## *Foreword*

This volume collects my speeches and papers from the first half of 2006.

As the year opened, I appeared before the Congress to deliver my annual State of the Union message. In this speech, I called for an ambitious agenda to strengthen our Nation's economy and ensure that our Nation remained competitive in the world. I proposed the Advanced Energy Initiative, a plan to harness the power of technology to reduce America's dependence on foreign sources of energy. I presented a strategy to reform health care for the 21st century by making it more affordable, portable, and efficient. And I introduced the American Competitiveness Initiative—a bold plan to support science and technology by investing in research and development, education, and entrepreneurship.

During these 6 months, I toured the Nation to promote these initiatives and other important domestic priorities. In March, I traveled to New Orleans to discuss the Federal Government's continued commitment to rebuilding communities devastated by Hurricane Katrina. During the spring, I visited a variety of States to encourage Americans to take part in the new Medicare prescription drug benefit. And as summer approached, I visited California, New Mexico, Nebraska, and Arizona to highlight the need for the Congress to pass comprehensive immigration reform.

On May 15, I addressed the Nation from the Oval Office on this vital issue. I said, "Our new immigrants are just what they've always been—people willing to risk everything for the dream of freedom. And America remains what she has always been: the great hope on the horizon, an open door to the future, a blessed and promised land. We honor the heritage of all who come here, no matter where they come from, because we trust in our country's genius for making us all Americans—one Nation under God."

During this period, we took decisive action on several key priorities for our Nation's future. In March, I signed the "USA PATRIOT Improvement and Reauthorization Act of 2005"—legislation that gave our country's intelligence and law enforcement officials vital tools to protect our citizens from threats such as international terrorists and drug dealers. In May, I was proud to sign into law a bill that extended tax relief for American families and businesses. And in June, I signed a proclamation creating the Northwestern Hawaiian Islands Marine National Monument—the largest single conservation area in the history of our country, and the largest fully protected marine area in the world.

This was a time when many talented and able Americans were appointed to the highest levels of the Federal Government. In January, Samuel Alito was confirmed by the United States Senate as the Supreme Court's newest Associate Justice. Less than a week later, Ben Bernanke was sworn in as our Nation's 14th Chairman of

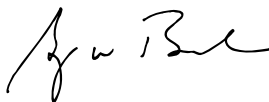

the Federal Reserve. In May, General Michael Hayden was appointed to be the new Director of the Central Intelligence Agency. And during this period, I also welcomed two new members to my cabinet—Dirk Kempthorne as Secretary of the Interior and Henry Paulson as Secretary of the Treasury.

As we focused on these key priorities at home, my Administration remained engaged in vital issues around the world. In March, the First Lady and I traveled to Afghanistan, India, and Pakistan to demonstrate America's commitment to strong partnerships in that vital region. While in Afghanistan, I was able to witness firsthand how America's men and women in uniform were combating radicalism and creating a more hopeful future for the Afghan people. After years under the radical Taliban regime, Afghanistan was transforming into a country where entrepreneurs had the freedom to pursue opportunity, journalists had the freedom to ask questions, and, at long last, girls had the freedom to receive an education. I praised this progress and let the Afghan people know that America's commitment to them remained firm.

Later that month, I visited Mexico, where I met with Mexican President Vicente Fox and Canadian Prime Minister Stephen Harper to discuss an agenda of security and prosperity for North America. In June, I attended a summit meeting between the United States and the European Union. On this trip, Laura and I visited Austria and Hungary, and I reaffirmed America's commitment to work with our European allies to promote peace, human rights, and democracy worldwide.

Finally, this period saw both setbacks and successes in the continued struggle for Iraq's future. Despite the destruction sparked by the terrorist bombing of a sacred Shiite mosque in Samarra, the Iraqi people banded together to form their first unity government in April. In May, Nouri Al-Maliki became Prime Minister of Iraq and presented his cabinet to the new government. And in June, United States military forces killed Abu Musab Al-Zarqawi, the operational commander of the terrorist movement in Iraq—a dramatic victory in the War on Terror.

Less than a week after Zarqawi was brought to justice, I made a surprise visit to Iraq, where I spent time with the men and women of our Armed Forces and met with the new Prime Minister. Upon my return, I told the American people, "I traveled to Baghdad to personally show our Nation's commitment to a free Iraq, because it is vital for the Iraqi people to know with certainty that America will not abandon them after we have come this far. The challenges that remain in Iraq are serious. We face determined enemies who remain intent on killing the innocent, and defeating these enemies will require more sacrifice and the continued patience of our country. But our efforts in Iraq are well worth it, the mission is necessary for the security of our country, and we will succeed." In the months to come, our country's patience would indeed be tested, but our determination to safeguard our Nation and help foster a free Iraq would prevail.

## *Preface*

This book contains the papers and speeches of the 43d President of the United States that were issued by the Office of the Press Secretary during the period January 1–June 30, 2006. The material has been compiled and published by the Office of the Federal Register, National Archives and Records Administration.

The material is presented in chronological order, and the dates shown in the headings are the dates of the documents or events. In instances when the release date differs from the date of the document itself, that fact is shown in the textnote. Every effort has been made to ensure accuracy: Remarks are checked against a tape recording, and signed documents are checked against the original. Textnotes and cross references have been provided by the editors for purposes of identification or clarity. At the request of the Office of the Press Secretary, the Bush property known as Prairie Chapel Ranch in Crawford, Texas, is referred to simply as the Bush Ranch. Speeches were delivered in Washington, DC, unless indicated. The times noted are local times. All materials that are printed full-text in the book have been indexed in the subject and name indexes, and listed in the document categories list.

The Public Papers of the Presidents series was begun in 1957 in response to a recommendation of the National Historical Publications Commission. An extensive compilation of messages and papers of the Presidents covering the period 1789 to 1897 was assembled by James D. Richardson and published under congressional authority between 1896 and 1899. Since then, various private compilations have been issued, but there was no uniform publication comparable to the Congressional Record or the United States Supreme Court Reports. Many Presidential papers could be found only in the form of mimeographed White House releases or as reported in the press. The Commission therefore recommended the establishment of an official series in which Presidential writings, addresses, and remarks of a public nature could be made available.

The Commission's recommendation was incorporated in regulations of the Administrative Committee of the Federal Register, issued under section 6 of the Federal Register Act (44 U.S.C. 1506), which may be found in title 1, part 10, of the Code of Federal Regulations.

A companion publication to the Public Papers series, the Weekly Compilation of Presidential Documents, was begun in 1965 to provide a broader range of Presidential materials on a more timely basis to meet the needs of the contemporary reader. Beginning with the administration of Jimmy Carter, the Public Papers series expanded its coverage to include additional material as printed in the Weekly Compilation. That coverage provides a listing of the President's daily schedule and meetings, when announced, and other items of general interest issued by the Office of

the Press Secretary. Also included are lists of the President's nominations submitted to the Senate, materials released by the Office of the Press Secretary that are not printed full-text in the book, and proclamations, Executive orders, and other Presidential documents released by the Office of the Press Secretary and published in the *Federal Register*. This information appears in the appendixes at the end of the book.

Volumes covering the administrations of Presidents Herbert Hoover, Harry S. Truman, Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard Nixon, Gerald R. Ford, Jimmy Carter, Ronald Reagan, George Bush, and William J. Clinton are also included in the Public Papers series.

The Public Papers of the Presidents publication program is under the direction of Frances D. McDonald, Managing Editor, Office of the Federal Register. The series is produced by the Presidential and Legislative Publications Unit. The Chief Editor of this book was Stacey A. Mulligan, assisted by William K. Banks, Loretta F. Cochran, Lois Davis, Kathleen M. Fargey, Stephen J. Frattini, Michael J. Forcina, Allison M. Gavin, Gwendolyn J. Henderson, Diane Hiltabidle, Alfred Jones, Joshua H. Liberatore, Heather N. McDaniel, Ashley Merusi, Amelia E. Otovo, Jennifer M. Partridge, D. Gregory Perrin, Matthew R. Regan, and Michael J. Sullivan.

