and good night.

NOTE: The President spoke at 8:01 p.m. in the Oval Office at the White House. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks at a Welcoming Ceremony for Prime Minister John Howard of Australia

May 16, 2006

Good morning. Laura and I are honored to welcome Prime Minister John Howard and his wife, Janette, back to the White House.

Australia and the United States share timeless values. On opposite sides of the Pacific, our peoples created lands of opportunity and offered millions the hope of new beginnings. As frontier peoples, we cherish the spirit of discovery. We believe that men and women who dream big and work hard can create a better world.

Australians and Americans also believe in the power of freedom. Our two nations were once remote outposts of liberty, lands

where those escaping tyranny could find a better life. Today, freedom is on the move. Australians and Americans celebrate freedom's advance, because nations that respect the rights and dignity of their own people are the best partners for peace and the strongest anchors of stability in every region of the world.

Freedom has enemies, and for more than 100 years, Australians and Americans have joined together to defend freedom. Together we fought the Battle of Hamel in World War I. Together we fought in World War II from the beaches of Normandy to the waters of the Coral Sea. Together we

fought in Korea and Vietnam. And together we're fighting and winning the global war on terror.

Prime Minister Howard, you and I stood together here at the White House the day before September the 11th, 2001. And our nations have stood together on every day afterwards. The American people know that Australia is a strong ally. We admire your courage, and we appreciate your sacrifice.

We share your grief over the loss of your own countrymen who were brutally attacked in Bali. We share your determination to defeat those who murder the innocent to promote their ideology of hatred. To defeat the terrorists, we must stay on the offensive, and Australia has been on the frontlines of every offensive in the war on terror.

In Afghanistan, the first casualty among American allies was an Australian. In Iraq, Australian Special Operation forces were among the first coalition units on the ground. The bravery and skill of the Australian military have helped the people of these two nations claim their freedom and deny the terrorists safe havens from which to launch further attacks.

War has reaffirmed the strength of our alliance, yet our alliance is only one component of our broad partnership. Australia and the United States signed a free trade agreement in 2004 because we recognize that open markets create greater prosperity for both our peoples. We're cooperating to expand trade worldwide. In the Doha negotiations, Australia and America speak with

one voice. We continue to urge all parties to reduce global trade barriers that keep millions in the developing world mired in poverty.

Our two nations accept other global responsibilities as well. We helped to build the Asia-Pacific Partnership on Clean Development and Climate, so we can make the latest energy technologies available to all to increase efficiency and reduce pollution.

We've pooled our resources to help the victims of natural disasters, and we're working together to meet the threat of pandemic disease. We share a common approach to security issues, including Iran and North Korea. Our two nations are closer than ever, and Americans admire Australia's strong leader. Prime Minister John Howard has affirmed our common values. He's strengthened our alliance. He's built on our long history of partnership. I value his counsel. I admire his courage.

Mr. Prime Minister and Mrs. Howard, thank you for making the long journey. We welcome you with the honor due to a valiant nation and with the warmth of close friends. Welcome to America.

NOTE: The President spoke at 9:16 a.m. on the South Lawn at the White House, where Prime Minister Howard was accorded a formal welcome with full military honors. The transcript released by the Office of the Press Secretary also included the remarks of Prime Minister Howard.

## The President's News Conference With Prime Minister John Howard of Australia

*May 16, 2006*

*President Bush.* Thank you all. It's my honor to welcome the Prime Minister of Australia here to the East Room for a press briefing. I'm going to feed him tonight—

before I feed him tonight, I'm going to feed him to you. [*Laughter*]

We just had a really interesting discussion about a lot of issues. First, I admire

John Howard's understanding that the war on terror still goes on and that we've got to be steadfast and firm if we intend to succeed in defeating the terrorists.

Secondly, I appreciate very much his understanding and discussions about the way forward in Iraq. We spent quite a bit of time talking about the new Government. I described to him as best as I could my feelings about the Prime Minister-designee, who I believe is a firm and decisive person that is going to make a difference in that country's future.

I thanked him very much for the commitment of Australian troops. We, of course, talked about the Iraqi security forces' capacity to defend themselves. I reported to him that we're pleased with the progress being made but that the United States will make decisions about our troop levels based upon conditions on the ground.

We talked about Afghanistan. Again, I want to thank the Prime Minister for his support there for this fledgling democracy. We talked about North Korea. We talked about Iran. We talked about a lot. And that's what you'd expect when you're talking to an ally and a friend and a good strategic thinker.

The Prime Minister is capable of not only seeing the problems for today; he's capable of looking down the road. And I appreciate his advice and his judgment on national security matters, as well as in talking about issues like energy and trade. We've got a good relationship with Australia, and we intend to keep it that way.

I always remind my friends who talk to me about countries around the world, I say, I can't think of a country more like—a place more like Texas than Australia. And that's a compliment—[laughter]—except for some of these people over here. [Laughter] The people of Australia are independent-minded; they're smart; they're capable; they're hard-working. And I really enjoy my relationship with the Prime Minister.

So Mr. Prime Minister, welcome. Thanks for coming, and the floor is yours.

*Prime Minister Howard.* Well, thank you very much, Mr. President. Again, can I thank you very warmly for the great hospitality that you have extended to me. It was a real privilege to sit around the Cabinet table and talk to your Cabinet officers, which followed a very extensive discussion between the two of us about all of those issues of which you spoke.

We remain a steadfast ally of the United States in the war against terror. I've made that clear on every occasion I've spoken here in the United States. The war against terror will go on for a long time; I think we have to accept that. Progress is being made. The challenge remains very, very strong, and there needs to be a continued commitment. And we admire and respect the leadership given by you and by the United States in that war, and it's a war that confronts us all. Those who imagine that somehow or other you can escape it by rolling yourself into a little ball and going over in the corner and hoping that you're not going to be noticed are doomed to be very, very uncomfortably disappointed.

We did have an opportunity to talk extensively about some of the challenges in our immediate region. And I spoke about the situation in East Timor and the Solomon Islands and the importance of the role of Indonesia, the symbolism and also the practical consequence of Indonesia being the largest Islamic country in the world. And therefore, the success and prosperity of moderate Islamic leadership in that country is itself a very important factor in the long-term success of the fight against terrorism, because the fight against terrorism is not only a military and physical one; it is also an intellectual one. And it's a question of providing within the Islamic world a successful democratic model as an alternative to the fanaticism of those who would obscenely invoke the sanction of Islam to justify what they seek to do.

Can I finally say that of the many ties that bind Australia and the United States,

as I said on the lawn earlier today, none are more important, of course, than the shared values and the beliefs that both of our countries have—that the spread of democracy around the world is an important goal and an important responsibility. It's been a privilege for our two peoples to enjoy democracy in an uninterrupted fashion for so long that we tend to take it for granted, and we forget its liberating impact on those who taste and experience it for the first time. And both of our societies have a responsibility in expanding the opportunities for democracy, and that, of course, lies very much at the heart of much of what our two societies do.

Mr. President, thank you very, very much for the honor you've done me and the courtesy and friendship that you've extended to me and all of the traveling party. We appreciate it very, very deeply, indeed. Thank you.

*President Bush.* Two questions a side. Terry [Terence Hunt, Associated Press].

#### *Terrorist Surveillance Program*

Q. Thank you, Mr. President. Mr. President, you've said that the Government is not trolling through the lives of innocent Americans, but why shouldn't ordinary people feel that their privacy is invaded by the NSA compiling a list of their telephone calls?

*President Bush.* What I have told the American people is, we'll protect them against an Al Qaida attack, and we'll do so within the law. I've been very clear about the principles and guidelines of any program that has been designed to protect the American people.

I've also been clear about the fact that we do not listen to domestic phone calls without court approval and that this Government will continue to guard the privacy of the American people. But if Al Qaida is calling into the United States, we want to know, and we want to know why.

For the Australian press friends here, we got accused of not connecting dots prior

to September the 11th, and we're going to connect dots to protect the American people, within the law. The program he's asking about is one that has been fully briefed to Members of the United States Congress in both political parties. They are very aware of what is taking place. The American people expect their Government to protect them, within the laws of this country, and I'm going to continue to do just that.

*Prime Minister Howard.* Australian press. Mr. Curry.

#### *Australian Prime Minister Howard*

Q. Mr. President, your relationship with Mr. Howard is obviously very close, personally. And I was wondering, first, could you just expand a little on that chemistry? And secondly, sir, do you think you would be able to work effectively with a future Australian leader, be it either a successor of Mr. Howard from his own party or from their opposition?

*President Bush.* Well, I suspect he's going to outlast me, so that is a moot point—[laughter]—probably a question you ought to ask him. Somebody said, "You and John Howard appear to be so close. Don't you have any differences?" And I said, "Yes, he doesn't have any hair." [Laughter]

Look, ours is a world in which sometimes people tell you something and they don't mean it. In order to work together to make difficult decisions—decisions of war and peace, decisions of security, decisions of trade—you've got to have somebody you talk to that tells you straight up what's on their mind. You know, politics sometimes produces people that will tell you one thing and don't mean it. It's really hard to be making rational decisions if somebody you're talking to just doesn't level with you.

And that's what I like about John Howard. He may not be the prettiest person on the block—[laughter]—but when he tells you something, you can take it to the bank. He is a reliable partner. And we don't agree on 100 percent, of course. But

the interesting thing, talking to John Howard, is that you can trust the man. And that's what is a necessary ingredient to be working together for the common good.

And I also appreciate a person who is capable of standing by a decision. I remember the campaign—as a matter of fact, your campaign was right before my campaign—and John Howard stood strong. And I remember telling somebody—and the polls didn't look all that good, I guess, at one point in time—and I remember saying to somebody, "This man is going to be rewarded at the ballot box because the people of Australia want somebody who is consistently strong, not somebody who tries to waffle around trying to figure out where to end up for political expediency."

People may not agree with his position on every issue, but people have got to agree with the fact that he's a man of conviction. And that's the essence of leadership—courage and conviction. And so we've got a relationship that is based upon respect, and I respect him. I've seen him in action. I've seen what it means to have him being pressured—probably by your newspaper. But I've seen him stand strong, and that's what's needed in this world.

Holland [Steve Holland, Reuters], yes.

### *Immigration Reform*

Q. Thank you, sir. On immigration, some worry that the U.S. military is stretched too thin. How effective can these National Guard troops be if they're shuttling in and out of the border area every two or three weeks? And how are you going to turn around these House Members who seem to be unswayed by your argument on the guest-worker program?

*President Bush.* The program to put Guard on the border is one that will enable the Border Patrol to do its job better. It's very important for the American people to know it's the Border Patrol that's going to be on the frontline of apprehending people trying to sneak into our country. And the

Guard will be doing a variety of functions, which I outlined last night.

Secondly, the Guard is—the up to 6,000 Guard in the first year of operation really is not going to put a strain on our capacity to fight and win the war on terror, as well as deal with natural disasters. And, of course, we'll be working in conjunction with Governors to make sure that that's not the case, that it doesn't put an unnecessary strain on other functions of the Guard.

Thirdly, the Pentagon is briefing today—how the program is going to work. There are Guard troops in Arizona and New Mexico and Texas that can be used by the Governors down there to work with the Border Patrol, that they'll be reimbursed for. And there's also training missions that can be used to help complement the Border Patrol. We're going to have double the Border Patrol agents since 2001, by 2008. And what the Guard is doing, the Guard is providing an interim service until those Border Patrol agents get stood up.

I made it clear to the country last night that we're not going to militarize our border. Mexico is a friend. But what we are going to do is use assets necessary to make sure that we can assure the American people that the border is secure.

Now in order to secure the border, it's important for people up here in Washington to understand that there's got to be a temporary-worker program. Border security and a temporary-worker program are really important because—let me say, a temporary-worker program is really important to border security, because we don't want people trying to sneak into the country. It seems rational to me to say, "If you're coming to work, come to work in a legal way, on a temporary basis, so you're not trying to sneak across." So the temporary-worker program goes hand in hand with border security. In order for there to be a—in order for us to solve the problem of an immigration system that's not working, it's really important for Congress to

understand that there needs a—that the elements I described all go hand in hand.

And so I'll continue to work with them. Look, this is a hard issue for many people.

Q. Would you go along with border protection only and a guest-worker program—*[inaudible]*.

*President Bush.* I said I want a comprehensive bill because I understand there needs to be a comprehensive bill in order to make—in order for us to achieve the objective.

And the objective is, on the one hand, protect our borders, and on the other hand, never lose sight of the thing that makes America unique, which is, we're a land of immigrants and that we—we're not going to discriminate against people. Now, we don't think there ought to be an automatic path to citizenship; that's called amnesty. Amnesty would be wrong. Amnesty would say that somebody that stood in line legally is—is mistreated, as far as I'm concerned. Amnesty would mean that more people would try to come and sneak into our country in the hopes that they would be granted automatic citizenship.

But there ought to be a way for somebody to pay a fine or learn English or prove that they've been here for a long time working and be able to get in line—not the head of the line but the back of the line—in order to become a citizen.

You know, there are some in our country who say, "Let's just deport everybody." It's unrealistic. It may sound attractive to some. You can't deport people who have been in this country for a long period of time—millions of people that have been here.

And so we've got to be rational about how we move forward. And part of my appeal last night was to say to people, let's don't get so emotional that we forget who we are. We're a land of immigrants, and when we welcome somebody to our country who is here legally, willing to work and willing to realize a dream, it helps restore our soul.

So this is a difficult debate for Members. I'm going to continue working with them. Part of my job is to lead, and I did last night. I said, here's how we get to where we need to be.

#### *Australia's Wheat Market/Trade*

Q. Mr. President, American wheat growers are angry that hundreds of millions of dollars in bribes were paid to Saddam's Iraq to protect Australia's wheat market. Do you share their anger, and do you sympathize with the push on Capitol Hill to investigate this further in America? And Mr. Prime Minister, I'd be interested in your comments on a possible Capitol Hill inquiry into this.

*President Bush.* My own judgment is, is that the Howard administration is pretty capable of investigating what took place, and I look forward to seeing the results of the investigation.

*Prime Minister Howard.* For my part, you are aware of what the Australian Government has done. Australia is the only country in the world that has responded to the bulk of findings with a public inquiry with the powers of a royal commission. And you are aware that the commission has probably completed its public hearings, and we're likely to have a report by the 30th of June.

What the United States Congress does in relation to this is a matter for the United States Congress. And, clearly, if it decides to do something, then we will respond in the appropriate fashion. But for our part, in Australia, we have been open, transparent that we do not approve in any way, shape, or form of the payment of bribes, and if a finding is to that effect, then the full processes of Australian law should be brought to bear. You can't be more transparent than that, and I think that is understood in the United States.

But obviously, just as we have responsibilities within Australia, the legislators of

this country, where I'm a guest, have responsibilities in this country. And if it discharges those in a particular fashion, the way it thinks fit—well, that's its right, and we will respond in what is also the appropriate fashion. I don't think I can add anything more to that, and we have been patently transparent and open. And let me just repeat again, Australia is the only country in the world that has established a pub-

lic inquiry with the powers of the royal commission.

*President Bush.* Thank you, sir.

NOTE: The President's news conference began at 11:43 a.m. in the East Room at the White House. In his remarks, he referred to Prime Minister-designate Nuri al-Maliki of Iraq.

## Remarks Honoring the 2005 Women's National Basketball Association Champion Sacramento Monarchs May 16, 2006

Thank you. Please be seated. It is a beautiful day to welcome the Monarchs to the White House. I want to first congratulate the 2005 WNBA champs, the Sacramento Monarchs. We're glad you're here. Thanks for coming, and congratulations to you.

I was thinking about a little one-on-one here on the South Lawn. [*Laughter*] Then I reconsidered. Laura said, "You might as well stick to your mountain bike; don't try to take on these athletes." But we're really glad you're here.

I want to congratulate Coach John Whisenant on being such a fine coach. Congratulations, sir. Glad you're here. Thanks for coming. Glad you brought Joyce. Welcome.

I want to thank my Cabinet Secretary, Alphonso Jackson. Welcome, A.J.—thanks for coming. I knew you were a sports fan, and I knew you appreciated excellence on the court, so I'm not surprised you're here.

I want to thank Doris Matsui, Congresswoman Matsui—thanks for coming—from the Sacramento area, as well as John Doolittle. I really appreciate you all being here. Thanks for taking time to honor these champs.

I appreciate Donna Orender, the president of the WNBA. Thanks for coming.

Proud you're here. I want to thank John Thomas of Maloof Sports & Entertainment for coming. John, congratulations for putting together a good franchise. Good job. It's not easy to field a championship team, but you've done so.

I'm also proud to be up here with Yolanda Griffith, the WNBA Finals MVP. Congratulations, Yolanda—[*applause*]—popular member of the team, as you can tell. I want to welcome all the other Monarch players who are here. I'm honored to be up here with you. I can't thank you enough for coming by to give us a chance to pay a proper tribute to your championship run.

I also want to welcome members of the local Junior WNBA program; glad you all are here. Welcome to the White House. This is the—interestingly enough, the 10th year of the WNBA, and I don't know if you can remember, but I certainly do, when a lot of people were speculating that the WNBA wouldn't last. "They couldn't possibly make it," they were saying. Well the truth of the matter is, the WNBA has not only lasted; it's thrived. And American sports are better for it.

A lot of fans are coming to see the games, which is a good indication. The WNBA broadcasts are seen now in 193

countries in 31 different languages. That means a lot of people are paying attention to what you're doing on the courts. And we appreciate it.

And I appreciate the team. I appreciate a team that's figured out how to, kind of, meld stars together for the common good. You know, there are a lot of teams with stars on them. I'm sure you've run into a few of them with some pretty good stars. But a lot of times, teams aren't able to work together, and this team was able to do so. They were tough on defense. They had an attitude—a positive attitude all the way throughout the season. In other words, they didn't think they could get beat. As a matter of fact, they only lost two games on their home court. It's a pretty good—it's called the home court advantage—[laughter]—15 and 2 in Arco Arena.

I know the city of Sacramento is really proud of you, and I know that if the mayor were here and the citizens that are, kind of, serving the folks of Sacramento were here, they'd be saying, "We really like the Monarchs. We're really proud that you brought a championship team to our city."

So one of the things I'd like to say to you is thanks for being team players; thanks for setting high goals; and thanks for working together to achieve those goals.

I also appreciate the fact that you've got players from China and Portugal and Mali, as well as a lot of different States here in the United States. I think it's pretty neat, isn't it, for people who—from different backgrounds, different cultures are able to figure out a way to win. I think it's a great example for the world; I really do. I think it's important for people to come together for a common cause. I know you view yourself only as athletes, but I view you as diplomats as well.

I also want to thank you for the example you've set. It's one thing to be called champs on the court; it's another thing to

be called champs in life. One of the things you've done is you've set a great example for young women athletes. As the father of twin daughters who had trouble finding the backboard, I might add—[laughter]—sorry, girls—I love the fact that there are role models, though, for young women, that somebody can look up to and say, "Gosh, I want to be like her. I want to realize my dreams by being like Yolanda."

So it's great to be able to play basketball as well as you play, but it's also really important to know that you're setting a good example for people watching your every move.

I was impressed by the fact that you're working on Read to Achieve. You know, I oftentimes call on fellow citizens to serve our country by helping somebody else. One way you can really help somebody is to teach somebody to read. What a wonderful gift. And the fact that pro athletes were willing to take time out of your busy schedule to help inspire a young reader means a lot to the country.

I appreciate very much your honoring breast cancer survivors, helping to lift somebody's spirits. Thanks for entering the annual Race for the Cure. I used to be able to run. [Laughter] But thanks for running while you're young. I know you didn't have to do it, but you set a good sign for people. All in all, I'm honored to be up here with some champs. It's a delight to welcome you here to the White House.

May God bless you and your families, and may God continue to bless our country. Welcome.

NOTE: The President spoke at 1:27 p.m. in the East Garden at the White House. In his remarks, he referred to John Whisenant, head coach, Sacramento Monarchs, and his wife, Joyce; John Thomas, president, Sacramento Monarchs; and Mayor Heather Fargo of Sacramento, CA.

## Remarks at a State Dinner Honoring Prime Minister John Howard of Australia

May 16, 2006

Mr. Prime Minister, Mrs. Howard, distinguished guests: Welcome to the White House. This is going to be a joyous occasion because we're honoring two really good friends. We wish you a warm welcome. We thank the Howards for making a long journey, and thanks for spending so much time with us here in the States.

Our partnership is broad, and it's deep. Australia and America are working together to expand trade and to counter threats of nuclear proliferation, to make the latest energy technologies available to all nations. In the global war on terror, we have no better ally than Australia and John Howard. And in the spread of freedom to create lasting peace, we have no better friend than Australia and John Howard.

Mr. Prime Minister, we value your courage and your faithfulness and your strength, and I value your friendship. Laura and I have cherished every visit with you and Janette. We really appreciated the chance to plant those trees yesterday at the Australian Embassy. *[Laughter]* We wanted to bring a Texas tree up, but they don't grow too well here in Washington. *[Laughter]* But

I know those trees are going to grow strong and sturdy, just like our friendship has grown strong and sturdy.

I was thinking about how to really describe John Howard and his leadership in Australia, and I thought I would remind everybody what Ronald Reagan used to say: it was "morning in America." And Mr. Prime Minister, that's still true for our country. We're really an optimistic people, and we firmly believe the best days are ahead for our country. I know you feel the same way about Australia. It's also comforting to know that on the other side of the world, it's already morning in Australia. *[Laughter]*

Mr. Prime Minister, Laura and I offer a toast to you and Janette, to our allies, and to the great people of Australia.

NOTE: The President spoke at 8:07 p.m. in the State Dining Room at the White House. In his remarks, he referred to Janette Howard, wife of Prime Minister Howard. The transcript made available by the Office of the Press Secretary also included the remarks of Prime Minister Howard.

## Remarks Honoring the United States Winter Olympic and Paralympic Teams

May 17, 2006

Thank you all very much. Please be seated. Laura and I are so honored to welcome the 2006 winter Olympic and Paralympic teams to the White House. It is such a joy to have you all here, and congratulations for being champs.

I appreciate the Members of the Congress who are here: Senator Thomas and Congressmen Shays, Buyer, Hastings, and

Ryun. Thank you all for coming. Thanks for honoring these great Olympians—Congressman Ted Poe from Texas as well.

I want to thank all the athletes who've taken time to come. We really appreciate your giving us a chance to pay respects to your athleticism and your character. I want to thank the coaches and the team

leaders and the U.S. Olympic staff. I particularly want to thank the members of the Texas A&M Singing Cadets for joining us today. Thanks for coming to provide the— [applause].

I wish I could have been at the games there in Turin, but fortunately we do have TVs here in the White House. [Laughter] It was such a thrill to watch you all compete. Laura represented our country and really enjoyed getting to know you all. She came back and talked about the kindness and the integrity of our athletes. I appreciate the fact that you treated her with such respect. More importantly, I appreciate the fact that you represented our country with such nobility and dignity.

I thank you for the example you set. I don't know if you know this or not, but there's all kinds of people watching our Olympic and Paralympic athletes, wondering whether or not it's possible for them to be able to achieve the same level of accomplishments that you all achieved. The fact that you compete hard and train hard and set high goals and succeed is a really important part of encouraging others to follow in your footsteps. Being a champ means that you've got enormous responsibilities, and I thank you for upholding those responsibilities with the class that you've showed as athletes in Turin.

Thanks for creating so many lasting memories for the American people. We love our athletes. We follow your successes. We love it when the "Star Spangled Banner" is played. We also understand that not everybody is going to win the gold, but we appreciate so much the fact that you competed so hard and in such a way that brought honor to our country.

The memories are such that we remember the—America's first medal in ice dancing in 30 years with Tanith and Ben. Congratulations to you both. We appreciate the courage of Lindsey Kildow, who overcame a terrible crash in the training run and then decided to continue to compete. That kind

of courage stirs our hearts. It's such a great example for people.

We appreciate Joey Cheek, who won the gold and then turned around and donated \$40,000 to help the refugee children of Sudan. What a wonderful example for all of us here in America to know that with our personal victories comes the responsibility of helping those who suffer and those who need help.

We're honored that "the Flying Tomato" represented our country. And we want to thank all the dudes and dudesses of the snowboarders who are here. [Laughter]

America's Paralympians overcame incredible odds to earn 12 medals for our Nation. Laurie Stephens was born with spina bifida; she won two golds and the silver medal in Alpine skiing. What a strong example for people to look at Laurie and realize that "I can achieve dreams too."

Steve Cook, he lost part of his right leg in a tractor accident, but that didn't stop him. He's gone on to earn seven medals in cross-country skiing, including two golds and a bronze in this year's Paralympics. Steve, I appreciate your courage, and I appreciate the example you have shown for others.

Lonnie Hannah is with us; she had breast [he had skin]\* cancer last year and came back to help the U.S. sled hockey team win the bronze in a really thrilling game against Germany.

All of our successes in the Olympics and Paralympics required unbelievable skill and determination, and they also required the support of a lot of people in your lives. The honors you've won are a tribute to, of course, your coaches and trainers but also to your parents and to your brothers and sisters and your friends and supporters who continue to cheer you. I know all of you join me in thanking those who supported you.

At the games, you showed the best values of our country. You were humble in

---

\* White House correction.

victory and gracious in defeat. You made us proud. And so here on the White House South Lawn, I want to thank you for being such great ambassadors to our country. Welcome, and may God bless you all.

NOTE: The President spoke at 10:16 a.m. on the South Lawn at the White House. In his remarks, he referred to Tanith Belbin and Benjamin Agosto, ice dancers, Lindsey Kildow, Alpine skier, Joey Cheek, speed skater, and Shaun “the Flying Tomato” White, snowboarder, U.S. Olympic Team.

## Remarks on Signing the Tax Increase Prevention and Reconciliation Act of 2005

May 17, 2006

Thank you all. Please be seated. Good afternoon, and welcome to the White House. It's nice to see so many Members of Congress at this end of Pennsylvania Avenue. [Laughter] And you've come for a really good reason. This is a good day for American workers and families and businesses. You have passed a bill that will keep our taxes low and keep our economy growing. And I'm really pleased to be able to sign this vital piece of legislation. Thank you for your leadership.

I'm glad you're here, and so is the Vice President. I'm proud to be up here with Vice President Cheney. I couldn't have picked a better person to be the Vice President of the United States. I appreciate Secretary John Snow for his leadership on this issue. Mr. Secretary, you have made a difference. I'm proud of your leadership. Thank you.

I want to thank the Speaker of the House, Denny Hastert. Mr. Speaker, welcome back to the White House. Thank you for your leadership. And I want to thank Senator Bill Frist, the Senate majority leader. Both these men have shown fine leadership capabilities on an important issue for the American people.

I want to thank Mitch McConnell, Jon Kyl, Kay Bailey Hutchison from the United States Senate. I want to thank John Boehner, Deborah Pryce, Eric Cantor. I particularly want to pay my respects to the

chairman of the Senate Finance Committee and the chairman of the House Ways and Means Committee; Chuck Grassley and Bill Thomas are incredibly able legislators. They've done a fantastic job on behalf of the American people, and our Nation owes them a debt of gratitude. I appreciate all the Members being here today.

This economy of ours is hitting full stride. In the first quarter of this year, our economy grew at an annual rate of 4.8 percent. This follows a vigorous 2005, when the American economy grew at 3.5 percent. The past 2½ years, we've added more than 5.2 million new jobs. Productivity over the last 5 years has grown at the fastest rate in decades. Higher productivity leads to higher wages for the American workers. Hourly compensation grew at an annual rate of 5.7 percent in the first quarter of this year. American workers are taking home bigger paychecks, and their standard of living is on the rise. The American economy is powerful, productive, and prosperous, and we're going to keep it that way.

Economic growth begins with the hard work of the American people and good policies in Washington, DC. Over the past few years, our economy has faced a lot of challenges. We've been through a recession, a stock market decline, corporate scandals, an attack on our country, high energy prices, and major natural disasters.

But we acted. We believe that our economy prospers when the American people make their own decisions about how to save and spend and invest their own money. And starting in 2001, we delivered the largest tax relief since Ronald Reagan was in the White House.

We reduced taxes for every American who pays income taxes. We doubled the child tax credit, reduced the marriage penalty, created new incentives for small businesses to invest. We put the death tax on the road to extinction. The American people have used their money better than the Government ever could have. They've used the tax relief to provide for their families and create jobs and help the American economy become the envy of the industrialized world.

Our progrowth policies stand in stark contrast to those in Washington who believe you grow your economy by raising taxes and centralizing power. They are wrong. Our progrowth economic policies are working for all Americans.

One of the most important decisions we made was to cut the taxes on dividends and capital gains. These cuts were designed to lower the cost of capital and to encourage businesses to expand and hire new workers. And these tax cuts are doing exactly what we expected. When these cuts were passed in 2003, business investment had been dropping for several years. Since then, business investment has been growing at more than 9 percent a year. Spending on equipment and software has hit record levels. And businesses have hired millions of new workers to fill the jobs that this investment creates.

The cuts on dividends and capital gains are reaching families and businesses alike. About half the households in America, 57 million in all, have some investment in the stock market. They either own shares in individual companies or through mutual funds. Sometimes they own these shares through their retirement plans. By cutting the taxes on dividends and capital gains,

we helped add about \$4 trillion in new wealth to the stock market.

If you have a mutual fund for your family, these tax cuts made you better off. If you have an IRA or a 401(k), these tax cuts will help provide a better retirement. If you're a senior who depends on dividend income to make ends meet, these tax cuts have led to a better check each month. At all levels of income, the tax cuts on dividends and capital gains are letting Americans keep more of their own money and live a better life.

The danger was that the tax cuts on the dividends and capital gains were set to expire in 2008. That's created great uncertainty, because businesses and investors couldn't plan for the future without worrying about a big tax increase around the corner. That uncertainty discourages investment and expansion. It reduces opportunities for workers and families. The bill you passed helps to address this problem by extending the tax cuts on dividends and capital gains. By reassuring businesses that their taxes will not be going up any time soon, the bill increases confidence for our job creators. It will help millions of American families who are saving for the future.

Part of our strategy to cut our deficit in half is to continue to grow this economy. Tax relief has helped a growing economy, which means more tax revenue for the Federal treasury—2005 tax revenues grew by \$274 billion, an increase of nearly 15 percent over the previous year. This year, the economy is still growing, and tax revenues are growing with it. So far, tax revenues are 11 percent higher than they were at the same point last year, which is better than projected. More than a quarter of these tax revenues come from corporations who pay more because they're growing with the economy.

By growing this economy, we're staying on track to meet our goal of cutting the deficit in half by 2009. But to meet that goal, we must be strong on controlling the Federal appetite for spending. Every year

since I took office, we've slowed the growth of discretionary spending that's not related to the military or homeland security. My last two budgets have actually cut this kind of spending.

Congress is now considering an emergency supplemental bill that can show the American people we're determined to be fiscally sound with their money. I've set a clear limit on spending that I'll accept for this legislation, and if this bill goes over the limit or includes nonemergency or wasteful spending, I'll veto it.

For the past 50 years, Republicans and Democrats have had many differences, but they've often been able to agree that the American people should keep more of their own money. Presidents like John F. Kennedy and Ronald Reagan proposed and cut taxes with strong bipartisan support, and in each case, the economy prospered and grew.

The tax cuts we passed in 2001 and 2003 have also helped the economy grow and prosper. Opponents of these tax cuts were

wrong when they voted against them the first time. They've been wrong to oppose extension of tax relief in the face of overwhelming evidence that the tax cuts have helped grow the economy and create millions of new jobs.

With this bill, we're sending the American people a clear message about our policy. We're going to continue to trust the American people with their own money. We'll continue to be wise with the people's money in Washington. We'll continue to work and to make sure the tax cuts are permanent. And the bill I sign today is a victory for the American taxpayers, and it's a strong lift for our economy. Congratulations on a job well done.

It's now my honor to sign the Tax Increase Prevention and Reconciliation Act of 2005.

NOTE: The President spoke at 1:58 p.m. on the South Lawn at the White House. H.R. 4297, approved May 17, was assigned Public Law No. 109-222.

## Remarks at a Republican National Committee Gala May 17, 2006

*The President.* Thank you all. Thanks for the warm welcome. Thanks for being here at the RNC Gala. I can't thank you enough for helping our party succeed. It's such an honor to be here. I am, first, really proud of the Republican Party. We're a party, over the past 5 years, that has made a significant difference for the American people. We have defended freedom at home and abroad, and by doing so, we've done our duty to make this Nation safer. And we've trusted the people, and as a result, America is a stronger and more prosperous nation.

I want to thank my friend Ken Mehlman for leading our party. When I talked to him about leading the Republican Party,

I said, "I want to be a party that welcomes everybody, from all walks of life, a party based upon principles, a party that trusts the people, a party that stands strong in a time of historic challenge." And Ken is doing a fine job of reaching out. Our party is strong, and it's getting stronger.

Laura sends her love. She's a fabulous First Lady. She's got to be the most patient woman in America. [Laughter]

*Audience member.* She's hot!

*The President.* Yes—well, wait a minute. [Laughter] *Muy caliente.* [Laughter] I hope she's not watching, you know? [Laughter]

I appreciate the members of my Cabinet who are here. I thank you all for coming. Thanks for serving. I also want to thank

my friend Bill Frist, majority leader of the United States Senate, who is here with us. The Speaker is rounding up votes right now, but like Senator Frist, the Speaker is doing a fabulous job for the American people. And we intend to keep Denny Hastert Speaker of the House and Bill Frist majority leader of the Senate. I want to thank all the other Members of the House and the Senate who are here. Thank you all for coming.

I appreciate Jo Ann Davidson, who is the cochairman of the RNC. I appreciate her leadership and her friendship. I want to thank Dwight and Martha Schar; he's the finance chairman for the RNC. You've done a great job tonight. Appreciate you making Schar look good. I want to thank the Gala chairs, Sam Fox, Jack Oliver, Bob and Suzy Pence, and Bill Paxon. I want to thank all the people who have worked to make this such a successful event. I particularly want to thank Diamond Rio for their fantastic singing.

We're just kind of warming up for these off-year elections. [Laughter] Tonight is part of the process to make sure that when our candidates take it to the voters, they're able to do so in a way where people can hear them loud and clear. You know, elections are all about choices. And our party is a party that has built a vision based upon solid principle, a vision which is inclusive, a vision which does not shy away from certain truths and values. We're the party of the future, and our candidates will be running against the party of the past, a party that offers no new ideas like the Republican Party, a party that can only offer opposition. The Republican Party is the party of the future because we believe it is our job to take on the challenges of our time and not to pass them on to future Congresses or future generations.

Ours is an optimistic party. We know we don't need to fear the future, because we intend to shape the future for the American people. We believe in the power of freedom, and we trust in the American

people. We're going to make our choice—make these choices very clear to the voters come November. And I'm confident the American people will realize the difference between positive and negative, optimistic versus pessimistic, and reelect Republican majorities to the United States Congress.

And I'm just getting warmed up. [Laughter] These are historic times in which we live, and we're in a war. We're in a war against an enemy that is ruthless, an enemy which adheres to an ideology of hatred, a backward ideology, an ideology that can't stand freedom. Ours is a nation that loves freedom and will never back down.

People have a choice to make, between folks who want to stay on the offense and protect the American people and people who lose their nerve.

We learned some lessons from September the 11th, lessons that I'll never forget. First lesson is, is that in order to protect the American people, which is our most important job, the United States of America must stay on the offense. And that's exactly what your Nation is doing. We will find the terrorists and bring them to justice before they can hurt the American people again.

We had a second lesson learned on September the 11th, and that is, if we find somebody harboring a terrorist, they're just as guilty as the terrorists. And when I said that, I meant what I said. When your President speaks, he must speak clearly and mean what he says. And when I said, "If you harbor a terrorist, you're as guilty as the terrorists," the Taliban didn't take me seriously. But we acted. We upheld doctrine to protect the American people, and because of our actions, 25 million people are no longer in the clutches of one of the most barbaric regimes in the history of mankind.

A serious lesson of September the 11th is that we must take threats seriously before they come to hurt us. And I saw a threat, and members of both political parties saw a threat, in Iraq was run by a dictator

who was killing his own people, who had used weapons of mass destruction, invaded his neighbors, was shooting at our aircraft, harbored terrorists. The world is better off without Saddam Hussein in power.

We have a plan for victory in Iraq. There's a political track taking place. I know it seems like a decade ago, but it wasn't all that long ago that 12 million people defied car bombers and assassins and terrorists and said loud and clear, "We want to be free." Democracy is on the march in Iraq, and the United States of America will help these brave people achieve their objective.

A new government is being formed in that country, made up of a Kurd and a Shi'a and a Sunni, people who are brave and dedicated, people who understand that the people of their country desires to be free. It shouldn't surprise us that they want to be free, because we firmly understand that the desire to be free is in every human heart. There is an Almighty, and one of the greatest gifts of the Almighty is freedom, and the United States of America will never forget that lesson.

It's tough work. It's tough work to help a young country go from tyranny to democracy. But it's worth it. Free countries are peaceful countries. Free countries will lay the foundation of peace for our children and grandchildren.

The enemy cannot defeat us in Iraq, and they can't defeat us anywhere else in the world. The only way we can be defeated is if we lose our nerve, and the Republican Party will not lose its nerve.

We understand the power of freedom to transform our world. I want to remind you that this Nation lost thousands and thousands of young men and women during World War II and World War I, and yet today, the continent of Europe is whole, free, and at peace. Why? Because democracies do not war.

One of the interesting lessons of history comes home to me every time I meet with my friend the Prime Minister of Japan.

Prime Minister Koizumi is a good friend. Sixty years ago, the United States was embroiled in a terrible war with Japan. My predecessor Harry Truman had the wisdom, however, to recognize the power of freedom to transform societies. Today, I sit down at the table with the Prime Minister of a former enemy and talk about how to keep the peace in North Korea. They've committed troops in Iraq because he understands democracy can make the world a better place.

Something happened between the time World War II ended and George W. was able to sit down with Prime Minister Koizumi, and what happened was, Japan assumed a Japanese-style democracy. One of these days, an American President will be sitting down with a duly elected leader from Iraq talking about keeping the peace, and a generation of Americans will be better off for it.

Our party has worked hard to protect the American people. It's our most important duty. And we passed the PATRIOT Act. You might remember the debates of the PATRIOT Act. Senator Harry Reid, Democrat of the Senate, boasted, quote, he "killed the PATRIOT Act." Because the Republican Party stood strong, our law enforcement have the tools necessary to protect the American people.

There's a lot of debate in Washington, DC, about connecting the dots. My job is to protect you. My job is to defend the civil liberties of the American people. My job is to act within the confines of the Constitution and the law. And that's precisely what I'm doing when it comes to making sure we understand the intent of the enemy. Let me tell you this: If Al Qaida is making phone calls in the United States, we need to know why. We're not going to sit around and wait for another attack.

These are historic times, and I'm proud to be working with Republican Members

of the Senate and the House who are making sure we do our duty, and that's to defend the American people. And we're doing our duty here at home as well. We've got clear choices when it comes to our economy. People are going to be able to choose between a party that's going to keep your taxes low to keep the economy growing and a party that's going to run your taxes up. It's a stark choice, and I'm going to keep talking about it, because we've got a record to run on. This economy of ours is strong, and it's getting stronger.

And the amazing thing is, we've overcome incredible obstacles. Think about the history of this economy. We've been through a recession and corporate scandals and an attack on the United States of America and high energy prices, and we've been through natural disasters. And yet this economy is roaring along, and we intend to keep it that way.

You know, right after the attacks came, right after I got elected and then the attacks, I worked with the United States Congress to pass a progrowth economic policy. It was based on a principle that is profound and works, and that—it says when the American people have more of their own money to save, invest, and spend, the economy grows. The progrowth tax cuts we passed are working. The United States economy grew last year at 3.5 percent. That's faster than any major industrialized nation in the world. Since 2003, we've created 5.2 million new jobs. The national unemployment rate is 4.7 percent. Real after-tax income is 8 percent for Americans since 2001. That means, on average, Americans have an income that is more than \$2,300 higher this year than it was at the beginning of 2001, adjusting for inflation. Consumer confidence has been at its highest point in nearly 4 years. Productivity is high. Manufacturing activity is up. People are owning homes. More minority own a home than ever before in our Nation's history. This economy is strong, and we're going to keep it strong for the American people.

I want to remind you, we cut taxes on American families; we cut taxes on everybody who pays taxes. We cut taxes on the small businesses of America; we cut taxes on dividends; we cut taxes on capital gains. We've put the death tax on the road to extinction.

And that stands in stark contrast to the Democrat Party. Here in Washington, DC, most congressional Democrats voted against cutting income tax rates. Most voted against a bill that provided tax relief for married couples. Most voted against a bill that doubled the child credit. Most Democrats voted against a bill to put the death tax on the road to extinction. In 2003, most congressional Democrats voted against cutting taxes on dividends and capital gains. They continue to block our efforts to make the tax cuts permanent. If we want to keep this economy roaring and strong, we have got to make the tax cuts permanent.

The elections this year offer the American people a clear choice: If you want to send more of your paycheck to Washington, DC, vote Democrat. [Laughter] If you want to keep more of your paycheck for your family, vote Republican.

We're also going to cut the deficit in half by 2009. You know, there's a myth in Washington, DC, that says we can cut the deficit by raising your taxes. When you're out there helping people get elected, you might remind people, that's not the way Washington works. Sure, they'll raise your taxes, but they're going to figure out new ways to spend your money. The best way to cut that deficit is to keep progrowth economic policies in place by keeping your taxes low and be wise about how we spend your money.

Let me make sure you've got the record about what's taken place in Washington, DC, over the last couple of years. We've cut the rate of growth on nonsecurity discretionary spending. That's discretionary spending other than for the military and the homeland security.

Last year, we had a cut in that discretionary spending. I proposed another budget to do so. The Democrats don't like that idea. They're trying to figure out new ways to spend your money. But the best way to cut that deficit in half is for the United States Congress to join with this administration, set priorities, and be wise about how we spend your money.

I sent a supplemental up to the United States Congress recently to make sure our troops—what they have they need to be able to do their jobs, and to make sure we provide important emergency relief for Katrina. The number was \$92.2 billion. And if the United States Congress sends me a bill that includes nonemergency measures that exceed the number I've put out there, I will veto it.

Monday night I gave a speech of real importance for this country. The Republican Party needs to lead on this issue of immigration. The immigration system is not working, and we need to do something about it now. America can be a lawful society and a welcoming society, and we don't have to choose between the two.

And so I talked about a five-point plan to make this country's immigration system work. And the first part of the plan is for the United States of America to secure its borders. I understand something about borders; you might recall I was the Governor of the great State of Texas. We've got a long border with Mexico. I'm very aware of the issue. I know how important it is to secure the borders.

I also know how important it is to treat people with dignity. We've increased funding for border security by 66 percent since I've been the President. We've expanded our Border Patrol from about 9,000 to 12,000 agents. Our Border Patrol folks are doing good work under difficult circumstances. Over the past 5 years, we have caught and returned 6 million people trying to come into our country.

But our border is not yet secure, and there's more work to be done. And that's

what I explained to the American people the other night. And so we're going to increase the Border Patrol agents by another 6,000 by the year 2008. And at the same time, we're going to make sure that we put the most modern technology on our border to make sure our Border Patrol agents can do the job.

And until those 6,000 agents are up and running, I think it's very important for us to help our Border Patrol by providing 6,000 Guard troops. It's really important that we help the men and women in our Border Patrol do their job, so the American people know that we're using manpower, technology, and equipment to do our duty to protect the border of the United States of America.

We're ending a policy called catch-and-release. Eighty-five percent of the folks coming across are from Mexico, and they're sent back within 24 hours. But a lot of people are coming from other countries. The problem with that is we haven't had enough bedspace. So they come in, and a Border Patrol agent finds them, and they say, "Why don't you check back for your court date?" [*Laughter*] A lot of them aren't checking back for the court date. [*Laughter*] So I'm going to work with Congress to expand the number of detention beds, speed up the deportation process, make sure countries know that we're very serious about them taking the people that we catch trying to come into our country illegally. We're going to end catch-and-release.

Secondly, to secure this border, you have got to understand there are people coming to work. They want to put food on the table for their families, and they'll do—they'll go to unbelievable means to come here. They walk across our deserts in the 100-degree heat. They get stuffed in the back of an 18-wheeler to come. They want to come and work. In order to secure this border, we must have an orderly way for people to come, on a temporary basis, who are doing jobs Americans aren't doing.

We must have a rational plan that says, if you're going to come and work, you're allowed to do so, on a temporary basis—you've got to pass a criminal background check, but you ought to be able to come in an orderly way, so you're not having to sneak across. In order to enforce this border, we want people coming to work jobs Americans aren't doing, on a temporary basis, in a legal way.

Secondly—thirdly, in order to make this plan work, we've got to make sure our employers are held to account. It's illegal for somebody to employ somebody here illegally. But the problem we face is that there's a lot of document fraud. See, people are showing up with IDs that an employer can't verify. So in order to make sure we secure our border and do our duty and treat people with dignity, we need to develop a tamper-proof ID card that uses biometrics, and that way, an employer will know whether or not they're hiring somebody who's illegally here. And when the word gets out, you've got to have a tamper-proof card, and you don't have one, it's likely you're not going to come to the United States at all.

Fourthly, you got to understand, in this country, there's a lot of people who have been here for a long period of time—decent, hard-working, honorable people. I oppose amnesty, and the United States Congress ought to oppose amnesty. Amnesty would be harmful for those who have waited in line to become a citizen legally, and amnesty would encourage others to come in the hopes that they, too, would become automatically a citizen. In this debate, we must make sure we distinguish between those who have been here for a while and those who are newly arrived. For those who are newly arrived, they've got to get a temporary-worker card, finish out their time, and go back home.

But for those who have been here for a while, it is unrealistic to deport them. What is realistic is to say, "Pay a fine; learn the English language; prove that you've

been working here for a while; and get in line—but the back of the line, not the front of the line."

And fifthly, to make sure we have an immigration system that upholds our values and speaks to the decency of America, we must help people assimilate into our country. And the best way to assimilate is to help folks learn to speak the English language.

When you learn to speak the English language, and you're a hard worker, you're likely to go from somebody who's picking crops to owning a grocery, somebody who's cleaning offices to working in an office. You know, one of the great things about America is we have been a welcoming society. People come to this country because they want to realize the great American Dream. They want to be able to say, "I'm putting food on the table for my family. I want to own my own home." Every immigrant who comes and works hard lifts the spirit of this country. We're a land of immigrants, and we're better for it. We always got to have confidence in our ability to be one Nation under God.

Ours is a party that recognizes we're too dependent on oil, and we intend to do something about it.

*Audience member.* All right! [Laughter]

*The President.* I signed a good energy bill, supported by the Republicans. The bill encourages conservation, encourages exploration for oil and gas in environmentally friendly ways, so we become less dependent on foreign sources of oil. And it's a bill that encourages alternative sources of energy. I firmly believe it makes sense for us to encourage use of ethanol. We want our farmers growing energy and—not trying to buy energy from parts of the world that don't like us.

We're on our way for breakthroughs for automobiles that will be able to drive the first 40 miles on electricity without using a drop of gasoline. The party of Lincoln has been active about spending your money on research and development to find new

ways to power automobiles, to find better ways to burn coal, to be able to use solar energy. My point to you is we understand, as a Republican Party, that it's in our economic interests, in our national interests, national security interests, to get off our addiction to foreign oil.

Ours is a party that's doing something about the cost of health care. The other ones are good about talking about it; we're actually doing something about it. You know, we have a duty, in my judgment, to help the poor and the elderly. That's a commitment our country has made, and it's a commitment the Republican Party is keeping. I want to remind you that for years, the Democrats have promised our seniors a stronger Medicare system. But we delivered. You see, it didn't make any sense to have a Medicare system where decisions were made out of Washington, DC, and that would pay \$25,000 for an ulcer surgery but not one single dime for the prescription drugs that would have prevented the surgery from being needed in the first place.

And so we reformed Medicare. We said to our seniors, "We trust you; we trust you to make decisions that meets your needs." Do you realize in the State of Florida, there's over 40 different plans from which a senior can choose a prescription drug benefit? See, Republicans believe in choice. We believe that when you're able to make a choice in the marketplace, it helps affect cost and quality at the same time.

You know, the Medicare drug benefit really does help our low-income seniors. I don't know about you, but I didn't like those stories about some of our seniors having to choose between food and medicine. We stepped up and delivered a Medicare bill, and no longer do poor seniors in America have to make that choice.

Ours is a party that understands the best health care system is when the doctor-patient relationship is central to decision-making. That's why we're strong believers in health savings accounts. That's why we

believe in transparency in pricing. That's why we believe in information technology.

We also understand that small businesses have trouble buying insurance so they can afford it for their employees. And so we believe small businesses ought to be able to pool risk across jurisdictional boundaries so they can buy insurance at the same discount big businesses get.

We also fully understand that junk lawsuits are driving good doctors out of practice and driving up the cost of medicine. Ours is a party that supports medical liability reform. And when you're out there talking to your friends, I want you to remind them that last week, Senate Democrats defeated the opportunity for small businesses to pool risk and once again defeated our ability to provide medical liability reform so that health care is available and affordable to the American citizens.

Finally, ours is a party that will continue to work to build a culture of life where every human—every human is respected. You know, I passed—we passed and I signed a ban on partial-birth abortion. It is the right thing to do for the American people, to recognize the value and worth of every human being in our society.

Ours is a party that understands government can pass out money but it cannot put love in a person's heart. And so we make sure that faith-based and religious charities are treated on an equal basis when it comes to providing compassion for those who need help.

Ours is a political party that understands we need to have people on the bench who understand the difference between legislating and being a good judge. I was proud to nominate Chief Justice John Roberts and Justice Sam Alito, and I want to thank the United States Senate for passing—for confirming these two good men.

I've also successfully appointed 44 courts of appeal judges, which is about 25 percent of all the Federal appeal court judges in our Nation. I'm going to continue working with Members of the Senate to make sure

my judges get a timely hearing, and I'm going to continue nominating good, conservative judges who will interpret the law and not legislate from the bench.

Ours is a party that believes in the sanctity of marriage, and ours is a party that believes in strong families. We got something to run on. We got something other than rhetoric to run on. We're going to run on principles and a strong record. And I'm confident, with your help, we'll continue to maintain our majorities in the United States Senate and the United States House, and America will be better off for it.

I'm looking forward to the contest. [Laughter] I'm looking forward to getting out there among the people again, talking about what I believe in. I believe that because of Members of the House and the Senate working with the administration, that this country is more secure. I believe we're laying the foundation of peace; I truly believe that. I believe history is going to look back at this time and say, thank good-

ness we had people in the United States Congress and the House of Representatives, good strong Republicans, people that stay true to our values, that when the times got tough, we didn't try to take the easy course, that we understood that there's universal truths and we didn't back off of them, and that we understood to keep this economy strong and America hopeful, that government must always trust the American people.

It is a joy to be your President. I'm proud to be here with you. May God bless you all, and may God bless our country.

NOTE: The President spoke at 6:58 p.m. at DAR Constitution Hall. In his remarks, he referred to Martha Schar, wife of Dwight Schar, finance chairman, Republican National Committee; and former President Saddam Hussein, President Jalal Talabani, Prime Minister-designate Nuri al-Maliki, and Speaker of the Parliament Mahmoud al-Mashhadani of Iraq.

## Remarks Following a Tour of the Border in Yuma, Arizona *May 18, 2006*

Thank you all very much for allowing me to come by and say hello. It's good to be here in Yuma. I'd never been to Yuma before. [Laughter] I'd like to come back. It's a hospitable place with good weather. [Laughter] Remember, I was raised in west Texas. [Laughter]

I've come down here to first of all thank the men and women of the Border Patrol for doing a fine job on behalf of the American people. A lot of time, you don't get the credit you deserve, but there's a lot of folks who understand how hard you work. And we really appreciate it. So on behalf of a grateful nation, thanks for doing an important job.

I'm down here to talk about the immigration issue. And this is an important issue. It really is. It's an important debate our country is having. We need to have—we need to secure our border, and we need fair and effective immigration laws. The other night I spoke to the country about the way I see it, and I'm looking forward to working with the United States Congress to get something done.

There's a lot of politics in Washington, DC. And it's time to get rid of all the politics and do what's right for the United States of America and help you do your job. And that's why I've come to this part of the world. I wanted to hear firsthand from David and Ronald Colburn what they

need to get the job done and where we're making progress and where we aren't making progress.

I think it helps to have the President out here, seeing the part of the area of the country that one time was overrun by people coming in here—that's beginning to get settled down because of a strategy that's being employed. And so I really want to thank you all for greeting me. Plus, I liked riding in the dune buggy. [*Laughter*]

I appreciate very much your Governor for being here. Governor Napolitano is with us today. Thank you very much for coming. I'm honored you're here. She's an important person as part of helping to implement this strategy; after all, she's the commander in chief of the Arizona National Guard. And I'm going to talk a little bit about the Guard's presence here on the border to help the Border Patrol do its job.

But I also want to thank the Members of the United States Congress who flew out here with me. It's a good bunch, a little rambunctious at times, but they're—I enjoy being with them. I call them friends. Congressmen Kolbe, Hayworth, Shadegg, Flake, and Franks—appreciate you guys taking time out of your day to come down. You care a lot about your State, and you care a lot about this issue. And I appreciate you being here.

I want to thank Senator Ken Bennett. He's the president of the Arizona Senate. Senator, you didn't need to come down here, but I'm grateful you did. And I also want to thank Speaker Weiers for being here as well. I appreciate your interest in the subject. The mayor, Mayor Larry Nelson, is with us. Mr. Mayor, thank you for coming.

I want to thank all the other State and local officials. I want to thank Major General David Rataczak. He's the head of the Arizona National Guard. We're going to be working with our Guard. Don't go overboard for the guy. [*Laughter*] We're going to be working closely with our Guard

around the country to help the Border Patrol do its job.

I want to thank all the folks who are here for taking time out of your day to give me a chance to come and visit. I particularly want to thank the local law enforcement officials as well.

I understand that illegal immigration is a serious problem. And one of our jobs in public office is to fix problems, is to deal with a problem in a rational way and not pass them on to other people. And I spoke to the country the other night because I want to fix the problem. And I want to work with people in Washington to do so. People here know firsthand that illegal immigration puts big pressure on our local communities, puts pressures on the schools, puts pressures on the hospitals, puts pressure on the State and local budgets, puts pressures on your penal system. I know that.

Our country is a country of laws, and we've got to enforce our laws. But we're also a nation of immigrants, and we've got to remember that proud tradition as well, which has strengthened our country in many ways. These are not contradictory goals: to remember our heritage and uphold our laws. America can be a lawful society and a welcoming society at the same time.

There's a debate in Washington, and the House started the debate by passing a strong enforcement bill last December. And now the Senate is debating. And I do want to compliment the Senators from this State—Senator McCain and Senator Kyl—for taking the lead. They understand the importance of getting this issue solved, and they're on the floor of the Senate debating a good immigration bill. And they've offered thoughtful proposals, for which I am grateful.

The Senate needs to get the bill out, and get it to what they call the conference committee so we can work hard to iron out the differences between the House and the Senate. I support, strongly support a

comprehensive reform bill though. It needs to have five key elements to it.

First, as I mentioned to you, we're going to secure our borders. That is the duty of our country. It's a sovereign responsibility. We want the border to be open to trade and lawful immigration, and we want our borders shut to illegal immigrants as well as criminals and drug dealers and terrorists. That's the objective.

You might remember, I was the Governor of a border State, so I understand how big the border is. I would suggest to Members of Congress, as they debate this issue, that they ought to come down and take a look at the border, see what it's really like. It requires an intense focus of resources and assets in order to secure this border. It also requires a comprehensive strategy as well.

Since I became the President, we've increased funding for our border security by 66 percent. That's helped upgrade equipment, infrastructure. Border Patrol agents have gone from 9,000—about 9,000 to nearly 12,000, a significant increase of Border Patrol agents, so that we can have more people in the frontlines of doing our duty.

Here, we've added about—more than 100 Border Patrol agents in the Yuma Sector in the last year. In other words, people are beginning to see, those on the frontline of protecting the border are beginning to see additional agents coming on board. That's about an increase of 20 percent, to more than 660 agents. This border—this sector was overwhelmed at one time from people coming across illegally. I understand that. And one way to help deal with that problem is to increase the number of agents on the frontline, which is what the leadership of the Border Patrol has done.

We saw some new fencing taking place. It makes sense to use fencing along the border in key locations in order to do our job. We saw lighting. I just saw the cameras in place where we're beginning to install—modernize the border, is what I'm telling you. We're in the process of making our

border the most technologically advanced border in the world.

Interestingly enough, I don't think most Americans know this, but over the past 5 years, Federal agents, like our Border Patrol agents, have apprehended and sent home about 6 million people—6 million people since 2001 coming into this country illegally. I mean, we've got some people working hard.

Last year, agents in the Yuma Sector apprehended more than 70,000 illegal entrants. That's up from 14 percent. People's work is making a difference, but we do not have full control of the border. And that's what I want you all to understand—I realize, and a lot of people in Congress realize.

And so here's the part—here's the strategy: We're going to increase our Border Patrol by another 6,000 agents. That will have doubled the Border Patrol from 2001. We should have those agents on line by 2008. We're going to make sure we continue to be wise about how we enable you to do your job better, with technologies and high-tech fences in urban corridors and patrol roads and barriers in rural areas and motion sensors, infrared cameras, unmanned aerial vehicles. All the equipment is aimed to enable the Border Patrol to do their job. We're adding additional equipment which will enable the 18,000 Border Patrol agents we'll have in place to be able to effectively control this border.

It's going to take time to get the technology in place, and it's going to take time to train the Border Patrol agents. And yet the need to enforce the border is urgent, and that's why, in coordination with our Governors, we're going to send 6,000 National Guard troops to be deployed on the southern border.

Now, the reason why I think this strategy is important is because deploying the 6,000 troops to complement the work of the Border Patrol will get immediate results. And it's time to get immediate results. And so I want to thank Governors like Janet for

her understanding about the need to utilize assets to do our job to enforce the border.

The Guard is going to support border control efforts. And the Border Patrol, of course, will be in the lead. The Guard will operate surveillance and communications systems. They will install fences and vehicle barriers. They're going to help build patrol roads. They'll analyze intelligence. They will help spot people. But the Border Patrol will be involved in direct law enforcement. The Guard is going to free up agents to be in direct contact with those trying to sneak across. It is—the Guard is complementary. The Guard makes it easier for the Border Patrol to do its job.

And the initial commitment will last for about a year for the 6,000—for the Guard, and after that, the forces will be reduced as new Border Patrol agents and new equipment comes on line.

There are more than 400 Guard members deployed along the Southwest border. In other words, this is something we've tried; this isn't anything new. The Governor has deployed Guard down here before. We've got Guard already helping the Border Patrol right now. The missions are directly related to their specific skills. In this sector, men and women from the Arizona Guard are assisting with communications and intelligence. Guard personnel from Pennsylvania and Ohio are helping install new infrastructure and technology. So the strategy I'm announcing—I announced last Monday has already started to work.

State and local law enforcement in border communities are also a part of the strategy. And so we're going to draw on their expertise and provide new resources. We're going to increase Federal funding for State and local authorities assisting the Border Patrol on targeted law enforcement missions. The Federal Government isn't telling you what to do, but we are saying that if you choose to help the Border Patrol, that you'll be reimbursed for targeted enforcement missions. And we're going to help—we'll give State and local authorities

specialized training to help Federal officers apprehend and detain illegal immigrants.

As we catch more people crossing the border illegally, we got to make sure they're all returned home. And one of the problems we've had here in the border, that Border Patrol agents will tell you, is the problem of catch-and-release. Now, more than 85 percent of illegal immigrants caught—who get caught crossing the border are from Mexico. And they're sent home within 24 hours, and that's good. Part of having a secure border is people have got to understand when you're caught, you're sent home.

But the problem is, is that it's not so easy to send home illegal immigrants from other countries. For many years, we didn't have enough space in detention facilities. You all know that. And so what would happen is somebody would get caught; the Border Patrol would do their job. They'd work hard to enforce the border, and some of the—a judge would say, "Show back up; we'll see you back here in 30 days." Well, guess what? There was nobody back in 30 days. They went and headed into society. We've got to stop that practice. In order to make sure the Border Patrol is effective and do their jobs—I can't think of, frankly, anything more discouraging than to be out there doing—working as hard as you possibly can, apprehend somebody, and the next thing you know, they're let back out.

And so we're going to add detention facilities. We'll continue to—we've added some already; we're going to continue to add more. We're going to expedite the legal process to cut the average deportation time. And the State Department, along with the White House, is going to continue to work with Governments to say, "Look, we want you to take these folks back. You've got to make sure that when we start sending them back that you take them back."

And we're making some pretty good progress. We've caught—we've ended catch-and-release for illegal immigrants from some countries. And so I'm going to

ask Congress for funding and legal authority to end catch-and-release at the southern border once and for all, for all countries.

I strongly believe that to have—secure the border, we need to have a temporary-worker program. And the reason why I do is I understand there are many people on the other side of the border who will do anything to come and work. And that includes risking their life crossing your desert or being willing to be stuffed in the back of an 18-wheeler. I believe in order for the Border Patrol to be able to effectively do their job, we've got to have a plan in place that will reduce the people who are trying to sneak across.

A temporary-worker program would create a legal path for foreign workers to enter a country in an orderly way for a limited period of time. A temporary-worker program would reduce the number of people trying to sneak across. A temporary-worker program would reduce the appeal of human smugglers. There's a whole industry that has sprung up that traffics in human beings, that degrades the human soul. *Coyotes*—that's a familiar word here in this part of the world. A lot of people around the country don't understand what a *coyote* is, but they're somebody who, for money, will smuggle people into the United States so they can work.

We want to know who is coming in the country and who is not coming in the country. And so I think it makes sense to say, if someone is willing to do a job Americans aren't doing, here's a temporary way to come and work. Here's a tamper-proof card, so you don't have to sneak across the border. You could walk across the border, and you can do that work, and when your time is up, you go home.

Now, these people are going to have to pass a criminal background check, but we've got to recognize there are people here doing jobs Americans aren't doing. You know it as well as anybody in this part of the world. And it seems like to me, there ought to be an orderly way, a

rational way, to deal with those workers—with a temporary-work plan.

And by the way, issuing a card, a tamper-proof card, will make it easier for us to enforce the law in the interior of our country. It is against the law for an employer to hire somebody who is here illegally. That's the law of the United States. We're a nation of laws; we'll uphold the laws. But how can you ask employers to uphold the laws when they're not sure whether the documents they're looking at are fraudulent?

So not only has the current immigration system caused a whole smuggling industry to come up, but there's also a document forgery industry. We want our employers to be able to be confident about who they're hiring. That's why we need a tamper-proof ID card based upon modern biometrics.

Fourth, it is important to resolve the status of million illegal immigrants who are here already. First of all, in this debate, there should be—nobody should be given an automatic citizenship—that's called amnesty. I oppose amnesty. Amnesty would be unfair to those who are here lawfully, to those who have played by the rules. Amnesty would undermine the rule of law, and amnesty would invite a further wave of illegal immigrants.

There are some in this country who believe we ought to deport everybody who has been here. I just don't think it's going to work. I don't think it makes sense. And so I believe there's a rational middle ground between automatic citizenship and a program of mass deportation.

And here it is. First, it's important for the law to distinguish between someone who has crossed the border illegally—recently—and someone who has worked here for many years and has a home and raised a family and has a clean record. For that person, the person who has got roots in our country, I believe that person should pay a meaningful fine, pay their taxes, learn English, prove they've worked in a job for

a number of years, and then that person should be able to apply for citizenship—but would not be granted an automatic citizenship, but instead would be at the end of the citizenship line.

In other words, people have been here legally, somebody who pays their dues, pays their taxes, pays a fine, proven to be a good citizen, they get at the end of the line. Someone said, well, that's amnesty—that's not amnesty. Amnesty is automatic citizenship. This is a rational way to deal with people who are God-fearing, decent people, and respect their dignity at the same time.

Fifth, we've got to honor the great American tradition of the melting pot. Americans are bound together by shared ideals and appreciation of our history, of respect for our flag and ability to speak the English language. There's certain things that unite us, no matter where we're from or what our background has been.

I want people to understand, as we go through this debate, that I fully understand English is the key to unlocking opportunity in America. Part of the greatness of America is that we've been able to help assimilate people into our society, people from all kinds of backgrounds who have come here to seek a better life and become American, because we have the capacity to assimilate.

And part of that assimilation process is English. I believe this: If you learn English and you're a hard worker and you have a dream, you have the capacity from going from picking crops to owning the store or from sweeping office floors to being an office manager. That's been the greatness of America, when you think about it. People have come here with a dream and have worked hard and realized that dream.

And yet because we're from different backgrounds, we've all been able to be one

America, one Nation under God. And so part of a rational immigration plan has got to remember that helping people assimilate into our society is a really important part of making sure we have an immigration system that works.

I strongly believe that Congress needs to pass a comprehensive immigration bill, because you cannot secure the border unless you have all elements of a comprehensive plan in place. Doing our duty to secure the border requires a comprehensive approach. The United States Senate needs to end by the act—act by the end of this month. They need to do their duty and get a bill out so we can get on about the business of getting a comprehensive bill to my desk.

We have a duty in Washington, DC, to conduct this debate with dignity and honor. Immigration is an emotional issue. Sometimes people get carried away on the issue, and they—in doing so, they forget the greatness of our country, that we are a land of immigrants, that we've always been a haven for better opportunity, that we welcome people who are willing to abide by our laws and work hard and raise their family and trust in the Almighty. America's greatness has been and always will be the fact that we are one Nation under God.

Thanks for letting me come by.

NOTE: The President spoke at 12:51 p.m. at the Yuma Sector Border Patrol Headquarters. In his remarks, he referred to David V. Aguilar, Chief, and Ronald S. Colburn, Chief Patrol Agent, U.S. Border Patrol; Gov. Janet A. Napolitano of Arizona; and James P. Weiers, speaker, Arizona State House of Representatives. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

Statement on House of Representatives Passage of Federal Budget  
Legislation  
May 18, 2006

The House's vote to pass a responsible budget marks a positive step toward controlling Federal spending. This Budget Resolution helps enforce spending discipline and moves us in the right direction to fund

our Nation's key priorities. I congratulate Chairman Nussle, the House leadership, and all Members of the House who voted for this budget for their hard work and commitment to spending restraint.

Message to the Congress on Continuation of the National Emergency  
Protecting the Development Fund for Iraq and Certain Other Property in  
Which Iraq Has an Interest  
May 18, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent the enclosed notice to the *Federal Register* for publication. This notice states that the national emergency declared in Executive Order 13303 of May 22, 2003, as expanded in scope by Executive Order 13315 of August 28, 2003, and modified in Executive Order 13364 of November 29, 2004, is to continue in effect beyond May 22, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on May 20, 2005 (70 FR 29435).

The threats of attachment or other judicial process against (i) the Development Fund for Iraq, (ii) Iraqi petroleum and petroleum products, and interests therein, and proceeds, obligations, or any financial instruments of any nature whatsoever arising from or related to the sale or marketing thereof, or (iii) any accounts, assets, invest-

ments, or any other property of any kind owned by, belonging to, or held by, on behalf of, or otherwise for the Central Bank of Iraq create obstacles to the orderly reconstruction of Iraq, the restoration and maintenance of peace and security in the country, and the development of political, administrative, and economic institutions in Iraq. Accordingly, these obstacles continue to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. For these reasons, I have determined that it is necessary to continue the national emergency protecting the Development Fund for Iraq, certain other property in which Iraq has an interest, and the Central Bank of Iraq, and to maintain in force the sanctions to respond to this threat.

GEORGE W. BUSH

The White House,

May 18, 2006.

NOTE: The notice is listed in Appendix D at the end of this volume.

## Message to the Congress on Continuation of the National Emergency With Respect to Burma

May 18, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. I have sent the enclosed notice to the *Federal Register* for publication, which states that the Burma emergency is to continue beyond May 20, 2006, for publication. The most recent notice continuing this emergency was published in the *Federal Register* on May 18, 2005 (70 FR 28771).

The crisis between the United States and Burma arising from the actions and policies of the Government of Burma, including its

policies of committing large-scale repression of the democratic opposition in Burma, that led to the declaration of a national emergency on May 20, 1997, has not been resolved. These actions and policies are hostile to U.S. interests and pose a continuing unusual and extraordinary threat to the national security and foreign policy of the United States. For this reason, I have determined that it is necessary to continue the national emergency with respect to Burma and maintain in force the sanctions against Burma to respond to this threat.

GEORGE W. BUSH

The White House,  
May 18, 2006.

NOTE: The notice is listed in Appendix D at the end of this volume.

## Letter to the Speaker of the House of Representatives Requesting Additional Funds for Border Security

May 18, 2006

*Dear Mr. Speaker:*

On May 15th, I outlined to the Nation a comprehensive immigration reform initiative with five objectives. As part of my first objective to secure our Nation's borders, I ask the Congress to consider the enclosed requests for an additional \$1.9 billion for the Departments of Defense, Justice, and Homeland Security, which is in addition to supplemental funding requested on February 16th for the Global War on Terror and the consequences of Hurricane Katrina. This additional amount is offset by a \$1.9 billion reduction in the amount requested on February 16th for the Department of Defense.

The revised request for the Department of Homeland Security will support my Administration's commitment to gain full control of the borders through the deployment of additional Border Patrol agents, infrastructure, and technology (such as hundreds of miles of new roads, vehicle barriers, tactical communications, and aerial surveillance).

The request for additional resources, coupled with additional legal authority from the Congress, will end the practice of catch and release along our southern border once and for all by increasing detention, transportation, and removal capabilities.

The revised request for the Department of Defense will support the deployment, in coordination with the Governors, of up to 6,000 National Guard members to the southern border. There, they will assist the Border Patrol by operating surveillance systems, building infrastructure, analyzing intelligence, and providing training until new Border Patrol agents and technologies come online. The request increases funding for training and other assistance for State and local authorities to support the Border Patrol on targeted enforcement missions. The request for the Department of Justice

will provide additional resources for the prosecution and adjudication of illegal immigration cases.

I designate these proposals in the amounts requested herein as an emergency requirement. I urge the Congress to act expeditiously to address the security needs along the Nation's borders.

The details of these requests are set forth in the enclosed letter from the Acting Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

## Message on the Observance of Cuban Independence Day, 2006 May 18, 2006

I send greetings to those celebrating the 104th anniversary of Cuban Independence.

The hope of freedom is found in every heart, and it is the future of every land. The United States is committed to advancing the values that sustain liberty and helping establish a just and peaceful government in Cuba. On this anniversary of Cuba's independence, we look forward to the day when Cuba embraces democracy and human rights for all her people.

This anniversary also is an opportunity to recognize the generations of Cuban

Americans who have contributed to the vitality, success, and prosperity of our great Nation. Through their devotion to faith, family, and freedom, they have helped make our country stronger and better.

Laura and I send our best wishes. May God bless the people of Cuba.

GEORGE W. BUSH

NOTE: This message was released by the Office of the Press Secretary on May 19. An original was not available for verification of the content of this message.

## Remarks on American Competitiveness in Highland Heights, Kentucky May 19, 2006

*The President.* Thanks. Please be seated. Geoff, thanks for the introduction. He said I was the last sitting President—the last sitting President to be here before me was a Texan. [*Laughter*] I don't know what took the other ones so long to get here—[*laughter*—but I'm proud to be here; particularly proud to be in NKU, Northern Kentucky

University. Thank you very much for letting me come by.

It's a good place to come to, to make sure that America understands we don't need to fear the future because we can shape it. That's what I want to talk to you about today, is the need for the United States of America to remain the leader of

the world. And one way you remain the leader is you have places like excellence—centers like Northern Kentucky University where you've got innovative curriculum, high standards, the willingness to work in your community—all aimed at making sure our kids have got the skills necessary to compete. And that's why I'm here.

So I want to thank the president—Mr. President, thanks for having me. [Laughter] He'd probably rather be called doctor. But, Jim, thank you for having us. Thank the faculty for letting me come. I appreciate you teaching; teaching is a noble profession. For the students who are here, one career path you ought to think about is being a teacher. And one thing you've always got to remember is the child's first teacher is a mother and a father.

I bring my RSVPs from Laura. She is giving a graduation speech tomorrow—she just didn't get the invitation to come to NKU to give the graduation speech here. [Laughter] If you had been wise, you would have had her and not me. [Laughter] She sends her best. She is really, really a good person, and I'm proud to—[applause]—I'm proud to call her wife. She's got to be the most patient woman in America. [Laughter] She's doing great; she sends her best.

I appreciate very much Congressman Geoff Davis. He's an interesting person. He served his country in the United States military. He didn't have to run for the United States Congress; chose to do so—I think sets a good example for people to understand, public service is a noble calling. And I want to thank you for inviting me here, Geoff.

I appreciate very much Senator Jim Bunning being here as well. So I was asking him what it was like to face the Cincinnati Reds. [Laughter] You might remember those days—[laughter]—at least I do. He's not only a fine Senator, he's a wonderful person. And his wife, Mary, reminded me she came here to NKU just a couple of years ago. [Laughter] She had the same kind of

career my mother did. Got in, got out without a degree, but nevertheless loved the experience. [Laughter]

I appreciate very much State Senator David Williams, president of the State senate. Thanks for coming. Make sure they got plenty of money to run this university, Senator. I've known Williams long enough where I can tell him that, see. [Laughter] It's great to see you. It's good to see the Judge as well. I appreciate Katie Stine—is with us today. Senator Stine, thanks for coming.

I want to thank the mayor—I want to thank Mayor Roettger, who is the mayor of Highland—the city of Highland Heights. Thanks for being here, Mr. Mayor. I want to thank all the local and State officials here. I want to thank Gary Toebben, who is the president of the Northern Kentucky Chamber. Thanks for having me here. I met Dr. Ed Hughes. If you don't know Ed, Ed is the founding president and CEO of Gateway Community and Technical College.

I want to say a quick word about community colleges. They're a really important part of making sure the United States is able to compete. People around here, if you've got a growing economy and are looking for labor, you need to support your community colleges. They're one of the really important institutions of the United States. And so for the community college students who are here, welcome; thanks for coming. Appreciate you taking advantage of the opportunities available to you.

We're living in historic times. They are exciting times. If you're a student getting ready to graduate from NKU, you've got a job available for you that's paying better than a lot of other college graduates have ever been able to get. This is a good time to be getting out of college.

On the other hand, these are difficult times in some ways, when you think about it. I mean, we're at war. And war is unsettling to people. War puts a strain on the

United States of America. War causes people to think about the future in different ways.

These are times of globalization. In other words, we're all connected now. Competition is coming at the United States from different places around the world. These are times of change. Technology changes so rapidly that it can create a sense of concern amongst our citizens.

I don't know if you know this or not, but by the time somebody gets 30 in this job market, people have changed jobs several times. That stands in stark contrast to the days when previous generations would go to work and stay at the job all their life. Pension funds are different now. We've got 401(k), defined contribution plans as opposed to defined benefit plans. These are changing times. And the fundamental question facing any nation, but particularly ours, is how do we adjust to those times? What do we do about it?

The temptation during changing times and unsettling times, for some, is to retreat and say, you know, it's really not worth it. We've been through this period in our Nation's history, a time when people would look abroad or look afar and say, "Well, these just seem such difficult problems that it's probably best that we don't take them on," or that, "Competition in the economic sphere is such that the best way to deal with that kind of competition is just to wall ourselves off."

Those two tendencies, which have happened in our Nation's history—tenants of thought—would be called isolationism and protectionism. And I'm here to talk today about why it is really important for us to reject those two notions—that the United States of America must not wall ourselves off from the world and must not forget our duty to help lead the world to be a better place.

Now there's a practical reason why we shouldn't isolate ourselves, and that is, there's an enemy that still wants to hurt us. And it's important for you all to know

that everyday that I wake up I think about the war on terror. I knew that after September the 11th—and many of the decisions I make are based upon what happened on that day, September the 11, 2001. My job is to do everything I can to protect the American people. And I knew that after the attacks there would be a tendency by people to say, well, maybe there's not a war, maybe that's just an isolated incident. Part of my job, by the way, was to say to the American people, "Go about your business; create jobs; go to school; raise your families—let us worry about it in Washington, DC."

But I think about this all the time. I know that in order for us to be able to defend ourselves, we have got to be active in the world. Another way to put it is, we will stay on the offense and bring the terrorists to justice before they hurt us again.

What's unsettling about these times for some is that we face a determined enemy. Let me tell you what I think about the enemy. The enemy is—they're coldblooded killers, the best way to describe them. They will take innocent life to achieve a tactical and strategic objective. These are people that are bound by an ideology. See, they're driven by an ideological fervor. In other words, they're not just isolated angry people; they're people that have got a point of view.

Perhaps the best way to describe the point of view is to remind people what life was like under the Taliban in Afghanistan. There's no freedom to dissent, no freedom to worship; if you're a woman, you were a second class citizen; if you were a young girl, you had no chance, very little chance to be educated. In other words, they had a view of the world which is 100 percent opposite of us. And that's the ideology of these people. And they believe it. They strongly believe that they should distort a great religion and convert it to meet their means. It's totalitarian in nature. It's something akin to dealing with fascism

and communism but with a different flavor to it.

Now, I recognize some in our country don't believe that, and that's okay. The great thing about our country is, we all have different views. But I believe it. And I know that if we were ever to retreat and isolate and say it's just too difficult to get involved, that ideology would flourish. After all, they've told us what their ambitions are, through intercepted communications and the different ways of finding out information. They have made it clear in their communications with each other that democracies are soft, capitalism is a failed system, and that it's just a matter of time before the United States of America were to lose its nerve.

That's what they believe. They believe if they can make life painful enough, that we will retreat from the battlefield, that we will give them safe haven—allow them to get safe haven. They want to reestablish roots in a country like they did in Afghanistan so they can help topple moderate governments in the Middle East as well as launch attacks against the United States of America. That's what they have said. As your Commander—as your President and as the Commander in Chief, it's probably pretty wise that I take the words of the enemy seriously, which I do.

And so therefore, for those who think it's probably best to let the world kind of drift off without American leadership or American involvement, they really don't see the world the way—at least the way I see it. And I understand some would like to see the world the way they hope it would be. But you've got to have a President who sees the world the way it is. And the way it is, is a dangerous place that requires the United States of America to be on the offense. And so we're waging the global war on terror.

And the global war on terror has a variety of fronts. The two most notable fronts, of course, are Afghanistan and Iraq. In Afghanistan, I said if you harbor a terrorist,

you're as guilty as a terrorist. I know full well that when the President says something, he better mean it. I meant it. And when the Taliban didn't believe us, we liberated the country. And today, there's a new democracy in the world, and that's important, particularly for the students to understand, because eventually I'm going to tie in democracy and peace. But there is a new democracy, and we're helping that democracy survive and grow.

Secondly, I said if you see a threat, you've got to take threats seriously. I saw a threat. Now, I don't want to rehash the history of the decisionmaking that went on in the runup to the war of Iraq. I would just remind people that people in both political parties and people all around the world saw a threat. And I feel strongly that the world is better off without Saddam Hussein in power.

And no matter what your position was on the issue of war in Iraq—and I can understand why good people differ about my decision—but we've got to make sure we don't retreat from the world and allow the good work that has gone on to collapse so that the enemy is able to gain a safe haven from which to create havoc and launch attacks. And so therefore, we have developed a plan for victory. It's not a plan for retreat; it's a plan for victory.

And the definition of victory is to support the Iraqis so they can sustain themselves, govern themselves, defend themselves, be an ally in the war on terror, and deny safe haven to Al Qaida. That's the goal.

The work is difficult work. It's hard to help a society go from a tyranny to a democracy. You see, the people who lived under the thumb of Saddam Hussein were terrorized by him. He divided the society up. He pitted groups of people against each other. He was ruthless in his administration of his so-called justice, and as a result, there's a lot of scarred emotions and distrust.

And yet something amazing happened in December of last year—admittedly it seems

like an eternity ago—but 12 million Iraqis defied car bombers, killers, and terrorists and declared in unity, “We want to be free.” It’s an amazing moment in the history of freedom. They’ve said to their Government and said to the people, “Look, we want to live in a free society. We want to be able to express ourselves. We want to be able to elect our officials.” And so the political process is one that’s now moving forward to honor that request, to honor the 12 million who voted.

There’s a government forming in Iraq. This is a new process for them. You might remember, we had a little trouble getting our own Constitution up and running; we weren’t a perfect democracy in our beginnings either. But nevertheless, what particularly the students now are seeing is, as a result of active involvement—not only to defend ourselves but adherence to some basic beliefs—a new democracy in the heart of the Middle East is emerging.

We’re training these Iraqis so they can take the fight to the enemy. I have said clearly to the American people, as the Iraqi forces step up, we will step down. But it’s really important for us to understand that if we leave too early, the new democracy will falter. It’s in the Nation’s interest that democracy prevail, because democracies help yield the peace.

A nation that becomes isolationist will be one that doesn’t understand that democracy can change the world, is one that says, well, let’s just get out of there before we complete the mission; let’s just not worry about what takes place in parts of the world other than, perhaps, our own neighborhood. But to me, that’s a bad choice, because, you see, during a period of time when we thought everything was calm, there was resentment and bitterness growing, which enabled an enemy to recruit suiciders who were willing to launch an attack on our Nation, which has caused more people to lose their life than in Pearl Harbor.

And so therefore, I really think it’s important for the American Government to work with allies to stay on the leading edge of change, to not lose our nerve, and to remember the lessons of history.

One of the interesting lessons of history is to look at Europe. We had World War I and World War II in a pretty quick period of time, and we lost a lot of troops there. And today, Europe is whole and at peace. So what happened? What caused the world to change? What caused the world to change was, Europe established democracies, and history has proven democracies don’t war with each other.

I love to tell the story about my relationship with Prime Minister Koizumi. You know, my dad was a young guy; right before he went to college, he joined up in the United States Navy just like a lot of others did—and I’m sure some of your relatives did the same thing—to fight the Japanese. Yet today, I sit down at the peace table with Koizumi. We talk about North Korea; we talk about Iraq; we talk about how allies can work to keep the peace.

I find it really interesting that that’s taking place. And what happened was, was that between the time that the United States fought the Japanese and the time old George W. sitting down there at the table with the Prime Minister, Harry Truman said, let’s help the Japanese develop a Japanese-style democracy. See, it’s really important for the students here to understand that liberty and freedom have got the—have proven the capacity to convert enemies into allies. And if you’re interested in keeping the peace, it’s important for the United States of America to lead.

There’s something universal about freedom. I believe in the universality of freedom. I believe everybody desires to be free. I don’t believe freedom is only owned by America; I don’t believe only Methodists can be free. I believe everybody desires to be free, and the United States of America must lead the world to be more free.

But our concern shouldn't just be in winning the war on terror and changing the conditions that enable folks to recruit—in other words, battling the ideology of hatred with the ideology of hope. An active nation is one that also works hard in places like the Sudan, where ours is the only nation in the world that has condemned what's going on in Darfur as genocide. The United States must lead to make sure—[applause]. A confident nation that does its duty in the international community is one that does what we're doing now in Darfur. We provide over 85 percent of the food aid to help the refugees in this area. We're taking the lead in the United Nations to call the world to account.

I believe to whom much is given, much is required. And therefore, it's important for the United States to continue to lead in the fight against HIV/AIDS in places like the continent of Africa. I believe that when we see starvation, this great Nation of ours should lead the world to help feed the hungry. I believe when we see devastation, the United States must continue to be willing to use assets to help people such as those whose lives were turned upside down by the tsunamis or the earthquakes in Pakistan. You see, a confident nation—a nation confident in its ideals and confident in its capacity must continue to lead and not isolate ourselves from the world.

We've got a good economy right now. And that's good news. Unemployment rate is 4.7 percent nationwide. We've got—productivity is up; homeownership is up; after-tax—real after-tax income is up by over 8 percent since 2001. Things are rocking along. The entrepreneurial spirit is strong. And yet when you think about it—when some think about it, they look at our economic future, and they're very worried. They're troubled. See, they're troubled by competition from places like China and India. And I can understand that. These are vast labor markets that are just beginning to grow.

And the response, in some instances, is to say, "Let's just don't—let's don't take them on; let us kind of pull back and wall ourselves off through protectionist policy." For those of you who've studied history, you might remember, we've had this kind of—we've had these decisions before in our Nation's history.

How about the 1920s? You might remember the 1920s, at least through your history books, at least—and that is, is that we were an isolationist nation. We said, "Let them figure it out in Europe; we'll let them work out their differences over there. We don't need to be involved." And we had high protective tariffs—and, by the way, really high taxes. And as a result, there's a worldwide depression. I'm not saying all of it was caused by those tendencies; I'm saying some of it was caused by those tendencies. So we've been through a period of time where we said let's—we lose our confidence; let's not be bold in our willingness to do the right things at home so that we can compete.

My attitude is this about America: We shouldn't fear the future, I told you. And I want to talk to you about some ways that we can shape the future in order to make sure America remains the leader. I'm not only talking about the leader for peace, but I'm also talking about the economic leader of the world. It's in our interests that that be the case. When our Nation leads and remains the most productive place in the world, it means a higher standard of living for our people. It means better wages, better quality of life. It means you're more likely to realize your dream. If we wall ourselves off and stagnate as an economy, it's going to be harder for this great American Dream to continue to renew itself.

And so here are some ideas for you as to how to make sure we continue to shape the future. One is to keep taxes low. The reason why it's important to keep taxes low is because in a global economy, capital will tend to flow where taxes are low. And the

other reason why is, is that you want money in the hands of the entrepreneurs.

You might remember, we've been through a lot in the last 5 years: recession; stock market collapse; corporate scandals; attacks on the country; natural disasters; high energy prices. Yet, we're growing; we're strong. And one of the reasons why is, is because we let the people keep more of their own money. See, the theory is, is that when somebody has more of their own money to spend, save, or invest, the economy grows. And so if we're going to be competitive, we've got to make sure that we keep money in the people's pockets. That's how the entrepreneurial spirit remains strong.

It's really important for our citizens to remember that 70 percent of new jobs in America are created by small-business owners. And the more money they have in their coffers, the more likely it is they're going to create jobs for the American people.

Secondly, we want this always to be the best place for entrepreneurship. We want people in our country saying, you know, "If I've got a good idea and willing to work hard, I'm going to take a risk because I want to own my own business." There's nothing better than meeting somebody who says, you know, "I started my business recently, Mr. President, and I'm doing just fine—and by the way, thanks for the tax relief so I can keep some more money to expand."

You'll hear, in Washington, people saying, "Well, we've got to raise the taxes in order to balance the budget." That's not the way Washington works. If we were to raise your taxes, Washington would figure out new ways to spend your money. And it might sound good; the titles of the programs will sound just fine, but we've got to make sure we set priorities with your money. My number-one priority is this: So long as we've got a troop in harm's way, a man or woman in uniform who's risking their lives for the security of America,

they're going to get whatever it takes to do their job. [Applause] Thank you all.

But we can cut this deficit in half if we're wise about how we spend your money, by setting priorities. And we will. The interesting thing about progrowth economic policies, coupled with fiscal sanity in Washington, is that when the economy grows, it creates more revenues for the Treasury. Last year, we've got about \$100 billion more revenues to our Treasury than anticipated. And this year, there's 11 percent ahead of where we were last year. And so if you hold your spending down by setting priorities and grow your economy, the deficit shrinks. And that's one way to control your budget.

But the real budget problems we face beyond the current account is—of the budget—is the unfunded liabilities inherent in Social Security and Medicare. If this Nation wants to be competitive, we have got to make sure that we reform Medicare and Social Security. And here's the problem, and this is—I'm addressing this particularly for the ones coming up, the people getting ready to get in the workplace, because the truth of the matter is, Social Security is fine for people who are eligible today. And Social Security is in pretty good shape for baby boomers. As a matter of fact, we're the problem. [Laughter] We're getting ready to retire—just so happens I turn 62 in 2008, which is a convenient age. [Laughter]

But there's a lot of us, see, and we're living longer than anybody anticipated. I'm riding that mountain bike because I'm trying to retard the aging process. [Laughter] But a lot of my—baby boomers are more conscious of their health. In other words, we're mindful that if you smoke, it's going to shorten your lifetime, or if you're drinking too much, it will affect you. And so there's been a—there's a health consciousness among my generation. There's a lot of us, and there's fewer people paying into

the system, and we've been promised greater benefits, which means we're on a collision course for our younger workers. And you're paying into this system that's going to be broke. And it's going to affect our ability to compete. That's what I'm telling you.

And so Congress has got to listen to this. Let's get rid of all the politics once and for all up there and come together and put a bipartisan solution to Social Security and Medicare so that we can say to a young generation of Americans, "We did our duty." And by doing our duty, by solving a problem that, admittedly, is down the road—but the longer we wait, the more acute the problem is going to be. Now is the time to fix it to make sure the United States of America remains the economic leader of the world. [*Applause*] Thank you all.

I was just getting warmed up, and we're running out of oxygen in here. [*Laughter*]

Trade is an interesting issue. One way to determine whether the Nation has lost its confidence is whether or not the Nation is willing to trade, be a free trading nation. And I can understand people's concerns about imports coming in from China and imports coming in from India. But I don't think we ought to allow those concerns to close down markets. As a matter of fact, I feel very strongly that the United States of America must do the right things internally and also open up markets so that we can keep competition in a global way.

Here's the thing: My job is to make sure that we're treated fairly, that with opening markets—our own markets and getting other people to open their markets, that they treat us the way we treat them, because I strongly believe, one, trade is good for the world; two, it's a good way to alleviate poverty; three, it's important for creating jobs. Northern Kentucky, by the way, benefits from trade. One reason your job base is strong is because we're selling goods made here, elsewhere.

The way I like to tell the American people—it's like China, for example. I was with President Hu. I said, "Mr. President, it's fine for you, selling your goods here, but you've got to understand something about the American people: We just want to be treated fairly." So intellectual property rights, if you have a product here, we're not going to steal the patent—steal the intellectual property rights from you; don't steal it from us. If you—treat our manufacturers well; make sure your currency moves like our currency moves. That's all we want, Mr. President." The American people are fair. And the reason I'm confident in talking about why opening markets will be good for us, because I firmly believe we can compete with anybody, anytime, anywhere. And America must never, never lose that thought.

So I know I shocked some people the other day when I got up and said, we're addicted to oil and that's a problem. But if we're really interested in being a competitive nation, we're going to have to do something about our reliance upon oil—now. So I'm working with Congress to promote what's called this Advanced Energy Initiative. And we're working on a variety of fronts. First, one thing we can do is make sure we promote clean coal technology. We've got a lot of coal—like, 250-some odd years worth of coal. We also care about our environment here in America. And we've also got the capacity to make sure that we develop the technologies that will enable us to use this coal. One way to get off oil and hydrocarbons is to use our coal in an environmentally friendly way, and I believe we'll be able to do so. We're spending a lot of money in Washington, by the way, on clean coal technology, and I think it's a proper use of taxpayers' money to do so.

We're also investigating coal-to-liquid technology. In other words, we'll be able to use our coals to be able to provide liquids that we'll be able to use, as well as an energy source. But there's some other

interesting ideas going on. For example, I like the idea of our farmers being able to provide energy to power automobiles; it's called ethanol.

But there will be some technological breakthroughs that allow us to use switchgrass. Somebody said, what is it? Well, it's grass that looks like a switch—[laughter]—that grows in dry climate. See, that makes sense, doesn't it, to be able to investigate whether or not we can convert that kind of material to energy? I think we'll be able to. Wood chips—now all of this sounds fanciful to some, which the Internet seemed fanciful at one point in time.

And so we're spending money at the Federal level to investigate ways to be able to diversify. One of the interesting technologies that's now on the market is hybrid automobiles. But there's new battery technology being developed, and I'm told we're close to breakthroughs in this technology that will enable you to drive your first 40 miles on electricity alone. That's a pretty good deal, if we're able to achieve that kind of breakthrough. Particularly in big cities—a lot of people in big cities aren't going to drive 40 miles a day. They may not drive 40 miles a week. But nevertheless, when you start taking that amount of demand off the market, for gasoline, it starts to begin to affect our national and economic security.

In terms of electricity, we have got to move forward with nuclear power. Nuclear power is clean—and we're spending money on solar energy and wind energy. There's not going to be a single breakthrough; there's going to be a variety of sources, of new renewable energy sources that are going to enable us to be able to say to the next generation coming, we're less reliant on oil. It's in our economic interests and it's in our national security interests that we spend money now to develop the technologies that will get us off oil so we can leave behind an America that's com-

petitive, that will be able to compete in the global economy.

I'm now getting to the reason I came here—[laughter]—and that is that this country of ours, in order to be competitive, must always be on the leading edge of technological change and, therefore, must be always the best at research and development and, at the same time, must educate our children so they have the skills necessary to fill the jobs of the 21st century.

NKU has got some really innovative programs, kind of a seamless transition from high school to college. You've got math and science fairs. You're focusing a lot of your attention on making sure the skill sets that you teach your children are relevant, that will actually keep us competitive.

Let me talk about research and development right quick. I believe there's a proper Federal role for basic research. The reason why is, there has been some Federal research projects which have made a difference in your lives. People here probably don't understand it, but at least understand this. But the Defense Department spent a lot of money on figuring out ways to communicate, out of which came the Internet. See, the Internet came to be as a result of Federal research dollars being spent. I like to mountain bike; I like to put a little country and western music on my iPod. [Laughter] The iPod came to be because of Federal research into microdrive storage and different technologies. And so therefore, in order to make sure America is competitive and that we're the leader of the world, I believe we ought to double the amount of money we spend in basic research at the Federal level.

Secondly, what's interesting is, most research money is spent by the private sector. One of the great things about our system is it encourages people to—encourages corporations to invest so they can remain productive and be able to compete. One of the tools that we've used to encourage people to invest in research and development is the research and development tax credit.

Curiously enough, it expires on a regular basis, which then causes uncertainty. If you're not sure the tax thing is going to be around, you may not want to invest. And so in order to make sure we continue to get the \$200 billion a year we get from private sector into research and development, we need to make the research and development tax credit permanent.

Thirdly, if our children don't have the skills necessary to fill the jobs of the 21st century, the jobs are going somewhere else; make no mistake about that. In a global economy, whether we like it or not, whether we're protectionists or confident, the jobs will go somewhere else. And so therefore, it's really important that the United States of America focus hard on the math and sciences. And by the way, we made a pretty good start with No Child Left Behind. And the reason why is, is that we're beginning to change the attitudes towards one of the real keys to success, and that is measurement.

So I go to Washington, and I said, we'll be strongly committed to helping Title I students in particular with additional money, but I want the States and the local governments to show us whether or not the kids are learning. I didn't think that was too much of a request to ask.

We didn't say, "Here, you do this curriculum." We didn't say that. We didn't say, "You've got to hire so-and-so or run your schools this way," because I believe in local control in schools. But we did say, "Why don't you show us—measure." Let's stop guessing in America. Let us know for certain whether or not our children are going to be able to compete in the 21st century, starting with making sure every child learns to read. I don't think that's too much to ask, to make sure every child can read. If you can't read, you're not going to be a scientist or an engineer. You won't be able to fill the jobs of the 21st century.

And so we started No Child Left Behind, and I want to appreciate the State of Kentucky for implementing the No Child Left

Behind standards. It says we're going to raise standards—we're not going to tell you how to run your schools, but you need to measure. And by the way, if you find that a child can't read at grade level, here's a little extra money to help. In other words, we use the accountability system to be able to diagnose problems early and solve them before it's too late.

In the old days—you might remember those days—we just kind of shuffled the kids through. And guess who got shuffled through? Inner-city African American kids, just move them through; it's so much more easy; just let them go. Kids whose parents don't speak English as a first language, they're too tough; just move them through. But that's not fair, and it's not right, and it's going to mean America will not be able to compete. And so we shut that practice down, and America is better for it.

And so let me read you some interesting statistics—I'm able to read these to you because we measure. [*Laughter*] In 2005, America's fourth graders posted the best scores in reading and math in the history of the test. In other words, there's a norming test to determine whether or not the local accountability system—standards or systems are making a difference. African American fourth graders set records in reading and math. The Nation's Report Card showed eighth graders earned the best math scores recorded ever. Eighth grade Hispanic and African American students achieved the highest math scores ever.

In other words, we've had an achievement gap in our country, and because we focus on each child and measure and insist that curriculum work, that achievement gap is growing—in order for this country—is shrinking. In order for this country to be competitive, all our students have got to get a good education. Everybody must be drilled in the basics. And now it's time to add. It's time to add math—focus on math and science. This college is going to—this university will benefit by making

sure that we've got high school students—junior high and high school students coming out of our—these institutions with the capacity to be interested in math and the skill set necessary to be able to take on some of the really interesting courses being taught here.

And so why am I concerned about math? Well, we also know that by the time a student gets to high school, most of our students have fallen behind the rest of the developed world in math and science. You're able to measure. And that's not good enough for America. It's a warning signal, it seems like to me. If we're going to be a confident nation that doesn't wall ourselves off from the world, that competes and leads, we better make sure the next generation of children coming up not only are good readers but have got the ability to be skillful in math and science and engineering and physics and chemistry.

And here's some ideas for us. First, I believe we ought to expand Advanced Placement programs around the country by providing money to train 70,000 high school teachers over the next 5 years to teach AP. Now, AP is an interesting program. Some of you probably know what it is. Here's the way I like to describe it: We're going to set high standards, and we're going to expect the best. And we're going to have teachers with that skill set necessary to convince students it's in their interest to learn AP. I went to an interesting AP school in Dallas, Texas, and they said it's graduating more AP students than any other high school in the country. Of course, you know how Texans are. Anyway—[laughter].

But I walked into a classroom and had a young Latino—guy had a pony tail on, and he said, "I want to be an astrophysicist, Mr. President." And it was child after child—because they had an AP teacher raise those standards—say, I want to be a chemist; I want to be a physicist. We can do this in America. And one way to start is to make sure that AP classes flourish.

Secondly, we're going to have a program that has 30,000, what we call, adjunct professors. These will be math and science professionals who will go into classrooms—one way to say this strategy is to say, "Look, it's okay to be a math—and scientist; it's cool." But we need—I went to a classroom outside of Maryland, and there was a NASA engineer in there, and he could make science really seem interesting to these kids.

Thirdly, we've got to make sure that we have the same rigorous examination of our math curriculum that we did with our reading curriculum. See, we went through a whole process of helping local districts determine whether or not the reading curriculum they were using was going to work. By the way, one way to determine is you measure.

And so Secretary of Education Spellings has established what's called the national math—I signed, through Executive order, her recommendation—the national math panel. They met this week earlier. They're 17 expert panelists and 6 members from other Government agencies. They're going to help design standards and accountability, as well as teaching methods. In other words, we're going to get focused on this, and we expect our States to join us and to focus on math and science. It is really important that we start laying that skill set now for the next generation of Americans if we're going to be confident.

And by the way, in the eighth grade, if you start falling behind in math, you ought to get that supplemental service money, that extra help, just like we provide for third and fourth graders in reading when they begin to fall behind.

Obviously, some are saying, "Well, that sounds great, Mr. President, how about helping those of us who can't go to college, go to college." I'm a big believer in Pell grants. Pell grants are a very important part of making sure American education lays that foundation for excellence. We've increased the number of Pell grants since

I've been your President by a million. We've got 5 million kids now getting Pell grants, and the maximum grant has gone from 3,750 to 4,050. If you qualify, you get 4,050. But I think we ought to provide additional incentives to the Pell grant program. We call them enhanced Pell grants—and we're working with Congress—they've actually just passed the two ideas that I think make sense.

One is that if you're a graduate with a 3.0 and you've taken a rigorous high school curriculum—if you take a rigorous high school curriculum and you go to college and maintain a 3.0 in college for your first 2 years, your Pell grant increases 750 for the first year, 1,300 for the second year. The purpose of this is to say to high schools, keep raising that standard. Keep providing rigorous courses in math and science, and for the students that qualify, there will be a reward. And by the way, once you get into college, there will be an additional \$4,000, on top of the Pell grant, for third and fourth year students who have maintained 3.0 and who major in math, science, or a critical foreign language.

And so here are some incentives to build on this strategy to make sure America competes. So before you all pass out, I want to say one other thing—[laughter]. Laura said, whatever you do, don't go over to Kentucky and get a little long-winded. I obviously didn't listen. [Laughter]

I feel passionately about our country's future. I am optimistic about America. I've got a unique perspective. I am able to see America in a different way from you all. I am able to see these unbelievable acts of kindness that take place on a regular basis here in our country, people willing to say, I want to serve my country by loving a neighbor. I also understand that our value system, our belief in human liberty is just a powerful motivator for good. And I know the entrepreneurial spirit is a way to make sure people are able to realize dreams.

And so what I really want to share with you is I understand that there's some uncertainty and worries because of circumstances today, but you've got a President whose—I've got no doubt in my mind that the world is headed toward peace and that this country is going to remain the economic leader of the world. We just can't lose our confidence. America shouldn't fear the future, because we're going to shape the future.

Thanks for letting me come by.

NOTE: The President spoke at 3:30 p.m. at Northern Kentucky University. In his remarks, he referred to James C. Votruba, president, Northern Kentucky University; Kentucky State Senator Katie Kratz Stine; Mayor Charles W. Roettger III of Highland Heights, KY; Prime Minister Junichiro Koizumi of Japan; and President Hu Jintao of China.

## Remarks at a Reception for Congressional Candidate Geoffrey C. Davis in Florence, Kentucky

May 19, 2006

*The President.* Thank you all very much. Geoff, thanks very much for your kind introduction; thanks for your service. I'm here because there's no doubt in my mind, Geoff Davis is the right candidate for the Fourth Congressional District.

I've gotten to know him. I got to know the kind of person he is. And you know, when you find somebody who is full of integrity, somebody who prioritizes his faith and his family above all else is somebody you need to send back to Washington, DC.

He came and campaigned hard here, and he told you what he was going to do, and he has done what he said he's going to do. Geoff Davis needs to be reelected to the United States Congress for the good of this district and for the good of the United States of America.

You know, one of the interesting things about Washington is we've got plenty of lawyers up there. [Laughter] I'm not one. [Laughter]

*Congressman Davis.* Me, neither.

*The President.* Neither is the Congressman. [Laughter] Seems like when you've got somebody who has got the kind of experience we need in Washington—I'm talking about experience outside of politics—that you ought to keep him up there. See, he's a fellow who's a small-business owner. This is a really vibrant part of our country, right here in northern Kentucky. It's a part of the world where the entrepreneurial spirit is strong. And it makes sense to have somebody in the United States Congress who has lived the life that many of our entrepreneurs have lived.

And we're a nation that is at war. And I need allies in the United States Congress, people who understand what the military is all about. This man wore the uniform of the United States of America. Send him back to the United States Congress.

Davis really wanted—he really wanted Laura. He said, "You stay at home, Mr. President." [Laughter]

*Audience member.* Next time.

*The President.* Yes, next time. Unfortunately, she was tied up. But she's a believer. She wants me to tell you all, thanks very much for supporting this good fellow. I bring a message from her, and I bring a message from myself: Any time when you find somebody who is willing to run, that's making a sacrifice, it means a lot to have the support of the people. And so thank you all for coming today. Thanks for contributing to this man's campaign.

And I want to remind you that money is one thing, but he's also going to need

people out working those coffee shops, working the neighborhoods. And so I'm going to thank you not only for what you have done; I want to thank you for what you're going to do, which is turn out the vote to make sure he gets back to Washington, DC.