The frontispiece and photographs used in the portfolio were supplied by the White House Photo Office. The typography and design of the book were developed by the Government Printing Office under the direction of Robert C. Tapella, Public Printer.

Director of National Drug Control Policy .....	John P. Walters

Remarks to Reporters Following a Visit With United States Troops and an Exchange With Reporters in San Antonio, Texas  
*January 1, 2006*

*The President.* Happy New Year to you all. Thanks. I can't think of a better way to start 2006 than here at this fantastic hospital, a hospital that's full of healers and compassionate people who care deeply about our men and women in uniform. It's also full of courageous young soldiers, marines, airmen—men and women—who are serving our country and making great sacrifice. I'm just overwhelmed by the great strength of character of not only those who have been wounded but of their loved ones as well. And so, thank you all for bringing great credit to our country.

As you can probably see, I have injured myself, not here at the hospital but in combat with a cedar. I eventually won. The cedar gave me a little bit of a scratch. As a matter of fact, the colonel asked if I needed first aid when she first saw me. I was able to avoid any major surgical operations here, but thanks for your compassion, Colonel.

I've been thinking long and hard about 2006. My hopes, of course, are for peace around the world. I'll continue to work as hard as I can to lay that foundation for peace. And also my hope is that this country remains as prosperous as it was in 2005. We had a very strong economy, and we'll work to keep the economy as strong as it possibly can, so anybody that wants to find a job can find one.

With that, I'll be glad to answer a couple of questions. Toby [Tabassum Zakaria, Reuters]—or, excuse me, Deb. You are Deb [Deb Riechmann, Associated Press], right?

*Terrorist Surveillance Program*

*Q.* Yes, sir. Mr. President, were you aware of any resistance to the launching of the NSA program at high levels of your administration, and if so, how did that influence your decision to approve it?

*The President.* First of all, the NSA program is an important program in protecting America. We're at war, and as the Commander in Chief, I've got to use the resources at my disposal, within the law, to protect the American people. And that's what we're doing.

The NSA program is one that listens to a few numbers, called from the outside of the United States in, of known Al Qaida or affiliate people. In other words, the enemy is calling somebody, and we want to know who they're calling and why. And that seems to make sense to me, as the Commander in Chief, if my job is to protect the American people.

This program has been reviewed, constantly reviewed, by people throughout my administration. And it still is reviewed. It has got—not only has it been reviewed by Justice Department officials, it's been reviewed by Members of the United States Congress. It's a vital, necessary program.

Now, some say, "Well, maybe this isn't a war. Maybe this is just a law enforcement operation." I strongly disagree. We're at war with an enemy that wants to hurt us again, and the American people expect the Commander in Chief to protect them, and that's exactly what I intend to do.

Toby.

### *U.S. Troop Levels in Iraq*

Q. Mr. President, as we start the new year, what is your outlook for U.S. troop withdrawal from Iraq in 2006?

*The President.* The conditions on the ground will dictate our force level. As the Iraqis are able to take more of the fight to the enemy, our commanders on the ground will be able to make a different assessment about the troop strength. And I'm going to continue to rely upon those commanders, such as General Casey, who is doing a fabulous job and whose judgment I trust, and that will determine—his recommendations will determine the number of troops we have on the ground in Iraq.

### *Terrorist Surveillance Program*

Q. In 2004, when you were doing an event about the PATRIOT Act, in your remarks you had said that any wiretapping required a court order and that nothing had changed. Given that we now know you had prior approval for this NSA program, were you in any way misleading?

*The President.* I was talking about roving wiretaps, I believe, involved in the PATRIOT Act. This is different from the NSA program. The NSA program is a necessary program. I was elected to protect the American people from harm. And on September the 11th, 2001, our Nation was attacked. And after that day, I vowed to use all the resources at my disposal, within the law, to protect the American people, which is what I have been doing and will continue to do. And the fact that somebody leaked this program causes great harm to the United States.

There's an enemy out there. They read newspapers. They listen to what you write. They listen to what you put on the air, and they react. And it seems logical to me that if we know there's a phone number associated with Al Qaida and/or an Al Qaida affiliate and they're making phone calls, it makes sense to find out why. They attacked us before; they will attack us again

if they can. And we're going to do everything we can to stop them.

Yes, Ed [Edwin Chen, Los Angeles Times].

Q. Mr. President, with this program, though, what can you say to those members of the public that are worried about violations of their privacy?

*The President.* Ed, I can say that if somebody from Al Qaida is calling you, we'd like to know why. In the meantime, this program is conscious of people's civil liberties, as am I. This is a limited program designed to prevent attacks on the United States of America. And I repeat, limited. And it's limited to calls from outside the United States to calls within the United States. But they are of known—numbers of known Al Qaida members or affiliates. I think most Americans understand the need to find out what the enemy is thinking, and that's what we're doing.

We're at war with a bunch of cold-blooded killers who will kill on a moment's notice. And I have a responsibility, obviously, to act within the law, which I am doing. It's a program that's been reviewed constantly by Justice Department officials, a program to which the Congress has been briefed, and a program that is, in my judgment, necessary to win this war and to protect the American people.

Last question. Mike [Mike Allen, Time].

### *U.S. Troops Wounded in Iraq*

Q. Mr. President, in August you said that Katrina could—the effects of it could test the strongest faith. I'm sure of some of the things that you saw today, that's the case as well. What do you tell a young soldier or his young wife about how a loving God could permit or cause some of the things you saw today?

*The President.* First of all, Mike, I'm conscious not to be trying to substitute myself for God. I am, on the other hand, inspired by the mom who told me upstairs that she prays every day and believes in the miracle of healing, that I think we see God's work

here every day. I think when you find nurses and doctors who work around the clock, who come in at a moment's notice to save a life, I happen to believe there's a lot of divine inspiration to that kind of dedication and work. The parents I saw or the wives I saw, many of them were in prayer on a regular basis for their loved one.

And, you know, war is terrible. There's horrible consequences to war; that's what you see in this building. On the other hand, we also see people who say, "I'd like to go back in, Mr. President." What we're doing is the right thing, because many of these troops understand that by defeating the enemy there, we don't have to face them here. And they understand that by helping a country in the Middle East become a democracy, we are, in fact, laying

the foundation for future peace. And my—as the Commander in Chief, I am resolved to make sure that those who have died in combat's sacrifice are not in vain. And I am resolved to make sure that these kids who are recovering here, that have suffered terrible injury, that their injuries are not in vain, by completing the mission and laying that foundation for peace for generations to come. And I'm optimistic we'll achieve that objective.

Thank you all very much.

NOTE: The President spoke at 12:05 p.m. at the Brooke Army Medical Center. In his remarks, he referred to Col. Lark Ford, USA, deputy commander for nursing, Brooke Army Medical Center; and Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq.

## Remarks Following a Meeting on the PATRIOT Act *January 3, 2006*

Earlier today, I spoke to Governor Manchin of West Virginia. I told him that Americans all across our country were praying for the miners who are trapped in the mine there in West Virginia. I told him that I appreciated the great outpouring of compassion from the West Virginia citizens toward those worried family members. I also assured him that the Federal Government will help the folks in West Virginia any way we can to bring those miners out of that mine, hopefully in good condition. And may God bless those who are trapped below the Earth, and may God bless those who are concerned about those trapped below the Earth.

I also have just met with folks on the frontline of fighting the war on terror. U.S. Attorneys from around the country have joined us. Folks from the FBI, whose job it is to protect the American people, are with us as well.

We're talking about the PATRIOT Act and how useful the PATRIOT Act has been to safeguard America and, at the same time, safeguard liberties of Americans. And yet, the PATRIOT Act is going to expire in 30 days. And these good folks, whose task it is to do everything they can to protect the American people from a terrorist enemy that wants to hit us again, is asking the United States Congress to give them the tools necessary to do their jobs. And I'm asking the Congress to do so as well.

The American people expect to be protected, and the PATRIOT Act is a really important tool for them to stay protected. You know, the Congress says to people in the administration, "How come you haven't connected the dots?" And the PATRIOT Act is an important way to help connect the dots to protect the people.

This PATRIOT Act was passed overwhelmingly by the United States Congress

in 2001. Members from both parties came together and said, "We will give those on the frontline of protecting America the tools necessary to protect American citizens and, at the same time, guard the civil liberties of our citizens." For 4 years, that's what's happened. These good folks have used the PATRIOT Act to protect America. There's oversight on this important program. And now, when it came time to renew the act, for partisan reasons, in my mind, people have not stepped up and have agreed that it's still necessary to protect the country. The enemy has not gone away. They're still there. And I expect Congress to understand that we're still at war, and

they've got to give us the tools necessary to win this war.

And so for the next 30 days, I look forward to working with Members of Congress and speaking to the American people as clearly as I can about the importance of renewing the PATRIOT Act.

Thank you.

NOTE: The President spoke at 1:42 p.m. in the Roosevelt Room at the White House. In his remarks, he referred to Gov. Joe Manchin III of West Virginia. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Meeting on the War on Terror in Arlington, Virginia *January 4, 2006*

Today our Nation mourns those who lost their lives in the mining accident in West Virginia. We send our prayers and heartfelt condolences to the loved ones whose hearts are broken. We ask that the good Lord comfort them in their time of need.

I want to thank the Governor of West Virginia for showing such compassion, and I want to thank those who risked their lives to save those miners for showing such courage. May God bless the good people of West Virginia.

I just finished an important meeting, a briefing with members of my national security team, a briefing hosted by Secretary Don Rumsfeld and General Pete Pace. We spent time talking about this war on terror, the global war on terror. And to make sure that my team understood the progress we've made and the challenges ahead, the Secretary asked three of our commanders to join in the briefing, Generals Abizaid, Casey, and General Dempsey.

I want to tell the American people that I am most impressed by the caliber of these generals. They are smart. They are

capable. They are visionary, and they're working hard to win this global war. We also were able to speak to one of our fine Ambassadors, Ambassador Khalilzad from Baghdad, as well.

During our briefing, we talked about the areas of concern in this global war on terror, recognizing that the enemy, which has an ideology of hate and a desire to kill, lurks in parts around the world. I assured those generals that this administration would do everything in our power to bring these enemies to justice.

We also spent time talking about the two major fronts in this war on terror, and that would be Iraq and Afghanistan. In Iraq, 2005 was a year of progress toward meeting our goal of victory. If you really think about it, there was three important elections that took place and in an atmosphere that some predicted wouldn't yield democracy. We had the January elections; we had the Constitution elections; we had elections last December when nearly 11 million people defied the terrorists to vote. The turnout in that country was 70 percent. Part of

our strategy for defeating the enemy in Iraq is for there to be a viable political process. And when 70 percent of the people show up to vote, that's a good sign. See, people are saying, "I want to participate in the democratic process." The Iraqis showed great courage.

Now, we look forward to the process, obviously, moving on. The formation of a unity government is going to be important to the stability of the future of Iraq. Before that happens, obviously, you've got to finish counting the votes. And that's going to happen over the next couple of weeks. And then the Government—well, they're beginning to form the Government under their new Constitution. It takes a two-third vote of the Parliament for certain top officials to assume office. And to form this inclusive government, the Iraqi leaders must compromise and negotiate and build consensus, and this is going to take some time.

What the American people will see during the weeks ahead is a political process unfold, that people will be making decisions not based upon who's got the biggest gun but who's got the capacity to rally the will of the people. And that's positive. Democracies are an important part of our winning the war on terror. Democracies yield an ideology that is based on an ideology that says people are free—free to choose. The ideology of the enemy says a few people will choose, and if you don't like what we tell you to believe in, we'll kill you or treat you harshly.

And I want the American people to remember what life was like for the poor people in Afghanistan under the Taliban. The Taliban had no hopeful vision. They're vision was, if you don't agree with us, we'll take you in the public square and whip you. They're vision was, women don't have rights. They're vision was a dark and dim vision, which stands in stark contrast to the vision based upon freedom and democracy.

The second part of our strategy is to—in Iraq, a strategy for victory, is to train the Iraqis so they can take the fight against

the few who would stop the progress of many. And during this election, we were briefed about the security forces during the election. The commanders talked about more than 215,000 Iraqi soldiers and police that secured the country. That was an increase, by the way, of 85,000 since January of 2005. General Casey labeled the performance of the troops as superb.

Before the elections, there was a number of joint operations to lay the groundwork for a peaceful election. The Iraqis were in the lead on election day. In other words, they were responsible for the security of the elections. We were in a position to help them, but they were responsible for securing the voting booths. And they did a fine job. The number of attacks during the election were down dramatically. They performed, and that's part of our calibrating whether or not the Iraqi troops are becoming more capable. Numbers are one thing, but the ability to perform is another. And during these elections, the Iraqi troops showed our commanders on the ground and showed the American people that they're becoming more and more capable of performing their duty to provide security to the Iraqi people.

Now, you've got to understand that just because the elections went forward that doesn't mean these Saddamists, Zarqawi types, are going to lay down their arms. They're not. There will still be violence, and there will still be some who believe that they can affect the political outcome of Iraq through violent means. We understand that. And we're going to stay on the offense against these—"we" being coalition forces as well as the Iraqi forces. But the recent elections have served as a real defeat for the rejectionists and the Saddamists and Al Qaida types. Sunni Arabs who had boycotted the process joined the process. And as they did so, those who want to stop the progress of freedom are becoming more and more marginalized inside of Iraq.

So in 2006, the mission is to continue to hand over more and more territory and

more and more responsibility to Iraqi forces. A year ago, there was only a handful of Iraqi Army and police battalions ready for combat, ready to take the lead. Today, there are more than 125 Iraqi combat battalions fighting the enemy, and 50 of those are in the lead. That's progress. And it's important progress, and it's an important part of our strategy to win in Iraq. And as these forces become more battle-hardened and take the lead, we're going to see continued confidence in the Iraqi people of the Iraqis being able to defend themselves, and that's important. And as we see more of these Iraqi forces in the lead, we'll be able to continue with our desire, our stated strategy that says, as Iraqis stand up, we'll stand down.

The commanders have recently determined that we can reduce our combat forces in Iraq from 17 to 15 brigades. And the reason they were able to do so is because the Iraqis are more capable. The adjustment is underway. This adjustment will result in a net decrease of several thousand troops below the pre-election baseline of 138,000 U.S. troops in Iraq. The decrease comes in addition to the reduction of about 20,000 troops who were in Iraq to assist with security during the December elections.

Later this year, if Iraqis continue to make progress on the security and political sides that we expect, we can discuss further possible adjustments with the leaders of a new Government in Iraq. But my decisions will be based upon conditions on the ground and the recommendation of our commanders, not based by false political timetables in Washington, DC. I'm not going to let politics get in the way of doing the right thing in Iraq, and the American people have got to understand that.

We've also got the opportunity to change our composition of our forces inside Iraq. In 2006, we expect Iraqis will take more and more control of the battle space, and as they do so, we will need fewer U.S. troops to conduct combat operations

around that country. More of our forces will be dedicated to training and supporting the Iraqi units. In the coming year, we will continue to focus on helping Iraqis improve their logistics and intelligence capabilities so more Iraqi units can take the fight and can sustain themselves in the fight.

We're also going to spend a lot of time on police training. An important part of our strategy is not only to have a competent Iraqi Army but police forces that are capable of earning the confidence of the Iraqi citizens. To restore security, Iraq has got to have capable police forces. And the recent reports of abuses by some of the Iraqi police units are troubling, and that conduct is unacceptable. Our commanders understand that; the Secretary understands that; and I know that.

To stop such abuses and increase the professionalism of the Iraqi police, General Dempsey, who's in charge of training, and others are working with the Iraqis to continue making adjustments in the way the forces are trained. First, we're going to work with the Iraqi Government to increase the training Iraqi police recruits receive in human rights and the rule of law, so they understand the role of the police in a democratic society.

Second, we're training Iraqi police with a program that has been effective with the Iraqi Army. In other words, when we find something that works, we'll do it. And if we find something that's not working, we change; and that is to embed coalition transition teams inside Iraqi special police units. Embedding our folks inside Iraqi Army units has worked. One reason why these Iraqi units are better able to take the lead is because they've worked side by side with American specialists and experts, some of our best troops. And so, we're going to embed these type of soldiers with the Iraqi police forces as well.