Anyway, Laura sends her best. And old Geoff is like me; he married well. [Laughter] All you've got to do is—if your six kids were 21, it would be a landslide. [Laughter]

But we flew down on Air Force One together. We talked about two things, I think, that will interest you. You can get to know a person pretty well when you're with them for a while and nobody else is around listening and there's not any—not any cameras and not any agenda papers. And so guess what he wanted to talk about? First, he wanted to talk about his children. I thought that was interesting. He could have talked about anything. He could have said bridges, or how about—

*Congressman Davis.* We did talk about— [laughter].

*The President.* How about this, Mr. President? Or why don't you tell them this, Mr. President? Presidents get a lot of advice. Some of it is solicited, and some of it is unsolicited. [Laughter] He wanted to talk about his family, how proud he was of his family. He wanted me to make sure I understood that he had six children and that one of them is going to NKU and one of them is 6. [Laughter] He wanted me to know how much he loved his wife and how much he respects her. I think that says something about the nature of the man. And I think the voters of this district ought to pay attention to the values of the candidates who are running for office. This is a man who's got strong values, the kind of values we need in the public arena.

Then he wanted to talk about the military. He wanted to share some thoughts. See, he went to West Point.

*Audience member.* Hey!

*The President.* Yes.

*Congressman Davis.* His son went to West Point.

*The President.* I'm glad somebody appreciates it. [*Laughter*] He wanted to share his experience with me as an officer, a West Point grad who—he's got friends out in the trenches still fighting for America. I think it's interesting to have a Congressman who feels comfortable enough to talk to the President about the command structure, the decisions we make that influence the troops in the field. See, we need people in Congress who understand that once you commit somebody into harm's way, they deserve all the support of the Federal Government. They not only deserve monetary support, they need strong moral support of our Government.

I'm proud also that Jim Bunning is with us today. He's a fine United States Senator, good man. That big right-hander is big enough to be able to see all way in the back. And his wife, Mary, is with him as well. Thank you, Mary. Thank you all for coming.

I want to thank State Senator Dan Kelly, the senate majority floor leader, for being here. Senator, thanks for coming. You make sure you turn out to help this guy turn out the vote.

You know, one of the interesting things about—one of the things I learned in Texas politics is the importance of the—we call them "county judges;" you call them "country judge executives"—"county judge-dash-executive." [*Laughter*] I remember campaigning for my dad in 1964. He was running against—yes, he's a good old boy. [*Laughter*] And he said, "Your job is to go tell them you'll pass out the literature in the courthouse." Then I got in the courthouse, and of course, it was completely empty. [*Laughter*] The courthouses were dominated in those days by the Democrat Party.

Good politics starts at the courthouse. You can tell whether a person is going to do well politically if he can get the court-

house crowd going for him, because that's—local politics always is the base of support. So I'm honored to welcome today Gary Moore, Ralph Drees, and Steve Pendery. These are the county judge executives of Boone County, Kenton County, and Campbell County. And we're glad you're here. Thanks for coming.

I want to thank the grassroots activists who are here. Somebody who is a grassroots activist is somebody who gets on the telephone at the right time and says, "I know Geoff Davis, and it's in our interest, our mutual interest, for you to go vote for him." A grassroots activist is somebody who does the tedious tasks of stuffing envelopes full of mailers that say, here's a good man with a good record. A grassroots activist is somebody who goes to their place of worship and says, "Oh, by the way, we have a duty to vote, and we've got a good man running here; don't let him down." That's what a grassroots activist is. And for those of you who are grassroots activists, thanks very much for being involved in campaigns; thank you for turning out the vote.

Let me talk about a couple of issues that are important. You win elections based not only on your values but what you believe and what you do. See, there's an interesting debate in Washington right now. There's a lot of anger in Washington. But anger is not a philosophy. Anger is not a set of principles. Anger is—you can't win elections by being angry. You win elections by being optimistic and hopeful and leading. That's how you win elections.

And we're in the lead. And I want to thank Geoff for joining this Nation as we lead the world toward peace. Our biggest challenge in Washington is to protect the American people. That's the biggest calling we have. It's the most important responsibility. When somebody says, "Name your most important responsibility, Mr. President," it's easily, "To protect you." I learned that lesson on September the 11th, 2001. It's a lesson I'll never forget as your President, that my most solemn duty is to

protect the American people. And therefore, it's important to have allies like Geoff Davis who are willing to stand strong in observing and honoring that duty.

I learned some lessons on September the 11th, and one of them is we face an enemy that is full of hate, that adheres to an ideology that is backwards, an ideology that's the opposite of freedom. An ideology, nevertheless, is one that can bind people together. I learned that these are folks you can't negotiate with; you can't hope for the best. You, kind of, can't sit back and say, well, maybe they'll change their mind. The only way to protect the American people and do our duty is to stay on the offense and bring them to justice. And it's important to have people in the United States Congress who understand that. And Geoff understands that.

Another lesson I learned is that it's really important to make sure this enemy can't find safe haven, can't hide in places so they can plot and plan in order to attack us. See, they have stated their objectives clearly. They want to spread their ideology, and they want us to retreat from the world. They think we will. They think it's just a matter of time for the United States to lose our nerve and to be—and to withdraw.

But they don't understand me, and they don't understand people in the United States Congress, like Geoff Davis. We understand our duty. I said, "If you harbor a terrorist, you're equally as guilty as the terrorist." Just as an aside, when the President says something, he better mean what he says. When a member of Congress says something, they better mean what they say, as well. I meant what I said, and the Taliban no longer is in power, and now 25 million people are free.

One of the interesting lessons of September the 11th, in this world in which we live, is that the United States cannot be complacent when we see a threat. If we see a threat, we must deal with that threat before it comes home to hit us. It used to be, we could see a threat, and

we'd say, wait a minute, we're okay; we've got oceans protecting us—you know, we're fine, because we're pretty well insulated from those kind of threats.

That changed on September the 11th. And I saw a threat. Matter of fact, people in both political parties saw the same threat I saw. Countries from around the world saw the same threat I saw. And the threat was a dictator who had killed millions of his people—killed hundreds of thousands of his people, used weapons of mass destruction, had invaded his neighborhood, declared the United States an enemy, harbored terrorists.

The President must use diplomacy before he ever commits troops into harm's way. We—worked as hard as I could to solve the issue of Iraq peacefully. When we couldn't do so, Saddam Hussein had a choice to make: disclose and disarm, or face serious consequences. He made the choice. The world is better off without Saddam Hussein in power.

And we have a plan for victory in Iraq. And a victory in Iraq is a country that can sustain itself, govern itself, and defend itself, an ally in the war on terror, and someone who will deny that which the enemy has declared they want, which is a safe haven from which to launch further attacks. And we're on our way. And it's really important to have Members in the United States Congress who understand the power of freedom to transform societies, the ability of our fighting forces—if given the proper equipment—to be able to achieve an objective, and not cut and run before the mission is complete.

These are difficult times for the American people. War is tough, particularly when you face an enemy that is able to put bloodshed on our TV screens on a regular basis. See, these people have no conscience; they have no sense of justice; they will take innocent lives in order to drive us out. That's what they're trying to do. And I need allies in Congress who are willing to understand the stakes, who know

that there is no option other than victory; that we're not going to retreat; that we're not going to allow the enemy to be able to have a safe haven in Iraq. And we will not abandon the 12 million people who defied car bombers and terrorists and said to the world, we want to be free.

We're going to succeed. We're going to succeed. You know, there are some interesting lessons in history—Geoff and I were talking about them as well. It's important for those of us in Washington to study history and to learn from history. One of the interesting lessons of history is the power of liberty to transform societies. It's happened. It's happened in recent times. World War I was a terrible war; World War II, also a terrible war. Both of them took place on the continent of Europe. And yet there are no wars on Europe today. Europe is free and whole, at peace because democracies don't war with each other. That's one of the lessons of history.

One of my better buddies in the world is Prime Minister Koizumi of Japan. That's probably not much of interest, until you realize my dad—or think about the fact that my dad fought the Japanese. One of the really interesting things that I think about when I visit with Prime Minister Koizumi—and, by the way, when I'm visiting with him, we're talking about the peace; we're talking about how to help democracy in Iraq; we're talking about what to do about the man in North Korea; we're talking about how to work together as strong allies to lay the foundation of peace. I find it interesting, and I think the American people ought to listen carefully to that lesson of history, that because Japan adopted a Japanese-style democracy, an enemy, a sworn enemy of the United States is today an ally in keeping the peace.

The same thing is going to happen in the broader Middle East. As democracy takes hold in the broader Middle East, we will have an ideology that defeats the ideology of terror in place, and someday an American President is going to be sitting

down with a duly elected leader of Iraq saying, how do we keep the peace? We're laying the foundation for peace, and I need allies like Geoff Davis who understand the stakes.

Government doesn't create wealth; government creates the environment in which people are willing to take risk to realize their dreams. And there is a fundamental difference in Washington, DC, on how to run this economy. We believe that the best way to run the economy is to let the people run the economy by keeping more of their own money.

This economy of ours is strong: 3.5 percent GDP growth last year; 4.7 percent unemployment rate across the Nation; 5.2 million new jobs in 2½ years. Productivity is on the rise; small businesses are flourishing; more people own a home today than ever before in our Nation's history. More minorities own a home today than ever before in our Nation's history. And the reason it's strong is because of the tax cuts we passed.

And I know what's going to happen if the other party runs the United States Congress; they're going to run up your taxes. Make no mistake about it; their view on how to grow this economy is to take more money out of your pocket. Our view on how to grow the economy is to let you keep more money. The tax cuts need to be made permanent.

Oh, you hear a lot of talk about the deficit in Washington, and the other side will say, well, here's how you solve the deficit—raise your taxes. See, it becomes a convenient excuse. That's not how it works in Washington. And Geoff understands that—that it doesn't work that way, to raise your taxes and balance the budget. No, what happens is, they're going to raise your taxes, and they're going to figure out new ways to spend your money. That's how Washington works.

The best way to balance the budget is to keep pro-growth economic policies in place which generate more revenue for the

Federal Treasury and hold down Federal spending. And that's why I need allies like Geoff Davis who are fiscally responsible with the people's money. We're on our way to cutting that deficit in half by 2009.

And by the way, if the United States Congress sees that supplemental I sent up there—that supplemental, by the way, aimed to make sure our troops have the combat equipment necessary to win this war on terror and to help the people down in Katrina—if they bust a 92.2 barrier I put on it, I'm going to veto the bill.

In order to make sure that we're a competitive—I just—by the way, I had a fantastic experience at NKU. I really enjoyed myself there. And it's a wonderful institute here. And I was talking about how to keep America competitive. That's one of the things we need. We need forward-thinking people in Washington, DC, who don't fear the future, because we intend to shape the future. We intend to make sure that we put policies in place that keep us the most competitive nation in the world.

And one thing we need to do in order to be the most competitive nation in the world is to get off our addiction to oil. In order to make sure America has the economic security for the future and the national security that we need, is we've got to do something about oil, and we've got to diversify away from it.

Here's some ideas: one, clean coal technology. We're going to spend research and development money to make sure we can use the coal—250 years worth of coal and burn it in an environmentally friendly way. We can do that. We'll be able to do that.

Secondly, we need to use coal to help get liquid fuels, see. And one of the things about Davis, he understands that. And he put, in the defense bill, \$5 million to help us make sure we can extract liquids from coal. In other words, it's a different way to make us less dependent on foreign sources of oil.

We need to change how we drive our cars. I want Kentucky farmers growing the

fuel for the future. I'm a big believer in ethanol. We've got battery technology going on that would mean that you can drive your first 40 miles on electricity and your thing doesn't have to look like a golf cart. [Laughter]

We're working on new solar technologies. We're working on wind technologies. We're investing in hydrogen so the little fellow here will be driving his car, not driven by gasoline but powered by hydrogen. I need—

*Audience member.* Good—

*The President.* I was about to say, this man is a nuclear power guy, and so am I. [Laughter] The best way to protect the environment and to have renewable sources of energy is through nuclear power.

And so I need allies in the United States Congress who understand that we have got to diversify away from oil. It's in our national interest and our economic interest that we develop a broad-based energy strategy that will get the job done.

Finally, I do want to talk about the importance of people in Congress who understand that values are important. One of the areas where we're making progress is promoting the culture of life. I think it's really important for our society to be a welcoming society, a society that recognizes everybody has worth, born and unborn.

Geoff Davis is an ally in promoting a culture of life. He's an ally—look, he didn't get to vote on these deals. He's in the House. But I can assure you, he supports my nominees for the Supreme Court and for the circuit court. These are people who will not legislate from the bench, people who are solid constructionists, strict constructionists.

It's really important to have people in Washington who understand that government can hand out money, but government can't put hope in a person's heart. That's done when a loving soul says, "I love you, brother. What can I do to help you?" Some of the most intractable problems in our country cannot be solved by money.

One of the things that we've initiated in Washington is the Faith-Based and Community-Based Initiative, which says to people of faith, you can apply for Federal grant money so that you can help heal broken hearts, and you don't have to lose the core of your mission. And we ought to have people in the United States Congress who understand that in order to solve problems, problems of the heart, that requires a higher power than the United States Government sometimes to do so. Geoff Davis understands that.

You know, de Tocqueville came to America in the 1830s. He came to America and observed that America was such a unique place because of the voluntary associations all across our country, where people would show up to help a neighbor in need. That spirit is still alive in America today, by the way. We've got people doing millions of acts of kindness on a daily basis, and there hasn't been one law that says you've got to do it, except for a higher calling. And the power of government must not stand

in the way of those trying to practice their faith to heal open hearts, but to stand side by side with them, and Geoff Davis understands that.

So I've come to northern Kentucky to support this good man and to ask you to continue to support him. He's making a difference in the United States Congress. He understands the challenges of the world in which we face, and he shares the same sense of optimism that I share, that this great country of ours can solve any problem when we put our mind to it. Send him back to the United States Congress and you'll be better off for it.

Thank you, and God bless.

NOTE: The President spoke at 5:34 p.m. at the Hilton Greater Cincinnati Airport. In his remarks, he referred to Pat Davis, wife of Representative Davis; former President Saddam Hussein of Iraq; Prime Minister Junichiro Koizumi of Japan; and Chairman Kim Jong Il of North Korea.

## The President's Radio Address *May 20, 2006*

Good morning. Earlier this week, I spoke to you from the Oval Office to lay out my vision for reforming our Nation's immigration system. And on Thursday, I went to Arizona to visit with the men and women of the Border Patrol. I wanted to get an update on their efforts because a secure America depends on a secure border.

I believe America can be a lawful society and a welcoming society at the same time. We must enforce our laws while honoring our proud immigrant heritage. So I support comprehensive immigration reform that will accomplish five clear objectives.

First, America must secure its borders. Since I became President, we've increased funding for border security by 66 percent,

hired thousands more Border Patrol agents, and caught and sent home about 6 million illegal immigrants. Yet we have much more work to do.

So this week, I asked Congress to provide funding for dramatic improvements in manpower and technology at the border. We'll hire thousands more Border Patrol agents. And to help these agents do their jobs, we will deploy advanced technologies such as high-tech fences in urban areas, infrared cameras, and unmanned aerial vehicles. We'll also draw on the expertise of State and local law enforcement in our border communities and give them new resources and training so they can help secure our border.

Putting these new resources in place will take time. To help during this transition, up to 6,000 National Guard members will be deployed to our southern border. They will assist the Border Patrol by operating surveillance and communication systems, installing fences and vehicle barriers, building patrol roads, and analyzing intelligence. The support of Guard personnel will allow Border Patrol agents to use their skills to focus on securing the border.

Second, to secure our border, we must create a temporary-worker program that provides foreign workers a legal and orderly way to enter our country for a limited period of time. This program would reduce pressure on the border, meet the needs of our economy, and allow honest immigrants to provide for their families while respecting the law. And it will help us make certain we know who is in our country and why they are here.

Third, we need to hold employers to account for the workers they hire by creating a better system for verifying documents and work eligibility. The system should include a new tamper-proof identification card for every legal foreign worker. This card would help us enforce the law and leave employers with no excuse for breaking it. And by making it harder for illegal immigrants to find work in our country, we would discourage people from crossing the border illegally in the first place.

Fourth, we must resolve the status of millions of illegal immigrants who are already here. They should not be given an automatic path to citizenship. This is amnesty, and I oppose it. Amnesty would be unfair to those who are here lawfully, and it would invite further waves of illegal immigration.

Some people think any proposal short of mass deportation is amnesty. I disagree. There's a rational middle ground between automatic citizenship for every illegal immigrant and a program of mass deportation. Illegal immigrants who have roots in our country and want to stay should have to

pay a meaningful penalty, pay their taxes, learn English, and work in a job for a number of years. People who meet these conditions should be able to apply for citizenship, but approval will not be automatic, and they will have to wait in line behind those who played by the rules and followed the law.

Fifth, we must honor the great American tradition of the melting pot by helping newcomers assimilate into our society. Americans are bound together by our shared ideals: an appreciation of our history; respect for our flag; and the ability to speak and write in English. We will work to ensure that every new citizen fully embraces our common culture. When immigrants assimilate, they will advance in our society, realize their dreams, renew our spirit, and add to the unity of America.

Congress is now considering legislation on immigration reform. That legislation must be comprehensive. All elements of this problem must be addressed together or none of them will be solved at all. The House started the debate by passing an immigration bill. Now the Senate should act by the end of this month, so we can work out the differences between the two bills, and Congress can pass a bill for me to sign into law.

We should approach this debate with confidence. America has shown before that we can enforce our laws and uphold our values, and we will do it again. Our Nation honors the heritage of all who've come here because we trust in our country's genius for making us all Americans, one Nation under God.

Thank you for listening.

NOTE: The address was recorded at 7:45 a.m. on May 19 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on May 20. The transcript was made available by the Office of the Press Secretary on May 19 but was embargoed for release until the broadcast. The Office of the Press Secretary also

released a Spanish language transcript of this address.

## Statement on the Formation of Iraq's Government May 20, 2006

I congratulate Prime Minister Maliki on the formation of Iraq's new unity Government. Iraqis now have a fully constitutional government, marking the end of a democratic transitional process in Iraq that has been both difficult and inspiring. This broadly representative unity Government offers a new opportunity for progress in Iraq.

The new Government reflects Iraq's diversity and opens a new chapter in that country's history. Iraq's new leaders know the period ahead will be filled with great challenge. But they also know that they and their great country will not face them alone. The United States and freedom-loving nations around the world will stand

with Iraq as it takes its place among the world's democracies and as an ally in the war on terror.

Today, as Iraqis look to their new Government, they can be proud that in 3 years, they have progressed from the oppression of a brutal dictator who fomented sectarian divides to an elected government in which all Iraqis have a voice. As Iraq's leaders work together to chart the future of their nation, bringing freedom and security to the Iraqi people, they make the world a safer place for all of us. The sacrifices of many of our country's noblest and bravest have helped make this day possible. We will not forget their contribution to our security and Iraq's democracy.

## Remarks on the Formation of Iraq's Government May 21, 2006

The formation of a unity government in Iraq is a new day for the millions of Iraqis who want to live in freedom. And the formation of the unity Government in Iraq begins a new chapter in our relationship with Iraq.

This morning I called the President, the Prime Minister, and the Speaker to congratulate them on working together to form the unity Government. I assured them that the United States will continue to assist the Iraqis in the formation of a free country, because I fully understand that a free Iraq will be an important ally in the war

on terror, will serve as a devastating defeat for the terrorists and Al Qaida, and will serve as an example for others in the region who desire to be free.

Thank you.

NOTE: The President spoke at 8:33 a.m. in the Diplomatic Reception Room at the White House. In his remarks, he referred to President Jalal Talabani, Prime Minister Nuri al-Maliki, and Speaker of the Council of Representatives Mahmoud al-Mashhadani of Iraq.

Remarks on the War on Terror and a Question-and-Answer Session in  
Chicago, Illinois  
May 22, 2006

*The President.* Thank you all very much. Thanks for the warm welcome. It's great to be back in Chicago, home of the mighty Chicago White Sox, world champs. I said that because the mayor is here—[laughter]—who, by the way, is one of the finest mayors in our country. Mayor Daley, thank you for being here. He's a huge Chicago White Sox fan. When I had the White Sox to the White House to congratulate them on the world championship—winning the world championship trophy, there was the mayor, beaming.

The other team here isn't doing quite so well these days. [Laughter] As a matter of fact, I had the honor, though, of throwing out the first pitch in the Chicago Cubs home opener against Cincinnati, and they won that game 16 to 7. You know, when you're President, sometimes you get blamed for a lot of things. [Laughter] So I want to assure all the Cubs fans here that the last time I saw them play, they were undefeated. [Laughter]

I really appreciate being invited here by the National Restaurant Association. Thanks for having me. You know, Laura and I don't eat out as much as we used to. [Laughter] But we do appreciate your industry's contribution to the country.

I appreciate your leadership in Washington on really important issues like tort reform and tax relief and immigration reform. I'm going to spend a little time today talking about immigration reform. But the main reason I've come today is to talk to you about a watershed event that took place this weekend in Iraq. On Saturday, in Baghdad, Iraqis formed a new Government, and the world saw the beginning of something new—constitutional democracy at the heart of the Middle East.

And if you like, after my remarks, I'd like to answer some of your questions. So be thinking of them.

But before I get there, I do want to thank Ed Tinsley. He's a west Texan, and like me, he married a woman from Midland, Texas. It's the best decision Tinsley ever made, and it's the best decision I ever made. Laura sends her greetings to you all. She's a fine First Lady, and I'm lucky she said yes when I asked her to marry me.

I appreciate Steven Anderson, the President and CEO of the National Restaurant Association. I appreciate sharing the stage with Denny Hastert. He is an excellent Speaker of the House. He is dependable, reliable, smart, capable. Do you realize that he will have served, come June 1st, longer than any other Republican Speaker in our Nation's history? And the reason why, he knows what he's doing.

And I appreciate Congressman Ray LaHood and Congresswoman Judy Biggert for joining us as well, today. They're here looking for a ride back to Washington on Air Force One. [Laughter] I appreciate all the State and local officials for coming too.

Our economy is strong, and it's growing. And the restaurant industry plays a vital role in this prosperity. National unemployment is 4.7 percent. That's lower than the average of the 1970s, 1980s, and 1990s. People are working. We've added over 2 million jobs in the last 2½ years. And one of the main reasons why is because the National Restaurant Association members are employing people. The NRA—National Restaurant Association—estimates that more than 12.5 million people work at 925,000 restaurants across our country. That makes restaurants the largest private employer in our land.

You not only help people put food on the table, but you provide many Americans with their first job, with a start. You teach people the importance of showing up on time and working hard and meeting the needs of our customers. You're also America's largest employer of immigrants, and you know how essential it is that we have an immigration system that is safe, orderly, and fair. And I agree with you, and that's why I laid out a vision for comprehensive immigration reform that would accomplish five key goals.

First, the United States will secure our borders by deploying thousands of new Border Patrol agents and giving those agents the best technology available to do their job.

Secondly, you can't secure our border with thousands trying to sneak in. And therefore, this country needs a temporary-worker program that will allow foreign workers to enter our country legally on a temporary basis to meet the needs of our economy and take the pressure off our border.

Third, we must create a reliable system for verifying documents and work eligibility so we can better enforce our immigration laws at the workplace.

Fourth, we will find a rational middle ground to resolve the legal status of the millions of people who have been here for quite a while, without granting amnesty.

And fifth, we will uphold the great American tradition of the melting pot so America can remain what it always has been, one Nation under God.

The reforms I proposed regarding guest workers are really important for your industry. Your association estimates that restaurants will add—will need 1.9 million new workers over the next 10 years, which means that you need workers—your need for workers will be growing faster than the American labor force. So you understand why effective immigration reform must include a practical and lawful way for businesses to hire foreign workers when they

can't fill those jobs with Americans. The restaurant industry has first-hand experience with immigrants and immigration law. And I appreciate your strong stand on Capitol Hill for comprehensive reform.

And here's where we are. The House passed a bill last—an immigration bill last December, and the Senate is working hard on its version of the bill. The Senate needs to complete its bill now so that the House and Senate can work out their differences and pass a comprehensive reform bill that I can sign into law.

We face challenges at home, and we face challenges abroad. So I've come to talk to you about an historic event that took place halfway around the world this weekend. This Saturday in Baghdad, the new Prime Minister of Iraq announced a national unity Government. This is a free Government under a democratic Constitution, and its formation marks a victory for the cause of freedom in the Middle East.

In three elections last year, millions of Iraqis cast their ballot in defiance of the terrorists. And now they have a Government of their own choosing under a Constitution that they drafted and they approved. As this new unity Government takes office, it carries with it the hopes of the Iraqi nation and the aspirations of freedom-loving people across a troubled region.

The unity Government has strong leaders that will represent all of the Iraqi people. I called them this weekend to congratulate them. I thanked them for being courageous and strong and standing for the belief that liberty will help transform their troubled nation.

The new Government is led by Prime Minister Maliki. He's a Shi'a. He's an Iraqi patriot who, for years, was part of the resistance to Saddam Hussein. He's shown courage and wisdom by surrounding himself with strong leaders who are committed to serving all the people. Prime Minister Maliki said this weekend, "Just as we did

away with the tyrant and the days of oppression and despotism, we will do away with terrorism and sabotage, backwardness, poverty, and ignorance.” The Iraqi people are blessed to have a leader like Prime Minister Maliki, and I’m proud to call him ally and friend.

Iraq’s new Government has another strong leader in its President, President Talabani. He’s a Kurd who distinguished himself by his service in the transitional government and in his long fight against Saddam Hussein. He’s proved that he’s not afraid to take the lead. He’s made clear that a democratic Iraq must reject sectarian violence as strongly as it rejects terrorism. He says, “It’s our duty, all of us, to work hand in hand to protect our people and to support Iraqi unity.”

Iraq’s new Government has another able leader in Speaker Mashhadani. He’ll preside over Iraq’s new Council of Representatives. The Speaker is a Sunni who originally opposed America’s presence in Iraq. He rejects the use of violence for political ends. And by agreeing to serve in a prominent role in this new unity Government, he’s demonstrating leadership and courage. It was said to me that he wouldn’t have taken my phone call a year ago. He’s now taken it twice. He says Iraq’s new leaders must govern by common vision. This common vision is critical to the new Government’s success.

Although Iraq’s new leaders come from many different ethnic and religious communities, they’ve made clear they will govern as Iraqis. They know that the strategy of the terrorists and the insurgents is to divide Iraq along sectarian lines. And the only way the enemy will be defeated is if they stand and act as one.

The Government is still a work in progress, and overcoming longstanding divisions will take time. Iraq’s new leaders know they have a great deal of work ahead to broaden the base of their Government and to unite the people. They also understand that representing all Iraqis and not

just narrow sectarian interests, they will be able to make a decisive break with the past and make a future of progress and opportunity for all their people a reality. The unity Government must now seize this moment and pursue a common agenda for the future.

This weekend Prime Minister Maliki laid out his plan for a new Iraq. He promised to work for a sovereign Iraq that will assume responsibility for the security of its people. He committed himself to a free Iraq that will uphold international standards of human rights and respect the role of women in Iraqi society. He pledged to work for a prosperous Iraq that welcomes foreign investments and accelerates reconstruction and lays the foundations for economic growth and opportunity. He declared he would lead a transparent Iraq where Government is open and accountable and corruption is not tolerated. And he vowed to work for a peaceful Iraq that is the enemy of terror, a friend to its neighbors, and a reliable partner in the community of nations.

The Prime Minister promised that he will soon fill the remaining positions in his Government and announced the details of his plans to build his new country, his new Iraq. As his Government moves forward, it can draw on many strengths of the Iraqi nation. Iraqis are among the most highly educated and skilled people in the Middle East. They have abundant natural resources, including fertile soil, abundant water, and large reserves of oil. And they’re rich in cultural and historical and religious sites that one day could draw millions of tourists and pilgrims from across the world. Iraq’s new leaders understand that so long as they remain united, there is no limit to the potential of their country.

The unity Government opens a new chapter in the relationship between the United States and Iraq. The new Iraqi Government does not change America’s objectives or our commitment, but it will change how we achieve those objectives and how

we honor our commitment. And the new Iraqi Government—as the new Iraqi Government grows in confidence and capability, America will play an increasingly supporting role. To take advantage of this moment of opportunity, the United States and our coalition partners will work with the new Iraqi Government to adjust our methods and strengthen our mutual efforts to achieve victory over our common enemies.

At my direction, the Secretaries of State and Defense recently traveled to Baghdad to meet with the Prime Minister and other leaders. And now the new Government has been formed, I've instructed those Secretaries to engage Iraq's new leaders as they assess their needs and capabilities, so we will be in the best position to help them succeed. Iraqis are determined to chart their own future. And now they have the leadership to do it. And this unity Government deserves American support, and they will have it.

Our Nation has been through three difficult years in Iraq. And the way forward will bring more days of challenge and loss. The progress we've made has been hard-fought, and it's been incremental. There have been setbacks and missteps—like Abu Ghraib—that were felt immediately and have been difficult to overcome. Yet we have now reached a turning point in the struggle between freedom and terror.

Two years ago, Al Qaida's leader in Iraq wrote a letter that said, "Democracy is coming," and this would mean "suffocation" for Al Qaida and its allies. The terrorists fought this moment with all their hateful power—with suicide attacks and beheadings and roadside bombs—and now the day they feared has arrived. And with it has come a moment of great clarity: The terrorists can kill the innocent, but they cannot stop the advance of freedom.

The terrorists did not lay down their arms after three elections in Iraq, and they will continue to fight this new Government. And we can expect the violence to continue, but something fundamental changed

this weekend. The terrorists are now fighting a free and constitutional Government. They're at war with the people of Iraq. And the Iraqi people are determined to defeat this enemy, and so are Iraq's new leaders, and so is the United States of America.

The path to freedom is always one of struggle and sacrifice. And in Iraq, our brave men and women in uniform have accepted the struggle and have made the sacrifice. This moment would not be possible without their courage. The United States of America is safer because of their success, and our Nation will always be grateful to their service.

For most Iraqis, a free, democratic, and constitutional Government will be a new experience. And for the people across the broader Middle East, a free Iraq will be an inspiration. Iraqis have done more than form a government; they have proved that the desire for liberty in the heart of the Middle East is for real. They've shown diverse people can come together and work out their differences and find a way forward. And they've demonstrated that democracy is the hope of the Middle East and the destiny of all mankind.

The triumph of liberty in Iraq is part of a long and familiar story. The great biographer of American democracy, Alexis de Tocqueville, wrote: "Freedom is ordinarily born in the midst of storms. It is established painfully among civil discords, and only when it is old can one know its benefits." Years from now, people will look back on the formation of a unity Government in Iraq as a decisive moment in the story of liberty, a moment when freedom gained a firm foothold in the Middle East and the forces of terror began their long retreat. Thank you for having me. [*Applause*]

Thank you all very much. Thank you. Thank you all. I'll be glad to answer some questions, if you've got some. Tinsley said it would be helpful if I answered some questions. [*Laughter*]

*The President.* Let's see, you got one? Yes, sir.

#### *Tax Reform*

*Q.* I was just wondering, being a small-business owner, one of the things we really appreciate about your administration was the tax cuts for small business. And I was just wondering, are those going to be permanent, and are we taking action to make them permanent?

*The President.* His question is about tax cuts and whether they'll be permanent. First of all, a lot of Americans don't really understand that when you cut taxes on individuals, you cut taxes on a lot of small businesses. Many small businesses are subchapter S corporations or limited partnerships, which end up paying their taxes based upon the individual income tax rates. And so when you reduce taxes on everybody who pays taxes, you're really helping the small-business sector. And why that's—that's an important part of our economic recovery policy, because small businesses create 70 percent of the new jobs in America.

So thank you for recognizing the—thank you for reminding people here the importance of those tax cuts for small business. And also, by the way, there was some incentives in our economic recovery package that encourage you to buy equipment. And when you buy equipment, somebody has got to make the equipment. When somebody makes the equipment, it means somebody is more likely to be able to find a job not only at your place of work but the equipment manufacturer's place of work.

And so his question was, are you going to allow the tax cuts to expire? See, they weren't permanent. My answer is, in order to make sure this economic recovery is lasting and real, the tax cuts need to be made permanent. And the Speaker agrees with me, you'll be happy to hear. It's important for Congress to understand that when there is any uncertainty in the Tax Code, it will

make it less likely someone is willing to invest in a small business and expand their businesses. Uncertainty in the Tax Code creates uncertainty in the investment community or when people make investments.

So we're absolutely committed to making the tax cuts permanent. The argument you'll hear is, well, how can you possibly balance the budget if you make the tax cuts permanent? I guess the reverse of that is, "We want to raise your taxes to balance the budget." Unfortunately, that's not the way Washington works. The way Washington works is they will raise your taxes and figure out new ways to spend the money and not balance the budget.

The best way to balance the budget is to keep progrowth economic policies in place. I think you're going to find a report coming out this summer to be very interesting. In other words—last year, by the way, we exceeded the estimated revenues by about \$100 billion. The economy is cranking. When the economy works, people are employing people, and when people are making money, they pay more taxes. Right now it looks like that the revenues coming into our Treasury are greater than anticipated this time around too.

And so the best way to reduce our deficit is to keep progrowth economic policies in place—hence, permanent tax cuts—as well as being wise about how we spend your money. And the best way to be wise about how we spend your money is to set priorities. And my priority is to make sure our troops have what it takes to defend the United States of America.

#### *Voluntarism*

*Q.* Mr. President, my daughter's name is Jamie. She's a 16-year-old girl. What advice or recommendations would you give to her and to other youth of our country to help make our country a better place?

*The President.* Thank you. I would say that—to Jamie, listen carefully to that universal admonition to love a neighbor like you'd like to be loved yourself. You know,

I get an interesting perspective of America. I, of course, get to see the incredible folks who wear our Nation's uniform. It's unbelievably inspiring to meet men and women who have volunteered to serve our country in a time of war. And not only do I get to meet them, I get to meet their families. I also get to meet the entrepreneurs of America, people who are willing to risk time, effort, and money to grow a business. And as a result, we've got a great—we've got fat wallets relative to the rest of the world.

But the true strength of the country lies in the hearts and souls of our citizens. That's the really unbelievable strength of America. I get to meet people all the time. I met two youngsters today, Chinese Americans, who volunteered to go down to help the Katrina victims. Nobody told them to do it. There was no government law that said, "You're going to go down and love your neighbor." They heard the call.

And so my advice is to tell your daughter that she can be a part of a changing America by helping somebody who hurts; feed the hungry; find shelter for the homeless. America's strength lies in the armies of compassion that exist all across the United States of America.

And so I thank you for your question. Yes.

### *Health Care Reform*

Q. Thank you, Mr. President. First, I want to tell you, thank you—how much we love your brother in the State of Florida.

*The President.* I had nothing to do with it. [Laughter] Thank my mother. [Laughter]

Q. He has been very good to the restaurant industry.

*The President.* He has been eating a lot, I noticed. [Laughter]

Q. You said that, not me. [Laughter] Mr. President, with mandated health care beginning to sweep the Nation, and we're seeing it pop up on the State level, do you see the association health plan passing,

hopefully, before you're out of office? And where do you see mandated health care going for the business industry?

*The President.* First of all, I think that the Government has a—the Federal Government has a responsibility, particularly on two fronts, when it comes to health care. One is to take care of the elderly. Lyndon Johnson signed that bill, and it said the Federal Government will provide health care for the elderly, called Medicare. And thanks to the Speaker's leadership and others here, we reformed Medicare so it actually meets the needs of our seniors.

My attitude is, if you made a commitment to the seniors, make it a good commitment; make it work. And we didn't have prescription drug benefits as a part of Medicare. And yet we're willing to pay for the surgery for an ulcer, for example, but not the drugs to prevent the ulcer from happening in the first place.

Secondly, we got to—made a commitment to the poor, and that's through Medicaid as well as community health centers. These are facilities—and the Speaker and I have been working on this—to expand community health centers throughout America so the poor and the indigent can get primary care in these facilities and not at your local emergency rooms.

Now, I also believe—[applause]—but I believe the best health care system beyond that means making sure we strengthen the doctor-patient relationship. And that is—that's not a mandate; that's just a practical way to view medicine.

And so how can you do that? Well, one is to promote health savings accounts, which we are doing. Health savings accounts are unique products that enable a small-business owner and/or an individual to be able to purchase a catastrophic plan—low-premium catastrophic plan, high-deductible catastrophic plan—coupled with a tax-free savings account. Now, that's important because it means that you're in control of your account. The person, the customer,

the consumer is in control of making health care decisions.

One of the problems we have when it comes to cost is that we have the third-party payer system. Somebody else pays the bills, and therefore, there is no consumerism, so to speak, involved in health care.

Secondly, we got to recognize that certain individuals don't have the capacity to be able to buy health insurance like big companies can do, and therefore, it erodes the capacity of small businesses to be able to maintain their purchasing power. In other words, if it costs you a lot of money to buy the insurance plan, you're not going to pay for your insurance, see. And right now our small businesses are being penalized because they're not allowed to pool risk across jurisdictional boundaries. A solution to that is association health plans. The Speaker got it passed out of the House. It got killed by the trial lawyers in the United States Senate.

To answer your question, yes, I hope to get it out. It's a practical way of making sure that small businesses aren't mandated but have got choice in the marketplace. That's what I'm trying to tell you. I believe in choices in the marketplace. I believe in empowering people to make rational choices. In order to have a health care system that helps control costs and where people can make rational decisions, there needs to be transparency in pricing.

I know when I go to restaurants, I got a menu, see, and they say, here's what it costs you. That's not the case in most health care decisions, is it? I don't—I haven't seen a lot of price postings. So we're working—we're using Federal leverage through Medicare and the Veterans Administration, for example, to say, if you're doing business with the Federal Government, post your prices and the quality of service you're getting, so consumers can start making rational decisions in the marketplace. When you've got rational decisionmaking based upon price, it's going to

help control cost, which is very important for your industry.

Third, this is an industry—the health care industry is one that's kind of lagging behind when it comes to information technology—the docs are still writing out prescriptions with longhand. Or sometimes when you're in a hospital and you're going from place to place, you're carrying files, right? And they've been written out in longhand. Well, it's not a very efficient use of a person's time; plus, most doctors can't write. [*Laughter*] And therefore, costs are higher than they should be in medicine. So we're working to make sure that information technology is spread throughout the medical industry.

Again, the Federal Government has got a good chance to help leverage our position. We're a major provider of health care. And therefore, we ought to be using our position to start off helping the industry write a common language. Part of the problem in medicine is that there's not a common language, and therefore, it's hard to have a smooth information technology system throughout the medical industry. Our goal, by the way, is for every American to have a electronic medical record, and—but, by the way, with a guarantee of privacy.

And finally, one reason why you're having trouble buying health care is because these lawsuits are running good docs out of practice. Do you realize there are over 1,500 counties in America without an ob-gyn? And part of the argument is we got a health care system that is accessible and affordable—then we got to do something about these junk lawsuits. Again, the Speaker got a good medical liability bill out of the House of Representatives, but the trial lawyers defeated it in the United States Senate. And if you really want to help the country and make sure you've got affordable health care, get ahold of your United States Senators who are voting against meaningful medical liability reform, and help us get a bill passed.

That's a long answer—it's a long answer because I wanted to show you we've got a comprehensive plan that runs the opposite of Federal Government being the decider at all costs. I don't believe we ought to federalize medicine; I believe we ought to localize medicine. And the most local medicine is between the doctor and the patient.

#### *Canada-U.S. Relations/Border Security*

*Q.* Good morning, Mr. President—from Toronto, Canada, and my question is regarding border restrictions between our two countries. Given the impact on tourism, do you feel that it's necessary to continue increasing border restrictions between Canada and the U.S.?

*The President.* What he's referring to is right after 9/11, the Congress passed legislation that said there will be a new—border—an identification card between—travel between our countries. And you can understand why our Nation reacted the way—I hope you can understand the way our Nation reacted the way we did after 9/11. I mean, we were—we analyzed all aspects of our security. We were—we said we were going to do everything we can within the law to protect ourselves. And Congress passed some new laws to make sure that we knew who was coming in the country and who was leaving the country. And I supported those laws.

And now we're working with your Government to make sure that the identification cards that will be used between our two borders are compatible not only with our needs but your needs. I spoke to Prime Minister Harper about this subject. He's very aware and worried about a identification card that would be difficult to get into the hands of Canadians; it would make it difficult for Canada to continue to attract conventions. And so to answer your question, yes, we ought to have a system that is compatible with both our countries' needs.

The difference between—and by the way, it's very important for the Canadians to understand, there's a difference in the debate going on between the northern border and the southern border. The southern—and by the way, it's important for Americans to understand, the language of this debate must never say that Canada and/or Mexico are the enemies of the United States. They're friends of the United States. They're our friends and neighbors.

And so the issue this gentleman is referring to really is, how do we make sure we have a system that enables the legal people to come back and forth, I guess, is the best way to describe it. And we're working on it, to make sure that whatever documents are needed will not be restrictive, but nevertheless, informational, I guess is the best way to put it.

Thanks.

Yes, sir. Okay, you're next after that. Yes.

#### *Fuel/Energy*

*Q.* President Bush—from Crown Point, Indiana. First of all, I want to say, you're doing a fine job.

*The President.* Well, leave it at that, will you? Thank you. That kind of makes your question not very credible when you say something like that. [*Laughter*] But I'll accept it anyway.

*Q.* My question is, is there a realistic yet aggressive timetable and strategy to get our reliance off of Middle East oil and go to a different fuel source or ways that the United States can prosper?

*The President.* No, that's a great question. One of the things that should be evident to the American people now is that we live in a global world, and when demand for hydrocarbons increases in places like China and India, it causes our gasoline prices to go up. In other words, a global economy is such that when demand rises faster than international supply, the price of crude goes up—which is the feedstock for gasoline. And so the American people

see firsthand what it means to be in a global world which is dependent upon fossil fuels, hydrocarbon.

And so the realistic timetable is as soon as possible. And I do think it's realistic. And here's—what he's saying is, how quick can we get off oil, all right? Well, most oil is consumed in America because of our automobiles. And the question then is, how quickly can we diversify the automobile fleet from one that is gasoline-only to one that becomes a mix, for example, of gasoline and ethanol? And we're making pretty good progress. If you really think about, for example, the penetration of ethanol in the Midwest, it's been amazing over the last couple of years. Indiana people—you're beginning to get E-85 pumps. E-85 means 85 percent of the fuel you buy at an E-85 pump is ethanol. We've put tax incentives in place to encourage the construction of ethanol refineries, and they're beginning to grow quite dramatically.

Some people say, well, you've got ethanol pumps, but doesn't it make it difficult to use it because the cars are not compatible? That's not true. There are 5 million automobiles on the road today that are flex-fuel vehicles. In other words, they can use ethanol and/or gasoline or a combination of the both. So the technologies to make our automobiles ethanol-compatible are around. As a matter of fact, you may have a flex-fuel vehicle and just don't know it.

The question then is, how do we—do we have enough feedstock into the ethanol business to be able to really get major penetration? And that's where we're spending some money. Because we got corn all right, but sometimes you got to eat corn. And sometimes your pigs and cows have got to eat corn. And so pretty soon, we're going to run into a bind when it comes to corn for ethanol and corn for other means and other needs. And so we're spending quite a bit of money at the Federal level, and have been for a couple of years, to see whether or not we can develop new tech-

nologies to make ethanol out of other feedstocks like switchgrass or wood chips.

They say we're getting pretty close to that. I can't give you a specific timetable. I know we're getting close to a battery that can go into a hybrid vehicle. Hybrid vehicles are good things—that switches between electricity and gasoline. And the next breakthrough is going to come to a vehicle that doesn't switch between electricity and gasoline until you've driven your first 40 miles. In other words, you'll have a battery that will be able to last for 40 miles before your car has to kick into gas—gasoline. And that's going to help save a lot of—that will help reduce demand for oil.

Longer term—and this is—this is a longer term—that's within 5 years, they tell me, as well. But over the next 10 years, my hope is that we have hydrogen become a technology that is commercial and applicable, so you're really driving automobiles with hydrogen as fuel source, not gasoline. And we're spending a lot of money on that. We're spending over a billion dollars to accelerate technologies to do that.

In the short term, in order to—by the way, it doesn't answer your question, how do you get off oil. But it does answer, how do we help consumers in America. I view rising gasoline prices as like a tax. It certainly affects small businesses. And one way to do it is to make sure we've got ample supplies of gasoline available. You realize, we haven't built a new refinery since the 1970s. If Congress is that concerned about the price of gasoline, it seems like they ought to give us flexibility so we can permit expansions and/or new refineries so that we can keep the price—[*applause*]. It's a long-winded answer, but it's a problem that requires a strategy in which we spend money on research and development and on a variety of fronts.

Another example is clean coal technologies. It's conceivable that relatively—well, within a period of time—it's not—in my lifetime; let's put it that way—that we can have coal-fired plants that have got

zero emissions. Now, that's important for people to know, that it's possible. We've spent about billions there, as well, to achieve this breakthrough, because we've got 250-some odd years of coal reserves in the United States.

I think we ought to be using nuclear power. It is renewable, and it produces no emissions. We're spending money on technologies to make sure we can reprocess spent fuels. In other words, we're working on a variety of fronts. I don't know the timetable—as soon as possible. And the reason why is, is that our national security issues oftentimes rest with countries that have got oil, and they don't like us, see.

And so the faster we're off oil, the better off we're going to be from an economic security perspective and a national—and I probably surprised you when I got up at my State of the Union and said, "We've got a problem; we're addicted to oil." You know, I'm from Texas and all that. But I believe it, and I know it. And so I'm going to work with members from both political parties to expedite research and development so we've got new technologies to achieve this important objective.

Yes, ma'am.

#### *U.S. Relations With Latin America*

*Q.* Thank you—Westport, Connecticut. Speaking of oil-producing countries that are not friendly to the United States right now, I'm very concerned about what's going on in Venezuela and Bolivia and all—the coalition of Hugo Chavez. I wondered what your strategy was going to be, or what you're working on in that respect.

*The President.* Thank you. I am going to continue to remind our hemisphere that respect for property rights and human rights is essential for all countries in order for there to be prosperity and peace. I'm going to remind our allies and friends in the neighborhood that the United States of America stands for justice; that when we see poverty, we care about it, and we

do something about it; that we care for good—we stand for good health care.

I'm going to remind our people that meddling in other elections is—to achieve a short-term objective is not in the interests of the neighborhood. I will continue to remind people that trade is the best way to help people be lifted from poverty; that we can spend money—and we do in the neighborhood—but the best way for there to be growth is to encourage commerce and trade and prosperity through the marketplace.

I want to remind people that the United States stands against corruption at all levels of government, that the United States is transparent. The United States expects the same from other countries in the neighborhood, and we'll work toward them.

We'll continue to work with forces like the Central—countries like the Central American countries, where we passed a free trade agreement called CAFTA, to remind the people in that area that relations with the United States will be beneficial to their people. There's a lot of things we're doing.

Thank you very much. I'm concerned—let me just put it bluntly—I'm concerned about the erosion of democracy in the countries you mentioned.

#### *Trust in Government*

*Q.* Hi—Orlando, Florida. Let me first say, it's an honor to hear you speak. And I'm a proud supporter. I just had a quick question. Yesterday, at the keynote address, Ted Koppel mentioned that there is a growing lack of trust between government and the American people. How would you address this statement?

*The President.* He said there's a growing lack of trust between our Government and the American people?

*Q.* Yes, he did.

*The President.* Well, I think I would say that there's an unease in America now, and the reason why is because we're at war. And war is difficult—particularly this kind of war, where it's on our TV screens every

day. And I can understand why people are uneasy. Americans care about human life. We have a great compassion for people all around the world. And so when people read or see that the enemy has run a suicide bomber into a village or a marketplace and innocent people died, it breaks our heart. So there is an unease about America.

Hey, listen, we got an amazing economy—it's strong, and yet there's an uneasiness. And that's what happens in war. And let me just share my thoughts about this with you. If I didn't think we'd succeed, I wouldn't stay. And if I didn't think it was important that we succeed, I wouldn't stay. And the reason it's important is that we must understand that we're in a global war against a totalitarian group of people who will kill innocent life, there or here, in order to achieve an objective. That's just the lessons of September the 11th that I refuse to forget.

In Iraq, the enemy has made it clear—this is their words, not mine; I quoted the man—the Al Qaida guy in Iraq—those weren't my—I didn't make up those quotes. That's what he said. And by the way, you need your President and your Commander in Chief to take the words of the enemy seriously. And they have said it's just a matter of time—[*applause*]. They have said it's a matter of time for the United States to leave, that democracies are soft, that capitalist societies are weak. And their view is that if they kill enough innocent people, we will tire and leave. That's what they said.

They've also said, "We're going to stop the elections." They will try to sow sectarian violence in order to make it difficult for a democracy to succeed in Iraq. And the reason why they want us to leave is because they want safe haven from which to launch attacks—not only against the United States but modern Muslim nations in the Middle East. That's what they want to do.

Their vision—they have a vision. They have an ideology that is the opposite of

ours. They don't believe in freedom to dissent and freedom to worship. Matter of fact, they've taken a great religion and, in my judgment, have twisted it to meet their own needs.

If somebody said, "Well, what do you think life would be like with these folks?," just remind them what life was like in Afghanistan under the Taliban. There was no dissent, and if you did, you were whipped. Young girls didn't go to school. They have a backward vision of the world, but they do have a vision, and they want to spread that vision. And we stand in the way of spreading that vision—we and a coalition of nations that have bound together to promote democracy and freedom. That's what—and democracy worries them.

My quote in the speech was this guy's words—democracy will be a setback. That's why I said, the formation of this Government, under a Constitution drafted and approved by the Iraqis, is a setback, because it's—they've said, "We will defeat this democracy." But they're not going to defeat the democracy. The only way they defeat the democracy is if we let them defeat the democracy, we don't stand with this young Government.

Again, I know that—I know there's concern about—from the American people that we can't win. See, most Americans want us to win. Most Americans want to succeed. And there's questions about whether or not the strategy will do so.

And I can understand why people are concerned about whether or not our strategy can succeed, because our progress is incremental. Freedom is moving, but it's in incremental steps. And the enemy's progress is almost instant, on their TV screens. And of course, I get briefings from our commanders on the ground. I want to assure you that the information—I make my mind up based not upon politics or political opinion polls but based upon what the commanders on the ground tell me is going on.

I do want to share with you—thanks for bringing this up. It's not exactly the question. [*Laughter*] I'll share with you some of my thoughts about why it's important to have a democracy—liberty prevail in the Middle East. You know, our policy up until now was, let's just hope everything's fine. If it looked okay on the surface, then let's just don't rock the boat. Let's get our energy sources and everything will be all right.

But that's not what was happening. Beneath the surface, there was a—discontent and hopelessness and despair was beginning to take hold. And as a result, this group of killers sprung up, and they were able to recruit and train sophisticated suiciders. And they killed over 3,000 of our people.

I felt it was important for us to address not only the short-term needs of the country—which means, stay on the offensive and bring them to justice before they hurt us again—but also the longer term needs of the country, by addressing the root cause of the resentment and hatred. And in my judgment, the best way to defeat the totalitarian vision of the enemy is with an ideology that has worked, that is bright and it's hopeful, called freedom and liberty, expressed through democracy.

Now, I know there are some people in our country who say, why worry? Well, the reason “why worry” is because we have a duty to lay the foundation of peace for a generation to come. And I'm confident we can succeed. And I will tell you two examples of this—of why I'm confident. One, think of all the lives lost in Europe during World War I and World War II, American lives lost. You all know some of them. You know neighbors who had a grandfather or a father who went over—called up, went overseas to—and fought in Europe and lost their lives. But today, after nearly a century of violence and death and destruction, Europe is whole, free, and at peace. And it's important for America to ask the question, why is that the case? Well, democracies don't war with each

other, and democracies have taken hold in Europe.

The second example I like to bring up is from World War II as well, and that is what's happened to our former enemy, the Japanese. Prime Minister Koizumi is coming to our country soon. I'll be sitting down at the table with a friend talking about issues like North Korea or thanking him for having 1,000 troops in Iraq or worrying about the spread of pandemic disease or talking about how we can help the young democracy, Afghanistan. And I find it amazing that the President of the United States is sitting down talking about peace with the head of a country that my dad went to war with and your dads and granddads went to war with.

And what happened between the brutal attack on our country—that, by the way, killed fewer people at Pearl Harbor than we lost on September the 11th—and today, when we're talking about keeping the peace? Japan adopted a Japanese-style democracy. One thing history teaches—and by the way, if you look back at some of the written word, when Harry Truman had the vision of helping this country recover from the war and become a democracy, a lot of people were saying, it's a waste of his time; hopelessly idealistic, they would say. But he had faith in certain fundamental truths. One truth is, everybody desires to be free. Freedom is universal. It's not just a right for America.

And the second truth is, proven after 60 years of time, that freedom has the capacity to convert an enemy to a friend. And as I said in my remarks, I believe that this is an historic moment in Iraq, and that someday people will be looking back on this period of time saying, thank goodness the United States of America didn't lose its faith in certain fundamental values and we laid the foundation of peace.

And it's hard work. It's hard work to go from a tyranny to a democracy. And I understand why people are concerned; I understand it. Listen, I meet with—the

hardest job of the President is to meet with families of the fallen. And it's a—it's my duty. But almost to a person, they say, "Whatever you do, Mr. President, complete the mission; lay the foundation of peace so my child had not died in vain." And I give them that assurance every time I'm with them.

Yell it.

### *Federal Response to Catastrophic Events*

Q. I'm from Munster, Indiana. I was wondering, sir, if we were to be attacked by a biological weapon or if there was an outbreak of the avian flu, would we be prepared?

*The President.* Good question. We are working to be prepared. His question is, if there is a catastrophic event that is beyond the magnitude of a natural event, such as a biological attack and/or a attack of pandemic flu, would we be prepared?

Well, first step is to recognize that it's a possibility and start preparing, which we're doing at the Federal level. Yes, we've got a good strategy—now, whether or not it would work to perfection, you hope you never have to find out.

One of the classic cases—one of the classic dilemmas we're trying to resolve is that most—it's against the law to put Federal troops in to enforce the law. It's posse comitatus, you know? I'm not a lawyer, but nevertheless, that's what the lawyers tell me. However, States can use their Guard to do law enforcement activities. And the fundamental question is, if there's an event big enough, should the Federal Government be able to prevent State authority—should there be an automatic declaration of a state of emergency that will enable me to rally Federal troops to keep the law?

We haven't resolved that issue yet, but that's one of the dilemmas on a catastrophic event that ends up exceeding the boundaries of—that would make it not a local event. But we're working hard on it. We've spent a lot of time on pandemic flu, which, by the way, has got the same—

a biological attack would have the same applications as to how you—how do you isolate the incident; how do you isolate the spread of disease; how do you rally local authorities to make the right decisions about public facilities.

Mike Leavitt is in charge of this, the health aspect of this response. He's been traveling the country, working with local and State response plans, and it's a big job to get ready for it. I appreciate your question.

Q. From Arlington, Texas.

*The President.* Oh, yes.

Q. Home of your Texas Rangers.

*The President.* Mighty Rangers. They never—they still don't have—

Q. They're in first place; that's good. My question is about—

*The President.* I thought with change of ownership they'd go all the way, you know? [Laughter]

### *Health Care Reform/Global Warming*

Q. My question is about health care reform.

*The President.* Yes.

Q. You mentioned health care reform, catastrophic health care reform, Americans with disabilities as well. Under the umbrella of that, it doesn't seem that there is much addressed in terms of dental care, even though that is part of health care, I would think.

And the second part of that question is, will you see Al Gore's new movie? [Laughter]

*The President.* Doubt it. [Laughter] But I will say this about the environmental debate, that my answer to the energy question also is an answer to how you deal with the greenhouse gas issue, and that is, new technologies will change how we live and how we drive our cars, which all will have the beneficial effect of improving the environment.

And in my judgment, we need to set aside whether or not greenhouse gases have

been caused by mankind or because of natural effects and focus on the technologies that will enable us to live better lives and, at the same time, protect the environment.

Not sure how to answer your question on dentistry, frankly. I'll take a look at it. Yes, drop your address off.

Chef, how are you doing, buddy?

Q. Doing very good. I'm doing very good, sir.

*The President.* You know how I could tell you were chef?

Q. I don't know. [Laughter]

*The President.* Yes.

Q. Thank you. On behalf of—I'm from Tampa, Florida. And on behalf of all the cooks and chefs in our country, I have to say, you're running the country the way a chef would run the country, and we're proud of you, first of all.

*The President.* Thank you, sir.

*Governor Jeb Bush of Florida/Public Service*

Q. You have created a lot of jobs, and our industry is just, like you said, it's cranking, and we're loving every minute of it. My biggest concern, sir, is 2008 is coming. Do you have a plan for—to keep your policies in place and keep them going?

And would Jeb ever consider—we like him—even though we're the home of the Tampa Bay Devil Rays—we don't have everything, but would Jeb ever consider—

*The President.* Playing for the Tampa Bay Devil Rays?

Q. Hell no. [Laughter] For our country—for our country, sir.

*The President.* You better ask Jeb. Look, I said something about it the other day. Somebody asked me about him. I said, look, I think he'd be a great President. But it's—he said he's not going to run in 2008, and I think you've got to take him for his word. He's been in public life now for 8 years, and I think he wants a breather.

But thank you for your kind words. You go back and write him a letter, you know.

He's a good man. Look, my—here's the thing about Washington that—the rhetoric needs, in my judgment, toned down up there so that we're able to attract good people, both Republican and Democrat, to run for public office. You know, it's one thing to disagree, but it's another thing to disparage people. And we just—we don't need that kind of language, in my judgment—in order to attract good people to public service.

And there's too much politics in Washington these days. There really is. And so my worry is, not so much about Jeb, but when people take a look at Washington and say, "Why mess with it? Why do I want to put my family through it all?" And my advice to them is, one, it's worth it. But my advice, also, to all of us in public office is not to demean somebody because you don't agree with them. At least, in the debate, be considerate of the other person's point of view.

And the immigration debate is one where America needs to start, in my judgment. I'm very worried about the tone of this debate. We are a land of immigrants. One of the great things about America is we've been able to assimilate people from all around the world into becoming Americans. And that debate—if that debate tends to divide this country or cause people to wonder about their worth as an individual, it will be a debate of—it will be a debate that will be harmful.

Now, I understand the emotions of this issue. It's a tough issue for Members to vote on. I happen to believe my comprehensive plan is the way to go. But if somebody doesn't agree with me, I'm not going to debase them in the public arena. And so whether the debate is immigration or tax or Iraq, it's really important, in my judgment, for us to conduct this debate with dignity. And that will help answer your question as to whether or not people are going to be wanting to run for office.

You know, my buddies in Texas take a look at Washington and say, "Why are you

even up there, man? Come on home.” [Laughter] “What are you doing that for?” My answer is, I love my country. Public service is noble and necessary. I’m glad I ran for President. And I’ll try to do my part to elevate the tone and hold people—and treat people with respect whether they agree with me or not.

I’ve got to go back to Washington. God bless. Thanks for coming.

NOTE: The President spoke at 10:37 a.m. at the Arie Crown Theater at Lakeside Center—McCormick Place. In his remarks, he referred to Mayor Richard M. Daley of Chi-

cago, IL; Edward R. Tinsley III, chairman of the board of directors, National Restaurant Association, and his wife, Meredith; Prime Minister Nuri al-Maliki, former President Saddam Hussein, President Jalal Talabani, and Speaker of the Council of Representatives Mahmoud al-Mashhadani of Iraq; senior Al Qaida associate Abu Musab Al Zarqawi; Prime Minister Stephen Harper of Canada; and Prime Minister Junichiro Koizumi of Japan. Participants referred to President Hugo Chavez Frias of Venezuela; Ted Koppel, former anchor, ABC News; and former Vice President Al Gore.

## Statement on the Death of Lee Jong-wook

May 22, 2006

Laura and I were saddened to learn of the death of Dr. Lee Jong-wook. As the world’s top health official, Dr. Lee worked tirelessly to improve the health of millions of people, from combating tuberculosis and HIV/AIDS to his aggressive efforts to eradicate polio. He provided tremendous leadership to the international community as it

confronted the challenges of the 21st century, including the threat of an influenza pandemic. Dr. Lee’s outreach to world leaders and entities increased awareness of potentially devastating public health dangers. We send our deepest condolences to his family.

## The President’s News Conference With Prime Minister Ehud Olmert of Israel

May 23, 2006

*President Bush.* Thank you. Mr. Prime Minister, welcome. I’m particularly pleased to welcome Mrs. Olmert to the White House as well. Thanks for coming.

The Prime Minister and I have known each other since 1998, when he was the mayor of Jerusalem and I was the Governor of Texas. And I remember you greeting me in your office there, and you probably thought you were going to be the Prime

Minister—I wasn’t sure if I was going to be the President. [Laughter]

We’ve just had a really productive meeting. We reaffirmed the deep and abiding ties between Israel and the United States. And those ties include our commitment to democracy and our strong belief that everybody has the right to worship freely. The ties include growing trade and economic relationships. The ties include important educational exchange programs that allow

Israeli students to study at American colleges and universities and American students to travel and study in Israel.

In our meeting, the Prime Minister and I recalled the great contributions to peace made by Ariel Sharon. I asked the Prime Minister to convey my very best wishes to Ariel Sharon's sons.

Prime Minister Olmert and I discussed peace and security in the Middle East, which the people of Israel seek and the American people support. In 2002, I outlined my vision of two democratic states, Israel and Palestine, living side by side in peace and security. Prime Minister Olmert told me that he and his Government share this vision. The international community seeks to realize this goal to the roadmap, which calls for a comprehensive settlement that resolves all outstanding issues between Israelis and Palestinians. I believe, and Prime Minister Olmert agrees, that a negotiated final status agreement best serves both the Israelis and the Palestinians and the cause of peace.

Palestinian Authority President Abbas favors and speaks out for peace and negotiations. Yet the Hamas-led Palestinian Government does not. Hamas needs to make a strategic choice for peace. The United States and the international community have made clear that Hamas must recognize Israel's right to exist, must abandon terror, and must accept all previous agreements between the Palestinian Authority and Israel. No country can be expected to make peace with those who deny its right to exist and who use terror to attack its population.

Today Prime Minister Olmert shared with me some of his ideas; I would call them bold ideas. These ideas could lead to a two-state solution if a pathway to progress on the roadmap is not open in the period ahead. His ideas include the removal of most Israeli settlements, except for the major Israeli population centers in the West Bank. This idea would follow Prime Minister Sharon's decision to remove

all settlements in Gaza and several in the West Bank.

I look forward to learning more about the Prime Minister's ideas. While any final status agreement will be only achieved on the basis of mutually agreed changes, and no party should prejudice the outcome of negotiations on a final status agreement, the Prime Minister's ideas could be an important step toward the peace we both support. I'm encouraged by his constructive efforts to find ways to move the peace process forward.

And finally, the Prime Minister and I shared our concerns about the Iranian regime's nuclear weapons ambitions. The United States and the international community have made our common position clear: We're determined that the Iranian regime must not gain nuclear weapons.

I told the Prime Minister what I've stated publicly before: Israel is a close friend and ally of the United States, and in the event of any attack on Israel, the United States will come to Israel's aid. The United States is strongly committed, and I'm strongly committed, to the security of Israel as a vibrant Jewish state.

I look forward to our continuing discussions after this press conference. I'm not sure the delegations realize this yet, but we're going to shed ourselves of our delegations, and the Prime Minister and I are going to go up to the Residence and sit down and have a continued dialog. And if we decide to brief our delegations on what we discuss, we will do so. But if not, they're going to have to guess. [Laughter] And then I'm looking forward to dinner.

Welcome.

*Prime Minister Olmert.* Thank you, Mr. President. I thank you for your kind invitation to visit Washington and for the opportunity to meet with you and discuss the many issues on our common agenda. Our meeting was enlightening, and I look forward to working closely with you in the

coming years to deepen the friendship, understanding, and bilateral ties between the United States and Israel.

I also recall our meeting in the city hall when you and I were strolling around the beautiful building, at the terrace on the sixth floor, watching the walls of the city of Jerusalem. At that time, you were the Governor; I was the mayor. And I think none of us thought that the day would come that I will have the honor and the privilege of being hosted by you, as President of the United States and Prime Minister of Israel.

I could sense then your deep connection to the Holy Land and your friendship and commitment to the State of Israel. I must say, Mr. President, that my instincts did not fail me. I, and the entire people of Israel, appreciate your true friendship and unwavering commitment to Israel's security and its well-being as a vibrant Jewish state.

Your involvement in the Middle East and personal contribution to the efforts towards resolving the Israel-Palestinian conflict has been significant. The vision, which you outlined in your historic speech of June 2002, of two democratic states living side by side in peace and security, is the basis of any progress towards the solution in this region. Your unreserved support of the disengagement plan and your letter of April 14, 2004, to Prime Minister Ariel Sharon—and I join you in praying for his recovery—were the basis for the success of its implementation. What you immediately recognized to be an historic step was later adopted by all those who were skeptical in the beginning.

I intend to exhaust every possibility to promote peace with the Palestinians according to the roadmap, and I extend my hand in peace to Mahmoud Abbas, the elected President of the Palestinian Authority. I hope he will take the necessary steps which he committed to in order to move forward.

Unfortunately, the rise of Hamas, a terrorist organization which refuses to recognize Israel's right to exist and regards ter-

rorism as a legitimate tool, severely undermines the possibility of promoting a genuine peace process. As you stated, Mr. President, the Palestinian Authority headed by Hamas Government must abandon the path of terrorism, dismantle the terror infrastructure, honor agreements, and recognize Israel's right to exist. By doing so they will find us a willing partner in peace. However, we will not enter into any kind of partnership with a party which refuses to recognize our right to live in peace and security.

Despite our sincere desire for negotiations, we cannot wait indefinitely for the Palestinians to change. We cannot be held hostage by a terrorist entity which refuses to change or to promote dialog. If we come to the conclusion that no progress is possible, we will be compelled to try a different route.

I presented to the President ideas which I believe could help advance his vision and prevent a political stalemate. According to these ideas, we will remove most of the settlements which are not part of the major Israeli population centers in Judea and Samaria. The settlements within the population centers would remain under Israeli control and become part of the State of Israel as part of the final status agreement. This process of realignment would reduce friction between Israelis and Palestinians, ensure territorial contiguity for the Palestinians, and guarantee Israel's security as a Jewish state with the borders it desires.

The implementation of these ideas would only be possible with the comprehensive support of the United States and the international community. I anticipate working with you to explore ways to advance this.

We discussed the Iranian issue. The Iranian regime, which calls for Israel's destruction, openly denies the Holocaust, and views the United States as its enemy, makes every effort to implement its fundamentalist religious ideology and blatantly disregards the demands of the international community. The Iranian threat is not only a threat

to Israel, it is a threat to the stability of the Middle East and the entire world. And it could mark the beginning of a dangerous and irresponsible arms race in the Middle East.

Mr. President, we appreciate your efforts to curb Iran's nuclear ambitions, including through the U.N. Security Council. They are of crucial importance. The international community cannot tolerate a situation where a regime with a radical ideology and a long tradition of irresponsible conduct becomes a nuclear weapons state. This is a moment of truth. It is still not too late to prevent it from happening.

I thank you again for your gracious hospitality and for our discussions. I look forward to continue working with you, Mr. President. Thank you very much.

*President Bush.* We'll take two questions a side, starting with Steve Holland [Reuters].

#### *Middle East Peace Process*

*Q.* You mentioned that the West Bank plan could be an important step. Doesn't this sweep away the U.S. principle of a negotiated two-state solution? And should the Palestinian side approve any plan that would establish Israel's final borders?

*President Bush.* You just heard the Prime Minister say that he's going to exhaust all options to negotiate, that he wants to reach out a hand to President Abbas. And I agree. I said in my opening statement that the best solution is one in which there's a negotiated final status. And we discussed—we spent ways—we spent some time discussing about how it's important to get a Palestinian President to the table. And the Prime Minister says he looks forward to discussing the issue.

And so our preferred option, of course, is there to be a negotiated settlement. On the other hand, as the Prime Minister said, that if he's unable to find a partner in peace, if nothing can go forward, he is willing to think about ways to advance the process forward.

And in order to solve this problem, there needs to be willingness to take the lead and creativity and the desire to follow through on the vision. The most important aspect about peace is to have a vision for peace. And I appreciate the Prime Minister's vision of two states side by side—two democratic states side by side in peace. That's possible.

And so what I come away from the meeting with is that the Prime Minister, one, has a vision; two, willing to reach out to determine whether or not that vision exists with the Palestinian President, which I think it does; three, is willing to work to see whether or not it is possible for two sides to come together, and if not, is still willing to consider other ways to move the process forward. That's, to me, a very positive statement.

*Q.* You said you wanted to hear more. Is there anything that worries you about this plan?

*President Bush.* No, the only thing that worries me about the plan is that Hamas has said they want to destroy Israel. And the reason that worries me is how can you have two states side by side in peace if one of the partners does not recognize the other state's right to exist? It's illogical for somebody to say, I'm for a state side by side with another state, and yet I don't want the state to exist. And so we spent time talking about Hamas, and I assured the Prime Minister that our position is steady and strong, that Hamas must change.

Now, we care about the Palestinian people—and I say, "we," both of us—he can speak for himself on this issue—but we are trying to set up a mechanism that supports the Palestinian people. Our beef is not with the Palestinian people. Our beef is with the Government that—a group in the Government that says they don't recognize Israel. And so the United States, we're working with the Europeans—Condi's people in the State Department are working with the Europeans to come up with a

mechanism to get food and medicine and aid to the Palestinians.

You may want to comment on it yourself, Mr. Prime Minister.

*Prime Minister Olmert.* Thank you, Mr. President. Indeed, the Government, Sunday, decided to spend 50 million shekels buying medical equipment—50 million shekels, about \$11 million—for the time being, to buy medical equipment and drugs needed for the hospitals in Gaza. And as I said during the Cabinet meeting, we will spend any amount of money needed in order to save lives of innocent Palestinians suffering from the indifference of their Government. We will not hesitate to do it. We will use the revenues that we have collected, and more if necessary. We will make arrangements, together with our friends, so that the supplies will arrive directly to those who need them.

This is a humanitarian commitment. We are absolutely committed to help innocent people that suffer from the brutality and the intransigence of their own Government, and we will continue to do it at all times.

Thank you, Mr. President.

### Iran

Q. Mr. Prime Minister, are you satisfied from what you have learned out of your meeting with the President with regard of the Iranian issue? And what's your message to the Israeli public about this issue?

And, Mr. President, with your permission, there is a military option, from your point of view, to solve the threat of the Iranian problem, their work on—to getting nuclear weapons?

*Prime Minister Olmert.* The Iranian issue was discussed, indeed, between the President and myself. And we'll continue to talk about it later. Obviously, there is a major threat posed, as I've said already and the President said, by the Iranians and their attempts to have nonconventional capabilities and also to build up delivery systems and the ballistic missiles that can hit major

centers all across Europe, not just in the Middle East.

This is something that needs to be stopped. We discussed this issue at length, and there is a total agreement and understanding between the President and myself that there is a need to stop it. And we reviewed the different ways how to do it, and I am very satisfied with what I heard from the President and on what we agreed that we would continue to do in order to achieve this goal.

*President Bush.* Our primary objective is to solve this problem diplomatically. I've told the American people that I will, on all issues, will try diplomacy first and exhaust diplomacy. And I explained to the Prime Minister that—about our diplomatic efforts—the most important thing in diplomacy is that there be a shared goal and—in other words, you have to have a common objective, a common goal in order to get people to come together around it. And now we have got a common goal throughout most of the world, and that is, Iran should not have a nuclear weapon. And that's important, and we are now working the diplomatic front around that goal.

We have a variety of options, one of which, of course, is the United Nations Security Council, if the Iranians aren't willing to show progress toward that goal. We're working very closely with what's called the EU-3. That's Germany, England, and France. And I've been pleased and Secretary of State Rice has been pleased about their willingness to stay tough on the goal, of achieving the goal. Sometimes when you've got a variety of negotiating parties, it's easier for one—a nontransparent negotiator to pick off a weak link. And yet they've been firm, and that's important for Israel to know. It's important for me to praise our partners for that strength of purpose.

Obviously, there's other parties we have to work with, including Russia and China. In other words, you can't get anything out of the U.N. Security Council unless there's

an agreement that the Iranians are not negotiating in good faith and aren't willing to go forward. And so we're spending a lot of time working with our Russian friends, in particular, to make it clear to them that Iran is showing no good faith.

And one of the interesting issues that the Iranians have tossed out in this debate is that they believe they have the sovereign right for civilian nuclear power. And my position has been, fine, it's just you just don't get to enrich the fuel necessary for the plant. And so we provided a—I thought—a very interesting opportunity for them—to say, if you want civilian nuclear power, you can have your plant and the international consortium will provide the fuel for the plant. And we'll pick up the spent fuel from the plant. And this was a very realistic and reasonable approach—and has been rejected by the Iranians.

And so I say to our friends in our consortium, I'm not so sure these people really do want a solution, and therefore, let us make sure that we're willing to be working together in the U.N. Security Council. That's where we are. We're headed—we're on the cusp of going to the Security Council. And I repeat to your question, obviously, we'd like to solve this issue peacefully and diplomatically. And the more the Iranians refuse to negotiate in good faith, the more countries are beginning to realize that we must continue to work together.

Martha [Martha Raddatz, ABC News]. Yes, you.

#### *Progress in Iraq*

Q. If we can switch to Iraq, sir.

*President Bush.* Iraq. Okay.

Q. I know that this is something you're leaving up to your commanders, but from what you've heard from your commanders, how confident are you that you can start drawing down troops by the end of the year?

*President Bush.* First of all, we are making progress in achieving our objective of training the Iraqis to take the fight to the

enemy. And the reason I know that is because I talk to our commanders quite frequently. And we're making good political progress, as the world saw in the formation of a unity government. The Government has yet to get their full Cabinet in place, although we think that will happen relatively quickly. And then this sovereign Government is going to assess their security situation and their security forces and their needs and work with our commanders. We haven't gotten to the point yet where the new Government is sitting down with our commanders to come up with a joint way forward.

However, having said that, this is a new chapter in our relationship. In other words, we're now able to take a new assessment about the needs necessary for the Iraqis. And when I get that report from our commanders, I'll share it with others and you.

Q. Sir, can I just add—

*President Bush.* Please—

Q. The U.S. has the most powerful military in the world, and they have been unable to bring down the violence in any substantial way in several of the Provinces. So how can you expect the Iraqis to do that?

*President Bush.* If one were to measure progress on the number of suiciders, if that's your definition of success, I think it gives—I think it will—I think it obscures the steady, incremental march toward democracy we're seeing. In other words, it's very difficult—you can have the most powerful army of the world—ask the Israelis what it's like to try to stop suiciders—it is a difficult task to stop suicide bombers. That's the—but that's one of the main—that's the main weapon of the enemy, the capacity to destroy innocent life with a suicider.

And so I view progress as, is there a political process going forward that's convincing disaffected Sunnis, for example, to participate? Is there a unity government that says, it's best for all of us to work together to achieve a common objective, which is democracy? Are we able to meet

the needs of the 12 million people that defied the car bombers? To me, that's success. Trying to stop suiciders—which we're doing a pretty good job of on occasion—is difficult to do. And what the Iraqis are going to have to eventually do is convince those who are conducting suiciders who are not inspired by Al Qaida, for example, to realize there's a peaceful tomorrow. And those who are being inspired by Al Qaida, we're just going to have to stay on the hunt and bring Al Qaida to justice. And our Army can do that and is doing that right now.

*Israel's Disengagement Plan/Middle East Peace Process*

Q. Mr. President, the Prime Minister just said that the settlement blocks, the major population centers will be part of Israel, annexed to Israel in the future. Do you support that? Would the United States sanction that?

And, Mr. Prime Minister, can you give us some assessment of the time that you are willing to wait for the emergence of a Palestinian partner?

*President Bush.* My answer to your question is, refer to my April 14, 2004, letter. I believed it when I wrote it, and I still believe it. [Laughter]

Q. [Inaudible]

*President Bush.* —rare that I wrote the letter, or rare that I believed what I wrote? [Laughter]

*Prime Minister Olmert.* First of all, I want to emphasize again what I said before—and what I said before the elections and immediately after the elections in Israel and when my Government was inaugurated in the Knesset just a couple of weeks ago. I said that we will make a genuine effort to negotiate with the Palestinian side on the basis of the roadmap, which is the framework for future negotiations towards, hopefully, a peace agreement between us and the Palestinians.

I meant precisely what I said. I'll make every possible effort. And in order to exam-

ine it carefully and seriously, I will certainly meet with the elected President of the Palestinian Authority, Mahmoud Abbas. We haven't yet decided about the timing. It will be in the near future. And I will do everything that I can in order to help create the necessary circumstances for such negotiations to take place, providing, of course, that the Palestinian partner will have to not just to make a public commitment but to be able to deliver on the basic requirements of the roadmap and the Quartet decisions, namely to recognize the State of Israel and its right to exist as a Jewish state, to unarm the terrorist organizations, and to implement all the obligations of the agreement signed between the State of Israel and the Palestinian Authority.

So we will make an effort. And I say time and again that we accept the sincerity of Mahmoud Abbas as the elected President of the Palestinian Authority. He is genuine; he is sincere; and we hope that he will have the power to be able to meet the requirements necessary for negotiations between us and the Palestinians. How soon it will be? The sooner the better. I don't want to prejudge it at this point. I think it's too early. And I didn't come with a timetable to meet with the President of the United States.

We shared our observations. I entirely agree with the vision of the President as it was outlined so brilliantly in the famous speech in June of 2002, which really set the course for all the developments that took place in the Middle East since then and created the possibility for, ultimately, the disengagement, which was a turning point in the history of the Middle East. And we are grateful to the President for the courage that he manifested then in presenting this outline and in being the first to support the disengagement, and carry on in spite of the difficulties and the skepticism and the question marks posed by different countries at the beginning. Most of them joined in later.

So we are anxious to have negotiations. And we will look and find every possible avenue to help establish a process of negotiations on the basis of these conditions. However, as I said, we will not wait indefinitely. If we will reach the conclusion that in spite of all these efforts, it is impossible to implement the principles of the roadmap through a negotiating process, we'll look for other ways to implement these principles and to ultimately create a situation where there are secured borders for the State of Israel with the population centers in the territories as part of a State of Israel and with a contiguous territory that will allow the Palestinians to establish their own Palestinian state alongside the State of Israel. And hopefully, this is something that will happen within the next 3 to 4 years.

Again, I am grateful to the President for the efforts that he was making and for his willingness to examine together with me these new ideas—as he called them, bold ideas—in the event that all other options will not be possible.

Thank you.

*President Bush.* Good job.

NOTE: The President's news conference began at 5:05 p.m. in the East Room at the White House. In his remarks, he referred to Aliza Olmert, wife of Prime Minister Olmert; former Prime Minister Ariel Sharon of Israel, and his sons, Omri and Gilad; and President Mahmoud Abbas (Abu Mazen) of the Palestinian Authority.

## Statement on the Death of Lloyd M. Bentsen, Jr. *May 23, 2006*

Laura and I and the entire Bush family are saddened by Lloyd Bentsen's death. Lloyd Bentsen served in the House of Representatives for 6 years, and he represented the people of Texas in the United States Senate for 22 years. During his time in Congress, he was known for his integrity and for seeking bipartisan solutions to issues facing our Nation. He later became Secretary of the Treasury in President Clinton's administration.

As a young man, Lloyd Bentsen served our country in battle in the United States

Army Air Forces, and he was awarded the Distinguished Flying Cross. In 1999, in recognition of his lifetime of service to the United States, he received the Presidential Medal of Freedom, the Nation's highest civil award. Lloyd Bentsen was a man of great honor and distinction. We send our condolences and prayers to B.A. and the Bentsen family.

NOTE: The statement referred to Beverly Ann "B.A." Bentsen, wife of Lloyd M. Bentsen, Jr.

## Remarks on Energy in Pottstown, Pennsylvania *May 24, 2006*

Thank you all. Please be seated. Thanks for the warm welcome. If I talk too long, it's going to be even warmer. [*Laughter*] I really appreciate the chance to come to

the Limerick Generating Station. I'm glad to see it in action. More importantly, I was glad to see the people working here, glad to meet them, glad to get to know them.

I appreciate their strong dedication to safety. I appreciate their dedication to the consumers you serve.

This plant serves 2 million homes in the area, and it does so in a way that does not require us to pollute the air. It's a perfect example of how we can grow our economy and protect our environment at the same time. And so thanks for receiving me. I'm honored to be here.

I thank John Rowe for introducing me, and thanks for coming over from Chicago. Appreciate you being here. I want to thank Chris Crane. I want to thank Ron DeGregorio. Thank you for having me, Ron. I want to thank the mayor, Sharon Valentine-Thomas, of the Borough of Pottstown. Thanks for coming, Madam Mayor. I appreciate you being here. I want to thank all the folks from the local government—sorry about clogging the neighborhoods coming through, but thanks. [*Laughter*] Appreciate you letting me come by.

I want to talk about how the United States of America can continue to be the economic leader of the world. First of all, I think it's important that we're the economic leader of the world, because when you're the leader, it helps the folks who live in your country. See, it matters if we're on the cutting edge of change. It matters to people working every day in America if we're creating strong economic growth.

Today, we are creating strong economic growth. I mean, this economy of ours is moving forward with a full head of steam—fifth year in a row of uninterrupted growth. Our economy grew faster than any other major industrialized nation in the world. We added 5.2 million new jobs since August of 2003. The national unemployment rate is 4.7 percent. Productivity is high, and that's important. A productive society will yield a higher standard of living for our people. Hourly compensation grew at an annual rate of 5.7 percent in the first quarter of this year. Our workers are taking bigger—home bigger paychecks. The stand-

ard of living is on the rise. After-tax income is up. Things are good.

And the fundamental question is, can you keep them that way, see? And there's a lot of competition in the world that creates some uncertainty and anxiety amongst our people. And the temptation for some is to say, "Well, we can't compete anymore so let's protect ourselves and let's withdraw; let's become isolationists." I think that would be a wrong approach by our country. See, we ought not to fear the future; we ought to shape the future. We ought to be confident in our ability to be able to compete and to remain the most innovative country in the world.

And so here are some ideas. First, if we want to be the economic leader in the world so our people can prosper, we need to keep taxes low. We need to be able to be a society that says, you get to earn more of that which you earn.

As you might recall, we went through a pretty tough time in this country over the past 5 years. We had a recession, corporate scandals, a stock market correction, an attack on our country. We went to war to defend ourselves; we've had high energy prices; and we had natural disasters. And yet this economy of ours is strong. And I believe the reason why is, is because of the tax cuts we passed in Washington, DC.

We believe that if you have more money in your pocket to save, spend, or invest, the economy grows. And so one way to make sure that we're the economic leader in the world is to make sure the tax cuts we passed are permanent. Now, people say, "Well, if you make the tax cuts permanent, you can't balance the budget." Well, let me talk a little bit about how Washington works. I've been there long enough to be able to give you an accurate report. [*Laughter*]

Don't believe it when they say they're going to raise your taxes to balance the budget. They're going to raise your taxes and figure out new ways to spend the money. The best way to balance the budget

is to keep progrowth economic policies in place. And, by the way, last year, because our economy was growing, we generated \$100 billion more for the Treasury than we thought. And this year, because of the economy growing strong, we're generating better rates than we did last year.

And so the best way to balance the budget is to keep growing the economy so we collect more tax revenues and be wise about spending your money. See, in Washington, everything sounds good there; every program sounds fantastic. But Government, in order to be wise about spending your money, has got to learn to set priorities. And my priority is this: So long as we have a soldier in harm's way, he or she will have what it takes to achieve victory and secure America.

We're on our way to cutting the deficit in half by 2009. Congress is now debating a supplemental bill. It's money to help fund our troops in Iraq, as well as helping the victims in Katrina. And I've made it very clear that I intend to participate with them in keeping the spending down. And if they exceed the \$92.2 billion request, plus monies for avian flu, I'm going to veto the bill. See, that's one way you keep fiscal discipline in Washington, DC.

We'll be competitive if we keep taxes low and be wise about how we spend your money. We'll be competitive, by the way, if we're smart about improving education for our people. See, this is a global economy, whether people like it or not. And the jobs of the 21st century will be either here in America or wherever the workforce is trained to fill those jobs. And therefore, it's important for us to make sure we educate our children early and emphasize math and science so our kids have got the skills necessary to fill those jobs.

We changed how we view public education in Washington. We passed the No Child Left Behind Act, see. It basically said, we're going to make sure we fulfill our commitment to Title I students, but we're starting to ask some questions—ques-

tions that I'm sure are asked at this plant: Are you meeting objectives, for example? If you set a goal, are you meeting those goals? And so we set some goals: How about every child learning to read at grade level by the third grade? That didn't seem like an unrealistic goal to me. As a matter of fact, it was a necessary goal.

And then we said to the States, you measure. We're going to get you some money, but you measure to show us whether or not we're meeting the goal. And if you're not meeting the goal, figure out why. See, you can't solve a problem unless you diagnose the problem. And so the No Child Left Behind Act basically says, we're going to diagnose problems early and solve them, before it's too late. This business about shuffling kids through the school—through our schools, based upon age, didn't work. It wasn't fair. It wasn't right. And so the No Child Left Behind Act says, we're going to measure early, and we're going to help children who have fallen behind in reading early, and then we're going to extend that to math.

See, one of the interesting things is because we measure, we know that we're doing fine in math in the eighth grade. But children get to high school—relative to other countries, we're not doing fine in math. And we better do something about it now if we want to be the economic leader of the world.

So we've got a plan to, one, make sure the same standards applied to reading for early grades are applied to math. If we measure in the eighth grade or ninth grade and you're falling behind, you're going to get extra help.

Secondly, advanced placement programs work. I bet I'm looking at some folks out here who took AP when they were in high school. AP means high standards. But we don't have enough teachers around the country to teach AP, so we've got a plan to train 70,000 Advanced Placement teachers to keep raising those standards.

We want to have 30,000 adjunct professors in our classrooms in high school and junior—sometimes it's not cool to be involved with science—and yet it is cool. And we need people who are on the frontlines of science explaining that. I went to a school in Maryland the other day, and there was a NASA scientist there, explaining to junior high kids why the sciences matter and why it's fun to be in science.

We're going to make sure our Pell grants—which, by the way, have expanded by a million kids since I've been the President—continue to have incentives in there for children to take rigorous academics coming out of high school and the first 2 years of college, and then if they maintain a 3.0 average or are taking math, science, or critical language, there's an additional \$4,000 on top of their Pell grant. In other words, this is an effort to make sure that we have a workforce that can compete in a global economy so we remain the economic leader of the world.

I want to talk about energy, see. If we don't get it right in energy, we can have the most educated workforce in the world, but we're not going to be able to compete. We can have the lowest taxes in the world, the least regulations, the fewest lawsuits, but if we haven't done something about our energy situation, we're not going to be able to compete in the world.

And so that's why I've come to this important powerplant, to talk about how the United States can have a diversified energy policy that makes us less dependent on foreign sources of oil and more dependent on renewable sources of energy.

Now, one of the things I want to start off by telling the—telling you all, and I hope others are listening, is that over the past 30 years, our economy has grown three times faster than our energy consumption. Isn't that interesting statistics? In other words, we're becoming more technologically advanced. And during that same period of time, we created more than 55

million jobs while cutting air pollution by 50 percent.

So what I believe the American people should understand is that we can put policies in place that encourage economic growth so you've got a better standard of living and, at the same time, become less dependent on energy from overseas and protect the environment.

So what do we need to do? Well, the first thing we got to do is understand that we've got to change our driving habits over time. You've seen the price of gasoline going up. One of the reasons why your price of gasoline is going up is because demand for oil is increasing in places like India and China, and the supply for oil is not meeting that demand. And the key ingredient for gasoline is crude oil. So when the Chinese economy is growing or the Indian economy is growing, and that demand is going up, so is your price at the pump.

One way to make sure the price at the pump doesn't go up as global demand increases for hydrocarbons is to figure out how to drive our cars with different kinds of fuels, such as ethanol. One of the really interesting developments that's taking place now in America is the use of corn-based ethanol—pretty cool deal, isn't it, for the President to be able to say, you know, we're growing a lot of corn—[laughter]—and we're less dependent on foreign sources of oil. It's coming—particularly in the Midwest right now, there's a lot of ethanol pumps and plants being developed there to manufacture ethanol from corn.

We've got to do more, though, if we're going to become less dependent on foreign sources of oil, when it comes to ethanol. And so we're spending a lot of your money to develop technologies that will enable us to be able to manufacture ethanol from wood chips or switchgrass. Somebody said, "What is switchgrass?" I said, "Well, it's grass that looks like a switch that grows in dry country." In other words, there's all

kinds of opportunities to manufacture ethanol, and we're exploring ways to do so. America has always been on the leading edge of technology and research and development, and here's an area where we've got to stay on the leading edge of change.

Another way to help reduce our use of gasoline is through hybrid vehicles. They're coming; they're coming on the market. As a matter of fact, the energy bill I signed actually will pay you—give you a tax credit if you buy a hybrid. We're trying to stimulate demand through the Tax Code. It makes sense. But there's going to be an additional breakthrough—or additional breakthroughs—when it comes to hybrid vehicles, starting with the development of a battery that will enable you to drive your first 40 miles on electricity. And the Federal Government is very much involved in this research. We're spending your money, again, on research to help fund breakthroughs for battery technologies that will enable you to drive a plug-in hybrid battery.

And, oh, by the way, on ethanol, just one thing I forgot to tell you is that there are 5 million flex-fuel vehicles on the road today. Flex-fuel means you can either have gasoline or ethanol or a combination of the two. You've probably got one and you don't even know it. The technology—the barrier to change is not the automobile; it is the ability to make the fuel in quantities—economic quantities so we can get them to you at the pump.

And same with hybrid batteries; they're coming. Hybrid, plug-in hybrid vehicles with new batteries, they're coming your way. And one of the reasons why is because the Government has entered into research partnerships with the private sector to accelerate these technologies, all aimed at making us less dependent on oil.

A third way to help this country remain an economic leader when it comes to the cars you drive is hydrogen. We spend about a—over a billion dollars of research to bring hydrogen to the marketplace. One

fellow reminded me, wisely, it costs—it takes quite a bit of power to make hydrogen. An interesting way to make hydrogen on an economic basis would be through nuclear power, see. But we're spending money and time and effort, all aimed at making sure that the automobiles of the future will require less crude oil. And we're close to some significant breakthroughs.

It's going to take time to move away from the hydrocarbon economy to the hydrogen economy, and in the meantime, it seems like it makes sense to me to do something about the refinery capacity of the United States. Like, if you're worried about the price of gasoline—you don't like it when your price got over \$3—and I don't blame you—you might want to ask the question, how come the Government isn't working hard to expand refinery capacity so that there's more gasoline? If you have more gasoline on the market relative to demand, guess what—it takes the pressure off price.

We haven't built a new refinery in the United States since the 1970s. The regulatory burden is a lot. You're kind of used to that here in this industry. And so we got to cut through all that business. If we're serious about helping our consumers and getting more gasoline to the market, we got to have regulatory relief. I suggested to Congress that we put new refineries on abandoned military facilities. It seemed to make sense to me. And so we need to be wise about these policies so that we can say to the American people, we're on our way out of the hydrocarbon era. But in the meantime, let's be thoughtful of the consumers here in the United States.

We're also going to need a lot of electricity in the future. Electricity demand is projected to increase by nearly 50 percent over the next 25 years. That's a lot. And we better be wise about how we implement a strategy to meet that demand; otherwise, we're not going to be the economic leader; otherwise, our people aren't going to be having the good jobs that we want them

to have; otherwise, your children and my children, our grandchildren are not going to have the bright, hopeful America that we want for them.

Now, one of the things that people have got to understand is that we get our—we generate our electricity from four sources: coal—it's about 50 percent; nuclear power—about 20 percent; natural gas—18 percent; and then other renewable sources like hydroelectric, solar, and wind power. And that's the mix; that's the energy mix.

Coal is by far the most abundant and affordable energy resource. We got about 240 years at current rates of consumption. It's a valuable asset for the United States. The problem is, coal isn't—when you burn it, it isn't clean. It doesn't meet our standards. It's not—it doesn't enable us to say, you can grow your economy and, at the same time, protect the environment like we want.

And so we're developing clean coal technology. We're spending over \$2 billion in a 10-year period to be able to say to the American people that we're using the money wisely to determine whether or not we can have zero-emissions coal-fired powerplants. It's in our interests that we do that. It makes sense. About 2012, under the FutureGen Initiative, we think we will build the first powerplant to run on coal and remove virtually all pollutants.

Natural gas is an important commodity. By the way, we can explore for natural gas in environmentally friendly ways. And we ought to be exploring for natural gas in the ANWR, as well as off the gulf coast of the United States.

Here's another interesting way to help make sure there's enough natural gas for this economy to grow—by the way, natural gas, as you know, is not just used for power. It's used for fertilizers, a variety of uses. You can liquefy natural gas; you can put it in a ship, and you can send it long distances and still have an economic product. And there are places in this world where there's a lot of natural gas—a lot.

And they're building liquefied production facilities. And they put them on these ships—but we don't have any places to offload it in the United States. We got some, but not enough.

If we're really interested in diversifying our energy sources and making sure the American people have got enough energy to watch this economy grow, we have got to have LNG sites to offload the gas from abroad. And so what we've done is, I signed a new bill, energy bill, that clarifies Federal authority to license new sites, that reduces the bureaucratic obstacles to opening up the terminals and streamlines the development. It's in your interest that we enable liquefied natural gas to come into our country so that we can help take the burden off some of the pricing pressures that we're inevitably going to feel with demand going up and not enough electricity supply.

Thirdly, about 6 percent of the continental U.S. is highly suitable for the construction of wind turbines. And this is a really interesting opportunity for the country—they ought to put one big one in Washington, DC. [*Laughter*] They say—the experts tell me that this area alone has the potential to supply up to 20 percent of our Nation's electricity. I think that's an interesting opportunity. I don't know if it's true or not, but it's certainly worth trying to find out, in order to make sure this country has got a bright future. And so we got \$44 million for wind energy research. And the goal is to expand the use and lower the cost of wind turbine technology.

In other words, we're constantly researching and looking. I don't know if you know this or not, but the Federal Government does spend money on research in a variety of fronts, and it should. And I intend to double the basic—the budget for basic research over the next 10 years. The iPod—like, I like to ride my mountain bike and plug in the iPod. The technology for

the iPod came as a result of Federal research. The Internet came about because of defense money research.

So we're spending money on research. The reason I keep repeating that is not only is it going to help us diversify our energy sources and make us competitive in the world, but it also helps make sure America is always on the leading edge of technological change.

Solar energy—the dream in solar energy is to develop technology so that someday your house is like a little generating plant, and if you don't use the power, you feed it back into the grid. It's possible, but it's not going to be possible if we don't spend money on research and development. So we're spending \$150 million to combine Government money with private research money in solar technologies to see if we can't help foster technologies that will be able to capture the sun, feed it into your house, generate enough electricity, and if you've got a little excess, feed it back into the grid. I think that's a pretty interesting idea, and it's certainly one worth exploring.

Finally, I want to talk about nuclear power—a subject you all are very familiar with. It is a really important way to meet our goals, which is to have abundant, affordable, clean, and safe sources of energy. The important thing for the American people to understand is this concept: One, nuclear power is abundant and affordable. In other words, you have nuclear powerplants, you can say, we've got an abundant amount of electricity. And once you get the plant up and running, the operating costs of these plants are significantly lower than other forms of electricity plants, which means the energy is affordable.

As I mentioned, nuclear power—it's the second leading source of electricity here. We have 100 nuclear powerplants that operate in 31 States. Now, we haven't built one in a long period of time.

People in our country are rightly concerned about greenhouse gases and the environment, and I can understand why; I

am too. As a matter of fact, I try to tell people, let's quit the debate about whether greenhouse gases are caused by mankind or by natural causes; let's just focus on technologies that deal with the issue. Nuclear power will help us deal with the issue of greenhouse gases. Without nuclear energy, carbon dioxide emissions would have been 28 percent greater in the electricity industry in 2004. Without nuclear power, we would have had an additional 700 million tons a year of carbon dioxide, and that's nearly equal to the annual emissions from 136 million passenger cars. Nuclear power helps us protect the environment.

And nuclear power is safe. It is safe because of advances in science and engineering and plant design. It is safe because the workers and managers of our nuclear powerplants are incredibly skilled people who know what they're doing.

For the sake of economic security and national security, the United States of America must aggressively move forward with the construction of nuclear powerplants. Other nations are. Interestingly enough, France has built 58 plants since the 1970s and now gets 78 percent of its electricity from nuclear power. I think that's an interesting statistic, isn't it? The United States hasn't ordered a plant since the 1970s, and yet France has not only ordered them, they built 58 plants. And 78 percent of their electricity comes from nuclear power. They don't have to worry about natural gas coming from somewhere else. They worry about it, but they don't have to worry about it to the extent that we do.

China has 9 nuclear plants in operation, and they got—plan to build 40 more over the next two decades. They understand that in order to be an aggressive nation, an economic nation that is flourishing so their people can benefit, they better do something about their sources of electricity. They see it. India—I just came from India—they're going to build some nuclear powerplants.

To maintain our economic leadership, we got to do it again. And so here's the strategy. First, in the energy bill I signed in 2005, there are loan guarantees, production tax credits, Federal risk insurance for the builders of new plants. In other words, we said, this is an industry that hadn't got much going since the seventies. It's an overregulated industry. It's highly risky because of the regulations to try to build a plant. People don't know this, but you get yourself a design for a nuclear powerplant; you start spending money for plans and engineering plans and everything; you get building; and all of the sudden, somebody can shut you down. And that makes it awfully difficult to take risk, if a lawsuit can cause you to spend enormous sums of money and have no productive use of the money spent.

And so we got together with the Congress and said, "Well, how—what can we do to create incentives to show the industry that we're serious about moving forward?" Well, one is loan guarantees, and that gives investors confidence that this Government is committed to the construction of nuclear powerplants. Secondly is production tax credits, and those credits will reward investments in the latest advanced nuclear power generation.

In other words, there's incentives—loan guarantee is an incentive, tax credits are incentives, Federal risk insurance. What the Federal risk insurance says—is offered for the first six new powerplant—nuclear powerplants. And the insurance helps protect builders of the plants against lawsuits or bureaucratic obstacles and other delays beyond their control. We have got what's called the Nuclear Power 2010 Initiative, which is a \$1.1 billion partnership between the Federal Government and the industry to facilitate new plant orders. In other words, I have said, we need more nuclear powerplants, and here's a strategy to get them going, see. Here's a way to say to the industry, we're serious about this.

This time last year, only two companies were seeking to build nuclear powerplants. Now 16 companies have expressed an interest in new construction, and they're considering as many as 25 new plants, trying to get these plants—construction started by the end of this decade. I want it to be said that this generation of folks had the foresight necessary to diversify our—or to continue to diversify electricity supply and recognize that nuclear power is safe, and we did something about it. We just didn't mark our time. We actually did something about it so a generation of Americans coming up will be able to have a better America.

I understand the issue of waste, and we've got to do something about it. We've got to be wise about nuclear waste. I'm a believer that Yucca Mountain is a scientifically sound place to send the waste, and I would hope that the United States Congress would recognize that as well.

I also recognize that we can do something on a reprocessing front. And so I got our administration to commit to the Global Nuclear Energy Partnership. I think you'll find this interesting; at least I did. Under the partnership, America is going to work with nations that have already got an advanced civilian nuclear energy program, such as France and Japan and Russia, and we're going to use new technologies that effectively and safely recycle spent nuclear fuel. In other words, we're coming together to say, how can we do a better job of reprocessing and recycling fuel?

And the reason that's important, at least for our fellow citizens to understand, is it will reduce the amount of the toxicity of the fuel and reduce the amount we have to store. To me, it's a smart way to combine with others to reduce storage requirements for nuclear waste by up to 90 percent. It's a good way to work with other nations that are spending money on research and development as well. It's a way to, kind of, leverage up an investment. We're going to—I've asked Congress to

spend \$250 million on this partnership. I hope they follow through with it. It is a necessary expenditure of money to make sure that the nuclear power industry can move forward with confidence, and the American people move forward with confidence as well.

And so here are some ideas—not only ideas; this is what we’re doing; this has gone from idea to action. What I’m telling you is, is that I understand the need to get off oil. I understand the need to work on renewable sources of energy. And I’m pleased to report we’re working with Congress to do it. We’re spending your money on research and development to find interesting technologies. You know, I hope that when my grandchildren and some of your children start taking their driver’s test, they’ll be cranking up a hydrogen-powered automobile, with hydrogen produced from electricity generated from plants such as these.

We have a duty to think about the problems this country is going to face. Listen, this economy is good, and I want to keep it that way; but I also want to make sure it’s good 10 years from now. And I want

to make sure that this global economy, this world that is becoming more connected, is one that doesn’t cause us to fear and to neglect our duties, but that we put policies in place that enable us to remain confident, that we’re an entrepreneurial society, that we’re well-educated people, that we’re willing to work hard to raise our families and put bread on the table. And we’ve got to make sure we have a good energy policy to do that.

I want to thank you for giving me the chance to come and share with you today what the country is doing right now. I want to thank you very much for showing what is possible. I appreciate your hard work here.

May God bless you all.

NOTE: The President spoke at 3:29 p.m. at the Limerick Generating Station. In his remarks, he referred to John W. Rowe, chairman, president, and chief executive officer, Christopher M. Crane, senior vice president, and Ronald J. DeGregorio, site vice president of Limerick Generating Station, Exelon Corporation.

## Remarks at a Pennsylvania Congressional Victory Committee Dinner in Philadelphia, Pennsylvania

May 24, 2006

Thank you all. Thanks for coming. I want to thank you for joining the Pennsylvania Congressional Victory Committee. I am so honored to be standing by two of the young stars of the United States Congress. You know, I’ve been up there long enough to be able to spot talent, and Jim Gerlach and Mike Fitzpatrick are really talented Congressmen, and they deserve to be re-elected to the United States Congress.

I appreciate Karen. It’s good to see you again, Karen. Thanks for coming. Katie, Rob, Joel, Jay, and Katelyn are also here.

[*Laughter*] All you got to do is register them to vote, and it’s a landslide. [*Laughter*]

And I appreciate Kathy Fitzpatrick and Jimmy for being here as well. And by the way, Mike’s mother [father],\* James, and mom, Mary, is with us. So it’s good to have the Fitzpatrick family well represented to pay honor to this good man here.

I appreciate all the local officials who are here and the grassroots activists. See,

---

\* White House correction.

you win campaigns by being able to raise money—and we've raised a lot tonight, and thank you for that. But you also win campaigns by convincing people to put up the signs and make the phone calls and go to the coffee shops and go to your houses of worship and tell people, when you've got somebody who's decent, honest, and honorable, put them back in office. And we've got people who are decent, honest, and honorable representing the Sixth and Eighth Congressional Districts here from Pennsylvania.

And so thank you for what you have done and what you're going to do coming down the stretch of the elections. We're just kind of getting warmed up. [Laughter] We're in the jumping-jack phase of the political season. [Laughter] We're getting ready to run and win. And one of the interesting things about politics, you can't win without a good candidates, and we've got two really fine candidates standing right up here on the stage.

Jim Gerlach is an experienced leader. He's been involved for 16 years in the political process. He is a—he's an independent voice, which is good. It's good for the people of this congressional district. He believes in low taxes. I appreciate his strong stand on national security. He's a member of the Transportation and Infrastructure Committee, and that's important for people in his congressional district because he's helped to improve traffic and roads, and he's promoted open spaces as well. He's a good, thoughtful Member of the United States Congress. And the people in his district are lucky to have him there, as far as I'm concerned.

Mike Fitzpatrick—I don't know what it's like in local politics here, but the county commissioner is somebody who generally knows the feelings of the people, and Mike was a county commissioner. And he's pretty—it means he was close to the constituents; he knows what they think. It's important to have people in Washington who don't lose touch with the constituents. And

Mike Fitzpatrick certainly didn't lose the touch.

He is an Eagle Scout, and interestingly enough, he continually goes to Eagle Scout ceremonies. You know why? He wants to help some other youngster set high values and understand the importance of achievement, but he also wants to thank the parents and those involved in the Scout troops for reaching out to help somebody.

I like Mike a lot. He's an honorable fellow who is for low taxes, good environmental policy; he cares a lot about health care. The people of his congressional district are really lucky to have him representing them.

We're going to win the elections in November of 2006. The reason why is we get things done on behalf of the American people. We've been given some challenges, and we've responded to meet those challenges. I spend the most time as your President working on ways to secure our country. The biggest challenge we face is to make sure that we prevent another attack on the American people. Much of my thinking about the presidency was formed on September the 11th, 2001. It's a day, of course, I will never forget; it's a day that all of us should never forget; it's a day in which our standing in the world changed dramatically. Because you see, we grew up thinking oceans could protect us, and we realized that there's an enemy out there that will do incredible harm to the American people. I'm proud to have allies in the United States Congress who understand that our most important job in Washington is to protect the American people.

We face an enemy that is totalitarian in nature. They've taken a great religion and have hijacked it to suit their own needs. They're Islamo-fascists. They will kill innocent life to achieve an objective. They have made it clear they'd like to hurt America again. They would like to drive us out of regions of the world so they could establish safe haven. They would like to mate their

terrible ambitions with weapons of mass destruction. These are their words, not mine. They believe this country is soft, and it's just a matter of time before we lose our nerve. And I'm proud to have two Members of the United States Congress standing up here who understand the stakes and who are strong in the support of the men and women who wear our uniform and strongly support our efforts to bring the enemy to justice before they hurt us again.

A battlefield in the war on terror is, of course, Iraq. And people in our country are unsettled because of the war, and I understand that. I fully understand why people in America are disquieted about what they're seeing on their TV screens. There's a concern about whether or not we can win. There's no doubt in my mind we will win. And our objective is to have an Iraq that can govern itself, sustain itself, and defend itself; an ally in the war on terror, and an example for others in a region that is desperate for freedom.

The enemy cannot defeat us on the battlefield, but what they can do is put horrible images on our TV screens. And it's really important for those who wear our uniform and the enemy and the people of Iraq to know that the United States of America will complete the mission, and in so doing, will make our country more secure and will be laying the foundation for peace.

I appreciate working with Members of Congress who understand the lessons of history. And one of the really interesting lessons of history, one way I'd like to describe what's taking place in the world today, is my relationship—I describe my relationship with the Prime Minister of Japan, Koizumi. He's a good friend of mine, personally. He's an interesting fellow. He loved Elvis. *[Laughter]* Still does. *[Laughter]* You know what's interesting, though, about my talks with the Prime Minister—and by the way, when I sit down at the table with him, we talk about how we can keep the peace. We talk about how

to deal with North Korean and the fact that he's trying to develop a weapon of mass destruction and, at the same time, creating starvation inside his country. We talk about the young democracy of Iraq, where Japan has 1,000 troops. We talk about a fledgling democracy in Afghanistan and how we can work together to help this young, new democracy grow and flourish.

It's really interesting, isn't it? What makes it even more interesting is the fact that 60 years ago or so, my dad went to war with the Japanese. And something happened between the 19-year-old Navy pilot, George H.W. Bush, and George W. Bush sitting at the table talking about the peace. And what happened was, my predecessor—one of my predecessors—Harry S. Truman, believed in what I believed in, the universality of freedom, the capacity of people to be—to take on democracy, and the knowledge that democracy yields the peace.

And so what you're seeing today is tyranny going to democracy, is people who demanded freedom—12 million people said, "I want to be free"—learning what it means to self-govern. Someday an American President is going to be able to tell the story of our generation. They're going to be able to tell the story of those of us who've been honored to serve our country and say, "Thank goodness they believed in the capacity of freedom to take a troubled country and convert it into an ally." Someday an American President is going to be sitting down with a duly elected leader from Iraq, working to keep the peace, and our children and grandchildren are going to be better off.

Here at home, we've got a strong economy. You know, the economy grew at 3.5 percent last year. That is faster than any other major industrialized nation in the world. The national unemployment rate is 4.7 percent, which happens to be the unemployment rate here in the State of Pennsylvania. We created 5.2 million new jobs since August of 2003. People are working. After-tax real income is up more than 8

percent per American since 2001. Productivity is on the rise; homeownership is high; small businesses are flourishing. This economy is strong, and we intend to keep it that way.

I think it's amazing to be able to tell you how strong the economy is, given through—what we have been through, however. We've been through a recession; we've been through corporate scandals; we've been through a stock market correction; we've been through an attack on our country; we've been through wars; we have been through natural disasters; we've been through high energy prices. Yet we have got a strong economy. You know why? Because we cut the taxes on the American people.

Our progrowth economic policies work. The three of us believe that when you have more of your own money in your pocket to save, invest, or spend, the economy grows. We would rather you spend your money than the Federal Government spends your money.

Now, you'll hear them in the campaign, they'll be talking about the deficit. I'm confident they'll be yelling about the deficit at these two Congressmen. Let me just set the record straight for you. See, they're going to say, "We're going to run up your taxes to balance the budget." That's not the way Washington, DC, works. They're going to run up your taxes, and they're going to figure out new ways to spend your money on new programs, and there will still be a deficit.

The best way to reduce the deficit is to keep progrowth economic policies in place and be wise about how we spend your money, which is exactly what we're doing in Washington. We're on our way to cut the deficit in half by 2009.

One of my concerns is that the United States will lose our nerve and fear competition and become an isolated place. You know, when you see the global competition these days from China and India, some in our country say, "Well, I don't think we

want to try to compete with them." And so they worry about protectionism—they think about protectionism, or they're isolators—that's not my attitude, and I know it's not the attitude of these Congressmen. We have nothing to fear about the future, because we intend to shape it, see. We intend to make America the most competitive nation in the world.

So I'm going to work with these two Congressmen to pass what we've called the American Competitive Initiative, which says that we will be the most—we'll lead the world when it comes to research and development. The Federal Government should double its commitment to basic research in physical sciences over the next 10 years. People say, "Why would the Federal Government be investing?" Well, I'll give you why—the Internet. The Internet came to be because of Federal research dollars—iPods—got one? I got one, you know—*[laughter]*—as a result of Federal research. It's important for the United States to be the most technologically advanced nation in the world.

And that's why I've called for Congress to make the research and development tax credit a permanent part of our Tax Code. And that's why I look forward to working with these Congressmen to make sure that our schools are adept at teaching people the skills necessary to fill the jobs of the 21st century, which means strong math and science curriculum.

So today I went out to one of the most advanced nuclear powerplants in the world—at least in our country. And I did so because I wanted to make this point: In order for us to be a competitive nation, in order for us to keep a high standard of living, we have got to get off of our addiction to oil. And I'm looking forward to working with these Congressmen to do that.

And so I talked today, and I'm going to work with the Congressmen to continue to spend your money on research and development; for example, to speed up new

battery technology so that the hybrid—we'll have plug-in hybrid batteries, which means, in Philadelphia, you'll be driving the first 40 miles per day on electricity, not on gasoline; or more advanced uses of ethanol so we can be using crops grown here in America rather than oil from the Middle East to power our automobiles. Eventually, we'll be firing up our automobiles using hydrogen.

I went to the powerplant today. It's estimated that demand for electricity is going to increase by 50 percent over young people's lifetimes, which means we better have the capacity to generate electricity and protect our environment at the same time. And a really good way to do so is through nuclear power.

I'm also going to work with the Congressmen to continue to spend research money on clean coal technology. We've got 240 years worth of coal; let's burn it cleanly. Let's use it in a way that says we can protect our environment and make sure we maintain our standard of living.

We'll continue to invest in solar technology. Here's the dream of solar technology—and by the way, we've got \$150 million in my budget for solar technology. The dream is, is that every house will have a solar roof to it. And if you do not use all the power generated that day from the sun, you feed it back into the grid. It's like your little powerplant. *[Laughter]* You become a generator of electricity. It's coming.

And we intend to lead the charge to change our habits when it comes to energy to protect our environment, on the one hand, and to make sure the United States is a competitive nation on the other.

I want to talk about health care. For years, Democrats have been talking about Medicare, see, how they're going to make it work better. They never did—they never got the job done. So we came along. We modernized Medicare for our seniors. We said, "If you make a pledge to the seniors of the United States, make it a good

pledge; make it work." You see, the Government would pay \$25,000 for an ulcer surgery but not a dime for the prescription drugs to prevent the surgery from being needed in the first place. What I'm telling you is, medicine had become modern, but Medicare hadn't.

And so we changed it. And today, more than 32 million seniors have enrolled in Part D of Medicare, which means there's a prescription drug benefit. The average senior saves one-half on his or her drug bills. And if you're a poor senior—about a third of those eligible for Medicare—the Federal Government is going to pay 95 percent of your drug bills. The days of a senior having to choose between food and medicine are gone, thanks to the Republican Party.

But we also understand that we don't want the Federal Government running your health care. The best health care system is one where the patient-doctor relationship is central to the decisionmaking, and that's why we're for transparency, information technology in the health care field. That's why we're strong believers in health savings accounts, which will help the uninsured and the small-business owners. We're believers in association health plans that will allow small businesses to pool risk across jurisdictional boundaries so they can buy insurance at the same discounts that big businesses get to do.

I'll tell you what else we're for: We understand that frivolous and junk lawsuits run good doctors out of practice and run up the cost of your medicine. And you got a problem here in Pennsylvania. You got ob-gyns leaving your State. You got specialists who are fearful of practicing medicine. And you need people like these two Congressmen who are willing to stand up to the trial lawyers and promote good, strong medical liability reform.

Finally, although they're not in the Senate, I appreciate them supporting me in picking judges, the right kind of judges, judges who will not legislate from the

bench but judges who will strictly interpret the Constitution. I am proud to have nominated Chief Justice John Roberts and Justice Sam Alito, and I'm even prouder they got confirmed by the United States Senate.

Ours is a philosophy that trusts people. We'd rather you have your money. We believe you can spend it wisely. We believe you can make the right decisions when it comes to medicine. We believe our seniors should be given modern medicine, and we delivered on our promises. The other bunch, they get angry, and they yell and they, you know, scream and holler. We just go about and get the job done. We're people who can deliver results on behalf of the American people.

I've signed a Medicare reform bill; I've signed an energy bill; I've signed tax cuts; I've signed bills to make sure those who

wear the uniform get the full support of the United States Government. And I'm proud to have these two accomplished men serving in Washington, DC. The people of Pennsylvania have got two good Congressmen in these two, and you need to send them back. They're serving this State with dignity, and they're serving our country with honor, and I'm proud to call them friends.

NOTE: The President spoke at 5:46 p.m. at the Sheraton Philadelphia City Center. In his remarks, he referred to Karen Gerlach, wife of Representative Jim Gerlach; Kathleen Fitzpatrick, wife of Representative Michael G. Fitzpatrick; Prime Minister Junichiro Koizumi of Japan; and Chairman Kim Jong Il of North Korea.

## Remarks at the Change of Command Ceremony for the Commandant of the United States Coast Guard *May 25, 2006*

Thank you all. Thank you for the warm welcome. I'm delighted to be here with you at Fort McNair. I'm pleased to join you in celebrating an historic moment for the United States Coast Guard. This morning we mark a change of command at the helm of America's oldest continuous maritime service.

Our Nation thanks a fine patriot, Admiral Tom Collins, for his leadership these past 4 years. And we thank his wife, Nancy, and their family for joining us today. We also congratulate Admiral Thad Allen, as he begins his duties as the 23d Commandant of the United States Coast Guard. And we appreciate the love and support of his wife, Pam, and their fine family as well.

I want to thank Michael Chertoff for his distinguished service to our country. I appreciate the other members of my Cabinet

who have joined to celebrate Thad Allen's beginning his duties as the Commandant: Secretary Elaine Chao and Secretary Norm Mineta and Secretary Sam Bodman and Acting Secretary Lynn Scarlett.

I'm honored to be on stage with General Pete Pace, Chairman of the Joint Chiefs, and I welcome his wife, Lynne, as well. I want to thank the Members of Congress who have joined us today. I appreciate Master Chief Frank Welch, who is the Master Chief Petty Officer of the United States Coast Guard. I want to thank Captain Wilbur Douglass for his fine invocation. I appreciate the members of the diplomatic corps who are here. Thank you all for coming.

The history of the Coast Guard dates back more than two centuries to the Revenue Cutter Service, established by Alexander Hamilton during the presidency of

George Washington, or as I call him, the first George W. [Laughter]

Through the generations, the men and women of the Coast Guard have stepped forward to defend our Nation, to protect our waterways and ports, to enforce maritime law, to safeguard commerce and natural resources, and to rescue those in peril on the seas. Now the Coast Guard is carrying out those missions during a new kind of war. The Coast Guard is vital to our Nation's security, and the American people are grateful to stand behind your shield of freedom.

The Coast Guard is also the world's premier lifesaving service, and the whole world saw your skill and bravery during the hurricanes last year. They saw Coast Guard rescuers plunging from helicopters, lifting people from rooftops, hoisting them to safety. In all, more than 4,000 Coast Guard personnel came to the aid of their fellow Americans and rescued more than 33,000 citizens. One of those saved said this about her rescuers: "They're my guardian angels. I couldn't be here if it wasn't for them."

Countless others who lived through last year's hurricanes feel the same way. When Americans were at their most desperate, they looked to the skies for help, and they knew their prayers were answered when they saw those rescue choppers from the United States Coast Guard. The Coast Guard performed with courage and distinction, and your response to Hurricane Katrina will go down as one of the finest hours in the Coast Guard's 216-year history.

In all your work over the past 4 years, the Coast Guard has benefited from a superb leader in Admiral Tom Collins. Admiral Collins assumed his duties as Commandant shortly after September the 11th, 2001, and has worked tirelessly to transform the Coast Guard for this war on terror. Admiral Collins has led the men and women of this service with honor and respect and devotion to duty. And he's made recruitment and retention a top priority.

Thanks to his leadership, recruitment is up, and the Coast Guard's retention rate is at its highest level since World War II.

Admiral Collins has a right to be proud of all that he accomplished in his time as Commandant. Now he has the right to take some time off. [Laughter] Maybe even spend a few afternoons at Fenway Park. [Laughter] Today Admiral Collins will mark the end of a distinguished 38-year career in the Coast Guard. He retires with the admiration and gratitude of the United States, and Laura and I wish him and Nancy all the best in the next chapter of their lives.

In a few moments, Admiral Collins will pass the duties of Commandant to an outstanding successor in Admiral Thad Allen. I came to know Admiral Allen well last September when he directed recovery efforts after Hurricanes Katrina and Rita. We surveyed damage together. We sat one evening on the deck of the USS *Iwo Jima* talking about how we could help the folks in that region recover. He gave me regular updates on what was taking place—an incredibly devastated part of our country.

It didn't take long to recognize his ability or his integrity or his ability to lead. I knew I could count on Admiral Allen to give me candid judgment. I relied on his steady nerves and his presence of mind in trying conditions. I was impressed by his compassion and his determination to help those who had lost so much.

Admiral Allen brings his experience with Hurricane Katrina to his new post, and he brings much more. The Admiral is a graduate of the Coast Guard Academy, where he was a star football player—he still looks like he could hold his own on the gridiron. [Laughter] He spent his life around the Coast Guard officers and enlisted personnel. Admiral Allen's father, Clyde, with us today, served in the Coast Guard. That means Thad followed in his father's footsteps; I see nothing wrong with that. [Laughter]

At every stage of his career, Admiral Allen has inspired those around him with energy and dedication to service. One of his former colleagues likened Admiral Allen to the Energizer bunny. [Laughter] Another said, "He brings out the best in people, especially in times of crisis." I want to thank Admiral Allen for his willingness to take on this incredibly important responsibility, and I look forward to calling him Commandant of the Coast Guard.

One of Admiral Allen's most important tasks as Commandant will be to help ensure that the Federal Government is ready for the hurricane season, which begins a week from today. The Coast Guard performed heroically during last year's hurricanes, and other agencies of our Government can look to you for example.

We're determined to learn the lessons of Katrina, and we're doing everything possible to be prepared for the next storm. The Department of Homeland Security has reviewed emergency plans for all 50 States and America's 75 largest cities. The Department is working closely with communities to identify any weaknesses in their plans and to find ways to improve them now.

Secretary Chertoff has taken steps to reform FEMA, improve partnerships with the

Red Cross and the Department of Defense, expand the amount of supplies the Federal Government has on hand. We're also making it clear that all able-bodied Americans should have the resources necessary to sustain themselves for 48 to 72 hours after a disaster so that emergency personnel can focus on saving those who cannot help themselves.

I appreciate the many dedicated Americans who are working to prepare for this hurricane season. And I'm confident that if danger arrives, whether from nature or man, the United States Coast Guard will be ready.

The Coast Guard has always been ready to defend our people and our freedom, and I thank you for your dedicated service. *Semper Paratus.*

And now, in recognition of your exceptional service during Hurricane Katrina, I will present the Presidential Unit Citation to the United States Coast Guard.

May God bless you all.

NOTE: The President spoke at 11:12 a.m. at Fort Lesley J. McNair. In his remarks, he referred to Capt. Wilbur C. Douglass III, USN, chaplain of the Coast Guard.

## Statement on House of Representatives Passage of Energy Legislation May 25, 2006

I applaud the House of Representatives for passing the energy and water appropriations bill. I am grateful for the House leadership's work on it. This bill marks a critical first step toward realizing my American Competitiveness Initiative, and it fully funds my request for the Energy Department's Office of Science. I appreciate the leadership of Chairman Hobson and Chair-

man Lewis in working to keep our economy the most competitive in the world. This bill also will support my Advanced Energy Initiative and help make America more secure and less dependent on foreign sources of energy. I urge the Senate to join the House in supporting these important initiatives.

NOTE: The statement referred to H.R. 5427.

## Statement on the National Economy May 25, 2006

America's economy is on the fast track. Today's revised report by the Commerce Department indicates our economy grew at 5.3 percent for the first quarter of this year. That is the fastest growth in 2½ years and another clear sign that our economy is powerful, productive, and prosperous. I commend America's workers, small-business

owners, and innovators for contributing to this strong economic growth. I will continue to work to pursue progrowth policies, make the tax cuts permanent, and restrain Government spending so that opportunity reaches every American neighborhood and every American family.

## Statement on the Department of Justice's Handling of Representative William J. Jefferson's Materials May 25, 2006

Over the last several days, the House of Representatives and the Department of Justice have attempted to resolve a dispute over the execution of a search warrant on the Capitol Hill office of Congressman William Jefferson, who is under criminal investigation.

The Department of Justice's search was part of an important investigation of alleged public corruption. At the same time, the bipartisan leadership of the House of Representatives believes this search violated the constitutional principle of separation of powers and the Speech or Debate Clause of the Constitution. They note these principles must be adhered to, even in the pursuit of a legitimate criminal investigation.

I recognize these are deeply held views. Our Government has not faced such a dilemma in more than two centuries. Yet after days of discussions, it is clear these differences will require more time to be worked out.

So today I am directing the Department of Justice to seal all the materials recovered

from Congressman Jefferson's office for the next 45 days and not to allow access to anyone involved in the investigation. I am also ordering the sealed materials to remain under the custody of the Solicitor General, who heads a separate office within the Justice Department and is not involved in the investigation.

This period will provide both parties more time to resolve the issues in a way that ensures that materials relevant to the ongoing criminal investigation are made available to prosecutors in a manner that respects the interests of a coequal branch of Government. The Justice Department and the House of Representatives should continue their discussions and resolve this matter as quickly as possible.

Let me be clear: Investigating and prosecuting crime is a crucial executive responsibility that I take seriously. Those who violate the law—including a Member of Congress—should and will be held to account. This investigation will go forward, and justice will be served.

Memorandum on Handling of Materials Held by the Department of Justice  
Following Execution of a Search Warrant  
May 25, 2006

*Memorandum for the Attorney General and  
the Solicitor General of the United States*

*Subject: Handling of Materials Held by the  
Department of Justice Following Execution  
of a Search Warrant*

After taking appropriate account of the respective constitutional functions of the House of Representatives and of the executive branch, including important law enforcement interests, the protections afforded those functions under the Constitution, and the need for comity between the executive and legislative branches in the service of the American people, I direct that, with respect to the materials taken pursuant to the warrant dated May 18, 2006, and captioned "In the Matter of the Search of Rayburn House Office Building Room Number 2113," including any copies thereof or items derived in whole or in part therefrom:

(1) The Attorney General, acting through the Solicitor General of the United States who shall for this purpose be subject to no supervision by any officer of the Department of Justice other than the Attorney General, shall (a) preserve and seal the materials, (b) ensure that no use is made of the materials, and (c) ensure that no person

has access to the materials, except that Office of the Solicitor General personnel under the direct supervision of the Solicitor General may have the minimum physical access to the materials essential to the preservation of the materials.

(2) The Attorney General shall endeavor, and the House of Representatives is respectfully encouraged to endeavor, to resolve any issues relating to the materials through discussions between them in good faith and with mutual institutional respect and, if it should prove necessary after exhaustion of such discussions, through appropriate proceedings in the courts of the United States.

The Attorney General shall keep me informed of discussions to which this memorandum refers and proceedings relating to the materials. This memorandum shall expire on July 9, 2006.

Statement on Senate Passage of Immigration Reform Legislation  
May 25, 2006

I commend the Senate for passing bipartisan comprehensive immigration reform before the Memorial Day deadline set by its leaders. I appreciate the hard work of the leadership and Senators on both sides of the aisle. An effective immigration reform bill will protect our borders, hold employers to account for the workers they

hire, create a temporary-worker program to take pressure off our border and meet the needs of our growing economy, address the issue of the millions of illegal immigrants already in our country, and honor America's great tradition of the melting pot. The House of Representatives began a national dialog by passing an immigration bill last

year. Now that the Senate has acted, I look forward to working together with both the House of Representatives and the Senate to produce a bill for me to sign into law.

NOTE: The statement referred to S. 2611. The Office of the Press Secretary also released a Spanish language transcript of this statement.

## Statement on House of Representatives Passage of Energy Legislation May 25, 2006

I applaud today's vote in the House to allow for environmentally responsible energy exploration in a small part of the Arctic National Wildlife Refuge. A reliable domestic supply of energy is important to America's security and prosperity. This project will keep our economy growing by creating jobs and ensuring that businesses can expand. And it will make America less dependent on foreign sources of energy,

eventually by up to a million barrels of crude oil a day—a nearly 20 percent increase over our current domestic production. I thank the House leadership and Chairman Pombo for their hard work on this issue. I urge the Senate to join the House in passing ANWR legislation.

NOTE: The statement referred to H.R. 5429.

## Statement on Signing the Coastal Barrier Resources Reauthorization Act of 2005 May 25, 2006

Today I have signed into law S. 1869, the "Coastal Barrier Resources Reauthorization Act of 2005." This Act provides for digital mapping in support of the coastal barrier resources system and authorizes appropriations through fiscal year 2010 for implementation of the Coastal Barrier Resources Act.

Section 3(c)(2) and section 4(c)(3)(C) and (D) purport to require executive branch officials to submit legislative recommendations to the Congress. The executive branch

shall construe such provisions in a manner consistent with the Constitution's commitment to the President of the authority to submit for the consideration of the Congress such measures as the President judges necessary and expedient and to supervise the unitary executive branch.

GEORGE W. BUSH

The White House,  
May 25, 2006.

## The President's News Conference With Prime Minister Tony Blair of the United Kingdom

*May 25, 2006*

*President Bush.* Thank you all. Good evening. I want to thank Prime Minister Tony Blair for coming to Washington to discuss his recent visit to Iraq. The Prime Minister met with key leaders of the new Iraqi Government that represents the will of the Iraqi people and reflects their nation's diversity. As Prime Minister Blair will tell you, Iraqi Prime Minister Maliki outlined an aggressive agenda to bring security to the Iraqi people, to improve electricity and other essential services, and to pursue a strategy for national reconciliation.

The agenda that Prime Minister Maliki has outlined demonstrates that Iraq's new Government understands its duty to deliver real improvements in the daily lives of the Iraqi people. The formation of a new government represents a new beginning for Iraq and a new beginning for the relationship between Iraq and our coalition. The United States and Great Britain will work together to help this new democracy succeed. We'll take advantage of this moment of opportunity and work with Iraq's new Government to strengthen its young democracy and achieve victory over our common enemies.

As we celebrate this historic moment, it's important to recall how we got there and take stock on how far we've come over the last 3 years. The violence and bloodshed in Iraq has been difficult for the civilized world to comprehend. The United States and Great Britain have lost some of our finest men and women in combat. The car bombings and suicide attacks and other terrorist acts have also inflicted great suffering on the Iraqi people. And Iraqis have increasingly become the principal victims of terror and sectarian reprisal.

Yet in the face of this ongoing violence, each time the Iraqi people voiced their opinion, they chose freedom. In three dif-

ferent elections, millions of Iraqis turned out to the polls and cast their ballots. Because of their courage, the Iraqis now have a government of their choosing, elected under the most modern and democratic Constitution in the Arab world.

The birth of a free and democratic Iraq was made possible by the removal of a cruel dictator. The decision to remove Saddam Hussein from power was controversial. We did not find the weapons of mass destruction that we all believed were there, and that's raised questions about whether the sacrifice in Iraq has been worth it. Despite setbacks and missteps, I strongly believe we did and are doing the right thing. Saddam Hussein was a menace to his people; he was a state sponsor of terror; he invaded his neighbors. Investigations proved he was systematically gaming the Oil-For-Food Programme in an effort to undermine sanctions, with the intent of restarting his weapons programs once the sanctions collapsed and the world looked away. If Saddam Hussein were in power today, his regime would be richer, more dangerous, and a bigger threat to the region and the civilized world. The decision to remove Saddam Hussein was right.

But not everything since liberation has turned out as the way we had expected or hoped. We've learned from our mistakes, adjusted our methods, and have built on our successes. From changing the way we train the Iraqi security forces to rethinking the way we do reconstruction, our commanders and our diplomats in Iraq are constantly adapting to the realities on the ground. We've adapted our tactics, yet the heart of our strategy remains the same: to support the emergence of a free Iraq that can govern itself, sustain itself, and defend itself.

All our efforts over the past 3 years have been aimed towards this goal. This past weekend, the world watched as Iraqis stood up a free and democratic government in the heart of the Middle East. With our help, Iraq will be a powerful force for good in a troubled region and a steadfast ally in the war on terror.

With the emergence of this Government, something fundamental changed in Iraq last weekend. While we can expect more violence in the days and weeks ahead, the terrorists are now fighting a free and constitutional government. They're at war with the people of Iraq, and the Iraqi people are determined to defeat this enemy, and so are Iraq's new leaders, and so are the United States and Great Britain.

It is vital that Iraq's new Government seize this opportunity to heal old wounds and set aside sectarian differences and move forward as one nation. As Prime Minister Maliki has made his priorities clear, we have learned they're the right priorities. He's said he will focus on improving the security situation in Baghdad and other parts of the country. He has declared he will use maximum force to defeat the terrorists. He's vowed to eliminate illegal militias and armed gangs. He wants to accelerate the training of the Iraqi security forces so they can take responsibility from coalition forces for security throughout Iraq. He wants to improve health care and housing and jobs, so the benefits of a free society will reach every Iraqi citizen.

Our coalition will seize this moment as well. I look forward to continued indepth discussions with Tony Blair, so we can develop the best approach in helping the new Iraqi Government achieve its objectives. The new Government of Iraq will have the full support of our two countries and our coalition, and we will work to engage other nations around the world to ensure that constitutional democracy in Iraq succeeds and the terrorists are defeated.

Mr. Prime Minister.

*Prime Minister Blair.* Thank you, Mr. President, and can I say what a pleasure it is to be with you again at the White House. And thank you for your welcome.

As everyone knows, I was in Iraq earlier in this week, in Baghdad. And I was able to discuss with the new leaders of Iraq, firsthand, their experience and their hopes and expectations for the future. And I came away thinking that the challenge is still immense, but I also came away more certain than ever that we should rise to it. And though it is at times daunting, it is also utterly inspiring to see people from all the different parts of the community in Iraq—the Sunni, the Shi'a, the Kurds—sitting down together, all of them democratic leaders—democratically elected by their people—elected for a 4-year term, elected and choosing to come together as a government of national unity, and completely determined to run their country in a different way for the future.

Anybody who studies the program of the Iraqi Government can't fail to see the similarities with the type of program that any of us would want to see for our countries. And what is remarkable about it is that they put the emphasis, of course, on the issues to do with economic recovery and reconstruction and all the problems of infrastructure that they have in their country, but they also very clearly commit themselves to reconciliation between the different parts of the country, to the fight against sectarianism, and to the defeat of terrorism.

And I think what is important now is to say that after 3 years, which have been very, very difficult indeed, and when, at times, it looked impossible for the democratic process to work—I think after these 3 years and the democratic process working and producing this Government, then it is our duty, but it is also the duty of the whole of the international community, to get behind this Government and support it, because the other thing that came across to me very strongly from talking to them

was that the reason there is bloodshed and violence in Iraq is that the very forces that we are confronting everywhere, including in our own countries, who want to destroy our way of life, also want to destroy their hope of having the same type of life. In other words, the very forces that are creating this violence and bloodshed and terrorism in Iraq are those that are doing it in order to destroy the hope of that country and its people to achieve democracy, the rule of law, and liberty.

And I think there is a pattern here for us in the international community. I know the decision to remove Saddam was deeply divisive for the international community and deeply controversial. And there's no point in rehearsing those arguments over and over again. But whatever people's views about the wisdom of that decision, now that there is a democratic Government in Iraq, elected by its people, and now they are confronted with those whose mission it is to destroy the hope of democracy, then our sense of mission should be equal to that, and we should be determined to help them defeat this terrorism and violence.

And I believe very, very strongly indeed—even more so having talked to the leaders there and now coming back and examining our own situation and how we help—I'm more than ever convinced that what is important for them in Iraq is to know that we will stand firm with them in defeating these forces of reaction.

I believe the same, incidentally, is true of the struggle in Afghanistan, where again, exactly the same forces of terrorism and reaction want to defeat the hopes of people for progress. I would also like to think—and this is something the President and I were discussing earlier—we will carry on discussing over tonight and tomorrow—and that is the importance of trying to unite the international community behind an agenda that means, for example, action on global poverty in Africa and issues like Sudan; it means a good outcome to the

world trade round, which is vital for the whole of the civilized world, vital for developing countries but also vital for countries such as ourselves; for progress in the Middle East; and for ensuring that the global values that people are actually struggling for today in Iraq are global values we take everywhere and fight for everywhere that we can in our world today.

So I would like to pay tribute also to the work that our forces do there. I think both our countries can be immensely proud of their heroism and their commitment and their dedication.

But one very interesting thing happened to me when I was there and talking to some of our Armed Forces and talking, also, to the Iraqi soldiers that were working alongside them, and that is, for all the differences in culture and background and nationality, both of them were working together in a common cause, and that was to help a country that was once a brutalized dictatorship become a country that enjoys the same rights and the same freedoms that we take for granted here and in the United Kingdom. And for all the hardship and the challenge of the past few years, I still think that is a cause worth standing up for.

Thank you, Mr. President.

*President Bush.* Terry [Terence Hunt, Associated Press].

#### *Timetables for Iraq*

Q. Mr. President, Pentagon officials have talked about prospects for reducing American forces in Iraq to about 100,000 by year's end. Does the formation of a unity government in Iraq put you on a sound footing to achieve that number?

And, Mr. Prime Minister, is it realistic to think that Iraqi forces will be able to take control of all Iraq by the end of next year as Mr. Maliki suggests?

*President Bush.* First of all, we're going to work with our partners in Iraq, the new Government, to determine the best way forward in achieving an objective, which

is an Iraq that can govern itself and sustain itself and defend itself.

I have said to the American people, as the Iraqis stand up, we'll stand down. But I've also said that our commanders on the ground will make that decision. And I have—we'll talk to General Casey once he is—conferred with the new Government of Iraq. They don't have a defense minister yet; they're in the process of getting a defense minister. So it probably makes a lot of sense for our commander on the ground to wait until their defense structure is set up before we discuss with them, and he with me, the force levels necessary to achieve our objective.

Q. So the 100,000—

*President Bush.* That's some speculation in the press that I—they haven't talked to me about. And as the Commander in Chief, they eventually will talk to me about it. But the American people need to know that we'll keep the force level there necessary to win. And it's important for the American people to know that politics isn't going to make the decision as to the size of our force level; the conditions on the ground will make the decision. And part of the conditions on the ground, Terry, is a new government, and we believe the new Government is going to make a big difference in the lives of the Iraqi people.

I told you earlier that when you attack an Iraqi now, you're at war with an Iraqi Government that's constitutionally elected. And that's a different attitude from the way it's been in the past.

*Prime Minister Blair.* I think it's possible for the Iraqi security forces to take control progressively of their country. That's exactly the strategy we've outlined at the beginning. And I think it's possible to happen in the way that Prime Minister Maliki said. For that to happen, obviously, the first thing that we need is a strong government in Baghdad that is prepared to enforce its writ throughout the country. My very strong feeling, having talked to the leaders

there, is that they intend theirs to be such a government.

Secondly, what they intend is to come down very hard on those people who want to create the circumstances where it's difficult for the Iraqi forces to be in control. And the truth of the matter is, there is no excuse now for anyone to engage in violence in Iraq. I mean, if people's worry is to do with being excluded from the political process, everybody has got their place in the political process today. And obviously, there are still issues to do with the capability of the Iraqi forces, but all the time they are building up, both in number and in capability, and we've got to support that all the way through.

But I'll tell you one interesting thing from talking to all the different groups—because sometimes, certainly in our country, the impression is given that the Iraqi people wish that we were gone from Iraq and weren't there any longer in support of the Iraqi Government or the Iraqi forces. Not a single one of the people I talked to, not one of the political leaders from whatever part of the spectrum, in Iraq, that I talked to—and these are all people from all the different communities elected by their people—not one of them wanted us to pull out precipitately. All of them wanted us to stick with it and see the job done.

Now, of course, they want to take back control of their own country fully, and we want them to do that. But when the Prime Minister, Maliki, talked about an objective timetable, what he meant was a timetable governed by conditions on the ground. And we will be working with them now over the coming period of time to see how we can put that framework together. But they have a very, very clear sense of what they want the multinational force to do. They want us there in support until they've got the capability, and then they want us to leave and them to take full charge of their country. And I believe that can happen.

Yes, Adam.

### United Nations

*Q.* One gets a clear sense of your mutual relief that a Government has now been formed, an elected Government has been formed in Iraq. But, nonetheless, the current Secretary-General of the United Nations has said that he believes that the invasion of Iraq was probably illegal. When you look at your legacy and you look ahead to the reforms of the United Nations you want to see, are you really saying that what you'd actually like to see is a United Nations which could take preemptive action legally?

*Prime Minister Blair.* I think what we need to do is to recognize that there are threats in our world today that require us to act earlier and more effectively. And I think we can debate the institutional structure within which that should happen in the United Nations and elsewhere. But I also think that when we look at this global terrorism that we face, there is—to me, at any rate—a very clear link between the terrorism that is afflicting virtually every country in the Western world, either in actuality or potentially, the terrorism that is happening all over different countries of the Middle East and in Asia and elsewhere, and the terrorism that is there in Iraq and Afghanistan.

And one of the things, I think, certainly for our people, they find most difficult to understand is, they will say, “Well, is it—can it be worth everything that we are doing? I mean, it's such a huge sacrifice that is being made. Can it be worth it?” And I think the answer to that is, it is worth it to those engaged in this violence and terrorism to try to stop us, and we should have the same faith and confidence in our determination to succeed as they have in their determination to make us fail.

And I think that is an issue for the whole of the international community, because I've got no doubt at all that if we do succeed, as I believe that we will in Iraq, difficult though it will be, and we succeed

in Afghanistan, then the whole of this global terrorism will suffer a defeat. And that's why I think we need an international community that's capable of recognizing these problems and acting on them.

*President Bush.* I'd like to see a United Nations that's effective, one that joins us in trying to rid the world of tyranny; one that is willing to advance human rights and human dignity at its core; one that's an unabashed organization—is unabashed in their desire to spread freedom. That's what I'd like to see, because I believe that freedom will yield the peace. I also believe freedom is universal. I don't believe freedom is just a concept only for America or Great Britain; it's a universal concept. And it troubles me to know that there are people locked in tyrannical societies that suffer. And the United Nations ought to be clear about its desire to liberate people from the clutches of tyranny. That's what the United Nations ought to be doing, as far as I'm concerned.

Yes, Steve [Steve Holland, Reuters].

### Iran

*Q.* Thank you, Mr. President. How close are you to an agreement on a package of incentives for Iran? And what does Iran stand to gain if it were to give up its enrichment program? And why are you ignoring these recent back-channel overtures from Iran?

*President Bush.* We spent a great deal of time talking about the Iranian issue, and one of the goals that Tony and I had was to convince others in the world that Iran with a nuclear weapon would be very dangerous, and therefore, we do have a common goal. And this fundamental question is, how do you achieve that goal, obviously. We want to do it diplomatically.

Right now we, as a matter of fact, spent a lot of time upstairs talking about how to convince the Iranians that this coalition we put together is very serious. One option, of course, is through the United Nations Security Council. And we strategized about

how do we convince other partners that the Security Council is the way to go if the Iranians won't suspend like the EU-3 has asked them to do. The Iranians walked away from the table. They're the ones who've made the decision, and the choice is theirs. Now, if they would like to see an enhanced package, the first thing they've got to do is suspend their operations, for the good of the world. It's incredibly dangerous to think of an Iran with a nuclear weapon.

And therefore, Steve, to answer your questions, of course, we'll look at all options, but it's their choice right now. They're the folks who walked away from the table. They're the ones who said that, "Your demands don't mean anything to us."

Now, in terms of—you said back channels—

Q. Back-channel overtures.

*President Bush.* Well, I read the letter of the President, and I thought it was interesting. It was, like, 16 or 17 single-spaced typed pages of—but he didn't address the issue of whether or not they're going to continue to press for a nuclear weapon. That's the issue at hand.

And so it's—we have no beef with the Iranian people. As a matter of fact, the United States respects the culture and history of Iran, and we want there to be an Iran that's confident and an Iran that answers to the needs of the—we want women in Iran to be free. At the same time, we're going to continue to work with a government that is intransigent, that won't budge. And so we've got to continue to work to convince them that we're serious, that if they want to be isolated from the world, we will work to achieve that.

Q. Should this enhanced package include a light-water reactor and a security guarantee?

*President Bush.* Steve, you're responding to press speculation. I've just explained to you that the Iranians walked away from the table, and that I think we ought to be continuing to work on ways to make

it clear to them that they will be isolated. And one way to do that is to continue to work together through the United Nations Security—if they suspend and have the IAEA in there making sure that the suspension is real, then, of course, we'll talk about ways forward, incentives.

#### *United Nations/Iran*

Q. Prime Minister, you've both talked a little about the U.N. I know that you believe the U.N. needs vigorous leadership, and you're going to pick up on these themes in your speech tomorrow. Is that a job application? And if not—

*President Bush.* Wait a minute. [*Laughter*]

Q. —do you both have a sense—do you have someone in mind? And if not, how are you going to get the reform of the U.N. you want to see?

*Prime Minister Blair.* No, no, and I'm not sure—[*laughter*]—is the answer to those ones. Look, what we want to do is to make sure that the U.N. is an effective instrument of multilateral action. That's what everyone wants to see. And the fact is, there are multiple problems in the world; they require the international community to respond on a collective basis, but you've got to have an effective set of multilateral institutions to do that. And that's true whether you're tackling global poverty or trying to resolve disputes or, indeed, when you're dealing with issues like Iran.

The whole point about the international community today is that these problems are urgent; they need to be tackled. If they're not tackled, the consequences are very quickly felt around the world, and you've got to have institutions that are capable of taking them on and tackling them and getting action taken.

Now, we were just talking about Iran a moment ago. I mean, we want to have this resolved through the process of the multilateral institutions. There's a way we can do this. I mean, after all, we are the

ones saying the Atomic Energy Authority—their duties and obligations they lay upon Iran should be adhered to. And we've got absolutely no quarrel with the Iranian people. The Iranian people are a great people; Iran is a great country. But it needs a government that is going to recognize that part of being a great country is to be in line with your international obligations and to cease supporting those people in different parts of the world who want, by terrorism and violence, to disrupt the process of democracy.

So I think that our position with Iran is a very reasonable one. And we want to see how we can make progress and help them to do the things that we believe that they should do, but they must understand that the will of the international community is sure and is clear, and that is that the obligations that are upon them have got to be adhered to.

*President Bush.* Stretch [Richard Keil, Bloomberg News].

*Secretary of the Treasury John W. Snow/  
National Economy*

*Q.* Thank you, Mr. President.

*President Bush.* I call him Stretch.

*Q.* And I've been called worse. [*Laughter*] Has Treasury Secretary Snow given you any indication that he intends to leave his job any time soon?

*President Bush.* Secretary of Treasury Snow?

*Q.* Has he given you any indication he intends to leave his job any time soon? And related to that, Americans—macro-economic numbers are indeed good, but many Americans are concerned, increasingly concerned about rising health care costs, costs of gasoline. And does that make it hard for your administration, Treasury Secretary Snow, and everyone else to continue to talk up the economy?

*President Bush.* No, he has not talked to me about resignation. I think he's doing a fine job. After all, our economy is—it's strong. We grew at 3.5 percent last year;

a good, strong first quarter this year. We added five—2.5 million new jobs; we've got 4.7 percent unemployment rate nationwide. Productivity is up; homeownership is high; small businesses are doing well. He's done a fine job.

And our—obviously, people are concerned about rising fuel prices—all the more reason to get off oil and to promote alternatives, such as ethanol or battery technologies that will enable us to drive the first 40 miles on electricity. We're spending about \$1.2 billion over the next 10 years to develop hydrogen fuel cells. We want—we need to get away from hydrocarbons here in America for economic security, for national security, and for environmental reasons as well.

One way we could help alleviate gasoline prices here in America is for the Congress to pass some regulatory relief so we can actually expand refining capacity. We haven't built a new refinery here since the 1970s. And curiously enough, when demand for a product goes up with tight supply, price follows. And so we put out some logical ways for Congress to work with the administration to relieve price pressures on gasoline.

As far as health care goes, there are some practical ways to deal with health care costs, and one of the most practical ways is to get rid of these junk lawsuits that are running good doctors out of practice and running up the price of medicine. Passed it out of the House; they can't get it out of the Senate because the lawyers won't let it out. But we put forth a commonsense practice to deal with rising health care costs as well.

*Progress in Iraq*

*Q.* You both presented the Iraqi Government as a substantial vindication of the conflict. Do you also accept, as a matter of harsh political reality, that the Iraq conflict has also left both of you politically weakened and, whether justly or unjustly, less

able to give the kind of moral leadership that you're discussing today?

*President Bush.* No question that the Iraq war has created a sense of consternation here in America. I mean, when you turn on your TV screen and see innocent people die, day in and day out, it affects the mentality of our country.

But here's what they're asking in America; they're asking, "Can we win?" That's what they want to know. Do we have a strategy for victory? And so the talk about the unity Government—you might remember, there was some—a lot of speculation as to whether there would even be a unity government. A couple of months ago, people were saying, "Well, they can't even get a unity government going." But we have a unity government—a Kurd President, a Prime Minister who is a Shi'a, a Speaker who is a Sunni. These are strong leaders. It's an indication that progress is being made.

Part of progress, of course, is on the political track. You know, we had elections in Iraq; 12 million people voted last December. Now, it seems like an eternity ago, I know, like a decade. But that's not all that long ago in the larger scope of things. Twelve million people said, we want to be free. It was an astounding moment. And this unity Government is now formed as a result of those elections, under a Constitution approved by the Iraqi people. That's progress. It's certainly a far sight from the days of a tyrant who killed hundreds of thousands of his own people and used weapons of mass destruction and threatened the neighborhood. I mean, that is progress.

No question, however, that the suiciders and the killers and the IEDs and the deaths have an effect on the American people. But one of the reasons that I appreciate Tony coming is that he brings a fresh perspective of what he saw. And the American people need to know, we are making progress toward a goal of an Iraq that can defend itself, sustain itself, and govern

itself; that will deny the terrorists a safe haven.

You know, Al Qaida has made it clear what their intentions are in Iraq. I'm sure you've read some of the intercepts that are laid out there for people to see. And they have made it clear that it's just a matter of time for countries like Great Britain and the United States to leave. In other words, if they make life miserable enough, we'll leave. And they want us to leave because they want a safe haven from which to launch attacks, not only on us but on moderate Muslim governments as well. These people are totalitarians. They're Islamic fascists. They have a point of view; they have a philosophy; and they want to impose that philosophy on the rest of the world. And Iraq just happens to be a—one of the battles in the war on terror.

And Tony brings up a good point: Why are they resisting so hard; what is it about democracy they can't stand? Well, what they can't stand about democracy is this: Democracy is the exact opposite of what they believe. They believe they can impose their will; they believe there's no freedom of religion; they believe there's no women's rights. They have a dark vision of the world, and that's why they're resisting so mightily.

So, yes, I can understand why the American people are troubled by the war in Iraq. I understand that. But I also believe the sacrifice is worth it and is necessary. And I believe a free Iraq is not only going to make ourselves more secure, but it's going to serve as a powerful example in the Middle East.

You know, foreign policy, for a while, just basically said, if it seems okay on the surface, just let it be. And guess what happened? There was resentment and hatred that enabled these totalitarians to recruit and to kill, which they want to continue to do to achieve their objectives. And the best way to defeat them in the long run is through the spread of liberty.

And liberty has had the capacity to change enemies to allies. Liberty has had the capacity to help Europe become whole, free, and at peace. History has proven that freedom has got the capacity to change the world for the better, and that's what you're seeing.

You know, the amazing thing about dealing with Prime Minister Blair, has never once has he said to me on the phone, we better change our tactics because of the political opinion polls. And I appreciate that steadfast leadership. And I appreciate somebody who has got a vision, a shared vision for how to not only protect ourselves in the war on terror but how to make the world a better place.

*Prime Minister Blair.* I don't really think it's a matter of our vindication. I think, in a way, that's the least important part of it. But I do think that occasionally, we should just take a step back and ask, why are we doing this? Why is it so important?

Saddam was removed from power 3 years ago. Since then, incidentally, our forces have been there with the United Nations mandate and with the consent of the Iraqi Government itself—the Iraqi Government becoming progressively more the product of direct democracy.

So whatever people thought about removing Saddam—you agree with it, you didn't agree with it—for these last 3 years, the issue in Iraq has not been, these people are here without any international support, because we haven't had any United Nations resolution governing our presence there. The issue is not, you're there, but the Iraqi people don't want you there, because the Iraqi Government and now this directly elected Iraqi Government has said they want us to stay until the job is done.

So why is it that for 3 years, we have had this violence and bloodshed? Now, people have tried to say, it's because the Iraqi people—you people, you don't understand; you went in with this Western concept of democracy, and you didn't understand that their whole culture was different;

they weren't interested in these types of freedom. These people have gone out and voted—a higher turnout, I have to say—I'm afraid to say, I think, than either your election or mine. These people have gone out and voted—

*President Bush.* Depends on which one, 2000 or 2004? [Laughter]

*Prime Minister Blair.* I think both of them.

*President Bush.* I think you're right. [Laughter]

*Prime Minister Blair.* They have gone out and voted despite terrorism, despite bloodshed, despite literally the prospect of death for exercising their democratic right. So they have kept faith with the very democratic values that we say we believe in, and the people trying to wrest that democracy from them are opposed to absolutely everything we stand for and everything the Iraqi people stand for.

So what do we do in response to this? And the problem we have is very, very simple. A large part of the perspective with which we look at this is to see every act of terrorism in Iraq, every piece of ghastly carnage on our television screens, every tragic loss of our own forces—we see that as a setback and as a failure, when we should be seeing that as a renewed urgency for us to rise to the challenge of defeating these people who are committing this carnage. Because over these past 3 years, at every stage, the reason they have been fighting is not, as we can see, because Iraqi people don't believe in democracy; Iraqi people don't want liberty. It is precisely because they fear Iraqi people do want democracy; Iraqi people do want liberty.

And if the idea became implanted in the minds of people in the Arab and Muslim world that democracy was as much their right as our right, where do these terrorists go? What do they do? How do they recruit? How do they say, America is the evil Satan? How do they say, the purpose of the West is to spoil your lands, wreck

your religion, take your wealth? How can they say that? They can't say that.

So these people who are fighting us there know what is at stake. The question is, do we?

*President Bush.* Must say, that was a great answer. [Laughter]

*Prime Minister Blair.* Yours was pretty good too. [Laughter]

*Q.* You have your chance now. [Laughter]

*President Bush.* Another chance, good. Well, thank you, Martha [Martha Raddatz, ABC News].

### *Troop Levels in Iraq*

*Q.* Mr. President, you have said time and time again, and again tonight, when Iraqi forces stand up, coalition forces can start standing down.

*President Bush.* Right.

*Q.* But the fact is, you have been standing up Iraqi forces in great numbers. The administration says you have hundreds of thousand trained and equipped, tens of thousand leading the fight. And yet during the same period they've been standing up, there has not been a substantial decrease in U.S. and coalition forces. So what does that tell us about how meaningful the figures are on Iraqi troops? And what does that tell us about a potential for a draw-down?

*President Bush.* It tells you that the commanders on the ground are going to make the decision, that's what that tells you. And when they feel comfortable in recommending to me fewer troops, I will accept that. But they're going to make that recommendation based upon the conditions on the ground. I know I keep saying that, and it probably bores you that I keep giving the same answer, but I haven't changed my opinion.

I talk to our commanders all the time. They feel strongly that the Iraqi Army is getting better. It's hard to have a command and control system with an Iraqi Army when you don't have a defense minister.

And so Mr. Maliki is going to have to pick one soon. And then our commanders will gauge as to whether or not the command and control structure is sufficient to be able to enable the Iraqis to take more of the fight. They are taking more of the fight, by the way. They're in more Provinces than ever before. They're taking over more territory. They're taking over more missions. There are some gaps that we need to continue to work on to fill. The transportation issue is going to need to be dealt with over time.

All I can report to you is what General Casey—in whom I have got a lot of confidence—tells me, and that is, the Iraqis are becoming better and better fighters. And at some point in time, when he feels like the Government is ready to take on more responsibility and the Iraqi forces are able to help them do so, he will get on the telephone with me and say, "Mr. President, I think we can do this with fewer troops." We've been up to 165,000 at one point; we're at about 135,000 now.

*Q.* [Inaudible]

*President Bush.* Hold on for a second. Actually, he moved some additional troops from Kuwait into Baghdad. Conditions on the ground were such that we needed more support in Baghdad, to secure Baghdad, so he informed me, through Donald Rumsfeld, that he wanted to move troops out of Kuwait into Baghdad.

So these commanders—they need to have flexibility in order to achieve the objective. You don't want politicians making decisions based upon politics. You want the Commander in Chief making decisions based upon what the military thinks is the right way to achieve the objective. I've set the objective; it's clear for everybody—a country that can sustain itself, defend itself, and govern itself. And we're making progress on all fronts. But as to how many troops we have there will depend upon the generals and their commanders saying, "This is what we need to do the job, Mr. President." And that's the way it's going

to be so long as I'm standing here as the Commander in Chief, which is 2½ more years.

*Prime Minister Blair.* I spoke to General Casey and to our own General Fry in Baghdad on Monday. We sat down and talked this very issue through. And I think what you will find is that progressively, there will be more and more parts of Iraq that are policed by the Iraqi security forces themselves, and their capability is improving. But I also think you will find, probably over the next few months, there will be a real attempt by the antidemocratic forces to test them very, very strongly. And remember, a lot of the attacks are now happening not on the multinational force, although those attacks continue, of course, but actually on the Iraqi forces themselves, on their police, on their army, and so on. And the purpose, of course, of that is to deter them from the very buildup of capability that we want to see.

But over the course of the next few months, you will see progressively those Provinces in Iraq coming under Iraqi control, and then, of course, it will be for the Iraqis to sort out that responsibility.

*President Bush.* One thing, Martha, is that we want to make sure we complete the mission, that we achieve our objective. A loss in Iraq would make this world an incredibly dangerous place. Remember, there is not only sectarian violence, a hang-over from Saddam's era, but there is an Al Qaida presence in the form of Zarqawi, who wants to sow as much havoc as possible to cause us to leave before the mission is complete.

Listen, I want our troops out; don't get me wrong. I understand what it means to have troops in harm's way. And I know there's a lot of families making huge sacrifices here in America. I'll be going to a Memorial Day ceremony next Monday, paying tribute to those who have lost their life. I'm sure I will see families of the fallen. I fully understand the pressures being placed upon our military and their families.

But I also understand that it is vital that we do the job, that we complete the mission. And it has been tough. It's been really tough, because we're fighting an unconventional enemy that is willing to kill innocent people. There are no rules of war for these people. But make no mistake about it, what you're seeing in Iraq could happen all over the world if we don't stand fast and achieve the objective.

No, I had the followup answer; you can't have a followup question. Nice try, though.

*Prime Minister Blair*

*Q.* Prime Minister, this is possibly your last official visit to Washington as Prime Minister—

*President Bush.* Wait a minute. [Laughter] Back-to-back disses.

*Q.* At least the beginning of the end of your particular special relationship. Will you miss the President? What will you miss about him? [Laughter]

And for the President, what will you miss about Tony Blair, and what are you looking for in an eventual replacement?

*President Bush.* I'll miss those red ties, is what I'll miss. [Laughter] I'll say one thing—he can answer the question—don't count him out; let me tell it to you that way. I know a man of resolve and vision and courage. And my attitude is, I want him to be here so long as I'm the President.

*Prime Minister Blair.* Well, what more can I say? [Laughter] Probably not wise to say anything more at all. [Laughter]

You guys, come on, I want you to—the British delegation, ask a few serious questions. [Laughter]

*President Bush.* Right.

*Prime Minister Blair.* Or we'll go on to one of you guys. [Laughter]

*President Bush.* Plante [Bill Plante, CBS News].

*Iraq*

Q. Perhaps I can change the mood. Mr. President, you talk about setting the objective. But our people, my colleagues on the ground in Iraq, say that when they talk to American troops, the rank and file, they say they don't believe that they've had enough to do the job. They say further that while the Iraqi Army may be improving, there is absolutely no way to depend upon the police, who they say are corrupt and aligned with militias. All of this going on—what reason is there to believe that the new Government can do any better with these people than we've been able to do so far?

*President Bush.* There are several tracks, Bill. One is the political track. I think it's very important for the Iraqi people to have a government that has been elected under a Constitution they approved. In other words, the political track has been a vital part of having a country that can govern itself and defend itself.

There's a security track. And there's no question that there are a lot of Iraqis trained to fight, and many of them are good fighters—117,000 have been trained and equipped. There needs to be more equipment; no question about that. The Iraqis—I think if you were to get a—at least the assessment I get, is that the Iraqi Army is moving well along and they're taking more and more of the territory over in order to defend their country.

No question, we've got a lot of work to do on the police. General Casey has said publicly that year 2006 is the year that we'll train the police up and running. Perhaps the place where there needs to be the most effective police force is in Baghdad. I just told you, we're moving more troops in. There's a—General Casey met today with the Prime Minister to talk about how to secure Baghdad. It's really important that Baghdad—that capital city become more secure. And there's plans to deal with the contingencies on the ground. All I can

tell you is, is that we're making progress toward the goal.

*Prime Minister Blair.* Can I just—and I'd like to say something, again, out of the discussions I had on Monday. I think that what is important is, try and get a sense of balance in this. Look, it would be completely foolish for us to say, there are no problems with either the police or the army; you've got a full force capability in the way that we want. And nobody is actually saying that.

It would also be wrong to turn it around the other way, though, even in respect to the police. I had quite a detailed discussion, not, in fact, with the generals, but some of the ordinary soldiers who—British soldiers there, up in Baghdad, and also with some of the people who are working with the police at the moment. And what they said to me is, yes, there are real problems to do with corruption in parts of the police force, but actually, there is also another side to it, which there are people who are really dedicated and really committed to a nonsectarian Iraq, who also are playing their part.

Now, I think the whole question is whether this new Government can then grip this in the way, in a sense, that only they can. You see, I think this is where, inevitably, over time, we have to transfer responsibility. And that is, of course, what we wish to do, and part of that is because it is easier for an Iraqi interior minister, who is the product of an Iraqi-elected Government, to go in and take the really tough measure sometimes that is necessary to sort some of these issues out.

But I can assure you of two things: First of all, there is another, more positive side to the Iraqi forces—both the army and in parts of the police as well; and secondly, the Iraqi Government knows that this is the absolute prerequisite of success for them. It's just—one of the ministers said to me, he said, "You should understand, our state was a completely failed state." The police—people didn't go to the police

in Iraq if they had a problem under Saddam. They had a problem if they were in contact with the police because of the way the state was run.

And so you're talking about literally building the institutions of a state from scratch. And I don't think it's, in one sense, very surprising that it is both difficult and taking time. But I think that they do know that this is of vital importance for them to succeed. And I think you may find that it is easier for Iraqis to do this themselves and take some of these measures necessary, than it is for us, although we would be there, obviously, in support of what they're doing.

#### *Lessons Learned in the War on Terror*

Q. Mr. President, you spoke about missteps and mistakes in Iraq. Could I ask both of you which missteps and mistakes of your own you most regret?

*President Bush.* Sounds like kind of a familiar refrain here—saying “bring it on,” kind of tough talk, you know, that sent the wrong signal to people. I learned some lessons about expressing myself maybe in a little more sophisticated manner—you know, “wanted dead or alive,” that kind of talk. I think in certain parts of the world it was misinterpreted, and so I learned from that. And I think the biggest mistake that's happened so far, at least from our country's involvement in Iraq, is Abu Ghraib. We've been paying for that for a long period of time. And it's—unlike Iraq, however, under Saddam, the people who committed those acts were brought to justice. They've been given a fair trial and tried and convicted.

*Prime Minister Blair.* I think inevitably, some of the things that we thought were going to be the biggest challenge proved not to be, and some of the things we didn't expect to be challenges at all proved to be immense. I think that probably in retrospect—though at the time it was very difficult to argue this—we could have done

the de-Ba'athification in a more differentiated way than we did.

I think that the most difficult thing, however, has been the determination of people to move against the democratic process in Iraq in a way that, I think—as I was saying a moment or two ago—indicates our opponents' very clear view from a very early stage that they have to stop the democratic process working. And I think it's easy to go back over mistakes that we may have made, but the biggest reason why Iraq has been difficult is the determination of our opponents to defeat us. And I don't think we should be surprised at that.

Maybe in retrospect, when we look back, it should have been very obvious to us, and is obvious still in Afghanistan, that for them, it is very clear. You know, they can't afford to have these countries turned round, and I think that probably, there was a whole series of things in Iraq that were bound to come out once you got Al Qaida and other groups operating in there to cause maximum destruction and damage. And therefore, I'm afraid in the end, we're always going to have to be prepared for the fall of Saddam not to be the rise of democratic Iraq, that it was going to be a more difficult process.

*President Bush.* Mr. Prime Minister, can I buy you dinner?

*Prime Minister Blair.* Certainly.

NOTE: The President's news conference began at 7:31 p.m. in the East Room at the White House. In his remarks, the President referred to Prime Minister Nuri al-Maliki, former President Saddam Hussein, President Jalal Talabani, and Speaker of the Council of Representatives Mahmoud al-Mashhadani of Iraq; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; President Mahmud Ahmadi-nejad of Iran; and senior Al Qaida associate Abu Musab Al Zarqawi. Prime Minister Blair referred to Lt. Gen. Sir Robert Fry, Royal Marines, deputy commander, Multi-National

*May 25 / Administration of George W. Bush, 2006*

Force—Iraq. A reporter referred to Secretary-General Kofi Annan of the United Nations.

## Statement on Senate Confirmation of Michael V. Hayden as Director of the Central Intelligence Agency

*May 26, 2006*

I commend the Senate for confirming Michael Hayden as Director of the Central Intelligence Agency by a bipartisan majority. Winning the war on terror requires that America have the best intelligence possible, and his strong leadership will ensure that we do. General Hayden is a patriot and a dedicated public servant whose broad experience, dedication, and expertise make him the right person to lead the CIA at

this critical time. I look forward to working with Ambassador Negroponte, General Hayden, and the other leaders of our intelligence community as we continue to address the challenges and threats we face in the 21st century. I congratulate General Hayden and his family on his confirmation and thank him for his continued service to our Nation.

## Statement on Senate Confirmation of Brett M. Kavanaugh as a United States Circuit Judge for the District of Columbia

*May 26, 2006*

I applaud the Senate's vote to confirm Brett Kavanaugh to the U.S. Court of Appeals for the District of Columbia Circuit. Brett Kavanaugh is superbly qualified for the Court of Appeals and will be a brilliant, thoughtful, and fair-minded judge. I appreciate his distinguished service in the execu-

tive branch for the last 5 years, as Associate Counsel and then Senior Associate Counsel to the President, and since July 2003 in the vital role of Staff Secretary. I congratulate Brett and his family on today's confirmation and thank him for his continued service to the law and our Nation.

## Statement on Senate Confirmation of Dirk Kempthorne as the Secretary of the Interior

*May 26, 2006*

I applaud the Senate for confirming Dirk Kempthorne as Secretary of the Interior. Dirk has an abiding love of nature and the outdoors and is dedicated to conserving our natural resources. He will continue my administration's efforts to effectively man-

age our national parks, support historic and cultural sites through our Preserve America Initiative, and pursue environmentally responsible energy development on Federal lands and waters. He will also work to

maintain good relations with Native American tribes and will play a leadership role in my cooperative conservation approach to environmental stewardship. I congratulate

Dirk and his family on today's confirmation and thank him for his continued service to our Nation.

## Statement on Senate Confirmation of Robert J. Portman as Director of the Office of Management and Budget

*May 26, 2006*

I commend the Senate for confirming Rob Portman as Director of the Office of Management and Budget. In this key position, Rob will have a leading role on my economic team and will help ensure that the Government spends the taxpayers' money wisely, or not at all. In addition, Rob will be in charge of implementing my goal of cutting the budget deficit in half

by 2009 while funding our priorities. The American people deserve results for every hard-earned dollar they send to Washington. Rob is a man of character and will perform his duties with dedication and integrity. I congratulate Rob and his family on today's confirmation and thank him for his continued service to our Nation.

## Joint Statement by President George W. Bush and Prime Minister Tony Blair of the United Kingdom

*May 26, 2006*

The United States has no closer ally than the United Kingdom. U.S. and U.K. forces are fighting terror in Afghanistan, Iraq, and around the globe. The Prime Minister and the President discussed ways to strengthen defense cooperation.

The two leaders are pleased to announce that the United States and United Kingdom recently signed an agreement that allows appropriately cleared British and U.S. personnel to use the same computer network to access military and intelligence information and other planning tools to support joint military operations in the defense of freedom.

Additionally, the leaders recognize that as American and British soldiers, sailors, airmen, and marines are right now standing together in harm's way, we must plan for the future capabilities that will enhance our

ability to cooperate. Both governments agree that the UK will have the ability to successfully operate, upgrade, employ, and maintain the Joint Strike Fighter such that the UK retains operational sovereignty over the aircraft. Further, both governments agree to protect sensitive technologies found within the Joint Strike Fighter program. Together, we are working out the details, while remaining committed to these principles.

Finally, the President and Prime Minister have a shared view that we need to continue to strengthen and deepen the relationship between our defense establishments to achieve fully interoperable forces and to leverage the respective strengths of U.S. and U.K. industries. The Prime Minister and President look forward to new ways we can achieve that goal.

Commencement Address at the United States Military Academy in West Point, New York  
May 27, 2006

Thank you for the warm welcome—General Lennox, Secretary Harvey, Members of the United States Congress, Academy staff and faculty, distinguished guests, proud family, and, most importantly, the class of 2006.

On the way in, General Lennox showed me what you did to his car. [*Laughter*] I told him, “That’s a fine looking vehicle”—[*laughter*]—“but you need to stay away from Marine One.” [*Laughter*]

I see a lot of “Gray Hogs” out there—a few “Century Men” too. During your 4 years at this Academy, I’m told, there are about 18,000 opportunities to be late for class, drill, march, or inspection, and many of you availed yourselves of those opportunities. [*Laughter*] Others got written up just for having bad haircuts. No matter what reason you got slugged, help is on the way. In keeping with longstanding tradition, I hereby absolve all cadets who are on restriction for minor conduct offenses. I leave it to General Lennox to define exactly what “minor” means. [*Laughter*]

It’s a privilege to stand before the future leaders of the United States Army. You have worked hard to get to this moment. You’ve survived the hardest Beast on record, the “best summer of your lives” in Buckistan, countless hours in the House of Pain. In 4 years, you’ve been transformed from “bean-heads” to “yuks” to “cows” and “Firsties.” And today you will become proud officers of the greatest army in the history of the world. Your teachers are proud of you; your parents are proud

of you; and so is your Commander in Chief. Congratulations on a fantastic achievement.

This Academy has shaped your minds and bodies for the challenges that lie ahead. You worked hard in the classroom and on the playing field to prepare for the rigors of combat. One cadet described the West Point attitude this way: “First I’ll beat Navy and Air Force, and then I’ll beat the enemies of freedom on the battlefield.”

The field of battle is where your degree and commission will take you. This is the first class to arrive at West Point after the attacks of September the 11th, 2001. Each of you came here in a time of war, knowing all the risks and dangers that come with wearing our Nation’s uniform. And I want to thank you for your patriotism, your devotion to duty, your courageous decision to serve. America is grateful and proud of the men and women of West Point.

The reality of war has surrounded you since your first moments at this Academy. More than 50 of your fellow cadets here at West Point have already seen combat in Afghanistan and Iraq. And 34 times since your class arrived, you have observed a moment of silence in Washington Hall to honor a former cadet fallen in the war on terror. Each loss is heartbreaking, and each loss has made you even more determined to pick up their mantle, to carry on their fight, and to achieve victory. We will honor the memory of those brave souls. We will finish the task for which they gave their lives. We will complete the mission.

West Point has adapted to prepare you for the war you’re about to enter. Since

the attacks of September the 11th, 2001, this Academy has established a new combating terrorism center, a new minor in terrorism studies, with new courses in counterinsurgency operations, intelligence, and homeland security, and winning the peace. West Point has expanded Arabic language training, has hired new faculty with expertise in Islamic law and culture, brought in members of the 101st and 82d Airborne to train you and share their experiences on the frontlines in Iraq and Afghanistan. And each of you endured grueling Saturday training events where you practiced identifying IEDs, conducting convoy operations, and running checkpoints. By changing to meet the new threats, West Point has given you the skills you will need in Afghanistan and Iraq and for the long war with Islamic radicalism that will be the focus of much of your military careers.

This Academy went through a similar period of change six decades ago, at the end of World War II. Some of West Point's greatest graduates—men like Eisenhower and Bradley, Patton and MacArthur—had just brought our Nation victory in Europe and Japan. Yet almost immediately, a new threat appeared on the horizon, the threat of imperial communism. And West Point, like America, had to prepare for a long struggle with a new adversary, one that would require the determination of generations of Americans.

In the early years of that struggle, freedom's victory was not obvious or assured. In 1947, Communist forces were threatening Greece and Turkey; the reconstruction of Germany was faltering; mass starvation was setting in across Europe. In 1948, Czechoslovakia fell to communism; France and Italy appeared to be headed for the same fate; and Berlin was blockaded on the orders of Josef Stalin. In 1949, the Soviet Union exploded a nuclear weapon, giving our new enemy the ability to bring catastrophic destruction to our homeland. And weeks later, Communist forces won their revolution in China and claimed the

world's most populous nation for communism. And in the summer of 1950, seven North Korean divisions poured across the border into South Korea, marking the start of the first direct military clash of the cold war. All of this took place in just the first 5 years following World War II.

Fortunately, we had a President named Harry Truman, who recognized the threat, took bold action to confront it, and laid the foundation for freedom's victory in the cold war. President Truman set a clear doctrine. In a speech to Congress, he called for military and economic aid to Greece and Turkey and announced a new doctrine that would guide American policy throughout the cold war. He told the Congress, "It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." With this new doctrine, and with the aid to back it up, Greece and Turkey were saved from communism, and the Soviet expansion into Southern Europe and the Middle East was stopped.

President Truman acted boldly to confront new adversaries. When Stalin tested America's resolve with a blockade of Berlin, President Truman launched the Berlin Airlift, delivering supplies to the besieged city, forcing the Red Army to back down, and securing the freedom of West Berlin. Later, Truman again responded to Communist aggression with resolve, fighting a difficult war in Korea. Korean war saw many setbacks and missteps and terrible losses. More than 54,000 Americans gave their lives in Korea. Yet in the end, Communist forces were pushed back to the 38th Parallel, and the freedom of South Korea was secure.

President Truman acted boldly to help transform old adversaries into democratic allies. In Asia, his administration led the effort to help Japan change from a nation that had launched a surprise attack on America into a thriving democracy and steadfast ally. In Europe, he launched the

Marshall plan, an unprecedented effort to help Germany and other nations in Europe recover from war and establish strong democracies. The Marshall plan cost about 100 billion in today's dollars, and it helped to save Western Europe from Soviet tyranny and led to the emergence of democratic allies that remain indispensable to the cause of peace today.

President Truman transformed our alliances to deal with new dangers. After World War II, he led the effort to form the North Atlantic Treaty Organization, the first peacetime alliance in American history. NATO served as a military bulwark against Communist aggression and helped give us a Europe that is now whole, free, and at peace.

President Truman positioned U.S. forces to deal with new threats. Despite enormous pressure to bring our troops home after World War II, he kept American forces in Germany to deter Soviet aggression and kept U.S. forces in Japan as a counterweight to Communist China. Together with the deployment of U.S. forces to Korea, the military footprint Truman established on two continents has remained virtually unchanged to this day and has served as the foundation for security in Europe and in the Pacific.

President Truman launched a sweeping reorganization of the Federal Government to prepare it for a new struggle. Working with Congress, he created the Department of Defense, established the Air Force as a separate military service, formed the National Security Council at the White House, and founded the Central Intelligence Agency to ensure America had the best intelligence on Soviet threats.

President Truman made clear that the cold war was an ideological struggle between tyranny and freedom. At the time when some still wanted to wish away the Soviet threat, he brought Winston Churchill to Missouri to deliver his famous "Iron Curtain" speech. And he issued a Presidential directive called NSC-68, which de-

clared that America faced an enemy "animated by a new fanatic faith" and determined to impose its ideology on the entire world. This directive called on the United States to accept the responsibility of world leadership and defend the cause of freedom and democracy, and that's exactly what the United States did.

By the actions he took, the institutions he built, the alliances he forged, and the doctrines he set down, President Truman laid the foundation for America's victory in the cold war. As President Truman put it towards the end of his Presidency, "When history says that my term of office saw the beginning of the cold war, it will also say that in those 8 years, we set the course that can win it." His leadership paved the way for subsequent Presidents from both political parties—men like Eisenhower and Kennedy and Reagan—to confront and eventually defeat the Soviet threat.

Today, at the start of a new century, we are again engaged in a war unlike any our Nation has fought before. And like Americans in Truman's day, we are laying the foundations for victory. The enemies we face today are different in many ways from the enemy we faced in the cold war. In the cold war, we deterred Soviet aggression through a policy of mutually assured destruction. Unlike the Soviet Union, the terrorist enemies we face today hide in caves and shadows and emerge to attack free nations from within. The terrorists have no borders to protect or capital to defend. They cannot be deterred—but they will be defeated. America will fight the terrorists on every battlefield, and we will not rest until this threat to our country has been removed.

While there are real differences between today's war and the cold war, there are also many important similarities. Like the cold war, we are fighting the followers of a murderous ideology that despises freedom, crushes all dissent, has territorial ambitions, and pursues totalitarian aims. Like

the cold war, our enemies are dismissive of free peoples, claiming that men and women who live in liberty are weak and lack the resolve to defend our way of life. Like the cold war, our enemies believe that the innocent can be murdered to serve a political vision. And like the cold war, they're seeking weapons of mass murder that would allow them to deliver catastrophic destruction to our country. If our enemies succeed in acquiring such weapons, they will not hesitate to use them, which means they would pose a threat to America as great as the Soviet Union.

Against such an enemy, there is only one effective response: We will never back down; we will never give in; and we will never accept anything less than complete victory. Like previous generations, history has once again called America to great responsibilities, and we're answering history's call with confidence. We're confronting new dangers with new determination and laying the foundations for victory in the war on terror.

In this new war, we have set a clear doctrine. After the attacks of September the 11th, I told a joint session of Congress, "America makes no distinction between the terrorists and the countries that harbor them. If you harbor a terrorist, you are just as guilty as the terrorists, and you're an enemy of the United States of America." In the months that followed, I also made clear the principles that will guide us in this new war: America will not wait to be attacked again; we will confront threats before they fully materialize; we will stay on the offense against the terrorists, fighting them abroad so we do not have to face them here at home.

In this new war, we have acted boldly to confront new adversaries. When the Taliban regime in Afghanistan tested America's resolve, refusing our just demands to turn over the terrorists who attacked America, we responded with determination. Coalition forces drove the Taliban from power,

liberated Afghanistan, and brought freedom to 25 million people.

In Iraq, another tyrant chose to test America's resolve. Saddam Hussein was a dictator who had pursued and used weapons of mass destruction. He sponsored terrorists, invaded his neighbors, abused his people, deceived international inspectors, and refused to comply with more than a dozen United Nations resolutions. When the United Nations Security Council gave him one final chance to disclose and disarm, or face serious consequences, he refused to take that final opportunity. So coalition forces went into Iraq and removed his cruel regime. And today, Iraq's former dictator is on trial for his crimes, and America and the world are better off because Saddam Hussein is no longer in power.

In this new war, we have helped transform old adversaries into democratic allies. Just as an earlier generation of Americans helped change Germany and Japan from conquered adversaries into democratic allies, today, a new generation of Americans is helping Iraq and Afghanistan recover from the ruins of tyranny. In Afghanistan, the terror camps have been shut down; women are working; boys and girls are going to school; and Afghans have chosen a President and a new parliament in free elections.

In Iraq, the people defied the terrorists and cast their ballots in three free elections last year. And last week, Iraqis made history when they inaugurated the leaders of a new Government of their choosing, under a Constitution that they drafted and they approved. When the formation of this unity Government—with the formation of this unity Government, the world has seen the beginning of something new: a constitutional democracy in the heart of the Middle East. Difficult challenges remain in both Afghanistan and Iraq. But America is safer and the world is more secure because these two countries are now democracies—and

they are allies in the cause of freedom and peace.

In this new war, we have forged new alliances and transformed old ones for the challenges of a new century. After our Nation was attacked, we formed the largest coalition in history to fight the war on terror. More than 90 nations are cooperating in a global campaign to dry up terrorist financing, to hunt down terrorist operatives, and bring terrorist leaders to justice. Nations like Pakistan and Saudi Arabia that once turned a blind eye to terror are now helping lead the fight against it. And since September the 11th, 2001, our coalition has captured or killed Al Qaida managers and operatives in over two dozen countries and disrupted a number of serious Al Qaida terrorist plots, including plots to attack targets inside the United States. Our Nation is more secure because we have rallied the world to confront this threat to civilization.

The greatest threat we face is the danger of terrorists armed with weapons of mass destruction. To confront this danger, we launched the Proliferation Security Initiative, a coalition of more than 70 nations that are working together to stop shipments of weapons of mass destruction on land, at sea, and in the air, and to stop them from falling into terrorist hands. And building on the legacy of Harry Truman, we launched the most dramatic transformation of the NATO alliance since its founding in 1949. Working with allies, we created a new NATO Response Force that will allow NATO to deploy rapid reaction forces on short notice anywhere in the world. And together we transformed NATO from a defensive alliance focused on protecting Europe from Soviet tank invasion into a dynamic alliance that is now operating across the world in the support of democracy and peace.

For five decades, NATO forces never deployed outside of Europe. Today, NATO is leading security operations in Afghanistan, training Iraqi security forces in Baghdad, delivering humanitarian relief to earth-

quake victims in Pakistan, and training peacekeepers in Sudan. An alliance some said had lost its purpose after the cold war is now meeting the challenges of the 21st century.

In this new war, we're positioning our forces to meet new threats. For more than a half a century, American forces essentially had remained in the same places that President Truman deployed them. So 2 years ago, I announced the largest transformation of our global force posture since the start of the cold war. Over the coming decade, we will move U.S. forces from cold war garrisons in Europe and Asia and reposition them so they can surge quickly to trouble spots anywhere. We will deploy advanced military capabilities that will increase U.S. combat power across the world, while bringing home between 60,000 and 70,000 troops now stationed overseas. By taking these steps, we will reduce stress on our military families, raise the pressure on our enemies, and ensure that when you put on the uniform of the United States Army, you are ready to meet any threat.

In this new war, we've undertaken the most sweeping reorganization of the Federal Government since the start of the cold war. We created a new Department of Homeland Security, merging 22 different Government organizations into a single department with a clear mission: to protect America from future attacks. We created the new Director of National Intelligence, which has led a broad restructuring of our Nation's intelligence agencies for the threats of the 21st century. We have transformed the FBI into an agency whose primary focus is stopping terrorism, and reorganized the Department of Justice to help us meet this new threat. We passed the PATRIOT Act, which broke down barriers that prevented law enforcement and intelligence agencies from sharing vital information on terrorist threats.

At the Department of Defense, we created a new Northern Command responsible for homeland defense, a new Strategic

Command responsible for defending America against long-range attacks. We transformed the Special Operations Command, more than doubling its budget, adding thousands of new troops, and making it the lead command in the global war on terror. And we're undertaking the largest transformation of the Army in more than 100 years. Since the turn of the last century, the Army has been organized around the division structure designed by Napoleon. Today, we're replacing that division structure with a 21st century Army built around modular brigade combat teams that will be interchangeable and available to work for any division commander. These brigades will make our Army faster and lighter and more agile and more lethal, and it will make you more effective in the defense of freedom.

We have made clear that the war on terror is an ideological struggle between tyranny and freedom. When President Truman spoke here for the 150th anniversary of West Point, he told the class of 1952, "We can't have lasting peace unless we work actively and vigorously to bring about conditions of freedom and justice in the world." That same principle continues to guide us in today's war on terror. Our strategy to protect America is based on a clear premise: The security of our Nation depends on the advance of liberty in other nations. On September the 11th, 2001, we saw that problems originating in a failed and oppressive state 7,000 miles away could bring murder and destruction to our country. And we learned an important lesson: Decades of excusing and accommodating the lack of freedom in the Middle East did nothing to make us safe. So long as the Middle East remains a place where freedom does not flourish, it will remain a place where terrorists foment resentment and threaten American security.

So we are pursuing a forward strategy of freedom in the Middle East. I believe the desire for liberty is universal, and by standing with democratic reformers across

a troubled region, we will extend freedom to millions who have not known it and lay the foundation of peace for generations to come.

We're still in the early stages of this struggle for freedom, and like those first years of the cold war, we've seen setbacks and challenges and days that have tested America's resolve. Yet we've also seen days of victory and hope. We've seen people in Afghanistan voting for the first democratic parliament in a generation. We have seen jubilant Iraqis dancing in the streets, holding up ink-stained fingers, celebrating their freedom. We've seen people in Lebanon waving cedar flags and securing the liberty and independence of their land. We've seen people in Kyrgyzstan drive a corrupt regime from power and vote for democratic change. In the past 4 years alone, more than 110 million human beings across the world have joined the ranks of the free, and this is only the beginning. The message has spread from Damascus to Tehran that the future belongs to freedom, and we will not rest until the promise of liberty reaches every people and every nation.

Now the class of 2006 will enter the great struggle, and the final outcome depends on your leadership. The war began on my watch, but it's going to end on your watch. Your generation will bring us victory in the war on terror. My call to you is this: Trust in the power of freedom, and be bold in freedom's defense; show leadership and courage, and not just on the battlefield; take risk; try new things; and challenge the established way of doing things; trust in your convictions; stay true to yourselves—and one day, the world will celebrate your achievements.

I have confidence in the final outcome of this struggle, because I know the character and determination of the men and women gathered before me. We see that character and determination in a cadet named Patrick Dowdell. It was Patrick's dream to attend West Point, and he applied

straight out of high school, but he did not get in on his first try. After being turned down, he wondered if he was cut out for the Academy. His father, New York Fireman Kevin Dowdell, encouraged Patrick to apply again. Kevin wrote letters to his Congressman on behalf of his son. And he spent long hours working with Patrick on his application—right up to September the 9th, 2001. Two days later, Kevin Dowdell raced across the Brooklyn Bridge with his fire rescue unit to the burning World Trade Towers, and he never returned.

After the attack, Patrick spent months digging at Ground Zero looking for his dad—and thinking about the dream that they had shared about his future. He was determined to fulfill that dream. And in the summer of 2002, Patrick arrived here at West Point as a new cadet, and today he will receive his degree and his commission.

A few weeks ago, Patrick's mom, RoseEllen, attended another graduation ceremony, at the New York City Fire Academy, where her other son, James, followed his father's footsteps as one of New York's bravest. And today RoseEllen is with us to see Patrick join the ranks of America's bravest, as an officer in the United States Army.

We live in freedom because young Americans like Patrick and all the cadets here today have stepped forward to serve. You have chosen a difficult and dangerous vocation, and America is grateful for that choice. Today you will accept a sacred trust: You will lead America's sons and daughters on the battlefield in a time of war. Our Nation is counting on you as we count on no other group of young leaders in our country. The last 4 years have tested you in ways you never imagined, and you leave here well prepared for the challenges you will face.

There's a saying at West Point, that much of the history you teach here was made by the people you taught here. Now the class of 2006 will leave for the battlefield, and you will make history. Never falter; never quit. Bring honor to the uniform and pride to your country. May God bless you and the class of 2006.

NOTE: The President spoke at 9:33 a.m. in Michie Stadium. In his remarks, he referred to Lt. Gen. William J. Lennox, Jr., USA, superintendent, U.S. Military Academy at West Point; former President Saddam Hussein of Iraq; and President Hamid Karzai of Afghanistan.

## The President's Radio Address *May 27, 2006*

Good morning. This Memorial Day weekend, Americans pay tribute to those who have given their lives in service to our Nation. America is free because generations of young Americans have been willing to sacrifice to defend the country they love, so their fellow citizens could live in liberty.

This weekend, I am visiting some of the brave men and women who will soon take their own place in the defense of our free-

dom, the 2006 graduating class at West Point. This was the first class to arrive at West Point after the attacks of September the 11th, 2001. Each of them came to West Point in a time of war, knowing all the risks and dangers that come with wearing our Nation's uniform. And the reality of that war has surrounded them since their first moments at the Academy. Thirty-four times since they arrived at West Point they have observed a moment of silence to

honor a former cadet fallen in the war on terror.

One of those former cadets was First Lieutenant Rob Seidel, a 2004 West Point graduate who gave his life in Iraq earlier this month. Rob grew up in Maryland, and as a child, he and his family made frequent visits to the Civil War battlefield at Gettysburg, and from his earliest days, he dreamed of serving in the U.S. Army. He deployed to Iraq with the 10th Mountain Division and was killed by a bomb in Baghdad. His father says this about Rob: "He loved his family and believed in God, and he loved his country, and he was willing to pay the ultimate sacrifice on behalf of his country."

We live in freedom because of young Americans like Lieutenant Rob Seidel. And in recent days in Iraq, we've seen what their sacrifices have made possible. A week ago, the new Prime Minister of Iraq announced the formation of a national unity government. British Prime Minister Tony Blair recently visited Baghdad to meet with Prime Minister Maliki and Iraq's new leaders, and this week, he came to the United States to give me his impressions. Prime Minister Blair told me that Iraq's new leaders are determined to rid their country of terrorism, unite Iraqis as one people, and deliver peace and prosperity for all their citizens.

The formation of a democratic government in Iraq marks a victory for the cause of freedom in the Middle East. It is a victory for millions of Iraqis, who defied the terrorists and cast their ballots in three elections last year. It is a victory for the Iraqi security forces, who fought and bled for this moment and now have a democracy worthy of their sacrifice. And it is a victory for the American, British, and other coal-

ition forces who removed a murderous dictator who threatened the world. Because of their courage and sacrifices, Iraq has a free government that will be a strong and capable ally in the global war on terror.

The new Government in Iraq is also a defeat for the terrorists, who fought the arrival of a free and democratic Iraq with all the hateful power they could muster. Now a day that they feared has arrived. The terrorists can kill the innocent, but they cannot stop the advance of freedom. We can expect the terrorists to continue bombing and killing, but something fundamental has changed: The terrorists are now fighting a free and constitutional government. They are at war with the people of Iraq. The Iraqi people and their new leaders are determined to defeat this enemy, and so is the United States of America.

This Memorial Day weekend, we remember First Lieutenant Seidel and the brave Americans of every generation who have given their lives for freedom, liberated the oppressed, and left the world a safer and better place. And the best way to honor America's fallen heroes is to carry on their fight, defend our freedom, and complete the mission for which they gave their lives.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on May 26 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on May 27. In his address, the President referred to Prime Minister Nuri al-Maliki and former President Saddam Hussein of Iraq. The transcript was made available by the Office of the Press Secretary on May 26 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Statement on the Earthquake in Indonesia May 27, 2006

On behalf of the American people, Laura and I send our deepest sympathies to the families and friends of those who lost their lives in the devastating earthquake in Indonesia. Our thoughts and prayers are with the Indonesian people as they comfort all those affected by this terrible disaster.

Through financial and material support, the United States is assisting with recovery efforts in coordination with Indonesian authorities, and we stand prepared to provide additional assistance as needed.

## Remarks at a Memorial Day Ceremony in Arlington, Virginia May 29, 2006

Thank you all. Laura and I are honored to join you today. Thank you for coming. Mr. Secretary, thank you for your kind words. Members of my Cabinet, General Pace, Members of Congress, members of the United States military, veterans, honored guests, and the loved ones of the fallen: A few moments ago, I placed a wreath at the Tomb of the Unknowns. I was honored to do so on behalf of the American people, as a sign of our solemn gratitude and our deep respect. The names of those buried there are known only to God, yet their souls have entered into the spirit of America, and they will never be forgotten by our Nation.

In this place where valor sleeps, we acknowledge our responsibility as Americans to preserve the memory of the fallen. On this Memorial Day, we look out on quiet hills and rows of white headstones and we know that we are in the presence of greatness. The markers here record the names of more than 296,000 men and women. Each of the soldiers, sailors, airmen, and marines buried here answered the call to serve and stepped forward to protect the nation they loved.

All who are buried here understood their duty. They saw a dark shadow on the horizon and went to meet it. They understood

that tyranny must be met with resolve and that liberty is always the achievement of courage. Here, in the presence of veterans they fought with and loved ones whose pictures they carried, the fallen give silent witness to the price of our liberty, and our Nation honors them this day and every day.

In this place where valor sleeps, we are reminded why America has always gone to war reluctantly—because we know the costs of war. We have seen those costs in the war on terror we fight today. These grounds are the final resting place for more than 270 men and women who have given their lives in freedom's cause since the attacks of September the 11th, 2001. With us here are veterans who fought alongside them and who have come today to pay their respects. They are joined by veterans of World War II, Korea, Vietnam, and other conflicts across the globe, whose friends and comrades also lie in this sacred ground. As we pray for their fallen friends, we also remember those who went to war and are still missing, and we are determined to account for them all.

In this place where valor sleeps, we find strength in knowing that those serving freedom's cause have acted with principle and steadfast faith. Second Lieutenant Jack Lundberg was killed 2 weeks after D-Day.

At the end of World War II, he wrote his Mom and Dad a letter to be opened in the event he did not come home. He wrote, "I am sorry to add to your grief, but we of the United States have something to fight for—never more fully have I realized that. The United States of America is worth the sacrifice."

That same feeling moves those who are now fighting the war on terror. First Lieutenant Mark Dooley was killed by a terrorist bomb last September in the Iraqi city of Ramadi. Before he left for his tour, he gave his parents a last letter, just in case. He wrote, "Remember that my leaving was in the service of something that we loved, and be proud. The best way to pay respect is to value why a sacrifice was made."

Last week, the family of Lieutenant Colonel Joseph Fenty, Junior, gathered here at Arlington to pay their last respects to the husband, son, and father they loved. Colonel Fenty was killed with nine of his fellow soldiers in a helicopter crash in Afghanistan earlier this month. Hours before that crash, he had spoken to his wife, Kristin, about their newborn daughter he was waiting to meet. Someday she will learn about her dad from the men with whom she served—he served. And one of them

said this about her father: "We all wanted to be more like Joe Fenty. We were all in awe of him." I am in awe of the men and women who sacrifice for the freedom of the United States of America.

Our Nation is free because of brave Americans like these, who volunteer to confront our adversaries abroad so we do not have to face them here at home. Our Nation mourns the loss of our men and women in uniform. We will honor them by completing the mission for which they gave their lives—by defeating the terrorists, by advancing the cause of liberty, and by laying the foundation of peace for a generation of young Americans. Today we pray that those who lie here have found peace with their Creator, and we resolve that their sacrifice will always be remembered by a grateful nation.

May God bless the United States of America.

NOTE: The President spoke at 11:26 a.m. in the Amphitheater at Arlington National Cemetery. In his remarks, he referred to Secretary of Defense Donald H. Rumsfeld, who introduced the President; and Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff.

## Remarks Announcing the Nomination of Henry M. Paulson, Jr., To Be Secretary of the Treasury May 30, 2006

*The President.* Good morning. Welcome to the White House. I'm pleased to announce that I will nominate Henry Paulson to be the Secretary of the Treasury.

For the past 8 years, Hank has served as chairman and chief executive officer of the Goldman Sachs Group. It's one of the most respected firms on Wall Street. He has a lifetime of business experience. He

has an intimate knowledge of financial markets and an ability to explain economic issues in clear terms. He's earned a reputation for candor and integrity. And when he is confirmed by the Senate, he'll be a superb addition to my Cabinet.

The Secretary of the Treasury has one of the most important jobs in the Federal

Government. The Treasury Secretary is responsible for recommending and implementing policies dealing with taxes, financial markets, Federal spending, trade, and other issues affecting the health and competitiveness of the American economy. The Treasury Secretary oversees the minting of U.S. currency, the management of public finances, and the enforcement of important laws, including our efforts to crack down on terrorist financing. The Treasury Secretary is the leading force on my economic team and the chief spokesman for my economic policies.

For the past 3 years, Secretary John Snow has shown strong leadership in carrying out these responsibilities. John answered the call to public service in a time of uncertainty for our economy, and under his leadership, we have seen a broad and vigorous economic resurgence. He's been a steady advocate for small-business entrepreneurs and working families, and he's helped deliver jobs and opportunity for the American people. I appreciate his years of service to our country. I wish you, John, and your family all the very best.

When he's confirmed by the Senate, Hank will build on John's fine work. He takes this new post at a hopeful time for American businesses and workers. In the first quarter of 2006, the U.S. economy grew at an annual rate of 5.3 percent, the fastest growth in 2½ years. We added 5.2 million new jobs since August of 2003. The national unemployment rate is down to 4.7 percent. Productivity is high, and that's leading to higher wages and a higher standard of living for the American people. Hourly compensation grew at an annual rate of 5.7 percent in the first quarter this year.

The American economy is powerful, productive, and prosperous, and I look forward to working with Hank Paulson to keep it that way. As Treasury Secretary, Hank will be my principal adviser on the broad range of domestic and international economic issues that affect the well-being of all

Americans. Hank shares my philosophy that the economy prospers when we trust the American people to save, spend, and invest their money as they see fit.

The tax relief we delivered has helped set off the economic expansion that we're seeing today. And one of Hank's most important responsibilities will be to build on this success by working with Congress to maintain a progrowth, low-tax environment.

Hank also understands that the Government should spend the taxpayers' money wisely or not at all. He will work closely with Congress to help restrain the spending appetite of the Federal Government and keep us on track to meet our goal of cutting the deficit in half by 2009.

Hank will also be an important representative of the United States on the international scene. As an investment banker, he understands the importance of opening new markets for American exports. He will insist on fair treatment for American businesses, workers, and farmers. He will help ensure that our trading partners play by the rules, respect intellectual property rights, and maintain flexible, market-based exchange rates for their currencies.

To all these tasks, Hank brings a record of achievement and excellence. He grew up on a farm in Illinois. He went to college at Dartmouth. He starred on the field as an All-Ivy football player and in the classroom as a Phi Beta Kappa student. He earned an MBA from Harvard. He served in the Pentagon and here at the White House. He started at Goldman Sachs in 1974 and rose to its top office after 24 years of distinguished work at the firm. He has a lifelong passion for nature, and he's served as chairman of the Nature Conservancy, where he has promoted conservation both at home and abroad.

As one of America's most prominent business executives, Hank has been a strong and consistent voice for corporate accountability. When the corporate scandals broke, Hank showed his leadership and character by calling for reforms that would strengthen

the way America's public companies are governed and improve their accounting practices. And as Treasury Secretary, Hank will bring those high standards to one of the most important posts in Washington.

I want to thank Hank for his willingness to leave one of the most rewarding jobs on Wall Street to serve the American people. Hank will follow in the footsteps of Alexander Hamilton and other distinguished Treasury Secretaries who used their talents and wisdom to strengthen our financial markets and expand the reach of the American Dream.

Hank is going to make an outstanding Secretary of the Treasury, and I call on

the United States Senate to promptly confirm him.

Mr. Secretary.

[At this point, Secretary of the Treasury John Snow made brief remarks.]

The President. Thank you, Mr. Secretary. Thank you very much.

[Secretary-designate Paulson made brief remarks.]

NOTE: The President spoke at 9:14 a.m. in the Rose Garden at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Secretary Snow and Secretary-designate Paulson.

## Remarks on Receiving Diplomatic Credentials From Ambassador Samir Shakir al-Sumaydi of Iraq May 30, 2006

President Bush. It is my honor and pleasure to welcome the papers from Iraq's Ambassador to the United States. Mr. Ambassador, congratulations.

Ambassador al-Sumaydi. Thank you, Mr. President.

President Bush. You're now officially the Ambassador. I look forward to working with you, Mr. Ambassador, and the new Government, to help Iraq become a country that can govern itself and sustain itself and defend itself. I'm confident in the future of liberty in Iraq because I believe the people of Iraq want to live in a free society. And although there's been some very difficult times for the Iraqi people, I am impressed by the courage of the leadership, impressed by the determination of the people, and want to assure you, sir, that the United States stands ready to help the Iraqi democracy succeed.

So welcome here to the Oval Office. Thank you for coming.

Ambassador al-Sumaydi. Thank you, Mr. President. I am honored and privileged to serve as the Ambassador of free Iraq, after 16 years of isolation, to represent my country to this great country, to have a voice for the new elected Iraqi Government, and communicate directly with this administration and with the people of the United States, to express our ambitions and desire to live in peace and remove the scourge of terrorism from our land and help others remove it from theirs.

The President said a couple of days ago in his radio address that the terrorists can kill innocent people, but they cannot stop the march of freedom. I echo those words and say that the terrorists can target the innocent and the weak and the vulnerable, but they will never stop us establishing a democratic and free country.

I'm proud to represent this country to you, Mr. President.

President Bush. Thank you, Ambassador. Very well done. Thank you.

NOTE: The President spoke at 11:15 a.m. in the Oval Office at the White House. A por-

tion of these remarks could not be verified because the tape was incomplete.

## Remarks Following Discussions With President Paul Kagame of Rwanda and an Exchange With Reporters

May 31, 2006

*President Bush.* I want to welcome the President of Rwanda to the Oval Office again. He was here last year, and I'm honored to welcome you back.

The President is—he's a man of action; he can get things done. I'm proud of your leadership. We have talked about a lot of issues. We talked about the Sudan, and I want to thank the President for committing troops in the AU mission to help deal with what I have called a genocide. We strategized about how we can go forward to resolve the situation. I thank you for your wisdom; I thank you for your concern.

One of the interesting things about President Kagame's Government is there is more women in his Government than anywhere else in Africa, which I think speaks to the man's character and understanding about how societies remain strong and whole. I appreciate his commitment to education. And I want to thank you, Mr. President, for your understanding that the best way for an economy to develop is to welcome private capital. He's been working hard with companies here in America. Many companies are taking a good look at Rwanda because they realize it's a country where they will be treated fairly, and there is a transparent society. And he's had some success, which will help people find work. And that's, to me, a sign of leadership. So welcome back.

I, finally, want to thank you for your commitment to fighting HIV/AIDS. This Government has done a really good job of using some of the monies that we provided to save lives. And I've always told people that it's one thing for the American

Government—and the American people, more importantly—to generously write checks to help, but it requires strong leadership at home. And you provided that leadership.

So I welcome you back to the Oval Office, and thank you for your friendship.

*President Kagame.* Thank you, President. It's a great honor for me to be here, President, and I appreciate the discussion we have had on a wide range of issues—starting with bilateral discussions we have had about United States Government has been very helpful in its support of Rwanda in different areas—dealing with HIV/AIDS, to supporting the private sector to invest in our country, to dealing with infrastructure programs. And also the support we have had during the period we were working under the African Union mission to send our troops to Darfur. The United States Government, with your support, Mr. President—we have had our forces, our troops airlifted by the United States military to Darfur and continued support for the African Union mission.

We are very grateful for—generally, the support in the area will bring peace to the Great Lakes region and to supporting the efforts in Sudan and, ultimately, that process of supporting my country to be able to develop and continue building on the foundation we have laid in the last 12 years. So we appreciate that, Mr. President.

*President Bush.* Welcome. The President and I will take two questions a side, starting with the Americans. Nedra [Nedra Pickler, Associated Press].

*Iraq/U.S. Armed Forces*

*Q.* Mr. President, what have you been told about the killings at Haditha? And are you worried about the impact it could have on the situation in Iraq?

*President Bush.* I am troubled by the initial news stories. I am mindful that there is a thorough investigation going on. If, in fact, the laws were broken, there will be punishment. I know this: I've talked to General Pete Pace about the subject, who is a proud marine, and nobody is more concerned about these allegations than the Marine Corps. The Marine Corps is full of men and women who are honorable people who understand rules of war. And if, in fact, these allegations are true, the Marine Corps will work hard to make sure that that culture, that proud culture will be reinforced, and that those who violated the law, if they did, will be punished.

*Rwanda*

*Q.* I'll ask a question—I'm a journalist from Rwanda.

*President Bush.* Welcome.

*Q.* Can I ask you a question on the genocide of Rwanda? It's been 13 years after the genocide of Rwanda, but many perpetrators of the genocide, many people who did it, who carried out the genocide are still at large. One estimate is about over 50 of them in Europe and the U.S., others in the Congo. What's the U.S. going to do to help run—to get these people to—

*President Bush.* The interesting thing about Rwanda today is that you have a President who understands that part of a successful society is for people to work hard on reconciliation. There's no question the genocide in Rwanda was a real tragedy. It's one of the most significant tragedies in modern history. And yet your President and his Government has worked hard to reconcile, help people reconcile the tragedy at all levels of society.

To the extent that he wants our help in finding certain perpetrators of crimes, we'll be glad to do so. But the way I look

at the situation is that Rwanda can serve as an example for other societies that are troubled. As you know, we're working hard in Iraq to bring a democracy—to help a democracy grow there. And yet there's still sectarian violence. People are still using violence to achieve either revenge or political means. And the Rwanda example shows what's possible when people work hard on reconciliation.

That's why I support Prime Minister Maliki's desire to have reconciliation moves. And the President actually offered to help, and it may be at some point in time it makes sense for the new Government in Iraq to do that. But I'm very proud of the accomplishments that Rwanda has made over 13 years—13 years after the genocide.

Kelly [Kelly O'Donnell, NBC News].

*Iran*

*Q.* Mr. President, Secretary Rice is outlining a change in U.S. position toward Iran today, after so many years of not engaging directly with them. Why now? And will you respond directly to the letter from the President?

*President Bush.* I believe it's very important that we solve this issue diplomatically, and my decision today says that the United States is going to take a leadership position in solving this issue. And our message to the Iranians is that, one, you won't have a weapon, and two, that you must verifiably suspend any programs, at which point we will come to the negotiating table to work on a way forward.

I thought it was important for the United States to take the lead, along with our partners, and that's what you're seeing. You're seeing robust diplomacy. I believe this problem can be solved diplomatically, and I'm going to give it every effort to do so.

I've talked on the telephone in the last couple of days with Jacques Chirac and Angela Merkel, and I spoke to Tony Blair when he was here about this issue; I spoke to Prime Minister Koizumi. I'm on the

phone a lot talking to—and President Putin, by the way—and I’m on the phone a lot talking to our folks that share the same concern I share, and say, “Look, let’s get this solved diplomatically,” but there must be a united international front that shares the same message, and that is, is that we will work collaboratively to prevent the Iranians from developing a nuclear weapon.

I also want to make it very clear that we have—we respect the Iranian people, and we respect their heritage and their history, and we hope their Government listens to the international demands and doesn’t isolate itself from the world and doesn’t foolishly spend money on a weapons program that takes away the capacity—the ability for the Iranian economy to grow so people are able to put food on the table and find work.

Final—anybody else from Rwanda?

#### *Situation in Sudan*

Q. Yes, Mr. President, I come from Rwanda. I heard the President of Rwanda thanking you for the assistance you are giving on Darfur, but in spite all that you’ve been doing, it has persisted. Are you planning to up your support in that regard, Mr. President?

*President Bush.* To support the Rwanda troops in Darfur? I will. As a matter of fact, we had a very good discussion about this subject. The President is concerned about whether or not the United States will honor its commitments. We will honor our commitments, but the United States

Congress must pass the supplemental with the money in there for the Sudan. See, part of the money in a supplemental request that’s working its way through a conference committee now is to help repay a country like Rwanda that’s putting troops on the ground.

And so I told the President that sometimes the Congress doesn’t move as quickly as I’d like on issues, but I’m confident they’ll get the supplemental passed when they come back from their Memorial Day break. That supplemental must, one, meet the financial conditions that I talked about—in other words, I’m going to veto the bill if they spend more money than I requested—and it’s got to set—it’s got to meet priorities as well. And one of the priorities is our own troops who are in harm’s way. And another priority is helping the Katrina victims. And a third priority in that bill that we’ve submitted is to help in Sudan. I told the President I’m confident they’ll pass that bill and that his troops will get reimbursed.

Thank you all very much.

NOTE: The President spoke at 11:43 a.m. in the Oval Office at the White House. In his remarks, he referred to Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff; Prime Minister Nuri al-Maliki of Iraq; President Mahmud Ahmadi-nejad of Iran; President Jacques Chirac of France; Chancellor Angela Merkel of Germany; Prime Minister Tony Blair of the United Kingdom; Prime Minister Junichiro Koizumi of Japan; and President Vladimir V. Putin of Russia.