These transition teams will be made up of our officers, as well as noncommissioned officers. The coalition teams will go in the

field with the police. They'll provide real-time advice and important assistance on patrol and during operations. And between operations, they're going to train the Iraqi officers; they're going to help them become increasingly capable and professional so they can serve and protect all the Iraqi people without discrimination.

As we train not only the soldiers but the police, our special units will continue hunting down Al Qaida and their affiliates. See, Al Qaida thinks they can use Iraq as a safe haven from which to launch attacks. That's their stated objective. I'm not making this up. Nobody in the—this is what Zawahiri and Zarqawi discussed. They said, "Let's drive America out of Iraq so we can use Iraq as a safe haven." We're going to train Iraqis. We'll train their army and train their police, and at the same time, we've got some of the finest soldiers ever on the hunt to bring Zarqawi and his buddies to justice.

The second front is in Afghanistan. The second major front in this global war against these terrorists is in Afghanistan, where we've made steady progress on the road to democracy. President Karzai got elected. There's a sitting Parliament. I mean, it's amazing how far Afghanistan has come from the days of the Taliban. General Abizaid told us in our briefing that new democracy is being increasingly defended by a capable Afghan Army and police. The Afghan National Army is now nearly 27,000 soldiers who are trained and equipped. General Abizaid tells us these soldiers are tough in battle. They want to defend their homeland. There are some 55,000 Afghan police officers on the beat. They're taking the fight to the enemy. They're working side by side with coalition forces to protect this new democracy.

They're receiving a lot of international support through the NATO Alliance. The NATO-led international security assistance force has now about 9,000 troops in the country that represents all 26 NATO Allies and 10 non-NATO nations. In other words,

the international community is stepping up. Like they have in Iraq, they're stepping up in Afghanistan as well. In 2006, the force levels will increase by up to another 6,000 forces, to a total of approximately 15,000 personnel. In other words, you're going to see in 2006 an increase of international force inside of Afghanistan.

As NATO takes on a larger role in Afghanistan and as the capability of Afghan forces continues to grow, the United States will reduce force levels in Afghanistan from 19,000 to 16,500 this year. In other words, our strategy has been to provide a strong commitment to provide stability so democracy can flourish. And then as others, including Afghan troops as well as NATO troops, step in, we step back. We're going to continue to conduct antiterrorist operations in Afghanistan as well. This is a part of a global war against the terrorist network.

I said after September the 11th we would do everything in our power to bring justice to the enemy that attacked the American people, and I meant it. And part of chasing down the Taliban and Al Qaida is to find them where they hide. And just like in Iraq, we're going to have our special forces stay on the hunt. And we'll continue training at the same time.

There's a lot of work to be done in this war on terror, but the American people can be—rest assured this administration understands the task and understands the challenges and understands our obligation to protect you, to protect the American people.

During the past year, we lost some really good folks who wore the uniform of the United States of America. We pray for their loved ones. We pray for the comfort of those who had a sorrowful holiday season because a seat at the table was empty. And we vow to those that we will complete our mission: We will lay that foundation of peace for generations to come, that we'll do our duty to protect this country by not only bringing justice to an enemy that

wants to do us harm but by spreading freedom and democracy.

Thank you very much.

NOTE: The President spoke at 11:24 a.m. at the Pentagon. In his remarks, he referred to Gov. Joe Manchin III of West Virginia; Gen. John P. Abizaid, USA, commander, U.S. Central Command; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Lt. Gen. Martin E.

Dempsey, USA, commander, Multi-National Security Transition Command—Iraq and NATO Training Mission—Iraq; U.S. Ambassador to Iraq Zalmay Khalilzad; senior Al Qaida associate Abu Musab Al Zarqawi; Ayman Al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al Qaida associate; and President Hamid Karzai of Afghanistan. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Statement on the Health of Prime Minister Ariel Sharon of Israel

*January 4, 2006*

Laura and I share the concerns of the Israeli people about Prime Minister Ariel Sharon's health, and we are praying for his recovery. Prime Minister Sharon is a man

of courage and peace. On behalf of all Americans, we send our best wishes and hopes to the Prime Minister and his family.

## Remarks Following a Meeting With Military and Diplomatic Leaders

*January 5, 2006*

It's been my honor to host former Secretaries of State and Secretaries of Defense from Republican administrations and Democratic administrations here at the White House. I've asked Secretary Rice and Secretary Rumsfeld and Ambassador Khalilzad and General Casey to bring these men and women up to date on our strategy for victory in Iraq.

I've also had a chance to listen to their concerns, their suggestions about the way forward. Not everybody around this table agree with my decision to go into Iraq, and I fully understand that. But these are good, solid Americans who understand that we've got to succeed now that we're there. And I'm most grateful for the suggestions that have been given. We take to heart the advice. We appreciate your experience, and we appreciate you taking time out of your day.

We have a dual-track strategy for victory. On the one hand, we will work to have a political process that says to all Iraqis, "The future belongs to you." And on the other hand, we'll continue to work on the security situation there. The main thrust of our success will be when the Iraqis are able to take the fight to the enemy that wants to stop their democracy, and we're making darn good progress along those lines.

Again, I want to thank you all for coming. I appreciate your interests. I appreciate you being such a solid citizen of our country.

NOTE: The President spoke at 10:31 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq. Participating in the

meeting were former Secretaries of State Colin L. Powell, Madeleine K. Albright, Lawrence S. Eagleburger, James A. Baker III, George P. Shultz, and Alexander M. Haig, Jr.; and former Secretaries of Defense

William S. Cohen, William J. Perry, Frank C. Carlucci, Harold Brown, James R. Schlesinger, Melvin R. Laird, and Robert S. McNamara.

## Remarks to the United States University Presidents Summit on International Education

January 5, 2006

Thank you all. Madam Secretary, it's your building; you can give my speech if you want to. *[Laughter]*

But first, our Nation sends our deepest sympathies to Ariel Sharon. He lies immobilized in an Israeli hospital. We pray for his recovery. He's a good man, a strong man, a man who cared deeply about the security of the Israeli people and a man who had a vision for peace. May God bless him.

Madam Secretary, thanks for having me. I'm here to let the good folks know here how strongly I support the National Security Language Initiative. I've had a little problem with the language in the past, so—*[laughter]*—if you've got room in the initiative for me, let me know. *[Laughter]* Condi said, "Come on by. We've got a bunch of university presidents here." And I said, "Great, just so long as we don't have to compare transcripts." *[Laughter]* She's the Ph.D.; I'm the President. *[Laughter]*

She's a heck of a Secretary of State, though, and Don Rumsfeld is a heck of a Secretary of the Defense, and I want to thank you both for joining together on this initiative. It's interesting, isn't it, that the State Department and the Defense Department are sponsoring a language initiative. It says something about the world we live in. I felt certain that the Secretary of Education would be here. After all, we're talking about education, and I want to thank you for being here, Margaret. But I also find it's interesting you're sitting next

to John Negroponte, who is the Director of National Intelligence.

In other words, this initiative is a broad-gauged initiative that deals with the defense of the country, the diplomacy of the country, the intelligence to defend our country, and the education of our people. And it's an important initiative, and I'm going to tell you why in a second. But thank you for joining your—together to make this happen.

I want to thank Deputy Secretary of State Bob Zoellick, and I want to thank the chairman of the Senate Foreign Relations Committee, Senator Lugar from Indiana. Senator Pat Roberts from Kansas is with us. I think you'll find this interesting: He has promoted the advanced study of foreign languages through the Pat Roberts Intelligence Scholars Program. Thanks for doing that. And I want to thank Congressman Rush Holt for being here as well. Thank you for coming, Rush. Thanks for taking time.

I appreciate all the ambassadors who are here. I'm scanning the room. I see a few familiar faces, and thanks for serving. What the heck are you doing here? Like, you're supposed to be—*[laughter]*—the deal was overseas. *[Laughter]*

We're living in extraordinary times. I wish I could report to you the war on terror was over. It's not. There is still an enemy that lurks, that wants to hurt us.