## Remarks at a Swearing-In Ceremony for Michael V. Hayden as Director of the Central Intelligence Agency in Langley, Virginia

May 31, 2006

Thank you. Thanks for the warm welcome. It’s great to be back with the really

fine people here at the Central Intelligence Agency.

I'm honored to be here at the swearing-in of Mike Hayden as America's new Director of the CIA. He's such a good man, we're going to swear him in twice—yesterday—[laughter]—and today.

Mike is a patriot; he's a reformer; he's one of our Nation's finest intelligence professionals. I know firsthand how good this guy is; I've worked with him on some really important issues related to the security of the United States. He brings more than two decades of experience in the intelligence field. He is going to be a superb leader for the dedicated men and women of the CIA.

I appreciate Ambassador Negroponte being with us today, the Director of National Intelligence. I want to thank Attorney General Al Gonzales for joining us and the Director of the FBI, Bob Mueller, for joining us as well. But most importantly, thank you all for coming.

I'm proud to serve with you. It is such an honor to serve the United States of America, and I appreciate your serving along my side to make America secure. The role of the CIA is critical to the security of the United States. This Agency is helping to lead the intelligence war against the terrorists who attacked us on September the 11th, 2001. They continue to plot attacks, and together, we are going to stop them.

The role of the CIA is vital to my doing my job. I cannot do my job without the Central Intelligence Agency. This Agency remains the principal provider of intelligence analysis to the President, to the Director of National Intelligence, and to senior national security officials in my administration. As Director of the CIA, Mike will continue the reforms needed. America's leaders are going to have the best possible intelligence, and Mike Hayden is going to work with you to see that that's the case.

I've asked Mike to continue to develop the human intelligence capabilities of the CIA, which are essential to understanding the plans and intentions of dangerous re-

gimes and terrorist organizations around the world. I've asked Mike to continue improving the analytical skills of the CIA, which apply the best minds to interpret the intelligence that we gather. I'm confident that under Mike's leadership, the CIA will help us stay ahead of America's enemies and win the war on terror.

The men and women who work here at the CIA have got a tough job and a really important job. You must penetrate closed societies and secretive organizations. You must master foreign languages and deal with unfamiliar cultures. Much of your work is secret, and American lives depend on that work remaining secret. America appreciates the good work you're doing, and so do I.

And in Mike Hayden, you have a leader who recognizes your talents, who understands your challenges and will ensure that you remain the finest intelligence agency in the world.

In his new position, Mike will build on the good work of Director Porter Goss. Nearly 2 years ago, I asked Porter to take on a tough assignment, the transformation of the CIA. Porter carried out that assignment with skill and determination. He upheld the high standards and proud tradition of the Agency, and he leaves behind a CIA that's stronger than the one he found. And Laura and I wish Porter and his family well as they begin a new chapter in their lives.

Mike Hayden succeeds Porter Goss at a time of great change in the world and great challenge for our intelligence community. Under the leadership of John Negroponte, our intelligence community is growing more integrated and more effective every day. And under the leadership of Mike Hayden, the Central Intelligence Agency will continue to play a critical role in our Nation's intelligence enterprise. Mike understands that the CIA must transform to confront new dangers and do so without slowing the high tempo at which it already operates, to protect this country.

I'm confident that with Mike Hayden at the helm, the CIA will succeed and continue to make important contributions to the security of the American people.

As Mike takes on this important assignment, he has my trust, my full trust, and he has the support of a loving family. I'm glad to see his wife, Jeanine, his children and grandchildren, and his father, Harry, and all the other members of the Hayden family who have joined us as well today.

I want to thank Mike for agreeing to serve our Nation once again. And I look

forward to continuing to work with him to do our duty to protect the American people.

Thank you all for coming today. May God bless Mike Hayden; may God bless you all; and may God continue to bless America.

NOTE: The President spoke at 2 p.m. at CIA Headquarters. The transcript released by the Office of the Press Secretary also included the remarks of Director Hayden.

## Remarks at a Reception for Gubernatorial Candidate Robert L. Ehrlich, Jr., in Baltimore, Maryland May 31, 2006

Thanks for coming tonight. Thank you all. So he just gave my speech. *[Laughter]* You know, when you have somebody who accomplishes positive things—he's got a record of accomplishment for everybody—not just a handful, but everybody—you need to send him back as the Governor of the State of Maryland.

So in our line of work, there's a lot of big talkers. *[Laughter]* And sometimes you find a doer, somebody who knows how to set an agenda and lead people to accomplish that agenda. Bob Ehrlich is a doer; he's a great leader; and he needs to be reelected Governor of the State of Maryland.

So the one thing he didn't take credit for was—I think he should have—was the Maryland women's basketball team. He can't even touch the net. *[Laughter]* Well, that's not true.

We both married really well. *[Laughter]* He married a fabulous woman; the first lady of Maryland is doing a wonderful job. Laura and I are very fond of Kendel and Bob. We consider them friends. We invited them to come to Camp David once, which is, after all, in the State of Maryland. So

he arrived—as did about 10 feet of snow. *[Laughter]* So I said, "Come on back in the summer." *[Laughter]* But Laura sends her love to the Ehrlichs.

And just a word on Laura. She's down in New Orleans today. She is a fabulous First Lady. She is really—I'm really proud of the job she does for our country.

I'm also proud to be here with Bob's parents, Bob and Nancy. Thank you all for coming. I'm sure Nancy—*[applause]*—I'm sure one of the reasons why your son is so successful as the Governor is because you keep telling him what to do. *[Laughter]* And obviously, he's wise enough to listen. *[Laughter]* I've got the same problem in my family. *[Laughter]*

Mr. Chairman, thank you for your leadership. I want to thank you all for supporting the Victory Committee. I want to thank you for giving of your money to help this good man and the party succeed. And I want to thank you in advance for what you're going to do when we come down the stretch in October/November, and that is, turn out the vote.

So I want to thank all the grassroots activists who are here. There's a couple of

you out there, you know, stuffing the envelopes, making the phone calls, putting up the signs. That's how you win. When you've got somebody as good as Governor Ehrlich, you need to get on the streets and go to the coffee shops and houses of worship and tell the people, you've got a good man; you've got a good man who has done a fabulous job for the people of Maryland. By the way, when you're getting him in as Governor, make sure you put Michael Steele into the United States Senate.

One of the things it's important to have in a chief executive officer, whether it be at the State level or the Federal level, is somebody who's willing to take on problems, to confront problems. You know, a lot of times in the political arena, it's easy just to shuffle them along. You know, you see a problem and say, "Well, let's just not deal with it; let's let somebody else take care of it." I like Bob Ehrlich because he's not afraid to take on problems. He understands that our jobs are to solve problems. Bob Ehrlich is a problem-solver. He sets agendas; he makes decisions based upon principles; he doesn't worry about polls and focus groups; and he leads. And he's the right guy to be reelected to the State of Maryland.

We're living in historic times. These are times that require steadfast conviction. I just want to share some thoughts with you about the war on terror. First of all, I want to thank the Governor for his strong support for the men and women who wear the uniform of the United States. As the Commander in Chief of a military full of incredibly fine people, it is important to have people in elected office like the Governor who know what it means to have—to be able to say strong words of support. These kids need our support. They're doing hard work on our behalf.

My most important job and the most important job of the Governor is to protect the American people. And that job came home, became very clear to us on September the 11th of 2001. It's a day that

I'll never forget. Many of the decisions that I have made as your President are based upon the lessons I learned on that day. The first lesson I learned on that day is, there are evil people in the world who want to do harm to the American citizens. I learned that you can't negotiate with these people; you can't rationalize with them; you can't hope for the best. That we must—in order to protect the country, we must bring them to justice before they do harm again.

I learned that when a President speaks, he better mean what he says. I understand to protect this country that we must deny safe haven to these terrorists who'd like to do us harm. And so I said, "If you harbor a terrorist, you're equally as guilty as the terrorists." I meant what I said. I gave the Taliban an opportunity to hand over Al Qaida. They refused to do so. And because of the bravery of our troops and coalition troops, Afghanistan is liberated and free and is no longer a threat to the United States of America.

I learned on September the 11th a lesson I'm never going to forget, that we've got to take threats seriously before they come home to hurt us. It's really important, if you think our duty is to protect the folks, to take every threat seriously. You see, when we grew up, or some of us grew up, baby boomers grew up, we felt pretty confident that America could be secure from a foreign attack, except maybe by missile. And then that attitude changed dramatically when we realized oceans couldn't protect us. And so when we see a threat, we've got to take them seriously.

I saw a threat. As a matter of fact, the world saw a threat with Saddam Hussein. See, he was a state sponsor of terror; he had used weapons of mass destruction; he had the capacity to make weapons of mass destruction; he invaded his neighbors; he was shooting at U.S. pilots. He was given a lot of United Nations Security Council resolutions, to change. He refused to change. He chose war, and the world is

better off without Saddam Hussein in power.

And now we're doing the hard work of helping people who were suppressed by a tyrant, to understand the blessings of liberty. But we shouldn't be discouraged when you see the car bombings and killings. It saddens us. But remember that last December, 12 million Iraqis went to the polls in defiance of car bombers and killers and terrorists, and said, "We want to be free. We want to be free." We understand that freedom is a universal principle. It is universal—I believe in an Almighty, and I believe one of the great gifts of the Almighty is freedom. Freedom isn't just, you know, for Methodists or Texans or Americans; freedom is for everybody. And it shouldn't surprise us when 12 million people are free.

And it shouldn't surprise us that there are killers and terrorists who are trying to stop democracy. See, their ideology is the exact opposite of a free society. They don't believe in dissent. They don't believe in the freedom to worship. They don't believe women should have rights. Their ideology is dark and backwards. And yet freedom brings light and hope. What you're seeing is an historic—is history being made as societies are—as two societies, Afghanistan and Iraq, have found the beauty of freedom, and they're establishing constitutional Governments of and by and for the people.

We're going to succeed in Iraq. We will succeed because we've got a great military, full of decent and honorable people. We will succeed because the Iraqi people want us to succeed. And we will succeed because the terrorists and killers offer no hope, whatsoever.

I want to tell you something about what's going on. I just talked today to my buddy Prime Minister Koizumi, on the phone. And we were talking about peace. And every time I meet with him, we sit down at the table and talk about peace. We talk about North Korea. He's got a thousand troops in Iraq because he understands the

power of democracy to make the world a better place. Yet that wasn't necessarily going to happen after World War II. My dad fought the Japanese—I'm sure relatives of yours fought the Japanese. They were the sworn enemy of the United States. I think it's amazing—don't you—that the President of the United States sits at the table talking about peace with the leader of an enemy, former enemy. You know what happened? Japan adopted a Japanese-style democracy after World War II. Fortunately, one of my predecessors, Harry S. Truman, believed in the power of freedom to transform an enemy into an ally.

Someday, an American President will be sitting down with duly elected leaders of Iraq, keeping the peace. Freedom causes people to reach for hope. Freedom brings light into society. Democracies don't war. What you're seeing today is the hard work of changing a society that was under the brutal thumb of a dictator into one that is free. And we're laying the foundation of peace for generations to come.

At home, if you're looking for work, you can find a job. Bob Ehrlich and I believe that the role of Government is not to create wealth but to create an environment in which the entrepreneurial spirit flourishes. That's the principle by which we make decisions. And you might remember, we've been through some pretty difficult times in this country when it came to our economy. We've been through a recession and a stock market correction, an attack on our country; we've been to war to defend ourselves; we had some terrible natural disasters; energy prices are up. Yet our economy is strong, and it's getting stronger.

And the reason why our economy grew at 3.5 percent last year—it grew at 5.3 percent in the first quarter of this year—the reason why the national unemployment rate is 4.7 percent and we've added 5.2 million new jobs since August of 2003, is because we cut the taxes. We believe that when someone has more money to save, spend, or invest, the economy grows.

Bob Ehrlich and I understand this fact: 70 percent of new jobs in America are created by the small-business owners—70 percent. And so if you can stimulate small-business growth, you stimulate job growth. And by cutting the taxes, individual tax rates, we cut taxes on subchapter S's and limited partnerships and sole proprietorships. The tax cuts we passed have helped make our small-business sectors strong and robust, and America is better off for it.

Ehrlich is going to fight to keep taxes low. It's not just low on some; it's low on everybody. See, we're not these kind of people who say, "Let's have selective tax cuts." We believe if you're going to cut taxes, you cut taxes on everybody who pays taxes. Tax cuts are good, strong economic policy.

And then there's the other thing in Washington, which Bob knows only too well, that says, "Well, look, you got to raise the taxes to balance the budget." But that's not the way Washington works. I suspect it's not the way Annapolis works. They're going to raise your taxes, but they're going to figure out new ways to spend your money. [Laughter] That's the way Washington works. I bet that's the way the state-house works too. That's why you've got to have a fiscally sound Governor as the Governor of the State of Maryland.

And so the best way to cut the deficit, at least in Washington, is to keep your taxes low so the economy grows. When the economy grows, it generates more tax revenues for the treasury—and then be wise about how we spend your money.

We're going to cut the deficit in half by 2009. I told the Congress, I said, "Look, if you bust the supplemental we've got coming up there, if you're greater than 92.2 billion and—plus some for the pandemic flu, I'm going to veto the bill." I'm serious about it, you know. They've got to understand that we're going to cut this deficit in half by 2009 by being wise about how we spend your money and keeping pro-growth economic policies in place.

Bob Ehrlich steps into office, as he told you—you took some of my speech away from me—[laughter]—but the people of Maryland have got to understand, he shows up in office, and they have a \$4 billion deficit, see. When he shows up, you're in the hole \$4 billion. Now he's standing up here asking for reelection, and he's able to say to the people of Maryland, "We've got us a \$2 billion surplus." Don't you want that kind of guy back in office?

Sometimes the temptation, when you get into government, is to grow it. And a good place to look is at the office of the Governor; see, that's a good place to start to determine whether or not you've got yourself a Governor who knows how to manage. See, the chief executive officer not only has got to set an agenda and call people to achieve the agenda; he's also got to be a manager. He's got to be able to do a lot with less, if you're dealing with the taxpayers' money.

Interestingly enough, he's decreased the size of Maryland's executive branch by 7 percent. See, he's in charge of the executive branch. And so the voters of Maryland—I don't care whether you're Republican or Democrat or independent—need to say to yourself, "Who best to manage the executive branch of the State of Maryland?" Bob Ehrlich has got a strong record.

The other thing that's interesting that probably doesn't get discussed a lot here in Maryland, but should, is what could have happened had he not been the Governor. See, we've discussed what he did as the Governor. We know what happened since he's the Governor. The question is, what would have happened? Well, I'll tell you what would have happened. The legislature would have raised \$7.5 billion in tax increases had you not had this man as the Governor of the State of Maryland.

I'll talk about three things real quick: one, education. I used to say when I was the Governor of Texas, education is to a State what national defense is to the Federal Government. I think it's by far the

most important—should be the most important priority of any Governor. I know it's a really important priority of Governor Bob Ehrlich. You know why? I've been to schools here in Maryland. I've seen him firsthand come into classrooms and talk to teachers and parents. And he generally cares about making sure the public school system—the public school system does what it's supposed to do, and that's educate everybody.

We had—when I came to Washington, I was very concerned about a system that just kind of shuffled people through—social promotion. You know we'd say, oh, you're supposed to be—you're X age; you're supposed to be here. You know what happened under that system? Impoverished kids, inner-city black kids, or kids whose parents don't speak English as a first language just got moved through. That's the easiest thing to do. And so we changed the attitude. And I'm proud to have a partner in Bob Ehrlich who understands, one, you've got to set high standards, see; you've got to believe every child can learn; and secondly, in return for money, we expect people to measure.

Now, I believe in local control of schools, and so does Bob. I'm a strong believer in local control of schools. But I said, in return for increasing Federal money, particularly for poor students, I want to know. I want to know whether a child can read and write and add and subtract. And I want to know early.

And so we worked with Governor Ehrlich. He put in a very strong accountability system—that's uncomfortable for some people. Oh, I've heard every excuse—you know, teaching the test, or you're testing too much. I don't accept that and neither does Governor Ehrlich. You can't have a good education system unless you determine early whether a child can read by grade level, and whether or not, if you find a child not reading by grade level, you've got courage enough to change the curriculum and make sure that child gets extra

help. No Child Left Behind Act is working in the State of Maryland because you've got a strong education leader in Bob Ehrlich.

And how do we know? We're measuring. You know, there's an achievement gap. So you've got a Governor like Governor Ehrlich, who recognizes what I recognize: You can't have an achievement gap in America and have America be a hopeful place. You can't have certain kids reading at the fourth grade level and other kids not, and you have a bright future for your country. You just can't. And he understands that, and so do I. And so he said, "The achievement gap is narrowing." Do you know why? Do you know? Because we're measuring. High standards, strong accountability, local control of schools, demanding change where you find the status quo is unsatisfactory is the key to success, and Maryland has an education Governor in Bob Ehrlich.

Why are charter schools important? They're important because if the status quo is unacceptable, you need to give parents alternatives. And that's what the charter school movement is all about. It says, "You don't trust government to make decisions for people when it comes to education; you trust the parents to make the decisions for the children." And if parents are not happy with the status quo, they ought to be given other options. The charter school movement is going to put Maryland on the leading edge of educational excellence, and Governor Bob Ehrlich gets a lot of credit for being the pioneer of the charter school movement in this State.

Our party is one that has proven that you can have economic growth and sound environmental policy at the same time. Environmental policy and economic growth are not zero-sum. As a matter of fact, I happen to believe that in order to have a good environment, you've got to have a strong economy so you can afford that which is necessary to protect the environment. Bob Ehrlich has got a very, very strong record of conservation.

He signed the most important legislation to clean up the Chesapeake Bay—ever. That’s leadership. Some of them talk a good game—I’m sure they’re spouting all kinds of stuff about how—[laughter]. This man has delivered. The Chesapeake Bay Restoration Act—the Bob Ehrlich “I’m going to protect the Chesapeake Bay” Act—upgrades the State’s 66 largest waste water treatment plants, upgrades sewage systems to increase nitrogen removal.

The Ehrlich-Steele administration has preserved nearly 60,000 acres of fields, forests, and open space and farmland. This man has got a record to run on. And if you care about the environment here in the State of Maryland, you need to put Bob Ehrlich back in as the Governor.

Finally, I proudly wear the label of compassionate conservative, and so does Bob Ehrlich. Let me tell you what I think that means. I think it means that government has got to recognize its limits in providing compassionate care. See, Government can hand out money, but it can’t put hope in a person’s heart or a sense of purpose in a person’s life.

If you find somebody who hurts in society, it’s best to rally a person who’s heard a universal call to love a neighbor like you’d like to be loved yourself. There’s nothing better than somebody putting their arm around a lonely person and saying, “How can I help you, brother or sister?” There’s nothing better than having a church or a synagogue or a mosque take up the cause of feeding the hungry and finding shelter for the homeless. Government should not fear the involvement of faith in our society; we ought to welcome faith in order to help solve some of society’s most intractable problems.

Ehrlich’s got the Office of Community Initiatives. He’s got a way to make sure that bureaucracy gets out of the way of

helping people who have heard a universal call to help. I oftentimes remind the American people that—who look at our country and say, “Well, our strengths are our military”—and it’s part of our strength, but that’s not the greatest strength for America. The size of our wallets, that’s important. We’re a wealthy nation, and we can do a lot with our wealth—which we’re doing, by the way. We’re leading the world when it comes to feeding the hungry. We’re helping fight HIV/AIDS on the continent of Africa. This is a generous nation. We believe to whom much is given, much is required. But the greatest strength of this country lies in the hearts and souls of our citizens.

Alexis De Tocqueville recognized that when he came to America in 1832. He recognized that one of the really unusual things about our society, characteristics of our society, was the voluntary organizations all aimed at helping someone who is down and out. That’s what he recognized. Our job is—my job as President and Bob’s job as the Governor is to recognize that strength and to rally that strength and to call people to serve; is to help those who need help, by calling on a fellow citizen to love a neighbor like they’d like to be loved themselves.

You’ve got a good man as your Governor in the State of Maryland, and you need to put him back in office, for the good of the people. Thanks for coming. God bless.

NOTE: The President spoke at 6:25 p.m. at the BWI Airport Marriott. In his remarks, he referred to John M. Kane, chairman, Maryland Republican Party; Michael S. Steele, Lieutenant Governor of Maryland and former Senatorial candidate; former President Saddam Hussein of Iraq; and Prime Minister Junichiro Koizumi of Japan.

## Remarks to the United States Chamber of Commerce June 1, 2006

Thank you all. I told Michael to keep it short—[laughter]—and he did. Thanks for having me. Speaking about short, it's a short commute from where I work and live to this place. Thanks for having me, Tom.

I'm honored to be back here at the chamber. I'm proud to be with some of America's finest entrepreneurs, job creators, risk takers. And I'm also proud to be with leaders from the national Citizen Corps. I thank you all for joining us today. I thank you for representing the true strength of America, which are those who are willing to volunteer in our communities to make the country a better place. We got people from the Citizen Corps from all different backgrounds—from business associations to government agencies to community groups to schools to non-profits to advocates for the disabled and emergency responders.

Citizen Corps is making a significant difference in our country. When the hurricanes hit our gulf coast last year, members of the Citizen Corps played a critical role in the relief efforts. I want to thank you for answering the call to service. Congress needs to provide the Citizen Corps with the funding you need to keep our communities safe and prepared for emergencies.

Today I want to talk about immigration, talk about the need for this country to have a comprehensive immigration reform. I'm going to spend a little time on making sure that workforce enforcement is effective and an integral part of making sure we have a comprehensive immigration reform.

Before I do, I want to thank the chamber very much for your strong advocacy of comprehensive immigration reform. I want to thank you and I want to thank your members for being an articulate, rational voice in the immigration debate.

I want to thank Chertoff for his service to our country—excuse me—Secretary Chertoff. Sometimes if you're from west Texas, you get a little familiar. [Laughter] Still adjusting to the protocols here in Washington. [Laughter] Of course, he knew what I was talking about.

I want to thank Ralph Basham, the Commissioner of the U.S. Customs and Border Protection. Thank you for being here, Ralph. Thanks for your service. Ralph ran the Secret Service so ably, did such a fine job, I asked him to serve in this capacity. And he'll do a fine job there.

I want to thank David Aguilar. He's the Chief of the U.S. Border Patrol. David, it's good to see you. David and I recently went down to the border, and we took a good look at this long border. It gave me a chance to see firsthand what's taking place down there. It also gave me a chance to thank the Border Patrol agents, men and women who are working every day to do our job. And I want to thank you for your leadership.

I thank Julie Myers, Assistant Secretary for U.S. Immigration and Customs Enforcement. I want to thank Tracy Henke, Assistant Secretary, Office of Grants and Training for DHS. She is the chair of the National Citizen Corps Council. And again, thank you all for letting me come by.

One of the jobs of the Government is to encourage entrepreneurship. We've done so in this administration, and as a result, America's risk takers are—and businessowners, both small and large, are hiring people. If you want a job in America, you can find a job in America. This economy of ours is growing, at 3.5 percent last year, 5.3 percent in the first quarter of this year. The national unemployment rate is 4.7 percent; 5.2 million new jobs have been created since August of 2003. Small businesses are flourishing; productivity is

high; after-tax income is up; homeownership is at an alltime level. This economy of the United States is strong, and we intend to keep it that way.

And the U.S. Chamber has been a strong supporter in making sure that Congress has sensible policies to keep this economy strong. And one of the most sensible things the United States Congress can do is to make the tax cuts we passed permanent. You'll hear talk in Washington that says, "Well, you've got to raise taxes on people in order to balance the budget." That's not how Washington works. They're going to raise your taxes, and they're going to figure out new ways to spend your money. The best way to balance this budget is to keep progrowth economic policies in place and be fiscally wise about how we spend your money.

Progrowth economic policies generate additional revenues for our Treasury. Last year, revenues exceeded expectations by about \$100 billion. This July, we're going to find out whether it happened again. I hope it does. I think it might, because we're growing this economy. When the economy grows, people pay taxes. And so the fundamental question is not whether or not we're going to have more revenues; the fundamental question is if we're going to have rational spending in order to balance this budget.

I told the United States Congress to get a \$92.2 billion supplemental to my desk. It's money needed to fund our troops. It's money needed to help the people down there in—that we're affected by the hurricanes. It's money to do important other measures. But if they bust the 92.2, I'm going to veto it. It's important for Washington to have fiscal sanity in order to balance this budget.

The fundamental question facing this country is, do we fear the future or do we intend to shape it? I intend to shape the future so America remains the economic leader in the world, which means we've got to have a good legal policy. I

want to thank the chamber for being on the leading edge opposing—and enabling me to sign meaningful tort reform. We don't need junk lawsuits running good people out of business. We don't need junk lawsuits running good doctors out of practice. What this country needs is a rational legal system that is fair and balanced. So I'm going to continue to work for tort reform in the Halls of Congress.

We need a health care system that takes care of the elderly and the poor, but also recognizes that the best health care system is one in which the decisions are made by doctors and patients, not by bureaucrats right here in Washington, DC.

We need energy policy that's wise. We got a problem in America: We're too dependent on oil from parts of the world where people may not necessarily like us. So I proposed an Advanced Energy Initiative, and I want to thank the chamber for supporting me on helping this country diversify away from hydrocarbons.

Today I want to talk about immigration, because the chamber of commerce understands that in order for this country to be an economic leader, in order for this country to be a country that upholds our values, we've got to have an immigration system that is secure and orderly and fair.

For decades, this country has not been in control of its borders. Yet we have an obligation to the American people to secure our borders. That's a solemn obligation of the Federal Government. And as a result of not securing our borders, many who want to work in this economy have been able to sneak across.

This is an issue I'm familiar with, since I was the Governor of Texas. You got to understand, there are people in our neighborhood who are desperate to put food on the table for their families. And if they, say, make \$7 in America versus 50 cents where they live, and they want to support their families, guess what? They're going to try to sneak across the border. And many have been able to do so. And that illegal

immigration has put pressure on our schools and hospitals; it's strained State and local budgets; and in some instances, bring crime to our neighborhood.

Yet we have got to remember that the vast majority of illegal immigrants are decent people. They're hard-working people. They're people who love their families, people of faith, and people who lead responsible lives. They're part of American life, and they are vital to our economy, and yet they're beyond the reach and protection of American law.

This Nation is a nation of laws. And we're going to enforce our laws. That's what the American people expect. But we're also a nation of immigrants. And we must uphold that tradition, which has strengthened this Nation in so many ways. These aren't contradictory goals. America can be a lawful society and America can be a welcoming society at the same time.

Congress is moving forward on immigration reform. The House started this debate by passing a bill that focuses on border security and interior enforcement. Then the Senate had its debate, and it passed a comprehensive bill that also includes a temporary-worker program and a plan to resolve the status of illegal immigrants who are already in this country. And now the two versions must be worked out in a conference committee.

The House and Senate bills will require effort and compromise on both sides. It's a difficult task, yet the difficulty of this task is no excuse for avoiding it. The American people expect us to meet our responsibility and deliver immigration reform that fixes the problems in the current system, that upholds our ideals and provides a fair and practical way forward.

The United States Congress needs to pass a comprehensive bill, one that will accomplish five objectives. First, a comprehensive reform bill must help us secure our borders. The border should be open to trade and lawful immigration and shut

to illegal immigrants as well as criminals, drug dealers, and terrorists.

Since I became President, we've increased funding for border security by 66 percent. We've expanded the Border Patrol from about 9,000 to 12,000 agents. As I told the folks down there, David, in Yuma, I am proud of the Border Patrol, and so should the American people. Do you realize that over the past 5 years, the men and women of the Border Patrol, working under incredibly difficult circumstances, have apprehended and sent home about 6 million people entering this county illegally? There's some people working hard down there on our behalf.

Despite the progress, despite the fact that they've turned back 6 million people in 5 years, we don't have full control of this border. And I'm determined to change that. I called on Congress to provide funding for dramatic improvements in manpower and technology on the border. And so by the end of 2008, we'll increase the number of Border Patrol agents by an additional 6,000. In other words, we will have doubled the size of the Border Patrol during my Presidency.

That's not going to be enough to do our job of securing the border. That's what you've got to understand. And so these Border Patrol agents need help. And the best way to help the Border Patrol is to construct high-tech fences in urban areas, urban corridors, to build patrol roads and barriers in rural areas. We're going to create a virtual fence that employs motion detectors and infrared cameras and unmanned aerial vehicles to detect and prevent illegal crossings. What I'm telling you is that we're going to have a border that is smart and secure.

And the best way to do that is to have Border Patrol agents, and then give them the most advanced technology so they can do their job. Training thousands of new Border Patrol agents and deploying the most advanced technology is going to take

time. Yet the need to secure this border is urgent. And so I'm acting.

This month, National Guard units will deploy to the border to set up headquarters that will help coordinate Guard operations that will support the Border Patrol. In other words, we'll be training 6,000 additional agents, but in the meantime, I'm going to send 6,000 National Guard down there. These forces are the first of 6,000 members that are going to assist the Border Patrol. They're going to operate surveillance systems and analyze intelligence, and install fences and vehicle barriers, and build patrol roads, and provide training. In other words, they're going to be a complement to the Border Patrol.

The Guard units will not be involved in direct law enforcement activities. That's the job of the Border Patrol. The United States is not going to militarize our border. What we're going to do is support those who we hire to do the job of enforcing the border.

As new Border Patrol agents and technologies come on line, the Guard forces are going to be reduced. The Federal Government is working to conclude formal agreements with California and Arizona and New Mexico and Texas that will define the roles and responsibilities of National Guard units deploying to the southern border. We're going to work closely with the Governors of those States to secure this border. Also in touch with the chief of the National Guard Bureau, General Blum, to make sure that we get those 6,000 Guard down there to help the Border Patrol do their job.

I also recognize the role of local and State enforcement authorities to help David and his people do the job. And so we'll increase Federal funding for State and local authorities assisting our Border Patrol on targeted enforcement missions. As well, we're going to give specialized training to certain State and local folks so they can complement the Border Patrol.

One of the problems we have down there is we got people working hard to find people, and in some instances, they apprehend somebody; then they head right into our society. That's frustrating for the Border Patrol agents. We got people working long, long hours down there, and they catch somebody sneaking into our country, and they say, "Hey, go over here to this legal proceeding, and since the courts are full, just check back with us in 45 days." The problem is, a lot of people who want to put food on the table or want to do other things don't check back. That's a program that needs to end.

See, most of the people we catch at the border trying to enter illegally are Mexicans, and 85 percent of them are sent right back home within 24 hours. But the real problem we've had is when we catch illegal immigrants from other countries trying to come in. It's easy to send people back into Mexico; it's hard to send somebody to a country south of Mexico, for example.

One of the problems we've had is we didn't have enough detention space. So we've got the Border Patrol agents working hard; they catch somebody from a country other than Mexico coming into our country, and there's no place to put them. And so part of our strategy is to end catch-and-release by expanding the number of beds in detention facilities along the border. We've added some, and we're going to add more. We're going to add enough to be able to end catch-and-release.

We've also expedited the legal process to cut the average deportation time. I've been in touch, as has my administration, with foreign governments, where we tell them, "You got to take your citizens back. When we catch one of your citizens coming in, you have an obligation to take that person back into your society." We've ended catch-and-release for illegal immigrants from the key Central American countries; now Congress needs to provide additional funding and legal authority so we can end

catch-and-release at the southern border once and for all.

The strategy is this: We're going to enforce our border. When we catch you, we're going to send you home—so that the message is very clear, and that is, you're going to be sent home if we catch you, illegally, which means don't try to come in in the first place, illegally.

Second, in order to have a comprehensive reform bill, we have to have a temporary-worker program. Part of securing this border is a temporary-worker program. You see, there are people who will do anything to come into this country to work. That's what you got to understand. People are motivated by a desire, in many cases—in most cases, to support the family. I used to tell people in Texas, family values do not stop at the Rio Grande. And so therefore, it shouldn't surprise you when people hike across the hot desert to—and risking their lives to come and work or are willing to get stuffed in the back of an 18-wheeler to come and do a job others won't do here in America.

The fact that people are willing to take those risks puts enormous pressure on our border, so much pressure that walls and patrols aren't going to stop it. In other words, you got people saying, "I'll do anything to come and work; just give me a chance." And we can put up—we can have a lot of patrols and a lot of walls, and it's not going to stop that flow. It will put a dent in it. But if the job is to secure this border, it seems like to me, we got to stop the number of people who are trying to sneak across in the first place. And the best way to do that is to make a temporary-worker program a part of immigration reform. Program would create a legal path for foreign workers to enter this country in an orderly way for a limited period of time. It would match willing foreign workers with willing American employers for jobs Americans are not doing.

Every worker who applies for the program would be required to pass a criminal

background check. Temporary workers must return to their homes at the conclusion of their stay. A temporary-worker program would meet the legitimate needs of American employers, and it would give an honest immigrant a chance to contribute to our economy and, at the same time, provide for their families. A temporary-worker program would reduce the appeal of human smugglers and make it less likely people would have to risk their lives to cross this border. A temporary-worker program would ease the financial burden on State and local Governments by replacing illegal workers with lawful taxpayers. And above all, the temporary-worker program would add to the security of this country by making certain we know who is coming into this country and why they're here.

Third, a comprehensive reform bill must hold employers to account for the workers they hire. It is against the law to hire someone who is in this country illegally. Those are the laws of the United States of America, and they must be upheld.

To ensure our laws are enforced, we've increased funding for immigration enforcement inside this country by 42 percent since I took office. Last year, I signed a bill that doubled Federal resources for worksite enforcement. We've launched law enforcement task forces in 11 major cities to dismantle criminal rings that are producing fake documents. Not only do we have a whole industry that's evolved to smuggle people in—you ever hear of the word *coyote*; these are these folks that are willing to use human life as a commodity, to make money off of somebody. We've also got document forgers too. See, there's a whole industry that's sprung up as a result of enforcement—an immigration system that isn't working. And so we're out to bust those document forgers.

Most American businesses want to abide by the law. Many are unable to determine whether their workers are legal, however, because of this document fraud. Today, there's an industry that's making these IDs

and fraudulent Social Security numbers. See, American employers who check these documents often discover that the names of their workers don't match their Social Security numbers. So then we've got people trying to verify, doing what they're expected to do under the law. But when this happens, the employer receives a "no match" letter from the Social Security Administration, yet under current law, the immigration enforcement agents at the Department of Homeland Security are not informed of these mismatches. The system isn't working.

See, we need to address problems and ensure that agents can enforce the law. Businessowners should not have to act as detectives to verify the legal status of their workers. And so the Federal Government has the responsibility to ensure that businesses have a clear and reliable way to check work documents. We have that responsibility. If we expect people to adhere to the law that you're not supposed to hire somebody illegally, we have a responsibility here in Washington, DC, to help you verify documents.

One thing we've done is we've launched what's called Basic Pilot. Basic Pilot is a voluntary online verification system that allows employers to confirm the eligibility of new hires by checking the information they provide against Federal databases. If there's a mismatch, the applicant then has 8 working days to contest the finding. By giving employers a quick and practical way to verify Social Security numbers, Basic Pilot gives employers confidence that their workers are legal, improves the accuracy of wage and tax reporting, and helps ensure that those who obey our laws are not undercut by illegal workers.

Basic Pilot, just a while ago, was only available in six States; now it's nationwide. As I told you, the program is optional. And the truth of the matter is, most employers do not participate. Now, the House and the Senate immigration bills would require employers to use Basic Pilot. I think this

is sensible. I think if we want to enforce our laws, people ought to be required to check to see whether or not names and numbers match. Homeland Security, by the way, in order for it to work, needs more money to make sure that the program is up and running.

Now, the other thing we need to do besides good verification procedures is to develop a new identification card for every legal foreign worker. The card should be tamper-proof. It ought to use biometric technology such as digital fingerprints. We got the technology to do this. It makes sense to have somebody who's going to be here legally, working on a temporary basis, to have a card that will allow American employers to know that the foreign job applicant is who he or she says she is, or he is. A tamper-proof card is going to be a vital tool to enforce the law, and it's got to be a part of a comprehensive immigration reform package.

Improving enforcement for immigration laws also requires stiffening the penalties for those violating the laws. Today, the fine for a business that fails to check an employee's ID can be as low as \$100. You might as well pay a speeding ticket. A penalty for knowingly hiring an illegal immigrant can be as low as \$250 and can't exceed \$2,000. These low penalties, frankly, provide little incentive for dishonest businesses to obey the law. And so we're going to increase the penalties. If we want to be smart about worksite enforcement, we got to say to somebody who's breaking the law, "There's going to be a cost, and it's more than \$250." And so the fines need to be larger.

The whole point and purpose of what I've just described to you is to assure the American people that we've got a plan in place that says to the employers, this is going to help you determine whether or not who you're hiring should be here in the first place. Secondly, it's going to help get rid of document fraud. I repeat: We

don't want our employers becoming document experts. That's not their—they're trying to get a job done.

And thirdly, we want to make sure that when we catch you, there's a consequence. You know, most American businesses are law-abiding. They really do want to uphold the law. They understand there's a responsibility to be an American, and that is to uphold the laws of the land. And yet we've got to recognize there are some unscrupulous folks who want to take advantage of low-cost labor. Illegal workers can be paid less than the market rate, see. And guess what? When you're illegal and you're worried about being detected, you can be exploited. And that's not the American way. We don't like people living in the shadows of our society. We're a nation of the rule of law, and we want people to be treated with respect. And so people who—businesses that knowingly employ illegal workers undermine this law and undermine the spirit of America. And we're not going to tolerate it in this country.

Fourthly, a comprehensive reform bill has got to address the reality that millions of illegal immigrants are here already. Now, these folks should not be given an automatic path to citizenship. That is called amnesty. I oppose amnesty. I opposed amnesty because it would be unfair to those people who are here lawfully, and I oppose amnesty because it would invite further waves of illegal immigrants.

One of the difficult tasks before the House and the Senate is deciding how American law will treat the illegal immigrants now in our country. Some Members of Congress argue that no one who came to this country illegally should be allowed to continue living and working in our country and that any plan that allows them to stay equals amnesty, no matter how many conditions we impose. Listen, I appreciate the Members are acting on deeply felt principles; I understand that. Yet I also believe that the approach they suggest is wrong and unrealistic. There's a rational middle

ground between granting an automatic path to citizenship for every illegal immigrant and a program that requires every illegal immigrant to leave. The middle ground recognizes there are differences between an illegal immigrant who crossed the border recently, and someone who has worked here for many years who's got a home, a family, and a clean record.

My position is clear: I believe that illegal immigrants who have roots in our country and who want to stay should have to pay a meaningful penalty for breaking the law, to pay their taxes, to learn English, and to work in a job for a number of years. People who meet these conditions should be eventually permitted to apply for citizenship like other foreign workers. But approval would not be automatic. They would have to wait in line behind those who played by the rules and followed the law. This isn't amnesty. It is a practical and reasonable way for those who have broken the law to pay their debt to society and demonstrate the character that makes a good citizen.

Fifth, a comprehensive bill must honor the great American tradition of the melting pot, which has made us one Nation out of many peoples. This debate is an interesting debate. It gets quite emotional, and sometimes an emotion—in all the emotions, we forget we are a land of immigrants. Success of this country has depended and will depend upon helping newcomers assimilate into our society and help folks embrace our common identity as Americans.

Americans are bound together by our shared ideals: an appreciation of our history; respect for the flag we fly; and an ability to speak and write the English language. As businessowners and community leaders, you know that English is the key to unlocking the opportunity of America. See, English allows a newcomer to go from picking crops to opening a grocery store. English allows a newcomer from sweeping an office floor to running that office. English allows someone to go from a low-

paying job to a diploma, a career, and homeownership. When immigrants assimilate and advance in our society, they realize their dreams. And as they do, they renew our spirit, and they add to the unity of our country.

As the chamber, you appreciate the great contributions immigrants have made to America's freedom and prosperity, and you know their importance for the future of this Nation. And so you're helping this country reach consensus by conducting the debate on immigration in a reasoned and respectful tone. And I appreciate that a lot.

I urge our fellow citizens to understand that harsh language, unnecessary politics, sends the wrong message about who we are as a nation. I appreciate the fact you're working for an immigration bill that is comprehensive. That makes a lot of sense, because you know that all the elements of this problem must be addressed together or none of them will be solved at all.

Throughout our long history, America has prospered because we welcome people who abided by our laws and worked hard and raised their families and trusted in the Almighty. I believe we must be guided by that history as we reform our immigration system. I trust in our country's genius for making us all Americans, one Nation under God. And I'm confident that the United States Congress will do its duty and pass an immigration bill that secures our borders, strengthens our laws, and upholds the promise of the United States of America.

May God bless you all.

NOTE: The President spoke at 8:50 a.m. at the U.S. Chamber of Commerce. In his remarks, he referred to Secretary of Homeland Security Michael Chertoff, who introduced the President; Thomas J. Donohue, president and chief executive officer, U.S. Chamber of Commerce; and Lt. Gen. H. Steven Blum, chief, National Guard Bureau. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Cabinet Meeting and an Exchange With Reporters *June 1, 2006*

*The President.* I want to thank the members of my Cabinet who came today. We had a really good discussion about a variety of important issues. We talked about the war against terror, and I reminded our Cabinet Secretaries that we all have a responsibility to help us win this war, including sending members of our administration to Iraq to help this new democracy succeed.

We talked about the hurricane season that's upon us, and the work we're doing to help local governments and State governments prepare for the hurricane season.

I talked about the immigration issue. I talked about how strongly I feel for this

country to have comprehensive immigration reform.

And then we heard from Secretary Snow about the strength of this economy and what we intend to do to keep it strong. One thing we intend to do is to continue to work with the United States Congress to make sure the tax cuts we passed are permanent. It turns out, our progrowth economic policies have worked, and the best way to make sure that the recovery we have is sustainable is to keep those taxes low. The Secretary briefed us on the fact that revenues coming into our Treasury look very robust. The best way to balance the budget is to keep progrowth economic policies in place and, at the same time,

work with our Cabinet Secretaries to keep spending down.

And so I'm very pleased with the progress on our economy. And I want to, again, thank my Cabinet Secretaries for being here.

And now I'll answer a couple of questions. Jennifer [Jennifer Loven, Associated Press].

*Iran*

Q. Thank you, sir. Do you have either China or Russia on board with Iran?

*The President.* Yesterday, Secretary Rice, at my instructions, said to the world that we want to solve the problem of the Iranian nuclear issue diplomatically. And we made it very clear publicly that we're willing to come to the table, so long as the Iranians verifiably suspend their program. In other words, we said to the Iranians, the United States of America wants to work with our partners to solve the problem.

I spoke to the President of Russia and explained my position clearly to him, and that is, the choice is up to the Iranians whether or not they're going to listen to the world demand, and if they do, we've got something to talk to them about. And if they don't, we expect Russia to participate in the United Nations Security Council. We'll see whether or not they agree to do that. I got a positive response from the President. He said he understands our strategy, and he agrees we want to solve this issue diplomatically.

I also spoke to President Hu Jintao this morning. I laid out to him why I instructed Secretary Rice to do what she did. And now it's going to be up to the Iranians to make their decision, and if they choose not to verifiably suspend, we have laid the groundwork for an effective international response.

Q. Was the response from President Hu positive?

*The President.* They understood our strategy, and they understood—the most positive thing about all the conversations

I had is there is uniform agreement that the Iranians should not have a nuclear weapon. And we'll discuss tactics and strategies to make sure that the international community speaks with one clear voice if the Iranians choose not to verifiably suspend. And so we'll see what their decision is. My decision is to be robust in trying to solve this problem diplomatically.

Matthew [Matt Spetalnick], Reuters. Yes, there you are.

Q. But the Iranian Foreign Minister, today, has already—while welcoming the offer of talks, has rejected the idea that they would first suspend uranium enrichment. How do you react to that, and is it now—

*The President.* My reaction is, the choice is theirs. And we'll see whether or not that is the firm position of their Government. If that's what they decide to do, then the next step, of course, will be to—for our coalition partners to go to the United Nations Security Council. And the choice is up to the Iranians. And they've already said, by the way, that they're willing to suspend. And this gives them a second chance to make their words mean something.

I want to solve this problem diplomatically, and I want to solve it peacefully. And the best thing for the Iranians to understand is that if they choose not to suspend in a verifiable—if they continue their obstinance, if they continue to say to the world, "We really don't care what your opinion is," then the world is going to act in concert. The next step of acting in concert is to go to the United Nations Security Council.

Ann [Ann Compton, ABC News].

*Iraq/U.S. Armed Forces*

Q. Why do American forces in Iraq need retraining on core values, as the military puts it?

*The President.* Our troops have been trained on core values throughout their

training, but obviously there was an incident that took place in Iraq. It's now being investigated. And this is just a reminder for troops either in Iraq, or throughout our military that there are high standards expected of them and that there are strong rules of engagement. The Haditha incident is under investigation. Obviously, the allegations are very troubling for me and equally troubling for our military, especially the Marine Corps. I've spoken to General Pace about this issue quite a few times. And he's troubled by the allegations, because he understands that the Marine Corps has got a proud tradition of upholding rules of engagement.

One of the things that happens in a transparent society like ours is that there is—there will be a full and complete investigation. The world will see the full and complete investigation. It also is a reminder to our commanders that they must constantly enforce the proud tradition of our military, and that's what they're doing.

Q. Have you gotten updates on the situation?

*The President.* Well, I'm not involved with the investigation, and you shouldn't expect me to be. I expect this investigation to be conducted independent of the White House, with a full and thorough investigation. And I'm confident.

Listen, the Marine Corps wants to get to the bottom of this. If anybody wants to make sure that they know the facts and to correct problems, if they do exist, it's the United States Marine Corps. They are run by—the Marines are run by an incredibly proud group of men and women who understand the history and tradition of the Marines. And they'll get to the bottom of this.

And if there is wrongdoing, people will be held to account. And at the same time, what you're seeing is the Marine Corps reminding our troops about what it means to be a marine, what it means to uphold the honor of that Corps, and what it means to adhere to the rules of engagement that we expect our soldiers to adhere to. The United States of America has got a willingness to deal with issues like this in an up-front way, in an open way, and correct problems. And that's what you're going to see unfold.

Thank you all.

NOTE: The President spoke at 11:01 a.m. in the Cabinet Room at the White House. In his remarks, he referred to President Vladimir V. Putin of Russia; President Hu Jintao of China; and Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff. A reporter referred to Minister of Foreign Affairs Manuchehr Motaki of Iran.

## Remarks at a Swearing-In Ceremony for Brett Kavanaugh as a United States Circuit Judge for the District of Columbia *June 1, 2006*

Please be seated. Thanks for coming. Welcome to the Rose Garden where, in a few moments, Brett Kavanaugh will be sworn in as a judge on the United States Court of Appeals for the District of Columbia Circuit.

Today, a court that is often considered the second highest in our land gains a bril-

liant and talented new member. The staff of the White House celebrates a friend they admire and a colleague they will miss. I congratulate a good man and a fine public servant on a job well done.

I'm especially pleased to be with Brett's wife, Ashley—[laughter]—whose face I know well and whose marriage was the first

lifetime appointment I arranged for Brett. [Laughter]

We welcome Brett's parents, Martha and Ed, and his mother-in-law and father-in-law, Nancy and John Estes from Abilene, Texas.

I welcome the star of Brett's most recent televised hearing, Margaret Murphy Kavanaugh. [Laughter] Margaret has his mother's—has her mother's good looks and her dad's preference for hearings that do not last too long. [Laughter]

We're honored this afternoon by the presence of Justice Anthony Kennedy, who hired Brett as a law clerk more than a decade ago. He now welcomes him as a fellow judge. And I'm also pleased that Mary Kennedy is with us today. Thanks for coming.

The Vice President has joined us. Mr. Vice President, welcome. Appreciate Al—Attorney General Al Gonzales for being here, and former Attorney General John Ashcroft is with us as well. I want to extend a warm welcome to Brett's new colleagues on the DC Court of Appeals. Thank you all for coming.

The power to nominate judges is one of the most serious responsibilities the Constitution gives the President. Our Founders thought carefully about the role they wanted judges to play in the American Republic. They decided on a court system that would be free of political and public pressure, with judges who are prudent in exercising judicial power and firm in defending judicial independence.

When a President chooses a judge, he owes it to the Constitution and to the country to choose with care, and I have done so in choosing Brett Kavanaugh. I chose Brett because of the force of his mind, his breadth of experience, and the strength of his character.

Brett grew up in Maryland. In high school, he distinguished himself both in academics and athletics. He graduated from Yale with honors. What did that feel like?

[Laughter] He stayed at Yale to earn his law degree. Brett was an editor of the Yale Law Review and impressed all around him with his mastery of the law and his strong work ethic.

After Yale, he embarked on a law career that has spanned judicial—on a career that has spanned the judicial branch, the executive branch, and the private sector. He clerked for Judges Walter Stapleton and Alex Kozinski on the Federal appellate courts and for Justice Kennedy on the Supreme Court. He served in the Solicitor General's Office and in the Office of the Independent Counsel. He was a partner in a leading national law firm. For the past 5 years, he has served in the White House as Associate Counsel, a senior Associate Counsel, and as Staff Secretary.

Over his career, he's argued cases before the Supreme Court, appellate courts, and trial courts. He has given his time and talent to provide legal services for those in need. He's earned a reputation for integrity and independence. Brett's abilities and professionalism have been recognized by members of both political parties. After I nominated Brett, a bipartisan group of his law school classmates wrote a letter of support saying Brett would bring credit to the distinguished court to which he has been nominated.

Brett's nomination also earned the backing of many leaders of the bar, including former Attorney Generals of both parties. And in three separate evaluations by the American Bar Association, all 42 reviewers rated him as well-qualified or qualified to serve on the Federal bench.

In the history of the DC Circuit, no judge has undergone a more thorough and rigorous confirmation process. And all who watched this process saw what I know: that he's a man of fairness, humility, and a reverence for the laws and the Constitution of our country.

Brett Kavanaugh is one of the many highly qualified men and women I've nominated to the Federal courts. These nominees come from many different backgrounds, and they bring different experiences to the bench. Yet they all have met the same high standards of legal ability, temperament, and judgment. I'll continue to fulfill my responsibility to nominate men and women of character and integrity who administer the law and not legislate from the bench. And I call upon the United States Senate to meet its responsibility to give every nominee a fair hearing and a timely up-or-down vote.

When Brett Kavanaugh takes his oath this afternoon, he will carry on a fine family tradition. His mother, Martha, was a public school teacher in the District of Columbia and went on to serve as a prosecutor and a State judge in Maryland. Martha instilled in her son a passion for service and raised

him to be true to the motto of his Jesuit high school: "Men for Others."

Throughout his life, Brett has used his many talents to serve others, and today he walks a new path of service: to administer justice equally, impartially, without fear or favor. Our Nation is fortunate that Brett Kavanaugh has accepted these responsibilities, and I'm proud to stand with Brett as he takes his place as a judge on the DC Circuit Court of Appeals.

And now I ask Justice Kennedy to administer the oath.

NOTE: The President spoke at 1:06 p.m. in the Rose Garden. In his remarks, he referred to Mary Kennedy, wife of U.S. Supreme Court Associate Justice Anthony M. Kennedy. The transcript released by the Office of the Press Secretary also included the remarks of Judge Kavanaugh.

## Letter to Congressional Leaders Transmitting Designations Under the Foreign Narcotics Kingpin Designation Act *June 1, 2006*

Dear \_\_\_\_\_ :

This report to the Congress, under section 804(b) of the Foreign Narcotics Kingpin Designation Act, 21 U.S.C. 1901–1908 (the "Kingpin Act"), transmits my designations of the following three foreign persons and two foreign entities for sanctions under the Kingpin Act, and reports my direction of sanctions against them under that Act:

Dawood Ibrahim  
Fahd Jamil Georges  
Ali Naway  
Dawood Ibrahim Organization  
Amezcu Contreras Organization  
Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to Pat Roberts, chairman, Senate Select Committee on

Intelligence; Arlen Specter, chairman, Senate Committee on the Judiciary; Richard G. Lugar, chairman, Senate Committee on Foreign Relations; John W. Warner, chairman, Senate Committee on Armed Services; Charles E. Grassley, chairman, Senate Committee on Finance; Susan M. Collins, chairwoman, Senate Committee on Homeland Security and Governmental Affairs; Peter Hoekstra, chairman, House Permanent Select Committee on Intelligence; F. James Sensenbrenner, Jr., chairman, House Committee on the Judiciary; Henry J. Hyde, chairman, House Committee on International Relations; Duncan Hunter, chairman, House Committee on Armed Services; William M. Thomas, chairman, House Committee on Ways and Means; and Peter T.

King, chairman, House Committee on Homeland Security.

## Remarks at a Swearing-In Ceremony for Robert J. Portman as Director of the Office of Management and Budget

June 2, 2006

Please be seated. Good morning. Welcome to the White House. Today I'm pleased to witness the swearing-in of Rob Portman as the new Director of the Office of Management and Budget. We welcome Rob's wife, Jane, as well as his brother, Wym, and other family members here with us today. I want to thank you all for supporting Rob.

As the OMB Director, Rob will not be racking up the frequent flyer miles that he did as America's Trade Representative. I think that's going to be a relief for Jane and his children. *[Laughter]*

I appreciate the Vice President being here. I want to thank Carlos Gutierrez for joining us as well, the Secretary of the Department of Commerce; John Walters, Office of National Drug Control Policy. Congressman Mike Turner, it's awfully kind for you to come back to witness the swearing-in of your friend. I appreciate the former Secretary, Don Evans, for being here as well.

The job of the OMB Director is one of the most important in our Federal Government. The OMB Director is a critical member of my Cabinet. He plays a vital role in every aspect of my administration's agenda, from securing the homeland to winning the war on terror to growing our economy and creating jobs.

For the past 3 years, these responsibilities have been carried out by a talented public servant, Josh Bolten. At my direction, Josh has pursued clear goals at OMB. He's worked to implement progrowth economic policies and ensure that taxpayers' money is spent wisely or not at all. He's

improved the management of Federal programs so that when we do spend taxpayer money, they deliver real results for the American people. He's put us on track to cut the deficit in half by 2009.

Now that Josh is serving as my Chief of Staff, I've turned to another outstanding public servant to take up these important responsibilities, and that's Rob Portman. Rob has served for more than a decade in the United States Congress, where he was vice chairman of the House Budget Committee, a member of the Ways and Means Committee, and a member of the House leadership. In Congress, Rob earned a reputation as an effective legislator who worked with members of both political parties.

For the past year, Rob has served his country as United States Trade Representative. He worked tirelessly to open new markets for American exports and to ensure that American workers, farmers, and small businesses are treated fairly overseas. He's reenergized the Doha round trade talks at the World Trade Organization. He completed trade agreements with Bahrain, Oman, Peru, and Colombia and launched new trade agreement negotiations with the Republic of Korea and Malaysia. His leadership was critical to the passage of the landmark Central American-Dominican Republic Free Trade Agreement last summer.

Rob assumes his responsibilities as OMB Director at a really important time for our economy. This morning's economic report shows that America's national unemployment rate is down to 4.6 percent because we added 75,000 jobs in the month of May.

The American economy has now added jobs for 33 months in a row and has created more than 5.3 million new jobs. In the first quarter of 2006, the U.S. economy grew at an annual rate of 5.3 percent—that's the fastest growth in 2½ years. Productivity is high, and that is leading to higher wages and a higher standard of living for the American people. The American economy is powerful. It is productive, and it is prosperous, and we intend to keep it that way.

I've given Rob a clear agenda. We'll continue to pursue progrowth economic policies. The tax relief we delivered has helped set off the economic expansion that we're seeing today. And Rob will build on this success by working with Congress to maintain a progrowth, low-tax environment.

Tax relief is important to families, workers, and entrepreneurs, and it is also vital to our efforts to reduce the budget deficit. When I came to office, taxes were too high, our economy was headed into a recession, and tax revenues were on the decline. By cutting taxes, we've helped produce a strong economic recovery, and that economic growth is producing more tax revenues. In 2005, tax revenues grew by a record \$274 billion, an increase of nearly 15 percent over the previous year. This year, the economy has continued to grow, and tax revenues are growing with it. These increased revenues are helping us to meet our goal of cutting the deficit in half by 2009.

To meet this goal, we must also control the Federal appetite for spending. Every year since I took office, we've slowed the growth of discretionary spending that's not related to the military or homeland security. My last two budgets have actually cut this kind of spending. And with Rob's leadership, we will continue to cut unnecessary spending and show respect for the taxpayers' money.

To cut unnecessary spending, I need the line-item veto. I've sent Congress a line-item veto proposal that has strong bipar-

tisan support. And Rob will work with his former colleagues on Capitol Hill to get a bill to my desk so I can sign it into law.

Rob will also work with Congress to pass reforms that will help us reduce earmarks and wasteful spending in the Federal budget. Congress is now considering an emergency supplemental bill that can show the American people we're determined to be responsible with their money. I've set a clear limit on spending that I will accept in this legislation, and if this bill goes over that limit, I'll veto it.

In the long run, the biggest challenge to our Nation's budgetary health is entitlement spending on programs such as Social Security and Medicare. Entitlement programs are growing much faster than our ability to pay for them. To keep these programs solvent, we need to slow their growth to a level we can afford. It's not a cut. It's the difference between slowing your car down to the speed limit and putting your car in reverse. Every American family and business has to set priorities and live within a budget, and so should the United States Congress.

My administration is committed to fiscal discipline and economic growth, and these policies will have a strong champion in Rob Portman. As OMB Director, Rob now assumes one of the most important posts in Washington. I'm pleased that he's agreed to serve our country once again. I look forward to working with him to keep America's economy the envy of the world, to create jobs and opportunity for all our citizens, and deliver results for the American taxpayer.

Congratulations.

NOTE: The President spoke at 11:05 a.m. in the Rose Garden at the White House. In his remarks, he referred to former Secretary of Commerce Donald L. Evans. The transcript released by the Office of the Press Secretary also included the remarks of Director Portman.

## Remarks Honoring the 2006 Super Bowl Champion Pittsburgh Steelers June 2, 2006

Thank you all for coming. Please be seated. It sounds like some people have been drinking some Iron City beer here. [*Laughter*] It's such an honor to welcome the Pittsburgh Steelers here to the White House. Congratulations on being the champs. You had a ring for every finger; now you've got one for the thumb.

I want to thank all the fans who've gathered here. I want to thank Senators Specter and Santorum for joining us, and Congressman Tim Murphy. I appreciate you all being here. It's good to see former U.S. Attorney Dick Thornburgh, former Governor of Pennsylvania.

The team probably doesn't recognize him, but they got quite a huge following here in Washington, DC, including in my administration. As a matter of fact, you have no greater fan than the new Director of the Central Intelligence Agency. So he came in for one of these briefings, see—he was going to keep the President abreast of what's going on in the world. And he was wearing a "terrible towel." [*Laughter*] Back in his school days in Pittsburgh, Mike spent a lot of time on the football field. Most of the Steeler fans know that Dan Rooney is a team owner, but Mike Hayden is able to call him coach. Mr. Rooney was Mike's coach. And you coached him well.

I want to—look, I was a Texas Cowboy fan, you know—[*laughter*]—Dallas Cowboy fan—and—yes, I know, I know. It's kind of hard for me to admit, but the Steeler franchise is one of the really great franchises in football history. And one of the reasons why is because of the Rooney family.

You know, I used to be in baseball, and I know the ability of an owner to affect the culture of the team, to be able to instill the habits necessary to win. And a class franchise starts with class ownership. And the Rooneys—Mr. Dan Rooney and Mr.

Art Rooney—are classy people. And I welcome you here to the White House.

I tested Mr. Rooney's sense of humor. See, I'm an early-morning riser, and of course, I saw the Super Bowl and got up early and was there in the Oval Office, and I just couldn't—I couldn't hold back. And so I said to the operator, "Get Mr. Rooney on the phone. I've got something I want to say to him." Unfortunately, I had gone to bed relatively early, and he had gone to bed relatively late. [*Laughter*] So he took my phone call after about 3 hours of sleep. And he was a gentleman then, when I apologized for waking him up; he's a gentleman today. Again, I want to publicly apologize—[*laughter*]—for routing you out of your sack. [*Laughter*] Except I'm pretty sure you were happy to get the phone call. [*Laughter*]

I want to congratulate all the coaches and the folks who make the franchise run. I particularly want to say something about those in the training room and those who pick up the laundry. Those are the folks that generally don't get a lot of credit, but I know the players will give you credit, and I know the ownership gives you credit, and I know Bill Cowher gives you credit. He is a—he's an amazing coach. He's got the most unusual expressions on the sideline. [*Laughter*] So I told the Vice President I was going to be able to congratulate Coach Cowher in person, and he said, "Well, get him to give me some tips on his scowl." [*Laughter*] You can't win a Super Bowl unless you've got a great coach. And the Pittsburgh Steelers have a great coach. And congratulations. Proud you're here.

I want to congratulate the players and their families. The country is proud of the way you played football. You've got some amazing characters on your team. You got a "Bus." You got a "Longhorn." [*Laughter*]

We used to pump iron together. [Laughter] His took; mine didn't. [Laughter] You got a "Big Ben." And you got a man known for his swagger; I've been looking forward to Joey Porter's new dance. [Laughter] He's a great player, and I'm proud to have him here at the White House. You're welcome to be here. Thanks for coming. I appreciate you.

Coach Cowher said this before the Super Bowl: "You play as a team, and you're going to walk away as champions." And this team played as a team. You may have some interesting characters on the team, but one thing the Pittsburgh Steelers learned to do was play as a unit. And that's why you're standing right here. It was a tough brand of football. It wasn't always flashy, but you learned how to win. And you're the kind of team Pittsburgh Steeler fans like to watch—hard-nosed football.

About halfway through the season, a lot of people were counting the Steelers out. They said you didn't have a chance. I kind of know the feeling. [Laughter] But you won eight games in a row, including three on the road in the playoffs, and of course Super Bowl XL in Detroit. You had some amazing unexpected players step up to help you play. You had the quarterback make an important tackle, and you had yourself a receiver make an important pass.

Super Bowl XL included other entries in the record book—"Fast" Willie Parker, 75-yard touchdown, the longest run in Super Bowl history. Looking sharp too. [Laughter] Your quarterback was the youngest quarterback in history to win an NFL title. But the most amazing thing about the victory, it seemed like to me, and for a lot of other fans, was you had

a fine man, a man you call "The Bus," retire in his home city of Detroit with the Lombardi Trophy in his arms. It was a touching moment for football fans.

There's a great responsibility with being in the spotlight and being champions, and I appreciate the acts of kindness the Pittsburgh Steelers do to help improve the community in which you live. I appreciate Jerome Bettis's The Bus Stops Here Foundation that helps underprivileged children in inner-cities. I appreciate Hines Ward, Super Bowl MVP, who traveled to his mother's home country of South Korea to inspire children of multiracial backgrounds speak out against discrimination. I thought that was an act of a champion. I appreciate the players who participated in Play Ball for Kids to raise money to help somebody who needs help.

You know, one of the great admonitions of all time is to love a neighbor like you'd like to be loved yourself. And true champs do that. So it's an honor to have champions on the field and off the field here at the White House. It is a joy for me to welcome you. Congratulations. Play hard. I'll be around here next year to see you come back. [Laughter]

NOTE: The President spoke at 1:40 p.m. in the East Room at the White House. In his remarks, he referred to Daniel M. Rooney, chairman, Arthur J. Rooney II, president, Bill Cowher, head coach, Jerome Bettis, former running back, Casey Hampton, nose tackle, Ben Roethlisberger, quarterback, Joey Porter, linebacker, Willie Parker, running back, and Hines Ward, wide receiver, Pittsburgh Steelers.

## The President's Radio Address *June 3, 2006*

Good morning. Next week, the United States Senate will begin debate on a constitutional amendment that defines marriage in the United States as the union of a man and woman. On Monday, I will meet with a coalition of community leaders, constitutional scholars, family and civic organizations, and religious leaders. They're Republicans, Democrats, and independents who've come together to support this amendment. Today I want to explain why I support the marriage protection amendment and why I'm urging Congress to pass it and send it to the States for ratification.

Marriage is the most enduring and important human institution, honored and encouraged in all cultures and by every religious faith. Ages of experience have taught us that the commitment of a husband and a wife to love and to serve one another promotes the welfare of children and the stability of society. Marriage cannot be cut off from its cultural, religious, and natural roots without weakening this good influence on society. Government, by recognizing and protecting marriage, serves the interests of all.

In our free society, people have the right to choose how they live their lives. And in a free society, decisions about such a fundamental social institution as marriage should be made by the people, not by the courts. The American people have spoken clearly on this issue, both through their Representatives and at the ballot box. In 1996, Congress approved the Defense of Marriage Act by overwhelming bipartisan majorities in both the House and Senate, and President Clinton signed it into law. And since then, voters in 19 States have approved amendments to their State constitutions that protect the traditional definition of marriage. And today, 45 of the 50 States have either a State constitutional amendment or statute defining marriage as

the union of a man and a woman. These amendments and laws express a broad consensus in our country for protecting the institution of marriage.

Unfortunately, activist judges and some local officials have made an aggressive attempt to redefine marriage in recent years. Since 2004, State courts in Washington, California, Maryland, and New York have overturned laws protecting marriage in those States. And in Nebraska, a Federal judge overturned a State constitutional amendment banning same-sex marriage.

These court decisions could have an impact on our whole Nation. The Defense of Marriage Act declares that no State is required to accept another State's definition of marriage. If that act is overturned by activist courts, then marriages recognized in one city or State might have to be recognized as marriages everywhere else. That would mean that every State would have to recognize marriages redefined by judges in Massachusetts or local officials in San Francisco, no matter what their own laws or State constitutions say. This national question requires a national solution, and on an issue of such profound importance, that solution should come from the people, not the courts.

An amendment to the Constitution is necessary because activist courts have left our Nation with no other choice. The constitutional amendment that the Senate will consider next week would fully protect marriage from being redefined, while leaving State legislatures free to make their own choices in defining legal arrangements other than marriage. A constitutional amendment is the most democratic solution to this issue, because it must be approved by two-thirds of the House and Senate and then ratified by three-fourths of the 50 State legislatures.

As this debate goes forward, we must remember that every American deserves to be treated with tolerance, respect, and dignity. All of us have a duty to conduct this discussion with civility and decency toward one another, and all people deserve to have their voices heard. A constitutional amendment will put a decision that is critical to American families and American society in the hands of the American people, which is exactly where it belongs. Democracy, not court orders, should decide the future of marriage in America.

Thank you for listening.

NOTE: The address was recorded at 7:30 a.m. on June 2 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on June 3. The transcript was made available by the Office of the Press Secretary on June 2 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following Discussions With President Denis Sassou-Nguesso of the Republic of the Congo June 5, 2006

*President Bush.* It's been my honor to welcome the President of the Congo here to the Oval Office. Mr. President, welcome. Thank you for coming. I welcome you not only as the President of your country but as a leader of the African Union.

We had a very constructive discussion about a variety of issues. We talked about our common commitment to help end the genocide in Darfur. I appreciate the President's leadership in helping negotiate a peace agreement, and I appreciate his leadership in working with the United Nations so we can get the AU forces blue-helmeted as quickly as possible.

And one of my interests, of course, is to join with African nations in combating HIV/AIDS, and I want to congratulate the President for the low infection rate in Congo. Thank you for your leadership on that issue.

We've had a very good visit here, and I look forward to seeing you in St. Petersburg, Russia, where we can continue our discussions. So, welcome.

*President Sassou-Nguesso.* I, first of all, thank you, Mr. President, and I want to say to everyone that I'm very happy and

honored to be here, actually for the second time, because in 1990, President Bush—father of President Bush now—welcomed me to this house on a state visit. So I'm very happy to be here, Mr. President.

Indeed, President Bush is absolutely right; we discussed a lot of issues that we're all interested in: peace, security, and not just in Africa, but beyond Africa, in the world. We talked about terrorism; we talked about the Iranian nuclear issue; we talked about the dialog that's about to open up, I hope, and that will bring good results to that problem.

And on behalf of all of Africa, I thank President Bush for his commitment in fighting AIDS, the commitment of the United States in the fight against HIV/AIDS. As you know, we had a special meeting on AIDS at the United Nations General Assembly, and as you know also, Africa is the continent that suffers the most from this scourge.

And we also talked about African development issues. We talked about the situation in the Gulf of Guinea and the Congo Basin, the NEPAD, Project for African Development in Africa. And I was happy to

see President Bush give his entire support to the development of Africa.

And I'm, again, very happy with this very useful meeting that we had with President Bush here. And I'm very happy for the fact that we're going to see each other in St. Petersburg, because President Putin invited me to come to the G-8 summit as a representative for Africa.

I thank President Bush for his very friendly and warm welcome. And I'm very

happy to be here, back in the White House.

NOTE: The President spoke at 9:51 a.m. in the Oval Office at the White House. President Sassou-Nguesso spoke in French, and his remarks were translated by an interpreter. President Sassou-Nguesso referred to President Vladimir V. Putin of Russia.

## Remarks Following Discussions With President Manuel Zelaya Rosales of Honduras

June 5, 2006

*President Bush.* Mr. President, welcome. It's good to have you here. We've had a very good discussion, as you would expect amongst friends. We discussed our common interests, and one of our common interests is expanded commercial opportunity. And CAFTA gives us a chance to realize those opportunities. We talked about our common desire to make sure the democracies in the region are strong.

We talked about the immigration issue. The President is very concerned about the immigration issue. I assured him that my administration supports a comprehensive immigration bill that treats people with respect and, at the same time, upholds our laws. And over lunch, I will give him our strategy to continue to press for a comprehensive bill that will enforce our borders but allow people to come to our country in a legal way to work on a temporary basis.

So, Mr. President, thank you. The people of America respect your country and appre-

ciate our close ties. And we're sure glad you're here.

*President Zelaya.* I have expressed my appreciation to the President. I'd like to reiterate my thanks to him for the frankness with which he has spoken about the solutions to the common problems we face in the Western Hemisphere.

And we come to this meeting with President Bush with great enthusiasm. And in coming here, we have asked for God's blessing so that this is a meeting that will truly strengthen the fraternal ties that join us in trying to achieve peace in our day.

I thank you very much, Mr. Bush. Your trust makes both of our nations strong.

*President Bush.* Thank you, sir. Thank you all.

NOTE: The President spoke at 11:51 a.m. in the Oval Office at the White House. President Zelaya spoke in Spanish, and his remarks were translated by an interpreter.

## Remarks on a Proposed Constitutional Amendment To Protect Marriage *June 5, 2006*

Thank you all. Please be seated. Good afternoon, and welcome to the White House. It is a pleasure to be with so many fine community leaders, scholars, family organizations, religious leaders, Republicans, Democrats, independents. Thank you all for coming.

You come from many backgrounds and faith traditions—yet united in this common belief: Marriage is the most fundamental institution of civilization, and it should not be redefined by activist judges. You are here because you strongly support a constitutional amendment that defines marriage as a union of a man and a woman, and I am proud to stand with you.

This week, the Senate begins debate on the marriage protection amendment, and I call on the Congress to pass this amendment, send it to the States for ratification so we can take this issue out of the hands of over-reaching judges and put it back where it belongs, in the hands of the American people.

The union of a man and woman in marriage is the most enduring and important human institution. For ages, in every culture, human beings have understood that marriage is critical to the well-being of families. And because families pass along values and shape character, marriage is also critical to the health of society. Our policies should aim to strengthen families, not undermine them. And changing the definition of marriage would undermine the family structure.

America is a free society which limits the role of government in the lives of our citizens. In this country, people are free to choose how they live their lives. In our free society, decisions about a fundamental social institution as marriage should be made by the people.

The American people have spoken clearly on this issue through their elected Rep-

resentatives and at the ballot box. In 1996, Congress approved the Defense of Marriage Act by large bipartisan majorities in both the House and the Senate, and President Clinton signed it into law. And since then, 19 States have held referendums to amend their State constitutions to protect the traditional definition of marriage. In every case, the amendments were approved by decisive majorities with an average of 71 percent.

Today, 45 of the 50 States have either a State constitutional amendment or statute defining marriage as a union of a man and a woman. These amendments and laws express a broad consensus in our country for protecting the institution of marriage. The people have spoken. Unfortunately, this consensus is being undermined by activist judges and local officials who have struck down State laws protecting marriage and made an aggressive attempt to redefine marriage.

Since 2004, State courts in Washington and California and Maryland and New York have ruled against marriage laws. Last year, a Federal judge in Nebraska overturned a State constitutional amendment banning same-sex marriage, an amendment that was approved by 70 percent of the population. And at this moment, nine States face lawsuits challenging the marriage laws they have on the books.

Some argue that defining marriage should be left to the States. The fact is, State legislatures are trying to address this issue. But across the country, they are being thwarted by activist judges who are overturning the expressed will of their people. And these court decisions can have an impact on our whole Nation.

The Defense of Marriage Act declares that no State is required to accept another State's definition of marriage. If that act is overturned by the courts, then marriage

recognized in one city or State may have to be recognized as marriages everywhere else. That would mean that every State would have to recognize marriage as redefined by judges in, say, Massachusetts or local officials in San Francisco, no matter what their own State laws or their State constitutions say.

This national question requires a national solution. And on an issue of such profound importance, that solution should come not from the courts but from the people of the United States. An amendment to the Constitution is necessary because activist courts have left our Nation with no other choice. When judges insist on imposing their arbitrary will on the people, the only alternative left to the people is an amendment to the Constitution, the only law a court cannot overturn.

The constitutional amendment that the Senate will consider this week would fully protect marriage from being redefined. It will leave State legislatures free to make their own choices in defining legal arrangements other than marriage. A constitutional amendment is the most democratic process by which our country can resolve this issue. In their wisdom, our Founders set a high bar for amending the Constitution. An amendment must be approved by two-

thirds of the House and the Senate and then ratified by three-fourths of the 50 State legislatures. This process guarantees that every State legislature and every community in our Nation will have a voice and a say in deciding this issue.

A constitutional amendment would not take this issue away from the States, as some have argued. It would take the issue away from the courts and put it directly before the American people.

As this debate goes forward, every American deserves to be treated with tolerance and respect and dignity. On an issue of this great significance, opinions are strong and emotions run deep. And all of us have a duty to conduct this discussion with civility and decency toward one another. All people deserve to have their voices heard, and a constitutional amendment will ensure that they are heard.

I appreciate you taking an interest in this fundamental issue. It's an important issue for our country to debate and to resolve. And the best way to resolve this issue is through a constitutional amendment, which I strongly support. God bless.

NOTE: The President spoke at 1:48 p.m. in Room 450 of the Dwight D. Eisenhower Executive Office Building.

## Remarks on Immigration Reform and a Swearing-In Ceremony for W. Ralph Basham as Commissioner of Customs and Border Protection in Artesia, New Mexico

June 6, 2006

Thank you all. Please be seated. Pete, thanks for your kind words, and thanks for your leadership. New Mexico has got a fine senior Senator in Pete Domenici. All he talks about is New Mexico when I'm with him. Now I'm afraid all he's going to talk about is FLETC. *[Laughter]*

It's good to be in Artesia. Some people probably think I've never heard of Artesia.

You forgot I grew up in Midland. Home of the Mighty Bulldogs, Artesia is. The land where the sky is big and the people are friendly. I knew I was in pretty good country when I saw all the cowboy hats, and I think I saw one guy spitting in a can. *[Laughter]* But I'm thrilled to be here, I really am, and I appreciate a chance to be here at the Border Patrol Academy,

here at the Federal Law Enforcement Training Center.

I want to—the reason I'm here is because I want the country to pay attention to what you're doing. And I want you to understand, those of you who are training to become Border Patrol agents and those of you who are training the trainees, I want you to understand that I really appreciate your contribution to the United States of America, and so do the American people.

What you're learning to do here is important. It's important for the security of our Nation. And I want to thank you for volunteering. At this academy, new agents undergo 19 weeks of training, and by the looks of it, it isn't all that easy. It's practical experience. It's the kind of experience that's going to put you in pretty good stead when it comes to doing the job that we expect you to do.

You're taking courses in counterterrorism and immigration law. You're taking courses in antidrug trafficking and firearms. You're taking courses in motor vehicle operations. And for those of you who don't know how to speak Spanish, you're learning how to speak Spanish. Those are all very important parts of your training.

Look, I'm not here to give you a lecture, but I am here to thank you. I want to appreciate what you're doing; I appreciate your service. I look forward to seeing you out there on the border doing the job we expect you to do. And in a little while, I'm going to tell you, you expect something from us too. But the first thing you can expect is the full support of the Federal Government, and you have it.

I appreciate—[*applause*—]Pete Domenici is keeping pretty good company today with Senator Jeff Bingaman. It's good to see the Senator. Thanks for coming. I'm proud you're here as well. I flew down with two Members of the United States Congress, Congressman Tom Udall—he's from the northern part of the State—and Congressman Steve Pearce—he's here from the eastern part of New Mexico. It's good

to see you all. Pearce has got that umbrella up because he's bald-headed. [*Laughter*] He's also a fine Congressman.

I want to thank the Governor of the great State of New Mexico, Governor Bill Richardson. Governor, I'm proud you're here. Thank you for taking the time. I know what it's like to be the Governor of a border State. And I know Governor Richardson counts on the Federal Government to pass a good piece of legislation that will enable him and the people of this State who are working with you to do their jobs. And I'm proud you're on the lead of comprehensive immigration reform, Bill.

I want to thank Secretary Mike Chertoff for joining us. I want to thank other members of my administration, starting with Ralph Basham, who is the Commissioner of the U.S. Customs and Border Protection, and his wife, Judy. We're fixing to swear Ralph in. Part of this ceremony is for you to witness the swearing-in of your boss. I think that's a good way for us to make it clear that those of us who are in Washington, DC—in my case, on a temporary basis, I want to emphasize—[*laughter*]—we know you're out here, see, and we care about the job you're doing. I thought it made sense to swear in the new Commissioner in your presence, as a way of making it clear for us to say, he may have an office in Washington, but his heart is right here with the Border Patrol agents.

I appreciate very much Connie Patrick, who's the Director of the Federal Law Enforcement Training Center. I want to thank David Aguilar; he's the Chief of the Border Patrol. For those of you fixing to join the Border Patrol, you need to know, you've got a Chief who knows what he's talking about. See, he did exactly what you've done. Plus, he's a Texan. [*Laughter*] I appreciate Jay Ahern; he's Assistant Commissioner of Field Operations for the U.S. Customs and Border Protection.

I just had a tour given to me by Charlie Whitmire. Maybe you've heard of Charlie. [*Laughter*] He's a no-nonsense kind of guy.

See, he's the kind of guy you want running a facility like this. He's got one thing in mind, and that is to give you the tools necessary to do the job. Whitmire, I appreciate your service, and thanks for your leadership. Thanks for the tour.

I appreciate all the State and local officials who have taken time out of your day to come and say hello, and I particularly want to thank the mayor, Manuel Madrid, for being here as well. Mr. Mayor, thank you for coming; proud you're here. Thanks for your time.

Most of all, I want to thank you all, and I want you to thank your families on behalf of a grateful nation. You need to tell your wives and children, mothers and fathers how much we appreciate what you're doing. So you've got my permission to take a little time off this afternoon—[laughter]—and let them know. This is a family deal. You're here training for a very important mission, a mission that's sometimes dangerous. And I understand how important it is to have the support of somebody in your house.

See, I got support from a great lady too, like many of you who are married. I'm fortunate to be married to Laura Bush, who sends her very—[applause]—she sends her best to all the good folks out here in eastern New Mexico. Her mother is living right across the border, so we stay in touch with how people are thinking out here.

And it's—I can't tell you how—a joy it is to be out here where the air is dry and fresh and the people are down-to-earth and decent—people who love our country and people who expect us to handle this immigration debate with dignity and to get something done. That's what they expect. The people of Artesia want something done on the immigration issue, and the people all across our country want something done on this important issue. So I want to talk to you today about the debate we're having in Washington, DC.

The first thing is, illegal immigration is a serious problem. The first thing we got

to understand as a country is that illegal immigration undermines the rule of law. It creates an underground economy. It can danger our national security. And therefore, we need to do something about it.

Illegal immigration makes it tough on local communities. It puts a strain on public schools and strains State and local budgets, brings crime to some of our communities. And we need to do something about it.

We've also got to remember this though, during this debate, that illegal immigration is a problem, but we need to remember that immigrants have been one of the great strengths of the United States of America. For generations, immigrants to this country have risked everything because of the dream of freedom. And they've assimilated into our society. And they've contributed to our economy. And they've contributed to the greatness of America. During this debate, this important debate on illegal immigration, we've got to remember we're a land of immigrants, and therefore, conduct this debate with dignity.

The United States is a nation of laws, and we're going to enforce our laws. We're also a nation of immigrants, and we're going to uphold that tradition. And these are not contradictory goals. America can be a lawful society, and America will be a welcoming society at the same time.

So I'm going to work with Congress to fix our immigration problems, and I'm going to work with Congress to pass a comprehensive bill I can pass into law. And we're making progress. I know you're following the debate in Washington, but we're making progress toward a comprehensive bill.

When I visited the border last fall, Congress was still debating whether to take any action at all. See, last fall there was a doubt as to whether or not Congress was going to act on the immigration bill. The last time I visited the border last month, the House had passed a bill focusing on border security and interior enforcement. Now the

Senate has passed a bill, and it's a more comprehensive approach that includes a temporary-worker program and a plan to resolve the status of illegal immigrants inside our country. And the next step is for the House and the Senate to reconcile its difference and agree on legislation that both houses can agree on. And I believe that legislation needs to be comprehensive in nature, which I'm going to talk about here in a minute.

I know when you watch your television or listen to the radio, it seems like there's nothing but disagreement on immigration policy in Washington. Yet there's a growing consensus among all parties and all regions of the country that fundamental reforms are needed. In other words, people are coming to the conclusion we got to do something about a system that isn't working. And while the differences grab the headlines, the similarities in approaches are striking.

We all agree we need to control our borders. There's a common agreement that the Federal Government has a responsibility to control the borders, so that every illegal immigrant caught at the border needs to be sent home. We agree with that. Secondly, we agree that the Government needs to crack down on businesses that hire illegal workers. In other words, in order to help you do your job, we all agree that if someone is hiring somebody who is an illegal immigrant, they've broken the law, and we need to crack down on that.

We all agree we must reduce the incentives for foreign workers to cross the border illegally. See, there's agreement on that in Washington. We agree that it's unacceptable to have millions of illegal immigrants living in our country beyond the reach of law and the protection of the law. And we all agree that immigrants to America must assimilate into our society. They must embrace our values and learn to speak the English language. See, there's common agreement; there's a consensus. And we

need to act on that broad consensus and deliver comprehensive reform that makes our system orderly, secure, and fair.

We all agree we've got to enforce the borders. Since 2001, I've worked with the United States Congress to increase border security funding by 66 percent. I want to thank the Members of Congress for working on that. Border Patrol has been expanded from about 9,000 agents to 12,000 agents, and we're building new infrastructures on the border.

Federal agents like you have apprehended and sent home about 6 million people entering America illegally since 2001. It's an amazing statistic, isn't it? Most American people have no earthly idea how hard our Border Patrol agents are working. Six million people since 2001 have been caught trying to come into this country illegally and sent home. And that's why I tell you, I'm grateful for your hard work. People are doing an outstanding job.

But we got to make sure that we give you more to secure the border. Congress needs to fund dramatic increases in manpower and additional technology that will help you build on the successes. See, there's more work to be done. We're going to increase the size of the Border Patrol by additional 6,000 agents by the end of 2008. You're going to be busy here at this facility. See, our goal is to have doubled the Border Patrol to about 18,000 Border Patrol agents. That's what they tell me is going to work. I said, "Fine, get it done." And your classes here are part of that doubling of the Border Patrol. And when these agents that are trained here are deploying, we're going to give them what's necessary in terms of technology to be able to do their jobs.

See, we need to add new technologies to the new manpower we're training, so we can tell the American people we're doing our best we possibly can to secure our border. Americans expect us to secure the border. It's an important job of the Federal Government. And so we're going

to double your size, and we're going to get you new technologies.

We're going to build high-tech fences in urban corridors. For the agents here who've been on the frontlines of enforcing our border, you understand how important those high-tech fences are so you can do that job. We're going to make sure you got new patrol roads. We can't ask these new Border Patrol agents that we're training to do their job and not have adequate patrol roads to be able to go up and down the border. We're going to build virtual fence that employs motion detectors and infrared cameras and unmanned aerial vehicles to prevent illegal crossings. See, we're going to leverage technology so you can better do your job.

Proposals to boost manpower and upgrade technologies have the support of Republicans and Democrats in the House and the Senate. In other words, there's consensus on that. We're going to get this part of the job done. And I understand and you understand, it takes time to get technology and Border Patrol agents in place.

The training you do here takes 19 weeks, as it should. We don't want to rush you through the academy. See, when we put you on the frontline of doing your job, we want you to be as well-trained as you possibly can be. That's what your families expect, that's what your Government expects, and that's what your trainers want. They want to use their skills to give you the skills necessary to do the job.

But it takes the time, and yet we don't have time to get this border enforced. And so therefore, I decided to work with our State Governors, Republicans and Democrats, to move 6,000 National Guard troops on the border to help the current Border Patrol do the job until the new agents are trained. That makes sense to me, doesn't it? If we've got a problem, let's address it square on. And if part of the problem is we're waiting to get new Border Patrol agents trained, and we can't wait, let's move some troops in—National Guard

troops that will be able to help those of you on the frontlines of securing our border do your job better.

Guard members are arriving at the border, and they're going to set up a headquarters to support Border Patrol operations. You see, you notice I said "support the Border Patrol." The Border Patrol is in the lead; that's why they're going through significant training. The Border Patrol is the primary law enforcement agency on the border. And so the Guard units are down there to support your job; they're to make it easier for you to do your job. Our Guard units will not be involved in direct law enforcement activities. That's not what they're going to go down there for. The United States of America will not militarize our border. We're going to make sure that the Border Patrol is the—is directly involved in law enforcement activities. That's what you're trained to do. The Guard is going to free up Border Patrol to focus on stopping illegal immigrants coming in. They're going to be building the roads, and they're going to be doing the support.

When I was down in Yuma, I saw the Guard working side by side with Border Patrol, and what they're doing is, they're freeing up the Border Patrol to be on the frontlines. And I want to thank Governor Richardson and Governor Perry and Governor Schwarzenegger, Governor Napolitano for working with the Federal Government to prepare the way for the arrival of the Guard troops. And as soon as you get the Border Patrol agents trained, these Guard troops will be going home. But until that time, I want them down here helping you do the job that the American people expect us to do.

We've got to stop catch-and-release. Perhaps the people of Artesia, New Mexico, know what I'm talking about; a lot of Americans don't. What happens is, these Border Patrol agents work hard; they find somebody coming back—coming into our country; they say, "The rules say you check in

with the officer here, in the court; come back in about 20 days when we've got time for you to show up," and they don't show up. So you've got somebody working hard to find somebody, and we let them back out in society, and guess what? They disappear. And we're going to end that practice.

Eighty-five percent of the illegal immigrants caught crossing the border are Mexican citizens, so they get sent back quickly. Within 24 hours they're sent back across the country, and that's important for people to know; if you get caught, you get sent home. It means it's less likely you're going to try to come in, in the first place.

Unfortunately, it wasn't that easy to send home illegal immigrants from other countries, Central American countries, for example, and so they were released back into our society. It had to be frustrating for you Border Patrol agents who were on the frontlines. You work hard, you find somebody who is trying to sneak in from Central America, you do your job; next thing you know you hear, "Oops, they're somewhere in society." So we're going to end that practice.

And the way you end it is, you build more detention facilities. See, part of the problem was, we didn't have a place to hold these folks. And so now I'm working with Congress to increase the number of detention facilities along our borders, to make sure that when we catch somebody from a place other than Mexico, there's a place to hold them until such time as we send them back to their country.

I'm also talking to leaders of those countries from which these people are coming, and I'm saying, "You have a responsibility to take them back as quickly as possible." And our mission is to end catch-and-release once and for all on the southern border of the United States, and we intend to do just that.

In order to make sure this Border Patrol strategy works, this strategy of securing the border, we all agree in Washington that

employers must be held to account for the workers they hire. I spoke to the Chamber of Commerce last week, and I made it clear that the United States is not going to tolerate employers who violate our immigration laws. See, it's against the law to hire someone who is here illegally. That's what the law says. We're a nation of laws, and we expect people to abide by the laws.

Most businesses want to comply with the law; they really do. Most people are good, law-abiding citizens who want to comply, but they have trouble verifying the legal status of their employees because of widespread problem of fake IDs and fraudulent Social Security numbers. See, there's a problem here. We got people sneaking into our country, and there's a whole document forgery ring supplying them with fake documents. And it's hard to expect some small-business person in Artesia, New Mexico, to be in a position to be a document checker.

And the Federal Government can help. So we're working on an effective system for verifying work eligibility so the businesses can better comply with the law, and then we'll be in a position to say, "If you don't comply with the law, you deserve to be punished. If we catch you cheating right now, you'll be punished." But we got to make sure that small businesses and large businesses have got the capacity to verify whether a person is here legally or not.

Congress needs to give Federal agents the authority they need to enforce the law when job applicants submit fraudulent Social Security numbers. Congress needs to make it mandatory for employers to check information provided by job applicants against Federal databases. Right now it's voluntary. In other words, you getting ready to hire somebody, you need to check against the Federal database to make sure the numbers on the cards aren't forged, are real. But what really Congress needs to do is to use a biometric technology to create a new tamper-proof identification card for every legal foreign worker. That's

what we need; we need a tamper-proof card. It says, if you're here legally working, here's your card, and you got to show it. And the businessowner has got to call for it. And if they hire somebody without the tamper-proof card, they're in violation of the law and will be fined.

We've got to reduce the incentives for foreign workers to sneak across the border. That's what we agree on in Washington. If I were a Border Patrol agent, I'd be asking, "What are you trying to do about the people trying to sneak in here to work? How come you don't have a temporary way for them to come work on the jobs Americans aren't doing?" See, I believe that we need to understand that there are people coming across this border to put food on the table for their family, and they'll do anything to make it into America to do work. That's what you got to understand. A lot of people in Artesia, New Mexico, know what I'm talking about. There are people coming to do work Americans aren't doing. They're working in the dairy farms; they're working the crops; they're laying tile; they're putting roof on in August.

And therefore, it seems like to me, if we want to protect this border, we ought to recognize they're coming and give them a temporary-worker card. They can come if they pass a criminal background check, for a limited period of time, and after they do their time, they go back home.

If you want to secure this border, you got to make it so people don't feel like they got to sneak across the border. The people these people catch are coming into this country to do jobs. We ought to recognize that and say, "Here is a legal way for you to come on a temporary basis for jobs that Americans aren't doing. And when you finish your time, when your time is up with the temporary-worker card, you go back home." And one way to secure that border is to have people not trying to sneak across the border, is to give them a chance to come here legally on a temporary basis.

You know, I was out in Yuma, and they were describing one of the techniques for people coming here to work. You got a couple of Border Patrol agents out on a part of the world—a part of the road there, and a hundred people rush them. A hundred people coming to do work rush right across the border, and you got three agents trying to stop them. And it's impossible. So the way to stop them is to do what we're doing out there: add Border Patrol agents, add new double-fencing in that part of the border. But it seems like to me, it's logical to say, "You can come over; you don't need to rush the Border Patrol. Just come over here in a legal way, if you pass a background check, for a temporary period of time, and do work Americans aren't doing." That's called a temporary-worker plan. And, in my judgment, any comprehensive bill that will work requires a temporary-worker plan.

We all agree we've got to resolve the status of millions of illegal immigrants who are here already. And this is the toughest part of the bill for the Congress. Now, I believe there's widespread agreement that we should not have an automatic path to citizenship, which is called amnesty. I'm against amnesty. I'm against amnesty because it's unfair to those people who are standing in line to become a citizen and who have been here lawfully. And I'm against amnesty because I think if you grant amnesty, it invites a further wave of illegal immigrants to try to come in this country. So whatever plan we do should not be viewed as amnesty.

In other words, some say, "Well, the way to solve this problem is to say, you're here; you're automatically a citizen." I disagree strongly with that. Now, there is a debate and honest disagreement who believe that immigration policy should force every illegal immigrant to return home for good. That's what some people in Washington think. And obviously, there are those at the other end who believe that every illegal

immigrant should be granted automatic citizenship. Neither of those plans are going to work. I just described why one wouldn't work. And trying to find 10 million people who have been here for a long period of time and rout them out of our society and send them home is just impractical. It may sound good; it's not going to work.

Our job is to put something on paper that will work, so these Border Patrol agents can get their job done. Our job is to be practical and to use common sense. And so here's a commonsense middle ground between those two polarized positions. First of all, we've got to recognize that people who—the difference between people who have been here for a while and people here newly arrived. Those who have been here newly arrived ought to be given a temporary-worker card, and they work their time and go home.

But we've got to recognize that there are people who have been here for years, and they've got a home and a clean record, and they've been paying taxes. And so I believe if they want to stay here, that they ought to pay a fine, first and foremost. They've broken our law, and they ought to pay a fine for breaking the law. Secondly, I believe they've got to pay taxes and make sure that they pay their taxes. Thirdly, I believe they ought to speak English. And fourthly, I believe they have to prove they've been working for a job for a number of years. In other words, there's a consequence. And then—and then—they can apply for citizenship, but they don't get at the head of the line; they get in the back of the line. You get behind the people who have been here legally.

In other words, you've got somebody who has been here for a while; they've been a good citizen; they've been working hard; and they pay a penalty for being here illegally. But if they want to choose to be a citizen, they get behind those people who have been here legally and who haven't broken the law. And if Congress is worried about the number of people getting in, they

can decrease the number of green cards. You can control the size of the line by the number of green cards you issue. If you want a longer line for people, issue fewer green cards. If you want to shorten the line, issue more green cards. But here is a rational way to make sure that we treat people with dignity without granting automatic citizenship, which is called amnesty.

And finally, whatever our views on the issue, we've got to agree that we've got to uphold the great American tradition of the melting pot. You know, we are one Nation under God for a reason, and that is because we appreciate our history, and we share ideals, we respect the flag we fly, and we're bound together by a common language.

I believe English is the key to unlocking opportunity in America. It's been what it takes to help somebody go from picking crops to owning a grocery store or from cleaning the floors of an office building to running that office. It's what we call assimilation, as part of assimilating to be Americans. When immigrants assimilate into this society, they realize their dreams. A lot of people have come here to this country over the decades with a dream, some of them just as simple as, "I'd like to own my own house," or, "I want to work hard so my child can go to college."

I'll never forget being the Governor of Texas and going to schools like UTEP, University of Texas at El Paso. One of the most amazing parts of that ceremony is when the president of the university stood up, and she said, "How many of you are first-generation graduates from college," and you see the students—a lot of them stood up. And you see their proud parents who've worked all their life to help a child go to college. There's something about America where people can work hard and realize dreams. That has, I think, made us a unique nation. And as we go through this debate, we've got to understand that people who have dreams and work hard

to achieve those dreams renews the spirit of the country, gives us a uniqueness and the capacity to say, we're all Americans.

So here are the elements for a comprehensive immigration bill—and I believe strongly this: That if we don't address all the elements together, none of it is going to be solved at all. The reason I called for a comprehensive bill is because I understand that in order for these good folks to do their job, we've got to link all five aspects together. We've got to be realistic about what it takes to enforce the border. So I look forward to working with Congress on this important issue.

I'll make you this pledge: My tone in this debate is going to be respectful. The language I use in this debate is going to remember the values and ideals of America. The language I use in this debate is to remember we're from different backgrounds, different religions, different cultures, but ultimately we're united under the great ideals of the United States of America. And I expect everybody else in this debate to carry that same tone as well.

And so I want to thank you for giving me a chance to share my thoughts with you. I feel passionately about this issue. I feel like one reason the people send us to Washington, DC, is to solve difficult problems. That's what you send us to do. You didn't send us up there to kind of shove them aside and hope that they go away. This one is not going away. This one needs to be solved right now.

And I also came to thank those who are getting ready to serve the Border Patrol for serving this great country of ours.

You're an important part of securing America, and I want to thank you for your dedication to our country.

I want to congratulate the new Commissioner for U.S. Customs and Border Protection, Ralph Basham. Ralph has a long and distinguished record of service in Federal law enforcement. He joined the Secret Service during the Presidency of Richard Nixon. Some of you all weren't even born during that period of time. [Laughter] He served as Special Agent in Charge of the Secret Service Offices in Cleveland and in Washington. He rose all the way to the position of Secret Service Director in 2003. I know he made it to that position because I put him there, and I put him there for a reason. He knows what he's doing. He can get the job done.

Ralph served as Chief of Staff for the Transportation Security Administration and Director of Federal Law Enforcement Training Center. That's where he came to know the Border Patrol Agency—Academy. He's a decent man. I trust him deeply, and he's going to be a superb leader for Customs and Border Protection.

And now it's my honor to witness his swearing-in.

NOTE: The President spoke at 10:45 a.m. at the Federal Law Enforcement Training Center. In his remarks, he referred to Charlie Whitmire, acting chief, Border Patrol Academy; Mayor Manuel Madrid of Artesia, NM; Gov. Rick Perry of Texas; Gov. Arnold Schwarzenegger of California; and Gov. Janet A. Napolitano of Arizona.

## Remarks at the Laredo Border Patrol Sector Headquarters and an Exchange With Reporters in Laredo, Texas

June 6, 2006

*The President.* Well, it's good to be in my home State with my home Governor.

Governor Perry understands, like I understand, the need to enforce this border. He

also understands what I understand—that in order to do so, we’ve got to have a comprehensive plan.

I started my day earlier in New Mexico, where I saw the training facility that is going to put out enough Border Patrol to be able to tell the American people, we will have doubled the Border Patrol since 2001. And that’s a really important part of our strategy, is to train more Border Patrol agents to help those that are working hard already to do their job. But we need to make the border technologically advanced as well.

We just saw some of the remote cameras that are in place that will help the Border Patrol be able to do its job better. But more than that, we’ve got to have a comprehensive approach. And that includes a temporary-worker plan that says, “You can come and do a job Americans aren’t doing if you pass a criminal background check, for a period of time. And then once you finish that time, you go home.”

We also have got to make sure that we deal with the problem of people who have been here for a long period of time. Some people say, “Throw them out of the country.” That doesn’t make any sense. You just can’t throw them out of the country. Others say, “Give them amnesty.” And that doesn’t make any sense. And the reason why giving them automatic citizenship doesn’t make any sense, it will encourage others to come. So what we ought to do is say to somebody who’s been here for a while, if you pass a background check, criminal background check, you’ve shown that you’ve worked here for a while, you paid a penalty—that you can apply for citizenship, but you get at the back of the line, the citizenship line, not at the front.

A comprehensive plan is necessary to help these good folks do their job. And I’m going to keep calling on Congress to think about a comprehensive plan. We agree on a lot of stuff. A lot of the elements of this plan have got common agreement. And now it’s time for folks to set

aside politics and get the job done on behalf of the American people.

Nedra [Nedra Pickler, Associated Press], you got a question?

*Iran*

Q. Yes, sir. Can you respond to Iran’s initial reaction to the incentives package today?

*The President.* Why don’t you tell me what it was?

Q. Well, the top negotiator said—

*The President.* As you know, I’ve been in Artesia.

Q. Right. I was. But the top negotiator said that the package contained positive steps, but there were some ambiguities, but the talks were constructive.

*The President.* I think that’s positive. I want to solve this issue with Iran diplomatically. And I think that—I appreciate Javier Solana carrying a message to the Iranians that America, Russia, China, Britain, France, and Germany—the main group of negotiators—wants this problem to be solved. And so we will see if the Iranians take our offer seriously.

The choice is theirs to make. I have said, the United States will come and sit down at the table with them so long as they’re willing to suspend their enrichment in a verifiable way. Sounds like a positive response to me.

Steve [Steve Holland, Reuters].

*Somalia*

Q. Sir. In Somalia, sir, it appears to have fallen to Islamic militants. Is there a need for international peacekeepers there, or what do you think has happened there?

*The President.* Well, I talked to Secretary of State Rice about this subject yesterday. And obviously, when there’s instability anywhere in the world, we’re concerned. There is instability in Somalia. The first concern, of course, would be to make sure that Somalia does not become an Al Qaida safe haven; that it doesn’t become a place from which terrorists can plot and plan. And so

we're watching very carefully the developments there, and we will strategize more when I get back to Washington as how to best respond to the latest incident there in Somalia.

Yes.

### *Immigration Reform*

Q. President Bush—

*The President.* Where are you from, here?

Q. Laredo Morning Times.

*The President.* It's nice to be back here. Thank you.

Q. Very nice to meet you too.

*The President.* Rick and I were talking about the first time I came here after I had won Governor—he had already been in office for a while—was the Washington day parade, and I remember it fondly. It's good to be back in Laredo.

Q. It's good to have you here, sir. Are you all—are you hoping to—a lot of people say that the answer for immigration is to—well, one group is saying that the quotas need to be raised for the amount of legal documented workers that can come in. Is that part of your proposal?

*The President.* Well, I think the framework I've outlined recognizes that Congress has got the right to regulate what they call green cards. And if Congress thinks that the line for citizens from Mexico is too long, they can increase the number of green cards. If they think it's—or they can shorten—increase the number of green cards. If they think it's too short, they can eliminate the number of green cards. In other words, they can control the flow of people from a particular part of the country.

What I want is people who have been here for a while to be able to have the choice—if they pay a fine, if they learn the English language, if they've proven they worked—to be able to get in the citizenship—in the potential citizenship line—but at the back of it. See, they don't get to be in the front. The people who have been

here legally are in the front of the line. They get to wait in line. And if Congress wants to shorten the line, they increase the number of green cards.

Q. And I guess for those that haven't been here that long, do you favor deportation of those?

*The President.* Well, I believe that—as I've said in my remarks—that there ought to be a difference between those folks who have been here for a period of time and—like for those who own a home or have got a family established or have had a job for a long period of time and—and those who have arrived recently. Those people ought to be given a temporary-worker card for a limited period of time. And when the time is up, they need to go home. That's what a temporary worker is—it's not a permanent-worker card; it's a temporary-worker card.

And Congress needs to determine the length—the proper length of time. Right now, one consideration is 3 years with a 3 year renewal. And what that will do is that will help people who are looking for somebody to do a job Americans aren't doing find workers. It'll also mean that somebody doesn't have to sneak across the border. See, we've got Border Patrol agents chasing down people who are trying to sneak across and do work Americans aren't doing. So it seems like it makes sense to me that—“Here, you can come to our country on a temporary basis to do a job, and when the time is up, you get to go home.” That's how you enforce the border. You enforce the border with more Border Patrol agents, better technology, and a rational way to treat people who are coming here to do work Americans aren't doing.

That's one of the reasons I've come down here to Laredo, as well as Artesia, is I want to talk to these Border Patrol agents. And I want to assure them that we're listening to what they need to get their job done. Our job in government is to say to people who are risking their lives and working hard is, “What do you need to get

the job done?” And that’s why I’ve been coming down here, and we’ll keep coming down here. And Congress needs to get a bill done.

Yes, sir.

*Congressional Action on Immigration Legislation*

Q. Mr. President, you spoke about progress earlier today in Artesia. You said that you feel it’s progress that both the Senate and the House have both taken up the issue of immigration. What concrete progress can you point to, in terms of winning over the conservatives in your party who still stand pretty firmly against the idea of any path to citizenship for immigrants?