I hate to report that to the American people, but my duty is to lay it out as plainly as I possibly can. And that's the truth.

And so the fundamental question is, how do we win? What do we do? Well, in the short term, our strategy is to find them and bring them to justice before they hurt us. In other words, we've got to stay on the offense. We've got to be unyielding and never give them a, you know, a breath of fresh air, never give them a hope that they can succeed. It's the only way to do it. We must defeat them in foreign battlefields so they don't strike us here at home.

And that's one of the reasons why the Secretary of Defense is here. He wants his young soldiers who are on the frontlines of finding these killers to be able to speak their language and be able to listen to the people in the communities in which they live. That makes sense, doesn't it, to have a language-proficient military, to have people that can go into the far reaches of this world and be able to communicate in the villages and towns and rural areas and urban centers, to protect the American people.

We need intelligence officers who, when somebody says something in Arabic or Farsi or Urdu, knows what they're talking about. That's what we need. We need diplomats—when we send them out to help us convince governments that we've got to join together and fight these terrorists who want to destroy life and promote an ideology that is so backwards it's hard to believe. These diplomats need to speak that language.

So our short-term strategy is to stay on the offense, and we've got to give our troops, our intelligence officers, our diplomats all the tools necessary to succeed. That's what people in this country expect of our Government. They expect us to be wise about how we use our resources, and a good use of resources is to promote this language initiative in K through 12, in our universities. And a good use of resources is to encourage foreign language speakers from important regions of the world to

come here and teach us how to speak their language.

You're going to hear a lot about the specifics of the program. What I'm trying to suggest to you, that this program is a part of a strategic goal, and that is to protect this country in the short term and protect it in the long term by spreading freedom. We're facing an ideological struggle, and we're going to win. Our ideology is a heck of a lot more hopeful than theirs.

You can't have an ideology that works if you say to half the population in a part of the world, "You have no rights." You can't say to a group of people, "My ideology is better than freedom, and if you speak out, you're going to get—you'll be tortured."

You see, freedom is the ideology that wins. We've got to have confidence in that as we go out. But you can't win in the long run for democracy unless you've got the capacity to help spread democracy. You see, we've got to convince people of the benefits of a free society. I believe everybody desires to be free. But I also know people need to be convincing—convinced—I told you I needed to go to language school. [Laughter] And you can't convince people unless you can talk to them. And I'm not talking to them right now directly; I'm talking through an interpreter on some of these Arabic TV stations.

But we need people in America who can go and say to people, "Living in freedom is not the American way of life; it is a universal way of life." We're not saying your democracy has to be like yours. We're just saying give your people a chance to live in a free society, give women a chance to live freely, give young girls a chance to be educated and realize their full potential.

And the best way to do that is to have those of us who understand freedom be able to communicate in the language of the people we're trying to help. In order to convince people we care about them, we've got to understand their culture and

show them we care about their culture. When somebody comes to me and speaks Texan, I know they appreciate the Texas culture. [Laughter] I mean, somebody takes time to figure out how to speak Arabic, it means they're interested in somebody else's culture. Learning a language—somebody else's language is a kind gesture. It's a gesture of interest. It really is a fundamental way to reach out to somebody and say, "I care about you. I want you to know that I'm interested in not only how you talk but how you live."

In order for this country to be able to convince others, people have got to be able to see our true worth in our heart. And when Americans learn to speak a language, learn to speak Arabic, those in the Arabic region will say, "Gosh, America is interested in us. They care enough to learn how we speak."

One of the great programs we've got here in America in terms of people understanding how we think and how we act is these scholarships we provide to our universities. I know this isn't the topic the Secretary assigned me to talk about, but it's one I'm going to talk about anyway. We want young kids from around the world coming to our universities. It's in our national interest that we solve visa issues and make sure that—[applause].

We have been calibrating the proper balance after September the 11th, and I fully understand some of your frustrations, particularly when you say the balance wasn't actually calibrated well. But we're going to get it right, because the more youngsters who come to America to get educated, the more likely it is people in the world will understand the true nature of America.

You can't figure out America when you're looking on some of these TV stations—you just can't—particularly given the message that they spread. Arabic TV does not do our country justice. They put out some kind—sometimes put out propaganda that just is—just isn't right. It isn't fair, and it doesn't give people the impression of

what we're about. You bring somebody here to college—it doesn't matter what's on TV—they see firsthand the compassion of the United States of America. They get to see firsthand that we don't discriminate based upon religion. They get to see firsthand the multicultural society in which we live, all united under the fabric of freedom. That's what they get to see.

And so I'm working with Condi, and she's working with others, to work with you, to make sure these youngsters are able to come to our universities. I'll tell you what's really neat, is to sit down with leaders from around the world, welcome them in the Oval Office or go to their office; they say, "You know, Mr. President, I went to Texas A&M," or, "I went to Stanford"—like President Toledo of Peru. I mean, it is—it makes it so much easier to conduct foreign policy and diplomacy when you've got that common ground of being able to talk about a university experience here in the United States. It makes it so much easier to be able to advance the interests of this country when you're dealing with a leader who doesn't have a preconceived notion about what America is all about, because he spent time studying here in the United States.

We're going to teach our kids how to speak important languages. We'll welcome teachers here to help teach our kids how to speak languages. But we're also going to advance America's interests around the world and defeat this notion about our—you know, our bullying concept of freedom, by letting people see what we're about. Let them see firsthand the decency of this country.

And so, Madam Secretary, in front of these presidents, you and I vow that we'll find that proper balance between security and letting people come to our universities for the good of this country.

I—there is no doubt in my mind we will win the war on terror. There's no

doubt in my mind that Afghanistan will remain a democracy and serve as an incredible example. For those of you in education, you might remember, this was a country that refused to educate young girls. And now, young girls in most of Afghanistan are going to school.

Iraq—we'll succeed in Iraq. It's tough. And the reason it's tough is because a handful of killers wants to stop the advance of freedom for a reason. Democracy in the heart of the Middle East is a major defeat to their ideology and their ambitions.

And it's hard work. What you're seeing on your TV screen is hard work. But we've done, as Condi said, hard work before. We have defeated fascism in the past. We defeated communism in the past. And we will defeat this ideology of hatred, but it's going to take all the tools at our disposal.

One of the stories I like to share with people is this. I—one of my best buddies in international politics is Prime Minister Koizumi of Japan. He's an interesting person. Elvis was his favorite singer, for example. [Laughter] Every time I meet with him, it strikes me as an amazing fact of history that number 41, President 41, at age 18 fought the Japanese, and 43, his son, is sitting down with the Prime Minister working on keeping the peace. It's amazing to me. And something happened between 41 going into combat and 43 talking to the Prime Minister, whether it be about troops in Iraq to help this young democracy flourish in the heart of the Middle East, or whether it be dealing with the leader of North Korea who is starving his people to death, and how do we solve that? What do we do about it?

And what happened was that the Japanese adopted a Japanese-style democracy.

It wasn't an American-style democracy; it was Japanese-style democracy. And that society, that form of government was able to convert an enemy to an ally. And that's what's happening. I live it when I talk to the Prime Minister. I see it firsthand. It's a real part of my family's life.

Someday, an American President is going to sit down and thank this generation for having the willpower and the determination to see to it that democracy has a chance to flourish in a part of the world that is desperate for democracy. Someday, somebody is going to say—[applause]—somebody someday will say, we're able to more likely keep the peace because this generation of Americans had confidence in our capacity to work with others to spread freedom.

And that's what we're facing today, and the stakes are high. It's an exciting time to be here in Washington, DC. It's a fantastic opportunity to serve our country. And I want to thank those of you who are serving it in government, and I want to thank those of you who serve it through higher education. There's no greater gift to give a child than the chance to succeed and realize his or her dreams. And you're doing that.

Appreciate you giving me a chance to come by and tell you what's on my mind. May God bless our country.

NOTE: The President spoke at 3:50 p.m. at the Department of State. In his remarks, he referred to Prime Minister Ariel Sharon of Israel; President Alejandro Toledo of Peru; Prime Minister Junichiro Koizumi of Japan; and Chairman Kim Jong Il of North Korea.

## Remarks to the Economic Club of Chicago in Chicago, Illinois January 6, 2006

Thanks for the warm welcome. It's nice to be back. Congratulations to the White Sox, all you longtime White Sox fans and you recent converts. [Laughter] We choppered in—the Speaker said, “There’s the home of the Cubs.” I said, “Well, Mr. Speaker, maybe next year.” [Laughter]

I did come here 3 years ago, and I appreciate the chance to come back. Three years ago, I came and said that we had an economic plan to help this country move forward after the devastating attacks, that we had an idea as to how to help this economy grow. And the cornerstone of that speech was to tell Congress they needed to accelerate the tax relief we passed. And they did, and the plan is working.

We got some new numbers today to show our economy added 108,000 jobs in December, and it's added more than 400,000 jobs in the last 2 months. The unemployment rate is down to 4.9 percent. Americans are going to work. This economy is strong, and we intend to keep it that way.

I appreciate the Economic Club of Chicago inviting speakers to come and talk about economics. I appreciate you giving me a chance to come back. I want to thank Miles White.

I'm proud to be traveling with the Speaker, Denny Hastert. He's a good, solid American. And he's doing a heck of a job as the Speaker of the House of Representatives. I appreciate being here with the senior Senator from the State of Illinois, Dick Durbin. I think the chairman is here—Mr. Chairman, Henry Hyde, thank you for being here, sir.

Congressman John Shimkus is here, from the south part of your State. Thanks for coming all the way up here. Congresswoman Judy Biggert is with us. Judy, good to see you. Thanks for coming. Congressman Mark Kirk is with us. I appreciate

you all. You do what the Speaker tells you to do. [Laughter]

I appreciate Charlie Carey; he's the chairman of the Chicago Board of Trade. I just went there. A guy yelled out, in the corn pit, “Hook 'em, Horns!” [Laughter] So I hooked 'em—[laughter]—and now I own a lot of corn. [Laughter]

I want to thank the members of the Chicago Board of Trade. I thank Terry Duffy, who is the chairman of the board of the Chicago Merc, where I had the honor of traveling in March of 2001. Thank you all for giving me a chance to come.

The American economy heads into 2006 with a full head of steam. Our economy grew at more than 4 percent in the third quarter. We've been growing at nearly that rate for 2 years. The American consumer is confident. More Americans now own their home than at any time in our Nation's history. Minority homeownership is at a record high. Real disposable income is up. New orders for durable goods like machinery have risen sharply. Shipments of manufactured goods are up as well. Business activity in our manufacturing sector reported its 31st straight month of growth. Our small businesses are thriving. In 2005, the American economy turned in a performance that is the envy of the industrialized world. And we did this in spite of higher oil prices and natural disasters.

We're strong, and I'm optimistic about the future of this economy. And one reason I am is because of the rise of American productivity. We're an incredibly productive nation. Our productivity has been growing at 3.5 percent for the last 5 years. American workers are now more than 17 percent more productive than they were in 2001. And why is that important? That's important because productivity means America

will remain the leader in the world. Productivity is important because it helps people live a better life.

From 1973 to 1995, productivity grew at 1.4 percent per year. At that rate, it would take 50 years to double the standard of living for Americans. Our economists now project that productivity will grow by 2.6 percent over the long term. And at that rate, we can double the standard of living of Americans nearly twice as fast. And that's important. We want to be able to compete, and we want our people being able to realize their dreams. In short, we're productive, we're innovative, we're entrepreneurial, and the role of government is to keep it that way.

Our goal in Washington has got to make sure America is the leader in the world when it comes to economic vitality, the best place to realize your dream in the world. And the best way to make sure economic opportunity reaches throughout our land is to make sure that we have economic growth. My administration has pursued and we'll continue to pursue progrowth economic policy. American businesses and farmers, workers, and entrepreneurs create the wealth in this country. Government does not create wealth. The role of government is to create an environment where the entrepreneurial spirit flourishes and where small businesses can grow to be big businesses and where people can dream about owning their own home and have it become a reality. That's the role of government.

In our economy, the most precious resource is the talent and ingenuity of the American people. And there's no limit to what the American people can achieve when they have the skill sets to compete and the freedom to make a better life for themselves and their family.

Our trust in the American people has brought us through some tough times. We've been through a lot. In the past 5 years, this economy has endured a stock market collapse, a recession, terrorist at-

tacks, corporate scandals, high energy costs, and natural disasters. They're all shocks to our economy, and they deserved swift action, firm resolve, and clear thinking.

Here's how I started to address—the perspective I took when it came time to addressing these challenges. I said, “The American economy grows when the American people are allowed to keep more of their own money so they can save and they can invest and they can spend as they see fit.” So I called on the Congress, as I mentioned to you earlier, to cut the taxes, and Congress responded. It's been a while since that happened. Let me review what took place. [*Laughter*]

We lowered the taxes so Americans—so American families could thrive. We cut the taxes on the families by lowering the rates and by doubling the child credit and by reducing the marriage penalty. I can't imagine a Tax Code that penalizes marriage. It seems like to me we ought to be encouraging marriage through our Tax Code.

We thought it was unfair to say to a farmer and a small-business owner, “The Government is going to tax you twice.” So we put the death tax on the road to extinction. We cut the taxes, and by doing so, we helped raise after-tax income for a person by 7 percent since I've been your President. Real after-tax income per person is up by 7 percent. And that's good for our families. We want our families to have more money in their pocket.

These tax cuts make a real difference in the lives of those who work hard in this country. By cutting taxes on income, we helped create jobs. You see, when people are allowed to keep more of their own money, it means they're going to demand more goods and services. And in the marketplace, somebody will produce that—those goods and services to meet demand. And when somebody meets the increased demand in the marketplace, it's more likely somebody is going to be able to find a

job. Cutting taxes helps people find a job in the United States of America.

We cut taxes on small businesses. Most small businesses pay individual income tax rates, sole proprietorship or a limited partnership or a subchapter S corporation. So when you reduce individual rates, you're really increasing the amount of capital available for small businesses to expand. And that's important because 70 percent of the new jobs in America are created by small businesses. And when you couple the tax—reduction in tax rates with incentives for small businesses to invest in new equipment, you can understand why this economy is strong. The small-business sector of the United States of America is flourishing. The entrepreneurial spirit is widespread, and more and more Americans are starting their own company.

American families have benefited from the tax cuts on dividends and capital gains. Let me repeat that. American families all across this country have benefited from the tax cuts on dividends and capital gains. Half of American households—that's more than 50 million households—now have some investment in the stock market, either by owning shares in individual companies or through owning mutual funds. By cutting the taxes on dividends and capital gains, we have boosted confidence in our economy. More people have more money to invest. As a result, the stock market has added nearly \$3 trillion in value.

I'll never forget going to an automobile manufacturing plant in Mississippi. It was a very diverse group of workers. I said, "How many of you own your own 401(k)?" In other words, "How many of you have a stock portfolio?" Nearly 90 percent held their hands up. When you cut taxes on capital gains and you cut taxes on dividends, you're helping the lineworkers in the automobile plant.

Part of making sure this economy grows is to understand who owns the wealth in the United States of America, and it's becoming widespread all throughout our soci-

ety. Cutting taxes has reduced—on capital gains and dividends has reduced the cost of capital. If you want your economy to grow, you want the cost of capital down. And reducing the cost of the capital has made it easier for investment, and investment has increased the productivity of the American worker, and the productivity increases for the American worker increased the standard of living for the American worker.

There's a mindset in Washington that says, "You cut the taxes, we're going to have less money to spend." Well, the growth, the economic vitality that has been set off by the tax cuts has been good for our Treasury. Since we cut taxes on income, tax revenues from income has jumped by 17 percent. Tax revenues from dividends and capital gains has increased an estimated 50 percent. By cutting the taxes on the American people, this economy is strong, and the overall tax revenues have hit at record levels.

Now, there are a lot of people in Washington that don't believe in tax cuts. As a matter of fact, they didn't believe the tax cuts would work. Critics said our economy was the worst since the Great Depression. The truth of the matter is, by cutting taxes when we did, we've had the fastest growing economy of any major industrialized nation. Critics said the tax cuts are ruining the economy. They're just wrong. The facts say otherwise.