*The President.* Well, one thing is, it’s conceivable you could have been asking me, “How come you can’t get any Chamber in Congress to pass a bill?” And so progress—what I’m telling the American people is, is that from last fall to now, we’ve got two bills out there. That’s progress.

What else is progress is a common understanding. One, we’ve got to enforce the border; two, that people need to be treated with respect; three, that there needs to be assimilation; four, that we need to hold employers who break the law to account; five, there needs to be some way to deal with people who are here to work on a temporary basis; and six, ultimately, we’re going to have to do something about people who’ve been here for a long period of time. In other words, people understand those are the principles that we’ve got to work on.

There’s no question this is a difficult issue for some in Washington, DC. But my job is to continue calling people to account and say, “We’ve got to work together to get a bill done.” And one way to do it is to come right down here on the frontlines of border enforcement and say to the United States Congress, “There are people working hard on behalf of this country, and we owe them a comprehensive

piece of legislation so they can do their job.” And I’m going to keep doing it.

Yes, ma’am. Where are you from?

Q. ABC News.

*The President.* ABC News? I’d suggest getting a little sunblock—

Q. Sunblock. Yes. [*Laughter*]

*The President.* Yes. Always looking out for my fellow citizens. [*Laughter*]

Q. Thank you. Last summer, you set a deadline for Congress before their August recess to pass things like the energy bill. Are you going to put such a deadline on an immigration bill—

*The President.* My attitude is, is that in order for these people to be doing their job, they need a bill as soon as possible. I’m looking forward to getting that conference, seeing the conference get together. You know, people—there are people making statements, and that’s important for people to set out there, say things, and kind of set their markers. The conferences have a way of working things out. And I’m going to be continuing to urge people to work things out in conference.

They haven’t yet sat down as a conference yet, but they will pretty soon. And that will give us a pretty good feel for whether or not attitudes are hardened to the point nothing can get done. I don’t think so. I think the people want something done in America. If you look at the—you know what people are saying. They’re saying, “Let’s get something done in a comprehensive way.” And I believe we can get something done. No question, it’s hard work, but that’s all the more reason to work hard to get it done. I recognize some people in Washington would rather duck the hard issue, but that’s not the way I am, and that’s not the way most people in Congress are. They want to get the job done, so we should keep working on it.

Okay, thank you all, unless you want to stand out here a little longer. [*Laughter*] You’re back again.

*Trade With Mexico*

Q. Mr. President, I'm sorry, one last question.

*The President.* That's fine. I'm glad to be working with the local press.

Q. Thank you so much. Some people say that Mexico needs to do a whole lot more to just create more jobs that pay a more decent wage for its people, and that America should help Mexico by investing more or providing more development funds. Is that—what do you think about that, and do you have any kind of proposals for that?

*The President.* I think the people that say that the long-term solution to immigration is for people to be able to find work in Mexico, they're right. And that's why I've been a strong supporter of NAFTA.

One of the interesting things about the border here that I don't think a lot of Americans are aware of, but I know those of us who grew up in Texas are aware of, is that this part of the world used to be really poor. Up and down the Rio Grande Valley, there was a lot of impoverished people. Laredo is a booming town—I mean, it's thriving. It has really changed a lot, and one of the main reasons why is because of trade with Mexico. On the other side of the border, the border States are prosperous States.

And so to answer your question, the first thing is to promote free and fair trade between Mexico and the United States. Trade enhances wealth; it provides opportunities for people. The problem is in Mexico is that the opportunities you can find here on the border don't extend to the south of the country. And so therefore, a lot of the Mexicans that we're finding at the border are people coming up from the south trying to find work so they can put food on the table. And I've talked to President Fox about this very issue, and I know Rick has talked to President Fox about this issue. And that is, what more can we do with

Mexico to encourage economic development south of the northern tier States?

President Fox, the last time I saw him, said that there are 100,000 vacant jobs in northern Mexican States. I think that's really interesting. And I said, "What are we going to do about it?" And the issue is education. The issue is to make sure that people in the interior and the south of the country have got enough education, enough skills so they can fill those 100,000 jobs.

And so to answer your question, economic development works through free and fair trade, as well as helping put an education system in place that makes sense. And that's Mexico's responsibility; that's their job. But we can help, and we work with Mexico all the time. I know Texas has got all kinds of collaborative programs with Mexico to help their education system.

Yes, Steve. You enjoying the heat? [Laughter]

*Immigration Reform*

Q. It's not so bad.

*The President.* It's because you've got a fine looking hat on there. [Laughter]

Q. Thanks, sir. The word "amnesty"—the critics seem to be able to just label this an amnesty and get away with it. I mean, are you having trouble fighting back that impression? Is it sinking in to people that this isn't amnesty and it's going—

*The President.* Look, if you're one of these types of people that basically say, we got to, you know, throw them out, then you just use the word "amnesty," just toss it around. You know, amnesty is something nobody is for in America. I'm not for it. But in order to frighten people, you just say the word "amnesty."

On the other hand, you can't kick people out of this country. You can stop people from coming in, but there have been people here in this part of the world, for example, been here for a decade—honest, hard-working citizens doing jobs Americans aren't doing, providing for their families.

They own their home. And the fundamental question is, how do you treat them with respect and, at the same time, have a system that's fair and orderly and respects our laws?

And so my attitude is on that, if a person wants to apply for a citizenship, they've got to pay a fine first. They have broken the laws of the United States, and they need to pay a fine. Then they've got to prove they've got a clean criminal record, paid their taxes, and worked. And then they can apply for citizenship, but they're at the back of the line. See, there's a line of people waiting to become a citizen, and they need to get at the back of the line, not at the front of the line. And that's how I think we can have an orderly system. That's not amnesty.

Amnesty is, "Okay, everybody who is here, you're a citizen." That's amnesty, and I'm not for that. I think it would be a mistake. And the reason I'm not for—and I recognize some people are for that. The reason I think it's a mistake is that, one, there are people who played by the rules here in America, law abiding citizens who've applied for citizenship, who are in line to become a citizen. They've adhered to all our laws. They're here legally, and they're in line, and they ought to be at the head of the line. And if you say to somebody who has been here illegally, "You're an automatic citizen," then that means they're not the head of the line—

it means somebody jumped in front of them who had broken our laws.

Secondly, if people are granted amnesty—in other words, the Government would say, "You're automatically a citizen"—there's going to be another 8 million people trying to get in this country, because a lot of people want to be citizens of the United States. It's a great honor to be a citizen of this country. It's a great tribute to our country, by the way, that people are willing to come here to work and to live. We're the land of the free; we're the land of the opportunity. And yet we've got to control our border. And so therefore, to say to some group of people, "You're an automatic citizen," would increase the likelihood of a lot of other people trying to come back in here so they can become a citizen automatically. And therefore, I'm against amnesty.

And I understand words in politics and words trying to frighten people. But the comprehensive approach I've outlined, when people think about it, makes a lot of sense, and you can't—all five need to go together in order to be able to do the job of enforcing the border.

I've enjoyed this, and I hope you have. Thank you.

NOTE: The President spoke at 3:23 p.m. In his remarks, he referred to Gov. Rick Perry of Texas; Secretary General Javier Solana of the Council of the European Union; and President Vicente Fox Quesada of Mexico.

## Remarks on Immigration Reform in Omaha, Nebraska June 7, 2006

Thanks for the warm welcome. It's great to be back in Omaha. I'm a little—I just wish the timing were a little better—*[laughter]*—Senator. If I'd only delayed my trip, we'd have been able to watch the College World Series again. *[Laughter]*

But I couldn't delay it, for this reason: This country is debating an important issue. It's an issue about our soul and our character. It's an issue that relates to people that are in our country. It's the immigration issue. And I don't think this issue can wait

for a baseball game or a baseball tournament; it needs to be addressed now. And I'm honored to be here in Omaha, Nebraska, right here in the middle of our country, to talk about a vital issue that affects us all.

Before I came here to give the speech, I went to the Juan Diego Center. It's right down the road, if you haven't been there. It's run by Catholic Charities. By the way, Catholic Charities is one of the most important battalions in the army of compassion. It's full of—[*applause*]—it's a center of love and compassion. It's a place where volunteers come to reach out to somebody who could use a little extra help, and those volunteers ask nothing in return.

I saw a place where people are learning to speak English and learning the civic lessons of what it means to be an American citizen. I sat around a table with entrepreneurs, people from different countries, all of whom are bound by a common dream of owning their own business; people who are willing to work hard to put food on the table for their families and to realize a dream. It was such an inspiring conversation for me.

One such person I met was Salvador Pina. He's a new American citizen who had a dream; he wanted to own his own business. And Salvador went to the Juan Diego Center and said, "Can anybody here help me?" For some of us, we take it for granted that it's easy to understand what forms to fill out or what worker compensation means or how do you pay your sales tax. But for some, they need a little extra help. They don't need to be inspired to dream big dreams, but they need help to realize those dreams.

He—Salvador received a \$10,000 loan from Catholic Charities. That's not exactly a microloan, but it's help. In other words, he said, "Can you help me? I'll work hard for whatever you do to help me, but can you give me—lend me a hand, brother?" And Catholic Charities did, and today he owns his own business. He's the proud

owner of Pina Auto Repair. By the way, if you're looking for a good man to fix your car—[*laughter*—give old Salvador a chance.

So what's it like? He said, "I've been working hard." I said, "Do you employ anybody?" He said, "Yes, I've started with just me, and now I've got three employees." That's what America is all about, isn't it, one person with a dream helping others to provide an employment opportunity. Salvador owns his own building. That's what we want in America. We want to encourage an ownership society, where a person like Salvador who started with nothing can say, "Welcome to my business, and I own my building; come on into the building I own, and here are the three people I'm employing."

When you hear people like me talk about assimilation, that's what we're talking about, helping people assimilate into America, helping us remain one Nation under God. So I want to thank Catholic Charities for their good work, and I want to thank a dreamer like Salvador for coming here, obeying the law, and working hard to achieve the American Dream.

When I get back to Washington, I'm going to sign an Executive order creating a task force on the new Americas. This task force is going to be led by our Secretary of Homeland Security, Chertoff. It's going to work to help people at the grass-roots level expand the teaching of English and civics and history instruction programs to help others assimilate into America.

We want to—I'm going to create—I've also signed legislation creating an Office of Citizenship at the Department of Homeland Security to promote knowledge of citizens' rights and responsibilities. In other words, one aspect of making sure we have an immigration system that works, that's orderly and fair, is to actively reach out and help people assimilate into our country. That means, learn the values and history and language of America. And for those of you who are wondering how you can

help our country, volunteer to be a part of such an assimilation process, just like the volunteers at Catholic Charities are doing.

I appreciate the Governor being here. Mr. Governor, thank you and Sally for coming. You're kind to take time out of your schedule to say hello to the old President. [Laughter] Getting older by the minute, by the way. [Laughter] I'm not supposed to talk about myself, but in a month, I'm turning 60. For you youngsters, I want to tell you something. When I was your age, I thought 60 was really old. [Laughter] It's all in your mind. It's not that old; it really isn't. Right, Senator Hagel? [Laughter]

I want to thank Chuck Hagel for his leadership on this issue, this immigration issue. You see, you can make the choice in Washington, DC, whether you want to be a leader or whether you want to kind of lay back and see how things work out and then take a position. You can go to Washington to solve problems, or you can go to Washington to hope those problems go away. Senator Hagel is one of the type of people that said, "I'm going to go to Washington to take a lead on this issue." This problem isn't going away; it needs to be fixed now, and I want to thank Chuck Hagel for his leadership on this important issue.

I'm proud to be here with one of the most decent men in the United States Congress, a man who's got a huge heart, a compassionate fellow, a person who didn't have to go into public service, but said, service to a nation you love and a State you care about is an important lesson for others to realize, and Tom Osborne is one of the fine, fine Americans.

I want to thank the Lieutenant Governor, Rick Sheehy, and the secretary of State, John Gale. Thank you all for coming today.

I'm glad we're at a community college. And I thank Jody McDowell and the board and the teachers who are here, welcoming me here. This is a—[applause]. I don't know if the people of Omaha realize what

an important asset you have in your community college system. I certainly understand it. Community colleges are a really important part of making sure America remains a competitive nation.

I remind our fellow citizens, particularly those who look to the future and get nervous and say, "Well, we can't compete," or, "There's no way for America to be the economic leader of the world. There's just too much competition"—I simply just don't believe that. I tell people, "Let's don't fear the future; let's shape it." And one way we can shape the future is to make sure people have the skills necessary to fill the jobs of the 21st century, and one of the best places for people to learn the skills of the 21st century is at a community college.

Community colleges are practical. They design curriculum that meets the needs of today's world. So when people come here, they come here to learn a set of skills so they can go out and get a job and be a contributor to our society. Maybe the best way for me to describe how important a community college is, is to tell you a quick story about Heather Fowler. Where is Heather? There you are. You got a lousy seat, but that's okay. [Laughter] She should have had a better seat because she's the president of the community college. Heather has got, I think, the toughest job in America, and that is being a single mother raising two children. It's particularly tough since one of her daughters is nearly 16. [Laughter] I know what it's like.

She's the president. She had been out of school for 16 years. She had been working to raise her family, but she realized that she needed to come back to enhance her skills. So guess where she came—right here. And she's graduating with a nursing degree. See, she had the initiative to say, "I may have been dealt a tough hand, but I'm going to play it with all my strength and all my might, and I'm going to take advantage of that which is available." The

community colleges makes advantages available to people.

Heather, I want to thank you for your dedication; I want to thank you for your example. If anybody is listening out there and you're wondering whether or not you can find a place to enhance your skills so you can get a higher paying job, so you can become a more productive worker, which means more pay for you, take the heart of the president of this school—take the lesson to heart. Heather Fowler shows what's possible here at the community college system. And I'm honored, Heather, you let me use you as an example to encourage others to come to this fine place of learning.

I want to thank Scot Adams. He tolerated me. He's the fellow who is the executive director of Catholic Charities who took me on the tour—great tour guide.

I want to thank—I've got two messages for you from Washington, one from the Secretary of Agriculture—[laughter]—Johanns; he's doing fine. [Laughter] He's doing really good. As a matter of fact, he remembers where he came from. That's an important part of Washington; it's important that you go up there and serve but never forget where you came from. And Mike Johanns knows where he came from, and he's doing an excellent job as the Secretary of Agriculture.

And Laura sends her best, by the way. She's a—I checked in with her this morning. I'm an early riser, maybe a little too early for her in this case. But she's doing good, really good. And I'm proud to call her wife, and I hope you all are proud to call her First Lady. She's a fine person.

We talked about the importance to help people assimilate into our society. This is what's happened throughout the ages here in America. People have learned to assimilate. You know, I like to remind people, when we think about this immigration debate, the first thing people have got to remember is we are a nation of immigrants, that we've had this debate before in Amer-

ican history. This isn't the first time the United States of America has had to take a look at our nature and our soul and our history.

I'm here to talk about a comprehensive immigration reform package, one part of which is to help people assimilate. The reason I want a comprehensive reform package is because I want whatever we do to work. And in my judgment, the definition of "work" is: We want a border that's safe and secure; we want rule of law to prevail; and we want the American Dream to flourish. We're a nation of laws, and we want to uphold those laws. We're also a compassionate nation that treats people decently, and the two are not in conflict. That's what's important for our fellow citizens to understand. The two are not in conflict.

I know you probably look at Washington and think it's impossible to develop a consensus in Washington, DC. It probably seems that way, doesn't it, when you pay attention to all the sharp elbows being thrown and the people opinionating and screaming and hollering and calling each other names. But there is a consensus emerging on this issue. I remind the folks, I was down—one reason I'm red-faced is I was down on the border yesterday in Laredo. It was about 106. But I reminded people that last fall, when I moved around the country on this issue, there wasn't any legislation at all. As a matter of fact, it was in doubt as to whether or not people even wanted to talk about the issue. You could hear them saying in Washington, "Two thousand-six is an election year; maybe we don't want to take on this issue."

But some of us in Washington said, "Well, you got to take on the issue." There's a problem. It's not working. The system is not working; the borders aren't secure; we got people living in the shadows of our society, and that's not right. People don't have trust in the border. The Federal Government is doing its job on the border,

and at the same time, we got a whole industry sprung up of smugglers and document forgers and people who are using people like chattel, and that's not fair, and that's not right, either.

And so since then, since when I went down there to the border for the first time to bring up the issue, the House passed a bill. And then I mentioned the Senate passed a bill with Chuck's leadership there. So there's progress. You can't get a piece of legislation out that I can sign unless you get both bodies to move.

And so now we're in what's called a conference committee, and there's a consensus developing. Listen, all of us in America agree we've got to secure our border. That's the job of a Federal Government. You want to know who's coming into your country and why; that's what you want to know. We have a responsibility to enforce the border.

And we're making good steps toward that. First thing is, you've got to have Border Patrol agents to enforce the border. And by 2008, we will have doubled the number of Border Patrol agents to 18,000 Border Patrol agents. And these are people who are highly trained people, whose job it is to respect the law, to be able to ascertain if somebody's coming into this country illegally or not. See, their job is to make sure the border is open for tourism and legal traffic and shut down for drugs and narcotics and smugglers.

And I was out there to the training plant in Artesia, New Mexico, by the way, yesterday, and there's some fine people serving our country. They really are hard-working, decent folks who volunteered and said, "I want to serve the United States of America in the Border Patrol." And since 2001, we've apprehended and sent back 6 million people trying to get in the country.

People are working hard to defend our border, and so therefore, we're going to double the number of Border Patrol agents. And until we get them stood up, in my judgment, it made sense to send some Na-

tional Guard folks down there, not to be the law enforcement arm of the Border Patrol but to man the phones and radars and help build the roads, to complement the Border Patrol so that the Border Patrol stays on the frontline of enforcing the border. And once we get the Border Patrol up and running, the Guard can go back to doing what they're doing. But it makes sense to tell the American people that we understand our obligation, and we're going to do our job of enforcing the border.

This is a long border. I mean, it's hard to enforce. And therefore, we need to have good technology down there—cameras and infrared devices and unmanned aerial vehicles and high-tech—high-density corridors, some fencing—just so the Border Patrol can do its job. That's what the American people expect, and we're going to modernize our border, and Congress agrees on that.

The other problem we got along the border is that when people get stopped who are illegally trying to come in the border, a lot of them just get sent back into society. That's not a good system. There's something wrong with this system. In other words, you got people down there enforcing the law, and somebody gets apprehended, and they send them to an immigration holding deal, and they say, "Look, check back after 45 days, with us, please." Well, they're not checking back after 45 days. That's called catch-and-release.

Most of the people we catch are Mexican citizens, and they're sent back to their country immediately. But a lot of folks from Central America, for example, are caught, and since we didn't have enough detention beds, places to hold them until they're able to be sent back to their country, people were let out in society. And that demoralized our Border Patrol. It basically said to the American people, "We're not serious about enforcing our border."

And so we're ending the practice of catch-and-release by increasing the number

of facilities for people to be compassionately held until they're able to be sent back to their countries. And I'm working with the countries to encourage their leaders to accept back those who have been caught trying to sneak into our country.

Look, the strategy is this: The strategy is to say, once people understand that they can't come into our country illegally and they'll be sent home when they try to, then they're not going to try in the first place. That's part of the strategy.

However, I want you to know that I don't believe we can enforce our border without having a rational way for people to come here to do work that Americans are not doing. It's called a temporary-worker plan. A temporary-worker plan recognizes that—two things: One, there are jobs Americans aren't doing—they're just not—and yet there's a need. We got employers who are looking for employees to do a certain kind of work. And the second aspect is, you've got to understand family values don't stop at the Rio Grande River. There are a lot of hard-working, decent people who want to put food on the table for their families. And therefore, they're willing to get in the back of an 18-wheeler or walk across a hot desert to work.

And that's part of the phenomenon you're seeing, you see, and you can't enforce the border like the American people expect us with just Border Patrol and technology alone. So long as there's that strong desire for people to improve their lives, to do whatever it takes to come to America to work, it's going to make it really hard to enforce that border. And so the best way to do it is to have a plan so people don't feel like they got to sneak in. We ought to have a plan that says, "You can come in legally for a limited period of time; you can come in and do work Americans are not doing, and then you go home. But you can take that money you made and help your family." That's what we ought to have.

See, when people are trying to sneak across the border, it makes it hard to enforce the border. When people can come here in a rational way that saves their lives as well as takes pressure off the border, it will enable us to be able to tell the American people we got a better way of doing the job they expect us to do, which is enforce the border.

I strongly support a temporary-worker program. I think most people in Congress understand the rationality of a temporary-worker program. I guarantee you, many employers here in the State of Nebraska, people in the agricultural sector, people in the hospitality sector, understand the need to have a rational plan that will enable them to have somebody here on a temporary basis to do the jobs Americans aren't doing.

We all agree that we need to uphold the law when it—oh, by the way, in order to get one of these cards, something I'm about to describe to you, you got to pass a criminal background check. In other words, we want to know who's coming into the country and why they're coming in the country, and we want to help meet an economic need as well as a humanitarian need.

I repeat to you, America should not tolerate a system that has encouraged *coyotes* to flourish. *Coyotes* are the unscrupulous that take a human being who desires to improve his or her life and stuffs them in the back of an 18-wheeler. And in my judgment, a temporary-worker program would put *coyotes* out of business, and society would be better off without them.

We agree in Washington that we need to enforce laws when it comes to hiring illegal workers. See, it's against the law in America to hire an illegal worker. That's what the law says. You can't hire—you can't uphold the law, however, when people are showing up with forged documents. How can you expect your employers to say, you're here legally or not legally, when employers are not document verifiers? And so therefore, a temporary-worker program has

got to have a tamper-proof identification card that shows somebody is here legally and so the employer knows that they're not breaking the law.

It makes sense to me to say to our employers, "Sure, you ought to be able to hire somebody, but just make sure they're legally here. And here's a system that encourages you to be able to know that you're hiring somebody who is legally here."

The big issue facing Washington is what to do with people that have been here for quite a while. That's really, I think, the ultimate stumbling block, when you think about it. There's serious disagreement on the issue around the country. First of all, we've got to recognize that there are people who have been here that are newly arrived, and then there are people who have been here for, say, a decade, who have paid their taxes and built a home and raised a family. So the question is, what do you do, what do you do as a society?

The debate really—much of the debate I'm sure you're hearing from is either amnesty or deportation, both of which I'm against. Amnesty means you're automatically a citizen. I don't think that makes sense. It's not fair to those who have waited legally. We got a lot of people waiting to be citizens here, and they've done—they've adhered to our laws, and they're in line—they're in the citizenship line. And I think it would be unfair to those who have been here legally to say to those who have been here illegally that these folks get ahead of you in line. That doesn't make any sense to me, if we're a country that's going to uphold laws.

On the other hand, it makes no sense at all to say we can find people and run them out of the country. For some, I guess that sounds appealing. It's impractical. It's not going to work, and it's not necessary, in my judgment. It's not the right thing to do.

The right thing to do is to recognize that if you've been here illegally, that there ought to be a cost for doing so, but also

recognize there are decent, hard-working people that have contributed to our society at the same time. And so I believe here's a way to work out—work through this problem. One is to say, you got to pay a fine for being here illegally. You've got to learn the English language. In other words, you got to pay—repay a debt to society and learn the skills necessary to assimilate into our society. Show us you've been working hard. In other words, there's a way to verify your contributions to our society. And then, if you want to be a citizen, you can get in line to be a citizen, but not at the head of the line—you get to get at the back of the line.

And to me, that is a humane, decent way of addressing a very difficult problem that Congress is going to have to wrestle with. I believe we ought to differentiate between those who've been here for a long period of time and those who are newly arrived. I know we need to treat people with respect and dignity. I think the best way to assure the American people that we're a nation of laws and a compassionate nation at the same time is to say, "Pay your debt to society, and if you choose to be a citizen, you can; just you wait in line at the back, not in the beginning."

See, there are lines for people who want to become a citizen, and they're based upon nationality. And Congress can determine the length of the line if they want. If the line is too long for Irish people or people from different countries or Mexicans, then increase the number of green cards. If the people are worried about the number of citizens all of a sudden becoming eligible for citizenship, you can decrease the number of green cards. But in the meantime, we need to treat people with respect.

This is a tough debate for America; it really is. It's a tough debate because it's one in which the language can sometimes send the wrong signals about what we're about. People are very emotional about this issue. And my admonition to people who

are concerned about the immigration debate is to remember that language can send signals about who we are as a nation, that harsh, ugly rhetoric on the debate tends to divide our country. It tends to forget the values that have made us great.

The values that made us great is that we're a nation that have been united by common ideals, proud of our history, proud of our flag, understanding of the need to have a common language, and at the same time, a society whose soul has been uplifted constantly by the fact that people have come to our country to realize a dream: the dream of working hard and improving their lot in life, the dream of putting food on the table, and at the same time, hoping the child goes to college, the dream of owning their own businesses. That's uniquely American. It enables me to say to the American people that "one Nation under God" means something. And we must never lose that spirit.

For people in Washington, DC, now's the time to get something done. It's important for our elected leaders to understand, if you're going to address the issue of immigration, you've got to address all aspects of the immigration. It's got to be a comprehensive bill if we want there to be an effective bill.

People say, "Well, you know, Mr. President, it looks impossible that something's going to happen." I disagree. American people want something to happen. They expect us as people elected to office to work together to get something done in a positive way. That's what they expect of us. And I'm going to continue traveling this country reminding the people that we have got an opportunity to put together a comprehensive package to reform the system to make it work, a system that will enforce our border and a system that will reinforce our values.

I want to thank you for giving me a chance to come and talk to you about this important issue. I'm really glad to be back in Omaha, Nebraska. May God bless you all, and may God continue to bless our country.

NOTE: The President spoke at 8:32 a.m. at the Metropolitan Community College—South Omaha Campus. In his remarks, he referred to Gov. Dave Heineman of Nebraska and his wife, Sally; and Jo Ann C. "Jody" McDowell, president, and Heather Fowler, student ex officio, Metropolitan Community College.

## Remarks at a Swearing-In Ceremony for Dirk Kempthorne as Secretary of the Interior

June 7, 2006

Thank you all. Please be seated. Welcome to the White House. Laura and I are thrilled you are here to witness the swearing-in of Dirk Kempthorne as our Nation's 49th Secretary of the Interior.

We welcome Dirk's family, particularly his wife, Patricia, and his children, Heather and Jeff. Thank you all for being here. I'm really happy Dirk's dad, Jim, is with us. I sure appreciate you being here, Mr.

Kempthorne. I want to thank all the other friends of the Kempthorne family and members of the family who have joined us here today.

I found it interesting that when Dirk and Patricia were married, they chose a wedding ceremony at sunrise high atop Idaho's Moscow Mountain. It's an interesting commitment to make, isn't it? [*Laughter*] And

an interesting place to make the commitment. It shows a love of—Dirk's love for his wife and their mutual love for nature. And one of the reasons I picked Dirk Kempthorne is because of his love of the beautiful country that we are fortunate to call America. That's why I picked him.

I want to appreciate the Vice President joining us today. Mr. Vice President, welcome. Thank you for being here, sir. I want to thank Justice Scalia for joining us, to administer the oath of office.

Dirk, you must be given a lot of these, kind of, swearing-in ceremonies, and we generally don't have a man of such esteem join us in a situation like this. [*Laughter*]

I appreciate Lynn Scarlett, the Deputy Secretary of the Interior, joining us, as well as all those who work for the Secretary of the Interior. I want to thank members of my Cabinet for being here. Thank you all for coming. Appreciate you taking time out of your day to be here, and I know Dirk does as well. I appreciate Members of the United States Senate who join us, starting with the Senate President pro tem, Ted Stevens. Thank you, Senator, proud you're here—as well as the two Senators from Idaho, Larry Craig and Mike Crapo. Thank you both for joining us. We have the House majority whip with us, Roy Blunt. I see former colleagues of Dirk Kempthorne have joined us as well. Thank you all for coming.

We have the privilege of living in a land of unparalleled beauty. We've got vast mountain ranges and mighty rivers and open plains and spectacular coastlines. These open spaces are shared—are the shared heritage of everybody. They just don't belong to a few people; they belong to all of us. It's the job of the Secretary of the Interior to manage these natural resources in such a way that we can pass them on to future generations, in good shape. That's Dirk's job. There's no doubt in my mind he'll be able to do it well.

Dirk Kempthorne is uniquely qualified for this important position. He is the first

Secretary of the Interior to serve as a Governor, a Senator, and a mayor. And each of these positions prepared Dirk well for his new responsibilities.

As Governor of Idaho, Dirk was responsible for managing Idaho's 30 State parks and recreational trails. He proved himself to be an outstanding steward of his State's open spaces. He launched a statewide initiative to fund improvements in the State's parks and public spaces. He created the Idaho Department of Environmental Quality. He established the Governor's Office of Species Conservation. He's a true conservationist, with a track record to prove it.

As a United States Senator, Dirk chaired the Subcommittee on Drinking Water, Fisheries, and Wildlife, and built bipartisan support to enact comprehensive reforms to the Safe Drinking Water Act.

As a former mayor of Boise, Dirk understands that those who live closest to the land know how to manage it best. He understands that while people here in Washington may care deeply about the land, it's the people that's closest to the land that we're going to rely upon to manage those resources. We're going to work closely with local and State leaders to ensure our natural resources are managed wisely.

Dirk takes up his new responsibilities at an important time in our Nation's history, and he follows an outstanding Secretary of the Interior in Gale Norton. Gale was instrumental in establishing the Healthy Forests Initiative to safeguard our forests and woodlands against fire damage. And thanks to her leadership, our administration has reduced the danger of fires by treating or removing hazardous fields from 11 million acres of Federal land so far. Gale also led the effort in Washington to improve our national parks and reduce the park maintenance backlog that we found when we came into office. Dirk is going to continue focusing on our national parks.

After Hurricane Katrina devastated our Nation's gulf coast, Gale helped lead the

effort to restore offshore energy production. She worked tirelessly to prevent a massive energy disruption that could have crippled our economy. America is a better place because of Gale Norton's leadership.

Dirk Kempthorne is going to build upon the strong foundation left by Gale Norton. He's going to continue my administration's effort to conserve our land and water and air resources. He's going to work to improve our national parks. He's going to preserve our Nation's historic and cultural sites. He'll carry forward our approach of cooperative conservation by encouraging conservation on both public and private lands in close collaboration with local communities. As we work to reduce our dependence on foreign sources of energy, he

will make sure that any exploration on Federal lands and in Federal waters is done in an environmentally sensitive way. As the Secretary of the Interior, Dirk Kempthorne will make certain that our Nation's natural spaces are cleaner and safer and more productive.

I want to thank Dirk for agreeing to serve our country again. I want to thank his family for supporting him. And now it's my honor to witness the swearing-in of Dirk Kempthorne.

NOTE: The President spoke at 3 p.m. on the South Lawn at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Justice Antonin Scalia and Secretary Kempthorne.

## Statement on Senate Passage of Marriage Protection Legislation

June 7, 2006

Today's Senate vote on the marriage protection amendment marks the start of a new chapter in this important national debate. I thank the Senators who supported this amendment, but I am disappointed the Senate did not achieve the necessary number of votes to move the amendment process forward. Our Nation's founders set a high bar for amending our Constitution, and history has shown us that it can take several tries before an amendment builds the two-thirds support it needs in both

houses of Congress. My position on this issue is clear: Marriage is the most fundamental institution of our society, and it should not be redefined by activist judges. The people must be heard on this issue. And as this debate continues, each American deserves to be treated with tolerance, respect, and dignity.

NOTE: The statement referred to S.J. Res. 1.

## Statement on Congressional Passage of Broadcast Decency Enforcement Legislation

June 7, 2006

I applaud the Congress for passing S. 193, the Broadcast Decency Enforcement Act. I believe that Government has a responsibility to help strengthen families. This

legislation will make television and radio more family friendly by allowing the FCC to impose stiffer fines on broadcasters who air obscene or indecent programming. I

look forward to signing this important legislation into law.

### Statement on Congressional Passage on Mine Safety Legislation *June 7, 2006*

I am pleased that the Congress has acted in a bipartisan way to pass important mine safety legislation. This legislation will complement the Mine Safety and Health Administration's efforts to enhance mine safety training, improve safety and communications technology, and provide emergency caches of breathable air for miners. The bill also increases penalties for those who

violate mine safety laws. America's miners and their families can be confident that their Government is committed to taking measures that will help prevent accidents and save lives. I look forward to signing this bill into law.

NOTE: The statement referred to S. 2803.

### Remarks on the Death of Senior Al Qaida Associate Abu Musab Al Zarqawi *June 8, 2006*

Good morning. Last night in Iraq, United States military forces killed the terrorist Al Zarqawi. At 6:15 Baghdad time, Special Operation forces, acting on tips and intelligence from Iraqis, confirmed Zarqawi's location and delivered justice to the most wanted terrorist in Iraq.

Zarqawi was the operational commander of the terrorist movement in Iraq. He led a campaign of car bombings, assassinations, and suicide attacks that has taken the lives of many American forces and thousands of innocent Iraqis. Usama bin Laden called this Jordanian terrorist "the prince of Al Qaida in Iraq." He called on the terrorists around the world to listen to him and obey him. Zarqawi personally beheaded American hostages and other civilians in Iraq. He masterminded the destruction of the United Nations headquarters in Baghdad. He was responsible for the assassination of an American diplomat in Jordan and the bombing of a hotel in Amman.

Through his every action, he sought to defeat America and our coalition partners and turn Iraq into a safe haven from which Al Qaida could wage its war on free nations. To achieve these ends, he worked to divide Iraqis and incite civil war. And only last week, he released an audio tape attacking Iraq's elected leaders and denouncing those advocating the end of sectarianism.

Now Zarqawi has met his end, and this violent man will never murder again. Iraqis can be justly proud of their new Government and its early steps to improve their security. And Americans can be enormously proud of the men and women of our Armed Forces, who worked tirelessly with their Iraqi counterparts to track down this brutal terrorist and to put him out of business.

The operation against Zarqawi was conducted with courage and professionalism by the finest military in the world. Coalition and Iraqi forces persevered through years

of near misses and false leads, and they never gave up. Last night their persistence and determination were rewarded. On behalf of all Americans, I congratulate our troops on this remarkable achievement.

Zarqawi is dead, but the difficult and necessary mission in Iraq continues. We can expect the terrorists and insurgents to carry on without him. We can expect the sectarian violence to continue. Yet the ideology of terror has lost one of its most visible and aggressive leaders.

Zarqawi's death is a severe blow to Al Qaida. It's a victory in the global war on terror, and it is an opportunity for Iraq's new Government to turn the tide of this struggle. Two minutes ago, I spoke to Prime Minister Maliki. I congratulated him on close collaboration between coalition and Iraqi forces that helped make this day possible. Iraq's freely elected Prime Minister is determined to defeat our common enemies and bring security and the rule of law to all his people.

Earlier this morning, he announced the completion of his Cabinet appointments with the naming of a new Minister of Defense, a new Minister of the Interior, and a new Minister of State for National Security. These new ministers are part of a democratic government that represents all Iraqis. They will play a vital role as the Iraqi Government addresses its top priorities: reconciliation and reconstruction and putting an end to the kidnappings and beheadings and suicide bombings that plague the Iraqi people. I assured Prime Minister Maliki that he will have the full support of the United States of America.

On Monday, I will meet with my national security team and other key members of my Cabinet at Camp David to discuss the way forward in Iraq. Our top diplomats and military commanders in Iraq will give me an assessment of recent changes in the political and economic and security situation on the ground. On Tuesday, Iraq's new Ambassador to the United States will join us, and we will have a teleconference discussion with the Prime Minister and members of his Cabinet. Together we will discuss how to best deploy America's resources in Iraq and achieve our shared goal of an Iraq that can govern itself, defend itself, and sustain itself.

We have tough days ahead of us in Iraq that will require the continued patience of the American people. Yet the developments of the last 24 hours give us renewed confidence in the final outcome of this struggle, the defeat of terrorism threats, and a more peaceful world for our children and grandchildren.

May God bless the Iraqi people, and may God continue to bless America.

NOTE: The President spoke at 7:31 a.m. in the Rose Garden at the White House. In his remarks, he referred to Prime Minister Nuri al-Maliki, Minister of Defense Abd al-Qadir al-Mufriji, Minister of the Interior Jawad al-Bulani, and Minister of State for National Security Shirwan al-Waili of Iraq; Usama bin Laden, leader of the Al Qaida terrorist organization; and Iraq's Ambassador to the U.S. Samir Shakir al-Sumaydi.

## Remarks at the National Hispanic Prayer Breakfast

June 8, 2006

Thank you very much, Luis. Thanks for your introduction. Right before we came in, I said, "Luis, how's your school doing?"

See, I got to first know Luis when I went into inner-city Philadelphia, and he said, "I'm starting a school." I said, "How's your

school doing?” He said, “Oh, pretty good.” He said, “Last year, we had 69 of the 70 graduates from our school go to college.”

Luis’s school is doing better than pretty good; it’s doing great. And we hold out hope to some kid, you know, that it’s amazing what results we can achieve in a society when you raise the bar and you say, “I have hope for you; I love you.” It’s amazing what our country can achieve. And so, Luis, thank you very much for your leadership, and thanks for having me here at the National Hispanic Prayer Breakfast.

I think it is fitting we come together to recognize the importance of prayer and the importance of faith. You see, Americans are a people of faith. And for millions of our citizens, prayer is a daily part of life. In prayer we give thanks for the many blessings bestowed upon us by our Creator. We’re blessed with courageous young men and women willing to defend us in time of war. We’re blessed with a growing economy and material prosperity. And we’re blessed by the diversity and creativity of millions of Hispanic Americans who enrich our great country.

We’ve got plenty of blessings to give thanks for, and I’m blessed by the fact that millions of Americans, many of whom I’ve never seen face to face, pray for me and my family. It’s one of the great blessings of America, to be President of a land of prayer. So this morning we come together to give our thanks for all our blessings and recognize our Nation’s continuing dependence on Divine Providence.

I appreciate the sponsors of this breakfast. It’s an important breakfast. This is a time for us to come together in common purpose to say, we’re humble enough to be on bended knee. I appreciate my friend Attorney General Al Gonzales for joining us today. It’s good to see you, *mi general*. The Director of the Peace Corps, Gaddi Vasquez—thank you for coming, Gaddi. Appreciate you being here. I see Senator Brownback—I think—yes, there he is. [Laughter] I know there are other Mem-

bers of the Senate and the Congress who are here. Thank you all for coming today. It’s really important that you’re here. And I know the participants of this breakfast are glad you’re here as well. I appreciate all the pastors and community leaders who are with us here today too. Thanks for coming.

In America, we are a people who profess many different faiths, with some of our citizens embracing no faith at all. In America, all are welcome. No citizen stands above another. In America, what unites us all is our dedication to freedom, and what brings us together today as men and women of faith is our belief that we’re all equal and precious in the eyes of the Almighty.

I like to tell people that my job as the President is to promote the fact that people are free to worship however you choose. See, that’s what distinguishes us from the Taliban or Al Qaida, that we’re free to worship and that we’re all equally American. If you’re a Christian, Jew, or Muslim, you’re equally American. If you choose not to worship, you’re equally American.

But I’ve also said, from my personal perspective, I rely upon the Almighty for strength and comfort. The daily example of our Hispanic communities reminds us that strong faith and strong families can build a better future for all. We are more—we’re a more hopeful society because men and women of Hispanic descent have put their faith and values into action.

More than 200,000 Hispanic Americans serve with courage and honor in our military, some of whom are with us today. And we thank you for your service. Our Government is enriched and strengthened by the Latinos who serve here in Washington, DC. Across America, Hispanic leaders are serving on the frontlines of our armies of compassion, reaching out to change the lives of brothers and sisters in need, changing this great country one heart, one soul at a time.

I like to remind people that government can hand out money, but government cannot put faith in a person's heart or a sense of purpose in a person's life. The best way to strengthen this country is for people such as yourself to continue to reach out to a neighbor in need, to listen to the universal call to love a neighbor just like you'd like to be loved yourself, to mentor to a child who needs to learn to read, to feed the hungry, to provide shelter for the homeless.

And that's precisely what the leaders in this room do. You're inspired by prayer; you move to action. And America is better off when you go into our neighborhoods to reach out to those who hurt, to provide comfort for those who are sick, to say loud and clear to a brother and sister in need, "We love you, and what can we do to help you?" On behalf of a grateful nation, I thank you for being soldiers in the armies of compassion and for making America a hopeful place for more of our citizens.

Speaking about a hopeful place, it is important for us in this important debate on immigration to remember that we've always been a hopeful nation. We are a land of immigrants. We're a country when people—we're a compassionate people. We're also a nation of laws, and being a nation of laws is not contradictory with being a compassionate country. We can enforce our laws. And we can treat people with respect and treat people with dignity and remember our heritage as a nation.

The immigration system isn't working today, and it needs to be fixed. Our borders need to be secure. The American people from all walks of life expect the Government to secure our border, and we will do that.

The system isn't fixed—the system is broken because we've got too many citizens, too many people here, too many people living in our country, living in the shadows of our society, beyond the reach of the law. That's not the America I know. The America I know is one in which people

are treated with respect; the America I know is one in which when we see something broken, we fix it.

So we'll secure our borders. We'll make sure people who hire people illegally pay a fine. But I want our fellow citizens to understand, you cannot secure our borders and you cannot be a compassionate society unless we provide a legal channel for people to work in America. We've got people coming across our borders who want to come and work and put food on the table for their families.

When I was Governor of Texas, I reminded people, family values do not stop at the Rio Grande River. There are people who are coming to our country who are doing jobs Americans are not doing. And we need a legal and orderly system. If we want to enforce the border, we must have a system that says, "You don't have to sneak across our border in order to find work. You don't need to risk your life."

So therefore, I strongly support and call upon the Congress to support the temporary-worker program that says, "You can come into our country legally"—so that we can match willing worker with willing employer, doing jobs Americans are not doing—"and you can come for a period of time, and you can work, and then you can go home in an orderly way as well."

The other part of this debate that's really important is what do we do with the folks that are here. See, there's a difference between those who have newly arrived that are doing work and those who have been here for quite a period of time. We've got people in this country who have paid their taxes, own a home, whose children are becoming valedictorians in high schools and colleges—people have been working hard.

This debate is—there's a heated debate on this subject here in Washington. There are some who say, "Well, best thing to do is just call them citizens right off the bat." I disagree with that. It's called amnesty. I don't think that would be fair to those who are legally here and are waiting in

line to become a citizen. You probably know many such citizens. They're here legally, and they say, "We want to be a citizen of your country," and we said, "Fine, get in line and wait." Granting amnesty to those folks who have been here illegally would be unfair to those who have been here legally. We're a nation of laws, and we must uphold the laws.

And then there are those here in Washington who say, "Why don't we just find the folks and send them home." That isn't going to work. That's not a good idea. It sounds simple; it's impractical. There's a reasonable middle ground. There's a reasonable way to uphold our laws and treat people with respect, and that is this: If you've paid your taxes, you've been here for awhile, you can prove that you've been working, you've got a clean background; if you want to become a citizen, you pay a fine, you learn English, you learn the values and ideals of America that have made us one Nation under God. And then if you want to be a citizen, you can get in line, but in the back of the line, not the front of the line. You can wait in line like those who have been legally here in America. We don't have to choose between the extremes. There's a rational middle ground.

I call upon Congress to enact common-sense immigration reform that enforces our border, that upholds our laws, that treats people with respect, and remembers the greatness of America is the fact that we've been able to come from different backgrounds, united under the common ideals of our country, and we live one Nation under God.

For centuries, people have come to this Nation because it is the land of promise. It's a place where people can realize their dreams. Yesterday I was in Omaha, Nebraska, at a Catholic Charities institute that was helping people learn English and learn the ideals of our country. I remember walking into a civics class, and the people were slightly startled to see the President walk in. I guess it's kind of the ultimate civics

lesson. [Laughter] But I was proud to be there. I really was.

And we sat down with a group of folks at a table to discuss entrepreneurship. And I went around the room asking, how long have you been here, and what are you doing? And I remember coming to the fellow, Pina—I think his name was Federico Pina. He said he started a couple years ago a automobile maintenance business. He said it was a dream of his to have his own business. I said, "How's it going?" He said, "Well, I've employed three people, and I own my own building." Here's a man who came to our country with a dream, and he's realizing that dream.

And what our citizens have got to understand is that if you're able to maintain a sense of hope in the United States, and people work hard to realize that hope, it inspires our Nation as a whole. It lifts our spirit. It reinvigorates what America is all about.

We have a great opportunity here in Washington to remember the traditions and history of the United States of America and to uplift that sense that America is a welcoming society, a country of law, but a country that also says, "If you work hard and dream big dreams, you can realize your dreams." And many of those who are in our country who are working hard to realize their dreams also rely upon a higher power to help them realize those dreams. And so I'm here to say thank you for your prayers, thank you for your example, thank you for helping your fellow citizens, and thank you for being great citizens of the United States of America.

*Que Dios les bendiga.*

NOTE: The President spoke at 8:08 a.m. at the J.W. Marriott Hotel. In his remarks, he referred to Rev. Luis Cortes, Jr., president and chief executive officer, Esperanza USA, who introduced the President; and Salvador Pina, owner, Pina's Auto Repair in Omaha, NE.

## Remarks Following a Meeting With Governors on the Line-Item Veto June 8, 2006

Appreciate some of our Nation's finest Governors joining us today. We talked about a couple of things. The first thing I did was bring the Governors up to date on recent successes we've had in Iraq. I talked about my discussion with Prime Minister Maliki, about the fact that he's completed his cabinet. I also told them that I had talked to our commanders and congratulated them on bringing Mr. Zarqawi to justice.

I thanked our Governors for being such strong commanders in chief. I hope they take a message back to their respective Guard units, how much our country appreciates their service, and I hope they also take the message back that we appreciate the service of their families.

We also talked about fiscal discipline, how the executive branch can have certain tools to work with the legislative branch to make sure that they're—responsible spending. Every one of these Governors have got a line-item veto, and they've used it wisely, and they shared their experiences with me. And the reason they did so is

because we're urging Congress to give this President and future Presidents the opportunity to be able to have what is very much similar to a line-item veto. And the American people expect their money to be spent wisely. The President needs to have a tool to be able to work with the Congress so that that money is spent wisely.

I appreciate the support of both Republicans and Democrats on the Hill in supporting the bill that we've submitted. I urge the Congress to pass this type of legislation so that we can work together to get our deficit cut in half by 2009, but, more importantly, assure the American people that we're being wise about how we use their money.

I thank you all very much. Thank you all for coming. I appreciate it.

NOTE: The President spoke at 10:50 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Prime Minister Nuri al-Maliki of Iraq; and senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7.

## Remarks Following Discussions With President Michelle Bachelet Jeria of Chile June 8, 2006

*President Bush.* It is such an honor for me to welcome to the Oval Office the President of Chile. Madam President, welcome.

*President Bachelet.* Thank you.

*President Bush.* I was told ahead of time that I was to meet a very charming person, and my briefers were right. I appreciate very much your dedication to values that are important: human rights and human decency, the right for people to be able to

speaking freely and to vote. I admire your personal story. I also thought it was very interesting that the President, before she came to see me, went by a middle school where she had been educated. It shows that she's dedicated to education and the welfare of the people.

I assured her that the United States of America shares her same sense of social justice and that our desire is to help, when

we can, people to become educated so they can realize their dreams.

We talked about the neighborhood. She shared with me her strategy to encourage there to be peaceful development and prosperous development. I assured the President that I'm very interested in her points of view. I look forward to working with you. The neighborhood is very important to the United States of America; it's very important for our country to be engaged and working with friends and allies to help others. And so I've been looking forward to this meeting for quite a while. We've got very good relations with Chile, and I intend to keep them that way.

And Madam President, you're welcome. I'm really glad you're here.

*President Bachelet.* Thank you, Mr. President.

[*At this point, President Bachelet spoke in Spanish, and no translation was provided.*]

*President Bachelet.* I am very glad to be here, and as President Bush has said, Chile and the United States have very good relationships, and we'll continue that way. And we have political, commercial relationships,

and we have been—we really are happy of how our relations have developed. And we have talked and shared opinions about how we can build peace, how can we fight together against poverty, for social justice, how we can help strengthen democracy in the region. And how we also can look at the issues as energy innovation, education, health, and so on.

It's for me an honor to be here. And as I live here as a child and then as an adult, it's always for me a wonderful possibility to be in a country where I have learned to love the American people, where I learned to—some experiences as how you can live in a country with difference, with different cultures, tradition, the different ethnic groups, and that's possible, and how you can integrate. And we want to integrate more in the region; we want to continue developing the best relationships with the United States, with the Government; and we hope we succeed in this covenant.

Thank you; Mr. President.

*President Bush.* Thank you, appreciate it.

NOTE: The President spoke at 11:50 a.m. in the Oval Office at the White House.

## Joint Statement Between the United States of America and the Republic of Chile

June 8, 2006

Presidents George W. Bush and Michelle Bachelet underscored the increasingly strong and close ties that Chile and the United States enjoy, based on common values and objectives, including the promotion of democracy, development, economic growth, hemispheric integration, trade liberalization, international security, and combating terrorism. They recognized the link among development, peace, security, human rights, and social justice. They reaffirmed their commitment to further

strengthen the bilateral relationship based on these principles and to deepen the two nations' ongoing strategic dialogue on democracy and regional development, and other key shared priorities.

They agreed that Chile and the United States, like all the peoples of the Americas, are united by ties, and by common aspirations, expressed in the founding Charter of the Organization of American States, which says: "The historic mission of America is to offer man a land of liberty and

a favorable environment for the development of his personality and the realization of his just aspirations.”

They agreed that the important measure of governments is whether they are committed in principle and in practice to the core conditions of democracy: to govern justly, to advance economic freedom, and to invest in their people. They agreed that a consensus in support of democratic governance unites our hemisphere and is enshrined in the Inter-American Democratic Charter, which declares that the people of our hemisphere have a right to democracy and that their governments have a responsibility to protect and promote that right, and that democracy is essential for the social, political, and economic development of the people of the Americas.

They agreed that the success of democracy in the Americas has produced increased expectations, and that in free societies citizens rightly insist that people should not go hungry, that every child deserves the opportunity for a decent education, and that hard work and initiative should be rewarded. The Presidents agreed that if democracy is to answer popular demands for development, if it is to help reduce poverty and inequality, then democratic institutions must be effective and responsive; that institutions like political parties, the police, and an independent judiciary must be representative of and accountable to the people; that institutions must be reformed to fight corruption and to function transparently; and that every democracy must have the strength to create opportunities for improved health and education for all of its citizens. For men and women who are committed to freedom, who work hard and play by the rules, democratic governments must eliminate policies and practices that interfere with opportunities to rise as high as their talents will take them. That is how we define social justice.

The Presidents recognized that the democracies of the Americas have now forged

a consensus on the vital link between security and prosperity as well as democracy and prosperity. They agreed that in a hemisphere that is becoming more democratic, the central security issue in the Americas is no longer one of state-to-state or military-to-military security, but how we face nontraditional threats such as organized crime, terrorism, delinquency, gangs, natural disasters, pandemics, weapons proliferation, and drug trafficking.

The Presidents agreed to work to make democracy a force for inclusion and empowerment, for effective institutions that will better people's lives in real ways, especially for the most disadvantaged and marginalized, while also recognizing that political and economic freedoms are not quick fixes, but are in fact lasting fixes.

They agreed to partner globally through the U.N. Democracy Fund and the Community of Democracies to support specific democracy promotion initiatives, particularly those aimed at improving democratic governance and strengthening institutions, promoting civil society participation, and sharing regional and trans-regional best practices and experiences. They further agreed to work together to support efforts to strengthen the capacity of the OAS and the Secretary-General to respond effectively to threats to democracy in the region and to help countries implement the provisions of the Charter.

The Presidents also reaffirmed their commitment to working to ensure a successful and ambitious conclusion of the Doha Round in the near future. In this context, President Bachelet welcomed President Bush's reaffirmation that the United States is ready to eliminate all tariffs, subsidies, and other barriers to the free flow of goods and services as other nations do the same.

Reaffirming the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), they acknowledged that the protection and enforcement of intellectual property rights should contribute

to the promotion of technological innovation to the mutual advantage of producers and users of technological knowledge and in a manner conducive to social and economic welfare. The leaders agreed to promote innovation and technological advancement by providing strong intellectual property protection and effective enforcement of intellectual property rights.

The Presidents acknowledged that economic growth and job creation are vital to reducing poverty and inequality and advancing human development, and that free trade is the key and their vision remains a Free Trade Area of the Americas, in the world's largest free trade community. The Presidents noted the importance of continuing efforts to promote trade liberalization and reaffirmed their commitment to the FTAA. They also observed that efforts toward economic and trade integration in the Americas are important tools for the promotion of prosperity, stability, and democracy in the region. They welcomed agreement by the IMF and World Bank to provide 100 percent debt relief for the poorest countries in our hemisphere. In addition, they agreed that the Inter-American Development Bank also should act to reduce the debt burden on the poorest countries. Collectively, these actions will ensure

that more resources are available to invest in health and education.

The Presidents expressed their commitment to ensure that political stability, democracy, and development take firm root in Haiti. They welcomed, as hemispheric partners in this effort to support democracy, the successful outcome of presidential and legislative elections held in February and April and expressed support for the new Government's efforts to respond to urgent social needs while aiming to achieve sustainable growth and poverty reduction.

The Presidents noted with satisfaction the activities of our continuing cooperation in the areas of economic growth, trade, cultural, people-to-people, and military exchanges. The Presidents agreed to intensively explore opportunities for people-to-people exchanges, including graduate doctoral education and English language education.

The Presidents reaffirmed their friendship and their commitment to further strengthening ties between the two nations to foster freedom, democracy, security, and prosperity.

NOTE: The transcript was released by the Office of the Press Secretary on June 9. An original was not available for verification of the content of this joint statement.

## The President's News Conference With Prime Minister Anders Fogh Rasmussen of Denmark at Camp David, Maryland *June 9, 2006*

*President Bush.* Good day. Welcome to Camp David. More importantly, welcome to Camp David to the Prime Minister and his wife. Mr. Prime Minister, we're glad you're here. Welcome.

The invitation to come to Camp David is an expression of my high regard for Prime Minister Rasmussen and our friendship between our two countries. You know,

I think—I was checking back; I think it's been over 2 years since we've had a foreign leader come and visit us here. And thanks for bringing such good weather. It's important to have good weather today, because the Prime Minister is going to give me a mountain biking lesson after this news conference.

A couple of thoughts, and then he's going to speak, and then we'd be glad to answer some questions.

First, I appreciate the Prime Minister's belief that freedom can help change the world and that freedom is universal. We had a really important discussion about our desire to help others realize the great blessings of liberty, particularly in Iraq and Afghanistan. Prime Minister Rasmussen has been a strong believer in supporting the Iraqi Government's desire to live in democracy. I thank you for your courage; I thank you for your country's commitment of troops that are helping make a difference.

We talked about the new Government in Iraq. The Prime Minister has met Prime Minister Maliki; I have not, and so it was very useful for me to hear from him firsthand about the Prime Minister's determination to succeed. I appreciate his understanding of the Prime Minister's desire to set priorities, starting with electricity in Baghdad, security in Baghdad, and dismantling militia groups that are creating havoc.

We discussed our common strategies in Iraq. One of the most important strategies is to make sure that the police force in Iraq is capable of inspiring the population who they're supposed to be protecting. And I believe we took a long—we took a big step toward that when the Prime Minister selected a new Minister of the Interior and—as well as a new Defense Minister.

And so we spent time on that, and we spent time on Afghanistan as well. Prime Minister Rasmussen shared his thoughts with me about President Karzai. We both agree that he's a patriot, that he's the kind of person that we can back and that we will back as this new democracy begins to develop.

We spent time on Iran. We shared thoughts about how to diplomatically solve the problem. And the problem is, the Iranians want to have a nuclear weapon, and they shouldn't have one.

We spent time talking about Darfur, our desire to help the AU forces achieve sta-

bility in Darfur. I've spoken out on this subject a lot. I believe there's genocide taking place, and I believe we have a responsibility to work together to bring some security to the poor folks that are being harassed and raped and murdered in the far reaches of Darfur.

The Prime Minister and I share values, and he spent time making sure that I understood his strong belief that when we fight the war on terror and we help new democracies, that we've got to uphold the values that we believe in. And he brought up the Guantanamo issue. And I appreciate the fact that the Prime Minister is concerned about the decisions that I made on—toward Guantanamo. I assured him that we would like to end the Guantanamo. We'd like it to be empty. And we're now in the process of working with countries to repatriate people.

But there are some that, if put out on the streets, could create grave harm to American citizens and other citizens of the world. And therefore, I believe they ought to be tried in courts here in the United States. We will file such court claims once the Supreme Court makes its decision as to whether or not—as to the proper venue for these trials. And we're waiting on our Supreme Court to act.

We talked about bilateral relations. I am impressed by the fact that the Prime Minister is off to the west coast with a message of new technologies and the desire for Denmark to work with some of our venture capitalists and businesses to promote energy independence, for example, and to come up with technologies that will enable a country like ours to become less reliant upon foreign sources of energy.

All in all, we had a very constructive visit, which will be continued over lunch after the bike ride and—presuming he doesn't ride me into the ground. [Laughter]

So, Mr. Prime Minister, welcome. Glad you're here.

*Prime Minister Rasmussen.* Thank you very much, Mr. President. Let me first of

all express my gratitude for inviting me to Camp David. I'm very honored to be here. And one could hardly imagine a better venue to spend time for work and pleasure with close friends. So thank you very much.

We have had a very productive meeting this morning at this wonderful setting. First we talked about Iraq. A few weeks ago, I met with the new Iraqi Government, as the President pointed out. It was with a particular sense of respect, I heard the views of the first permanent democratically elected Government in Iraq. I would say that our efforts have not been in vain.

Democracy is what it is all about. We agree on the very reason for being engaged in Iraq: to put an end to oppression and to promote freedom, democracy, and human rights. These are the very values we want to defend. That also gives us strong obligation to live up to those values in every step we take. When unacceptable events happen in Abu Ghraib and when allegations are made about horrific events in Haditha, it is not only a tragedy for the victims; it is damaging to our own efforts and an offense to our very own values. The President has assured me that all allegations will be investigated, and if there has been wrongdoing, then the responsible will be prosecuted.

We are committed to remain in Iraq as long as the Iraqi Government and the U.N. request our assistance and as long as we can make a positive difference.

As the President mentioned, we had also a discussion on Iran. I am pleased that the United States, under the President's leadership, has joined his European allies in presenting a package to the Iranians. It's now up to the Iranians to take advantage of this window of opportunity.

Secondly, we touched upon energy. I strongly share the President's view that energy is a major strategic challenge. I think that transatlantic cooperation can contribute to ensuring energy security and sustainable development. It could, for instance, be in-

strumental in developing new energy technologies.

In Denmark, this issue has been a high priority for 30 years. We have focused on renewable energy and energy efficiency, and we are among the leading countries when it comes to developing technologies in that field. It is part of the reason for our strong economy and competitiveness. And in Denmark, we have managed to combine economic growth with energy efficiency. Over the last 25 years, the Danish economy has grown by 50 percent without increasing the use of energy.

I think it's fair to say that Danish companies are at the edge in developing new technologies, and they are already engaged in the United States. Some of them are traveling with me to the west coast on Monday.

Which brings me to my final point on our bilateral economic relations. Trade and investment between the United States and Denmark is flourishing at impressive growth rates. The United States is now the biggest foreign investor in Denmark. Likewise, Danish companies have turned their attention towards the United States. Our top five companies have created more than 20,000 jobs in the United States, and they have engaged in a vast number of sub-contractors. I think that the broad range of subjects demonstrates the vitality and closeness of our relations.

Mr. President, the health experts tell us that we need daily exercise. So before we even start thinking about lunch, I'm looking forward to exploring Camp David in even greater detail on bike. It's going to be hard work; I know that. But I will do my very best to keep up with you, Mr. President. [Laughter]

So once again, thank you very much for your hospitality. Meeting with you at Camp David has indeed been a great symbol of the close and very warm relations between our two countries. Thank you.

*President Bush.* I'll take a couple of questions. Deb [Deb Riechmann, Associated Press].

*Iraq/Abu Musab Al Zarqawi*

*Q.* Mr. President, after meeting with the Danish Prime Minister last month, Maliki said he thought he could stand up the Iraqi security forces in about a year-and-a-half. And with Zarqawi's death, do you think this is realistic?

*President Bush.* I think it is—we'll get a realistic appraisal about the capacity for standing up Iraqi troops as this new Government begins to function as a government. It wasn't until just a couple of days ago that they didn't had a Defense Minister. Now they've got a Defense Minister, which will give us time to assess their command and control, their capacity to be able to send an order from the top to the bottom of their organization—a Defense Ministry that will be independent from politics, hopefully.

Once we make those assessments, then I think I'll be able to give the American people a better feel for what "stand up/stand down" means. And one of the reasons we're coming here—I'm coming here Monday, by the way, Mr. Prime Minister, with a lot of my Cabinet members to discuss the way forward in Iraq, to analyze the new Government, to look carefully at what their blueprint for the future looks like, and to figure out how we can help. And of course, I will share our thoughts with the Prime Minister, because he's a very important part of our coalition.

Zarqawi's death helps a lot. Zarqawi was bin Laden's main advocate, outside of some remote parts of the world. He was the operator. He was the person that had made the declaration that it's just a matter of time for America and other democracies to leave, so that we could then—so that they could then develop safe haven from which to launch further attacks. He beheaded people; he was a coldblooded killer; he masterminded the bombing of the hotel

in Jordan; he masterminded the bombing of the U.N. headquarters early on in the liberation of Iraq.

Removing Zarqawi is a major blow to Al Qaida. It's not going to end the war, and it's certainly not going to end the violence. But it's going to help a lot.

One of the goals of Al Qaida was to encourage sectarian violence inside that country; it was to pit Sunni against Shi'a and Shi'a against Sunni in order to be able to stop democracy. His whole ambition was to stop the advance of democracy in Iraq. And our troops—who performed brilliantly, by the way, in bringing this man to justice—did the Iraqis and the Americans and anybody else who loves freedom a great service by bringing him to justice.

*Iraqi Government*

*Q.* Can I ask you a followup?

*President Bush.* Probably not.

*Q.* How long will—

*President Bush.* Yes.

*Q.* You said you'd have to reassess with the new Government these various things. How long do you think that that assessment is going to take?

*President Bush.* See, part of the issue I deal with is people want to know with certainty when certain things are going to happen, and I understand that; it's a legitimate question. It's like, when are you going to withdraw troops? And the answer is, when conditions on the ground—

*Q.* I didn't ask that.

*President Bush.* No, I know, but I'm—you asked the question; I answer them. The answer is, as to when we'll be able to stand up Iraqis and stand down, when we'll be able to analyze the situation, depends upon how these people react—how they react to pressure, how they react to forming their Government. This is a brand new democracy. And the problem with the war we have is it requires a certain degree of patience in order to succeed. And we have to be patient here, as this new democracy

begins to flourish and has to deal with people like Zarqawi who is trying to stop their advance.

And so, as soon as possible. I've told the American people I'd like to get our troops out as soon as possible. But the definition of "as soon as possible" is depending upon victory in Iraq. And victory in Iraq is a country that can sustain itself, govern itself, and defend itself. That's the definition of victory, and we're making progress toward that goal.

Here you go.

*Iran*

Q. Mr. President, Mr. Prime Minister, last week, we saw a major change in the policy towards Iran. And although you don't want to talk about timetables, the Prime Minister talked about a window of opportunity for the Iranians. How do you see that window of opportunity? What is the timetable, and what will be the next step in the procedure when we talk about Iran?

*President Bush.* Thank you. Actually, you saw a shift in tactics but not a shift in strategy. I've always felt like we needed to solve this problem diplomatically. And I always felt it was essential that when the Iranians looked out at the world, they see a common, united group of nations saying, "No nuclear weapon."

Part of the change in tactics was to do two things: One, say to the Iranians, "The choice is yours to make," see. "You have said you're going to verifiably suspend your program. Now we're going to see whether or not you really mean it. And if you do, by the way, the United States will come to the table." And I said to our friends and partners, "If they choose not to come back—to suspend verifiably, there must be a consequence." There must be a sense of urgency on our part to send a common message to them. And I applaud my Secretary of State for effectively delivering that message.

And so to answer your question, we've given the Iranians a limited period of

time—weeks, not months—to digest a proposal to move forward. And if they choose not to verifiably suspend their program, then there will be action taken in the U.N. Security Council.

Caren [Caren Bohan, Reuters].

*Abu Musab Al Zarqawi*

Q. Thank you, Mr. President. Your initial public comments on the death of Zarqawi have been described as more cautious than other developments, such as the capture of Saddam Hussein. Are you more cautious now? And, if so, why?

*President Bush.* Well, let me make sure everybody understands, I'm thrilled that Zarqawi was brought to justice. And I am so proud of our troops and intelligence officers who brought him to justice. This man had a lot of blood on his hands. He killed a lot of people. And it's a big deal to have brought him to justice. Having said that, I don't want the American people to think that a war is won with the death of one person that—we have still more work to do.

I am confident that Al Qaida will try to regroup and kill other people in order to say, "Well, we haven't lost our way." I believe that. I also know that there are criminal elements and irritated people inside of Iraq who will try to stop the progress of the Government; they will continue to bomb.

The problem we have in this war is that all they've got to do is kill some innocent people by a car bomb, and it looks like they're winning, see. It takes a major event like an election or the death of Zarqawi to understand that we're making progress. And so one of the things I'm trying to be is realistic with the American people and say, there's still going to be tough days ahead because the enemy has got the capacity to get on our TV screens with death and destruction. That's what they've got the capacity to do.

In the meantime, however, the political process—remember, a government that can

sustain itself and govern itself and defend itself. Well, the governance aspect, as the Prime Minister will attest, is making progress under Prime Minister Maliki. It's a new type of government. It's a unity Government that represents the Iraqi people under a Constitution which they ratified, which is a remarkable feat, by the way, in the Middle East. A government that can defend itself, and that is, a government with an army that's well-trained, with a chain of command that's responsive to civilian leadership.

And finally, a government that can sustain itself is one that not only has an economic—a bright economic future for its people, but one in which the internal security is such that people have confidence in their Government. And frankly, that's the area where we need a lot of work, which is in the police forces. The Interior Minister was dominated by politicians that wanted to seek revenge, as opposed to provide blanket security. And as General Casey has said, "The—training our troops—training the police is the mission of our troops for 2006." And I want to thank the Prime Minister for his great contribution through NATO and the police training academies that we're helping to run.

But we're making progress. But I don't want—I want the people to understand that our progress will be viewed as incremental progress. If I didn't think we would succeed, I wouldn't stay. And if I didn't think it was necessary for peace, I wouldn't have put our troops there in the first place. And I told that to the Prime Minister. I said you can count on America for standing by this new Government, because we're doing the right thing. And people are going to look back at this moment in history and say a democracy in Iraq helped change the world for the better and helped provide security. It certainly helped address the simmering resentment that exists in a part of a region that for too long has been ignored, see.

And some say, I understand, that liberty isn't universal; therefore, we shouldn't worry about freeing people of Iraq. I strongly disagree with that. Liberty is universal. And not only in our attempts to defend ourselves—we also have got to understand that to help win hearts and minds, freedom is an avenue that will help do that. We've got to be confident in our belief in freedom and confident in our knowledge that freedom has the capacity to yield the peace we want.

#### *Abu Ghraib Prison/Situation in Iraq*

*Q.* Mr. President and Mr. Prime Minister, in previous meetings, you have discussed Guantanamo, Abu Ghraib, and now Haditha, and possibly other crimes have been added to that list.

Mr. President, how did you try to convince the Prime Minister today that that kind of violations of human rights will stop and guilty will be prosecuted? And for Mr. Prime Minister, are you today convinced that violations of human rights will stop so that these violations are not undermining the war for democracy in Iraq? Thank you.

*President Bush.* You know, the last time—I think it was in Denmark, we talked about Abu Ghraib, if I'm not mistaken. Yes. I told the people in Denmark—on your soil—that it was a disgusting event. It soiled our soul. It's not what America stands for. I also—I'm not sure I put it this way, but I understand humans make mistakes, but there needs to be accountability. And since then, those involved with the Abu Ghraib have been brought to justice. And that's what happens in transparent societies—which, by the way, stood in stark contrast to the society that Saddam Hussein ran, where there was no justice, where there was no transparency, where people weren't given a chance to take their case in front of an impartial court. But that's what's happened here in America.

I'm like the Prime Minister; I understand that these incidents run contrary to what we believe; I know that. But I also want

to assure—I assured the Prime Minister that they'll be dealt with. That's what societies like ours do. I can't guarantee success all across the front, but I can guarantee there will be justice.

*Prime Minister Rasmussen.* I'm very much in line with that. What we have seen in Abu Ghraib is not, was not what we are standing for. If the allegations concerning Haditha show up to be true, it is definitely not what the coalition, what America, what Denmark stands for. On the contrary, we are in Iraq to promote freedom, democracy, respect for human rights. And, of course, we should comply with these basic principles in all our behavior.

I can give no guarantee, but just like the President, I can give the guarantee that in free and open societies, the whole process will be transparent. And if there are wrongdoings, the responsible will be prosecuted. That's a guarantee you can give in a free and open society based on the rule of law.

*The President.* Bret [Bret Baier, FOX News].

#### *Abu Musab Al Zarqawi/War on Terror*

*Q.* Mr. President—

*President Bush.* Fine looking shoes you've got on there. [Laughter]

*Q.* Thank you, sir. Mr. President, what are your top commanders telling you, in the last 48 hours, about the possible impact of Zarqawi's death? And how does that affect what you are trying to accomplish in these strategy meetings here in Camp David, Monday and Tuesday?

*President Bush.* First, we had the strategy meetings scheduled before Zarqawi's death, interestingly enough. I haven't spoken to our commanders yet, except to call General Casey and McChrystal and congratulate them but, more importantly, for them to congratulate the troops and the intel groups that were working on finding Zarqawi.

I suspect they will tell you what I just said, answered to Caren, and that is that

it's a big deal, but it's certainly not the end of conflict. We had some—we believed that Al Qaida was stirring up violence inside of Baghdad. And one of the things the Prime Minister told the Prime Minister and me by phone, that the security of Baghdad is a central part of having a strategy that shows the Iraqi people that the Government is capable of governing and achieving objectives. And therefore, if Al Qaida was a part of—not the sole source, but a part of the violence inside of Baghdad, it helps to get rid of their commander.

It's also a—General Abizaid, whose job it is to think beyond just Iraq—he's the CENTCOM; he's the theater commander—will tell you that the upper management of Al Qaida was counting on Zarqawi to help implement their vision beyond Iraq.

See, it's really important for the American people to understand that Al Qaida has got an ideology and a strategy to impose that ideology. And part of the strategy is to create turmoil in moderate Muslim nations. And they want to overthrow moderate Muslim nations. They want to have their view of the world. I call it totalitarian, Islamo-fascism. Whatever you want to call it, it is extreme, and it's real. And Zarqawi was the implementer of that strategy, and he can no longer implement. And that is helpful in winning the war on terror.

Iraq is a theater in the war on terror; it's not the war on terror. It's a part of the war on terror. And Zarqawi was a general inside of Iraq, and he was a part of their strategy outside of Iraq. And I suspect General Abizaid—I don't mean to be putting words into one of our top commanders, but I would suspect he would say this was a major blow to Al Qaida.

The death of Zarqawi was very important for the people of Iraq. He was sowing incredible violence inside of Iraq. He promoted spectacular death. And by the way, he talked about human rights abuses, and we definitely need to be held to account. But the world needs to hold to account terrorists for civil rights abuses too. The

killing of innocent people to achieve a military objective is the cornerstone of Al Qaida's military strategy. And this world of ours—it's no question we ought to be concerned about what the United States does. But I expect the free world, as well, to unite in condemnation of terrorist activities around the world. See, there ought to be a universal condemnation. We ought not to excuse that kind of behavior.

And yesterday's action—or a couple of days ago action, expressed our disdain for that kind of killing of innocent life. And bringing him to justice is a positive thing.

It's important for the Iraqi people to see progress in the death of Zarqawi. There's no question progress toward more stable—it's not going to solve all problems. And I'm sure, as I mentioned to you, there's going to be some who step up and say, "We will teach you a lesson, and we will continue to send suiciders into neighborhoods just to show that we've still got power." But they've lost their general. They've lost the person that the top management of Al Qaida was counting on. And it's a positive development.

#### *Upcoming Meeting on Iraq*

*Q.* Is there specific goals for Monday and Tuesday?

*President Bush.* Specific goals for Monday and Tuesday is to review the Iraqi strategy, the Iraqi way forward. In other words, the Prime Minister has put forward a strategy as to how to achieve his objectives, which coincide with our objectives—a nation that can sustain itself, govern itself, and defend itself. And we want to review all aspects of that strategy. I felt that Camp David is a good place to do it because it can be distracting down in Washington, with phone calls and all those kinds of stuff; we can make sure the people involved in senior levels of Government stay focused on the task at hand.

I will be talking to Zal and our commanders just to get assessment. One question I'll ask is precisely the question you

asked. I want to get a feel for their view of the Iraqi Government's plans and how we can help Iraq achieve the objectives they want. And then the next day, we're going to have the Ambassador from Iraq to the United States up to talk with him, as well as have a Cabinet meeting between my government and the Maliki Government via secure video. And I think that will be a very interesting moment for the Iraqi Government, to see that we're concerned and interested about their plans for success. And I think it will be interesting for us to be able to get a sense for the type of people that the Prime Minister has attracted.

Ask Anders a question, will you? He's feeling a little defensive. [*Laughter*]

#### *Central Intelligence Agency*

*Q.* I'm sorry, I have one for you, Mr. President. This week, a report from the European Council talked about some CIA flights, illegal CIA flights with the prisoners in Europe, and illegal CIA presence also in some European countries. Have these flights taken place, and did you discuss this in your meeting today?

*President Bush.* We haven't discussed it yet. I suspect we will now that you brought it up. I would just—I can tell you what I'll tell the Prime Minister, is that in cases where we're not able to extradite somebody who is dangerous, sometimes renditions take place. It's been a part of our Government for quite a period of time—not just my Government, but previous administrations have done so in order to protect people. And as we do so, we protect the sovereign rights of nations that we're involved with.

Okay, thanks for the press conference. Enjoy yourselves. Get out of here. [*Laughter*] Welcome, glad you all are here.

*Q.* Are you guys going to race?

*President Bush.* No, we're old—one of us is old. [*Laughter*] I'm taking a lesson.

NOTE: The President's news conference began at 10:43 a.m. In his remarks, he referred to Anne-Mette Rasmussen, wife of Prime Minister Rasmussen; Prime Minister Nuri al-Maliki, Minister of the Interior Jawad al-Bulani, Minister of Defense Abu al-Qadir al-Mufriji, and former President Saddam Hussein of Iraq; President Hamid Karzai of Afghanistan; senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7; Usama bin Laden, leader

of the Al Qaida terrorist organization; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Lt. Gen. Stanley A. McChrystal, USA, commander, Joint Special Operations Command, U.S. Central Command Forward, U.S. Special Operations Command; Gen. John P. Abizaid, USA, commander, U.S. Central Command; U.S. Ambassador to Iraq Zalmay Khalilzad; and Iraq's Ambassador to the U.S. Samir Shakir al-Sumaydi.

## The President's Radio Address *June 10, 2006*

Good morning. This was a good week for the cause of freedom. On Wednesday night in Iraq, U.S. military forces killed the terrorist Zarqawi.

The killing of Zarqawi is an important victory in the global war on terror. This Jordanian-born terrorist was the operational commander of Al Qaida in Iraq. He led a campaign of car bombings and kidnappings and suicide attacks that has taken the lives of many American forces, international aid workers, and thousands of innocent Iraqis. Zarqawi had a long history of murder and bloodshed. Before September the 11th, 2001, he ran a camp in Afghanistan that trained terrorists, until coalition forces destroyed that camp. He fled to Iraq, where he received medical care and set up operations with terrorist associates.

After the fall of Saddam, Zarqawi went underground and declared his allegiance to Usama bin Laden, who called him the "Prince of Al Qaida in Iraq" and instructed terrorists around the world to "listen to him and obey him." Zarqawi personally beheaded American hostages and other civilians in Iraq. He masterminded the destruction of the United Nations headquarters in Baghdad, and he was responsible for the assassination of an American diplomat in Jordan and the bombing of hotels in

Amman. His goals in Iraq were clear: He wanted to stop the rise of democracy, drive coalition forces out, incite a civil war, and turn that country into a safe haven from which Al Qaida could launch new attacks on America and other free nations. Instead, Zarqawi died in the free and democratic Iraq that he fought so hard to prevent, and the world is better off because this violent man will never kill again.

Iraqis can be justly proud of their new Government and its early steps to improve their security. And Americans can be enormously proud of the men and women of our Armed Forces and the intelligence officers who support them. In the past 3 years, our troops have overthrown a cruel dictator, fought the terrorists and insurgents house to house, and trained Iraqi forces to defend their new democracy. All the while, they stayed on the trail of this brutal terrorist, persevering through years of near misses and false leads and never giving up hope. This week, they got their man. And all Americans are grateful for their remarkable achievement.

Zarqawi is dead, but the difficult and necessary mission in Iraq continues. In the weeks ahead, violence in Iraq may escalate. The terrorists and insurgents will seek to prove that they can carry on without

Zarqawi. And coalition and Iraqi forces are seizing this moment to strike the enemies of freedom in Iraq at this time of uncertainty for their cause. The work ahead will require more sacrifice and the continued patience of the American people.

I'm encouraged by Prime Minister Maliki's determination to defeat our common enemies and bring security and rule of law to all Iraqis. This week, he took another major step toward this objective when he completed the formation of his Cabinet, naming a new Minister of Defense, a new Minister of the Interior, and a new Minister of State for National Security. These new leaders will help the Government address its top priorities: reconciliation, reconstruction, and putting an end to the kidnappings, beheadings, and suicide bombings.

As they pursue these goals, they will have America's full support. On Monday, I will convene my national security team and other key members of my Cabinet at Camp David to discuss the way ahead in Iraq. On Tuesday, Iraq's new Ambassador to the United States will join us, and we will have a teleconference discussion with Prime Minister Maliki and members of his Cabinet. Together we will determine how to best deploy America's resources in Iraq and achieve our shared goal of an Iraq that

can govern itself, sustain itself, and defend itself.

There's still difficult work ahead in Iraq. Yet this week, the ideology of terror has suffered a severe blow. Al Qaida has lost its leader in Iraq; the Iraqi people have completed a democratic government that is determined to defend them; and freedom has achieved a great victory in the heart of the Middle East.

Thank you for listening.

NOTE: The address was recorded at 1:45 p.m. on June 8 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on June 10. The transcript was made available by the Office of the Press Secretary on June 9 but was embargoed for release until the broadcast. In his address, the President referred to senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7; Usama bin Laden, leader of the Al Qaida terrorist organization; former President Saddam Hussein, Prime Minister Nuri al-Maliki, Minister of Defense Abd al-Qadir al-Mufriji, Minister of the Interior Jawad al-Bulani, and Minister of State for National Security Shirwan al-Waili of Iraq; and Iraq's Ambassador to the U.S. Samir Shakir al-Sumaydi. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following a Meeting With the Interagency Team on Iraq at Camp David, Maryland

June 12, 2006

I want to thank Generals Abizaid and Casey, as well as Ambassador Khalilzad for the last—for the briefing for the last 3 hours. I thought your assessment of the situation in Iraq was very realistic. I think your recommendations to us on how to win in Iraq, to have an Iraq that can govern itself, sustain itself, and defend itself are—your recommendations are valid.

I look forward to continuing to visit with you later on this afternoon about how we can help this new Government succeed. Zal, you've been—I just want to thank you all very much for remaining in theater and working as hard as you are. You're making a significant difference.

And again, please give my best congratulations to the troops on the ground for

bringing Zarqawi to justice. I fully recognize that's not going to end the war. On the other hand, it was a major blow to Al Qaida and the killers and terrorists that are trying to spread violence and suffering and stop the emergence of a new democracy.

Zal, we left off where you were talking about the way forward in Iraq and your perception of this new Government.

NOTE: The President spoke at 12:33 p.m. In his remarks, he referred to Gen. John P. Abizaid, USA, commander, U.S. Central Command; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; U.S. Ambassador to Iraq Zalmay Khalilzad; and senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7. A portion of these remarks could not be verified because the tape was incomplete.

## Remarks Following Meetings on Iraq and an Exchange With Reporters at Camp David June 12, 2006

*The President.* We just had a meaningful day. We have spent a lot of time talking to our team in Baghdad about the way forward in Iraq. We've spent time talking about the security situation in Iraq and what we intend to do to help the Iraqi Government bring security to neighborhoods in Baghdad and Basra. We talked about the economic situation in Iraq. We talked about the energy situation in Iraq. We talked about a variety of matters with Ambassador Khalilzad and General Casey and General Abizaid.

As you can see, I not only have my national security team here, I've got members of my Cabinet as well. We all agree that we have got to continue to help this new Government move forward. Success in Iraq will depend upon the capacity of the new Government to provide for its people. We recognize that. We're encouraged by the formation of a unity government, and we recognize our responsibilities to help that new Government.

And tomorrow we'll be meeting with the new Government via SVTS, and that will be a very interesting experience for all of us, to be able to talk to our respective counterparts.

The message to the Iraqi Government is, is that we stand with you, that what you're doing is important, that democracy in Iraq is not only important to the 12 million people that went to the polls and their families, but democracy in Iraq is important in the war on terror. It's important that we succeed in Iraq in order to make America more secure and the world a better place.

So I want to thank my Cabinet Secretaries for being with me today, and other members of my team, to really have this very vital and important discussion.

I'll answer a couple of questions.

### *U.S. Troop Levels in Iraq*

*Q.* You said that you were going to listen to your U.S. commanders on the ground about the troops. And, you know, General Casey has said now that he thinks that gradual U.S. troop reductions could be made in the coming months. So do you agree with this?

*The President.* Well, as I also said the last time you asked me this question—which was a couple of days ago—that we were going to make sure that we fully understand the Iraqi capability to be able to take the fight to the enemy and secure

its country. And the Iraqi Defense Minister is just in office. And General Casey, of course, will be making those assessments, as he told us today via the teleconference—that he will make the proper assessments and come back to us and make recommendations to us.

Whatever we do will be based upon the conditions on the ground. And whatever we do will be toward a strategy of victory. And so this is a process of getting to know the—understand the Iraqi capabilities, particularly the command and control structure, and what our need—we need to do to help them achieve victory.

*Abu Musab Al Zarqawi/War on Terror*

Q. Mr. President, what do you think of the successor to Zarqawi that was named by Al Qaida? And how do you stop an insurgency that is still able to recruit people and continue to threaten attacks?

*The President.* I think the successor to Zarqawi is going to be on our list to bring to justice.

What was the second part of your question?

Q. How do you stop an insurgency that continues to be able to recruit people and continues to threaten attacks and carry them out?

*The President.* The best way to win this war against an insurgency is to stand up a unity government which is capable of defending itself but also providing tangible benefits to the people. The Iraqis have got some wonderful assets. They've got energy, which they can use to the benefit of their people. They're entrepreneurial. They've got a stable currency. They've got a small-business sector that's growing. And, ultimately, the Iraqi people are going to have to make up their mind: Do they want to live in terror, or do they want to live in peace? And the United States and our coalition will help them realize their ambitions if they choose to live in peace and hope, which we believe they will.

Remember, it wasn't all that long ago that 12 million people went to the polls and said, "We want to live in a free society." No question, the fighting is tough. No question, the enemy is violent and mean. But the enemy doesn't stand for anything. They have no message of hope. They have no positive philosophy. All they can do is kill and hope that the Government splits up or that the American people lose their will. And I keep reminding the American people that the stakes are worth it. It is worth it to help Iraq succeed. It is worth it to have a democracy in the Middle East. It is worth it to show other reformers and people who want to live in a free society what is possible.

Q. Mr. President

*The President.* Yes.

*International Support for Iraq*

Q. Are you satisfied with what Iraq's neighbors and the international community are doing to help this new Government, or would you like to see them do more, and what should it be?

*The President.* Iraq's neighbors ought to do more to help them. And we're constantly working with our friends in the neighborhood to encourage them to support this new democracy. And I recognize that there's some concerns about a Shi'a Prime Minister and a—from different countries where there's Sunni representation, Sunni leadership. But our message is, is that Iraq will show that it's possible for people of all faiths to live together. After all, they've got the most modern Constitution in the history of the Middle East.

We expect our friends who have made commitments, \$13 billion, to honor those commitments. Many of those countries are outside of the Middle East. And so we'll continue—we discussed that today, as to how to continue to rally not only the neighborhood, Iraq's neighbors, to the cause of the new democracy, but how to help others who have made a pledge to honor their pledge.

Yes.

*Energy/Foreign Sources of Oil*

*Q.* Mr. President, did you talk about oil production and maybe getting it back to prewar levels, or anything?

*The President.* We did. We spent a lot of time in talking about energy and oil. The oil belongs to the Iraqi people. It's their asset. It is one of the—it's—the capacity to generate wealth from the ground distinguishes Iraq from Afghanistan, for example. It's something that I view as a very positive part of Iraqi future. And we talked about how to advise the Government to best use that money for the benefit of the people.

Secondly, obviously, we spent time figuring out how to help strategize with the new ministries as to how to get oil production up. And recently, they've had oil production as high as a little over 2 million barrels a day, which is extremely positive. The oil sector is very much like the rest of the infrastructure of Iraq: Saddam Hussein let it deteriorate. There wasn't much reinvestment or not much modernization. After all, he was using money for his own personal gain, and he wasn't spending the people's money on enhancing the infrastructure. And the oil infrastructure collapsed and deteriorated. And as a result, there's a lot of work that needs to

be done on, for example, work-overs, that is, to help old wells become revitalized, see, just a standard maintenance procedure. So there's a maintenance program on to help the Iraqi people get their production up.

There's some unbelievably interesting exploration opportunities. And the new Government is going to have to figure out how best to lease the people's lands in a fair way. My own view is, is that the Government ought to use the oil as a way to unite the country and ought to think about having a tangible fund for the people, so the people have faith in central government.

Listen, thank you all for coming today. And tomorrow is going to be a fascinating day, and I'm looking forward to having discussions with our counterparts via SVTS. Thank you.

NOTE: The President spoke at 3:40 p.m. In his remarks, he referred to U.S. Ambassador to Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Gen. John P. Abizaid, USA, commander, U.S. Central Command; Minister of Defense Abd al-Qadir al-Mufriji, Prime Minister Nuri al-Maliki, and former President Saddam Hussein of Iraq; and senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7.

Remarks Following Discussions With Prime Minister Nuri al-Maliki of Iraq in Baghdad, Iraq

*June 13, 2006*

Mr. Prime Minister, thank you for this opportunity to visit with your Cabinet. I have expressed our country's desire to work with you, but I appreciate you recognizing the fact that the future of this country is in your hands. The decisions you and your Cabinet make will be determinate as to whether or not a country succeeds that can

govern itself, sustain itself, and defend itself. I'm impressed by the Cabinet that you've assembled. You've assembled people from all parts of your country, representing the different religions and different histories and traditions.

And yet the Cabinet here represents the entire Iraqi people, and I appreciate your

commitment to representing the people of Iraq. I'm impressed by the strength of your character and your desire to succeed. And I'm impressed by your strategy. We've discussed—I discussed earlier with the Prime Minister and here with his Cabinet and with members of my Cabinet the strategy necessary to have a country that is capable of answering to the needs of the people.

We discussed the security strategy. We discussed an economic strategy, a reconstruction strategy. And all of it makes sense to me. And so I've come to not only look you in the eye, I've also come to tell you that when America gives its word, it will keep its word; that it's in our interests that Iraq succeed. It's not only in the interests of the Iraqi people, it's in the interests of the American people and for people who love freedom.

Iraq is a part of the war on terror. Iraq is a central front on that war, and when Iraq succeeds in having a government of and by and for the people of Iraq, you will have dealt a serious blow to those who have a vision of darkness, who don't believe in liberty, who are willing to kill the innocent in order to achieve a political objective.

And so, Mr. Prime Minister, I want to thank you for giving me and my Cabinet a chance to hear from you personally and a chance to meet the members of this team you've assembled. It's an impressive group of men and women, and if given the right help, I'm convinced you will succeed, and so will the world.

NOTE: The President spoke at approximately 6:36 p.m. at the U.S. Embassy.

## Remarks to United States Military Personnel in Baghdad June 13, 2006

Thank you all. Thank you for the warm welcome. Thought I'd stop in to say hello. [*Laughter*] I bring greetings from a grateful nation. I thank you for your sacrifice; I thank you for your service; I thank you for making history.

You know, one of the things I try to do is put good people in place who accomplish hard jobs. And I can't think of two better leaders than Zal Khalilzad and General Casey to lead this important effort. I thank you all very much for your service to our country. Your sacrifice is noble, and your sacrifice is important.

I understand long deployments are tough; they're tough on you, and they're tough on your families. And so the first thing I want to tell you is the American people are incredibly grateful for what you do, and I bring their greetings and their thanks for the sacrifices you and your family make.

These are historic times. The mission that you're accomplishing here in Iraq will go down in the history books as an incredibly important moment in the history of freedom and peace, an incredibly important moment of doing our duty to secure our homeland.

You know, right after September the 11th, I knew that some would forget the dangers we face. Some would hope that the world would be what it's not—a peaceful place in which people wouldn't want to do harm to those of us who love freedom. I vowed that day, after September the 11th, to do everything I could to protect the American people. And I was able to make that claim because I knew there were people such as yourself who were willing to be on the frontline in the war on terror.

Baghdad and Iraq is a front in the war on terror. It is a part of our mission to

help make sure that the world is a better place. I truly believe the work that you're doing here is laying the foundation of peace for generations to come, and I thank you from the bottom of my heart.

The progress here in Iraq has been remarkable when you really think about it. The people of this country suffered under the hands of a brutal tyrant. And thanks to the United States forces and coalition forces, the people are liberated from the clutches of Saddam Hussein. America is safer, the world is better off, and the Iraqi people have a chance to realize the great blessings of liberty because Saddam Hussein is no longer in power.

Thanks to your hard work, the Iraqi people have been given a chance to go to the polls—not once but three different times—to elect a government that is dedicated to the will of the people. Today I have come to not only thank you but to look Prime Minister Maliki in the eyes, to determine whether or not he is as dedicated to a free Iraq as you are, and I believe he is.

I met with the Cabinet officials from all walks of life here in Iraq and came away with the distinct impression that they are unified in serving the people of Iraq. They want to succeed. The faith and future of Iraq is in their hands, and our job is to help them succeed—and we will.

I have come today to personally show our Nation's commitment to a free Iraq. My message to the Iraqi people is this: Seize the moment; seize this opportunity to develop a government of and by and for the people. And I also have a message to the Iraqi people, that when America gives a commitment, America will keep its commitment.

Our work is not done with the formation of a unity government. This Government is just getting started. And the enemies of a free Iraq will do everything they can to stop the progress. That should tell us something about the enemies of a free Iraq. Who wouldn't want the people's will to be

expressed? Who wouldn't want a government to be able to meet the needs of the people? Those who kill the innocent lives or those who have no concept of liberty have no sense of justice, have no respect for human rights and human dignity.

But I believe the Iraqi Government that's formed does respect human rights and human dignity. It will respond to the will of the people. There are going to be tough days ahead and more sacrifice for Americans as well as Iraqis. But I come here—come away from here believing that the will is strong and the desire to meet the needs of the people is real and tangible.

You know, one of the things that we've got to realize—"we," the world, have got to realize, is that Iraqi women want their children to grow up in a peaceful world. They want their sons and daughters to be well educated. They want to live in peace and harmony. They want to be able to realize their hopes and aspirations. It's a common desire, and is one that you all are helping the Iraqis realize. It's important work; it's vital work; and it's historic work.

Our military will stay on the offense. We will continue to hunt down people like Mr. Zarqawi and bring them to justice. We will continue to train the Iraqis so they can help the unity Government secure the peace. I've told the American people that as the Iraqis stand up, we will stand down, and I appreciate all the military folks here who are working hard to help the Iraqi forces become capable and able to do the job the Iraqi people expect them to do. Those of you who are not in the military, the civilians, have got a really important job to do as well, and I want to thank you for the job you're doing.

It is clear that Saddam Hussein destroyed many of the institutions necessary for this society to succeed. It is clear that he was a selfish, brutal leader who was willing to sacrifice infrastructure and civil society in order to meet his narrow objectives. And it is clear to me that our job

is to help the Prime Minister and his Government implement his strategy and his plan to restore infrastructure and education and health and agricultural society so that people have the confidence in their new Government. Yours is hard work, but it's necessary work, and the Government of the United States stands strongly beside you.

The stakes are high, and what happens here in Iraq reaches far beyond the borders of Iraq. The war on terror really will be addressed by strong actions by our intelligence and military services to bring to justice those who would do us harm. I've told the American people we will defeat the enemy overseas so we do not have to face them here at home.

Ultimately, the victory in the war on terror, the victory in a struggle against those who have no ideology—well, they've got an ideology, but it's an ideology that is dark and dismal. It's one that doesn't respect human dignity. It's an ideology that doesn't believe in the freedom to worship. It's an ideology that doesn't respect the role and rights of women in society. It's an ideology that has no hope. The way to defeat that ideology is with an ideology of light. I believe in the universality of freedom. I believe deep in everybody's soul is the desire to be free.

We don't expect the Iraqi Government to look like the American Government. We expect an Iraqi government to honor its traditions and its histories and its religious faiths. But we do expect the Iraqi Government to honor the right of every man, woman, and child to live in a free society. And when Iraq succeeds—and it will—the rest of the world, particularly in the Middle East, will see such a hopeful example of what's possible.

I told you earlier, we were laying the foundation of peace for generations to come, and we are, because we go with confidence, knowing that liberty is the desire

of every soul. When Iraq succeeds, reformers and people who desire to live in a free society will see such a hopeful example, and they'll begin to demand the same rights and the same conditions and the same hopeful society.

And that's why I tell you, what you're doing is historic in nature. People will look back at this period and wonder whether or not America was true to its beginnings; whether we strongly believed in the universality of freedom and whether we were willing to act on it. Certainly we acted in our own self-interest right after September the 11th, and now we act not only in our own self-interests but in the interests of men, women, and children in the broader Middle East, no matter what their religion, no matter where they were born, no matter how they speak.

This is a moment—this is a time where the world can turn one way or the other, where the world can be a better place or a more dangerous place. And the United States of America and citizens such as yourself are dedicated to making sure that the world we leave behind is a better place for all.

It is such an honor to be here. It is such an honor to be with you. May God bless you all; may God bless your work; may God bless your families; and may God continue to bless the United States of America.

NOTE: The President spoke at approximately 8:32 p.m. at the U.S. Embassy. In his remarks, he referred to U.S. Ambassador to Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; former President Saddam Hussein, and Prime Minister Nuri al-Maliki of Iraq; and senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7. A tape was not available for verification of the content of these remarks.

## The President's News Conference *June 14, 2006*

*The President.* Good morning. Thank you. I've just returned from Baghdad, and I was inspired to be able to visit the capital of a free and democratic Iraq.

It was a pleasure to meet face to face with the Prime Minister. I talked to him on the phone a couple of times, but I thought it was important to sit down with him and talk to him in person. I saw firsthand the strength of his character and his deep determination to succeed, to build a country that can sustain itself, govern itself, and defend itself.

I also had the pleasure of meeting with people who work for the U.S. Government, our Embassy staff, the intelligence community, and I had a chance to thank them. Theirs is a tough job, and they're far away from home, and obviously, they miss their families. And it was an honor to say to them, I appreciate their hard work, and so do the American people.

And I met with our troops. I had a chance to congratulate those that were responsible for bringing Zarqawi to justice. You know, when you're in a theater like that, it's important to hear words of congratulations sometimes, to hear that their efforts are appreciated—and doing hard work. And I got to do that.

General Casey briefed me on the operations that followed the death of Zarqawi. He told me that Iraqi and coalition forces are still on the offense, that they launched a series of raids on terrorist targets across Iraq. We've got new intelligence from those raids which will enable us to continue to keep the pressure on the foreigners and local Iraqis that are killing innocent lives to stop the advance of a country that can sustain itself and govern itself and defend itself.

Obviously, the raids aren't going to end terrorism. I understand that, and the American people understand that, and the Iraqi

people understand that. But the terrorists are vulnerable, and we will strike their network and disrupt their operations and continue to bring their leaders to justice.

Prime Minister Maliki and I held a joint meeting of our two Cabinets—members of my Cabinet participating by video, some of whom were slightly surprised to see me from afar. I told the Prime Minister how impressed I was to meet the team he assembled. These are good people from different walks of life. I appreciated very much the agenda he's laid out. In other words, he's got a plan to succeed. And I appreciated their determination—it's not just his determination but their Cabinet's determination to succeed. In other words, part of the success in Iraq depends upon the Iraqis and their will and their desire. The Iraqi people have expressed their desires, and now it's up to the Government to follow through.

The Prime Minister briefed us on immediate steps he's taken in three key areas: to improve security; to build up the Iraqi economy so they can see—the Iraqi people can see real progress, real economic progress; and he's reaching out to the international community to help secure support for this new Government. We discussed ways that my administration can help the Prime Minister accomplish these objectives. The policy of the United States Government is to stand with this new Government and help them succeed, and we will do what it takes to help them succeed.

The Prime Minister is taking immediate action to implement a plan to improve security, and his top priority is around Baghdad. Operation Together Forward started this morning. This operation is a joint effort to restore security and rule of law to high-risk areas in the capital city. It will be carried out by some 26,000 Iraqi soldiers, some 23,000 Iraqi police, backed up by

over 7,200 coalition forces. Iraqi troops will increase the number of checkpoints, enforce a curfew, and implement a strict weapons ban across the Iraqi capital. Baghdad is a city of more than 6½ million residents, and we've got to recognize that it's going to take time for these operations to take hold.

Iraqi and coalition forces are also working to restore security in Ramadi, the capital of Anbar Province. The Prime Minister's plan to bring militias and other armed groups under Government control is moving forward, and we talked about that plan. He understands how important it is to rein in these militias. Many militia members will be demobilized and integrated into the Iraqi security forces, where they'll be dispersed among different units and, obviously, monitored closely by the Government. I've directed General Casey and our Ambassador to work with the Prime Minister on this really important effort, so he can make clear: Illegal militias have no future in a free Iraq.

Prime Minister Maliki is working to build confidence in the Iraqi security forces, and he has a plan to do that. To assist him, we'll continue embedding coalition transition teams in Iraqi Army and police units. We've deployed advisory teams to assist Iraq's new ministries of—Ministers of Defense and Interior, both of whom I met. We want to help them build the command and control capacity of their ministries. In other words, you can't have an effective army unless you've got command and control coming out of Government.

We want to establish an internal affairs bureau to root out corruption. No question, this Government has got to deal with corruption at all levels in order to earn the confidence of the people. And, of course, we will encourage them and help them investigate and punish human rights violations in order to earn the confidence of all Iraqis.

Part of the Prime Minister's plan is to improve the Iraqi judicial system. And to

assist him, I've directed the Attorney General and the Secretaries of State and Defense to work together on a new rule-of-law initiative. Under this initiative, we'll help train Iraqi judges, increase security so they can do their jobs, improve Iraqi prison capacity, and help the Iraqi Government provide equal justice for all its citizens.

Prime Minister Maliki is promoting reconciliation among the Iraqi people. And during my discussions with his Cabinet and others, the concept of reconciliation kept coming up. People know they've got to reconcile the past in order to have a bright future. He told us he's going to soon appoint a reconciliation committee that will focus on resolving specific concerns of different Iraqi communities. We will support his efforts to bring the Iraqis together by encouraging leaders from countries like South Africa to share their experiences with this new Government to help them reconcile the past.

Secondly, the Prime Minister has a plan to revitalize the Iraqi economy. He understands that the people have got to feel benefits from the new Government. I mean, it's a simple concept, but it's a profound one. I've directed our Secretary of Treasury and—or the Treasury Department to send teams of experts to Iraq to help the Government create a public finance system that is accountable and transparent. These advisers will help Iraqis develop an economic framework that promotes growth and job creation and opportunity. I've directed the Secretaries of Commerce and Agriculture to travel to Iraq as soon as possible to meet with their counterparts.

To revitalize the Iraqi economy, the Prime Minister is working to increase oil and electricity production. We spent a lot of time talking about energy in Iraq. I reminded the Government that that oil belongs to the Iraqi people and the Government has the responsibility to be good stewards of that valuable asset and valuable resource.

We have—we're working with the Iraqi Government on measures to protect key infrastructure from insurgent attacks. There's rapid-repair teams that are being established that will quickly restore oil and electricity production if and when attacks do occur.

I've directed the Secretary of Energy to travel to Iraq to meet with his counterpart and identify ways we can provide additional support. It's up to the Iraqis to pass a hydrocarbon law, which they're now debating. It's up for the Iraqi Government to decide what to do with the people's asset. Our advice is to be careful and to develop it with the people's interest in mind.

Finally, the Prime Minister has taken immediate action to engage the international community, and we're going to help him. Earlier, the international community pledged about \$13 billion to help this new Government, and they've only paid about 3 billion. And so we're going to help encourage those who've made a pledge to pay up to help the new Government succeed. Plus, he's working to develop what he's calling an international compact. Under this compact, Iraq will take a series of steps in the political, economic, and security areas. And then the international community will provide more robust political and economic support.

I told the Prime Minister, I'll designate Deputy Treasury Secretary Bob Kimmitt to lead our efforts on behalf of our country and the people of this country. He'll be supported by State Department Counselor Phil Zelikow and other senior officials, and they will soon travel to the United Nations and then to Baghdad for consultations. And then they're going to travel across Europe and Asia and the Middle East to discuss the compact and secure support from Governments for this new Government.

I was impressed with the Prime Minister, and I'm impressed by his team. I told him that America is a nation that meets its commitments and keeps its word. And that's what we're going to do in Iraq. It's in our

interest that Iraq succeed. More importantly, it's in the interest of the Iraqi people. The challenges that remain are serious, and they will require more sacrifice and patience. And our efforts are well worth it.

By helping this new Government succeed, we'll be closer to completing our mission, and the mission is to develop a country that can govern itself, sustain itself, and defend itself, and a country that is an ally in the war on terror. We'll seize this moment of opportunity to help the Prime Minister. We'll defeat our common enemies. We'll help build a lasting democracy in the heart of the Middle East, and that will make Americans and Iraqis and the world more secure.

I'll now take your questions. Nedra [Nedra Pickler, Associated Press].

#### *Support for the Iraqi Government*

*Q.* Thank you, Mr. President. You said yesterday that a standard of no violence in Iraq is an impossible standard to meet, but do you believe that there needs to be a reduction in violence for U.S. troops to begin to draw down? And if so, how much?

*The President.* Yes, I said that if people say, "Well, there's got to be no violence in order for this to be a successful experience," then it's not going to happen. All that does is give the power of—a handful of murderers to determine success. Obviously, we'd like violence to go down, and that's what the operation in Baghdad is intending to do, starting in the capital, is to reduce violence. And the reason why it's important for violence to be reduced, obviously, is, one, to save lives, but, two, give confidence to the Iraqi people that their Government will be able to sustain itself and govern itself and meet the needs of the people.

This is a tough struggle, and the reason why is because the rules of warfare as we used to know them are out the window. I mean, there's no rule of warfare. It's just, if you can kill innocent life in order to

shake somebody's will or create consternation in society, just go ahead and do it. And so it's a tough task, no question about it.

But I'm confident that this Government will succeed in meeting that task. And the reason why I said that we shouldn't use the level of—have a zero-violence expectation is because there are other measures to determine success, starting with political measures. I mean, this is a government which is now a unity government, formed under a Constitution that the people voted for. That's success. The question is, can this Government sustain itself, and that will be determined if—whether or not they're be able to get electricity and use their oil resources wisely. Can it defend itself? One way to measure whether it can defend itself is through the strength of their army and their police. And so that's what I said.

And the second part of your question?

Q. Do you have a specific target for how much you want that violence to be reduced?

*The President.* Enough for the Government to succeed. In other words, the Iraqi people have got to have confidence in this unity Government, and reduction in violence will enable the people to have confidence.

And you said something about troop levels. Our policy is stand up/stand down; as the Iraqis stand up, we'll stand down. But if we stand down too soon, it won't enable us to achieve our objectives. And we will support this Iraqi Government—that's what I went to tell them. We'll do what it takes to support them. And part of that support is the presence of coalition forces.

*Guantanamo Bay Detainees/Abu Ghraib Prison*

Q. Thank you, Mr. President. You expressed serious concern when you learned about the Guantanamo suicides, and you and your aides immediately called allies. I'm wondering, how concerned are you about the U.S. image abroad, based on this

incident and the ongoing investigation in Haditha and Abu Ghraib and other incidents? And also, why shouldn't Guantanamo be closed now?

*The President.* I'd like to close Guantanamo, but I also recognize that we're holding some people that are darn dangerous and that we better have a plan to deal with them in our courts. And the best way to handle—in my judgment—handle these types of people is through our military courts. And that's why we're waiting on the Supreme Court to make a decision.

Part of closing Guantanamo is to send some folks back home, like we've been doing. And the State Department is in the process of encouraging countries to take the folks back. Of course, sometimes we get criticized for sending some people out of Guantanamo back to their home country because of the nature of the home country. It's a little bit of a catch-22. But we're working through this.

No question, Guantanamo sends a signal to some of our friends, provides an excuse, for example, to say, the United States is not upholding the values that they're trying to encourage other countries to adhere to. And my answer to them is, is that we are a nation of laws and rule of law. These people have been picked up off the battlefield, and they're very dangerous. And so we have that balance between customary justice, the typical system, and one that will be done in the military courts. And that's what we're waiting for.

Eventually, these people will have trials, and they will have counsel, and they will be represented in a court of law. I say "these people," those who are not sent back to their mother countries. You know, we've sent a lot of people home already. I don't think the American people know that, nor do the citizens of some of the countries that are concerned about Guantanamo.

You mentioned Abu Ghraib. No question, it's set a terrible example. I was asked at a press conference in the East Room

with Tony Blair, mistakes. Abu Ghraib was a terrible mistake. I was asked that question, by the way, about Abu—very same question you asked, by a member of the Iraqi Cabinet. And I told her, I said that where there's allegations, we will investigate. And I reminded her that ours is a transparent society where people will see and follow these investigations, and people will be held to account according to our laws.

But I also want the people to understand, here and around the world, that 99.9 percent of our troops are honorable, decent people who are serving our country under difficult conditions, and I'm proud of them. I'm proud of the United States military. And that's a message our military and their families must consistently hear, that they're doing fine work. I understand the politics and all that. But I'm going to continue to remind them that, set politics aside, this Nation owes you a debt of gratitude.

So we'll deal with these incidents, and we'll deal with them in an upfront way. But I'm not going to let these incidents stain the reputation of our military. They're good people; they really are.

Yes, sir. Roger [Roger Runnigen, Bloomberg News].

### *National Economy*

Q. Thank you, sir.

*The President.* Roger, Roger.

Q. Thank you, sir. Mr. President, you've said that you trust the markets to guide you, but stock and bond markets are telling us that inflation is a growing concern. Is there a threat that inflation is going to derail the economic expansion?

*The President.* There are a lot of indicators about the strength of our economy, starting with job creation, productivity increases, small—the entrepreneurial spirit is strong. There's a lot of positive things. And obviously, the Fed is watching the signals for inflation very carefully. They'll make decisions independent of the White House.

On fiscal policy, though, I would strongly urge the Congress to recognize why we have grown the way we have grown, why we're—have got strong economic growth in the first quarter of this year, why we've added over 5 million new jobs in a—in 2¾ years, and that's because the tax cuts are working, and they need to make the tax cuts permanent. Progrowth economic policies work. And that's why I've been calling for permanence in the Tax Code.

And so there will be monetary policy; we'll pay attention very carefully to signs, inflationary signs. That's Ben Bernanke's job. Our job is to work with Congress to have wise fiscal policy. And wise fiscal policy means not only keeping revenues low, but it also means being wise about how we spend the people's money. I called Chairman Lewis this morning to congratulate him on getting a good supplemental out of the House of Representatives. It's a supplemental that meets our numbers and meets the requirements for a good bill. And evidently, it's going to be voted on in the Senate here pretty quick, and I look forward to signing that piece of legislation, should it make it to my desk.

Let's see here. Jake Tapper [ABC News]. Yes, filling in, huh?

### *Progress in Iraq/Natural Resources*

Q. How are you doing, sir?

*The President.* I'm doing all right. Thank you. A little jetlagged, as I'm sure you can imagine—nearly 60.

Q. I can, sir. Thank you.

*The President.* Good. I'm not sure you possibly can empathize—[laughter]—but nevertheless—

Q. Jetlag, I understand jetlag.

*The President.* Okay, good.

Q. What are your feelings about discussions, in the new Iraqi Government, of amnesty for insurgents?

And regarding the oil resources in Iraq that you discussed, do you support guaranteeing the Sunnis a percentage of the oil

profits, either through a new law or through a constitutional provision?

*The President.* Yes, that's not a bad question for a substitute guy. [Laughter] I believe that the Iraqi Government—first of all, the decision on what to do with their resources is their decision, not mine. And so this is advisory. These are people that are elected and under a Constitution. My advice to them is to use their energy assets as a way to unite the country. And by that I mean that people will have—they may not have oil resources in their Provinces, but they would have a stake in how the resources are developed elsewhere in the country.

One option I laid out the other day for them to consider—I must confess, this isn't probably the best way to convince a government to do something, is to put it out through the press—but I did suggest a royalty trust on behalf of the Iraqi people. Other countries have tried that; the state of Alaska has tried that. To me, it's an interesting idea for them to consider, to basically say that no matter where you live in the country, you have a stake in the future of your country because of your ownership in energy assets.

Other part of the question?

Q. Possible amnesty for insurgents.

*The President.* Yes—I talked to the Prime Minister about—his question is, possible amnesty. The Prime Minister, I think, would say “reconciliation.” This is an issue that is on the minds of a lot of the folks there in Iraq. In other words, they're trying to figure out how to reconcile an ugly past with a hopeful future. And part of that is reconciliation. I'm not exactly sure how you would—what you mean by—if somebody has committed a crime, I don't know whether or not they'll be that lenient, frankly.

But I do recognize that—I mean, they recognize that, for example, Ba'ath Party membership in order to secure a job or to be able to get an advanced degree should be a part—shouldn't be held against

a person. And I think they're willing to balance the difference between terror and—“expediency” isn't the right word, but terror and membership of a party to advance one's life. And I was impressed. I was impressed by their—the sophisticated nature of that discussion and their recognition that it's really important to do the best they can to reconcile the past.

One of the things I was looking for was—first of all, I'm convinced this Government will succeed. And one of the reasons I am is because there is a sense of hopefulness. If you're a person stuck in the past, you tend to be bitter and look for ways to seek revenge. I didn't sense that. I did have a strong sense that they're really happy to get rid of Saddam Hussein, to a person. They believe he wrecked their country in more ways than one. It was clear he wrecked their infrastructure. And it is clear that he wrecked a lot of lives. But I didn't have that great sense of people being so bound up in bitterness that they weren't willing to think positively about the future. And I think that's important. I really do.

Gregory [David Gregory, NBC News], fine-looking scarf—not scarf, what do you call that thing?

*Progress in Iraq*

Q. Thank you very much.

*The President.* It's strong.

Q. Thank you. [Laughter] Mr. President, you've made a public point recently of soliciting outside advice about the way forward in Iraq and retooling your strategy. I wonder, what idea from a critic or somebody outside your administration that you've concluded should be part of the strategy going forward?

*The President.* Well, I think—I've gotten a lot of advice from people. You know, one of the interesting debates from the outside community is troop levels. I've got people who say, “You need to increase the number of forces—now.” I've gotten people that said, “Well, the role of the United

States ought to be more indirect than it has been," in other words, in a supporting role. To those folks, I say, "Look, I'm going to rely upon General Casey." But I did share with him the philosophies that were reflected in a conversation we had over lunch at Camp David.

I've had people come in and say, "You better make sure that the Iraqi forces are well-tooled to do their job." In other words, there's people who have gone over there and taken a hard look, have felt like that the Iraqi forces were not equipped well enough to be able to stand up as we stand down. I asked that question of General Casey, and the area where he agrees with the critics is that they don't quite have the capability to move themselves around the country. In other words, they need more mobility. And he recognizes that and is working toward an Iraqi Army that has more mobility.

Obviously, there has been criticism about our reconstruction plan, that we started with big projects that were sometimes blown up or sometimes didn't get off the ground like we'd hoped. And that's why we morphed a lot of our aid into a PRT approach, where local commanders had the capacity to get money out more quickly.

But I appreciate people's advice, and I appreciate their candor. I am going to meet this afternoon with a group of folks put together by the Peace Institute. They're going to take a look at Iraq. And the reason I bring that up to you is that it's important for people to share their advice with this administration. It's an important business. And it's not easy. It's a complex task to help a society go from tyranny to freedom.

But the American people have got to understand, I believe we're going to succeed. That's why we're there. And my message to the Iraqis is, we're going to help you succeed. My message to the enemy is, don't count on us leaving before we succeed. My message to our troops is, we support you 100 percent; keep doing what you're doing. And my message to the critics

is, is that we listen very carefully and adjust when needed to adjust.

This policy will be driven by the people on the ground. Those are the folks who are going to ultimately make the recommendation that I'll accept. It's important to get advice; I share the advice with our commanders and with Zal. They're the folks who are right there. These are very competent, capable people who understand the Iraqi situation well. And their judgment is important, and I listen very carefully to it—along the same way.

Sheryl [Sheryl Gay Stolberg, New York Times]. Welcome. Got a couple of newcomers today, sitting next to Tapper.

#### *2006 Midterm Elections/Democratic Party*

Q. Thank you, Mr. President. I'm pleased to be here. Mr. President, polls show that the public thinks Democrats can do a better job of running the country than Republicans. Are you concerned that Republicans will lose control of Congress in November? And do you think there's anything you could have done differently to put them in a better position, coming up in the midterms?

*The President.* I remember 2004. At one point, people—you would have stood up and said, "You know, there's no way you can get reelected," if you had been listening to those polls. I can't remember; I was probably down double digits at some point. And they said, "How can you possibly stand here and tell us you're going to get reelected?" Listen, the elections are a long way off. What's going to matter is who has got the plan that will enable us to succeed in Iraq and keep the economy growing. And I look forward to the campaign. And I believe we're going to hold the House and the Senate, because our philosophy is one that is forward-looking and optimistic and has worked. We've got a record to run on.

There's an interesting debate in the Democrat Party about how quick to pull out of Iraq. Pulling out of Iraq before we

accomplish the mission will make the world a more dangerous place. It's bad policy. I know it may sound good politically; it will endanger our country to pull out of Iraq before we accomplish the mission.

See, Iraq is a part of the global war on terror. It's not the global war on terror; it's a theater in the global war on terror. And if we fail in Iraq, it's going to embolden Al Qaida types. It will weaken the resolve of moderate nations to stand up to the Islamic fascists. It will cause people to lose their nerve and not stay strong.

And so I look forward to taking the debate—that's not quite right—kind of getting warmed up as a result of your question—the timing is not right for me to get out there yet. But I think the Democrat economic policy of raising people's taxes isn't going to work either. I know they'll couch it in all kinds of language, but really what they're saying is, we're going to raise your taxes.

So, you know, Sheryl, thanks for your question. I don't necessarily buy your premise. I feel confident we will hold the House and the Senate.

Let's see here. Peter [Peter Baker, Washington Post].

#### *CIA Employee Identity Disclosure Investigation*

*Q.* Thank you, Mr. President. Mr. President, when you ran for office for the first time, you said you would hold the White House to a higher ethical standard. Even if Karl Rove did nothing illegal, I wonder whether you can say now whether you approve of his conduct in the CIA leak episode, and do you believe he owes Scott McClellan or anyone else an apology for misleading them?

*The President.* I appreciate the job that the prosecutor did. I thought he conducted himself well in this investigation. He took a very thorough, long look at allegations and rumors. And I, obviously, along with others in the White House, took a sigh of relief when he made the decision he

made. And now we're going to move forward. And I trust Karl Rove, and he's an integral part of my team.

There's an ongoing trial, Peter, and I know the temptation is—not the temptation, you'll keep asking questions during the course of the trial. We're not going to comment beyond that.

Yes. Jim Axelrod [CBS News].

#### *Progress in Iraq/War on Terror*

*Q.* Good morning, Mr. President. You seem quite energized by this moment of opportunity.

*The President.* No, I'm just fighting off fatigue.

*Q.* I know the feeling, sir. I'm wondering, though, if there are ever moments of doubt about your decisions and strategy in Iraq. Do you ever have a moment where you feel this just won't end well, that no matter how many Zarqawis are killed, the insurgents are just never going to give up?

*The President.* Well, one of the reasons I went to Iraq was to be able to sit down with an Iraqi Government to determine whether or not they have the will to succeed.

Success in Iraq depends upon the Iraqis. If the Iraqis don't have the will to succeed, they're not going to succeed. We can have all the will we want; I can have all the confidence in the ability for us to bring people to justice, but if they choose not to take the—make the hard decisions and to implement a plan, they're not going to make it. And so one of the things I went to Iraq to do was to, as best as I possibly can, expel any doubt in my mind as to whether or not we have a partner that is going to do the hard work.

One of the interesting things that—and by the way, I believe we will have a partner to do the hard work. I made it clear to the Government there that it's up to them to succeed. It's really up to them to put a plan in place and execute it. We'll help, but it's—they were elected by the people; they're living under a Constitution that the

people endorsed; and they have to follow through.

And that's why I was most interested in hearing the Prime Minister's plans on electricity and energy and security. As I mentioned to you, there's an operation now going on in Baghdad that he helped put together, that we're helping him on. He recognizes that the capital city of a country sends important signals to the rest of the country—the security of the capital city—to the country and the world. He knows that. And that's why he has worked out a robust plan, with our help.

And so doubts about whether or not this Government can—has got the will to go forward was expelled. That's why I went. In other words, sitting here in America, wondering whether or not these people have got what it takes can create uncertainty. I've eliminated that uncertainty. I was able to sit with the man and talk to him.

I was also pleased to meet with his Cabinet. You might remember, it wasn't all that long ago that there were some doubts in people's minds as to whether or not this Government had the capacity to put a unity government—as a matter of fact, there was doubts after the first election as to whether or not a portion of the population would even participate in the elections. And last December a lot of folks voted, from all different aspects of society, and the Government reflects that. And that was important for me to see firsthand as well.

The enemy has an advantage in this war, because they can get on our TV screens every day. And of course, it upsets me when I see the loss of innocent life, and it upsets me to know that our service men and women are losing their lives. I'm like most Americans, it is—death affects my way of thinking. But I also understand the stakes of this war, see. I understand how important it is to defeat the enemy. Now, I recognize some in the country don't feel that same sense of urgency I do. But Al Qaida is real; their philosophy is a real phi-

losophy; they have ambitions. Their stated goal is to drive us out of Iraq before a government can defend itself and govern itself and sustain itself, so they can have safe haven from which to launch further attacks. And my most important job is to protect the American people from harm. And I understand the stakes of this war, and I understand this battlefield in Iraq.

And I want to repeat something: Iraq is not the only part of this war. It's an essential part, but it's not the only part of the war on terror. And so the decisions I make are all aimed at protecting the American people and understanding the vast stakes involved. If the United States of America leaves before this Iraqi Government can defend itself and sustain itself and govern itself, it will be a major blow in the war on terror. Al Qaida will benefit. And make no mistake about it, they still want to do innocent people harm, whether it be in the Middle East or whether it be here in the United States of America. The stakes are high in Iraq.

And my trip over there gave me confidence that we have a partner that is capable of setting priority and developing a plan to meet those priorities, and then following through to see that those priorities are met. And my assurances to him were, you get good plans and you have the desire to follow through; we'll help you. We'll help you. We will do what it takes to help you succeed. It's in our national interest to do so.

Let's see here. Bret [Bret Baier, FOX News].

#### *Iraqi Government*

Q. Thank you, Mr. President. Could you characterize the worry you heard from Iraqi leaders about U.S. troop levels that you first mentioned on the flight home from Iraq? And here in the Rose Garden a week ago, you said that Zarqawi's death is an opportunity for Iraq's new Government to turn the tide in this struggle. After your visit, do you truly believe that the tide is turning in Iraq?

*The President.* First part of the question? I'm sorry.

Q. About the worry that you—

*The President.* Yes. No question, there are concerns about whether or not the United States will stand with this Government. And I can understand why. You know, ours is a society that encourages debate, and people are free to express themselves. And they do so; they say, "Look, this is my view of how we ought to go forward; this is what I think." And the willingness of some to say that "If we're in power, we'll withdraw on a set timetable," concerns people in Iraq, because they understand our coalition forces provide a sense of stability, so they can address old wrongs and develop their strategy and plan to move forward. They need our help, and they recognize that. And so they are concerned about that.

And I'm concerned that an enemy will hear the wrong message. And then I'm also concerned that there are people inside Iraq who have yet to make up their mind as to whether or not they want to help this Government succeed, or maybe, or just maybe America will lose its nerve and, therefore, something else, a new team may show up. And so I made it very clear to the Iraqis, and I'm going to make it clear to them again right here that we're going—we'll stay with them and help them succeed.

I know there is a lot of discussion about troop levels. Those troop levels will be decided upon by General Casey. He will make the recommendations, in consultation with an Iraqi government. But whatever decision General Casey makes, the message is going to be, "We stand with you." In other words, if you're more capable, it requires less troops, but nevertheless, we're still with you.

Other part?

Q. Is the tide turning in Iraq?

*The President.* I think—tide turning—see, as I remember—I was raised in the

desert, but tides kind of—it's easy to see a tide turn—did I say those words?

Q. [*Inaudible*]

*The President.* Yes, I probably ought to then reflect on those words and think that—I sense something different happening in Iraq. The progress will be steady toward a goal that has clearly been defined. In other words, I hope there's not an expectation from people that, all of a sudden, there's going to be zero violence—in other words, it's just not going to be the case. On the other hand, I do think we'll be able to measure progress. You can measure progress in capacity of Iraqi units. You can measure progress in megawatts of electricity delivered. You can measure progress in terms of oil sold on the market on behalf of the Iraqi people. There's ways to determine whether or not this Government's plans are succeeding.

But I know there's a tangible difference between the Government that is now in place and previous governments, and the reason why is because this is a government that's formed under elections and a Constitution. And it's a unity government, and so people have a sense of—they're pulling for their Government to succeed. And the reason why is, by far, the vast majority of Iraqis want a normal life. They want their children to be able to go out in the street and play. They want there to be a good education system. They want to be able to have their business—their little storefront business flourish without fear of bombing. That's what they want.

And so they're pulling for this Government to succeed. And it's a government that they elected. It's not a government that we appointed; it's a government that they elected. They have a vital stake in the future of this Government. And so there is a noticeable change. And whoever said it's a tide turning and all that needs—never mind. [*Laughter*]

Elaine [Elaine Quijano, Cable News Network].

*President's Visit to Iraq*

Q. Thank you, Mr. President. What kind of signal do you think it sends to the Iraqi people that your administration notified the leader of Iraq's sovereign Government only 5 minutes beforehand of your arrival? And was there a specific security concern about either Prime Minister Maliki's inner circle or others that led you to make that decision?

*The President.* No, I think—look, it's a security concern because I'm a high-value target for some. And Iraq is a dangerous place. The American people have got to know that I will take precautions when I travel somewhere. I'm not going to put our Government at risk to achieve a very important trip. And therefore, we were—a lot of people didn't know about it. Half my Cabinet didn't know about it. Does that mean I'm going to run them off? No. I just—we want to make sure we're extra secret about this deal. And the reason why is, Iraq is dangerous. It's a dangerous place. And I think if there was ample notification that I was coming, perhaps it would have given somebody a chance to plan, and we just didn't want to take that risk.

There is no question about Prime Minister Maliki's—when he walked in, I never—I didn't fear. I was happy to see him, and he was happy to see me. But you should expect the President to be—to take precaution. I take precaution when I go somewhere here in the United States. Obviously, not to that extent, but nevertheless, we're careful. And that's what the people expect, us to be careful.

I appreciate the efforts that went into this trip. There are a lot of people that worked hard to make sure this worked. And it worked well. It was a good trip. And it was an exciting trip, by the way. I was up there in the cockpit of that airplane coming into Baghdad, watching Colonel Tillman steer us in. It was an unbelievable, unbelievable feeling. And walking into that ballroom there in Saddam's old palace, to

see our—see our people on the frontlines of changing history was an exciting moment for me. It's a thrill to be able to shake their hands and look them in the eye and tell them America appreciates what they're doing. I really, really appreciated the fact that I was able to go and—no matter how secret it was.

McKinnon [John McKinnon, Wall Street Journal].

*Progress in Iraq*

Q. Thank you, sir. You just mentioned that you think the United States will be able to measure progress in terms of electricity and oil and violence. And I'm wondering if you can say how you're going to measure that in terms of time. In other words, are you going to put a 6-month timeframe on this, or a 12-month timeframe on this?

*The President.* John, I know—look, I understand the pressures to put timetables out there on everything. And my answer to you is, is that we will work with the Iraqi Government to do what's realistic. And the people on the ground will help me understand what is realistic. We will know whether or not the Government is capable of following through because we're going to help them follow through.

The answer to electricity is, sooner the better. It's hot over there, and it would be helpful if people had the capacity to cool their homes. It would be a pretty good signal that the Government is making a difference in somebody's life.

There are certain projects that are easier to achieve than others. Fixing the infrastructure of the northern Iraq oil fields is going to be more difficult to do. It's old; it's tired; it's been destroyed by an enemy. And it's going to take a while to get that done, and so we've got to be realistic with this Government. There is a—but, nevertheless, I do believe that it makes sense to develop, with them, benchmarks, so we can measure progress. And once those are

in place, and to the extent they are, we'll be glad to share them with you.

Part of my visit yesterday was a strategy session, to sit down with a partner, the Prime Minister, Maliki, to figure out how to move forward, to listen to his plans and how we can help his plans. The important thing for me to hear from him is, "Here's what I intend to do," he says; not, "Here's what we want you to do," like the oil suggestion. I really meant what I said; it was just a suggestion. It wasn't, "You must do this." And same with the electricity. And he made a point to have his Electricity Minister brief my Cabinet, because he wanted us to know that he has a plan to put in place. The guy, by the way, said, "I need your help." And we'll provide the help as best as we can.

You know, the ultimate judge about whether this Government is making a difference is going to be the Iraqi people, and these elected officials know that. That's the great thing about being elected; you get a sense if people don't, kind of, like what you're doing—or not. And democracy causes you to respond to the people's needs. Tyrants don't have to. They don't have—sometimes they may have to, but they always have got kind of an interesting way of helping suppress dissent. This elected Government is going to have to respond to the people, and that's a big change.

Remember that Saddam did a really good job of milking the society to keep himself in power. In other words, the infrastructure is destroyed, or a lot of it is destroyed and dilapidated. We heard that over and over again in Baghdad. People said, "You've got to understand how backward we are compared to where we want to be." And he divided society and pitted people against each other in order to justify his own presence. And we're having to deal with that. The Iraqis are having to deal with that.

And I was impressed by their willingness to be up front about the past. And it's going to be difficult work, no question

about it. There are still resentments and bitterness and people wondering, does the future belong to them. The Sunni—I was impressed, by the way, by the Speaker—Denny Hastert told me I'd like him; Denny met with him. And I was impressed by him. He's a fellow that had been put in prison by Saddam and, interestingly enough, put in prison by us. And he made a decision to participate in the Government. And he was an articulate person. He talked about running the parliament. It was interesting to see a person that could have been really bitter talk about the skills he's going to need to bring people together to run the parliament. And I found him to be a hopeful person.

They tell me that he wouldn't have taken my phone call a year ago—I think I might have shared this with you at one point in time—and there I was, sitting next to the guy. And I think he enjoyed it as much as I did. It was a refreshing moment. And the Deputy Speaker was there as well.

Let's see here. Ann [Ann Compton, ABC News].

#### *Iraqi Government*

Q. Thank you, Mr. President. Yesterday while you were gone, Senator Kerry, who was your challenger in the last election—

*The President.* I remember that.

Q. You remember that. [Laughter] He said he now regrets his votes on the war. And, actually, I think Senator Clinton, at the same meeting, actually heard some boos when she said that she did not support a timetable for withdrawal. Do you see, as some of your critics do, a parallel between what's going on in Iraq now and Vietnam?

*The President.* No.

Q. Why?

*The President.* Because there's a duly elected government; 12 million people voted. They said, "We want something different from tyranny; we want to live in a free society." And not only did they vote

for a Government, they voted for a Constitution. Obviously, there is sectarian violence, but this is, in many ways, religious in nature, and I don't see the parallels.

You know, look—I thought you were going to ask, do I regret what I did. Absolutely not. I made the right decision in Iraq. It's the right thing to get rid of Saddam Hussein. And now it's the right thing to stand with this Government when they build a new democracy. And I reminded the Iraqi people, their democracy doesn't have to look like us. It's their country, and the Government ought to reflect their traditions and their history. All we expect is people to be treated with respect and there to be self-governance in a way that tolerates differences of opinion.

Yes, Peter [Peter Wallsten, Los Angeles Times]. Are you going to ask that question with shades on?

#### *CIA Employee Identity Disclosure Investigation*

Q. I can take them off.

*The President.* I'm interested in the shade look, seriously.

Q. All right, I'll keep it then.

*The President.* For the viewers, there's no sun. [Laughter]

Q. I guess it depends on your perspective. [Laughter]

*The President.* Touche. [Laughter]

Q. Following up on the other Peter's question about Karl Rove, you said you were relieved with what happened yesterday. But the American public, over the course of this investigation, has learned a lot about what was going on in your White House that they didn't know before, during that time, the way some people were trying to go after Joe Wilson, in some ways. I'm wondering if, over the course of this investigation, that you have learned anything that you didn't know before about what was going on in your administration. And do you have any work to do to rebuild credibility that might have been lost?

*The President.* I think that—first of all, the decision by the prosecutor speaks for itself. He had a full investigation. Karl Rove went in front of the grand jury like—I don't—a lot of times. More times than—they took a hard look at his role.

Secondly, as I told the other Peter, I'm going to tell you that there's an ongoing trial; it's a serious business. And I've made the comments I'm going to make about this incident, and I'm going to put this part of the situation behind us and move forward.

Let's see here—yes, sure. Richard [Richard Benedetto, USA Today].

#### *Public Opinion on Iraq/War on Terror*

Q. Mr. President, the death of Zarqawi and the formation of the new Government in Iraq has given you a chance to reengage the American people on Iraq. A majority of the people still say that the war was a mistake. Do you think that the people have turned off on Iraq? Or do you think they're still winnable back, to consider that it was worth it?

*The President.* I think the people want to know, can we win? That's what they want to know. Listen, admittedly, there are a group of people in our country that say, "It wasn't worth it; get out now." And that opinion is being expressed. As these campaigns start approaching, you'll hear more people say, I suspect, "It's a mistake; Bush shouldn't have done what he did; pull out." And that's a legitimate debate to have in America, and I look forward to the debate. I will remind the American people, if we pull out before we achieve our objective, the world will be a lot more dangerous and America will be more at risk.

Then there are some in the country that say, "We understand the stakes, but do they have a plan to win, can they possibly win?" And I will continue to explain to the American people, winning means a government that can sustain itself, defend itself, and govern itself, and an ally in the war on terror. And we will help this Government

do that. And one of the reasons I went to Iraq was to determine whether or not we have a partner which is capable of making the tough decisions necessary to achieve our objective.

The American people have got to understand that Iraq is a part of the war on terror. Now, Richard, I fully understand how people might have made the decision that America is no longer under threat or the lessons of September the 11th were just momentary lessons. I can understand that. But I have a responsibility to lay out what I believe. And the lessons learned from September the 11th are still an integral part of my thinking, and I'll continue to make decisions based upon the lessons.

And I know there is an international jihadist movement that desires to do us harm, and they have territorial ambitions. The reason I know that is, that's what they've told us. And part of their territorial ambition is to have safe haven in Iraq. That's what they've said. That's what the enemy has clearly said. And it seems like to me that the Commander in Chief ought to listen to what the enemy says. And they believe capitalists and democratic societies are soft, and it's a matter of time before we pull out.

And that's why one message that I will continue to send to the enemy is, don't count on us leaving before the mission is complete. Don't bet on it; don't bet on American politics forcing my hand, because it's not going to happen. I'm going to make decisions not based upon politics but based upon what's best for the United States of America.

But I understand why people, Richard, are concerned, because progress is hard to see. You know, it's one thing to say, "We've got Zarqawi;" that's progress. It's another thing to say, "I met with the man, and I believe he can make the right decisions." And so somebody is going to say, "Sure, well, show me." And I understand that. And I understand how tough it is for the American people to reconcile death on

their TV screens with the President saying, we're making incremental progress toward an important goal. But what I hope they understand is how important it is we succeed in Iraq, that the country is more dangerous if we don't—the world is more dangerous if we don't succeed.

And so I'm going to keep talking about it and talking about—because I believe passionately we're doing the right thing. And I've told the American people this: If I didn't think we could succeed and if I didn't think it was worth it, I'd pull our troops out. And I mean that.

And one reason I went to Iraq yesterday, no matter how secretive the trip was, was to get a firsthand feel for how those people are thinking over there, what are they like. I understand leadership. Leadership requires determination. You've got to be determined to do something in order to be able to lead, particularly in difficult circumstances. You've got to have will. You've got to have desire to succeed, and you've got to have a plan. And that's what I found in Iraq.

It's really important that the Iraqi people have no doubt in their mind that we will help this Government succeed. It's important for them to understand that. And I know there's going to be different voices, and there should be different voices out of America. That's where we're great. That's what makes us interesting and great; people can say whatever they want to say as they try to attract votes. But my voice—what you hear from me, no matter what these polls and all the business look like, is that it's worth it, it is necessary, and we will succeed.

Thank you all very much.

NOTE: The President's news conference began at 9:45 a.m. in the Rose Garden at the White House. In his remarks, he referred to Prime Minister Nuri al-Maliki, Minister of Defense Abd al-Qadir al-Mufriji, Minister of the Interior Jawad al-Bulani, Minister of Electricity Karim Wahid al-Hasan, Speaker

of the Council of Representatives Mahmoud al-Mashhadani, and Deputy Speaker of the Council of Representatives Khaled Atea of Iraq; senior Al Qaida associate Abu Musab Al Zaraqawi, who was killed in Baquba, Iraq, on June 7; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; U.S. Ambassador to Iraq Zalmay Khalilzad; Deputy Secretary of the Treasury Robert M. Kimmit; Prime Minister

Tony Blair of the United Kingdom; Patrick J. Fitzgerald, U.S. Attorney for the Northern District of Illinois and Department of Justice CIA leak investigation Special Prosecutor; and Col. Mark Tillman, USAF, commander, Presidential Airlift Group. A reporter referred to former Ambassador Joseph C. Wilson IV, who served as CIA envoy to Niger in February 2002.

## Remarks Following Discussions With President Alvaro Uribe Velez of Colombia June 14, 2006

*President Bush.* Thank you all for coming. It's my honor to welcome back to the Oval Office *mi amigo el Presidente*. Mr. President, we're glad you're here. This is my first chance to be able to congratulate the President for a very strong victory. I asked him what it's like to win with a lot of votes. [Laughter] He was obviously a good campaigner that had a message that the Colombian people appreciated. So first of all, congratulations for a grand victory.

President Uribe is a personal friend. I'm able to talk very frankly with him about a variety of subjects. I told him that one of the things I admire is he's a strong believer in democracy, human rights, human dignity. He's got a tough job in dealing with narcoterrorist groups in his country, but he's committed to dealing firmly with narcoterrorism. He's committed to helping reconcile past differences. He's committed to helping people get back into society. And I appreciate those commitments. He's committed to human rights.

We talked about trade. We negotiated a free trade agreement. We've still got some details to work out, but we committed ourselves to working out those details and try to get this done as quickly as we can. I will submit the agreement to Congress once it gets done, and I would

hope members of both political parties understand the importance of a free trade agreement with this vital ally of ours.

We talked about the neighborhood. We talked about—he came from a meeting with some of the Andean neighbors, and he brought messages, and he shared some thoughts with me. I appreciate strategizing with the President about how to make sure our neighborhood is a peaceful and hopeful place.

I told President Uribe that one of the things I will do a better job of is communicating to the people of South America and Central America my country's desire to promote justice and education and health. We spend about \$1.6 billion a year in Central and South America. I want the people to understand that money is meant to help them, to help improve their lives. I want the people to understand America is a considerate country, that we care about justice.

And so, Mr. President, I am really pleased you're here. It's good to see you again. And again, congratulations on a great victory.

*President Uribe.* Thank you, Mr. President. I want to repeat my gratitude to your Government, to you personally, to your Congress, to the U.S. public opinion, for

the permanent support of my country. I appreciate your friendship, your permanent advice, and we have many challenges before us.

One challenge is that Colombia can overcome this long nightmare of terrorism. I understand the mandate my fellow country citizens have given me to work harder and with better results for my country to get peace, and the United States cooperation is necessary.

In the last 2 years, we have not gotten the—[inaudible]—result in dropping the areas with illegal drugs. One point we have studied this morning with President Bush is how to speed up the eradication of drugs, because we need to show better results in this area.

And of course, as President Bush has informed to you, we spoke about our free

trade agreement and some pending points. And we spoke about the necessity in Colombia and in all the Central American and South American countries to improve social cohesion. For I thank President Bush, he's willing—his willingness and determination to help us in education, in social issues, because we need to conduct hand in hand our fight against terrorism with our fight to create social cohesion, not only in Colombia but in the whole region as well.

*President Bush. Gracias, amigo.* Thank you very much.

NOTE: The President spoke at 12:06 p.m. in the Oval Office at the White House. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Meeting With the Iraq Study Group June 14, 2006

I want to thank a distinguished group of Americans, led by Jim Baker and Lee Hamilton, for your willingness to look at the way forward in Iraq and to provide advice to the administration, to the Congress, and to the American people about the proper strategies and tactics to achieve success.

Iraq is a complex situation. It is vital that we succeed. And the fact that you all are willing to lend your expertise to help chart the way forward means a lot. And I can't thank you enough. We've got Republicans at the table; we've got Democrats at the table; we've got people who've served in the administration, administra-

tions past, our court system, and the legislative branch. And you bring a lot of expertise and a lot of knowledge, and the fact that you're willing to lend your expertise and knowledge to help our country means a lot.

Once again, you've been called to serve, and once again, you are serving, and we thank you for that a lot. Appreciate you very much.

NOTE: The President spoke at 2:36 p.m. in the Roosevelt Room at the White House. In his remarks, he referred to James A. Baker III and Lee H. Hamilton, cochairs, Iraq Study Group.

## Remarks at the Initiative for Global Development's 2006 National Summit June 15, 2006

Thank you all. Whatever successes this administration has had in combating global poverty, Colin Powell gets a lot of credit. I will spend some time talking about our responsibility as government to address global poverty. It's a responsibility we take seriously, and it's a responsibility that Colin Powell carried out in his distinguished tenure as the Secretary of State of our country. I want to thank you for being a friend, and thank you for your service to the country. He's a good man.

Thank you all for allowing me to come by to speak. I appreciate the cofounders and the leaders of the Global Development effort. I want to thank you for having this summit. Thank you for being what I call social entrepreneurs, people who care about the plight of other people.

The facts are these: Across the globe, more than a billion people live on less than a dollar a day. That should be a troubling statistic to all Americans. They lead lives of hunger; they lead lives of desperation. Every day is a struggle just to survive. That struggle ought to inspire us here in America. It's inspired you; it ought to inspire all our citizens.

I want to thank you for lending your expertise and your funds to address problems alongside your Government. Colin said, "You know, this is not a governmental effort; it's not a business effort; it's not an NGO effort; it's a combined effort by a lot of compassionate hearts to address a significant problem." And so I'm here to thank you for your commitment and to let you know, we're pleased to stand with you.

I want to thank Susan Schwab, who traveled with me today. Maybe you don't know who she is, but you will soon, because she just got sworn in as the new Trade Representative for the United States. So who do you pick to be the Trade Minister?

Well, you pick somebody who is a good negotiator, for starters, somebody who understands that opening markets is in our national interest and that when you open a market, you make sure—as we open our markets, you make sure you're treated fairly. That's what we want. That's all we want. We want to be able to tell the American people that free trade is good for our country, but fair trade means that it's responsible. And so she understands that. She'll be a good, hard negotiator, but she also understands something I understand, and that is, trade is one of the best ways to help lift people out of poverty. I'm going to talk about that in a little bit.

I'm sorry Laura couldn't be with me here. She's a—she is a person who cares deeply about the suffering in places like the continent of Africa. When she travels, she brings the message to the people there that a lot of Americans care deeply about AIDS or care deeply about hunger or malaria. She sends her greetings. I'm lucky she said yes when I asked her to marry me. I think this country is lucky to have her as an ambassador for the good hearts of the American people.

I thank Bill Clapp and General Shalickashvili, former Senator Dan Evans, Bill Ruckelshaus, cofounders of the Initiative for Global Development. Thank you for being farsighted. Thank you for calling people to action. I thank the members who are here as well.

I appreciate Ambassador Randy Tobias. He had a pretty easy job there in Indianapolis at one time. [Laughter] I asked him to—I asked him—I said, "Look, Randy, you've got management skills, and you care; why don't you serve your country, see; why don't you come here to Washington, DC, and put up with all the rhetoric and the noise and the sharp elbows and do something for people around the world?" And

he did. He ran the—he ran our HIV/AIDS initiative, and he did a really good job.

America is on the leading edge of fighting HIV/AIDS, and one of the reasons we're effective is because of Randy Tobias. So I'm confident he wanted to leave—"See, I got a place in Montana where I can fish." I think you got one in Montana, don't you? Yes, he started talking about his fishing place in Montana. My answer was, "You're not through yet." [Laughter] I said, "You need to run USAID." It's an important part of helping deal with global poverty. It's an important part of our strategy. I want to thank you for staying on, and I want to thank you for your hard work and your vision. You represent the very best of corporate America. You get your skills; you make a living; and then you come and serve your fellow countrymen and the world. Randy, I really thank you for the inspiration and the example you've set.

I'm going to talk about the Millennium Challenge Account. Colin mentioned it. The head of it is here today, John Danilovich. We were really kind of bureaucratic when we first got the thing set up. Like, we weren't moving money out the door, and Congress began to get nervous. I remember Colin was coming to the Oval saying, "Look, it's a great idea, but we got to show some results here pretty quick." Danilovich understands the job is to be less bureaucratic and more forward-leaning when it comes to implementing the Millennium Challenge Account strategy. I want to thank you for taking on this important job.

And I also want to thank my friend Rob Mosbacher, fellow Texan, who's running OPIC. Appreciate you serving the country. Thanks for coming up from Houston to serve.

Here's what I believe: I believe to whom much is given, much is required. This country has been given a lot. We've got a great system; we've got wonderful entrepreneurs; and we're wealthy. We're wealthy because of the ingenuity of the American

people. We're wealthy because there's risk takers. We're wealthy because we've got a fiscal system that encourages the private sector to flourish. We're wealthy because we're a country of rules and laws.

I also believe that with prosperity comes an enormous responsibility. We have a moral duty to care for those who hurt here at home, and we have a moral duty to care for those—as best as we can for those abroad. That's part of the foreign policy of our country. It's a foreign policy that Secretary of State Powell helped implement—helped form and implement. We believe every person, no matter their income or economic status, bears the image of a Creator. That's what I believe. I believe every person, no matter their income or their status or where they live, has dignity of matchless value. And we believe that those who live in the most extreme poverty deserve this country's help.

Fighting global poverty reflects this country's values. It serves our Nation's interests as well. It's the country's economic interest that we fight global poverty, because as developing nations grow in prosperity, they create better lives for their citizens and markets for U.S. products. It's in our security interests that we fight global poverty, because weakened, impoverished states are attractive safe havens for terrorists and tyrants and international criminals. We believe that young people without opportunities are susceptible to ideologies of hatred. And so by helping poor nations create a more hopeful future, we can not only build prosperity; we reduce the appeal of radicalism.

Our values and our interests draw us to the same conclusion: The reduction of extreme poverty in our world must be a key objective of American foreign policy. And it is. And so today I want to talk to you about the need for us to expand trade, to promote freedom, and to reform the programs that we have in place, in order to achieve results, in order to say that—to the

American taxpayer, the money is not only being spent; it's being spent wisely.

First, the strategy to defeat extreme poverty begins with trade. That's sometimes hard for some people to connect with. It's kind of a—people don't quite understand why that's the case. One way to describe it, the value of trade, is this: The value of trade is more than 10 times the value of foreign investment and foreign aid combined. In other words, prosperity as a result of trade is more likely, 10 times more likely, to have a positive effect on somebody living in a poor society than just investment and grants.

History has shown what I'm talking about. Take the example of South Korea. It's probably hard for some to remember, back in the fifties, particularly if you were born in the sixties—[laughter]—but South Korea was one of the poorest nations in Asia. South Korea reformed its economy and opened its markets to the world. And today, export growth—the capacity for people to find work in South Korea, for products that are sold elsewhere—has made this country the tenth largest economy in the world.

India, for a long period of time, had restricted its markets. India opened its markets to global trade 15 years ago. It has doubled the size of its economy since then and created a middle class which is larger than the entire population of the United States.

I don't believe these are isolated examples. The World Bank study found that developing nations that lowered their trade barriers in the 1990s grew three times faster than those that did not. Economic growth is one important way to reduce poverty. It's the most effective way to reduce poverty. The best way to help millions mired in poverty is to expand the benefits of global trade. That's part of this administration's strategy.

I asked Congress, and Congress granted trade promotion authority. It took a lot of work, as you recall, Mr. Secretary, but it

was a necessary part of our capacity to expand trade. And since then, we've completed negotiations on free trade agreements with 15 nations on 5 continents with a combined population of 200 million people.

We've built on the success of the African Growth and Opportunity Act. For those of you who follow the economic vitality of Africa, you know that AGOA has been a very effective policy. It was put in place by my predecessor, President Clinton. And we signed into law the AGOA Acceleration Act. In other words, we took the step that President Clinton took and took it farther.

And it's worked. That's what's important for our citizens to understand. Trade helps lift people out of poverty. Since AGOA's inception, U.S. imports from Africa have increased by 114 percent. Last year, over 98 percent of U.S. imports from AGOA-eligible countries entered this country duty-free. When somebody is able to sell a product into the United States, it means somebody is working. It means somebody has got a job. It means that people aren't reliant upon the Government to help them realize their dreams. This is like—AGOA has created new opportunities. Americans have got to understand that when we talk about trade, we're not only talking about enhancing economic growth and vitality; we're helping people get out of poverty. Trade is an important part of making sure that we implement this strategy.

You know, the AGOA showed that bipartisan cooperation here in Washington is possible. And one thing you can help is to make sure that bipartisan cooperation on other trade agreements is possible in Washington, DC. If you're genuinely serious about reducing poverty, you need to help us make sure this Nation does not become a protectionist nation. The tendencies are to say, "Let's just wall ourselves off from competition." But if we become a protectionist nation, if we lose our confidence and our capacity to compete in the

global economy, it will make it much harder to achieve the common goal of reducing global poverty.

Now we're confronted with a really good opportunity, by the way, to deal with global poverty, and that is to complete the Doha round of the WTO negotiations. And it's tough sledding right now. You know, national interests seem to be kind of more important than a—than reducing barriers and tariffs across the world. You know, local politics has a lot to do with whether or not this Doha round is going to get completed, and I understand that. And I knew that going into the negotiations.

And that's why at the United Nations last year, I made this pledge on behalf of the American people: We're ready to eliminate all tariffs and subsidies and other barriers to free flow of goods and services, and we expect other nations to do the same. That's what I said to get the Doha round moving. See, we're ready to make the move on agriculture and services and manufacturing, but we expect other nations to do the same thing. We expect other nations to give us market access. I want to be able to go to people here in the United States, producers, and say, "We got you market access so you can compete fairly." And that's why we're going to get rid of the subsidies that now exist on the books.

The Doha negotiations are at a critical moment. It is—in my view, countries in Europe have to make a tough decision on farming. And the G-20 countries have to make a tough decision on manufacturing. And the United States is prepared to make a tough decision along with them. That's my message to the world.

Susan's going to carry that message. I'm going to carry it to Europe next week at the EU summit. Now is the time for the world to come together and make this world a free trading world, not only for the benefit of our own economies but as an important part of the strategy to reduce poverty around the world.

I think we have to expand freedom in order to reduce poverty. Free nations produce the vast majority of the world's economic output. Many of the worst dictatorships are some of the world's most poorest nations. I believe there's a correlation between prosperity and freedom. And this country of ours will continue to pursue an agenda that understands that human liberty is universal. It's just not a U.S. thing; it's its own—liberty is something that everybody yearns for. And freer the world becomes, the more prosperous the world becomes and the more likely people will not be mired in poverty.

Nations that build institutions that secure the rule of law and respect human dignity also are more likely to create an economic climate that fosters investment and growth. And so we support the rise of free and democratic societies across the world. And the story of freedom is one of the really, really interesting chapters of the 21st century, when you think about it. From Afghanistan to Iraq to Lebanon to Georgia to Ukraine to Kyrgyzstan, people have gone to the polls and elected their leaders. In the last 5 years, more than 110 million people have joined the ranks of the free. That's an astonishing development when you think about it. And it's a positive development for those of us who care deeply about global poverty.

As more people gain their freedom, they will also gain the opportunity to build a better life. That's a fact of life. And so this country has got to be confident in our willingness, in our desire to help people—to help free people from the clutches of tyrants. I said in my second Inaugural speech, "The goal of this country ought to be to end tyranny in the 21st century." I could have easily have said, "One way to reduce global poverty is to reduce tyranny in the 21st century."

Free peoples need to do more than cast their ballots. We recognize that. Going to the polls is not the kind of freedom necessary to reduce global poverty. It's just

the beginning of a process to reduce global poverty. And so the United States has an obligation to help others build the institutions necessary—in a civil society—necessary to be able to deal in a—with the advent of freedom. And so we're helping new democracies build free institutions that are responsive to the people's needs. And we're doing so through organizations like the National Endowment of Democracy. We've worked to double its budget over the past 5 years. Those funds support programs that will help form civic organizations. We're helping dissidents become legislators. We're helping businesses in new market economies organize trade associations and chambers of commerce. It's the things we take for granted here in America, these funds are meant to do.

It's one thing to promote trade; it's one thing to promote freedom, but we've got to recognize that our own aid programs have got to help complement those objectives. In other words, we want results from the money we spend. That's what the American people expect, by the way. See, when we talk about foreign aid, they expect the foreign aid to mean something. You know, I travel around a lot. I think about people out there that are working hard for a living, and they say, "You know, you're spending this money overseas. Why?" And the answer is, because not only do we have a moral duty, it's in our national interest to do so.

But I've got to be able to tell them, as well, and anybody in elected office has got to be able to say, "We're making a difference with the money, see; it's actually producing results." For decades, we provided aid with good intentions. We didn't always ask if we were getting good results. One of the great reforms of Colin Powell's tenure as Secretary of State is, he started asking, "What are the results of the programs; what are we achieving?"

Since 2002, we've committed to increase the resources we devote to fighting poverty across the world. As Colin mentioned, since

taking office, we more than doubled assistance around the world from 10 billion to 27½ billion. It's the largest increase, by the way, of foreign aid since the Marshall plan. And you get a lot of credit for that, Mr. Secretary. I remember you coming into the Oval Office saying, "Let's put our hearts out there for people to see." And one way to do it is by increasing our budgets.

I want to remind you what we're doing with that money. We're fighting HIV/AIDS, and we're helping countries fight malaria. We're expanding education for women and girls. We're rewarding developing nations that move forward with economic and political reform. And by the way, shortchanging these efforts—Congress has got to understand, in shortchanging these efforts, if they choose to do so in the appropriations process, they would undercut our long-term security and dull the conscience of our country. I urge Congress to serve the interests of America by showing the compassion of America and approve my full funding request for foreign assistance this year.

And as we increase the resources, we'll increase accountability for those who have received American aid. In many poor countries, it's really important for all of us who are involved in this program to admit that corruption runs deep. And a lot of times, the assistance we have provided has been wasted or put in the pockets of corrupt officials. I know that's unpleasant for some to hear, but it's a fact. If we expect the people to support us in our efforts to be robust in our compassion overseas, then we've got to recognize that sometimes that money gets stolen and people don't get the results for the money that they expect.

And so we decided to do something about it. We decided that our foreign policy ought to recognize true compassion as measured by real improvements, not just by the amount of money spent. And real improvement is the goal of our assistance.

And so we've set up the Millennium Challenge Account. And it was set up

under the—in the State Department when Colin was there. And here's what it says, it says, "We want to grant you money. We want to give assistance, but you've got to be responsible. You, the recipient, have got to be responsible for fighting corruption, embracing democratic government, encouraging free markets, and investing in the health and education of your people."

I remember when we put that out, it was a little controversial, as you remember. I don't see what's controversial in that. I don't see what's wrong with saying to a nation, "You don't get any money if you're corrupt." Because we believe countries are capable of getting rid of corruption. I don't see what's wrong with saying, "You've got to show real investment in education and health care in order to receive our money." I think that's a wise thing to ask. I think if part of the goal is to encourage economic development, we ought to say to countries, in return for U.S. aid, open your markets so you can enhance the prosperity of your citizens. Every nation that applies for a Millennium Challenge grant develops its own priorities and develops its own strategies. But one of the things we do—and this is what Danilovich does and his staff does—they develop clear goals that are measurable. So we say, "This is what you're going to do? Fine. Show us as time goes on that you're doing it."

So far, eight nations have compacts in place that's worth over \$1½ billion. Additional 15 countries are now negotiating with the Millennium Challenge Account. And we're going to get the money out the door so long as they meet the criterion.

But the point I'm trying to make to you is that wise use of Government monies can help us achieve objectives which lead to the reduction of global poverty. And so we're just through spending the money without asking for results.

We're an optimistic nation. We believe countries have got the capacity to change; that's what we believe. We refuse to accept the status quo. It is time for other countries

around the world to demand anticorruption regimes. If we're truly interested in reducing global poverty, those of us who are granting money need to stand up with a united voice and say, "We're not going to tolerate corruption."

One of the things Randy Tobias and others are going to do at the State Department, they're going to apply the same principle I've just described to you to all our development aid. We're going to insist upon transparency and performance and accountability. We're going to ensure that every American aid dollar encourages developing nations to build institutions necessary for long-term success. And we're going to help developing nations achieve economic independence. That's what we're going to do. We're going to get away from this notion about, kind of, just analyzing monies based upon percentage of this, that, or the other. We're going to be generous in our contribution and demand results in return.

Now, what's interesting about the goal of eliminating poverty is that about 85 percent of American resources to the developing world come from the private sector. It's one thing for me to talk, and now I'm changing from what we're doing to encouraging you to continue doing what you're doing.

The truth of the matter is, our generous Nation is—the generosity of our Nation is reflected in the private sector a lot. I think that's what makes us such a unique country. You know, government helps, and government does a lot. As I said, we've doubled aid, but what our private sectors do is—it's unbelievable, when you think about it.

And corporate America has a responsibility. And for those of you who represent the NGOs and faith-based groups, thank you for joining the cause as well. This is a collaborative effort. Some of the best work in fighting poverty is accomplished in partnership with private institutions. The

Global Development Alliance has successfully built 400 worldwide alliances. That's good. You've leveraged about 1.4 billion of taxpayers' dollars to over \$4.6 billion. In other words, you've taken the money we're spending as kind of a—I wouldn't call it a downpayment, but it's part of a way to really leverage your generosity.

And you're making a difference in the lives of millions of people. I'm grateful for you. That's what I've really come to say. I've come to assure you that the effort to eliminate global poverty is an integral part of our foreign policy. And I think it needs to be a foreign—part of foreign policy after 2½ years, by the way. I think it needs to be a—I think it needs to be part of the calling of the United States in the 21st century.

One of the moral objectives of our time—the great moral objectives of our time is to reduce poverty. I like what Alexis de Tocqueville said about America. He's a pretty interesting observer. Back in 1832, he captured a lot of the spirit of this country. He said this, he said, "When an American needs the assistance of his fellows, it's very rare that it be refused. When some

unexpected disaster strikes a family, a thousand strangers willingly open their purses."

That was the America he saw in the 1830s. It's still got to be the America of the 21st century as well, but not only to help our fellow citizens here at home but for our national interests and our economic interests, and just to answer the call of our hearts, it ought to be our foreign policy. It ought to be the center of our foreign policy and the center of the social entrepreneurs in America.

I want you to know that when disaster strikes, we move. We moved hard for the tsunamis, with a military presence that helped organize relief. When the earthquake came in Pakistan, we didn't hesitate; we moved. We know that when a neighbor needs assistance, that we have an obligation to help provide it.

My assurance to you is that we will continue to stand with our brothers and sisters who are poor, to help as best as we possibly can, and I want to thank you for helping as well. God bless your efforts, and may God bless our country.

NOTE: The President spoke at 9:55 a.m. at the Willard InterContinental Washington.

## Remarks on Signing the Broadcast Decency Enforcement Act of 2005 *June 15, 2006*

Thank you all. Please be seated. Thank you all for coming. In a few moments, I will sign the Broadcast Decency Enforcement Act. This is a good bipartisan bill. It's going to help American parents by making broadcast television and radio more family-friendly.

I appreciate the many citizens groups who are here, and I want to thank the Members of Congress who worked hard to get this bill passed. And I'm looking forward to signing it into law.

I want to thank Kevin Martin, who's the Chairman of the Federal Communications Commission, and I want to thank the other Commissioners who are here today.

I appreciate Senator Bill Frist joining us. He's the majority leader of the United States Senate. I want to thank Senator Ted Stevens for joining us as well. I thank Senator Sam Brownback, Senator George Allen. I want to thank the House majority leader, John Boehner, for being here. I want to thank Joe Barton, chairman of the House Energy and Commerce Committee.

The bill sponsor is with us, Fred Upton from the State of Michigan. Thank you for coming, Fred. I appreciate Congressman Bobby Rush from the State of Illinois, Chip Pickering from Mississippi, and Joe Pitts from Pennsylvania.

Every day, our Nation's parents strive to raise their children in a culture that too often produces coarse, vulgar, and obscene entertainment. In our free society, parents have the final responsibility over the television shows that their children watch or the web sites they visit or the music they listen to. That's a responsibility of moms and dads all across the country, to make sure their children are listening to or watching the right kind of programming.

The best way to do that is for parents to be vigilant, pay attention to what their children are doing. One thing they can do if they're worried about people watching a bad program is turn off the TV. That's why they put the on/off button there. [Laughter] Parents are the first line of defense, but broadcasters and the electronics industry must play a valuable role in protecting our children from obscene and indecent programming.

They provide the tools that empower parents to make good decisions, such as voluntary rating systems and the V-chip. And we applaud those. Broadcasters also have a duty to respect common decency, to take into account the public interest, and to keep the public airwaves free of indecent material, especially during the hours when children are most likely to be watching and listening.

Unfortunately, in recent years, broadcast programming has too often pushed the bounds of decency. One study found that during the hours between 8 and 9 p.m.—that's the time when most families are watching television—the use of profanity on television shows increased vulgar language by 95 percent from '88 to—1988 to 2002. In other words, the language is becoming coarser during the times when it's more likely children will be watching television.

It's a bad trend, a bad sign. Since 2000, the number of indecency complaints received by the FCC has increased from just hundreds per year to hundreds of thousands. In other words, people are saying, "We're tired of it, and we expect the Government to do something about it."

And so we believe we have a vital role to play. We must ensure that decency standards for broadcasters are effectively enforced. That's the duty of the FCC. That's why we've got the Chairman standing right here, which he understands. [Laughter] It's the duty of the FCC to impose penalties on broadcasters and stations that air obscene or indecent programming. It's one of their responsibilities. People expect us to adhere to our responsibilities. He's a part of the executive branch. And since I'm the head of the executive branch, I take responsibility, as well, for putting people in place at the FCC who understand, one of their jobs, and an important job, is to protect American families.

The problem we have is that the maximum penalty that the FCC can impose under current law is just \$32,500 per violation. And for some broadcasters, this amount is meaningless. It's relatively painless for them when they violate decency standards. And so the Congress decided to join the administration and do something about it.

And so the bill I'm about to sign, the Broadcast Decency Enforcement Act, increases tenfold the penalty that the FCC can impose, to \$325,000. The Congress got serious, and I appreciate their hard work on this measure.

The legislation does not change the broadcast decency standards that are already on the books. What the legislation does is it gives the FCC the means to enforce them more effectively. By allowing the FCC to levy stiffer and more meaningful fines on broadcasters who violate decency standards, this law will ensure that broadcasters take seriously their duty to keep the public airwaves free of obscene,

profane, and indecent material. American families expect and deserve nothing less.

And so I'm going to ask the Members of Congress who have worked hard on this piece of legislation to join me. I congratulate you for your good work. Thank you for coming. May God bless you.

NOTE: The President spoke at 11:07 a.m. in Room 350 of the Dwight D. Eisenhower Executive Office Building, S. 193, approved June 15, was assigned Public Law No. 109-235.

## Remarks on Signing the MINER Act *June 15, 2006*

Thanks for coming. Welcome to the White House, and thank you for witnessing this bill signing ceremony. In a few moments, I'm going to sign into law the most sweeping overhaul of Federal mine safety law in nearly three decades. The MINER Act of 2006 has strong support of mine workers and the mining industry, and it was overwhelmingly passed by the Congress. I want to thank the Members of the United States Congress who have joined us here for their hard work on this important measure.

I thank the Secretary of Labor, Elaine Chao, who has joined us. I appreciate the Governors from three important coal mining States, Joe Manchin, Ernie Fletcher, and Ed Rendell for joining us here as well. I was struck by how the Governors handled the tragedies of the mine incidents. I thought they were able to convey a deep sense of compassion in an attempt to heal hearts, and I thank them for their courage.

I appreciate Bill Frist, who has joined us, and Mitch McConnell, Members of the United States Senate, as well as Mike Enzi, Senator Ted Kennedy. I'm particularly thrilled that Senator Robert Byrd is here. I don't know if you know this, but last Monday he achieved a milestone, and that is, he has served longer in the United States Senate than any other Senator in our Nation's history, and he's served with distinction. And we're glad you're here, Senator. Thank you for coming.

I thank Majority Leader John Boehner for joining us, as well as Congressman Buck McKeon and Shelley Moore Capito, Hal Rogers, Rick Boucher from Virginia. I appreciate all the Members of Congress who've joined us.

I appreciate the leaders of the mining industry. I appreciate the workers who are here. Thanks for taking time in your day to come.

I want to welcome the families of those—who mourn the loss of life. We share in your grief, and we honor the memories of your loved ones. I know it's hard. It's really hard for you, but we welcome you here, and we're honored you took time to be here.

I appreciate members of my administration who have joined us as well today. The hard work of American miners provides us with really important fuel. This economy is growing because of the work of our miners. Coal is an important part of our Nation's present and future.

Thanks to modern technology and equipment, we've come a long way from the days when a miner would take a canary into the coal mines. Passage—and since the passage of the Mine Safety and Health Act in '77—1977, America has seen significant decreases of injuries and fatal mining accidents.

Yet events in recent months have reminded us that mining is dangerous work. That's what we've seen. This year alone,

accidents have taken the lives of 33 miners in our country. Just last month, five miners were killed in a mine explosion in Harlan County, Kentucky. And in January, Americans watched and prayed—a lot of Americans prayed with the people of West Virginia for the 13 miners that were trapped underground by the explosion in the Sago mine. Only one man came out, and he's with us today—Randal McCloy, and his wife, Anna. And we welcome you all.

And we know—we know, and I hope you know that your fallen mining brothers are with us here today in spirit. They're with us today with their loved ones here, eyes wet with tears but proud of their accomplishments. We're glad you're here.

We honor the memory of all lost miners today; that's what we're doing signing this bill. We make this promise to American miners and their families: We'll do everything possible to prevent mine accidents and make sure you're able to return safely to your loved ones.

The bill I'm about to sign is an important part of the effort. The MINER Act will build on the Mine Safety and Health Administration's ongoing efforts to enhance mine safety training, to improve safety and communications technology for miners, and provide more emergency supplies of breathable air along escape routes.

This new legislation will require mine operators to report any life-threatening accident no later than 15 minutes after they know that one has occurred. And to ensure compliance with the law, the MINER Act

will increase the maximum penalty for flagrant violations of mine safety regulations nearly fourfold.

To implement this new legislation, we need effective and experienced leadership at the Mine Safety and Health Administration. Last month, I named, or nominated Richard Stickler of the State of West Virginia to be the head of MSHA. He's got experience. He served for 6 years as the Director of Pennsylvania's Bureau of Deep Mine Safety. He was a miner, mine shift foreman, a superintendent, and a manager, and the Senate needs to confirm Richard Stickler to this key position.

America's miners work hard every day to support their families and support this country. It's hard work. You deserve the best training, the best equipment, and safeguards that we can provide to protect the lives. And this good legislation I'm signing today is an important part of honoring that commitment.

May God bless you all. May God bless our miners and their families, and may God continue to bless our country. And now it's my honor to sign the MINER Act into law.

NOTE: The President spoke at 11:23 a.m. in Room 450 of the Dwight D. Eisenhower Executive Office Building. In his remarks, he referred to Gov. Joe Manchin III of West Virginia; Gov. Ernie Fletcher of Kentucky; and Gov. Edward G. Rendell of Pennsylvania. S. 2803, approved June 15, was assigned Public Law No. 109–236.

## Remarks on the Establishment of the Northwestern Hawaiian Islands Marine National Monument

June 15, 2006

Thank you all. Please be seated. Pretty good deal when you get introduced by your wife. [Laughter] I really am glad Laura is here, because she is a champion of our

Nation's cultural and natural resources. It's an honor to share this important day with her at the podium. And I want to thank you all for coming.

As I was walking in here, I actually saw Theodore Roosevelt's portrait over there. What's interesting is that we are here to fulfill a legacy of conservation that was first begun by Theodore Roosevelt. In 1909, President Roosevelt established the Hawaiian Island Reservation, and he did so to protect native sea birds from being hunted. His Executive order was the first of many Presidential efforts to protect the life and waters of Northwestern Hawaiian Islands.

In a few moments, I will sign a proclamation to designate the waters in this region a national monument. This action will create the Northwestern Hawaiian Islands Marine National Monument, the largest single conservation area in the history of our country and the largest protected marine area in the world.

As a marine national monument, the waters of the Northwestern Hawaiian Islands will receive our Nation's highest form of marine environmental protection. We will protect a precious natural resource. We will show our respect for the cultural and historical importance of this area. And we will create an important place for research and learning about how we can be good stewards of our oceans and our environment.

I can't thank the Governor for being here enough, Governor Linda Lingle. She's—as I'll mention a little later on, we've been in close consultation with the Governor. And when did you leave yesterday? [Laughter] We're sure honored you're here representing your great State.

I want to thank Senator Daniel Akaka for joining us as well. I want to thank Congressman Ed Case, and I know that Congressman Neil Abercrombie will be here shortly for the signing of this important proclamation. Sherry Boehlert is here from the great State of New York—a strong conservationist. Welcome, Congressman. I'm glad you're here. I appreciate Senator Fred Hemmings from—he's a minority leader, by the way, of the Hawaiian State Senate. Thanks for coming. I'm glad you're here.

I appreciate Secretary Dirk Kempthorne, Secretary Carlos Gutierrez. I want to thank Vice Admiral Conrad Lautenbacher of NOAA. Thanks for coming. Appreciate your hard work on this issue. As you will hear a little later on, NOAA will be playing an important part of this national monument.

I want to thank Jean-Michel Cousteau for joining us. He just showed me a picture of another President—well, two fathers kind of gathered together. And it's proud for two sons to be carrying on the legacy of conservation. He's made a really important movie that I hope people watch about the Northwestern Hawaiian Islands. I think the American people will understand better about why I made the decision I made when they see the movie that Jean-Michel has produced.

I want to thank Sylvia Earle. She's a marine biologist. She's explorer in residence of the National Geographic Society. It was during the showing of the movie that she sat me down and gave me a pretty good lecture about life. [Laughter] She actually invited me to spend a week with her under the seas. [Laughter] There's some in Congress who would like me to spend my lifetime under the seas. [Laughter]

I want to thank Mike Nussman; he's the president and CEO of American Sportfishing Association. Thanks for coming, Mike. I want to thank the guests from the environmental community who are here today. Thanks for your hard work on this vital issue.

The vibrant beauty of the oceans is a blessing to our country, and it's a blessing to the world. The oceans contain countless natural treasures. They carry much of our trade; they provide food and recreation for billions of people. We have a responsibility, a solemn responsibility to be good stewards of the oceans and the creatures who inhabit them.

In 2004, my administration released an Ocean Action Plan to promote an ethic of responsible use and stewardship for our

oceans and coastal resources. By establishing this new national monument, we implement an important part of our plan, and we accomplish three goals for the nation: First, this new national monument will honor our commitment to be good stewards of America's natural resources.

Our duty is to use the land and seas wisely or, sometimes, not use them at all. Good stewardship of the environment is not just a personal responsibility, it is a public value. Americans are united in the belief that we must preserve our natural heritage and safeguard the environment. This belief has affirmed our laws, and today we reaffirm that commitment once again.

The Northwestern Hawaiian Islands are a beautiful and special place. The 10 islands and atolls stretch over 1,400 miles. That's the distance from Chicago to Miami. In the tropical waters surrounding the archipelago, there are more than 4,500 square miles of coral reef habitat thriving under the surface. Think about that—4,500 square miles of coral reef. These undersea forests and mountain ranges comprise the largest remote reef system in the world. And this region holds the largest and healthiest untouched coral reef system in the United States. And we're going to preserve it.

These reefs burst with life, great predators like the white tip reef shark and the spinner dolphins and the Trevally jacks. The archipelago is home to more than 7,000 marine species. That's a quarter of which are found nowhere else on the world. The Northwestern Hawaiian Islands are also the primary home for nearly 1,400 surviving Hawaiian monk seals. That's virtually the entire population of this critically endangered species. They are the breeding grounds for approximately 90 percent of the threatened Hawaiian Island green sea turtle population.

I think you're beginning to get a feel for why I made the decision I made. The national monument we're establishing today covers nearly 140,000 square miles. To put this area in context, this national monument

is more than 100 times larger than Yosemite National Park, larger than 46 of our 50 States, and more than 7 times larger than all our national marine sanctuaries combined. This is a big deal.

We will preserve access for native Hawaiian cultural activities. As part of the proclamation, the Department of the Interior and the Department of Commerce will work with the State of Hawaii and the public to develop a plan to manage the monument. This proclamation will also charge NOAA to use its expertise to oversee the new marine areas and the Fish and Wildlife Service to apply their skills to the wildlife refuge areas.

Within the boundaries of the monument, we will prohibit unauthorized passage of ships; we will prohibit unauthorized recreational or commercial activity; we will prohibit any resource extraction or dumping of waste. And over a 5-year period, we will phase out commercial fishing as well. For sea birds and sea life, this unique region will be a sanctuary for them to grow and to thrive. And for the American people, it will be a place that honors our responsibility to protect our natural resources.

This new monument shows what cooperative conservation can accomplish. My administration is committed to working in a spirit of respect and cooperation with those seeking to protect our land and sea and sky. We believe cooperative conservation is the best way to protect the environment. This means we must focus on the needs of States and respect the unique knowledge of local authorities and welcome the help of private groups and volunteers.

Through cooperative conservation, we're moving away from the old environmental debates that pit one group against another and towards a system that brings citizens of every level of government together to get results. In the northwest Hawaiian Islands, we have worked with Governor Lingle and State officials and native Hawaiian leaders to ensure, first and foremost,

that they wanted the monument and, secondly, to make sure that we protect the cultural and historical heritage of these islands.

For more than 1,000 years, native Hawaiians sailed these waters and visited these islands as part of sacred journeys. The islands are dotted with archeological treasures and traditional sites of worship. This monument will protect the cultural ties that native Hawaiians have to these lands and waters. We respect these natives' beliefs, and this monument will safeguard both the natural and spiritual treasures of the region. And for this reason, we will consult with native Hawaiian leaders to give this monument a native Hawaiian name.

Protecting the Northwestern Hawaiian Islands, volunteers play an important part. Jean-Michel taught us that in his movie. Through a major Federal-State partnership, volunteer divers work together to remove nets and gear that have been abandoned by fishermen. In one year alone, divers removed more than 120 tons of this derelict fishing gear. To fight the destructive effects of abandoned nets and other debris, the Ocean Action Plan directed the Coast Guard and EPA and NOAA and the State Department and the Interior Department to coordinate efforts to improve how the Federal Government tracks, prevents, and cleans up maritime waste. And we've got more work to do. And I expect these agencies to be robust in our efforts to prevent this kind of debris from polluting our—polluting this sanctuary, this monument.

We're going to work together with volunteers to make our oceans safer for marine life. And to give this remote and special place our Nation's highest level of protection—as we give it this kind of protection, we're also reminded of our responsibility to be wise managers of marine resources living off every coast. And that's why we're working to end overfishing. Overfishing is harmful. It's harmful to our country, and it's harmful to the world.

To protect our marine ecosystem and the future fishing of all kinds, the Ocean Action Plan calls for Congress to reauthorize the Magnuson-Stevens Fishery Conservation and Management Act. They need to get that done. This act would provide enhanced authority to work with regional fish councils to build an improved market-based system to restore our fisheries. I like to fish, and I expect this Government of ours to protect the fisheries so sports people can fish and get a good catch. That's why I'm glad the sportsmen are here—sportfishing people are here. You know, you just got to understand, we're going to listen to you. It's in the Nation's interest that we have a robust recreational fishing industry.

Congress needs to move forward with my administration's plan to build a well-managed system of offshore aquaculture. Aquaculture or "fish farming" uses pens in the ocean—open ocean to feed and grow shrimp, shellfish, and many other types of fish. And when we get this right, these farmed fish can provide a healthy source of food and reduce pressure on the ocean ecosystems.

In the Northwest Hawaiian Islands, we're also preserving an historic landmark of great importance. Near the northern edge of these islands lies Midway Island, the site of one of the most decisive battles of World War II. On this atoll, there's a memorial to the sacrifice and valor of those who fought in the Pacific theater during World War II. This national monument will have special access area around Midway Island. That's what we want. We want people to go and pay homage to those who sacrifice for our freedom.

Third, the new national monument creates a new opportunity for ocean education and research for decades to come. Successful ocean stewardship depends on informed policy makers and an informed public. One of the key priorities of the Ocean Action Plan is promoting ocean education. Jean-Michel put it this way, he said, "How can we protect what we don't understand?"

*June 15 / Administration of George W. Bush, 2006*

Ninety-five percent of our planet's oceans have yet to be explored. We're just beginning to appreciate what the seas have to offer humanity. The waters of this new national monument will be a living laboratory that offers new opportunities to discover new life, that helps us better manage our ocean ecosystems, and allows us to pursue advances in science.

You know, in America, there's a great consensus that we have an obligation to be good stewards of the environment. Success of a generation is not defined by wealth alone. We also will be measured by the respect we give to the precious creatures of our natural world.

We have great choices before us in this country. And with the designation of the Northwestern Hawaiian Island Marine National Monument, we are making a choice that will leave a precious legacy.

I want to thank you all for joining us today. It's an historic moment. Thank you all for your leadership. And may God bless the country.

NOTE: The President spoke at 2:34 p.m. in the East Room at the White House. In his remarks, he referred to Gov. Linda Lingle of Hawaii; and oceanographer Jean-Michel Cousteau.

## Statement on Congressional Passage of Appropriations Legislation *June 15, 2006*

I applaud those Members of Congress who came together in a fiscally responsible way to provide much-needed funds for the war on terror and continued Hurricane Katrina recovery, as well as for securing our border and protecting against a possible avian flu pandemic. Responding to these critical needs in a timely way is not easy, but it must be done if we are to fight terrorism, defend our homeland, enforce

our borders, and fulfill our moral obligation to help our fellow Americans in need. I am pleased that Congress has addressed these urgent national priorities within the spending limits I set. House and Senate leadership and Chairmen Cochran and Lewis deserve great credit for working together to pass a fiscally responsible bill. The statement referred to H.R. 4939.

## Statement on Signing the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006 *June 15, 2006*

Today, I have signed into law H.R. 4939, the "Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006." The Act provides additional resources needed to fight the war on terror, help citizens of the Gulf States recover from devastating

hurricanes, and protect Americans from a potential influenza pandemic.

Sections 1209 and 2202 of the Act prohibit use of certain funds appropriated in the Act to initiate new start programs unless the congressional defense committees

receive advance written notice. The Supreme Court of the United States has stated that the President's authority to classify and control access to information bearing on the national security flows from the Constitution and does not depend upon a legislative grant of authority. Although the advance notice contemplated by sections 1209 and 2202 can be provided in most situations as a matter of comity, situations may arise, especially in wartime, in which the President must act promptly under his constitutional grants of executive power and authority as Commander in Chief of the Armed Forces while protecting certain extraordinarily sensitive national security information. The executive branch shall construe these sections in a manner consistent with the constitutional authority of the President.

Subsection 1304(a) of the Act amends section 550 of Public Law 109-102 to purport to require the President to consult with committees of the Congress prior to exercising authority granted to the President by section 550. Subsection 1304(b) purports to require the Secretary of State to consult such committees prior to exercising authority under that provision. Because the President's constitutional authority to supervise the unitary executive branch and take care that the laws be faithfully executed cannot be made by law subject to a requirement to consult with congressional committees or to involve them in executive decision-making, the executive branch shall construe the references in the provisions to consulting to require only notification.

The provision under the heading, "Joint Explosive Device Defeat Fund," Department of Defense-Military, that calls for the

reporting to congressional committees of information that may include highly sensitive and classified national security information, will be construed consistently with the President's constitutional responsibility to control the dissemination of such information.

The executive branch shall construe the provision in the Act under the heading "Disaster Relief," Federal Emergency Management Agency, Department of Homeland Security, that purports to require the Secretary of Homeland Security to submit a housing proposal and expenditure plan for congressional committee approval as calling solely for notification, as any other construction would be inconsistent with the constitutional principles enunciated by the Supreme Court of the United States in *INS v. Chadha*.

Sections 7030 through 7033 of the Act, inclusive, purport to make changes in or in relation to statements of managers that accompanied various appropriations bills reported from House-Senate conferences in the past. Also, a provision in chapter 9 of the Act under the heading "Emergency Relief Program," Federal Highway Administration, Department of Transportation, purports to give binding effect to a document not presented to the President. The executive branch shall construe these provisions in a manner consistent with the bicameral passage and presentment requirements of the Constitution for the making of a law.

GEORGE W. BUSH

The White House,  
June 15, 2006.

NOTE: H.R. 4939, approved June 15, was assigned Public Law No. 109-234.

## Letter to Congressional Leaders Reporting on Deployments of United States Combat-Equipped Armed Forces Around the World

June 15, 2006

*Dear Mr. Speaker: (Dear Mr. President:)*

I am providing this supplemental consolidated report, prepared by my Administration and consistent with the War Powers Resolution (Public Law 93-148), as part of my efforts to keep the Congress informed about deployments of U.S. combat-equipped Armed Forces around the world. This supplemental report covers operations in support of the war on terror, Kosovo, and Bosnia and Herzegovina.

### *The War on Terror*

Since September 24, 2001, I have reported, consistent with Public Law 107-40 and the War Powers Resolution, on the combat operations in Afghanistan against al-Qaida terrorists and their Taliban supporters, which began on October 7, 2001, and the deployment of various combat-equipped and combat-support forces to a number of locations in the Central, Pacific, and Southern Command areas of operation in support of those operations and of other operations in our war on terror.

I will direct additional measures as necessary in the exercise of the U.S. right to self-defense and to protect U.S. citizens and interests. Such measures may include short-notice deployments of special operations and other forces for sensitive operations in various locations throughout the world. It is not possible to know at this time either the precise scope or duration of the deployment of U.S. Armed Forces necessary to counter the terrorist threat to the United States.

United States Armed Forces, with the assistance of numerous coalition partners, continue to conduct the U.S. campaign to pursue al-Qaida terrorists and to eliminate support to al-Qaida. These operations have been successful in seriously degrading al-Qaida's training capabilities. United States

Armed Forces, with the assistance of numerous coalition partners in Combined Forces Command, Afghanistan, ended the Taliban regime and are actively pursuing and engaging remnant al-Qaida and Taliban fighters in Afghanistan. Approximately 200 U.S. personnel also are assigned to the International Security Assistance Force (ISAF) in Afghanistan. The U.N. Security Council authorized the ISAF in U.N. Security Council Resolution 1386 of December 20, 2001, and has reaffirmed its authorization since that time, most recently for a 12-month period beginning October 13, 2005, in U.N. Security Council Resolution 1623 of September 13, 2005. The mission of the ISAF under NATO command is to assist the Government of Afghanistan in creating a safe and secure environment that allows reconstruction and the reestablishment of Afghan authorities. Currently, all 26 NATO nations contribute to the ISAF. Ten non-NATO contributing countries also participate by providing military and other support personnel to the ISAF.

The United States continues to detain several hundred al-Qaida and Taliban fighters who are believed to pose a continuing threat to the United States and its interests. The combat-equipped and combat-support forces deployed to Naval Base, Guantanamo Bay, Cuba, in the U.S. Southern Command area of operations since January 2002 continue to conduct secure detention operations for the approximately 460 enemy combatants at Guantanamo Bay.

The U.N. Security Council authorized a Multinational Force (MNF) in Iraq under unified command in U.N. Security Council Resolution 1511 of October 16, 2003, and reaffirmed its authorization in U.N. Security Council Resolution 1546 of June 8, 2004. In U.N. Security Council Resolution 1637 of November 8, 2005, the Security

Council, noting the Iraqi government's request to retain the presence of the MNF, extended the MNF mandate for a period ending on December 31, 2006. Under Resolutions 1546 and 1637, the mission of the MNF is to contribute to security and stability in Iraq, as reconstruction continues. These contributions have included assisting in building the capability of the Iraqi security forces and institutions as the Iraqi people drafted and approved a constitution and established a constitutionally elected government. The U.S. contribution to the MNF is approximately 131,000 military personnel.

In furtherance of our efforts against terrorists who pose a continuing and imminent threat to the United States, our friends and allies, and our forces abroad, the United States continues to work with friends and allies in areas around the globe. These efforts include the deployment of U.S. combat-equipped and combat-support forces to assist in enhancing the counterterrorism capabilities of our friends and allies. United States combat-equipped and combat-support forces continue to be located in the Horn of Africa region, and the U.S. forces headquarters element in Djibouti provides command and control support as necessary for military operations against al-Qaida and other international terrorists in the Horn of Africa region, including in Yemen. In addition, the United States continues to conduct maritime interception operations on the high seas in the areas of responsibility of all of the geographic combatant commanders. These maritime operations have the responsibility to stop the movement, arming, or financing of international terrorists.

#### *NATO-Led Kosovo Force (KFOR)*

As noted in previous reports regarding U.S. contributions in support of peacekeeping efforts in Kosovo, the U.N. Security Council authorized Member States to establish KFOR in U.N. Security Council Resolution 1244 of June 10, 1999. The mis-

sion of KFOR is to provide an international security presence in order to deter renewed hostilities; verify and, if necessary, enforce the terms of the Military Technical Agreement between NATO and the Federal Republic of Yugoslavia (which is now Serbia); enforce the terms of the Undertaking on Demilitarization and Transformation of the former Kosovo Liberation Army; provide day-to-day operational direction to the Kosovo Protection Corps; and maintain a safe and secure environment to facilitate the work of the U.N. Interim Administration Mission in Kosovo (UNMIK).

Currently, there are 24 NATO nations contributing to KFOR. Eleven non-NATO contributing countries also participate by providing military personnel and other support personnel to KFOR. The U.S. contribution to KFOR in Kosovo is about 1,700 U.S. military personnel, or approximately 11 percent of KFOR's total strength of approximately 16,000 personnel.

The U.S. forces have been assigned to the eastern region of Kosovo. For U.S. KFOR forces, as for KFOR generally, maintaining a safe and secure environment remains the primary military task. The KFOR operates under NATO command and control and rules of engagement. The KFOR coordinates with and supports the UNMIK at most levels; provides a security presence in towns, villages, and the countryside; and organizes checkpoints and patrols in key areas to provide security, protect minorities, resolve disputes, and help instill in the community a feeling of confidence.

In accordance with U.N. Security Council Resolution 1244, UNMIK continues to transfer additional competencies to the Kosovar Provisional Institutions of Self-Government, which includes the President, Prime Minister, multiple ministries, and the Kosovo Assembly. The UNMIK retains ultimate authority in some sensitive areas such as police, justice, and ethnic minority affairs.

NATO continues formally to review KFOR's mission at 6-month intervals. These reviews provide a basis for assessing current force levels, future requirements, force structure, force reductions, and the eventual withdrawal of KFOR. NATO has adopted the Joint Operations Area plan to regionalize and rationalize its force structure in the Balkans. The UNMIK international police and the Kosovo Police Service (KPS) have full responsibility for public safety and policing throughout Kosovo. The UNMIK international police and KPS also have begun to assume responsibility for guarding patrimonial sites and established border-crossing checkpoints. The KFOR augments security in particularly sensitive areas or in response to particular threats as needed.

*NATO Headquarters in Bosnia and Herzegovina*

Pursuant to the June 2004 decision made by NATO Heads of State and Government, and in accordance with U.N. Security Council Resolution 1575 of November 22, 2004, NATO concluded its Stabilization Force operations in Bosnia-Herzegovina and established NATO Headquarters-Sarajevo to continue to assist in implementing

the Peace Agreement in conjunction with a newly established European Force. The NATO Headquarters-Sarajevo, to which approximately 250 U.S. personnel are assigned, is, with the European Force, the legal successor to SFOR. The principal tasks of NATO Headquarters-Sarajevo are providing advice on defense reform and performing operational supporting tasks, such as counterterrorism and supporting the International Criminal Tribunal for the Former Yugoslavia.

I have directed the participation of U.S. Armed Forces in all of these operations pursuant to my constitutional authority to conduct U.S. foreign relations and as Commander in Chief and Chief Executive. Officials of my Administration and I communicate regularly with the leadership and other Members of Congress with regard to these deployments, and we will continue to do so.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate.

Remarks at the Congressional Picnic  
*June 15, 2006*

Thank you all for coming. Welcome to the South Lawn. Laura and I are thrilled you're here. This is called "Rodeo on the South Lawn." [*Laughter*] And we've—first of all, I want to thank all the Members of the Congress and the Senate who are here. Thanks for serving the country.

I always take this opportunity to thank your families on your behalf. I know you do it all the time, but I know you couldn't serve without the support of your loved ones. And so, for all the family members

who are here, the wives and the husbands and the children and the grandchildren, welcome. Thanks for serving the country too.

We got some interesting entertainment for you tonight. We got some people who can play music and some people who think they can play music. [*Laughter*] We got three bands, one—the first band will be called The Compassionates. The leader of that band is my Chief of Staff, Josh Bolten.

Yes. Then we've got—The Second Amendments will be playing tonight. That would be Congressman Collin Peterson, Dave Weldon, Kenny Hulshof, Thaddeus McCotter—he's that rock-and-roll dude, Thaddeus McCotter—and Congressman Jon Porter. Once you get through those two bands, then a real group of musicians will be here, and we're fortunate Riders in the Sky will be playing for you tonight.

I hope you enjoy this as much as Laura and I enjoy it. We're really glad you're here. God bless you all, and God bless our great country. Please welcome The Compassionates.

NOTE: The President spoke at 6:50 p.m. on the South Lawn at the White House.

## Message on the Observance of Juneteenth *June 12, 2006*

I send greetings to all those observing Juneteenth.

President Lincoln called the Emancipation Proclamation of 1863 the “central act” of his administration and “the greatest event of the nineteenth century.” The joyous news of freedom did not reach Galveston, Texas, until two and a half years after emancipation when Major General Gordon Granger arrived and announced that the Civil War was over and all slaves were free. Ever since, Americans have marked June 19th with special celebrations and traditions commemorating this historic moment.

On this day, we honor the vision of President Lincoln, and we will keep striving to build a Nation where the dignity of every person is respected, where people are

judged by the content of their character, and where the hope of the American dream reaches every neighborhood and every citizen. Together, we can continue to advance the ideals of liberty and justice that make our country strong and help more Americans realize the full promise of this great Nation.

Laura and I send our best wishes on this special occasion. May God bless you, and may God continue to bless the United States of America.

GEORGE W. BUSH

NOTE: This message was released by the Office of the Press Secretary on June 16. An original was not available for verification of the content of this message.

## Remarks at a Reception for Congressional Candidate Heather Wilson in Albuquerque, New Mexico *June 16, 2006*

Thank you very much. Thanks for coming. It's great to be back in New Mexico again. It just seemed like I was here the other day. [*Laughter*] This time I've come because I cannot tell you how important

it is to reelect Heather Wilson to the United States Congress.

I have spent enough time in Washington, DC, to be able to distinguish between the real, genuine person and those who are

just up there to mark time. Heather Wilson is honest; she is capable. She has gone to Washington, DC, to do a job on behalf of the citizens of New Mexico, and she deserves to be reelected to the United States Congress.

And I thank you for helping her. This has been a successful event. So I want to thank the organizers and the phone callers and the people that encouraged you to come, and then I want to thank you for being here. When you find somebody who is a decent soul willing to sacrifice time with her family, willing to travel the long distances between New Mexico and Washington, DC, willing to do the hard work on behalf of the citizens of Albuquerque and the surrounding area, you need to support her. And I want to thank you for supporting her.

When Heather tells you something, she means it. And you don't have to worry about her disgracing the office of the United States Congress. You know, I like strong women. [Laughter] I was raised by one; I married one; and I hope we're raising two. [Laughter] And sometimes a strong woman—sometimes they—they all listen, and sometimes they do what you ask them to do, and sometimes they don't. [Laughter] See, Heather Wilson is an independent soul. That's what you want from a person from this district. You want somebody who is strong in her beliefs, strong in her convictions, but strong, first and foremost, to the people of this district. The way I like to describe her is: She's compassionate; she's smart; she's independent-minded; and she can get the job done. And that's why she needs to go back to the United States Congress.

Laura sends her best. In the photo line, the guy said, "Where's Laura?" It didn't hurt my feelings, you know. [Laughter] Kind of like, you know, "How come you're here and she's not?" [Laughter] But Laura knows talent and strength of character when she sees it; Heather Wilson is one of her favorite people in Washington, DC.

And she sends her love to Heather and sends her thanks to you all for helping this fine lady get reelected to the United States Congress.

By the way, I lucked out when she said yes. [Laughter] We were raised, as you know, right across the border, so I have a pretty good feeling about the values and the thinking of the people of New Mexico. And so does Laura. And there's no doubt in her mind and my mind that Heather Wilson is the right person to represent you in the United States Congress. And again, I want to thank you. I forgot to ask you to do one thing, though, and that is thanks for giving of your hard-earned money; make sure that you turn out the vote coming down the stretch.

She's going to win. No doubt in my mind, she's going to win. I want to thank her family, Jay, Joshua, and Caitlin. I was telling Joshua and Caitlin coming over—I spent some quality time with Heather on Air Force One; it's amazing what people do to get on Air Force One, by the way. [Laughter] I said to Joshua and Caitlin, "I know a lot about you." They kind of looked at me like, you know, "Huh?" [Laughter] I said, "That's all your mother talked about for half the leg." [Laughter] I love a person who values her family, who places her family at the center of her life. We need people in the United States Congress who understand the importance of family in our society. Heather Wilson not only talks about family, she acts on her love of her family. And I want to thank Jay and Josh and Caitlin for being here today. And thank you for supporting your mom and your wife for her hard work doing the job.

I want to thank Allen Weh—[applause]—yes, he's a good fellow. I want to thank the grassroots activists who are here. I want to thank those of you who, a lot of time, don't get credit for making phone calls—there's one right there—[laughter]—and people who put up the signs and go to the rallies and stuff the envelopes, the people who really turn out to be the wind

at the candidate's back. And you're going to make the difference coming down the stretch for Heather. So thank you in advance for what you're fixing to do.

We're dealing with some big issues. We really are. These are historic times. And one of the reasons I feel so strongly that Heather needs to be reelected is, she understands the stakes of the world in which we live. See, we need people who see the world the way it is, not the way we would hope it would be. And the world we live in is a dangerous world because there's still enemies that would like to strike the United States of America.

We need clear-eyed realists in Washington, DC. Heather Wilson is a clear-eyed realist. She brings a lot of experience to the job. By the way, she's on the Intelligence Committee; I'm probably not supposed to talk about it. *[Laughter]* The reason she's on it is because she's a clear-eyed realist. It's a very, very important job. She helps make sure this country has the best intelligence possible. And the reason that's important is because our most important job, the most important priority of the President and the Congress, is to protect the American people. And the best way to protect the American people is to stay on the offense and bring the killers to justice so they don't hurt the American people again.

And in order to stay on the offense, we've got to have good intelligence, and we've got to have smart, capable people helping this Government find these terrorists. In order to protect the American people, I need people in the United States Congress who understand the importance of supporting the men and women who wear the uniform of the United States of America, and Heather Wilson understands that.

We're fighting a global war on terror. Now, I know most of the attention is focused on Iraq, but I want to remind you, that is just a battlefield in the global war on terror. It's a part of the war on terror.

I need people in the United States Congress like Heather, who understands that the war on terror is not just Iraq but it's Afghanistan, and it's places where people plan and plot their attacks on the United States of America.

I just came back from Baghdad. It's a remarkable experience to, first and foremost, meet the leaders of a new Government, people that are in office because 12 million people are able to vote because we threw out a tyrant that was so brutal and so ruthless that—not only to kill his own people by the thousands, that he invaded his neighbors, that he threatened the United States of America, that he harbored terrorists. And now they have a chance to vote, and they did, and now there's a Government formed under one of the most modern constitutions ever written in the Middle East. And it was refreshing to see these people that are anxious to fulfill the will of the people of Iraq.

And it's hard work. But I went to take the measure of the person. I went to say this to him: "It's up to you; here's your chance; here's your chance to succeed; here's your chance to liberate people; here's your chance to make history; here's your chance to spread the peace; here's your chance to help us fight those who want to destroy your hopes and aspirations." And I also told him this, that "When the United States of America gives a commitment, we will keep our word. We will not cut and run." It's important to have people in the United States Congress who understand the stakes of the fight in Iraq and complete the mission. And Heather Wilson is such a person.

We're going to succeed in Iraq. We will succeed. And when we do, they will be an ally in the war on terror, and they'll be an example for others to see. You see, I base a lot of my decisions upon this belief: There is an Almighty, and one of the great gifts of the Almighty to men and women from all faiths and all walks of life is freedom. Freedom is universal. Freedom

is not owned just by people in the United States of America, it's universal; all people desire to be free. And free societies turn out to be peaceful societies. Free societies figure out ways to keep the peace. And so, in our fight against the terrorists, not only will we bring them to justice and stay on the hunt to protect the American people, but at the same time, we will act on the universal principle of freedom and help others become free.

People say, "What do you mean by that, Mr. President?" Well, I'll give you an example. Two weeks from today, I'll be meeting with the Prime Minister of Japan, Prime Minister Koizumi. He's coming. We'll have a visit in Washington, DC. It turns out he's an Elvis fan, so he and I are then going to go to Graceland. [*Laughter*] Think about that, though. Think about the American President traveling to Graceland—[*laughter*—with the Prime Minister of Japan. Let me ask you something—60 years ago, would you have thought that would be possible? [*Laughter*] Think about it.

See, my dad and, I bet, your relatives too—some of you had relatives who fought the Japanese. They were the sworn enemy of the United States of America in a bloody, bloody conflict. And 60 years later, I'll be sitting down at the table with the Prime Minister talking about North Korea, how to keep the peace there. I'll be talking about the fact that their country has contributed 1,000 troops to help this young democracy in the heart of the Middle East. He understands that freedom can help change a neighborhood that's been full of hatred.

What happened? What happened was Japan adopted a Japanese-style democracy. They had a different form of government. They became—they adopted a different style of governing themselves. Democracies have the capacity to convert enemies into allies. And what's happening today is we're after the terrorists not only by staying on the hunt, but we're after them with an

ideology of hope, an ideology of light, an ideology that recognizes human rights and human dignity. And one of these days, somebody is going to be sitting down—a duly-elected leader from Iraq sitting down at the table with a future U.S. President talking about how to keep the peace. We're laying the foundation of peace for generations to come, and Heather Wilson understands the stakes.

Our economy is strong. And one of the reasons it's strong is because we put policies in place that recognize that if you have more money in your pocket to save, invest, or spend, this economy is going to grow. See, there's a philosophical debate in Washington, DC: Who best can spend your money? [*Laughter*] We like—Heather and I like for you to spend your own money. We believe if you have more money in your pocket, the economy—[*applause*]. We believe if you're a small-business owner and you got more money in your treasury, your more likely to hire somebody. That's what we believe.

The other crowd believes they need to run up your taxes, because they think they can spend your money better than you can. You might remember, we've had some tough economic times in this country. We had a recession, a stock market correction, corporate scandals, an attack on the United States of America, two wars to defend ourselves, major natural disasters, and high energy prices—and yet this economy is going strong. And we intend to keep it strong. [*Applause*]

And the reason it's strong is because we cut the taxes. We let you keep more of your own money. Now, you'll hear them in Washington say, "Well, what we need to do is balance the budget by raising the taxes." That's not the way Washington works; it's just not the way. It may sound attractive to some here in Albuquerque, "Oh, we'll just tax a certain number of people, and we'll balance the budget that way." No, the way Washington works is, they will raise your taxes, and they will figure out

new ways to spend your money. The best way to balance the budget is to set priorities when it comes to spending the people's money, to be strong on those priorities, and to keep progrowth economic policies in place so we get more tax revenues coming into the Treasury because this economy is growing. That's how you balance the budget.

Make no mistake about it, if the other bunch gets in control of the Congress, you'll be paying higher taxes. And that's why we're going to win this November. People understand they're taxed enough. What they want is fiscal sanity in Washington, DC. That's what they want.

You know something? One of the things that we're going to run on as a party and Heather can really run on is, she's delivered. Take Medicare, for example. That's a program—it's an important program. It was signed by Lyndon Baines Johnson in 1965. It's really an important deal. The Federal Government has made a commitment to help our elderly when it comes to health care. And our attitude is, if you make a commitment, you want to make sure you have a modern health care system. There's no need to make a commitment and have a lousy health care system. And Medicare had done a lot of good work, but it was getting old, and it needed to be reformed. Medicine was changing, but Medicare wasn't.

And so we got together and decided we're going to do something on behalf of the seniors. We're going to fulfill our promise to the seniors of the United States of America. The other bunch had been talking about it, year after year. We did—we got something done. What we did is, we provided prescription drugs as an integral part of Medicare.

People say, why was that important? Well, I'll give you one reason. Medicare would pay for heart surgery but would not pay one dime for the prescription drugs that could prevent the heart surgery from being needed in the first place. Medicine

had been modernizing; Medicare had not. And thanks to the leadership of Heather Wilson, I was able to sign a modern Medicare bill. And if you're a poor senior in Albuquerque, New Mexico, this Government is going to help you with your prescription drugs. And the days of you having to choose between medicine and food are over, thanks to Heather Wilson.

I could keep talking all day long about her—[laughter]—but I might miss my dinner with Laura. [Laughter] But I do want to talk about her love of the young people. You might remember, she served in the cabinet here as the Secretary of Children, Youth, and Family. She was—she said, “Look, I want to serve my State by helping young people, helping the disadvantaged.” In other words, she's got a good heart.

And she took that heart to Washington and helped us pass the No Child Left Behind Act. Let me tell you something about the No Child Left Behind Act. It said, we're going to increase money, particularly for poor students. I think that's a good use of money. I really do. But instead of just accepting mediocrity in our schools, we said, “We're going to challenge the soft bigotry of low expectations.” Here's the truth. In some schools, it's just as easy to pass somebody who looks hard to educate along. “If you're at such-and-such an age, you're supposed to be here; we'll just move you there.”

See, Heather and I believe every child can learn, no matter if you're—how you were raised, no matter your heritage. We believe you can learn to read. You know, if your mom and dad don't speak English as their primary language, we still believe you can learn. And not only we believe you can learn, we expect the school to teach you to learn. That's what we want. We expect the schools to teach you how to read and write and add and subtract.

And so we worked to raise the standards and said to States, “You measure, because we want to know.” We want to know early,

before it's too late. The No Child Left Behind Act that Heather was a strong supporter of has helped change America for the better. It says, if we find a child struggling with reading early, we're going to make sure there's extra money to help that child, because we don't want one child left behind in America.

There is an achievement gap in America. There really is. When you look at the fourth grade results, there's a—the Anglo students are here, and Latino students are here, and the African American—that's not right. That's not what this country is all about. This country is about equal opportunity. This country is about making sure every child, no matter what her—his or her background is, gets a great education. And the No Child Left Behind Act is challenging mediocrity, and it's challenging failure, and that achievement gap is closing. And Heather Wilson gets credit for being a strong supporter of good schools in New Mexico.

You know, there's a lot of problems that rise—rise up for a State like New Mexico. You've got very important labs, and these labs make a difference for the United States of America. But it's not a given the labs will be there. You need people in the

Congress that understand how to get things done.

It seems like to me the people of this district would want somebody to be able to pick up the phone and call the President of the United States and have the President of the United States answer the phone. I'm close to Heather, you know. As I told you, she's independent. But that doesn't mean I don't hold her in the highest—highest regard and deep respect, which I do. I love her integrity. And when she calls me on the phone, I answer. And guess what—guess what she's generally talking about? The people of this congressional district. She loves of the people of this district. She's serving the people of this district. And I urge the people of this district, for their own sake, for their own good, and for the good of the United States of America, to send Heather Wilson back to the United States Congress.

Thanks for coming. God bless.

NOTE: The President spoke at 4:40 p.m. at the Hyatt Regency Albuquerque. In his remarks, he referred to Allen Weh, chairman, Republican Party of New Mexico; Prime Minister Nuri al-Maliki and former President Saddam Hussein of Iraq; and Prime Minister Junichiro Koizumi of Japan.

## The President's Radio Address *June 17, 2006*

Good morning. Earlier this week, I traveled to Baghdad to visit the capital of a free and democratic Iraq. It was an incredible feeling to stand in the cockpit of Air Force One and watch the pilot steer us in toward Baghdad.

After we landed, I had the pleasure of meeting with our dedicated Embassy staff and intelligence officers serving far from home under dangerous circumstances. And I was honored to meet with some of our

troops, including those responsible for bringing justice to the terrorist Zarqawi. It was a privilege to shake their hands, look them in the eye, and tell them how much the American people appreciate their daily courage and how much we appreciate the sacrifices that they and their families are making.

On my trip, I also met with the new Iraqi Prime Minister Maliki, and I was able to see firsthand his strong character and

his determination to succeed. We held a joint meeting of our two Cabinets, with members of my Cabinet participating by video teleconference from Camp David. The Prime Minister briefed us on his plan to take immediate steps in three key areas: improving security; building up Iraq's economy so Iraqis can see real progress in their lives; and reaching out to the international community to secure support for Iraq's new Government. Then we discussed how my administration can help the Prime Minister accomplish these vital objectives.

His top priority is securing Baghdad, so coalition and Iraqi forces have launched Operation Together Forward, a joint effort to restore security and the rule of law to high-risk areas of the city. To help the Prime Minister improve security, we will continue embedding coalition transition teams in Iraqi Army and police units, and we will help the new Iraqi Ministers of Defense and Interior improve their command and control, root out corruption, and investigate and punish human rights violations. We will also support the Prime Minister as he works to rein in illegal militias, build a judicial system that will provide equal justice to all, and promote reconciliation among the Iraqi people.

To aid the Prime Minister in revitalizing Iraq's economy, we will send additional experts to help the Iraqi Government develop an economic framework that will promote job creation and opportunity for all Iraqis. We will also help the Prime Minister increase oil and electricity production by working together on ways to protect key infrastructure from attacks and to quickly restore oil and electricity production when attacks do occur.

Finally, America will help the Prime Minister engage the international community in Iraq's success. We will encourage other nations to fulfill the monetary pledges they have already made to help the new Iraqi Government succeed. We will also support the Prime Minister's efforts to forge a new international compact. Under

this compact, Iraq will take a series of steps in the political, economic, and security areas, and in return, the international community will provide Iraq with more robust political and economic support.

During my trip, I was impressed with the Prime Minister, the team he has assembled, and the plan he has set for his Government. I appreciate his determination and the determination of his Cabinet to make his agenda work. I told them that the future of Iraq is in their hands. And I told them that America is a nation that keeps its word, and America will stand with them as we work toward our shared goal: a free Iraq that can govern itself, sustain itself, and defend itself. By seizing this moment of opportunity, we will defeat our common enemies and build a lasting democracy in the heart of the Middle East, and that will make Americans, Iraqis, and the world more secure.

I traveled to Baghdad to personally show our Nation's commitment to a free Iraq, because it is vital for the Iraqi people to know with certainty that America will not abandon them after we have come this far. The challenges that remain in Iraq are serious. We face determined enemies who remain intent on killing the innocent, and defeating these enemies will require more sacrifice and the continued patience of our country. But our efforts in Iraq are well worth it. The mission is necessary for the security of our country, and we will succeed.

Thank you for listening.

NOTE: The address was recorded at 7:10 a.m. on June 16 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on June 17. The transcript was made available by the Office of the Press Secretary on June 16 but was embargoed for release until the broadcast. In his address, the President referred to senior Al Qaida associate Abu Musab Al Zarqawi, who was killed in Baquba, Iraq, on June 7; and Prime Minister Nuri al-Maliki, Minister of Defense Abd al-Qadir al-Mufriji,

and Minister of the Interior Jawad al-Bulani also released a Spanish language transcript of Iraq. The Office of the Press Secretary of this address.

## Commencement Address at the United States Merchant Marine Academy in Kings Point, New York

June 19, 2006

*The President.* Thank you for the warm welcome, if you know what I mean. [Laughter] Admiral Stewart, Secretary Mineta, Members of the United States Congress, Academy staff and faculty, distinguished guests, proud family members, and most importantly, the class of 2006: I'm honored to be the first President to address the United States Merchant Marine Academy. I know that a Presidential visit to Kings Point has been a long time in coming, and, Admiral, I hope it's worth the wait. [Laughter]

This is a proud moment for the class of 2006. You have worked hard for this day. You sweated through the hardest indoc in Academy history; you braved the Jamaican beef patties of Delano Hall. [Laughter] You spent a year when your classroom was a ship and your campus the seven seas. You've made it through endless drills on the Grinder; you've survived the restriction musters that come with missing the train back from Manhattan. This fall, your football team brought home the Secretaries Cup by beating the Coast Guard. You've rung the bell outside Wiley Hall. And the words etched in your class ring affirm your commitment to teamwork: "Not for you, not for me, but for us." Your parents are proud of you; your teachers are proud of you; and this Academy is proud of you. On behalf of the American people, I congratulate you on a fine achievement, and I thank you for choosing to serve the United States of America.