Since we cut the taxes, household wealth is on the rise; people are doing better; we're creating jobs. One Democratic critic described the day the House voted for tax relief this way: She said, "Today the Congress of the United States will vote on a reckless, irresponsible tax plan that will undermine opportunity in our country." Since that Congresswoman had uttered those words, the economy has added more than 4.5 million new jobs.

By letting people keep more of what they earn, this economy is strong. Unfortunately, just as we're seeing the evidence of how

the tax cuts have created jobs and opportunity, some in Washington are saying we need to raise your taxes. See, that's either by saying, "We're not going to make the tax cuts permanent"—in other words, they're going to expire—or, "Why don't we repeal the tax cuts right now." When you hear somebody say, "Let's don't make the tax cuts permanent," what they're telling the American worker and the American family is, "We're going to raise taxes on you." If that were to happen, a Chicago family of four making \$50,000 would see Federal income taxes go up by nearly 50 percent.

Just as this economy is getting going, there are some in Washington who want to take the money out of your pocket. They think they can spend it better than you can. To keep this economy growing, to keep the entrepreneurial spirit alive, to make sure that the United States of America is the most productive nation in the world, the United States Congress must make the tax cuts permanent.

There's been a lot of discussion about the budget in Washington; there should be. You'll hear the folks say, "Why don't we just raise the taxes to balance the budget?" Folks, that's not the way Washington works. They will raise your taxes and increase Federal spending. The best way to deal with the budget deficit is to have progrowth policies in place and be fiscally sound with taxpayers' money.

Listen, we're at war. And by the way, we're going to win the war. And so long as we've got our kids—and so long as we've got our men and women in uniform in harm's way, this Government will support them with all the resources that are necessary to win that war. That means we've got to show extra discipline in other areas of the Federal budget.

Now, our budget has two kinds of spending—it's called discretionary spending and mandatory spending. And thanks to working with the Speaker and others, we've shown real progress on being fiscally wise when

it comes to discretionary spending. We've now cut the rate of growth in nonsecurity discretionary spending each year since I've been in office. Last February, my budget proposed an actual cut in nonsecurity discretionary spending. It's the most disciplined budget proposal since Ronald Reagan was the President.

We ended or reduced about 90 low-priority or poorly performing Government programs. We cut nonsecurity discretionary spending and kept overall discretionary spending growth below the rate of inflation. That's what the American people want us to do. They want us to set priorities, be wise with the money. And by doing this, we are still on track to cut the Federal deficit in half by 2009.

The bigger challenge to this budget is the long-term deficits driven by mandatory spending, or what they call entitlements. And these entitlements include Social Security and Medicare, both of which are growing faster than our ability to pay for them. The costs of these programs are growing faster than the economy. The cost of these programs are growing faster than the rate of inflation. The costs of these programs are growing faster than the population is growing. It's unsustainable growth, because a lot of people like me are getting ready to retire. [Laughter] In my case, I turn 60 in 2008—that's a convenient date for me—[laughter]—62 in 2008, 60 this year, unfortunately.

Projected deficits of these programs when these baby boomers like me retire are fixing to grow and grow and grow. And we don't have enough people paying into the system to cover them. It's what's called unfunded liabilities. And they're a problem for our children and our grandchildren, and we can solve this problem. It just takes political will, political courage. We don't need to cut the programs; we need to slow their growth. That's what we need to do.

Oh, I know some in Washington would like me to stop talking about it. I'm not going to. I believe the role of the President

of the United States—[*applause*]. I believe my role, and I believe all our roles in Washington is to confront problems now and not pass them on to future Presidents and future Congresses.

Congress has an opportunity to show its commitment to controlling entitlement spending when it comes back off its recess. Before Members of the House and the Senate left Washington, they agreed to rein in future spending on entitlements by nearly \$40 billion. They did this by reforming programs and eliminating waste and reducing the rate of spending growth. Now Congress needs to finish the work on this important bill. And, Mr. Speaker, I want to thank you for your leadership on this important bill.

Listen, we got a lot of people in Washington who preach fiscal discipline and then they go on to vote against spending restraint. By passing the first reduction in the growth of entitlement spending in nearly a decade, Congress can send a clear signal that the people's Representatives can be good stewards of the people's money.

As we work to keep taxes low and restrain spending, we've also got other challenges. One big challenge we face is energy. Again, I want to thank the Speaker and the Congress for putting an energy bill on my desk that I signed that encourages conservation, alternative forms of energy, encourages the exploration for natural gas in environmentally friendly ways. It's a good start. But the truth of the matter is, technology is going to lead this country away from our dependence upon hydrocarbon, and the United States Government can help speed up technology.

In order to make sure this economy grows, we've got to have a reasonable health care system. I view the role of the Federal Government is to help the elderly. And we got good Medicare reforms done. And I believe the role of the Federal Government is to help the poor. And that's why we've got Medicaid. But I do not believe the role of the Federal Government

is to tell doctors how to work and patients what to do. We need to make sure we connect the doc—the patient-doctor relationship to inventive programs like health savings accounts. This Congress needs to expand health savings accounts on behalf of good health care in America.

To make sure this is the most competitive country in the world, we've got to get rid of some of these junk lawsuits that are running capital out of America. We've got a real challenge; the trial bar is tough. You need to speak up. You need to let people understand the consequences of all these lawsuits.

Now, I want to thank the Speaker again, and the Senate; we got some legal reform done. We got a good class-action piece of legislation. We got good bankruptcy law. I hope that this year, we can get a good asbestos reform out of the United States Congress. But one thing is for certain: People around this country have got to understand we need a balanced legal system if Americans want to be able to find good-paying jobs.

A growing economy means we've got to have a private pension system that is fully funded and one in which those who pay into the private pension system keep the promises they make. I'm going to talk more about these issues as the legislative session begins.

I want to talk about two things real quick to make sure that this country remains the leader in the world when it comes to economic growth, and the first is education. We've got to make sure that our citizens have the skills they need to be able to fill the jobs which will be created in the 21st century. This country has a moral and an economic obligation, a moral and an economic interest in seeing that our people have the skills they need to succeed in a competitive world. You see, if we don't make sure our people have the skills they need in a competitive world, the jobs are going to go somewhere else. And that's what we've got to understand.

Making sure that people have got a good basis of education and capacity to fill the jobs which will actually exist really, it's important, particularly given the fact that our economy is one that is so dynamic and so vibrant that people are changing jobs all the time. Do you realize that if the recent pattern continues, the typical American worker will have held at least 10 jobs between the ages of 18 and 38? This job market of ours is churning. It's creating opportunity. We've got to have the skills to be able to fill these new jobs. And that's the challenge ahead of us. And having good skills begins with making sure our children can read and write and add and subtract. The best job training program begins early in life.

We came together in Congress—with the Congress and passed what's called the No Child Left Behind Act. I'd like to remind you about the spirit and the philosophy behind that act. It basically says, "Let's raise the standards, and let's measure." And the reason the Federal Government has got a right to call for measurements is because we spend a fair amount of money from Washington, DC, at the local level. And so we simply said, "If you're taking our money"—it's actually your money—*[laughter]*—"do you mind showing us whether or not the children can read or write?" I don't think that's too much to ask, is it? Unless you believe that certain kids can't learn to read and write.

I remember when I was the Governor of Texas, I found some school systems that simply, I guess, didn't believe that certain kids could read and write, so they just shuffled them through. They said, "It's much easier than taking on the tough task of analyzing and correcting, so let's just quit. Let's just say, okay, we'll just kind of socially promote you." It makes us look good on paper, but it's not treating American families well. And it's not setting that foundation to make sure our children can get the job skills necessary to fill the jobs of—

or the skills necessary to fill the jobs of the 21st century.

And so the No Child Left Behind Act came into being. And we're now measuring, and it's beginning to work. There's an achievement gap in America that is beginning to close. You know why I know? Because we're measuring. There's what's called the NAEP test. It's a standardized test across the country. It's called the Nation's Report Card. It gives us a chance to measure. It has shown that American children have made strong gains over the last 5 years, especially in the early grades. The results have showed that our fourth and eighth graders have improved math scores for not only Anglo students but African American students and Hispanic students. As a matter of fact, the math scores were the highest ever for African American kids and Hispanic kids. Overall scores for fourth grade reading matched the alltime high.