This morning I flew here on Air Force One with my friend Andy Card. You might remember Andy; he was my former chief

of staff, and he attended this Academy in the 1960s. It just so happens, when he was a plebe, he was stuffed in a duffel bag and run up the flagpole. [Laughter] I know he appreciates the much warmer welcome he received here today. [Laughter]

Secretary Card also reminded me that the President of the United States has the authority to lift all demerits and restrictions. So I bring you a graduation present. [Laughter] In keeping with the longstanding tradition at our Nation's service academies, I hereby absolve all midshipmen who are on restriction for minor conduct offenses; I leave it to Admiral Stewart to define exactly what "minor" means. [Laughter]

Life at this Academy is demanding, and it is meant to be. America is a great maritime power, and our merchant marine has a vital role to play. In times of peace, the merchant marine helps ensure our economic security by keeping the oceans open to trade. In times of war, the merchant marine is the lifeline of our troops overseas, carrying critical supplies, equipment, and personnel. For more than six decades, the mission of this Academy has been to graduate highly skilled mariners to serve America's economic and national security needs. To train you for these responsibilities, this Academy sharpens your mind; it strengthens your body and builds up your character. The Academy has made you strong and instilled respect for the Kings Point motto: *Acta Non Verba*, "Deeds, Not Words."

"Deeds, Not Words" was the hallmark of this Academy in World War II. In the

early years of the war, America's efforts to supply our allies in Europe were threatened by the U-boats that were sinking American ships faster than we could build them. The need to arm and defend our merchant ships was urgent, and King Pointers answered the call. And one of them was an 18-year-old named Edwin O'Hara, whose statue stands not far from here. In September 1942, Cadet O'Hara was serving on the USS *Stephen Hopkins* when it came under attack from two Nazi raiders. After the entire guncrew of the *Hopkins* was killed by enemy fire, O'Hara singlehandedly served and fired the last five shells in the ready box, scoring direct hits on the German warship *Stier*. Cadet O'Hara was mortally wounded in the action, but not before he helped send the *Stier* to the bottom of the South Atlantic.

Edwin O'Hara is one of 142 Academy graduates who gave their lives in the Second World War. Today, Kings Point is still the only one of our five service academies that sends its students into the theaters of war—and for that reason, it is the only Academy authorized to fly a battle standard.

"Deeds, Not Words" was your response on the morning of September the 11th, 2001. From this campus, every man and woman could see the black smoke rising from the Twin Towers. Within hours, your midshipmen were working side by side with the Coast Guard and Marine Division of the New York City Fire Department. Over the next 9 days, you moved firefighters and police and emergency response teams into Ground Zero. You moved tons of food and water and supplies. The heroic response to that terrible day showed the spirit of America and the spirit of this fine Academy, and I thank you for your service.

"Deeds, Not Words" defines the Academy's role in the global war on terror. Your cadets are forward-deployed in the Middle East, where they're supporting operations in Afghanistan and Iraq. Your Global Maritime and Transportation School is providing

advanced training in areas from marine engineering to port security for military units like the Navy Seabees and Surface Warfare Officers. And your graduates are serving our Nation in every branch of our Armed Services, as sailors projecting American combat power across the Earth, as marines and soldiers leading platoons from Khandahar to Tikrit, as Coast Guard officers securing our homeland, and as airmen delivering justice to terrorists hiding in safe houses and caves. In the global war on terror, the men and women of this Academy are making a difference on every front, and the American people are grateful for your service.

To win the war on terror, we will continue to build and strengthen ties with our friends and allies across the world. America's alliance with Europe is a key pillar of our strategy for victory. And tomorrow Laura and I will depart on my 15th trip to Europe since I have taken office. This visit comes at a critical moment for America and our allies. We have important decisions to make that will affect the prospects for peace and prosperity across the world. And today I'm going to talk to you about the objectives I will pursue on this important trip.

My first stop will be Vienna, where I will attend the annual summit between the United States and the European Union. And then I'm going to travel to Budapest to commemorate the 50th anniversary of the Hungarian Revolution. And I'm really looking forward to the trip. Americans have strong ties to the European people. We have warm friendships with European nations. And on my trip this week, we will strengthen our close and growing partnership with the European Union.

America's partnership with the European Union grows from sturdy roots—our common love of freedom and our commitment to democratic principles. Those of you graduating today have grown up with a Europe whose major powers are at peace with one another. Yet in the sweep of history,

this is a dramatic change. There was a time in the history when Europe was the site of bloody conflicts and bitter rivalries. As recently as the last century, Europe was the site of two devastating world wars. Now, because generations have sacrificed for liberty and built strong democracies, the nations of Europe are partners in common union and neighbors on a continent that's whole, free, and at peace.

A free and peaceful Europe is one of the great achievements of the past century. My generation and yours will be judged by what comes next. So America and Europe must work together to advance freedom and democracy. We will cooperate to expand trade and prosperity. We will strengthen our efforts to combat terrorism. And we will stand together to stop the proliferation of weapons of mass destruction.

Our work begins with a common commitment to extending the reach of freedom and democracy. On Prime Minister Blair's recent visit to America, he said, "The governments of the world do not all believe in freedom, but the people of the world do." As people who have secured our own freedom, America and Europe have a duty to help others do the same. We're fulfilling that duty together in Belarus, where we support the reformers seeking to erase the stain of dictatorship from Europe. We're fulfilling that duty together in Georgia and the Ukraine, where we stand with brave people striving to consolidate democratic gains. We're fulfilling that duty together in the Balkans, where people who have suffered so much have made a choice to live in liberty and should be welcomed as a part of Europe in the 21st century.

As we saw on September the 11th, 2001, the actions of a repressive regime thousands of miles away can have a direct impact on our own security. In this new century, the loss of freedom anywhere is a blow to freedom everywhere. And when freedom advances, people gain an alternative to violence, and the prospects for peace are multiplied, and all nations be-

come more secure. So America and Europe have launched bold initiatives to aid democratic reformers across the world, especially in the broader Middle East. We've worked with the United Nations to end the Syrian occupation of Lebanon, and we will not rest until the Lebanese people enjoy full independence. We're determined to end the conflict in the Holy Land and bring about a solution with two democratic states, Israel and Palestine, living side by side in peace and security.

Our shared commitment to extending freedom and democracy is clear in Afghanistan and Iraq. Together America and Europe have helped bring about a historic transformation in those countries. Two of the world's most dangerous regimes have been removed from power, and the world is better off for it. Al Qaida's training camps have been closed in Afghanistan. Al Qaida's leader in Iraq has been killed. Two violent dictatorships are being replaced with growing democracies that answer to their people, that respect their neighbors, and that serve as allies in the war on terror. Afghanistan and Iraq are taking their rightful place in the free world, and America and Europe must work tirelessly to help them succeed.

One week ago today, I left Camp David and flew to the capital of a free and democratic Iraq. In Baghdad, I met with Prime Minister Maliki and members of his Cabinet. The Prime Minister is a man of strong character. He has a clear and practical plan to lead his country forward. He briefed me on the immediate steps he's taking to improve security in Baghdad, to build up Iraq's economy, and to reach out to the international community.

The formation of a new Government, successful raids on Al Qaida targets in Iraq have created a moment of opportunity. Iraqis must seize this moment, and we will help them succeed. I assured the Prime Minister that when America gives a commitment, America will keep its word. By

helping Prime Minister Maliki's new Government achieve its aims, we will expand opportunity for all the Iraqi people, we will inflict a major defeat on the terrorists, and we will show the world the power of a thriving democracy in the heart of the Middle East.

A free and sovereign Iraq requires the strong support of Europe. And some of the most important support for Iraqis is coming from European democracies with recent memories of tyranny, Poland and Hungary and Romania and Bulgaria and the Czech Republic and Slovakia, Georgia, Ukraine, Latvia, Lithuania, and Estonia. Others in Europe have had disagreements with our decisions on Iraq. Yet we've all watched the Iraqi people stand up for their freedom, and we agree that the success of a democratic government in Baghdad is vital for the Iraqis and for the security of the world.

The European Union has been the world's most—among the world's most generous financial donors for reconstruction in Iraq. And Europe and America will encourage greater international support to help Prime Minister Maliki implement his plans for recovery. The international community has pledged about \$13 billion to help this new Government. Yet only \$3½ billion has been paid. This is a critical time for Iraq's young democracy, and assistance from the international community will make an immediate difference. All nations that have pledged money have a responsibility to keep their pledges, and America and Europe will work together to ensure they do so.

America and Europe also stand together in our determination to widen the circle of prosperity. We're cooperating on projects to develop clean, secure energy sources, especially alternatives to fossil fuel. On the continent of Africa, we're working to strengthen democracy, relieve debt, fight disease, and end the genocide in Darfur. At the World Trade Organization, we're working to lower trade barriers by con-

cluding the Doha talks. America has made a bold proposal to eliminate trade-distorting agricultural subsidies and tariffs, and I call on Europe to join us, so we can set an example of free and fair trade for the world. By spreading prosperity, America and Europe will create new opportunities for our people to help alleviate poverty and deliver hope and dignity and progress to millions across the world.

Together America and Europe are laying the foundations for a future of peace and prosperity. And yet the terrorists are threatening this progress. So at our summit this week, we'll take new steps to strengthen our cooperation on counterterrorism, to improve transportation security, and to crack down on terrorist financing. And we will renew our commitment to support the voices of peace and moderation in the Muslim world, to help provide a hopeful alternative to radicalism. America and Europe must stand united in this war on terror. By being steadfast and by being strong, we will defeat the enemies of freedom.

America and Europe are also united on one of the most difficult challenges facing the world today, the behavior of the regime in Iran. The leaders of Iran sponsor terror, deny liberty and human rights to their people, and threaten the existence of our ally, Israel. And by pursuing nuclear activities that mask its efforts to acquire nuclear weapons, the regime is acting in defiance of its treaty obligations, of the United Nations Security Council, and of the International Atomic Energy Agency. Nuclear weapons in the hands of this regime would be a grave threat to people everywhere.

I've discussed the problem of the Iranian regime extensively with leaders in Europe, particularly in Great Britain and Germany and France. I've also consulted closely with the Presidents of Russia and China. We've all agreed on a unified approach to solve this problem diplomatically. The United States has offered to come to the table with our partners and meet with Iran's representatives, as soon as the Iranian regime

fully and verifiably suspends its uranium enrichment and reprocessing activities. Iran's leaders have a clear choice. We hope they will accept our offer and voluntarily suspend these activities, so we can work out an agreement that will bring Iran real benefits. If Iran's leaders reject our offer, it will result in action before the Security Council, further isolation from the world, and progressively stronger political and economic sanctions.

I've a message for the Iranian regime: America and our partners are united. We have presented a reasonable offer. Iran's leaders should see our proposal for what it is, an historic opportunity to set their country on a better course. If Iran's leaders want peace and prosperity and a more hopeful future for their people, they should accept our offer, abandon any ambitions to obtain nuclear weapons, and come into compliance with their international obligations.

I've a message for the Iranian people: The United States respects you and your country. We admire your rich history, your vibrant culture, and your many contributions to civilization. When Cyrus the Great led the Iranian people more than 2,500 years ago, he delivered one of the world's first declarations of individual rights, including the right to worship God in freedom. Through the centuries, Iranians have achieved distinction in medicine and science and poetry and philosophy and countless other fields.

In the 21st century, the people of Iran, especially the talented and educated youth, are among the world's leaders in science and technology. Iranians have a large presence on the Internet and a desire to make even greater progress, including the development of civilian nuclear energy. This is a legitimate desire. We believe the Iranian people should enjoy the benefits of a truly peaceful program, to use nuclear reactors to generate electric power. So America supports the Iranian people's rights to develop

nuclear energy peacefully, with proper international safeguards.

The people of Iran, like people everywhere, also want and deserve an opportunity to determine their own future, an economy that rewards their intelligence and talents, and a society that allows them to pursue their dreams. I believe Iranians would thrive if they were given more opportunities to travel and study abroad and do business with the rest of the world. Here in the United States, Iranian Americans have used their freedom to advance in society and make tremendous contributions in areas from business to medicine to academics.

To help provide more opportunities for the people of Iran, we will look for new ways to increase contact between Americans and Iranians, especially in education and culture, sports, and tourism. We'll provide more than \$75 million this year to promote openness and freedom for the Iranian people. These funds will allow us to expand and improve radio and television broadcasts to the people of Iran. These funds will support Iranian human rights advocates and civil society organizations. And these funds will promote student and faculty exchanges, so we can build bridges of understanding between our people.

Americans believe the future of Iran will be decided by the people of Iran, and we believe that future can be one of progress and prosperity and achievement. We look forward to the day when our nations are friends and when the people of Iran enjoy the full fruits of liberty and play a leading role to establish peace in our world.

The advance of freedom is the calling of our time, and the men and women of the United States Merchant Marine Academy are answering that call. In a few moments, you will walk through Vickery Gate and leave the Academy that's been your home. You leave with a bachelor's degree, a license as a merchant marine officer, and a commission in one of the branches of our Armed Services. And you leave with

something else: The great truth that duty and honor and courage are not just words; they are virtues that sustain a free people, people who are determined to live under self-government. They're the virtues that will be your anchor and compass in a life of purpose and service. These are the virtues that America demands of those entrusted with leading her sons and daughters in uniform. And these are the virtues that America has come to expect from the blue and gray.

We see the devotion to duty and honor and country in the life of one of this Academy's finest graduates, Aaron Seesan. Aaron was an Ohio boy who grew up dreaming of being a soldier. He brought that dream with him to this Academy, and when he walked through these gates 3 years ago, he carried on his shoulders the gold bar of a second lieutenant in the United States Army. After entering the Army, Lieutenant Seesan trained as a combat engineer. And he was serving at Fort Lewis, Washington, when a group of soldiers who were based at that fort were struck by a suicide bomb in Iraq. Two of the men were killed. And that's when this young lieutenant volunteered to go to Iraq to take the place of a wounded platoon leader.

When Lieutenant Seesan arrived in Iraq, some of his fellow soldiers wondered, "What was the Army thinking?" His platoon sergeant said, "I didn't know what the hell a merchant marine graduate was doing here in the 73d Engineering Company." The sergeant quickly changed his mind when he saw Lieutenant Seesan in action, taking care of his men as they patrolled the most dangerous roads in and around Mosul. In May 2005, he was leading a routine sweep of a city street when a bomb exploded and hit the fuel tank of his Humvee. Those who were with him recall his last words: "Take charge, Sergeant Arnold, and take care of the others."

He died on May 22, on National Maritime Day. For his act of bravery, Lieuten-

ant Seesan was awarded the Bronze Star. And the campus memorial that bears his name will remind all who come here of Kings Point commitment to service above self.

Aaron Seesan gave his life freely. While still in high school, he wrote a poem that now seems prophetic. He wrote, "Mourn not my terrible death, but celebrate my cause in life." Aaron's cause in life was freedom, and as you take your place as officers in our Armed Forces, I ask you to celebrate the freedom for which Aaron fought and died.

America has invested in you, and she has high expectations. My call to you is this: Trust your instincts, and use the skills you were taught here to give back to your Nation. Do not be afraid of mistakes; learn from them. Show leadership and character in whatever you do. The world lies before you. I ask you to go forth with faith in America and confidence in the eternal promise of liberty.

In all that lies ahead, I wish you fair winds and following seas. As I look out at the men and women before me, I will leave here knowing that you will bring honor to our Nation and to this Academy that has prepared you for the challenges you will face.

May God steer thee well, Kings Point.  
And may God bless America.

NOTE: The President spoke at 10:07 a.m. on the Captain James Harvey Tomb Field at Brooks Stadium. In his remarks, he referred to Vice Adm. Joseph D. Stewart, USMS, superintendent, U.S. Merchant Marine Academy; Prime Minister Tony Blair of the United Kingdom; senior Al Qaida associate Abu Musab Al Zargawi, who was killed in Baquba, Iraq, on June 7; Prime Minister Nuri al-Maliki of Iraq; President Vladimir V. Putin of Russia; and President Hu Jintao of China.

## Message to the Congress on Blocking Property of Certain Persons Undermining Democratic Processes or Institutions in Belarus

June 19, 2006

*To the Congress of the United States:*

Consistent with subsection 204(b) of the International Emergency Economic Powers Act, 50 U.S.C. 1703(b)(IEEPA), and section 301 of the National Emergencies Act, 50 U.S.C. 1631 (NEA), I hereby report that I have issued an Executive Order (the “order”) blocking the property of persons in connection with the situation in Belarus. In that order, I declared a national emergency with respect to the policies and actions of certain individuals in Belarus, to address the unusual and extraordinary threat to the national security and foreign policy of the United States posed by the actions and circumstances involving Belarus, as described below. This action follows the issuance of Proclamation 8015 of May 12, 2006, “Suspension of Entry as Immigrants and Nonimmigrants of Persons Responsible for Policies or Actions That Threaten the Transition to Democracy in Belarus,” in which I determined that it is in the interest of the United States to suspend the entry into the United States of members of the government of Alyaksandr Lukashenka and others who formulate, implement, participate in, or benefit from policies or actions, including electoral fraud, human rights abuses, and corruption, that undermine or injure democratic institutions or impede the transition to democracy in Belarus.

The United States, the European Union, and other allies and partners around the world have repeatedly expressed support for the democratic aspirations of the Belarusian people and condemned the Belarusian government’s human rights abuses, assaults on democracy, and corruption. The Belarusian authorities have resorted to intense repression in an attempt to preserve their power, including the disappearances of four regime critics in 1999

and 2000, which the authorities have failed to investigate seriously despite credible information linking top government officials to these acts.

The undemocratic 2006 presidential election was only the latest example of the Belarusian government’s disregard for the rights of its own citizens. Hundreds of civic and opposition activists were arrested—and many beaten—both before and after the vote for exercising their rights. The authorities forcibly dispersed peaceful post-election demonstrations. There is simply no place in a Europe whole and free for a regime of this kind.

The order also takes an important step in the fight against public corruption, which threatens important United States interests globally, including ensuring security and stability, the rule of law and core democratic values, advancing prosperity, and creating a level playing field for lawful business activities. As noted in Proclamation 8015, the persistent acts of corruption by Belarusian government officials in the performance of public functions has played a significant role in frustrating the Belarusian people’s aspirations for democracy. This order authorizes the Secretary of the Treasury to block the assets of senior-level officials of the Government of Belarus, their family members, or those closely linked to such officials engaged in such corruption.

Thus, pursuant to IEEPA and the NEA, I have determined that these actions and circumstances constitute an unusual and extraordinary threat to the national security and foreign policy of the United States, and I have issued the order to deal with this threat.

The order blocks the property and interests in property in the United States, or in the possession or control of United States persons, of the persons listed in the

Annex to the order, as well as of any person determined by the Secretary of the Treasury, after consultation with the Secretary of State:

- to be responsible for, or to have participated in, actions or policies that undermine democratic processes or institutions in Belarus;
- to be responsible for, or to have participated in, human rights abuses related to political repression in Belarus;
- to be a senior-level official, a family member of such official, or a person closely linked to such an official who is responsible for or has engaged in public corruption related to Belarus.

The order also authorizes the Secretary of the Treasury, after consultation with the Secretary of State, to designate for such blocking any person determined to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services in support of, the activities listed above or any person listed in or designated pursuant to the order. I further authorized the Secretary of the Treasury, after consultation with the Secretary of State, to designate for such blocking any person determined to be owned

or controlled by, or acting or purporting to act for or on behalf of, directly or indirectly, any person listed in or designated pursuant to the order. The Secretary of the Treasury, after consultation with the Secretary of State, is also authorized to remove any persons from the Annex to the order as circumstances warrant.

I delegated to the Secretary of the Treasury, after consultation with the Secretary of State, the authority to take such actions, including the promulgation of rules and regulations, and to employ all powers granted to the President by IEEPA, as may be necessary to carry out the purposes of the order. All executive agencies are directed to take all appropriate measures within their authority to carry out the provisions of the order.

The order, a copy of which is enclosed, was effective at 12:01 a.m. eastern daylight time on June 19, 2006.

GEORGE W. BUSH

The White House,  
June 19, 2006.

NOTE: The Executive order is listed in Appendix D at the end of this volume.

## Message to the Congress on Continuation of the National Emergency With Respect to Weapons-Usable Fissile Material in the Russian Federation *June 19, 2006*

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent the enclosed notice to the *Federal Register* for publication,

stating that the emergency declared with respect to the accumulation of a large volume of weapons-usable fissile material in the territory of the Russian Federation is to continue beyond June 21, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on June 20, 2005 (70 FR 35507).

It remains a major national security goal of the United States to ensure that fissile material removed from Russian nuclear weapons pursuant to various arms control

and disarmament agreements is dedicated to peaceful uses, subject to transparency measures, and protected from diversion to activities of proliferation concern. The accumulation of a large volume of weapons-usable fissile material in the territory of the Russian Federation continues to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. For this reason, I have determined that it is necessary to continue the national emergency declared with re-

spect to the accumulation of a large volume of weapons-usable fissile material in the territory of the Russian Federation and maintain in force these emergency authorities to respond to this threat.

GEORGE W. BUSH

The White House,  
June 19, 2006.

NOTE: The notice is listed in Appendix D at the end of this volume.

## Remarks at the President's Dinner June 19, 2006

Thank you all very much. Thank you. Please be seated. Thanks for the warm welcome.

Jim, thanks very much for your introduction. Thanks for your leadership for this incredibly successful dinner. Thank you all for coming.

I told Laura, I said, "I'm going to the President's Dinner." She said, "Cook it yourself." [Laughter] She's doing great, by the way. She is a—I'm a lucky man that she said yes when I asked her to marry me. She is a fabulous mom, a great wife, and she's doing a wonderful job as the First Lady of the United States.

She sends her best. She, like me, understands that we're going to keep the House and we're going to keep the Senate thanks to you all. And there's a reason why we got to keep the House and the Senate. We got a fabulous Speaker and leadership team in the United States House of Representatives and a great leader in Bill Frist in the United States Senate.

We're here for a reason. We're here to solve problems and not pass them to future Congresses and future Presidents. We're making a difference for the people of the United States of America. When we see problems, we solve them. The Democrats

are good talkers; we're good doers. We get the job done. We understand the stakes to the world in which we live. We understand the most important responsibility we have in Washington is to defend the people of the United States, and that's exactly what we're doing.

I appreciate the members of my Cabinet here tonight. Thank you all for coming. Don't stay too long; you got to get back to work. [Laughter]

I'm thrilled that Speaker Denny Hastert is here, and Leader Bill Frist. [Applause] I want to thank the—must have a lousy seat. [Laughter] I want to thank Elizabeth Dole and Lamar Alexander. I want to thank Congressman Tom Reynolds. I want to thank Mitch McConnell. I want to thank John Boehner. I want to thank all the Members of the House and the Senate who've joined us tonight. I appreciate your service to our country, and I'm proud to serve with you.

These are historic times in which we live, and these are times that require people to make hard decisions. I'm proud to be serving with people, here in Washington, DC, who make decisions on what's right, not what the focus groups say and what the polls say. And what is right is doing

what it takes to defend the United States of America from attack again.

I'm proud to be serving with people who understand the lessons of September the 11th. And here's what I've learned. I've learned that we must look at the world the way it is, not the way we hope it is. I've learned that in order to do our duty to protect the American people, we must understand the nature of the enemy we face. We face coldblooded killers who would like nothing more than to strike the United States of America again, and the only way to defeat them is to stay on the offense and bring them to justice before they hurt America again.

When the President speaks, he better mean what he says, and when I said, "If you harbor a terrorist, you're equally as guilty as the terrorist," I meant exactly what I said. And when the Taliban refused to cough up Al Qaida, we acted. In the United States Congress, we're strong supporters of upholding that doctrine. And as a result of our action, America is safer, Al Qaida no longer has training camps, and 25 million people now live in freedom.

I'm proud to be working with a Speaker and the leader of the Senate and Republican Members of the House and the Senate who understand the stakes of the world in which we live. I am proud to be working with clear-eyed realists who understand that we can give no quarter to an enemy that would like to do us harm again.

One of the lessons of September the 11th is that when this country sees a threat, we must deal with it before it fully materializes. When a lot of us were coming up, we thought oceans could protect us from harm, but the lesson of September the 11th is, oceans can no longer protect the United States.

The best way to protect the United States is to take care of threats before they come to hurt us. In Iraq, Republicans and Democrats saw a threat. We saw Saddam Hussein who terrorized his neighbors, Saddam Hussein who killed his own people,

a Saddam Hussein who used weapons of mass destruction, a Saddam Hussein who had funded terrorists, Saddam Hussein who defied U.N. resolution after U.N. resolution. And when he defied his last U.N. resolution, we removed him from power, and the world is better off for it.

And I'm proud to be serving with Members of the United States Congress and the United States Senate who stand by their convictions, who don't try to change history in the midst of hard work. And that's what this world requires; it requires hard work by the United States of America. And right now we're doing hard work in Iraq. Iraq is the central front on the war on terror. And it's important we succeed.

You know I just recently went to Baghdad, had an interesting experience there. I met the new Prime Minister and the new Cabinet of a unity government. And here's what I saw: I saw people dedicated to living out the—to living out the desires of the 12 million people who went to the polls in defiance of the car bombers and the killers. I saw people from different groups in that country coming together to say, "We want to succeed." And I saw people wondering whether the United States would have the nerve to stay the course and help them succeed.

I went to Iraq, and I said, "It's up to you. It's up to you to seize this moment." But I also told them this, "When America gives its word, America will keep its word." And we will help this good country of Iraq become a thriving democracy in the heart of the Middle East.

Now, we're going to win the war on terror if we don't lose our nerve. We will win the war on terror by bringing the terrorists to justice. We will win the war on terror by defeating the terrorists in Iraq, and we will win the war on terror by defeating their hateful ideology with freedom.

You see, I want you to understand something loud and clear. I make my decisions based upon principles that just aren't going to change, and I'm proud to be standing

with Members—Republican Members of the House and Senate who stand on the very same principles. We believe in the universality of freedom. We believe everybody desires to be free. And we believe that the spread of freedom will yield the peace this world wants. It is important to have Members of the United States Congress who will not wave the white flag of surrender in this war on terror.

There is a debate here in Washington, and there should be. And I welcome the debate, and we should welcome the debate. But I want to remind you of the consequences if those who want to withdraw from Iraq happen to prevail in the debate. An early withdrawal would be a defeat for the United States of America. An early withdrawal would embolden the terrorists. Talk about a deadline before we've done the job sends chills throughout the spines of Iraqi citizens who are wondering whether or not the United States has the capacity to keep its word.

An early withdrawal would embolden Al Qaida and bin Laden. An early withdrawal, before we completed the missions, would say to the United States military, "Your sacrifices have gone to vain." There will be no early withdrawal so long as we run the Congress and occupy the White House.

I want to thank the Members of Congress, Republican Members of Congress, for supporting the United States military. It's really important for our military to know that the United States of America supports them in Iraq. I'll tell you one of the things that just struck me when I was there in Baghdad. I looked in the eyes of our civilians who were there and I looked in the eyes of our troops, and I saw brave and honorable and decent and courageous souls. I saw the best of America. And this Congress and this White House will give them what it takes to win the war on terror.

And here at home, Republicans in the House and the Senate, working with the White House, have dealt with some pretty tough times for our economy. I know it

seems like a long time ago, but it wasn't all that long ago that we had to deal with a recession and a stock market correction and corporate scandals and attacks on our country and two wars and two major invasions as a part of the war on terror and natural disasters and high energy prices. Yet instead of talking, we acted, and we acted on principle.

We Republicans believe that when you have more of your own money in your pocket to save, spend, or invest, it can overcome tough economic times. We believe that we ought to trust you with your money, and not trust Government on how to spend your money. And as a result of our progrowth economic policies, this economy is strong, and we intend to keep it strong.

Our economy grew at 3.5 percent last year, and that's faster than any other major industrialized nation in the world. We added 5.3 million new jobs since August of 2003. The national unemployment rate is 4.6 percent. That's below the average for every decade since the 1960s. The entrepreneurial spirit is strong in America because of Republican progrowth economic policies.

And there is a clear record on this issue. And as people start going to the polls next November, I want them to remember who cut the taxes and who was against the tax cuts. Every single tax cut was opposed by the Democrat leadership, every tax cut: tax cuts for child—children, families with children; tax cuts to get rid of the death tax; tax cuts on capital gains and dividends; tax cuts for everybody who pays taxes; tax cuts for small businesses. We're the party of tax cuts, and we're the party of economic growth. And we intend to keep it that way by making the tax cuts permanent.

If you want your taxes raised, vote Democrat. If you want your taxes low, keep Denny Hastert and Bill Frist as leaders of the House and the Senate.

Oh, you hear all kinds of excuses for raising taxes here in Washington. The classic is, "We need to raise the taxes to balance the budget." That's not how Washington works. I've been here 5½ years; I can tell you how it works. See, they're going to raise your taxes, and then they'll figure out new ways to spend your money.

The best way to balance the budget is to be fiscally wise with your money and to keep progrowth economic policies in place, which is exactly what we're going to do. We're on our way to cutting this deficit in half by 2009, because our economy is strong as a result of low taxes and because we're working together to make sure we're wise about how we spend your money. I'll tell you one thing about spending your money, though. So long as we have got any soldier in harm's way, I look forward to working with the Congress to make sure he or she gets all the equipment, all the training, all the pay necessary to win this war on terror.

We're willing to deal with tough issues, and we got a tough issue with immigration. This is an important debate for the United States of America, but I want all of us to remember one thing: We are a nation of immigrants, and we will treat people with respect, no matter what country they're from.

The American people expect us to secure our borders, and we will. We will increase the number of Border Patrol agents, and I want to thank the Congress for passing strong measures to do just that. We will provide new technologies for our borders, to help our Border Patrol agents. We will end catch-and-release, so when we catch somebody trying to sneak in our country, they're going to go back home. We will send a clear message to people trying to sneak across our borders: The United States will secure our borders. But I also want you to understand that to secure our borders, we need a comprehensive immigration plan.

We need a plan that says, instead of trying to sneak across our borders, you can come and work in our borders—in our country, on a temporary basis, for jobs Americans aren't doing. We need a temporary-worker plan in order to make sure this border of ours is secure. We need to give those temporary workers a chance to come here and then go back home after they work, and give them a card, see. They need to have a tamper-proof card. And that's how you begin to have true enforcement.

It's against the law to hire somebody who's here—who is illegally here, and we intend to make sure we uphold the laws against employers who are hiring illegal immigrants. We oppose amnesty. Amnesty is wrong for the United States of America. Amnesty sends the wrong signal to people here by—playing by the rules. On the other hand, it is unrealistic to expect the United States of America can deport 11 million people. And so my plan is, is that if you pay your fine, pay your dues, learn English, you can get at the end of the citizenship line, not ahead of those who are here legally.

And finally, during this debate I want us to remember that this country has had an amazing capacity to assimilate people from different walks of life, and so a part of a comprehensive plan will not only be to secure our borders but to have an orderly work plan to be responsible on how we treat people who have been here—but as well as to help people learn English and learn the customs and habits of the United States of America.

I love a country where someone can go from picking onions to owning the grocery store, when somebody can go from sweeping the floor of an office to running the office. I love a country where somebody can come and work in a small business and own the small business. America is one Nation under God, and the Republican Party must always stand for that.

You know, ours is the party that came here to Washington, DC, and saw a Medicare system that wasn't working. The Democrats were great about talking about making Medicare work; they could never get anything done. And we did. People say, "What did you care about Medicare for?" I cared about it because the Government has made a commitment to the elderly to provide good health care. And once—my view is, once you make a commitment, you got to honor the commitment. And I saw a Medicare system that wasn't working, and so did a lot of the Republicans in the United States Congress.

I'll give you an example of why it wasn't working. We had a Medicare system that would pay \$25,000 for surgery but not one single dime for the prescription drugs that could prevent the surgery from being needed in the first place. The system was old. It was tired. It wasn't working. And Republicans came together to make sure we had a Medicare system that delivered modern medicine for our seniors. And if you're a poor senior in America, we give you help. The days from choosing between an electricity bill and medicine are over, thanks to the Republican Party.

There is more work to be done when it comes to making sure health care is available and affordable. That's why we support association health plans to help small businesses be able to afford health insurance. That's why we support health savings accounts, so you're in control of the health decisions. That's why we support the advent of information technology to help bring excess costs out of the systems. And in order to make sure health care is available and affordable, we strongly support medical liability reform. We got to make sure these junk lawsuits stop running good doctors out of practice and stop running up your bills.

Ours is the party that understands we got to have a comprehensive energy plan to make us less dependent on foreign sources of oil. We strongly support conservation measures. We strongly support

clean coal technologies and nuclear power. We strongly support hybrid vehicles, new battery technologies, ethanol. Ours is a party that is willing to work hard to say to the American people, soon, that we're less dependent on foreign sources of oil, and that's good for national security, and that is good for economic security.

What I'm telling you is, we stand for some things, and we get things done for the American people. We stand on principles. We believe in human dignity of each and every person. We stand for a culture of life. We strongly stand for families in America. And we believe it is essential to make sure that we have a judiciary that understands its proper role in society.

I want to thank the United States Senate for confirming two fantastic Supreme Court Justices in John Roberts and Sam Alito. And our pledge to you is that I will continue to nominate good judges, good honorable men and women, who will interpret the law and not legislate from the bench.

Ours is a party that understands that Government can hand out money but cannot put hope in a person's heart or a sense of purpose in a person's life. And therefore we strongly support—we strongly believe in supporting faith-based and community programs that all exist to put an arm around a brother who is lost or a sister who needs help, and says, "I love you." We strongly believe that Government ought to support programs of faith in order to help lift the souls and the spirits of those who need something much greater than Government can provide.

Ours is a party that believes in limited government and empowering the people of the United States. There's no question that this country of ours can accomplish anything we set our minds to. We can win the war on terror, and we will. We can make sure people are able to find work all around our country. We can help the homeless, help the addicted. We can help feed the hungry. We can lift up the souls of every person who is lucky enough to

be a citizen of this great country, and we will.

I want to thank you for your help. I want to thank you for giving us a chance to lead this great country. I want to thank you for helping make sure that Denny Hastert and Bill Frist remain in their positions in the Senate and the House, and I assure you of this: We will continue to lead this country with an optimistic, hopeful, positive vision that says to every Amer-

ican, opportunity belongs to you as much as your neighbor.

May God bless you all, and may God bless the United States of America.

NOTE: The President spoke at 7:50 p.m. at the Washington Convention Center. In his remarks, he referred to Rep. James O. McCrery III of Louisiana; Prime Minister Nuri al-Maliki of Iraq; and Usama bin Laden, leader of the Al Qaida terrorist organization.

## Message to the Senate Transmitting a Report on Additional Geneva Convention Amendments *June 19, 2006*

*To the Senate of the United States:*

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith: the Protocol Additional to the Geneva Conventions of 12 August 1949, and relating to the Adoption of an Additional Distinctive Emblem (the “Geneva Protocol III”), adopted at Geneva on December 8, 2005, and signed by the United States on that date; the Amendment to Article 1 of the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May be Deemed to be Excessively Injurious or to Have Indiscriminate Effects (the “CCW Amendment”); and the CCW Protocol on Explosive Remnants of War (the “CCW Protocol V”). I transmit, for the information of the Senate, the report of the Department of State concerning these treaties.

Geneva Protocol III. Geneva Protocol III creates a new distinctive emblem, a Red Crystal, in addition to and for the same purposes as the Red Cross and the Red Crescent emblems. The Red Crystal is a neutral emblem that can be employed by governments and national societies that face challenges using the existing emblems. In addition, Geneva Protocol III will pave the way for Magen David Adom, Israel’s na-

tional society, to achieve membership in the International Red Cross and Red Crescent Movement. Legislation implementing Geneva Protocol III will be submitted to the Congress separately.

CCW Amendment. The amendment to Article 1 of the CCW, which was adopted at Geneva on December 21, 2001, eliminates the distinction between international and non-international armed conflict for the purposes of the rules governing the prohibitions and restrictions on the use of certain conventional weapons. It does not change the legal status of rebel or insurgent groups into that of protected or privileged belligerents.

CCW Protocol V. CCW Protocol V, which was adopted at Geneva on November 28, 2003, addresses the post-conflict threat generated by conventional munitions such as mortar shells, grenades, artillery rounds, and bombs that do not explode as intended or that are abandoned. CCW Protocol V provides for the marking, clearance, removal, and destruction of such remnants by the party in control of the territory in which the munitions are located.

Conclusion. I urge the Senate to give prompt and favorable consideration to each of these instruments and to give its advice

and consent to their ratification. These treaties are in the interest of the United States, and their ratification would advance the longstanding and historic leadership of the United States in the law of armed conflict.

GEORGE W. BUSH

The White House,  
June 19, 2006.

NOTE: This message was released by the Office of the Press Secretary on June 20. An original was not available for verification of the content of this message.

## The President's News Conference With European Leaders in Vienna, Austria June 21, 2006

*Chancellor Wolfgang Schuessel.* So, ladies and gentlemen, let me first start by saying that this was—is the 15th journey of President of the United States, George Bush, to Europe. And I'm really happy that this journey leads—it's a kind of an Austria-Hungarian journey—leads George Bush and his team to Vienna.

We had a summit, a very fruitful and a positive summit touching a broad range of subjects, from economy—quite obvious—America and Europe, we are the E-2, the economic big two powers of the world, and we spoke about common trade, foreign investment in both directions. Of course, we touched some problems, but don't forget that 99 percent of our trade volume is done without any problems. It's, per date, a sum of around \$2 billion traded above the Atlantic Ocean.

And we touched foreign policy issues; we touched Iran; we touched Iraq; Balkan issues; global issues like global warming, climate change, et cetera.

Although we might have different approaches in some aspects, this should never overshadow the depth and quality of our cooperation. We covered, as I said it, a wide range of issues during our talks, from foreign policy and economic cooperation. The energy security was high on our agenda, the protection of intellectual property rights, the cooperation in the fight against

terror, and the protection of human rights around the world.

In our common responsibility to promote stability and security for our citizens and the world, the European Union and United States successfully work together. There are recent examples for our good cooperation, as I mentioned, just Iran, Middle East, and Iraq.

And in one of the topics we intensively discussed today, our efforts to keep Iran from producing nuclear weapons. We have come to a crossroad on the Iranian nuclear issue. Iran has to make the right choice. And we welcome a U.S. involvement, in particularly, recent historic signal that U.S. is ready to join negotiations talks if conditions for resuming negotiations are met. And this signal greatly contributed to the credibility of a united position between the key players. And I told President George Bush how much we appreciate his constructive role in this particularly sensitive situation.

The situation in Middle East is still complex. There's no doubt that the Palestinian Government has to accept the basic principles of the peace process—nonviolence, recognition of Israel, acceptance of existing agreements, the so-called roadmap. On the other hand, both America and Europe consequently argue against any unilateral steps

by Israel. The escalation of armed confrontation during the recent days and weeks show the lack of a political perspective. The solution to this conflict can only be a political one based on negotiations and the principles of the roadmap.

In Iraq, we welcome the formation of the new Iraqi national unity Government on 20th of May. We strongly condemn terrorist acts, the continuing campaign of violence against the Iraqi people and their constitutionally elected Government. At the European Council last week, we stressed our encouragement for enhanced institutional and international engagement and underlined our willingness for continued supporting U.N. role in Iraq.

On Balkans, we informed President Bush on the European strategy. We have opened negotiations last week with Croatia. Macedonia is a candidate. We signed an agreement for stabilization association with Albania. We have now Montenegro independent. Bosnia is integrated, and we are, all the time, involved in positive talks with Serbia. Of course, there are open questions, and we discussed them in detail. In Kosovo, negotiations under the chairmanship of Martti Ahtisaari and Albert Rohan are taking place here in Vienna. The office of Ahtisaari is here, and we do our utmost to help and to ease.

Strong bilateral ties between Europe and USA are absolutely important. We are the most important economic partners for each other. The summit highlights only some topics. Progress made in many other areas should not be overlooked.

Today we signed an agreement on higher education and vocational training that will last for a longer period of time than the previous one, engage us in a larger quantity of programs and funds, and will reach more students and teachers—three times more students than before.

Given the worldwide increase in energy demands and, at the same time, limited resources, security of supply is of strategic importance. And therefore, we welcome the

establishment of a strategic cooperation between America and Europe. And we are committed to develop a coherent energy strategy that not only emphasizes security of supply but also efficiency, sustainability, and climate protection.

This is my first statement. I now invite the President of the United States, George Bush, to take the floor, and then the President of the Commission.

*President Bush.* Mr. Chancellor—I call him, Wolfgang; he calls me, George W.—Jose, it's good to see you. Thank you very much for your hospitality. I also want to thank President Fischer for his hospitality as well. I've really been looking forward to this trip. I have never been to your beautiful country. I need to come back. It is—and your hospitality has been grand. I really appreciate it a lot.

We did have a very engaged and fruitful conversation, as we should. We're close partners in peace and prosperity. I've always believed that when America and the EU work together, we can accomplish big deeds. And this world needs us to work together, because there's a lot of challenges.

We talked about democracy and new democracies, and I want to thank the European Union for its strong support of Afghanistan and Iraq. Look, I fully understand we've had our differences on Iraq, and I can understand the differences. People have strong opinions on the subject. But what's past is past, and what's ahead is a hopeful democracy in the Middle East. And I want to thank your leadership, both of your leaderships, on this important issue. I believe the Maliki Government is going to succeed. I know the Government needs our help, and the European Union has stood up to help, and I can't thank you enough for that.

We talked about Lebanon and the need for Lebanon to be free from Syrian influence. We worked very closely together at the United Nations to send that clear message to the Syrians: Leave Lebanon alone;

let them be; let them be a free democracy—which is a necessary part of laying the foundation for peace in the Middle East.

We talked about Israel and Palestine. I assured the leaders here that my position is firm, and that is, I envision two states living side by side in peace. And we want to help. On the other hand, we're not going to deal with a Government that has made the destruction of Israel one of its key policy platforms. How can you be side by side in peace if part of your platform is the destruction of one of the countries you're supposed to be at peace with? And I appreciate Europe being strong on that issue as well.

We talked about the Balkans, and I assured the Chancellor that Austria's role in the Balkans and the European Union's role in the Balkans is essential, and we look forward to supporting your role. In essence, the EU, particularly under the Chancellor's guidance, is in the lead on the Balkans. And we want to help. We want to be a participant in helping bring peace to that region.

I think the European Union is a vital part of helping solve the issue of the Balkans. After all, aspirations to the EU causes people to adopt the habits necessary for there to be a democracy and peace. And so we're very strongly supportive of the EU's role in the Balkans and applaud your strong role as well, Mr. Chancellor.

We talked about development and prosperity. Listen, we're trading partners, and we've got to make sure that commerce and trade and capital continues to flow freely between the EU and America. And we talked about some of the impediments to capital flows, and we discussed our desire to make sure that we continue to trade as freely as possible.

Obviously, the Doha round of the WTO was a big subject. And it's a tough subject because we're trying to make difficult adjustments to our own internal policy in order to satisfy a—in order to reach an

agreement that's fair for all of us. But the good news is, is that we were very frank in our discussion with each other. I mean, the Europeans have problems with the U.S. position; we have problems with the European position; we both have problems with the G-20 position. But the point is, we're committed to a successful round. And it's going to take hard work. There's a ministers meeting here at the end of this month, and my pledge to our European counterparts is, we'll do the very best we can to reach an agreement that is—that satisfies all parties' desires.

But make no mistake about it, it's hard work. My view is, is that we can't let this round fail. A failed WTO round would be missed opportunity, particularly to help people in the impoverished—who are impoverished. The best way to help lift people out of poverty is trade. You can give all the money you want—and my Government has been very generous on the continent of Africa. We're joining with the Europeans to fight HIV/AIDS and to deal with hunger. But if you're really interested in development, the best way to do it is to have a successful round at the WTO. And I understand that, and we're committed to working for success in that round.

We talked about energy. I kind of startled my country when, in my State of the Union, I said, "We're hooked on oil, and we need to get off oil." That seemed counterintuitive for some people to hear a Texan say. But the truth of the matter is, we got to diversify away from oil. And the best way to do it is through new technologies. And we agreed we would share technologies between our nations and between the EU and the United States. The EU needs to get diversified as well. And so this is going to be a very interesting period for us as new technologies develop, and we're willing to share those technologies.

We talked about our efforts to continue to defeat the terrorists. I reminded my fellow leaders here that the terrorists still

want to strike, and they want to do harm, and we have an obligation to work very closely together.

And obviously, they brought up the concern about Guantanamo. And I understand their concerns. But let me explain my position. First, I'd like to end Guantanamo; I'd like it to be over with. One of the things we will do is we'll send people back to their home countries. We've got about 400 people there left—200 have been sent back—400 are there, mainly from Saudi Arabia, Afghanistan, and Yemen. And I explained to the two leaders here our desires to send them back. Of course, there's international pressure not to send them back. But, hopefully, we'll be able to resolve that when they go back to their own country.

There are some who need to be tried in U.S. courts. They're coldblooded killers. They will murder somebody if they're let out on the street. And yet we believe there's a—there ought to be a way forward in a court of law, and I'm waiting for the Supreme Court of the United States to determine the proper venue in which these people can be tried.

So I understand the concerns of the leaders. They expressed the concerns of the European leaders and the European people about what Guantanamo says. I also shared with them my deep desire to end this program, but also, I assured them that we will—I'm not going to let people out on the street that will do you harm. And so we're working through the issue. And I appreciate your interest and appreciate your questions.

Finally, we talked about Iran. It's very important for the leadership in Iran to look at the world and say, Europe and the United States and Russia and China are united in our common desire to make sure that Iranians do not develop a nuclear weapon. And step one of achieving a diplomatic success is to share a goal. And there's no question we share the goal of Iran not having the capacity and/or a nuclear weap-

on. It would be a terrible situation if they developed a weapon.

And so the second phase of a diplomatic strategy is to have a common front, a common diplomatic front that says clearly to the Iranians, here is a way forward for it, but you get to choose. And so I said to the—I said to our—my counterparts here that we'll come to the table to negotiate, so long as the Iranians verifiably end any enrichment activities. The Iranians have said that they will end uranium enrichment activities before; that's what they told the EU-3. We're just asking them to do what they already said they would do.

But it's their choice to make. And I'm convinced that when they look and see that we're working very closely together, that they will see the seriousness of our intent to resolve this in a diplomatic and peaceful way.

And so the discussions were wide-ranging, which is a positive sign of a healthy relationship. We shared tactics and strategies, which is a sign of a healthy relationship. We disagreed in an agreeable way on certain issues, but we're bound to work together for the good of our respective peoples. And this meeting has been a great success, Mr. Chancellor, and I appreciate you running it. And again, I want to thank you for your hospitality.

*Chancellor Schuessel.* Thank you. Jose.

*President Jose Manuel Durao Barroso.* Thank you. Thank you very much. I think there is a very good spirit in European Union and United States relations, and we're building on that today. And as President Bush just said, it was not just a working meeting for very concrete results, but also, we were thinking aloud; we were discussing together some possible strategies for the future. And this is precisely that spirit that relations between partners like the United States and European Union should be established.

But let me just concentrate on concrete results of this summit that were already presented by Chancellor Schuessel, but I

want to highlight some of them. First, we are entering into strategic cooperation on energy to promote energy security for producers, consumers, and transit countries alike. I think this is important, strategic cooperation on energy between the United States and Europe. Second, we have agreed to establish a European Union and United States high-level dialog on climate change, clean energy, sustainable development. This will address ways to deliver cost-effective emission cuts, development and employment of new technologies, efficiency and conservation, renewable fuels, and other environmental issues such as biodiversity.

We have also discussed how to deliver an ambitious and balanced conclusion to the Doha development agenda. These negotiations are at a crucial phase. European Union and the United States have a joint responsibility to help deliver an agreement which promotes growth and opportunity, especially for the poorest. We look for a similar determination from other WTO members. And after the good exchange of views we had today during this summit, I'm convinced, I'm really convinced that it's possible to have a successful outcome of the Doha talks. And it's crucially important from a trade point of view, from a global economic point of view, but also from a development point of view.

Third, we have endorsed today a strategy for the enforcement of intellectual property rights in third countries. For the first time, we have named the countries and regions which cause most concern. They will be the focus of concrete actions to reduce global piracy and counterfeiting. Proper protection of intellectual property is vital for our industry and for our consumers.

Fourth, we also agreed on the need for open investment regimes, fighting all protectionist tendencies that can happen in some of our circles. We need to boost growth, jobs, and get best control of our very dynamic transatlantic economy. Two-way investment benefits our economies. In this context, I hope we will see the finaliza-

tion of the European Union-United States Air Transport Agreement, if possible by the end of the year.

We also addressed the issue that is very important in European Union of this—for establishment of reciprocal visa-free travel for all European Union citizens to the United States. I also believe this is good for our citizens; this is good for our economies.

Finally, the point I want to highlight, I want to emphasize our shared commitment to promoting democracy, freedom all over the world. The very enlargement of the European Union has been one of the greatest achievements in terms of promotion of democracy from Southern Europe, West Europe, to Eastern Europe, North Europe, from the Iberian Peninsula in the eighties to the Baltic countries, now most recently. European Union is a great success story in terms of promoting democracy. And we want to do it also globally, and we are doing it globally. And that's one of the fields where I see that the United States and European Union can do, and should do, even more together.

One thing is sure, the world now is very complex. Even together we are not sure that we will solve all issues. But if we don't—aren't working together, it will be much more difficult to face global challenges. I believe this summit was very helpful for having this closer relationship between the United States and Europe so that together, we can do our best to make the world a better place.

*Chancellor Schuessel.* Thank you.

*President Bush.* Jennifer [Jennifer Loven, Associated Press].

#### *North Korea*

*Q.* Thank you, Mr. President. Could you explain why the world should care that North Korea is test-firing a long-range missile? And what sort of penalties do you think are in order if they do so?

And to the Chancellor, if I might, where does the EU stand on possible penalties for such a test?

*President Bush.* The North Koreans have made agreements with us in the past, and we expect them to keep their agreements—for example, agreements on test launches. We think it would be in the world's interest to know what they're testing, what they intend to do on their test. It should make people nervous when nontransparent regimes that have announced that they've got nuclear warheads fire missiles.

And so we've been working with our partners, particularly in that part of the world, to say to the North Koreans that this is not the way you conduct business in the world; this is not the way that peaceful nations conduct their affairs.

I was pleased to see that the Chinese spoke out to the North Korean Government and suggested they not fire—whatever it is on—their missile. And we'll see whether or not the North Koreans listen. One of our strategies in North Korea has to make sure we include other countries as a part of our consortium to deal with this nontransparent regime. And China is an integral part of what we've called the six-party talks, and I am pleased that they're taking responsibility in dealing with the leader of North Korea. I think it's a very positive sign.

I've talked to President Putin about this subject. I know that we're reaching out to the Japanese, all aimed at saying to the North Koreans, this is not a—in order to be an accepted nation, a nonisolated nation, there are certain international norms that you must live by. And we expect them to live by those norms.

*Chancellor Schuessel.* I couldn't agree more with the question of North Korea, and the compliance with the international rules and the international standards are always a matter of great concern, always high on the priority list of foreign policy matters within the European Union. And if this happens, there will be a strong state-

ment and a strong answer from the international community. And Europe will be part of it. So there's no doubt. We discussed it, by the way, in our debate, what to do when and if, and there will be a strong response on that.

#### *Nuclear Proliferation/Energy*

*Q.* A question to President Barroso and President Bush. Thank you. Do you actually share the view that Russia is using its energy resources to oppress other countries? And in what respect does your cooperation help you now to position yourselves against that?

And if I may, to President Bush, you've got Iran's nuclear program, you've got North Korea, yet most Europeans consider the United States the biggest threat to global stability. Do you have any regrets about that?

*President Bush.* That's absurd. There's my statement. The United States is—we'll defend ourselves, but at the same time, we're actively working with our partners to spread peace and democracy. So whoever says that is—it's an absurd statement.

*President Barroso.* Yes. On energy, as you know, that energy is a geostrategic question. That's why in January, President Bush called for an end to American oil addiction. That's why in February, in Washington, I asked for partnership between United States and European Union in matters of energy. That's why today we are agreeing on key principles to guarantee energy security. I also welcome the high-level—the agreement on a high-level dialog between European Union and United States on climate change, sustainable development.

These are central challenges to all of us globally. So our agreement is not against anyone, by the way, we expect the G-8 summit to be a very important point, to be a success. And we wish President Putin success at that G-8 summit. We believe it should be an occasion to reinforce our

message for an open, stable, nondiscriminatory, transparent market on energy. So energy is a global issue, and it should be tackled globally.

*President Bush.* Steve [Steve Holland, Reuters].

*Iran*

*Q.* Mr. President. Thank you, sir. If Iran says it will respond to the offer in late August, is that a suitable timeframe? And I would ask all of you, Iran's Foreign Minister says some kind of negotiations can start before a final answer is given; are you willing to do that?

*President Bush.* Well, our position, Steve, is that we'll come to the table when they verifiably suspend, period. And we expect them to verifiably suspend. This is what they said they would do, to the EU-3.

Secondly, the August 22d date—is that part of your question? Yes. It seems like an awful long time for a reasonable answer—for a reasonable proposal, a long time for an answer. And we look forward to working with our partners. We just got word of this statement as we walked in here, but it shouldn't take the Iranians that long to analyze what is a reasonable deal.

*Q.* [Inaudible]

*President Bush.* Well, I said weeks, not months. And I believe that's the view of our partners—weeks, not months.

*Chancellor Schuessel.* We agree. We spoke about Iran in length, and it is really one of the fruits of a well-balanced partnership and cooperation that we were able to offer a bold package of incentives to Iran, to the Iranian Government and to the Iranian people. And as President Bush said, it's better to agree as soon as possible. The time is limited, and I think we should not play with time.

This is—we discussed it for months and months, and I think time—there is in Greek language, there is—and I learned ancient Greek—there is a fantastic word, *kairos*. *Kairos* means “the right moment.” The right moment—it's not only time; it's

the right moment. And I think now is the right moment for Iran to take this offer, to grab it and to negotiate. This is a well-balanced—we got advice from everybody from the international scene—United Nations, ElBaradei here, the International Atomic Energy organization, a lot of experts, of scientists that convinced us—of course, the EU-3 and America, Russia, and China are on board. So this is their *kairos*. Take it. This is my advice.

*Spread of Democracy/American Influence Worldwide/War on Terror*

*Q.* Chancellor Schuessel, the European public is deeply worried by these secret prisoners that the CIA has been transporting, is transporting through Europe. Did you get the assurance today from the President that this is not going to happen anymore, that there won't be anymore in the kidnaping of terror suspects in Europe, that this is a thing of the past?

And to the President, Mr. President, you said this is “absurd,” but you might be aware that in Europe, the image of America is still falling, and dramatically in some areas. Let me give you some numbers. In Austria, in this country, only 14 percent of the people believe that the United States, what they are doing is good for peace; 64 percent think that it is bad. In the United Kingdom, your ally, there are more citizens who believe that the United States policy under your leadership is helping to destabilize the world than Iran. So my question to you is, why do you think that you've failed so badly to convince Europeans, to win their heads and hearts and minds? Thank you.

*President Bush.* Well, yes, I thought it was absurd for people to think that we're more dangerous than Iran. It's a—we're a transparent democracy. People know exactly what's on our mind. We debate things in the open. We've got a legislative process that's active. Look, people didn't agree with my decision on Iraq, and I understand that.

For Europe, September the 11th was a moment; for us, it was a change of thinking. I vowed to the American people I would do everything I could to defend our people, and will. I fully understood that the longer we got away from September the 11th, more people would forget the lessons of September the 11th. But I'm not going to forget them. And therefore, I will be steadfast and diligent and strong in defending our country.

I don't govern by polls, you know. I just do what I think is right. And I understand some of the decisions I made are controversial. But I made them in the best interest of our country and, I think, in the best interest of the world. I believe when you look back at this moment, people will say, it was right to encourage democracy in the Middle East. I understand some people think that it can't work. I believe in the universality of freedom; some don't. I'm going to act on my beliefs so long as I'm the President of the United States. Some people say, it's okay to condemn people for—to tyranny. I don't believe it's okay to condemn people for—to tyranny, particularly those of us who live in the free societies.

And so I understand, and I'll try to do my best to explain to the Europeans that, on the one hand, we're tough when it comes to the war on terror; on the other hand, we're providing more money than ever before in the world's history for HIV/AIDS on the continent of Africa. I'll say, on the one hand, we're going to be tough when it comes to terrorist regimes who harbor weapons; on the other hand, we'll help feed the hungry. I declared Darfur to be a genocide because I care deeply about those who have been afflicted by these renegade bands of people who are raping and murdering.

And so I will do my best to explain our foreign policy. On the one hand, it's tough when it needs to be; on the other hand, it's compassionate. And we'll let the polls figure out—people say what they want to

say. But leadership requires making hard choices based upon principle and standing by the decisions you make, and that's how I'm going to continue to lead my country.

Thank you for your question.

*Chancellor Schuessel.* And let me add something. I think Austria is a really a good example to show that America has something to do with freedom, democracy, prosperity, development. Don't forget, I was born in '45. At that time, Vienna and half of Austria laid in ruins. I mean, without the participation of America, what fate would have Europe? Where would be Europe today? Not the peaceful, prosperous Europe like we love it and where we live.

Nothing—I will never forget that America fed us with food, with economic support. The Marshall plan was an immense aid and incentive to develop industry, agriculture, tourism. And by the way, I said it to the President, the Marshall Fund is still working in Austria. It's now transformed into a kind—in a fund for research and development—still working.

The American people—at that time, the American Government invested billions of dollars in Europe to develop the former enemy. And now we are a partner. So I think it's grotesque to say that America is a threat to the peace in the world compared with North Korea, Iran, other countries.

Of course, we—and I thank you very much for the question on human rights and the overflights and the secret prisons and Guantanamo. And it was quite interesting to see how the debate was going on in—this morning—the President started, himself. He didn't wait that we raise the question. He came up and said, "Look, this is my problem; this is where we are." And I think we should be fair from the other side of the Atlantic. We should understand that what September 11th meant to the American people. It was a shock—for the first time, a real shock. A society values

were attacked—American values, international values, European values were attacked in the home country of the President and all Americans. And we should not be naive. We Europeans are also attacked. We had bomb attacks in Madrid; hundreds of people were killed. We had bomb attacks in London subway; buses were blown up. We had detected some terrorists who tried to shoot down an Israeli plane. So we should not be naive.

And since September 11th—and I think this is important to underline—that since September 11th, we are now able to define our targets, to fight against terror and terrorists, to cut off their financial supplies, to share information, to secure our citizens, our people. This is the ultimate goal: not creating enemies, virtual enemies, but to secure our people and to secure peace in the world and to stabilize our societies.

The problem is—and I will be very frank on that, and I said it the same way like we did it here, and we say it now—we are only—we can only have a victory in the fight against terror if we don't undermine our common values. It cannot—it can never be a victory, a credible victory over terrorists if we give up our values: democracy, rule of law, individual rights.

This is important to know. And our discussion with all the European Parliament, the European governments, I personally—we are calling for the closure of Guantanamo. But our discussion today went far beyond the closing Guantanamo, because we have—we have a legal problem; we have gray areas. And there should be no legal void, not in the fight against terrorists, but also not in—for individuals to be guaranteed in their individual rights, in their freedom.

And it's quite interesting to see how the President reacted. I welcome, of course, your statement saying that you're looking forward to close Guantanamo, and it depends on the Supreme Court's decision. And we got clear, clear signals and clear, clear commitments from the American

side—no torture, no extraordinary or extraterritorial positions to deal with the terrorists all—the McCain amendment, for instance. All the legal rights must be preserved.

But we have to help if we're to find a way-out strategy, to help countries to take back the prisoners, either to charge them or to release them. And there are international organizations which could help and could assist. And we discussed this in detail. And I think it's important to know that although there are differences in the legal perception, it was possible to have such a statement.

And I really want to add, after my visit to you in December '05, last December, we established a very good cooperation between John Bellinger, the leading adviser of the State Department, and the Austrian Volkerrechtsburo Bureau, the Department for International Law. And this is working. We are really working in a precise, professional way on that. So thank you very much.

Let me say, Mr. President, I'm really happy that you are here, that you were here in Vienna. Come back, if possible. You will find a little bit more from our town and from the possibilities of our city. And don't let us wait for another nearly 30 years for the next visit. All the best. Thank you.

*President Bush.* Good job. Thank you, sir.

NOTE: The President's news conference began at 2:50 p.m. in Zeremoniensaal Hall at the Hofburg Palace. Participating in the event were Chancellor Wolfgang Schuessel of Austria and President Jose Manuel Durao Barroso of the European Commission. President Bush referred to President Heinz Fischer of Austria; Prime Minister Nuri al-Maliki of Iraq; Chairman Kim Jong Il of North Korea; and President Vladimir V. Putin of Russia. Chancellor Schuessel referred to Martti Ahtisaari, U.N. Special Envoy for the Future Status Process for Kosovo; Albert Rohan, U.N. Deputy Special Envoy for the

Future Status Process for Kosovo; and Director General Mohamed ElBaradei of the International Atomic Energy Agency. A re-

porter referred to Minister of Foreign Affairs Manuchehr Motaki of Iran.

## Joint Statement: United States-European Union Summit Declaration *June 21, 2006*

We, the leaders of the United States of America and the European Union (EU), met today in Vienna to respond to the concerns of our citizens for peace, security, stability and prosperity in an increasingly globalize world.

We welcome that over the past year our Transatlantic Partnership has delivered real results as shown by the political and economic Progress Reports we issued today. We remain committed to finding common or complementary lines of action in many areas. Over the last year, there have been many examples of how productive our relationship is in the Middle East, Iran, the Western Balkans, Belarus, on the frozen conflicts, and Sudan, as well as in our efforts to promote transatlantic trade and investment under last Summit's Economic Initiative.

We have decided to further strengthen our strategic Partnership by adopting a number of priority actions to support our cooperation in the following four areas:

- Promoting peace, human rights and democracy worldwide;
- Confronting global challenges, including security;
- Fostering prosperity and opportunity;
- Promoting strategic cooperation on energy and energy security, climate change and sustainable development.

### *Promoting Peace, Human Rights and Democracy Worldwide*

We recognize that the advance of democracy is a strategic priority of our age. We will intensify our efforts to promote peace, democracy, freedom, the rule of law and

respect for human rights in the world to make it more secure, safe, and prosperous for all mankind. Noting the need for tolerance of diverse cultures, beliefs and religions and the importance of dialogue while emphasizing respect for universal human rights, we will sustain our efforts to advance democracy.

We will work with the United Nations and international and regional organizations, civil society, NGOs and dedicated individuals committed to human rights, democracy and the rule of law. We will work to ensure that the newly created Human Rights Council becomes an effective and efficient body committed to the promotion and protection of human rights and fundamental freedoms for all. We underline our shared commitment to UN-Reform and we welcome the establishment of and give our backing to the Peacebuilding Commission and the UN Democracy Fund. We will continue to support reform in the Mediterranean region and the Middle East and will promote greater participation of civil society in the reform process through our respective efforts, including the Barcelona Process, the European Neighbourhood Policy, the Middle East Partnership Initiative, and our joint actions through the Broader Middle East and North Africa Initiative and the Foundation and Fund for the Future.

We will continue to closely cooperate in the Middle East, notably through the Quartet. We welcome the temporary international mechanism to deliver assistance directly to the Palestinian people. We will continue to deliver humanitarian assistance and promote Palestinian democracy and

civil society. Whilst recalling President Abbas' commitment to a platform of peace, we will continue to urge the new Palestinian government to commit to non-violence, recognize Israel's right to exist and accept existing agreements and obligations. We will continue to call on Israel to ease restrictions on access and movement and to take additional steps including with respect to the Palestinian tax and customs revenues, to improve the humanitarian situation of the Palestinian people. We remind both sides of their obligations under the 15 November 2005 Agreement. We will continue to promote a negotiated solution to the Israeli-Palestinian conflict on the basis of the Roadmap in order to advance a just, viable and lasting two-state solution and we call on both parties to avoid unilateral measures that prejudice final status issues. We call on the Palestinian Authority government to implement policies that will permit the international community to provide greater support to and review its policies on contact with the Palestinian Authority.

We will strongly urge Syria to implement UNSC Resolutions 1559, 1595, 1636, 1680 and 1686 and to prevent its territory from being used to support violence in Iraq, and end cross-border transit and support for terrorist groups. Similarly, Syria must end its support for Lebanese and non-Lebanese militias, and prevent the smuggling of arms and other support to these groups. We will work together to increase support for human rights and democracy, and secure the release of political prisoners in Syria. We will strongly urge Syria to refrain from any attempt at destabilizing Lebanon.

We will jointly support political, economic and institutional reforms in Lebanon, as well as its sovereignty, democracy, territorial integrity, unity and political independence. We will strengthen efforts to coordinate assistance to Lebanon, and we support the reform plan of the Lebanese government and seek to work towards an international Core Group conference. We

support the efforts of the Lebanese government to disarm and disband Lebanese and non-Lebanese militias, as called for in UNSCR 1559 and 1680, and we will support the call expressed by the UN Security Council to halt the flow of arms and funds to terrorist groups and militias. We support UNSCR 1686 and the continuation of the investigation of the assassination of former Lebanese Prime Minister Rafiq Hariri.

We support progress by the Government of Egypt towards ensuring fundamental freedoms, and building multi-party democracy. We will continue to encourage the Egyptian government to proceed with the fundamental political and constitutional reforms it announced particularly by replacing the emergency law with a counterterrorism law in conformity with international human rights standards.

We will support the newly constitutionally elected government of Iraq and call upon it to continue the policies of inclusiveness as a means to overcome divisions within Iraq. We will continue to assist in building an independent, stable, secure, democratic, prosperous and united Iraq at peace with its neighbors and the international community. We call on the international community to show its support for the new government in particular by increasing development, rule of law, and security assistance, offering capacity building support, providing generous debt relief on terms equivalent to the Paris Club Agreement and extending its local presence keeping in mind the security situation.

Over the past year our cooperation on Iran has reached a new level. We have worked closely together at every stage of the ongoing attempts to address the question of Iran's nuclear program. We have agreed on a set of far-reaching proposals as a basis for discussion with Iran. We believe that they offer Iran the chance to reach a negotiated agreement based on cooperation, if Iran is willing to make that choice. The United States has made clear that it is prepared to join the negotiations

should Iran resume full and verifiable suspension of all enrichment related and re-processing activities as required by the IAEA. We have agreed that if Iran decides not to engage in negotiations, further steps would be taken in the Security Council. We urge Iran to take the positive path.

Building on the success of the London January 2006 conference on Afghanistan, we will support Afghan efforts to build a democratic, accountable and sustainable state. We will pay particular importance to governance, human rights, reform of the public administration, the judiciary and security sector, counter-narcotics as well as an Afghan-led process of reconciliation and justice.

Recognizing the next year to be a crucial period for the Western Balkans we will build on the experience of our successful transatlantic cooperation by cooperating to stabilize the countries in the region, support their European and Euro-Atlantic perspectives and to combat organized crime and corruption. We will continue to work with NATO as well as the OSCE to ensure the security and prosperity of the region. On Kosovo in particular, we will continue to ensure the convergence of our positions on the ongoing talks in order to promote a lasting status that respects the Contact Group principles. We will develop our relations with Montenegro as a sovereign, independent State and call on both Serbia and Montenegro to pursue a direct and constructive dialogue on their future relations.

Ukraine has made remarkable progress in democratic and economic reforms. Building on the March 2006 elections, we will support Ukraine's development as a democratic, prosperous and secure country. We will help Ukraine pursue economic reforms, combat corruption and reform the energy sector.

We will continue to support the democratic aspirations of the people of Belarus and work together to strengthen democratic institutions, assist civil society, and promote independent media. We condemn the use

of violence in Belarus and the repression of the democratic opposition and we urge the authorities of Belarus to release all political detainees. The travel ban imposed on President Lukashenko and others, as well as the freezing of assets of individuals responsible for violations of international election standards and human rights abuses are good examples of our broad cooperation and coordination. We remain resolved to help the people of Belarus achieve their aspirations for a better future.

We will contribute to finding a solution to the Transnistrian conflict that assures Moldova's territorial integrity. We will work with all relevant parties to resolve through peaceful, negotiated settlements the frozen conflicts in the Southern Caucasus and encourage the democratic processes in Armenia, Azerbaijan and Georgia.

We will work together to promote democratic and economic reforms, human rights, freedom of expression and the press, the rule of law in Central Asia to promote international security and stability. We continue to call upon Uzbekistan government to facilitate an independent international investigation into the tragic events of Andijon.

We attach great importance to our relationship with Russia and are pursuing deeper cooperation on a range of issues of common interest, including some important foreign policy issues, non-proliferation and counterterrorism. We are concerned about some recent developments in Russia and the region and will work with Russia to promote energy security, the application of the rule of law, an independent judiciary and full respect for human rights, including free and independent media and a vibrant civil society, and a resolution of frozen conflicts in the region. We will make constructive use of the OSCE as an important forum for cooperative and comprehensive security and call on Russia to fulfill all Istanbul and OSCE commitments.

Regarding our respective relations with Latin America and the Caribbean, we recognize the need for greater collaboration to promote stable and effective democracies, as well as market economies that contribute to greater social cohesion. We will actively engage NGOs and civil society, and we will support access to information, establishment of rule of law and independent media where this is not provided. Where necessary, we call on countries in the region to provide coherent and effective support and protection to individuals, organizations or institutions working for the promotion and protection of human rights and democracy. We express our deep concern about the human rights situation in Cuba, and urge the Cuban government to take rapid steps to improve the situation. We welcome the reestablishment of the constitutional order in Haiti, support the renewal of the UN Stabilization Mission's mandate, and welcome police and troop contributions to the mission.

We will jointly work towards rapid implementation of the Darfur Peace Agreement. We will work with the United Nations and other international and regional partners and organizations, including NATO, to strengthen the African Union Mission in Sudan (AMIS) with the assistance required, and UN authorization to "bluehat" the AMIS force by September. We will continue to support the Comprehensive Peace Agreement in Sudan and will continue to mobilize resources for humanitarian needs.

We will seek to ensure successful elections on 30 July 2006 in the Democratic Republic of Congo, and will continue our support for the building of government institutions, training programs, and security sector reform. In the post-transition the United States and the EU will prioritize support for improved governance, the rule of law and security sector reform.

In Somalia, we reiterate our support to the efforts of the Transitional Federal Institutions (TFI) in pursuing dialogue, reconciliation and stable governance. We will

assist the transition and the establishment of viable and inclusive institutions in order to promote stability in Somalia and the region.

We will further coordinate our respective efforts on humanitarian and democracy assistance to address the worsening plight of the population in Zimbabwe. We call on the Government of Zimbabwe to restore democratic freedoms and the rule of law, and to respect human rights. We are ready, as soon as significant action in this direction is taken, to reconsider the restrictive measures now in place against Zimbabwe. We also call for measures by the Government of Zimbabwe needed to reverse the economic collapse.

We will enhance our joint efforts in conflict prevention and crisis management by increasing consultations on current and potential crises, identifying ways to strengthen cooperation in crisis management and post-conflict reconstruction, and coordinating efforts to improve international crisis management capacities.

#### *Confronting Global Challenges, including Security*

Since no single nation can efficiently and effectively deal with global challenges such as climate change, counter-terrorism, non-proliferation, pandemics and natural disasters on its own, we commit ourselves to strengthening our cooperation to address these challenges.

Consistent with our common values, we will ensure that measures taken to combat terrorism comply fully with our international obligations, including human rights law, refugee law and international humanitarian law. We attach great importance to our ongoing in-depth dialogue on our common fight against terrorism and our respective domestic and international legal obligations.

We will step up our cooperation against terrorism, including through denying resources (financing, travel, and other material support) and shelter to terrorists, and

we will co-ordinate efforts to prevent a new generation of recruits from emerging by countering radicalization and recruitment, and promoting tolerance, including by cooperating on developing regional strategies and by implementing—and encouraging others to implement—steps required by UNSCR 1624. In particular, we will work to enhance our border security cooperation by improving lost and stolen passport data sharing with Interpol, coordinating the implementation of biometric standards based on ICAO recommendations. We will cooperate to block terrorism financing, in particular in the informal financial sector, by developing improved procedures for information sharing and a more pro-active use of financial investigations implementing FATF Special Recommendations, among others by enforcing cash declaration regulations for travelers, optimizing the use of financial intelligence and controls, and engaging the private sector to develop partnerships to enhance protection of financial institutions.

We will strengthen our cooperation by completing negotiations on a U.S.-Eurojust cooperative agreement and we will step up our coordination to improve counterterrorism capacity building in third countries. We welcome the signature of bilateral agreements by EU member states and the United States to accompany the U.S.-EU Mutual Legal Assistance Treaty and Extradition Agreements, and will aim to bring them into force as soon as possible. We intend to agree without delay on a Comprehensive UN Convention on International Terrorism, and on a universally accepted definition of terrorism and we will work with others towards a targeted UN strategy on combating terrorism. We take note of the “Vienna Initiative”, initialed on 4th May, on possible future tripartite cooperation in the field of justice and home affairs between the EU, the Russian Federation and the United States.

We will strengthen our efforts to prevent access by terrorists to weapons of mass de-

struction (WMD) and their means of delivery. We will work together to further implement our Program of Work on the Non-Proliferation of WMD, in particular by reinforcing our support for the Nuclear Non-Proliferation Treaty and we will continue to work together to strengthen it, stressing the importance of compliance and promoting its universality.

Our cooperation will include the full implementation of UNSC Resolution 1540, including by conducting joint demarches, where appropriate, to urge all countries to fully implement their obligations under UNSCR 1540, and by assisting States to meet their obligations. In implementing UNSC Resolution 1540, we will also address the issue of financing of proliferation-related activities and develop our cooperation in that regard by seeking to identify, track, seize or freeze assets associated with the proliferation trade, in accordance with national legislation and consistent with international law, and consider further actions against proliferation finance.

We will support the rapid opening and conclusion of negotiations on a Fissile Material Cut-Off Treaty at the Conference on Disarmament and emphasize that, pending the conclusion of the Treaty and the Treaty’s entry into force, all states should declare publicly and observe a moratorium on the production of fissile material for use in nuclear weapons. We will continue to work together in the Nuclear Suppliers Group framework on proposals to develop transfer restrictions on enrichment and reprocessing (ENR) technology and to support multilateral mechanisms for reliable fuel supply assurances for States that have chosen not to pursue ENR.

We will coordinate efforts in preparing for the Biological Toxins and Weapons Convention Review Conference with a view to promote a productive outcome, the universality of the convention and the implementation by all States Parties through national laws and regulations in order to put these obligations into practice. We reaffirm

our commitment to the Chemical Weapons Convention and its full implementation.

We reiterate our support for multilateral efforts to improve prevention and combat global health threats such as the spread of pandemics, including HIV/AIDS, Malaria and Tuberculosis, and other communicable diseases like SARS and Hepatitis. We agree that priority should be given to promoting effective control measures in animal health as a means to reduce outbreaks of H5N1 in birds. We will further increase regional and global cooperation between states, international organizations and civil society in mitigating and preparing for a pandemic, to which input by the International Partnership on Avian and Pandemic Influenza is welcome. We will further improve coordination of our response to natural disasters that have cost the lives of hundreds of thousands of people.

#### *Fostering Prosperity and Opportunity*

We reiterate our strong commitment to reaching an ambitious conclusion to the Doha Development Agenda by the end of 2006. These negotiations are at a critical phase and we call on all WTO members to demonstrate the political will and courage necessary to achieve an ambitious and balanced agreement that will help strengthen global economic growth, improve living standards, and alleviate poverty. We recognize the need for trade ministers to make substantial progress on core negotiating areas over the next few weeks in order to ensure that this historic opportunity to liberalize trade is not missed. As responsible leaders, we will continue to work in cooperation with other WTO members towards an agreement that is worthy of the objectives identified in launching the Doha Development Agenda in 2001.

We will increase our partnership with developing countries to promote growth globally for the benefit of all. This will help us to realize the internationally agreed development goals and objectives, including the Millennium Development Goals and

the objectives and commitments of the Monterrey Consensus, which have helped to galvanize efforts towards poverty eradication through development co-operation and economic growth.

We will redouble our efforts to promote economic growth and innovation and reduce the barriers to transatlantic trade and investment by implementing all aspects of the Transatlantic Economic Initiative, in line with the Work Program agreed at the U.S.-EU Economic Ministerial Meeting in November 2005, and to be updated and reviewed at a second U.S.-EU Economic Ministerial meeting later this year.

We endorse the new Action Strategy for the enforcement of intellectual property rights against piracy and counterfeiting. Implementation has already started with concrete actions aimed at promoting strong and effective enforcement in third countries, strengthening cooperation to reduce global piracy and counterfeiting, and offering public-private partnerships to protect intellectual property. We will enhance our dialogue to promote a more efficient international patent system.

We will build on the progress of the High Level Regulatory Cooperation Forum and associated dialogues, and expand implementation of our Regulatory Cooperation Roadmap to address new topics and sectors and initiate targeted exchanges of regulatory experts. As part of our Innovation Initiative, we will work to measure innovation performance, its impact on the economy, and to understand better each other's innovation policies. We will implement the U.S.-EU plan on e-accessibility with the goal of reaching a coherent approach on our policies in this area. We will work on an implementing arrangement on environment research and eco-informatics under our Agreement on Scientific and Technological Cooperation. We will continue to work together through the U.S.-EU Financial Markets Regulatory Dialogue and the Policy Dialogue on Border and Transportation Security.

We pledge to keep our investment regimes open and to build on existing investment flows to boost growth and create jobs in the transatlantic economy. We will address obstacles to transatlantic investment with a view to promoting closer economic integration.

We will redouble our efforts to conclude a first stage Air Transport Agreement in 2006. The United States and the EU will cooperate closely on the legal framework governing the transfer of air passenger data following the European Court of Justice ruling of 30 May 2006.

We will work together to ensure implementation of phase I of the Wine Agreement, and, as mutually agreed, pursue negotiations on phase II in September.

We have signed today a new Agreement on Higher Education and Vocational Training under which our respective educational institutions will inaugurate innovative joint study programs, promote exchanges of students, teachers, and other professionals, strengthen the Fulbright-Schuman Program and encourage greater institutional collaboration in tertiary education.

We recognize the need for tangible progress to be made towards the establishment of reciprocal visa-free travel for all EU citizens to the United States, as part of our efforts to promote the economic and social benefits of increased travel while keeping borders secure.

*Promoting Strategic Cooperation on Energy and Energy Security, Climate Change and Sustainable Development*

We recognize the strategic role of security of supply, competitiveness and sustainability in the energy sector. In this connection, we strongly reaffirm our commitment to the energy security principles enunciated by the International Energy Agency. We have agreed to reinforce our strategic energy cooperation to:

- support diversification of energy sources and supplies;
- secure our energy infrastructure;

- promote market-based energy security policies that ensure competition, transparency, respect for contracts, and non-discriminatory trade, transit, and access;
- speed development of new lower-pollution and lower carbon technologies;
- accelerate investment in cleaner, more efficient use of fossil sources and renewable sources in order to cut air pollution harmful to human health and natural resources, and reducing greenhouse gases associated with the serious long-term challenge of global climate change.

We will cooperate to ensure sufficient, reliable and environmentally responsible supplies of energy at prices reflecting market fundamentals, facilitating sustained global economic growth as well as expanding access to energy in developing countries. Thus, we agree to:

- Improve energy security by enhancing the dialogue with the main transit, producer and consumer countries and by promoting diversification of energy sources and supply routes worldwide and notably in the Caspian Sea region, Middle East, continental Africa and Latin America;
- Analyze geopolitical implications of the worldwide energy situation as it develops, its impact on our external policies and to develop mutually reinforcing policies where appropriate;
- Promote energy security policies in key third countries by encouraging a gradual transition to market pricing and behavior, and co-ordinate capacity-building assistance to emerging economies, including to increase energy efficiency, adopt clean technologies and build strategic stocks;
- Support maintenance and improvement of pipeline infrastructure to ensure uninterrupted deliveries and facilitate diversification investments in

large trans-national projects by ensuring convergence of legal and regulatory frameworks and supporting collaboration among energy regulatory authorities, notably with Ukraine;

- Coordinate where appropriate technical assistance to improve energy legal and regulatory frameworks and investment climates in third countries;
- Improve the security of global energy networks and develop standards for physical security of critical energy infrastructure;
- Facilitate development of Liquefied Natural Gas (LNG);
- Increase our coordination within international fora, notably the G8, the International Energy Agency (IEA) and the International Energy Forum (IEF);
- Use energy in a more efficient and environmentally responsible manner, and in particular cooperate on improving the efficiency of world-wide traded products. In this context we have just initialed a new Energy Star Agreement;
- Make more and better use of renewable energy sources and reinforce technological cooperation and partnerships, notably on environmentally-friendly low emission power generation technologies, hydrogen energy, carbon sequestration, cutting gas flaring and biofuels;
- Promote diversification of fuel sources in transportation sector, including through increase use of biofuels;
- Continue cooperation through the International Partnership for a Hydrogen Economy and increase collaboration over regulatory, standards and trade issues affecting alternative fuels and emerging technologies, especially hydrogen;
- Cooperate on developing efficient, transitional transport technologies, and

fuel standards, such as plug-in hybrids or efficient diesel engines;

- Continue scientific exchanges among U.S. and EU research and development organizations focused on energy efficiency in buildings;
- Promote, consistent with national energy policies, safety standards in the production of nuclear energy.

To monitor and guide this process, we will conduct an annual strategic review of U.S.-EU energy cooperation.

We also agreed to promote energy security worldwide by applying the following Energy Security Principles:

- a. Contractual commitments should be upheld and market-based principles should prevail at all stages of the energy supply chain.
- b. Diversifying sources of energy and modes/routes of transit, and ensuring non-discriminatory third-party access to transit infrastructure will improve the functioning of energy markets worldwide.
- c. Open, transparent, non-discriminatory and stable legal conditions that ensure fair and equitable treatment for energy investment and trade are essential to helping producing and transit countries meet market demands.
- d. Further development of production and export capacities in producer countries in a safe and secure environment, and the upgrading of existing and development of new energy transportation infrastructures by producer and transit countries as well as further development of refinery capacity in all countries are critical.
- e. Bolstering and ensuring the highest levels of physical and environmental security and safety of energy infrastructures, as well as the highest level of nuclear safety, is crucial to the durability and sustainability of the global energy system.

- f. We should encourage the most economic and efficient use of energy worldwide notably through the use of market-based instruments to minimize negative environmental consequences, and should promote in particular the use of cleaner and more efficient use of fossil fuels and the development of economically competitive non-fossil energy sources based on appropriate policies and market-based instruments.
- g. We should promote continued research, development and deployment of alternative energy sources and the facilitation of technological and industrial co-operation.
- h. Supporting effective implementation of transparency and data sharing initiatives, such as the Joint Oil Data Initiative (JODI), including on the evaluation of oil reserves, and the Extractive Industries Transparency Initiative (EITI) will improve transparency and predictability of the market for all stakeholders.
- i. Addressing energy poverty endured by many of the world's poorest people who will still lack access to modern energy services is a priority.

We will work more closely to address the serious and long-term challenge of climate change, biodiversity loss and air pollution and will act with resolve and urgency to reduce greenhouse gas emissions. We

will continue our dialogue and efforts under the UN Framework Convention on Climate Change (UNFCCC), including work on long-term cooperative action in the process established in Montreal in December 2005. To this end, we have agreed to establish an U.S.-EU High Level Dialogue on Climate Change, Clean Energy and Sustainable Development to build on existing bilateral and multilateral initiatives and further advance implementation of the G-8 Gleneagles Plan of Action for Climate Change, Clean Energy and Sustainable Development. This dialogue will be guided by the ultimate objective of the UNFCCC and will initially meet in fall 2006 in Helsinki. Among topics of importance for this dialogue will be experience with different market-based mechanisms to promote cost-effective reductions in greenhouse gas emissions; advancing the development and deployment of existing and transformational technologies that are cleaner and more efficient, producing energy with significantly lower emissions; efficiency and conservation; renewable fuels; clean diesel; capture of methane; lower emitting agricultural operations and energy production and distribution systems, as well as other environmental issues.

## Remarks in a Discussion With Foreign Students in Vienna June 21, 2006

*The President.* It's always important to wait on your wife. [*Laughter*] Please sit down. Here's what we're going to do. I'm going to give a statement, then answer a couple of questions. Then we'll get the press out of here and have a dialog. Is that okay? Yes. Let them get set up.

This will take a little bit of time and then we'll—first of all, I want to thank our Ambassador for setting this up, and thank you all very much for joining Laura and me. We're the parents of 25-year-old twin daughters who have dreams and aspirations just like I'm sure you do. And one of the

things that I hope we're able to accomplish today is I want to learn about you and your dreams and aspirations, and I want you to ask me questions about our country and, you know, the decisionmaking process that I go through. I'll answer any question you have.

I just want to assure you of one thing, that I believe that freedom is universal. I don't think freedom is just a right for American citizens. I don't think it's just a right for people who practice religion one way. I think it is the right of everybody who lives everywhere. I believe that free societies end up yielding peace and hope. And that's the cornerstone of my foreign policy.

I've had to make some very difficult decisions, as you know, and I made the decisions based upon what I think is in the best interest of my country, the security of my country. But I also believe the decisions I have made will end up helping people realize the great blessings of liberty. I believe people ought to be able to worship freely or not worship at all, but you're equally a citizen of the world. I believe that poverty and hopelessness in the spirit can be changed. I believe the United States has got an obligation to help others.

And we're doing so. We've got a very robust foreign policy. One part of the foreign policy you hear about is, obviously, my determination to defend ourselves. But we're also actively working with people who are suffering from HIV/AIDS in Africa. I'm deeply concerned about the Sudan and the situation in Darfur. I believe that it's very important for the United States to work with friends and allies to accomplish our objectives.

And so the purpose of my visit here to Vienna has been to work with my European Union counterparts to join in a common alliance for the good of mankind. And so thank you for giving me a chance to come by and visit. I'll answer a couple of questions. If anybody has any thoughts or questions and wants to be the lead-off person,

please step up and do so. Don't be shy. [Laughter] Any questions or thoughts?

Yes, sir. Please. State where you're from so everybody knows.

#### *Kosovo*

*Q.* Mr. President, Mrs. Bush, and Ambassador McCaw, I just wanted—first of all, I wanted to say that I'm really honored to have been given this opportunity to participate in this breathtaking occasion. I would like—first of all, I would like to give thanks to Ambassador McCaw for the very friendly invitation to the Embassy and for choosing me as a student of this country that has been chosen here, among so many countries in the world. And want to thank also President Bush, American Government, and the American people, especially, for giving a continuous contribution and help to a country that was having, and is having, a tough time. Therefore, I have reason to believe that tough times never last, that tough people do.

*The President.* Do you mind if I use that sometime? [Laughter]

*Q.* It's not original from me. So long live America and its people. And thank you. And the following question is concerning my country. So I would like to ask you, since the peaceful people of Kosovo has put its trust to America and since the people of Kosovo believe in American power and American democracy, what will the American contribution be for the independence of Kosovo? And furthermore, to what extent is America as a superpower—to what extent is it ready to take on burden and responsibility for solving the problem of Kosovo and to contribute in its progress and democracy, economy and education and freedom?

*The President.* Yes, thank you very much. Is it Niser? Niser is from Kosovo. And yours is a country which is a part of the world which has got our attention. As you know, we've got U.S. troops stationed there

with the intention of helping provide stability so that there can be a peaceful resolution to the issue between Serbia and Kosovo.

We believe that dialog between Serbia and those who aspire for an independent country in Kosovo need to be ongoing, in such a way that there is a resolution that meets the needs of the majority and, at the same time, enhances minority rights inside Kosovo. To this end, we're working with our European partners to try to just bring a sense of stability and a sense of calm so that a rational solution can be worked out and so that the people, the Kosovars can realize dreams.

The ultimate political solution is going to require a buy-in by both sides. And I think the proper role of the United States is to encourage this kind of dialog. The Prime Minister of Serbia will be coming to the United States shortly, and we will work with him to urge him to listen to the needs of the Kosovars and, at the same time, assure him that our policy is to guarantee minority rights.

Thank you for your question. One of the things that—you asked what else we can do. One of the things that is very important for our country is to have exchanges with students such as yourself. I hope that some of you, as you consider your future, will come to the United States to study. And the reason why I say that is because I want you to get to see America the way it is, not the way, necessarily, sometimes it's portrayed through a robust and free media around the world. You'll find the people there to be very understanding, very respectful of traditions. After all, we are a country of immigrants. One of the interesting things about our country is that we've been able to accept people from around the world and, as a result of common values and—that people become Americans. And it is that capacity to help people assimilate into our society that I'd like for you to see firsthand. I think you'll

find there to be a very open society, one that honors freedom for all.

Yes, ma'am. Where are you from?

*Foreign Investment/Life at the White House*

Q. Hello—I'm from Kosovo as well. And first of all, I can say it's an honor to meet you, the President, the First Lady, and the Ambassador McCaw. Mr. President, I want wholeheartedly thank you, your Government, and the people of the United States for working for a stable, free, and democratic Kosovo and the region.

I wanted to say one thing. The intervention of 1999 of the American troops along with NATO partners has enabled me to be a participant today at this roundtable. Otherwise, most of all, I would have had the tragic fate of my father, a prominent university professor and minister of agriculture, as well, who was murdered in the war.

I have two questions. For Mr. President, do you believe that an independent Kosovo will attract foreign investments, consequently improve the economy and enable Kosovo to slowly gain financial independence by supporting their infrastructure and slowly decreasing the need for international financial aid?

And the other question goes to Mrs. Bush. Can you please describe a family day at the White House? [Laughter]

*The President.* Let me start, please. No matter what government I talk about, in order to attract capital, there must be some basic considerations—first of all, rule of law. In order for there to be capital and investment in any society, people have to be assured that their investment will be treated fairly, and therefore, there has to be consistent and constant law. What you can't do is have contracts, for example, that are broken—summarily broken, without an adequate court system to protect that kind of investment.

Secondly, in order for people to feel comfortable investing, there has to be a society which shuns corruption. Capital

looks at a country and says, well, maybe my money will end up being stolen, or maybe I have to bribe my way in, or maybe I have to make concessions in order to get my capital to be properly invested. And therefore, it's important that any society that wants to attract capital must have strong anticorruption measures.

Thirdly, capital needs a rate of return. In other words, if somebody invests in a society, they expect there to be a return on their investment. And that means rational tax policy and monetary policy by the host government. What I'm saying to you is, is that there are certain, just basic standards that must be met in order to attract capital. On the other hand, you're absolutely right. The investment into a society far outweighs the grants and aid, for example. A society that's capable of handling investment in a proper way is a society which will grow and prosper and enable people to be able to realize dreams.

The word I like to use in America is "entrepreneurial spirit." And how do you enhance that entrepreneurial spirit? Well, you do it through good law, good practice, and anticorruption.

*The First Lady.* Okay, a day at—a typical day at the White House. Well, I'll give you a workday first. We get up about 5:30 a.m.—the President gets up and goes in and gets the coffee and brings it back to me in bed. [Laughter] Very nice of him.

*The President.* Record that, please. [Laughter]

*The First Lady.* Then, we have three animals that get up at the same time, and they have to go out—two dogs and a cat. The cat actually doesn't have to go out, but the two dogs do. So then we read the newspapers and drink coffee until we finally get up. We eat breakfast about 6:30 a.m. The President goes to work at the West Wing, which is right there; we live where we work. It's sort of like living above the shop—and goes to the West Wing to work at 7:00.

Usually, I don't go to work until later, around 9 o'clock, unless I'm traveling in the U.S. The President's offices are in the West Wing of the White House; my offices are in the East Wing. And my chief of staff happens to be here with me, right now, Anita McBride. I think there are about 18 people on my staff, and we—I have a lot of initiatives that we're working on.

We travel the country to work on issues that have to do with what we can do to help young people, especially boys, because right now boys in the United States are not going to college—not as many boys go to college. More boys drop out of school; more boys, obviously, get in trouble and are arrested. So we have an initiative that we've been working on where I visit programs around the country that help young people.

Sometimes we meet with—at the same time that I'm meeting with people—I meet with Afghan teachers, for instance, that are being trained in the United States—and the President, of course, is meeting with world leaders over there in the West Wing—also going out and traveling. And then, usually about 5:30 or 6, we're back in the Residence of the White House.

We have dinner. A lot of times our girls come over to have dinner with us. One of them was just living with us, but she just has moved out. The other one lives in an apartment and is teaching school; she's a third grade schoolteacher. So sometimes they'll come over and have dinner with us. Sometimes we'll watch a movie in the White House theater. But we do go to bed early. And so that's sort of the typical day.

*The President.* Thank you all.

NOTE: The President spoke at 4:33 p.m. at the Austrian National Library. In his remarks, he referred to U.S. Ambassador to Austria Susan Rasinski McCaw; and Prime Minister Vojislav Kostunica of Serbia.

## Statement on Senate Passage of Fisheries Management Legislation June 21, 2006

I applaud the Senate for passing a stronger Magnuson-Stevens Act by unanimous consent. By emphasizing the important role of ecosystem-based approaches to fisheries management and strengthening penalties for overfishing and other violations, this legislation will be vital to ensuring that we remain good stewards of our marine environment. I congratulate Chairman Stevens and Cochairman Inouye for their work on this important bipartisan bill that embraces my priorities of ending overfishing and rebuilding our Nation's fish stocks through more effective, market-based management methods.

Since my administration released the Ocean Action Plan in 2004, we have been making great strides in our efforts to make

our oceans, coasts, and lakes cleaner, healthier, and more productive. Last week, I established the Northwestern Hawaiian Islands Marine National Monument, the largest single conservation area in the history of our country and the largest protected marine area in the world. Enactment of a stronger Magnuson-Stevens Act is one of the top priorities of the Ocean Action Plan, and Senate passage of this bill is an important milestone on the way to another significant bipartisan ocean policy achievement.

I urge the House of Representatives to join the Senate in passing this important initiative.

NOTE: The statement referred to S. 2012.

## Remarks at a Welcoming Ceremony in Budapest, Hungary June 22, 2006

*President Laszlo Solyom of Hungary.* Mr. President, may I welcome you to Sandor Palace. Thank you very much for coming to Budapest to commemorate the 50th anniversary of the 1956 Hungarian Revolution and freedom fight.

Mr. President, your visit is a rarity and signifying prelude to the celebration later this year, which will be attended by more than 50 heads of state and government here in Budapest.

Your visit today here in Hungary underlines the importance of 1956, how important it was from the point of view of global history. At the same time, it also highlights the importance of those values for which the Hungarians and Hungary fought in 1956. These are freedom, liberty, democracy, human rights, and national self-determination.

And both the United States of America and Hungary belong to the same community of common values. This is the foundation of the fact that now we are allies. And this is also—gave a foundation to the fact that after crushing 1956, the United States of America admitted more than 35,000 Hungarian refugees. For that, Mr. President, I wish to express my sincere thanks.

These values constitute the foundation of our alliance. It also means obligation for us, and it also means that we have got to represent that in an authentic way. And that was also the secret to Hungary's successful process of democratization and the fact that even under the extraordinary international circumstances made no—[*inaudible*—]and insisted on observing the Constitution and the law.

It is my firm belief that our common responsibilities, duty now is to fight terrorism. This fight against terrorism can be successful only if every step and measures taken are in line with international law. That is why it is my special pleasure to welcome the Vienna declaration.

We are aware of the fact and the various help and of the system that the United States of America contributed and helped this country and the countries of this region, that democracy should be able to take root.

There are many examples, many of these examples are not even known to the general public. In the course of our discussions, Mr. President, I would like to give you a couple of examples for that and also would like to speak about our common responsibility for the future generation and also sustainable global growth and also mention a few words about the visa.

Thank you very much.

*President Bush.* Listen, I'm thrilled to be here, Mr. President. Thank you for your

hospitality, and thank you for your personal contribution to your country's democracy.

I am here to celebrate the 1956 Revolution, the idea of a revolution that celebrated the notion that all men and women should be free. I'm also here to confirm the friendship between Hungary and the United States.

I bring greetings from thousands of Hungarian Americans who are very proud of their homeland and their heritage. I also bring greetings from a nation that admires your courage and your desire to continue to do the hard work necessary for democracy to take hold.

I thank you for your grand hospitality, and I too look forward to our discussions.

NOTE: The President spoke at approximately 9:40 a.m. in the Maria Therese Salon at Sandor Palace. President Solymos spoke in Hungarian, and his remarks were translated by an interpreter.

## Remarks Following Discussions With Prime Minister Ferenc Gyurcsany of Hungary in Budapest

June 22, 2006

*Prime Minister Gyurcsany.* First of all, I'd like to thank from the depth of my heart to the President of the United States for his visit today to Hungary, on the 50th anniversary of the '56 Revolution. We consider this visit to be a tribute to be a point to perseverance of the Hungarian people for freedom.

We also see this as a confirmation of our joint effort that freedom and democracy must not only be preserved but also spread around the world in every region and every country, wherever necessary. Now this work that we started must not and cannot be completed, but it must be

continued, because the world is the way how you shape it.

The alliance of the United States and Hungary is based on values and interests at the same time. There are no major unsolved or painful issues, open issues in the relations of our two countries. There are challenges, and there are tasks to be solved, but that's just the way how it is.

As a European country, I believe that we should finally end with preconception that Europe represents morality and the United States represents efficiency. And if we are democrats, then we believe that morale and power must go hand in hand. And

we are democrats on both sides of the Atlantic. Now, in terms of practical matters, of course, we just cannot avoid talking about the visa issue whenever we meet. We are well aware of each other's standpoints. We cannot pose much surprises to each other. But because we know that this is a long road, this is a long path that we must go down, so we must look for other areas where we can be more successful.

However, an important step on this road is that within a couple of months, finally, the building, the Tancsics was captured was kept—the building known as the Tancsics prison will return to Hungarian ownership. Let me tell you quite frankly that the President showed much more understanding for the importance and the meaning of this issue. And just within this circle, I can say that he promised, and if he did that, it will happen.

So, by and large, this is what we talked about.

*President Bush.* Mr. Prime Minister, thank you. I'm honored to be here. As I recall, this trip started back when you invited me to come when you were visiting the Oval Office. I thank you for the invitation. I'm proud to be here. I'm impressed by the beauty of this city. I'm honored to be able to speak to the people of Hungary tonight when I talk about the unbelievable thirst for freedom that was exhibited in 1956. And that spirit of freedom still exists

in the world today. And I thank you for your troops who are working through NATO to help Iraq and the PRT that we're working on for Afghanistan. And thank you for your commitment to help others be free.

It is also my pleasure to congratulate you on being reelected. It's not easy to win a second opportunity to serve, but you have done so. And I appreciate the courage you're showing not only in foreign policy but in domestic policy. We have a very good relationship, which means the Prime Minister is comfortable in bringing up the visa issue. Look, I understand this is a difficult issue, and we have developed a roadmap to work through this issue, so the people of your good country will understand that you're doing your best and I'm doing my best to meet U.S. laws, and you're doing your best to represent the people of Hungary to get this issue solved.

And so thank you for bringing up a lot of issues, and thank you for your leadership. And we are very proud of our friendship and alliance with Hungary. Thanks for the invitation.

*Prime Minister Gyurcsany.* Thank you, Mr. President.

NOTE: The President spoke at approximately 11:40 a.m. in the Parliament Building. Prime Minister Gyurcsany spoke in Hungarian, and his remarks were translated by an interpreter.

## Remarks at a Luncheon Hosted by President Laszlo Solyom and Prime Minister Ferenc Gyurcsany of Hungary in Budapest June 22, 2006

*President Solyom.* Mr. President, Mrs. Bush, distinguished guests, it is indeed a great honor and great privilege to have the President of the United States of America here in Hungary on the occasion of the

commemoration of the 50th anniversary of the 1956 Revolution and freedom fight.

This visit demonstrates that community of shared values that is a very strong bond between us. It was freedom, democracy, self-determination, and human rights—were

the values for which so many people sacrificed their lives in Hungary in 1956.

This year, in March, in the Capitol, President Bush said, on the occasion of the commemoration, that the Hungarian Revolution was an example of patience and is a value which is deeply rooted in everybody's soul. We were, indeed, very patient. We carried this value in the heart of our hearts for 35 years, and not only in the heart, and finally, after 35 years, it became reality.

This set of values is a must for us, to authentically represent it all over the world. During our bilateral meetings, we were able to exchange views on the various techniques that can help people to have these values take deep roots in the hearts of the people.

Only a few of us know, though, the great importance of the practice of the Supreme Court of the United States, especially in the field of human rights, the lesson we learn from them and started to exercise them, and then radiate the lesson to the neighboring countries in east-central Europe and even beyond that, down to South Africa. And these techniques are just as important as is another important initiative by the father of President Bush, who initiated the establishment of environmental center, which radiated an impact and influence all over the region.

In the course of our bilateral relations, I reiterated our commitment to fight and enhance sustainable economic growth in the world. We touched upon several foreign political issues as from the Balkans down to Iraq, Iran, and Russia. We agreed that there are vast opportunities to further expand our bilateral cooperation, and our two respective countries have their own role to play. And Hungary, because of its geopolitical situation and tradition, can help a lot to materialize our common goals and objectives.

In the spirit of this common cooperation, may I propose a toast to the health of Mr.

President, Mrs. Bush, and the cooperation between our two respective countries.

*President Bush.* Mr. President, Mr. Prime Minister, Laura and I thank you and your wives for such gracious hospitality in this beautiful country. It is a joy to be in Hungary. It is an honor to be here.

I bring the greetings from my country. I bring the greetings from Hungarian Americans who are so proud of their heritage. I bring the thanks of the American people for supporting the freedom movement. I'm looking forward to sharing some thoughts about the unbelievable events that took place in 1956. And all of us who have the blessings of freedom must remember the spirit that took place then and must never take freedom for granted.

I congratulate your political leaders for doing the hard work necessary to make sure democracy takes hold. And I assure the Hungarian people that we're proud to be your friend and ally. And so it is in the spirit of respect and friendship that I would like to offer a toast to the people of Hungary.

*Prime Minister Gyurcsany.* Mr. Presidents, ladies and gentlemen, freedom and love, these are the two things I need. That's how we Hungarians, many Hungarians sing but this is also how Americans or anybody else in the world could sing and celebrate like we do here in Hungary all the time. Freedom and love really link together the two basic conditions for public and private happiness. Neither of these can exist without enthusiasm. Neither of these can tolerate selfishness. And both of these require unselfishness and sacrifice. So we are prepared to do our best for a better world, unselfishly and with some self-sacrifice sometimes.

And we know that this better world needs more democracy, more understanding, and sometimes, perhaps, more love. Well, this is perhaps where we are linked together, Europe and the United States, Hungary and the United States, in this effort, in this struggle. Sometimes we

might have debates; we might have discussions; but after all, we know that we must work together and fight together for the objectives that we have together.

So, welcome, Mr. President. Let's make this a better world, better Hungary, and better United States.

## Remarks in Budapest June 22, 2006

Thank you very much. *Jo napot kivanok*. Thank you for your warm welcome. I first want to thank the President for his gracious hospitality and the chance to visit Sandor Palace. It's a beautiful site, and I know you're proud of it. I also want to thank your Prime Minister for his hospitality and the chance to go to the Parliament Building. Laura and I particularly liked to see the Holy Crown of St. Stephen. It was beautiful. It's a grand reminder of the great history of Hungary.

I thank the Hungarian people for their gracious reception. Laura and I are honored to visit your great nation. Hungary sits at the heart of Europe. Hungary represents the triumph of liberty over tyranny, and America is proud to call Hungary a friend.

I appreciate the opportunity to stand here on Gellert Hill, which offers a striking view of your beautiful city. Fifty years ago, you could watch history being written from this hill. In 1956, the Hungarian people suffered under a Communist dictatorship and domination by a foreign power. That fall, the Hungarian people decided they had enough and demanded change. From this spot, you could see tens of thousands of students and workers and other Hungarians marching through the streets. They called for an end to dictatorship, to censorship, and to the secret police. They called

NOTE: The President spoke at approximately 12:20 p.m. in Hunter Hall at the Parliament Building. In his remarks, he referred to Erzsebet Solyom, wife of President Solyom; and Klara Dobrev, wife of Prime Minister Gyurcsany. President Laszlo and Prime Minister Gyurcsany spoke in Hungarian, and their remarks were translated by an interpreter.

for free elections, a free press, and the release of political prisoners. These Hungarian patriots tore down the statue of Josef Stalin and defied an empire to proclaim their liberty.

Twelve days after the Hungarian people stood up for their liberty, the Communists in Moscow responded with great brutality. Soon the streets of Budapest were filled with Soviet tanks. The Red Army killed many who resisted, including women and children. The Soviets threw many more into prison. They crushed the Hungarian uprising but not the Hungarian people's thirst for freedom.

Some 200,000 Hungarians fled into exile in search of liberty. Many found refuge in the United States. These immigrants have contributed to my country in countless ways, and America will always be glad that we opened our doors to Hungarians that were seeking freedom. Fifty years later, the sacrifice of the Hungarian people inspires all who love liberty. Some of those who faced those tanks are here today. I had the honor of meeting three such gentlemen at lunch. I was proud to be in their presence. America honors your courage. We've learned from your example, and we resolve that when people stand up for their freedom, America will stand with them.

In 1989, a new generation of Hungarians returned to the streets to demand their liberty and boldly helped others secure their freedom as well. By giving shelter to those fleeing tyranny and opening your border to the West, you helped bring down the Iron Curtain and gave the hope of freedom to millions in Central and Eastern Europe. Because you had the courage to lead, Hungary became the first Communist nation in Europe to make the transition to democracy.

Hungary has continued to move forward. You regained your independence, held free elections, and established a free economy. Hungary is now a valued member of NATO and the European Union. You know that the democratic journey is not easy, but you continue to make the tough decisions that are necessary to succeed. America admires your perseverance; we welcome your progress; and America values our alliance with the free people of Hungary.

You believe that free nations have an obligation to help others realize the benefits of freedom. So last year, you launched the International Center for Democratic Transition here in Budapest. You set that center up to help others learn from your country's experiences. Hungary was also an early contributor to the United Nations Democracy Fund, which supports emerging democracies with legal and technical and financial assistance. And together America and Hungary helped launch the Foundation for the Future, which supports democratic reformers, independent journalists, women's groups, and human rights advocates throughout the Middle East. Hungary is making a difference in our world, and I thank you for your leadership in freedom's cause.

Hungary is also showing courage in freedom's cause. In Kosovo, Hungarian soldiers are helping to secure the peace. Your work is aiding the rise of democracy in a region that has endured violence and tyranny for many decades. By your efforts, you're helping the people of the Balkans establish free

and democratic societies, and you're paving the way for their membership in the institutions of a united Europe.

Hungarian troops are also defending freedom's cause in the war on terror. In Afghanistan, your soldiers have rebuilt schools and a medical center. They've helped train Afghan police to enforce the rule of law and to protect the Afghan people. In Iraq, Hungarian troops played a vital role in Operation Iraqi Freedom by providing security and delivering food and medical supplies to coalition forces. Today, Hungarian soldiers are helping to train Iraqi security forces. This is important work. By supporting these two young democracies, you are strengthening two new allies in the war on terror, and you're bringing hope to millions of people in a vital region of the world.

Last week, I traveled to Baghdad. I was impressed by what I saw. Americans and Hungarians and other coalition partners can be proud of what we have achieved in partnership with the Iraqi people. I met with Iraq's new Prime Minister and was able to see firsthand his strong character, his commitment to freedom, and his determination to succeed. Hungarians will recognize this spirit. Prime Minister Maliki is committed to the democratic ideals that also inspired Hungarian patriots in 1956 and 1989. He has a sound plan to improve security, to unify his people, and to deliver a better life for the citizens of Iraq. The success of the new Iraqi Government is vital to the security of all nations, and so it deserves the support of the international community. We will continue to help the Iraqi Government establish free institutions, to achieve its goals, and we will continue to help Iraq take its rightful place alongside America and Hungary as beacons of liberty in our world.

Iraq's young democracy still faces determined enemies, people who will use violence and brutality to stop the march of freedom. Defeating these enemies will require sacrifice and continued patience, the

kind of patience the good people of Hungary displayed after 1956. We will help them rebuild a country destroyed by a tyrant. We'll help the Iraqis defeat the enemies of freedom. Our commitment is certain; our objective is clear. The new Iraqi Government will show the world the promise of a thriving democracy in the heart of the Middle East.

The Hungarian people know well the promise of freedom. Many of you lived through the nightmare of fascism or communism or both. Yet you never lost hope. You kept faith in freedom. And 50 years after you watched Soviet tanks invade your beloved city, you now watch your grandchildren play in the streets of a free Hungary.

The lesson of the Hungarian experience is clear: Liberty can be delayed, but it cannot be denied. The desire for liberty is universal, because it is written by our Creator into the hearts of every man, woman, and child on this Earth. And as people across the world step forward to claim their own freedom, they will take inspiration from your example and draw hope from your success.

Earlier today Laura and I laid a bouquet of flowers at the 1956 Memorial Monument across the river. It was our privilege to do so. It was a moving moment for us. Kossuth Square is named for the father

of Hungarian democracy and honors more than a century-and-a-half of Hungarian sacrifice in freedom's cause. A bust of this great leader stands in the United States Capitol. It affirms that those who fight for liberty are heroes not only in their own land but of all free nations. All who love liberty are linked together across the generations and across the world.

Your great poet, Petofi, said this: "Here is the time, now or never! Shall we be slaves or free? This is the question; answer! By the God of the Hungarians we swear: We swear to be slaves no more!"

These words were addressed to the Hungarian people, yet they speak to all people in all times. This is the spirit that we honor today. I appreciate the opportunity to come to this great country and to celebrate the Hungarian example—the courage, the sacrifice, the perseverance that has led to this democracy.

On behalf of all Americans, *Koszonom*. May God bless you all. Thank you very much.

NOTE: The President spoke at 4:38 p.m. on Gellert Hill. In his remarks, he referred to President Laszlo Solyom and Prime Minister Ferenc Gyurcsany of Hungary; and Prime Minister Nuri al-Maliki and former President Saddam Hussein of Iraq.

## Statement on House of Representatives Passage of Legislative Line-Item Veto Legislation June 22, 2006

I commend Members of the House who voted today in support of the Legislative Line Item Veto Act of 2006. I also applaud the House Republican leadership, Congressman Paul Ryan and Congressman Mark Udall, for successfully steering this bill to passage. Controlling the Federal appetite for spending and protecting taxpayer

dollars are shared responsibilities of the legislative and executive branches and require a bipartisan approach. I appreciate those Democrats who have supported the line-item veto in the past and did so again today. The line-item veto is a critical tool that will help rein in wasteful spending and

bring greater transparency to the budget process.

Forty-three Governors have a line-item veto, and we need similar authority at the Federal level to control spending. Working with Congress, this tool can be used to help reduce the budget deficit and discourage the practice of earmarking Federal

funds for projects that are wasteful, duplicative, or unnecessary. I urge the Senate to also pass the line-item veto legislation, so Congress and my administration can begin using this important tool to help enforce fiscal discipline.

NOTE: The statement referred to H.R. 4890.

## Message to the Congress on Continuation of the National Emergency With Respect to the Western Balkans

June 22, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent the enclosed notice to the *Federal Register* for publication, stating that the Western Balkans emergency is to continue in effect beyond June 26, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on June 24, 2005, 70 *FR* 36803.

The crisis constituted by the actions of persons engaged in, or assisting, sponsoring, or supporting (i) extremist violence in the Republic of Macedonia, and elsewhere in the Western Balkans region, or (ii) acts obstructing implementation of the Dayton Accords in Bosnia or United Nations Security Council Resolution 1244 of June 10, 1999, in Kosovo, that led to the declaration of a national emergency on June 26, 2001, in Executive Order 13219 has not been re-

solved. Subsequent to the declaration of the national emergency, I amended Executive Order 13219 in Executive Order 13304 of May 28, 2003, to address acts obstructing implementation of the Ohrid Framework Agreement of 2001 in the Republic of Macedonia, which have also become a concern. The acts of extremist violence and obstructionist activity outlined in Executive Order 13219, as amended, are hostile to U.S. interests and pose a continuing unusual and extraordinary threat to the national security and foreign policy of the United States. For these reasons, I have determined that it is necessary to continue the national emergency declared with respect to the Western Balkans and maintain in force the comprehensive sanctions to respond to this threat.

GEORGE W. BUSH

The White House,  
June 22, 2006.

NOTE: This message was released by the Office of the Press Secretary on June 23. The notice is listed in Appendix D at the end of this volume.

## Remarks at Opening Day of 2006 White House Tee-Ball June 23, 2006

*The President.* Seth, thank you very much. Good job. Welcome to the South Lawn. Laura and I are thrilled you're here for opening day. It is an honor for me and the commissioner, General Pete Pace, to welcome you all here for what is going to be an exciting ball game between the Yankees from McGuire Air Force Base—[*applause*—yes, right from New Jersey. Welcome. Glad you all are here. And they're going to be playing the Dolcom Little League Indians from Groton, Connecticut, representing the Naval Submarine Base of New London. Thank you all for coming. Welcome.

We want to welcome the coaches and the players. We want to welcome the moms and dads and grandparents here to this historic ballpark. And we're glad you're here to help us kick off the 2006 Tee-Ball on the South Lawn season. General Pace and I expect there to be some pretty good competition today.

I do want to welcome the mayor of Groton, Connecticut, Mayor Harry Watson. Mr. Mayor, thank you for coming; proud you're here. Thanks for serving. Thanks for joining us. I welcome Captain Sean Sullivan, who will be the first base coach. Captain, thanks for serving. Proud you're here. Good luck. You've got some awesome duties today. And Colonel Rick Martin from McGuire, good to see you, Colonel. Thanks for coming. Colonel. Proud you're here.

We're proud to welcome Steve Keener, who is the president and CEO of Little League International, and his wife, Cheryl. Steve, thanks for coming back. Thanks for helping. For those of you who want to be a Major League player, Mike O'Connor is with us, from the mighty Washington Nationals. Mike, thank you for coming, buddy. Mike is a pitcher for the Nationals. Glad you're here, Mike. We welcome Seth Fallon. We just heard from Seth. Thanks.

And I want to thank the Navy Sea Cadets Corps, who happen to be the color guard.

Zane Ellingwood is about to put the first ball on the first tee for the first game. But not quite yet. I do want to welcome Tim Brant. Where are you, Tim? There he is. Tim, thanks for coming, buddy.

*Announcer Tim Brant.* Thank you, pal.

*The President.* A national baseball announcer here to call opening day. We really appreciate you coming. Thanks.

And finally, I do want to welcome representatives from the Armed Forces Foundation, the Fisher House, and our military kids. Thank you for serving our families. After the game, it's my honor to be able to present the balls to each of the players on the team. And I will also be able to welcome Dave Erbe, who is a youth volunteer. He volunteers to help the wounded and injury—military personnel at Walter Reed. David, thank you in advance for doing what you're doing. Thanks for serving your generation and our country. You're a good man.

And now, before we put the first ball on the tee, I do want you to join me in the Little League Pledge. Are you ready? All players ready? Doesn't look like it. [*Laughter*] Are you ready?

[*At this point, the pledge was recited.*]

*The President.* Play ball.

NOTE: The President spoke at 1:05 p.m. on the South Lawn at the White House. In his remarks, he referred to Seth Fallon, member, Maryland State Boychoir, who sang the national anthem; Gen. Peter Pace, USMC, Chairman, Joint Chiefs of Staff, in his capacity as 2006 commissioner of White House tee-ball; Capt. Sean P. Sullivan, USN, commanding officer, Naval Submarine Base New London, who served as first base coach; Col. Frederick H. Martin, USAF, commander,

McGuire Air Force Base, who served as third base coach; and youth volunteer Zane Ellingwood.

## Statement on the Proliferation Security Initiative

*June 23, 2006*

Today members of the international community are gathered in Warsaw, Poland, to share their experiences and develop new approaches to countering the trafficking of weapons of mass destruction through the Proliferation Security Initiative (PSI). Since the initiative was launched in Krakow, Poland, on May 31, 2003, the PSI has grown from a handful of nations to a global partnership of more than 70 countries from all around the world.

The PSI is dedicated to stopping all aspects of the proliferation trade and to denying terrorists, rogue states, and their supplier networks access to WMD-related materials and delivery systems. Together, we are working to disrupt the financial activities of networks that support proliferation, as called for in United Nations Security Council Resolutions 1540 and 1673. To-

gether, we are shutting down front companies and proliferation networks and interdicting cargo carrying these dangerous materials, whether transported by land, air, or sea. With renewed determination, PSI supporters have come to Warsaw to further enhance our ability to counter WMD proliferation.

I join President Lech Kaczynski in welcoming PSI supporters to Warsaw, including our newest partners from the Persian Gulf and Central Asia. I commend all member nations for their readiness in taking on this vital task, and I urge all responsible states to join this global effort to end the WMD proliferation trade.

NOTE: The statement referred to President Lech Kaczynski of Poland.

## Statement on the Resignation of Norman Y. Mineta as Secretary of Transportation

*June 23, 2006*

Norman Mineta has served America with integrity, dedication, and distinction. He leaves his position as the longest serving Secretary of Transportation in our Nation's history.

Norm's life is a story of determination, courage, and service. As a child, he lived in an internment camp. As a young man, he wore his country's uniform in Korea and Japan. From there, he went on to become

a mayor, a Congressman, and a Cabinet Secretary under two Presidents.

As my Secretary of Transportation, Norm performed a crucial role on September 11, 2001, leading the successful effort to bring tens of thousands of passengers aboard commercial aircraft to safe landings. His leadership was vital to strengthening the security of America's seaports and airports. Norm worked hard to help eliminate red tape and liberalize the commercial aviation

market. After Hurricane Katrina, Norm and his team were able to rapidly repair and reopen the region's major highways, airports, seaports, and pipelines. He also oversaw important changes in fuel economy standards that will save fuel, save lives, and save jobs.

Norm is an inspiration to all of us and has earned the admiration of a grateful Nation. I am honored that he agreed to serve in my Cabinet. Laura and I wish Norm, Deni, and their children all the best.

## The President's Radio Address *June 24, 2006*

Good morning. This past week, I traveled to Austria and Hungary, where I had productive meetings with our European allies. We discussed the challenges and opportunities we share, including the importance of spreading prosperity at home and around the world. It's good to be back home, and I'm pleased to report that our economy is strong, growing, and delivering prosperity to more of our people.

Let me give you a few facts. In the first quarter of 2006, our economy grew at an impressive annual rate of 5.3 percent. Since August of 2003, America has created more than 5.3 million new jobs, more than all 25 nations of the European Union combined. Productivity is growing, and wages are beginning to rise. And because taxes are low, workers are keeping more of the money they earn.

Our economy is heading into the summer on the fast track, and one of the best ways to keep our momentum going is to restrain spending in Washington, DC. Earlier this month, Congress took an important step by passing an emergency spending bill that stayed within the strict spending limits I set. The bill included necessary funding for high priorities, such as equipping our military and rebuilding the gulf coast, and it showed discipline in other areas. Congress deserves credit for meeting my spending limits, and I was pleased to sign the emergency spending bill into law.

As Members of Congress show restraint on spending bills, they also need to make reforms in the spending process. Under the current system, many lawmakers are able to insert funding for pet projects into large spending bills. This process is called earmarking, and it often results in unnecessary spending. For example, a bill to fund our military can be loaded up with unjustified earmarks and other spending that may not add to our national security.

This leaves Members of Congress with two bad options: They can either vote against the whole bill, including all the worthwhile spending, or they have to accept the whole bill, including the wasteful spending. The President is left with the same dilemma: Either he has to veto the entire bill or sign the bill and approve the unnecessary spending.

There's a smarter way to handle taxpayer dollars, and it begins with granting the President a tool called the line-item veto. A line-item veto would allow the President to remove wasteful spending from a bill while preserving the rest of the legislation. Forty-three of our Nation's 50 Governors have line-item veto authority, and they have used that authority to remove needless spending from otherwise good bills.

Ten years ago, Members of Congress from both parties voted to grant President Clinton the line-item veto. However, the Supreme Court ruled that version of the line-item veto unconstitutional because it

took too much spending authority away from the Congress. I proposed a new version of the line-item veto that fixes the problem and gives the President a clear and constitutional way to cut wasteful spending. Under my proposal, the President would identify a list of unnecessary items that should be removed from a larger spending bill. Congress would then be required to hold a prompt up-or-down vote on the list.

A line-item veto would give the President a way to insist on greater discipline in the budget. A line-item veto would reduce the incentive for Congress to spend wastefully because when lawmakers know their pet projects will be held up to public scrutiny, they will be less likely to suggest them in the first place. Most importantly, a line-item veto would benefit American taxpayers by ensuring greater respect for their hard-earned dollars.

This past Thursday, the House of Representatives passed a bill granting line-item-veto authority. This was a victory for the taxpayers and for spending restraint. I call on the Senate to show a bipartisan commitment to fiscal discipline by passing the line-item veto so we can work together to cut wasteful spending, reduce the deficit, and save money for American taxpayers.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on June 23 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on June 24. The transcript was made available by the Office of the Press Secretary on June 23 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following a Meeting With Organizations That Support the United States Military in Iraq and Afghanistan and an Exchange With Reporters June 26, 2006

*The President.* I have just had a remarkable discussion with some of my fellow citizens who have dedicated their lives to making sure our troops know that this country supports them as they help secure our country and spread freedom.

One of the amazing things about America is that people are desirous of coming together to support a neighbor in need. And we've got kids who are overseas defending this country, and we've got people at this table who are supporting their families, their loved ones, and most importantly, the troops who are in harm's way.

There's an organization called America Supports You. I would hope my fellow citizens would look on the web page [americasupportsyou.mil](http://americasupportsyou.mil) to determine how you can help support our troops if you so

desire. I would urge Americans to do that, and around the table are leaders of the different organizations that make up this umbrella group. We've heard from people that are helping families of the wounded. We're talking to people who are using their position in different fields, like the entertainment field, to go over and provide hope for our troops. We're talking to moms and wives of those who have volunteered to serve our country.

But I want to thank you all for joining us, and thank you for serving your country. I told the folks here that the politics in Washington can be rough. But make no mistake about it, I am determined to succeed. And we will implement a plan to achieve victory, which is necessary, and that they need to tell the troops that no matter

how tough it looks here in the Nation's Capital, that I know we're doing the right thing, and I know we will win.

I'll take a couple of questions. Terry [Terence Hunt, Associated Press].

*Iraq/U.S. Armed Forces*

Q. Mr. President, General Casey saw you on Friday, and it's been reported that he's talked about withdrawing two brigades from Iraq by this year. Can you tell us what he recommended to you?

*The President.* First of all, I did meet with General Casey, and I met with him because it's very important for me, as well as Secretary Rumsfeld, to meet with our commander on the ground. I've told the American people our commanders will be making the decisions as to how to achieve victory, and General Casey, of course, is the lead person. So we had a good visit with him.

And we talked about a lot of things. The first thing we talked about was the joint operations with the Iraqi forces to secure Baghdad and how that's going. We talked about the actions we're taking in Ramadi. The coalition is in the lead in Ramadi, and we're trying to make sure Ramadi does not become a safe haven for Al Qaida. And so he explained to me the tactics on the ground, what we're doing to secure that city and to run the Al Qaida-types out.

We talked about the Iraqi training mission. And as you well know, our standards are, as Iraqis stand up, the coalition will be able to stand down. And he talked about that kind of progress.

But in terms of our troop presence there, that decision will be made by General Casey, as well as the sovereign Government of Iraq, based upon conditions on the ground. And one of the things that General Casey assured me of is that whatever recommendation he makes, it will be aimed toward achieving victory. And that's what we want. And victory means a free Government that is able to sustain itself, defend itself. It's a Government that will be an

ally in the war on terror. It's a Government that will be able to fight off Al Qaida and its desires to have a safe haven.

And so I did visit with General Casey, and I came away once again with my trust in that man. I've told the people here around the table that the decisions that I will make will be based upon the recommendations of people like General George Casey.

Toby [Tabassum Zakaria, Reuters].

*North Korea*

Q. Mr. President, how much closer do you believe North Korea is to launching the long-range missile, and how concerned are you about this? What if they just launch a satellite—

*The President.* Toby, I have said that the North Koreans should notify the world of their intentions, what they have on top of that vehicle and what are their intentions. We have not heard from the North Koreans, so I can't tell you what their intentions are. I have made clear to our partners on this issue—that would be Japan and South Korea and China and Russia—that we need to send a focused message to the North Koreans in that this launch is provocative. And I was pleased to hear that the Chinese have delivered that message to the North Koreans, and we would hope that the leader in North Korea listened to the Chinese.

So we don't know; we don't know. That's part of the problem. It's a nontransparent society that ought to be sharing its intentions with the rest of the world.

Hutch [Ron Hutchesson, Knight Ridder].

*Environment*

Q. I know you are not planning to see Al Gore's new movie, but do you agree with the premise that global warming is a real and significant threat to the planet that requires action—

*The President.* I think—I have said consistently that global warming is a serious problem. There's a debate over whether it's manmade or naturally caused. We ought

to get beyond that debate and start implementing the technologies necessary to enable us to achieve a couple of big objectives: one, be good stewards of the environment; two, become less dependent on foreign sources of oil for economic reasons and for national security reasons.

That's why we're pressing for clean coal technology. That's why the hydrogen initiative is robust. In other words, we want our children being able to drive cars not fueled by gasoline but by hydrogen. That's why I've been a strong advocate of ethanol as an alternative source of fuel to run our cars. I strongly believe that we ought to be developing safe nuclear power. The truth of the matter is, if this country wants to get rid of its greenhouse gases we've got to have the nuclear power industry be vibrant and viable. And so I believe in—and I've got a plan to be able to deal with greenhouse gases.

April [April Ryan, American Urban Radio Networks].

#### *Voting Rights Legislation*

Q. Mr. President, what are you doing to ensure that the Voting Rights Act is reauthorized by the midterm elections, as you're saying that's one of your top priorities? And also, do you support foreign ballots—foreign language ballots?

*The President.* I am working very carefully with Members of Congress to implement that which I said when I signed the proclamation for Rosa Parks, is I want this Voting Rights Act extended. And so we're working with Members of the United States Congress to see if we can't get it done.

#### *Bank Records/War on Terror*

Q. Sir, several news organizations have reported about a program that allows the

administration to look into the bank records of certain suspected terrorists. My questions are twofold: One, why have you not gone to Congress to ask for authorization for this program, 5 years after it started? And two, with respect, if neither the courts nor the legislature is allowed to know about these programs, how can you feel confident the checks and balances system works?

*The President.* Congress was briefed. And what we did was fully authorized under the law. And the disclosure of this program is disgraceful. We're at war with a bunch of people who want to hurt the United States of America, and for people to leak that program and for a newspaper to publish it, does great harm to the United States of America. What we were doing was the right thing. Congress was aware of it, and we were within the law to do so.

The American people expect this Government to protect our constitutional liberties and, at the same time, make sure we understand what the terrorists are trying to do. The 9/11 Commission recommended that the Government be robust in tracing money. If you want to figure out what the terrorists are doing, you try to follow their money. And that's exactly what we're doing. And the fact that a newspaper disclosed it makes it harder to win this war on terror.

Thank you.

NOTE: The President spoke at 10:41 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; and Chairman Kim Jong Il of North Korea.

## Remarks at a Reception for Black Music Month June 26, 2006

Glad you're here. Thank you all. Welcome to the White House, and thank you for joining us as we celebrate Black Music Month.

I wish Laura were here, but she's got a good excuse. She's in New Orleans. She went down there to talk to the American Library Association's Annual Conference, and she spoke about the importance of rebuilding school libraries up and down the gulf coast of our country. She sends her best. I wish she could be here to hear the music. I know she's going to love it as much as I will love it.

I'm looking forward to introducing our artists here in a second. I do want to recognize Alphonso Jackson, who's a member of my Cabinet. Thank you for coming, and thank you for bringing us here. And it's good to see the Federal coordinator for the gulf coast rebuilding effort, Don Powell. Thank you for being here, sir. I welcome Chip Pickering from Mississippi and Congresswoman Marsha Blackburn from Tennessee. Thank you both for coming. I'm proud you're here.

It is always a special treat to be in the presence of Dr. Dorothy Height. Good to see you, Dr. Height.

And with us we have two great athletes, Alana Beard—thank you for coming, Alana—and Kareem Abdul-Jabbar. Proud you're here. I don't know whether you know this, but Kareem Abdul-Jabbar is a jazz expert, and he is working on a documentary about the connection between jazz and basketball. [Laughter] Pretty good combination. [Laughter]

During this month, we recognize the great contributions that black music has made to our Nation. That's why we're here. We express our gratitude to the artists whose works have inspired our Nation and have brought such beauty into the world.

Black music was often born of great pain, from the music of slaves who sang to warn others that the master was coming to the music of faith that helped African Americans endure tremendous suffering and overcome injustice. Black music is a really important part of our Nation's history and culture, and that's why we're celebrating it here today.

Some of the finest performances by black musicians have been heard right here in the White House, and we're going to continue that tradition today. During—in 1878, during the administration of Rutherford B. Hayes, soprano Marie Selika became the first black artist to perform here in the White House. A few years later, the Jubilee Singers of Fisk University became the first black choir to perform here. They moved President Chester Arthur to tears with a rendition of "Safe in the Arms of Jesus." Like the man they sang about, the Jubilee Singers could not find an inn that would welcome them here in Washington, DC. Those times have changed, thank goodness.

In more recent times, the White House has been graced by performances by artists like Louis Armstrong and Pearl Bailey, Ella Fitzgerald, Aretha Franklin, Shirley Caesar, Duke Ellington, and Lionel Hampton. These men and women created some of the greatest music America has ever produced, and they honored our country by sharing their gifts right here in the people's house. We're about to have the same type of performances here, if I can ever quit talking. [Laughter]

This year, Black Music Month celebrates the music of our Nation's gulf coast, soul and blues and jazz. And I'm honored that we've got three tremendous performers who represent the best of these three great traditions.

Patti Austin is one of America's most talented singers and songwriters. Her extraordinary career began at the age of 4 when she made her debut alongside her godmother, Dinah Washington, at Harlem's famed Apollo Theater. Since then, she's recorded 16 solo albums featuring everything from soul to standards. Recently Patti earned her sixth Grammy nomination with her tribute to Ella Fitzgerald. Patti is an incredible artist. Laura and I have been privileged to see her perform at the Kennedy Center. I think you're going to like her a lot. [Laughter]

She's sung at the White House for every President since Ronald Reagan. When she was rehearsing her performance for President Reagan, Patti was singing so powerfully the piece of molding fell from the ceiling here in the East Room. [Laughter] Be forewarned. [Laughter] When Patti sings, she brings down the house. [Laughter] I'm proud to join the distinguished line of Presidents who have welcomed her here to the White House.

With us today is B.B. King, "King of the Blues." B.B. was raised in the Mississippi Delta, where he picked cotton for 35 cents a day, and then he played after work on the street corners for dimes. He says that when he sang gospel songs, "They'd pat me on the head but wouldn't ever put anything in the hat." [Laughter] So he would change, "my Lord" to "my baby"—[laughter]—and then they always gave him a tip. [Laughter]

One night in the 1950s, B.B. King was playing in an Arkansas town called Twist when two men got in a fight over a woman and knocked over a kerosene stove and set the whole place on fire. B.B. got out, but then he realized he had left his guitar behind. And so he went back inside; he braved the flames; and he rescued the guitar. Later, he learned that the lady who had inspired the brawl was named Lucille. So that's what he named his guitar.

Since then, B.B. and Lucille have played more than 10,000 shows. They have thrilled

audiences all over the world. B.B. has notched an incredible 74 entries on the Billboard charts, and his work has influenced virtually every major guitar player over the last half-century. He remains gracious and humble, what folks in Mississippi call "free-hearted."

B.B. says this about his career: "I'm trying to get people to see that we are our brother's keeper." He went on to say, "Red, black, brown, yellow, rich, and poor, we all have the blues." It's hard to have the blues when you're about to hear B.B. King perform. At 80, this ageless star is still going strong, and we are thrilled to welcome him back to the White House.

We're also pleased to welcome Irvin Mayfield. Irvin is the cultural ambassador of New Orleans and artistic director of the New Orleans Jazz Orchestra. At just 28 years old, Irvin has already become one of America's finest trumpet players, in the great New Orleans jazz tradition. He's more than a musician; he's a decent, big-hearted man.

Last year, as Hurricane Katrina roared through New Orleans, the rising water took his dad, Irvin, Sr. The pain of losing his father was suddenly unimaginable. Yet in his father's name, Irvin pushed back his grief, and he went to work. He pulled out his trumpet; he pulled together his orchestra and started performing to help others who had lost homes and loved ones. He helped dry New Orleans's tears through the inspiring power of his music, and he hasn't stopped.

He's using his God-given talent to help rebuild his beloved homeland—his hometown, one brick and one note at a time. After the storm, Irvin made this solemn vow: No breached levee will wash away the culture of New Orleans.

There's a wonderful and unique tradition in New Orleans called the jazz funeral. The funeral procession parades slowly through the streets followed by a band playing a mournful dirge as it moves to the cemetery. Once the casket has been laid in place and

the mourners have moved out of the cemetery, the music begins to speed up and the procession is joined by a joyful second line, with crowds of people dancing and celebrating the triumph of spirit over death.

Today Irvin Mayfield will play a song in the great tradition called “Just a Closer Walk With Thee.” It’s the first song he learned from his dad. He played it at his dad’s—in his dad’s memory after Hurricane Katrina, and then he retired the song. We’re honored that he’s decided to play it one last time, right here in the White House.

Irvin, we thank you for your personal courage and your dedication to others in a time of adversity. I have no doubt that

with every good deed you perform and every note you play, your dad is smiling down on you. God bless you, Irvin.

Ladies and gentlemen, please welcome Irvin Mayfield.

NOTE: The President spoke at 5:23 p.m. in the East Room at the White House. In his remarks, he referred to civil rights leader Dorothy I. Height; Alana Beard, guard and forward, Women’s National Basketball Association’s Washington Mystics; and Kareem Abdul-Jabbar, former National Basketball Association center. The Black Music Month proclamation of May 25 is listed in Appendix D at the end of this volume.

## Statement on the 10th Anniversary of the Terrorist Attack on the Khobar Towers in Saudi Arabia

*June 26, 2006*

Ten years ago yesterday, in an attack on the Khobar Towers apartment complex in Dhahran, Saudi Arabia, 19 members of our Armed Forces were killed and hundreds of other Americans were injured by terrorists who we believe were working with Iranian officials. We honor the courage of those who paid the ultimate price in defending our country. America will carry on the legacy of these fallen heroes by continuing the mission for which they gave their lives: defeating tyranny, defending freedom, and protecting their fellow citizens.

Laura and I offer our prayers and the gratitude of this great Nation to the families who lost loved ones in that brutal attack. These families can know that their loved ones will always be remembered and that we will remain determined in our efforts to bring to justice those responsible for this attack.

In remembrance of those who lost their lives 10 years ago, I ask Americans to keep their families in your hearts and your prayers.

## Message to the Congress Transmitting Legislation To Implement the United States-Oman Free Trade Agreement

June 26, 2006

*To the Congress of the United States:*

I am pleased to transmit legislation and supporting documents to implement the United States-Oman Free Trade Agreement (FTA). This FTA enhances our bilateral relationship with a strategic friend and ally in the Middle East region. The FTA will benefit the people of the United States and Oman, illustrating for other developing countries the advantages of open markets and increased trade.

In negotiating this FTA, my Administration was guided by the objectives set out in the Trade Act of 2002. Congressional approval of this FTA will mark another important step towards creating a Middle East Free Trade Area. Like our FTA with Bahrain that the Congress approved in Decem-

ber 2005, and our FTA with Morocco that was approved in July 2004, this FTA offers another important opportunity to encourage economic reform in a moderate Muslim nation. Oman is leading the pursuit of social and economic reforms in the region, including by selling state-owned businesses, encouraging foreign investment connected to broad-based development, and providing better protection for women and workers. It is strongly in our national interest to embrace these reforms and do what we can to encourage them.

GEORGE W. BUSH

The White House,  
June 26, 2006.

## Remarks to the Manhattan Institute for Policy Research

June 27, 2006

Thank you very much. Thanks for letting me come by to say a few words. Larry, thanks for the introduction. I do want to congratulate the Manhattan Institute for being a think tank for new ideas and better ways for our Nation to handle some of the problems we face. I appreciate your thought; I appreciate your works. For those of you who support the Manhattan Institute, I thank you for supporting them. For those of you who serve on the Board of Trustees, thanks for helping. And thanks for inviting me here today.

I want to talk about our economy. I want to talk about ways that we can—the executive branch can work with the Congress to convince the American people we're being wise about how we spend our money. One of the things I want to assure you

is that I believe that this country ought not to fear the future; I believe we ought to put good policy in place to shape the future. And by that I mean we shouldn't fear global competition. We shouldn't fear a world that is more interacted. We should resist temptations to protect ourselves from trade policies around the world. We should resist the temptation to isolate ourselves. We have too much to offer for the stability and peace and welfare of the world than to shirk our duties and to not accept an international community.

I know some in our country are fearful about our capacities to compete. I'm not. I believe that we can put policies in place that will make sure we remain the most entrepreneurial country in the world, that we're capable of competing in the world.

And one way to do so is to keep progrowth economic policies in place and be wise about how we spend the people's money. And that's what I want to talk about.

I do want to thank my Director of Office of Management and Budget, Rob Portman, who has joined us today. He has done a spectacular job as the person partially responsible for tearing down trade barriers and to making sure our Nation was treated fairly in the trade arena when he was head of USTR. And now I've asked him to come over and manage OMB. It's a powerful position. The person who knows how the money is being spent is generally the person who's got a lot of influence in government. So I put a good friend in there to make sure we're able to work with the Congress to bring some fiscal austerity to the budget.

I want to thank Senator Thad Cochran, who is the chairman of the Senate Appropriations Committee. It's awfully generous of the Senator to be here today. He's a good fellow and a fine United States Senator, and we're proud to have him in our midst.

I want to thank Senator Judd Gregg, who's the chairman of the Senate Budget Committee. I've known Judd a long time. I've had to—when I was running for President, I was asked to debate my opponent a couple of times, and one of the things you do prior to debating your opponent is you have somebody serve as the opponent, and that happened to be Judd Gregg in both elections. [Laughter] And I had to kind of reconcile myself with the fact that he whipped me in—every time we debated. [Laughter] He's a good man who's just introduced some interesting ideas onto the floor of the United States Senate about how to deal with some of the fiscal problems and financial problems this Nation faces.

I'm proud to be here with John McCain—speaking about debates—[laughter]—we had a few. But one thing we agree upon is that this country needs to have

a line-item veto. And I'm proud the Senator is here, and I appreciate you coming. I might add, one of the many things we agree upon.

I'm proud to be here with Congressman Paul Ryan, who's the House bill sponsor of the line-item veto, as well as Congressman Mark Udall. Thank you both for being here. Congratulations on getting that bill out of the United States House of Representatives. I'm also honored that Congressman Mike Castle, Congresswoman Marilyn Musgrave, and Congressman Henry Cuellar from the great State of Texas, has joined us. Thank you all for coming.

For those of you who are working the Halls of Congress to get a line-item veto out, thanks for doing what you're doing. One of the reasons I've come to give you a speech on the line-item veto is to encourage you to continue working hard with members of both political parties to get the job done.

We're growing. This economy of ours is strong. And that's good news. It's amazing where we've come from, if you really think about it. We've been through a recession; we've been through a stock market correction; we've been through corporate scandals; we've been through an attack on our country; we've been through two major operations to defend the United States of America; and we've been through amazing natural disasters and high energy prices. And yet we're growing. We're the envy of the industrialized world. The growth in the last year was 3.5 percent; it was 5.3 percent in the first quarter of this year. That's good news. It means the entrepreneurial spirit is strong, that people are investing and people are making wise decisions with their money. And as a result of the growing economy, the national unemployment rate is 4.6 percent. That's low. That means your fellow citizens are going to work. That means people are having a chance to put food on the table. And that's a positive indication of how strong our economy is.

We're a productive nation. Productivity is on the increase. That's a result of investments that are being made in the private sector. A productive economy is one that will yield higher wages for the American people. The more productive you are, the more likely it is your wages will go up, which means a higher standard of living for the American people. And I want to thank the Manhattan Institute's support for progrowth economic policies, policies that really send a clear signal that we are still the land of dreamers and doers and risk takers.

The cornerstone of our policy has been to keep taxes low, see. We believe, and you believe, that the more money a person has in their pocket, the more likely it is this economy is going to grow. We trust people to make the right decisions on how to spend, save, and invest. That's certainly not necessary—necessarily the common policy here in Washington. There's some good and decent folks who think they can spend your money better than you can. I just don't agree with them. And one of the reasons why this economy is strong is because we cut the taxes on everybody who pays taxes in the United States. If you have a child, you got extra money. If you're married, we did something about the marriage penalty. It doesn't make any sense, by the way, to penalize marriage. Society ought to be encouraging marriage.

If you're an investor, you got tax relief because we cut the taxes on the dividends and capital gains. If you're a small business, it's likely that you pay taxes at the individual income tax rate because you're more likely than not to be a sole proprietorship or a subchapter S corporation. Seventy percent of new jobs in America are created by small business, and it made sense to let our small-business entrepreneurs keep more of their own money to save and invest and expand their businesses. The tax relief we passed is working, and the Congress needs to make the tax relief we passed permanent.

One of the benefits of keeping taxes low and growing your economy is that you end up with more tax revenues in the Federal Treasury. I know that seems counterintuitive to some people. You'll hear people say, "Let's balance the budget by raising taxes." By the way, that's not the way Washington works. They'll raise your taxes and figure out new ways to spend your money.

It turns out that when you encourage economic vitality and growth, the Treasury benefits from it. In 2005, tax revenues grew by almost \$274 billion, or 15 percent. That's the largest increase in 24 years. The economy is continuing to grow, and tax revenues are growing with it. So far this year, tax revenues are more than 11 percent higher than they were at the same point last year, which is significantly better than projected. These increased tax revenues are part of how we intend to cut the deficit in half by 2009. In other words, Rob Portman will be giving a report to the Nation about how we're doing on the tax revenues; I think you're going to find that progrowth economic policies means that more revenues are coming into the Treasury than anticipated, which makes it easier to deal with a current account budget deficit.

But there's a second part of the equation to dealing with the current account budget deficit, and that is, how we spend your money. Now, I'm going to talk about discretionary spending in a minute, but I just want you to understand that a significant problem we face is in our mandatory programs. And I know you know that. Those would be programs called Medicare and Social Security and Medicaid.

As you might recall, I addressed that issue last year, focusing on Social Security reform. I'm not through talking about the issue. I spent some time today in the Oval Office with the United States Senators, and they're not through talking about the issue either. It's important for this country. I know it's hard politically to address these

issues. Sometimes it just seems easier for people to say, "We'll deal with it later on." Now is the time for the Congress and the President to work together to reform Medicare and reform Social Security so we can leave behind a solvent balance sheet for our next generation of Americans.

If we can't get it done this year, I'm going to try next year. And if we can't get it done next year, I'm going to try the year after that, because it is the right thing to do. It's just so easy to say, "Let somebody else deal with it." Now is the time to solve the problems of Medicare and Social Security, and I want your help. I need the Manhattan Institute to continue to agitate for change and reform. You've got a big voice. You got creative thinkers, and if you don't mind, I'd like to put this on your agenda and let you know the White House and Members of the Senate and the House are anxious to deal with this issue and get it done once and for all.

In the meantime, we've got to do everything we can to control the spending that Congress votes on and approves every year. That's called discretionary spending. My administration is doing its part on discretionary spending. Every year since I took office, we've reduced the growth of discretionary spending that is not related to the military or homeland security. And the reason why we haven't reduced the growth on spending for the military is because so long as we've got troops in harm's way, they're going to have whatever it takes to win the war on terror.

We will not shortchange the people who wear the uniform of the United States military. As the Commander in Chief of this fine group of men and women, I have got to be able to look in the eyes of their loved ones and say, one, "The mission is worth it," and two, "This Government and the people of the United States support your loved ones with all we got." And that's exactly how I'm going to continue to conduct this war on terror.

But apart from defending our country, the last two budgets have cut nonsecurity discretionary spending—have cut the non-security discretionary spending. And that's not easy. It's not easy to do that, but the Congress delivered, at least on last year's appropriations bills. And they're working on this year's appropriations bills. Our view is, taxpayers' dollars should be spent wisely or not at all. One of Rob Portman's jobs is to analyze programs that are working or not working. Look, every program sounds good, I know. But we're focusing on the results of the programs. Are they achieving the objectives that we expect?

One of the first tests of this year on whether or not the administration can work with the Congress on fiscal restraint was on a supplemental spending bill. That's a bill that was passed to provide emergency spending for our troops overseas and for citizens that had been hit by Katrina and to prepare for the dangers of a pandemic flu. I felt those were important priorities that needed to be a part of the supplemental bill, and so we sent that bill up.

Obviously, there was some noise coming out of the Congress at first; people had different opinions. And that's a good thing about democracy; you'll find there's all kinds of different opinions here in Washington, DC. People had different views about what ought to be in that bill.

Part of my job is to help bring some fiscal discipline to Washington. So I said that if the Congress exceeded a limit that I thought was wise, I would veto the bill. Congress acted responsibly. And it was hard work, and I applaud Senator Cochran for his hard work on this measure. He brought the House together with the Senate, and they took out \$15 billion in spending that had been added to the bill. It came under the spending limit I had set. And it's a good example of fiscal restraint set by the Congress. I appreciate so very much your leadership on that issue, Mr. Chairman. Thanks for working with us.

I believe another crucial test for the Congress is to whether or not the Congress will pass a line-item veto. And that's what I want to talk to you about today. A line-item veto would be a vital tool that a President could use to target spending that lawmakers tack on to the large spending bills. That's called earmarking, and that's become quite a controversial subject here in Washington, DC.

I happen to believe that, a lot of times, earmarking results in unnecessary spending. See, part of the job of the President and the leaders in the Congress is to set priorities with the people's money. If you don't set priorities, the tendency is to overspend. And sometimes, a lot of times, the earmark doesn't fit into the priorities that have been set through the budgetary process. A lot of times earmarks are inserted into bills at the last minute, which leaves no time, or little time, for debate. Part of the process—a good process is one in which Members are able to debate whether or not spending meets a priority, whether it makes sense. Earmark sponsors are often not required to provide their colleagues with a reasoned justification for proposed spending. And not surprisingly, the process often results in spending that would not have survived had it not been subject—subjected to closer scrutiny. Part of a good legislative process is for Members to take a good look at whether or not a spending request meets a priority or not.

And the process has changed. And according to the Congressional Research Service, the number of earmarks has increased from about 3,000 to 13,000 over the last decade. In other words, this process is taking place more and more often. I don't think that's healthy for the process. Matter of fact, I think it's circumventing the process. Now, that's up—obviously, up for the Legislature to determine whether I'm right or not. The President proposes, and the legislative body disposes, and I'm proposing a way to help deal with this

problem. And that way is to pass a line-item veto.

Now, here's why it's necessary. First of all, part of the problem with the line-item veto is that it's oftentimes deemed to be unconstitutional. As a matter of fact, I know there are people in this room that helped pass the line-item veto in 1996. President Clinton was the President then, and the Congress—in my judgment—wisely gave him the line-item veto. And yet shortly thereafter, when he started using the line-item veto, the Supreme Court struck it down because they concluded that it unconstitutionally permitted the President to unilaterally change a law passed by the Congress. In other words, the bill didn't pass constitutional muster.

And so we dealt with this issue. We figured out that, obviously, any line-item veto would again be challenged to our highest Court. And so we proposed the following type of legislation: When the President sees an earmark or spending provision that is wasteful or unnecessary, he can send it back to the Congress. And Congress is then required to hold a prompt up-or-down vote on whether to retain the targeted spending. In other words, the Congress is still in the process.

The line-item veto submitted would meet the Court's constitutional requirements. And that's important. Members of Congress need to know that we've thought carefully about this, and we've worked with them to make sure that that which is passed is constitutional.

The other thing the line-item veto needs to do is it will shine the light of day on spending items that get passed in the dark of the night, and that will have—in my judgment—a healthy—it will send a healthy signal to the people that we're going to be wise about how we spend their money.

The bill I submitted will be an effective tool for restraining Government spending because it will address a central dilemma created by unwarranted earmarks. And here's the dilemma: When Members of

Congress are faced with an important bill that includes wasteful spending in the bill, they have two bad options. On the one hand, they can vote against the whole bill, including the worthwhile spending, or they can vote for the whole bill, including the wasteful spending. When such a bill comes to the President, it creates a dilemma. I've negotiated year after year on a top-line budget number. And Congress has met that top-line budget number, which means it's very difficult for the President, then, to veto the appropriations bills that have met the top-line budget number, because the next year's budget negotiations will be meaningless. You can imagine Members of the United States House or Senate walking into the President's office and saying, "Wait a minute; we met your number last year, and you vetoed the bill, so forget negotiations."

I want to be a part of the budgetary process. It's an important part of the President's working with Congress, and I'm not going to deal myself out of the budgetary process. So my point is, they can meet the size of the pie, but I may not like some of the slices of the pie. And therefore, what do we do about it? And one way to deal with it is the line-item veto. The President could approve the spending that is necessary, could redline spending that is not, and then let the Congress decide whether or not the President is right. It's a fair process; I believe it's a necessary process.

Many Members in Congress, I know, want to do the right thing. And so one of the interesting things about the line-item veto is it will help deal with that dilemma I described, either all or nothing when it comes to voting for appropriations bills. You know, sometimes a Member of Congress gets a special project for the district, and they go back and tout the project. Then you have Members who don't agree with earmarking, and they don't have any special project to tout to the district. And yet the people in their district are voting for the special project for the other per-

son's district. And I think the line-item veto—I know the line-item veto would help resolve this dilemma.

You see, if there's an opportunity for the President to redline certain programs and hold them up to the light of day, it will probably mean Members of Congress are less likely to propose the earmarks in the first place. Rather than being able to move a special project into the bill without hearing, this—the President would have the opportunity to say, "Wait a minute; this doesn't make much sense; it doesn't seem to fit into the priorities. This special project, this unusual study"—[laughter]—"or this particular project, this doesn't make sense."

I believe that part of a budgetary reform program is the line-item veto, the opportunity to put the light on such programs. And that will help Members resolve the dilemma of either voting for an important bill with bad items in it or being a part of trying to put bad items in it in order to justify their existence in the Congress.

The good thing about the line-item veto, it has bipartisan support. We've got a Democrat Member from the United States Congress who supported that bill strongly. Governors have had the line-item veto. I met with Senator Ben Nelson earlier this morning in the Oval Office; he talked about what an effective tool it was to have the line-item. Did you have it, Engler, when you were Governor? Engler had it. It's an important part of relating with the legislative process. And by the way, these aren't just Republican Governors with the line-item veto; they're Democrat and Republican Governors who are using that line-item veto effectively.

The line-item veto has bipartisan support in the Congress. Thirty-five Democrats joined more than 200 Republicans in the House to get the bill passed. That's a good sign. I was disappointed, frankly, though, that more Democrats didn't vote for the bill, especially those who are calling for fiscal discipline in Washington, DC. I mean,

you can't call for fiscal discipline on the one hand and then not pass a tool to enhance fiscal discipline on the other hand. You can't have it both ways, it seems like to me.

Now the Senate is going to take up the measure. And again, I want to thank the Senators who are here for strategizing on how we can get the bill moving. Senator Frist is committed to getting the bill moving. Senator McCain is one of the important cosponsors, as is Senator John Kerry. I remember campaigning against him in 2004, and I remember him talking about the line-item veto, and I appreciate the fact that he's living up to the political promises he made. It's a good sign, and I applaud Senator Kerry for taking the lead on the line-item veto. And I hope members of his party listen to his justifications for that important piece of legislation.

What's really interesting is we've had Senators on record for the line-item veto. After all, the Senate passed a line-item veto in 1996. And for those Senators who passed the line-item veto in 1996, I hope they still consider it an important vote in 2006. Ten years hasn't made that big a difference. It was good enough 10 years ago; it's good enough today, for those who voted for the line-item veto.

Oh, I know this town is full of all kinds of politics, but we ought to set politics aside. We need to set politics aside when it comes to reforming Social Security and Medicare, and we need to set politics aside so that the President can work with the Congress to bring fiscal discipline to our budgets. That's what the taxpayers expect from those of us who are honored to serve.

So that's my opinion on the line-item veto. I hope you can feel—tell I feel strongly about it. I think it makes sense, no matter who the President may be. I think it makes sense for a Republican President to have a line-item veto, and I think it makes sense for a Democrat President to have a line-item veto. And I urge the United States Senate to pass this important legislation so we can reconcile whatever differences there are between the House and the Senate version and show the people that we are serious about being responsible with their money.

Thanks for letting me come by and say hello.

NOTE: The President spoke at 10:58 a.m. at the JW Marriott Hotel. In his remarks, he referred to Lawrence J. Mone, president, Manhattan Institute for Policy Research; and former Gov. John Engler of Michigan.

## Remarks Following a Meeting With the National Endowment for Democracy Award Recipients

June 27, 2006

It has been my honor to welcome four amazing individuals to the Oval Office. These four folks are from the continent of Africa. They're here to receive the National Endowment for Democracy's award, which is an award to honor courage and fortitude and strength in promoting freedom.

And we have had an amazing discussion. My spirits are enriched by talking to free-

dom lovers and freedom fighters. We've got a man from the Sudan who talked eloquently about free press. We had a doctor from Zimbabwe who talked about the human condition and the need for the United States to make sure we stay engaged with the democracy movements and help people who are hungry.

I talked to two really unusual ladies, one from the Democratic Republic of Congo.

She is very concerned about free elections, and she wants to make sure people in the rural part of her country are represented in free elections.

And then we had an amazing discussion with a lady from Sierra Leone but who's working in Liberia. And one of the most amazing stories is when she recounted the fact that she was escaping Liberia in the mid-1990s and had to get on a fishing boat to escape the authorities who wanted to bring—to do her harm because she expressed her desire for people to be free.

Again, I want to thank all of you for doing what you have done. I'm proud to be in your company. I'm proud to have you here in the Oval Office. I thank you for being witness to this universal fact: that

liberty is universal in its application; that people everywhere desire to be free; that freedom is not just—belongs to the American citizens, freedom belongs to everybody. And you're courageous in your fight and your desire to spread the concept of freedom.

Congratulations on winning a very important award. Congratulations on being so courageous. Thank you all for coming.

NOTE: The President spoke at 2:22 p.m. in the Oval Office at the White House. In his remarks, he referred to National Endowment for Democracy's 2006 Democracy Award recipients Alfred Taban Logune, Reginald Matchaba-Hove, Immaculee Birhaheka, and Zainab Hawa Bangura.

## Remarks During a Run With Staff Sergeant Christian Bagge June 27, 2006

*The President.* So I first met Christian when I went to Walter Reed—Brooke Army, San Antonio, Texas. And he said, "I want to run with you." He was in bed. He had lost both legs. I looked at him, like, you know, there's an optimistic person. But I could tell in his eyes that he meant it. And after a lot of hard work and a lot of compassionate care, this fine man is here on the South Lawn running with the President. And he ran the President into the ground, I might add. [*Laughter*]

But I'm proud of you. I'm proud of your strength. I'm proud of your character. Thank you for your service.

It's an amazing sight for me to be running with a guy who, last time I saw him,

was in bed wondering whether or not—I was wondering whether or not he'd ever get out of bed. There was no doubt in his mind that he would.

Thanks for your service.

*S. Sgt. Bagge.* Your welcome, Mr. President.

*The President.* Good man. God bless you.

*S. Sgt. Bagge.* It's a privilege.

*The President.* We're not through running yet. Get out of the way. [*Laughter*]

NOTE: The President spoke at 4:02 p.m. on the South Lawn at the White House. S. Sgt. Christian Bagge, USA, was injured in Iraq in June 2005 while serving in the Oregon National Guard.

## Statement on Senate Passage of a Proposed Constitutional Amendment To Prohibit Desecration of the American Flag

June 27, 2006

Today a bipartisan majority of United States Senators voted to protect our Nation's most important symbol through a constitutional amendment to authorize Congress to prohibit the desecration of the American flag. Unfortunately, the final count fell short of the votes needed to send this important proposed amendment to the States for ratification.

By showing respect for our flag, we show reverence for the ideals that guide our Nation and we show appreciation for the men

and women who have served in defense of those ideals.

I commend the Senators from both parties who voted to allow the amendment ratification process to protect our flag to go forward and continue to believe that the American people deserve the opportunity to express their views on this important issue.

NOTE: The statement referred to S.J. Res. 12.

## Letter to the Speaker of the House of Representatives Transmitting Budget Amendments for International Assistance Programs

June 27, 2006

*Dear Mr. Speaker:*

I ask the Congress to consider the enclosed FY 2007 Budget amendments for International Assistance Programs. The total discretionary budget authority in my FY 2007 Budget would not be increased by these requests.

The details of this proposal are set forth in the enclosed letter from the Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

## Remarks Following a Meeting With Military Personnel in St. Louis, Missouri

June 28, 2006

I want to thank you all for coming. I just had a discussion with fellow citizens in the Guard, Reserve, and active duty who have been in both Iraq and Afghanistan. I want to thank you for sharing your insights with me. Thank you for your service to the country.

I told these men and women that their service is necessary for the security of the

United States of America and that they're serving in historic times. And one day, their children will be able to look back and say, "My dad or my mom went to Iraq and Afghanistan and helped a young country become a democracy, and therefore, the world is more peaceful for it."

One of the things I am going to do is I'm going to meet with the family members

of these good people and express our country's gratitude for their service as well. A lot of times military families don't get proper thanks, and I can't wait to meet your loved ones and tell them firsthand that the country appreciates your service.

One thing I told these good folks is that this country stands with the people wearing our Nation's uniform. We're with you. We know the work is hard, but the work is

necessary. And we're winning, and we're winning. And the world is going to be better off because of your courageous service, and I thank you for it.

Thanks for letting me come by and visit. I appreciate it.

NOTE: The President spoke at 3:41 p.m. at VFW Overland-St. Ann Memorial Post 3944.

## Remarks at a Dinner for Senatorial Candidate James M. Talent in St. Louis June 28, 2006

*The President.* Thanks for coming. Thanks a lot. Thanks for the warm welcome.

*Audience Member.* Four more years! [Laughter]

*The President.* No more wife. [Laughter]

Thanks for supporting Jim Talent. He is a decent, honorable, can-do man who deserves to be reelected to the United States Senate.

Laura and I are very fond of Jim and Brenda. Jim is very fond of Laura, to the point where he was hoping she would be the keynote speaker. [Laughter] But the Senator and I both married very well. You know, you cannot succeed in this line of work unless you've got a supportive family. It's really important. And the Talents have the right priorities: their faith and their family and their country. And that's another reason why he's a great United States Senator. So not only do I want to thank Jim for his service, I do want to thank Brenda for being such a fabulous partner to Jim. And I also want to welcome Michael and Chrissy, the Talent children. Thanks for coming.

Laura sends her best. She not only sends her best to the Talents, she sends her best to Uncle Bucky and Aunt Patty. She sends her best to all our friends here in St. Louis.

She is a fabulous First Lady, and I am proud to call her—proud she's my wife.

I want to thank your Governor for joining us, Matt Blunt, and Melanie. Thank you for serving. Governors can make a big difference in the States—the State in which they live, and you are doing just that.

Where's Branch? Yes. He was afraid he couldn't make it through the speech. [Laughter] It's good to see old Branch. I think I remember getting to know Branch kind of before Branch became Branch—[laughter]—during the 2004 campaign. But thank you all for coming, and thanks for your service. I'll tell your old man you're doing all right. [Laughter]

I thank the Lieutenant Governor, Peter Kinder, for being here. Governor, it's good to see you again. Thanks for your service. I thank all the statehouse folks who are here. Thanks for serving. It's not an easy job to serve the communities in which you live, but it's important jobs. And so thanks for setting a good example.

I appreciate so very much my friend Jack Oliver, who happens to be the finance chairman for this effort. And Rachel—thanks for coming, Rachel. It's a pretty big sacrifice for you to be here tonight. Is there a doctor in the house? [Laughter]

I want to thank you all for—for those of you who organized this event. This is

a big, successful event, and it takes a lot of hard work. So for all of those who have helped organize this event, thanks a lot. It's important. You can't win without friends. And the Talent for Senate race is a vital race for the United States of America, and you're helping him.

I want to thank the grassroots activists who are here. You're the folks who make the phone calls and put up the signs and turn out the vote. I want to thank you in advance for what you're going to do when we're coming down the stretch, which is to make sure that Jim Talent is not only backed financially but backed with your hard work and labor. He deserves your support. He has got a record to run on. He has made the people of Missouri proud, and he needs to be sent back to Washington, DC, for 6 more years.

These are historic times in which we live, and it is essential that we have people in the United States Senate who are clear-eyed realists who see the world the way it is, not the way we would hope it would be. And the reason why it's important to have clear-eyed realists is because it's essential we do not forget the lessons of September the 11th, 2001. And one lesson is, is that in order to secure the homeland, we must defeat the enemy overseas so they do not hurt us here at home. And therefore, we must have a United States Senate who understands that we must stay on the offense in order to protect America.

The second lesson is that when you see a threat, you must deal with that threat before it fully materializes. What that means is, is that oceans can no longer protect us, and if there's an enemy out there that's willing to do us harm, we must have United States Senators who are willing to take action to protect the homeland. And Jim Talent understands the world in which we live.

Oh, I know some of them in Washington are trying to rewrite history. But we all saw a threat in Saddam Hussein. See, he had threatened his neighbors; he invaded

his neighbors. He was a sworn enemy of the United States of America. He harbored terrorists. He had used weapons of mass destruction. He was hoping the world would look the other way so he could manufacture weapons of mass destruction, at the very least. He defied U.N. resolution after U.N. resolution. Republicans and Democrats looked at the same intelligence and saw a threat. And when he defied the U.N., we removed Saddam Hussein, and America and the world are better off for it.

Iraq is a central front in the war on terror; it's not the only front. Today I went to the VFW hall and was able to thank in person men and women who have served in both Afghanistan and Iraq, two crucial fronts in the war on terror. But Iraq is now the central front, and we've got a plan to succeed, a plan for victory, a plan that will enable a new ally in the war on terror to govern itself, sustain itself, and defend itself as a free nation. The stakes are vital, and it is important that Missouri send a United States Senator who understands that retreat is not an option for the United States of America.

One thing about old Jim Talent, he understands what I understand, is that when you put a man or woman in uniform and ask them to go into harm's way, they deserve the full support of the United States Government. We will complete the mission, and I will make my judgments as to the troop levels necessary to achieve victory not based upon political polls or focus groups but based upon the measured judgment of our commanders on the ground.

Make no mistake about it: There's a group in the opposition party who are willing to retreat before the mission is done. They're willing to wave the white flag of surrender. And if they succeed, the United States will be worse off, and the world will be worse off. These are historic times. We will defeat the enemy by, one, bringing them to justice before they hurt us again,

and we will defeat the enemy—we will defeat their hateful ideology by spreading liberty.

There's an interesting debate in the world today; it's an interesting debate as to whether or not liberty is universal or not. Jim Talent and I understand there's an Almighty; we understand a great gift of the Almighty is freedom for every man, woman, and child on this Earth. I'm not talking about just for Methodists or Texans. [Laughter] I'm talking about the universality of freedom. Everybody wants to be free, and everybody is desirous to be free. And freedom yields the peace we're looking for. The way to win this war on terror is not only to defeat the enemy abroad, but it's also to defeat them by spreading a hopeful ideology, an ideology which has worked in the past.

You see, tomorrow I'm going to have an interesting day; every day is interesting when you're the President. [Laughter] I'm going to welcome Prime Minister Koizumi from Japan. And so we'll have the deal tomorrow, which is going to be a lot of fun, there on the South Lawn. And then we'll meet and have the press conference and a nice dinner. And then on Friday—Friday, we're going to Graceland. [Laughter] The Prime Minister, my dear friend, loves Elvis. [Laughter] So what better place to go.

Isn't it interesting, though, when you think about this moment in history compared to what life was like 60 years ago. You see, I guarantee you there's some folks here whose relatives were in combat against the Japanese, the sworn enemy of the United States, a nation which had launched an attack on our country, killing—by the way, we lost more on September the 11th than we did on Pearl Harbor. But, nevertheless, it was an attack on the Nation, and our Nation responded with force. President Roosevelt understood when you're going after an enemy, you use all your assets. That's what I understand too. If you're going to commit your military,

you commit it, so we can achieve victory. That's what he understood.

And yet 60 years later, I'm meeting with the Prime Minister of the former enemy. I find that to be really interesting. One reason why I'm able to is because a fellow from Missouri named Harry S. Truman had faith in the universality of liberty. He understood that people desire to be free. And the reason I'm able to call Prime Minister Koizumi friend and ally is because Japan became a democracy in her own image, a democracy that recognizes the traditions and history of the Japanese people. Democracies don't fight each other. Democracies work together to yield the peace. Liberty has the capacity to change an enemy into a friend.

And what you're seeing today in the Middle East is the spread of liberty. And it's hard work. It's hard work to replace tyranny with democracy, but it's necessary work. We're laying the foundations for peace. Someday, an Iraqi leader will be coming to America to sit down and to help keep the peace, and generations of America will be safer for it. And Jim Talent understands the stakes.

I also appreciate the fact that he understands the nature of the enemy, and he understands we've got to be smart about how we defend the homeland. I've sworn to uphold the Constitution, and I will. I'm also expected to defend the United States of America. And when we think somebody from Al Qaida is calling in to somebody in the United States from out of the country, we want to know why. We want to know why somebody is talking to Al Qaida, in order to protect the United States of America.

I told the American people we would defend ourselves. I remember all the kind of recommendations that we were getting, by the way, after 9/11. The 9/11 Commission took a look and said, "You need to do more on cutting off the money of the terrorist organizations." Newspapers editorialized: Make sure you do what you need

to do to cut off their funding. One way to win the war on terror is to starve the enemy of money. I thought that made a lot of sense.

And so the Treasury Department launched a program to track the flow of terrorist money. See, we wanted to watch the money that the terrorists were moving around. It's one way to help protect the American people. It's one way for us to do the job that you've expected us to do. The program we put in place is legal. We got a lot of lawyers in Washington who scrutinize that which we do. It's legal. It has been briefed to the United States Congress. Like the terrorist surveillance program, this program of chasing terrorist financing was briefed to Members of Congress. We want them to understand what we're doing. We have an obligation in the executive branch to work with the legislative branch.

This program has been a vital tool in the war on terror. Last week, the details of this program appeared in the press. There can be no excuse for anyone entrusted with vital intelligence to leak it, and no excuse for any newspaper to print it.

The American people expect the Government to protect them. That's what you expect. It's our most important job. Jim Talent understands, our most important job is to protect the American people. And they want our people to have the tools necessary to achieve victory in the war on terror and to do our job. The disclosure of this valuable program makes it harder for us to identify terrorist cells and their activities. It makes it harder for us to build international cooperation. It makes it harder to protect the American people. It's tough enough to fight the terrorists; we shouldn't have to worry about news organizations revealing important information that makes it more important—makes it more difficult to protect our country.

We'll uphold our values; we'll follow the law; and I will do everything in my power to protect the American people. And it's

important to have a United States Senator like Jim Talent who understands the stakes.

One of the issues in this campaign is going to be who best to spend your money, you or the Federal Government. [Laughter] That's right. You know, it's amazing, I would hope people, when they go to the polls, would take a look at the economic record that we've achieved, a record that is really pretty remarkable when you think about what the economy has been through. We've been through a recession, a stock market correction, corporate scandals, an attack on the United States of America, two major theaters in the war on terror to defend ourselves, natural disasters, and high energy prices. And yet the economic growth of the United States is the envy of the industrialized world. The national unemployment rate is 4.6 percent. We've created millions of new jobs in the last couple of years. The entrepreneurial spirit is high. Small businesses are flourishing. More people own a home than ever before in our Nation's history. Productivity is high.

This economy is strong, and we intend to keep it that way. And one reason it's strong is because we cut the taxes on the American people. We didn't cut just some taxes; we cut taxes for everybody who pays taxes. Talent and I don't believe we use the Tax Code to play political favorites. We said, "If you're paying taxes, you deserve tax relief." And guess who benefits? People with children; investors, because we've reduced the dividend—the taxes on dividends and capital gains; small businesses—most small businesses pay tax at the individual income tax rate because they're sole proprietorships or subchapter S's. When you hear them talking about, "Oh, we're just going to tax the rich," what Talent's opponent is really saying is, "We're going to tax small businesses," and that's bad for job creation in Missouri. Jim and I believe we need to get rid of the death tax once and for all.

You know, it's amazing when you listen to the debate up there in Washington about

the budget. We've got a plan to cut the budget in half by—the deficit in half by 2009, and we're on our way to doing that. You know what's amazing is, when you cut the taxes, it causes the economy to grow. And when the economy grows, it yields more tax revenues than you anticipated. That's what's happening. That's what progrowth economic policies do for your budget.

The problem in Washington is, is that sometimes they take those revenues and don't apply it to the deficit; they apply it to additional programs, see. And so one of the reasons I like Talent so much is, he understands that to get the deficit cut in half, you got to be wise about spending your money. And we're doing a fine job on it.

Now, I recognize that the budgets have gone up, but for this reason: So long as we have a troops in harm's way, we're going to spend what is ever necessary to get he or she the equipment, the training, and the pay to win the war on terror. That's what we owe the folks. That's what we owe their families.

But we have cut nonsecurity discretionary spending, last year, and we intend to do it again this year. And that's hard to do because every program sounds good. But if you listen to the debate about—the other side, how they want to balance the budget, they say, "Let's just raise some taxes to balance the budget." That's not the way Washington works. If the other side gets in power, they will raise your taxes, and I promise you, they will figure out new ways to spend your money. The best way to balance the budget is to keep the taxes low and to set priorities with the people's money and to be wise and fiscally sound, just like Jim Talent is.

And I need this tool to be able to do my job: the line-item veto. And Jim Talent is one of the Senate sponsors and leaders on the line-item veto.

Health care is an issue. And so we took a look at the Medicare program. My atti-

tude is this, and I know Jim agrees with me: If you're going to provide health care for our seniors, let's make sure it's modern. Makes sense for the taxpayers and certainly makes sense for the seniors. And the Medicare system—which was signed by Lyndon Baines Johnson, by the way—had become stale and old. I will give you an example. Our system would pay for a ulcer surgery—20, \$15,000, whatever it costs—but not a dime for the medicine that would prevent the ulcer surgery from being needed in the first place. In other words, medicine was changing, but Medicare didn't.

And so we got together and said, "How can we improve this for the seniors? How can we make it work?" And we also added another feature to a new and improved Medicare. We said, "If you're poor, you shouldn't have to choose between medicine and food." We said, "If you're a poor senior, you shouldn't have to make that difficult choice of the medicine necessary to keep you going or the food necessary to keep you going."

And so we modernized Medicare. We improved the system. We delivered on behalf of the seniors. And Jim Talent gets a lot of credit for modernizing Medicare. And he's running against a person who said she would have voted against the bill, this bill that is positive for seniors, was necessary for our seniors. And I am proud to have signed it, and I am proud to have worked with Jim Talent to make the Medicare work better.

We have got a national security and economic security problem when it comes to energy. We've got to do something about our addiction to oil. I know it sounds odd for some to think—a Texan to say, but that's the way I feel. [Laughter] I understand the consequences of living in a global economy. When the demand for hydrocarbons goes up in China and India, it affects the price of gasoline here in St. Louis, Missouri. That's the way it works. I'm worried about a situation where sometimes we get our hydrocarbons from people that

don't like us, and that creates a national security problem.

I'm proud to be standing side by side with Jim Talent and his efforts to promote alternative sources of energy like ethanol. He led the renewable fuel standard in the Halls of the United States Senate. He is more than a talker; he's a doer. He's getting stuff done for Missouri and the American people.

I appreciate his work on methamphetamine eradication. He's a leader in the United States Senate. You've got a problem in Missouri, and we've got a problem around the country in methamphetamines. Jim Talent is working hard to deliver positive legislation and decent appropriations to fight methamphetamines. And I want to thank you for your fight and thank you for your struggle.

He gets things done. There's a lot of noise in Washington. But, you know, when you find somebody who is a positive person, who is able to accomplish things, you've got to send him back to Washington, DC. Talent can deliver for the people of Missouri and for the people of the United States. He's got a proven track record. He deserves to be reelected. I love his values.

I love the fact that he understands the judiciary needs to be filled with people who aren't going to legislate from the bench but will strictly interpret the Constitution of the United States. I'm proud that he stood up strong for Judge Roberts and

Judge Alito, two really fine members of the Supreme Court. It's another issue in this campaign. Who do you want in the Senate to be able to confirm and battle for what kind of judges? You want judges that are—that understand the limitation of the judiciary. We got plenty of legislators in Washington. That's not the role of a judge. The judge is to interpret the Constitution of the United States. Jim Talent understands this. Most Missouri citizens understand the proper role of the judiciary. He's in tune with Missouri.

He's in tune with Missouri when it comes to taxes. He understands the farm issue. He understands small businesses. He is in tune with the elders and seniors of Missouri. He's a good man who's delivered a lot for the people of this State. He stands on solid moral ground. You don't have to worry about his honesty. You never have to worry about his integrity. He's a decent, honorable person that deserves reelection to the United States Senate. Thanks for coming, and God bless.

NOTE: The President spoke at 5:24 p.m. at the Ritz-Carlton. In his remarks, he referred to Melanie Anderson Blunt, wife of Gov. Matt Blunt of Missouri, and their son, William Branch Blunt; Rachel Oliver, wife of John L. Oliver III, finance chair, Jim Talent for U.S. Senate; former President Saddam Hussein of Iraq; and Prime Minister Junichiro Koizumi of Japan.

## Statement on Senate Confirmation of Henry M. Paulson, Jr., as Secretary of the Treasury

June 28, 2006

I commend the Senate for moving swiftly to confirm Henry Paulson as Secretary of the Treasury. I look forward to working with Hank to keep our economy and financial markets strong and to continue our efforts to choke off sources of terrorist fi-

nancing. I thank Chairman Grassley, Senator Baucus, and Senator Schumer for their leadership during the confirmation process. I congratulate Hank and his family on his confirmation and thank him for his service to our Nation.

## Letter to the Speaker of the House of Representatives Requesting Additional Funds for the Department of Veterans Affairs

June 28, 2006

*Dear Mr. Speaker:*

I ask the Congress to consider expeditiously the enclosed fully offset FY 2006 request for the Department of Veterans Affairs (VA) to address the security of personal information of veterans and service personnel.

I am requesting these additional resources for VA to cover the increased costs to the VA information technology account in FY 2006 as a result of providing credit monitoring and fraud watch services for

veterans and service members impacted by a security breach that occurred on May 3, 2006. The total cost of this effort, estimated to be \$160.5 million in FY 2006, is fully offset.

The details of these proposals are set forth in the enclosed letter from the Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

## Remarks at a Welcoming Ceremony for Prime Minister Junichiro Koizumi of Japan

June 29, 2006

*President Bush.* Good morning, Laura and I are welcome—are proud to welcome and honored to welcome our friend Prime Minister Koizumi back to the White House. Japan and the United States have built a strong alliance and a close friendship. Decades ago, our two fathers looked across the Pacific and saw adversaries, uncertainty, and war. Today, their sons look across that same ocean and see friends and opportunity and peace.

The friendship between our two nations is based on common values. These values include democracy, free enterprise, and a deep and abiding respect for human rights. These values have created a better life for both our peoples, a firm alliance between our two nations, and a common approach to our engagement with the world.

These values are under attack by terrorist networks that bring death and destruction to all who oppose their hateful ideology, so the United States and Japan are working

together to defend our shared values and win the war on terror.

Japanese naval vessels have refueled hundreds of coalition ships as part of Operation Enduring Freedom. Japan is now the third largest donor nation for reconstruction efforts in Afghanistan. In Iraq, Japanese Self-Defense Forces have helped improve the lives of citizens in a key Iraqi Province that will soon return to Iraqi control. And Japan continues to provide critical airlift support to coalition forces in Iraq. The people of Japan can be proud of the contribution their Self-Defense Forces have made in the war on terror, and Americans are proud to serve alongside such courageous allies.

Japan and the United States are cooperating to address other threats to our security. Our two nations are working together through the six-party talks, insisting that North Korea meet its pledge to abandon all nuclear weapons and its existing nuclear programs. Japan and the United States are

also founding members of the Proliferation Security Initiative that is working to keep dangerous weapons from rogue states and terrorist groups. And our two nations are repositioning our forces to counter the emerging threats of the 21st century.

As we meet threats to our security, we're also working together to improve the lives of our people and address common challenges. Our two economies are the largest in the world, and we are working to expand trade and investment opportunities for both our peoples. Japan and the United States are working together for a successful conclusion to the Doha negotiations, which would add to the prosperity of our nations and help lift millions in the developing world out of poverty.

With prosperity comes responsibility. So our two nations helped build the Asian-Pacific Partnership on Clean Development and Climate, so we can make the latest energy technologies more widely available, reduce pollution, and increase energy efficiency.

Americans cherish our friendship with the Japanese people and value our alliance with the nation of Japan. And we honor the leadership of Japan's Prime Minister Koizumi. He's a man of vision; he's a man of integrity. And I'm proud to call him my friend. I thank the Prime Minister for coming to the White House. And I'm looking forward to joining him tomorrow at Graceland. [Laughter] Officially, he's here to see the President, but I know the highlight of his visit will be paying his respects to "the King." [Laughter]

Mr. Prime Minister, thank you for your leadership, and welcome back to America.

*Prime Minister Koizumi.* Good morning.

*Audience Member.* Good morning.

*Prime Minister Koizumi.* Our Japan children very good. [Laughter] You can learn both Japanese and English. In the future, it's useful to you all.

First of all, allow me to express my heartfelt gratitude to President Bush, the Government, and the people of the United States for putting on such a splendid welcome ceremony for me.

In Japan, I am known as "Lucky Man." And I feel that I am lucky in the United States as well. Look at this fine weather; I feel that this weather is also welcoming me.

I believe it is no exaggeration to say that over the past 5 years, there has been no world leader, alongside Mr. Bush—President Bush, among the world leaders with whom I have felt so much heart to heart, felt so deep a friendship and trust, and have cooperated with.

And I believe having personal and good relations between the two leaders is good not just for the two friends, the two of us. From now on, I'll engage in the discussions with President Bush on—as Japan and the United States are allies on various matters, not simply of bilateral relations but on the questions of how best we, our two countries, could cooperate together as allies in addressing various international issues.

I sincerely hope that my visit this time will enable our two countries to continue to cooperate and develop together and, as allies in the international community, make even greater contributions to the numerous challenges in the world community.

And in concluding, I would like to express my heartfelt wishes for further prosperity of the Government and the people of the United States of America.

Thank you again. Such a wonderful hospitality. Thank you.

NOTE: The President spoke at 9:11 a.m. on the South Lawn at the White House, where Prime Minister Koizumi was accorded a formal welcome with full military honors. Prime Minister Koizumi spoke partly in Japanese, and those portions of his remarks were translated by an interpreter.

## The President's News Conference With Prime Minister Junichiro Koizumi of Japan June 29, 2006

*President Bush.* Thank you all. Please be seated. Mr. Prime Minister, as I said on the South Lawn, we are delighted to have you here in Washington. The Prime Minister and I have got a very friendly relationship. We've just had 2 hours of discussions. We talked about a lot of areas of mutual concern. I've reminded the Prime Minister—the American people, Mr. Prime Minister, over the past months, that it was not always a given that the United States and America [Japan]<sup>\*</sup> would have a close relationship. After all, 60 years we were at war—60 years ago, we were at war, and today we talked about North Korea and Iran and Iraq and trade and energy cooperation.

It's an amazing fact that we're able to have these discussions. To me it shows the power of liberty and democracy to transform enemies to allies and to help transform the world. And one thing about the Prime Minister is he understands that. He's a firm believer that—in universal values. He believes in freedom, and he's willing to act on those beliefs. And we have been a strong partner in peace, Mr. Prime Minister.

You've had a remarkable tenure as the Prime Minister of your country. You have led with courage. You have made hard decisions. You've helped us change our relationship so that Japan and the United States will be able to work even closer together in the 21st century. You made the hard decision to help realign our troops in your part of the world to better accommodate the needs of the Japanese people and, at the same time, keep in position a relationship that will be necessary for peace and stability.

I want to thank you for opening your markets to U.S. beef. I think the Japanese people are going to like the taste of U.S. beef. As a matter of fact, I had a good slice of beef last night, and you told me you did as well, and you look like you're feeling pretty good. [Laughter]

*Prime Minister Koizumi.* Very good. [Laughter]

*President Bush.* Right, good. We had an interesting discussion about energy. And one of the things that Japan and the United States can do is we can help provide technologies that will improve the climate as well as reduce our dependence on hydrocarbons. We discussed the Nuclear Suppliers Group that we're a part of and our contributions to some research and development that will help speed up fast breeder reactors and new types of reprocessing so that we can help deal with the cost of globalization when it comes to energy; make ourselves more secure, economically, as well as make us less dependent on hydrocarbons from parts of the world that may not agree with our policies.

As I mentioned, we discussed Iraq and Afghanistan. By the way, the Japanese defense forces did a really good job when they were in Iraq. And they're able to leave because they did such a good job. And now the Iraqis will be running the Province in which the Japanese forces used to be. Nevertheless, the Prime Minister, as he mentioned in the comments, will continue to provide airlift capacity and naval help.

The North Korean issue is one, obviously, that's got everybody's attention now. And we discussed this issue in length. We both agree that it's very important for us to remain united in sending a clear message to the North Korean leader that, first of all, launching the missile is unacceptable. There have been no briefings as to what's

---

<sup>\*</sup> White House correction.

on top of the missile. He hasn't told anybody where the missile is going. He has an obligation, it seems like to me and the Prime Minister, that there be a full briefing—to those of us who are concerned about this issue—as to what his intentions are. It makes sense, doesn't it? It's a reasonable thing for somebody to do.

We talked about the six-party talks, and to make sure we remain bound up in sending a clear message to the leader of North Korea. I also talked about one of the most touching moments of my Presidency, when the mom of the abducted daughter came to the Oval Office and talked to me about what it was like to have a young daughter abducted by the North Koreans. And it really broke my heart. I told the Prime Minister it was a moving moment for me. I just could not imagine what it would be like to have somebody have taken, you know, my daughter—one of my daughters—and never be able to see her again. And the woman showed such great courage, Mr. Prime Minister, when she came and shared her story with me. It took everything I could not to weep, listening to her.

It also reminded me about the nature of the regime: what kind of regime would kidnap people, just take them offshore, you know; what kind of person would not care about how that woman felt.

And so we talked about the need to work together to bring a resolution to this issue about nuclear weapons. And I reminded the Prime Minister—he didn't need reminding, but I'm going to share with him once again my deep concern about the human condition inside North Korea. He shares that condition—after all, he's the Prime Minister of a country that has suffered a lot as a result of abductions. So we spent time talking about abductions.

All in all, it was a visit that I knew was going to be a good one, because I know the man; I know what he's like. He's a good thinker; he's a strategic thinker; he's a clear speaker. And plus, as you all know,

it's become quite well-known that we're going to end the visit at Graceland tomorrow. He's an Elvis fan. Laura and I gave him a jukebox as a gift, and I can't—what was the first song you put on? It wasn't "Hound Dog;" it was—

*Prime Minister Koizumi.* "I Want You, I Need You, I Love You."

*President Bush.* See, he loves Elvis, and I couldn't think of a better way to honor my friend, by going to Graceland. But it also sends a signal about how close our relationship is.

And so, Mr. Prime Minister, we're glad you're here. Thanks for your friendship; thanks for your alliance; and thanks for your leadership.

*Prime Minister Koizumi.* Thank you very much. With President Bush, I had a very candid exchange of views. Over the past 5 years, I've really had a close friendship with President Bush, and thanks to that, we've been able to have a very candid exchange of views. And I believe this is not just limited to close relations between us, personally, but I believe this close relationship is necessary in the future between Japan and the United States as well.

Japan and the United States is in a Japan-U.S. alliance in the world, and we reconfirmed that we can cooperate with each other on various challenges, maintain Japan's security and deterrence, and reduce burdens on local communities. On these points we were able to have a very important agreement, and we're most grateful for that.

In the meeting, we discussed not just Japan-U.S. bilateral relations but numerous challenges that the world community faces today—Afghanistan, North Korea, poverty reduction—reduced poverty for people who suffer from various diseases. We shared a common perception, and by doing so, we'll be able to cooperate with each other.

Now, Japan, in a way different than the U.S., has been supporting the nation-building in Iraq by the Iraqis themselves. The ground self-defense forces stationed in

Samawa, having accomplished their mission, will be withdrawing. But as a responsible member of the international community, through cooperation with various countries concerned and through cooperation with the United Nations, Japan will continue provide support and help the Iraqis get back on their feet.

With regard to North Korea, we spent a lot of time, and I expressed my views, and President Bush also expressed his thoughts. President Bush was kind enough to meet with Mrs. Sakie Yokota. And he told me he was very moved on that occasion. Anyone, if one's daughter is abducted, naturally will be grieved. And this feeling need to be shared by Americans and Japanese. We discussed that sort of thing.

We do have the six-party talks framework. Japan and the United States, I believe, need to maintain close coordination and encourage North Korea to become a responsible member of the international community.

With regard to Iranian nuclear proliferation, Japan also is concerned about this problem. The United States attaches importance to cooperation with EU and other countries concerned. Japan certainly supports that U.S. stance of seeking resolution through a dialog regarding the nuclear proliferation issue. The Iranian issue remains a grave issue for the entire world economy, and Japan wishes to cooperate with the United States and other countries concerned on this matter as well.

On U.N. reforms, building on the results achieved so far, we would like to work out with the G-4 a proposal that can be supported by the United States and achieve reforms of the United Nations and the Security Council. Japan and the United States will maintain close coordination, partnership. We need to do that and address various challenges.

The Japan-U.S. alliance is not just an alliance for our two countries; it is an alliance for the world. And in the interest of the world, we were able to confirm that

we need to cooperate with each other. And I think this was a very substantive, fruitful meeting. And I would like to thank President Bush and the U.S. for a very warm, hospitable welcome.

*President Bush.* We've agreed to take two questions a side. Walking in, I reminded the Prime Minister of one of Elvis's greatest songs, "Don't Be Cruel"—[laughter]. So keep that in mind, Hunt [Terence Hunt, Associated Press], when you ask your question.

*Hamdan v. Rumsfeld*

*Q.* Thank you, Mr. President. You've said that you wanted to close the prison at Guantanamo Bay, but you were waiting for the Supreme Court decision that came out today. Do you intend now to close the Guantanamo Bay quickly? And how do you deal with the suspects that you've said were too dangerous to be released or sent home?

*President Bush.* Thank you for the question on a court ruling that literally came out in the midst of my meeting with the Prime Minister—and so I haven't had a chance to fully review the findings of the Supreme Court. I, one, assure you that we take them very seriously; two, that to the extent that there is latitude to work with the Congress to determine whether or not the military tribunals will be an avenue in which to give people their day in court, we will do so.

The American people need to know that this ruling, as I understand it, won't cause killers to be put out on the street. In other words, there's not a—it was a drive-by briefing on the way here; I was told that this was not going to be the case. At any rate, we will seriously look at the findings, obviously. And one thing I'm not going to do, though, is I'm not going to jeopardize the safety of the American people. People have got to understand that. I understand we're in a war on terror, that these people were picked up off of a battlefield. And I will protect the people and, at the same

time, conform with the findings of the Supreme Court.

Q. Do you think the prison will close?

*President Bush.* Well, I haven't had a chance to fully review what the Court said, Terry. I wish I had, and I could have given you a better answer. As I say, we take the findings seriously. And again, as I understand it—now please don't hold me to this—that there is a way forward with military tribunals in working with the United States Congress. As I understand, certain Senators have already been out expressing their desire to address what the Supreme Court found, and we will work with the Congress. I want to find a way forward.

In other words, I have told the people that I would like for there to be a way to return people from Guantanamo to their home countries, but some of them—people need to be tried in our courts. The Hamdan decision was the way forward for that part of my statement, and again, I would like to review the case. And we are; we've got people looking at it right now to determine how we can work with Congress, if that's available, to solve the problem.

#### *North Korea*

Q. On North Korea, I'd like to ask a question of both of you, Prime Minister and President. On North Korea, I understand you spent a lot of time to exchange views. It is said that the North Koreans are preparing to launch Taepodong-2. To resolve this missile issue, what kind of cooperation do you think is possible between Japan and the United States? And also, did you discuss possibly referring the matter to the U.N. Security Council?

On the abduction issue and human rights issue, I understand, Mr. President, you've shown deep concern for the resolution of the abduction issue. What sort of cooperation do you think is possible between the U.S. and Japan?

*President Bush.* Do you want to go? Yes, please.

*Prime Minister Koizumi.* The North Koreans—I believe, in the first place, we need to try and approach the North Koreans not to launch Taepodong-2, through various efforts, and should they ever launch the missile, that will cause various pressures—we would apply various pressures. And we discussed that. I believe it is best that I do not discuss what specific pressures we were talking about.

As we approach the North Koreans, we shall maintain close cooperation and coordination with the United States, including the abduction issue.

*President Bush.* —all kinds of opportunities, and the U.N. is an opportunity to express our common concern. You know, another interesting opportunity is, over time, to work on missile defenses. The Japanese cannot be—afford to be held hostage to rockets. And neither can the United States or any other body who loves freedom. And so one really interesting opportunity is for—to share and cooperate on missile defenses.

You know, the leader of North Korea is just going to have to make a decision: Does he want to be isolated from the world, or is he interested in being an active participant in, kind of, the nations of the world who care about their people and desire peace? It's his choice to make. We've made our choice. We believe it's important for nations such as Japan and the United States to be active participants in the world in a positive way. And that's what we're doing.

You know, a lot of the focus of our relationship is based upon, obviously, Iraq and Afghanistan, but the truth of the matter is, Japan and the United States make mighty contributions to end suffering because of disease and hunger. And that's why I appreciate the Prime Minister's leadership. He understands that with economic might comes serious responsibilities in the world. And the United States takes those responsibilities seriously, and so does Japan. Matt [Matt Spetalnick, Reuters].

*Hamdan v. Rumsfeld*

Q. Yes, Mr. President. We can assume you've at least been given some of the broad strokes of the Supreme Court's decision on Guantanamo—

*President Bush.* No, I just gave you the answer on that. I'll be glad to answer another question—I gave you the broad strokes I've been given.

Q. Right, but this—can you comment on what looks like a judicial repudiation of your administration's policy on the treatment of terror suspects post-9/11?

*President Bush.* Matt, I can't—I wish I could comment, and would, obviously. I'm a person who generally comments on things. I haven't been briefed enough to make a comment on it, except for the following things. I'm sorry you had to waste your question, but we will conform to the Supreme Court. We will analyze the decision. To the extent that the Congress has given any latitude to develop a way forward using military tribunals, we will work with them.

As I understand, a Senator has already been on TV. Haven't seen it; haven't heard what he said, but as—they briefed me and said he wants to devise law in conformity with the case that would enable us to use a military tribunal to hold these people to account. And if that's the case, we'll work with him.

I can't comment any more than I have just done in the first question; otherwise, I would have. I just haven't been fully briefed enough to answer your question, Matt.

*Japan-U.S. Relations*

Q. Over the past 5 years, Prime Minister Koizumi and President Bush have built up the best sort of relationship between the two of you in the history of Japan and the United States. Now, what is the greatest reason for having maintained this policy of attaching greatest importance to Japan-U.S. relations?

And a question for President Bush. Various problems have occurred after 9/11. And in the Prime Minister Koizumi's policy of attaching importance to Japan-U.S. relations, what was the case—instance where you were most appreciative of Prime Minister Koizumi's position? And what sort of impact has it had on your feeling and stance toward Japan?

*Prime Minister Koizumi.* Well, attaching importance to our relations with the United States—well, after the Second World War, throughout—over the past 6 years, Japan has maintained that policy. We've recognized the importance of a Japan-U.S. alliance and also maintain a stance of international cooperation and coordination. It's because we have learned the lessons of World War II, we took up this policy in believing that this was good for Japan. In the past, today, and the future, as well maintain Japan-U.S. alliance and international cooperation. This is a very important fundamental policy of Japan that should never change.

Last year, President Bush visited Kyoto in Japan and had one-on-one meeting. Some seem to think that the—to the extent Japan-U.S. relations is undermined, that could be complemented by better relations with Asia and other countries. And I've said I do not subscribe to that view. The better the Japan-U.S. relations, my view is that we will be able to have better relations with China and other countries in Asia.

Now, some in the mass media took up on that and misinterpreted my position. In other words, they thought that I was saying, to the extent Japan-U.S. relations remain good, I couldn't care less what Japan's relations would be with other countries. That is not at all what I said. I've been saying that there is no country in the world that has as important bilateral relations as Japan-U.S. bilateral relations. But I have no view such as having better relations with the United States at the expense of relations with other countries.

My view is that by having better relations with the United States, I can have better relations with other countries. And from that perspective, in the post-war years, Japan has achieved remarkable growth and development. It is because we've learned lessons from the past in our relations with the United States and determined to maintain friendly relations with the United States. And that is what we have done to date.

In the future as well, Japan-U.S. alliance is something that will be—contribute to the resolution of various challenges in the world—by maintaining friendly ties between Japan and the United States. Attaching importance to our relations with the United States does not sacrifice our views and our relations with other countries. Please do not misunderstand.

*President Bush.* It's a pretty tricky question. I hate to point out one area where that has influenced my thinking about Japan's contributions for fear of diminishing the contributions in other areas. Because the truth of the matter is, we live in a very complex world, and by—cooperating to solve problems makes the world a better place. However, since you asked, I'll answer. I would think it is the Prime Minister's understanding of the capacity for democracies to help change the conditions of the world. And therefore, his strong support for helping a new Afghanistan democracy grow and his willingness to do something a lot of other leaders in Japan have been unwilling to do, which is to commit Self-Defense Forces to help the growth of a new democracy.

And I tell the American people this: I use the Prime Minister all the time in my speeches, as the press corps will tell you, incredibly bored of hearing. But neverthe-

less, I do share the example with the people about my relationship with the Prime Minister. It is just—it strikes me as just amazing. A lot of people take it for granted. I don't, because 60 years ago, we were at war. And something happened between our visit to Graceland and when our respective fathers looked at each other with deep suspicion. And what happened was, Japan developed a Japanese-style democracy based upon shared values. And today, we're able to discuss peace. It is a remarkable transformation of a relationship. We just happen to be the beneficiaries of that transformation. I also believe, however, that there are people who are coming up who have shedded the bonds of tyranny are also the benefits of this relationship.

And so Japan is making a mighty contribution to new democracy, which I strongly believe is in our Nation's interests and I strongly believe will yield peace. And I firmly believe that the example that we show today will be repeated over the decades, particularly with newly elected leaders in the Middle East. And the Prime Minister understands that. And I'm grateful for the contribution of the Japanese people to the cause of peace.

Mr. Prime Minister, thank you.

*Prime Minister Koizumi.* Thank you very much, American people, for "Love Me Tender." [*Laughter*]

NOTE: The President's news conference began at 11:33 a.m. in the East Room at the White House. In his remarks, he referred to Chairman Kim Jong Il of North Korea; and Sakie Yokota, mother of Megumi Yokota, who was abducted by North Korean authorities. Prime Minister Koizumi and some reporters spoke in Japanese, and their remarks were translated by an interpreter.

Joint Statement by President George W. Bush and Prime Minister  
Junichiro Koizumi of Japan: The Japan-U.S. Alliance of the New Century  
*June 29, 2006*

President George W. Bush of the United States of America hosted Prime Minister Junichiro Koizumi of Japan for an Official Visit to the White House on June 29, 2006, that celebrated their close personal friendship and the deep and increasing ties between the American and Japanese people.

The two leaders agreed that the U.S.-Japan partnership stands as one of the most accomplished bilateral relationships in history. They reviewed with great satisfaction the broadened and enhanced cooperation achieved in the alliance under their joint stewardship, and together heralded a new U.S.-Japan Alliance of Global Cooperation for the 21st Century.

*The U.S.-Japan Alliance Based on Universal Values and Common Interests*

The United States and Japan stand together not only against mutual threats but also for the advancement of core universal values such as freedom, human dignity and human rights, democracy, market economy, and rule of law. These values are deeply rooted in the long historic traditions of both countries.

The United States and Japan share interests in: winning the war on terrorism; maintaining regional stability and prosperity; promoting free market ideals and institutions; upholding human rights; securing freedom of navigation and commerce, including sea lanes; and enhancing global energy security. It is these common values and common interests that form the basis for U.S.-Japan regional and global cooperation.

*Bilateral Political, Security and Economic Cooperation*

The President and Prime Minister welcomed the tremendous progress in the U.S.-Japan security relationship achieved

during their tenures. Bilateral security cooperation has deepened as a result of ballistic missile defense cooperation and legislation in Japan to deal with contingencies.

The two leaders welcomed the establishment of common strategic objectives of February 2005 as well as the conclusion of watershed agreements to transform the alliance for the future. These agreements, including the most significant realignment of U.S. and Japanese forces in decades, constitute historic steps forward that make the U.S. military presence more enduring and effective, and ensure the capabilities necessary for the alliance to cope with diverse challenges in the evolving security environments. The two leaders agreed that full and prompt implementation of these agreements is necessary, not only for Japan and the United States, but also for peace and stability of the Asia-Pacific region.

Asia's historic transformation is underway, creating a region that increasingly embraces the universal values of democracy, freedom, human rights, market economy, and rule of law. The two leaders pledged to work together to shape and support this transformation. In this regard, the two nations will continue to work on common challenges in the region such as (a) promoting individual freedoms; (b) increasing transparency and confidence in the political, economic, and military fields; and (c) protecting human dignity, and resolving humanitarian and human rights problems including the abduction issue.

The two leaders affirmed that robust U.S.-Japan cooperation embraces the dynamism of China, and helps to maintain peace and tranquility in Northeast Asia. They reaffirmed the importance of advancing strategic dialogues with friends and allies in the region such as Australia. They called on North Korea to fulfill

denuclearization pledges made in the September 2005 Joint Statement of the Six Party Talks and to continue to adhere to its missile test moratorium. They discussed the need for the few isolated regimes in the region to respect human rights and democratic principles including an inclusive political dialogue.

The two leaders reaffirmed their common efforts on a wide range of global activities including recent successes in the war on terrorism, support for the new government in Iraq, and cooperation on counter-proliferation activities, including on Iran. The President praised Japan's humanitarian and reconstruction assistance in Afghanistan and Iraq as well as Japan's support provided to coalition forces operating in the Indian Ocean.

Mindful of Japan's significant role and contributions at the U.N., Japan and the United States will intensify their cooperation, and work together in realizing Japan's permanent membership at the Security Council.

They pledged to continue close cooperation under the Strategic Development Alliance and to work together on other global challenges such as capacity-building for natural disaster response and prevention and response to avian/pandemic influenza. They also agreed to work on the interrelated challenges of energy security, clean development, reducing pollution, and climate change.

Building upon the progress achieved over the last five years under the U.S.-Japan Economic Partnership for Growth, the two

leaders agreed to explore ways to further deepen the mutually-beneficial bilateral economic relationship as well as to enhance cooperation on regional and global economic issues.

Such an expanded partnership would include: promoting growth and economic reform; promoting and maintaining open markets; ensuring efficient movement of legitimate goods, services, people, and investments, while tackling threats from terrorism; strengthening intellectual property rights protection and enforcement; enhancing global energy security; and fostering transparent and favorable business climates in both countries.

The two leaders also affirmed their commitment to make a strong contribution to ensure a successful and ambitious outcome for the WTO Doha Development Agenda negotiations by the end of 2006 that opens markets and achieves a balanced outcome across the board. They expressed their determination to work together to strengthen the Asia-Pacific Economic Cooperation (APEC) forum, recognizing its crucial role in promoting stability, security, and prosperity in the region.

The two leaders shared the view that the U.S.-Japan global alliance remains a constant and positive force. They shared the expectation that the U.S.-Japan friendship and global cooperation shall continue to grow stronger.

## Statement on House of Representatives Passage of Scientific Research Legislation

June 29, 2006

I commend the House for approving full funding of the basic research component of the American Competitiveness Initiative

through the Science, State, Justice and Commerce appropriations bill. With this funding, the House has shown that it is

committed to supporting the work of our Nation's most brilliant scientists as they study promising areas such as new energy technologies, supercomputing, and nanotechnology.

I appreciate the support of Chairman Lewis and the tireless and effective efforts

of Chairman Wolf, and I commend the House leadership's work to move quickly on the centerpiece of our innovation agenda. I urge the Senate to join the House in passing this important legislation.

### Remarks at a Dinner Honoring Prime Minister Junichiro Koizumi of Japan June 29, 2006

Mr. Prime Minister and distinguished guests, Laura and I thank you for joining us tonight, and we welcome you to the White House. This room has hosted many honored guests, and tonight it also hosts a treasured friend.

Mr. Prime Minister, our strong friendship has grown out of the strong alliance between our two nations. Japan and America share a common belief in the power of freedom to bring hope to millions who have not known it. And we share a common commitment to meet the challenges of our time and lay the foundations of peace for generations to come.

In our meetings today, you have once again demonstrated the qualities of character that both the Japanese people and the American people admire. You have an optimistic view of the world. You welcome hard work and big challenges, and you are determined that your great nation will con-

tinue to make a positive contribution to our world.

Mr. Prime Minister, more than 25 years ago, the White House welcomed another distinguished visitor who shared much in common with you. Like you, he had great hair. [Laughter] Like you, he was known to sing in public. [Laughter] And like you, he won admirers in countries far from home. That man was Elvis. [Laughter] And Laura and I are looking forward to joining you tomorrow in our visit to his home in Memphis.

But tonight, Mr. Prime Minister, it's my honor to offer a toast to you and to our friends and allies, the people of Japan.

NOTE: The President spoke at 8:05 p.m. in the State Dining Room at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Prime Minister Koizumi.

### Remarks With Prime Minister Junichiro Koizumi of Japan in Memphis, Tennessee June 30, 2006

*President Bush.* It is such a joy to be here to Graceland. It's my first visit.

*Prime Minister Koizumi.* My first visit too.

*President Bush.* The Prime Minister's first visit.

*Prime Minister Koizumi.* It's like a dream, with President Bush and Presley's daughter.

*President Bush.* Thank you all for greeting us. You're awfully kind to be here.

*Prime Minister Koizumi.* You look like Elvis.

[*At this point, the late entertainer Elvis Presley's daughter, Lisa Marie, spoke in Japanese, and no translation was provided.*]

*President Bush.* The visit here is an indication of how well-known Elvis was around the world. A lot of people are still singing Elvis Presley songs here in the States, and there's a lot of people who love Elvis Presley in Japan, including the Prime Minister. This visit is also a way of reminding us about the close friendship between our peoples.

And, Mr. Prime Minister, thank you for agreeing to come here. A lot of Americans are thrilled you're here, particularly to Graceland. It means a lot to our country

that you would be that interested in one of America's icons, Elvis Presley.

*Prime Minister Koizumi.* My birthday is the same as Elvis's.

*President Bush.* You and Elvis were born on the same day?

*Prime Minister Koizumi.* January 8th. Even now, I often listen to Elvis CDs.

*President Bush.* Still listen to Elvis CDs?

*Prime Minister Koizumi.* Sure.

*President Bush.* You're a pretty good Elvis singer.

*Prime Minister Koizumi.* I'm not impersonator.

[*Prime Minister Koizumi sang an Elvis song.*]

*President Bush.* I thought you were going to do "Blue Suede Shoes." Thank you.

NOTE: The President spoke at 10:38 a.m. at Graceland.

## Remarks Following a Tour of Graceland With Prime Minister Junichiro Koizumi of Japan in Memphis June 30, 2006

*President Bush.* First of all, the Prime Minister and I would like to thank Priscilla and Lisa for their gracious hospitality. And we thank the Graceland staff as well for arranging this unusual experience. First of all, my presence here shows it's never too late to come to Graceland. Laura and I are—we've known Elvis Presley since we were growing up. He's obviously a major part of our music history. He had an international reputation. His reputation was so strong that he attracted the attention of the now Prime Minister of Japan.

I was hoping the Prime Minister would want to come to Graceland. I knew he loved Elvis; I didn't realize how much he loved Elvis. He not only knows Elvis's history, he can sing a pretty good Elvis song. This visit here shows that not only am I

personally fond of the Prime Minister, but the ties between our peoples are very strong as well.

And so, again, to the Presleys, thank you all. And Mr. Prime Minister, glad you joined us. Want to say a few comments?

*Prime Minister Koizumi.* It's like a dream. I never expected Mr. President come with me to visit Graceland. There's Elvis song: "To Dream Impossible."  
[*Laughter*]

[*At this point, Prime Minister Koizumi sang an Elvis song.*]

*Prime Minister Koizumi.* My dream came true. So thank you very much for—[*inaudible*]  
—thank you. Thank you very much for treating me nice. That's an Elvis song.

[*Prime Minister Koizumi sang another Elvis song.*]

*Prime Minister Koizumi.* Thank you.

*President Bush.* We're going to go have some barbeque. Thank you.

NOTE: The President spoke at 11:44 a.m. on the front lawn at Graceland. In his remarks, he referred to the late entertainer Elvis Presley's wife, Priscilla, and daughter, Lisa Marie.

## Appendix A—Digest of Other White House Announcements

*The following list includes the President's public schedule and other items of general interest announced by the Office of the Press Secretary and not included elsewhere in this book.*

### January 1

In the morning, the President traveled from the Bush Ranch in Crawford, TX, to San Antonio, TX, where, at Brooke Army Medical Center, he visited wounded soldiers and their family members and presented Purple Heart medals to nine soldiers.

In the afternoon, the President and Mrs. Bush returned to Washington, DC.

### January 2