There is an achievement gap in America that is inexcusable, and it's beginning to close. And I think one of the main reasons it's closing is because we are now measuring. We're posting scores on the Internet for people to see, and we're saying to school districts, "If you've got a problem, correct it early, before it is too late. And if you can't figure out how to correct it, give parents a different option than keeping their child in a school which will not change and will not teach."

And tell your brother, tell your brother I appreciate his understanding of the need to challenge the status quo when it's failing the kids of Chicago.

And if you hear them talking about getting rid of the accountability standards, say to the local school folks, "Don't do it." You see, we've all got to challenge the soft bigotry of low expectations. We cannot revert to a system which quits on kids too early in life. As business leaders and community activists, you must stand strong for strong accountability systems and systems which correct problems early, before it is too late.

We've got a problem in our high schools. We're beginning to make progress at the elementary school level, over the 5 years, the test scores have risen. But we've got a problem in our high schools. Our high school American students rank below students from around the world when it comes to math and science. We measure fine in junior high grades, but for some reason, between junior high and high school, our kids are falling behind. And that's a problem. If we want to be competitive and if we want our children to be able to fill the jobs of the 21st century, we must do a better job in high school.

I think one place to start is to bring the spirit of No Child Left Behind, which is K through eight, into the high schools and insist upon measuring early and to say, "If you've got a problem, develop remediation programs today." Because we just can't guess anymore in America. If we want to be competitive, we've got to know, and we've got to measure.

We've got programs to bring professionals from math and science into the classrooms as adjunct teachers. We're going to help teachers—particularly in low-income schools—have the training they need to teach advanced placement courses. What I'm telling you is, is that we're going to take that very same spirit that's beginning to work in elementary school and put it in the high schools.

And then we've got to make sure our kids go to college. And that's one of the important programs that we've worked with both Republicans and Democrats alike in Congress, to increase the number of Pell grants available for students by a million people. And that's important.

One of the real assets in our country is the community college system. I spent a lot of time going to the community college system because, as I tell people, they're available; they're affordable; and unlike some institutions of higher education, they know how to change their curriculum to meet the needs of society.

In other words, what's interesting about the community college experience is that if you're living in an area where there's a need for health care workers, and you got a chancellor of the community college system that is any good, that person will devise a program with the local health care providers that will help train nurses or whatever is needed. I mean the health care—the community college system is a fabulous job training opportunity for the American people. It's a place to find—to match people's desire to work with the jobs that actually exist.

There's an interesting story about a woman named Julie Duckwitz here in this area. She had been a bookkeeper for 11 years, and she's a single mom—which happens to be the hardest job in America, by the way—and she's laid off. And she doesn't know what to do. You can imagine being a single mother with two kids—two young kids—and you get laid off your job.

Fortunately, she went to the job training counselors, and they steered her to Lake Land community college. Lake Land had received a Federal grant to help fund training programs, and she enrolled in a nursing program. Why? Because Lake Land understood there was a need for nurses. In other words, it's a demand-driven curriculum in the community college system. And they adjusted, not just for her, but for others. And she got a nursing degree. And she said, "Now I feel I can move upward. When I lost my old job, I was as high as I could go with that position, but health care offers me many more avenues for the future."

Gaining additional education to enhance your chance to get a job means more productivity. It means you're a more productive worker, which means higher pay, which means better news for the American economy. This Government must utilize our community college system to make sure people have the skills necessary to fill the jobs of the 21st century. I'm looking forward to Congress to fully fund my request

for these job training grants to the community college system of our country.

I want to tell you one other thing, and then I'll let you eat. [Laughter] I want to talk about trade. It's a pretty controversial subject in some people's minds. Here's how I think about it. We're home to 5 percent of the world's population. That means that 95 percent of our potential customers live abroad. I believe this country ought to do everything it can to open up markets for our products overseas. I know it's going to be necessary to make sure this economy grows, short term and long term, to open up markets for our manufacturers, our farmers, and our entrepreneurs.

I believe that trade opens up opportunities for people here at home. Now, we've got some people in Washington who are what I call economic isolationists. They have a different point of view—good people, just a different philosophy. They don't believe trade is good. They believe that it's okay to wall ourselves off from the rest of the world. I disagree strongly. And that's why my administration has pursued free trade agreements around the globe and will continue to do that.

Do you realize that more than 350,000 people in Illinois have jobs that depend on exports? In other words, there's a market overseas; somebody is meeting the demand for the product or the good and service and are manufacturing right here in Illinois, which means somebody is working out there, because there's a market overseas. One in every five manufacturing jobs in this State is supported by exports.

Look, I know the manufacturing industry got hit hard here. All I had to do is listen to the Speaker every time I met him. He said, "We got a problem. The manufacturing base of this State is getting hit hard." He said, "What are you going to do about it?" I said, one thing I'm not going to do about it is deny opportunities for those who are able to export, and second, what we're going to do about it is make sure the playing field is level, make sure our manufac-

turers are treated fairly. That's all we can expect. We don't expect any special treatment, we just want to be treated fairly.

My view of trade is this: If we can get a level playing field, American workers and farmers and entrepreneurs can compete with anybody, anytime, anywhere in the world. And now we have a chance, through the World Trade Organization, the Doha round of the World Trade Organization, to see to it that this world trades more fairly and more freely.

And that's in our interests. I'm telling you, it's in the farmers' interests that we're selling soybeans in China. It's in our interests that we have a free-trading world. If we wall ourselves off from the rest of the world, a bunch of other folks are going to take the—take advantage of the opportunity of free trade.

This is an important issue for our country. We got to be confident in our ability to compete. We'll be tough when it comes to the policy to make sure you're treated fairly, but I refuse to allow walls to shut our producers and entrepreneurs off from opportunities around the world. Free and fair trade is an important cornerstone of strong and valid economic policy for the creation of jobs here in America.

So that's what I'm going to be talking about when it comes to our economy. We're doing fine, but I believe we can do even better. The right policies out of Washington, DC—policies that encourage growth, not stifle growth, policies that encourage entrepreneurship, not diminish the entrepreneurial hopes, policies that educate our folks so we can fill the jobs of the 21st century—will keep the United States the economic leader of the world. And that's the way I want it, and that's the way you should want it, and that's the way Members of the United States Congress on both political parties should want it as well.

I can't tell you how neat it is to travel the world and represent the United States of America. Ours is a land that is so unique, if you think about our country

where a person can start off with nothing except a dream, can start off with just a hope, and own something, own your own business, own an opportunity to thrive. And that's what we're about. That's what we have been about, and that's what we must remain about.

We've got to still be the greatest hope for mankind on the face of this Earth. We

are today, and with the right policies, we'll be tomorrow.

Listen, thanks for letting me come back. God bless.

NOTE: The President spoke at 11:44 a.m. in the Hilton Chicago. In his remarks, he referred to Miles White, CEO, chairman of the board, and director, Abbott Laboratories.

## Statement on Signing the National Defense Authorization Act for Fiscal Year 2006 *January 6, 2006*

Today, I have signed into law H.R. 1815, the "National Defense Authorization Act for Fiscal Year 2006." The Act authorizes funding for the defense of the United States and its interests abroad, for military construction, and for national security-related energy programs.

Several provisions of the Act, including sections 352, 360, 403, 562, 818, and 2822, call for executive branch officials to submit to the Congress proposals for legislation, including budget proposals for enactment of appropriations, or purport to regulate or require disclosure of the manner in which the President formulates recommendations to the Congress for legislation. The executive branch shall implement these provisions in a manner consistent with the President's constitutional authority to supervise the unitary executive branch and to recommend for the consideration of the Congress such measures as the President judges necessary and expedient. Also, the executive branch shall construe section 1206(d) of the Act, which purports to regulate formulation by executive branch officials of proposed programs for the President to direct, in a manner consistent with the President's constitutional authority to supervise the unitary executive branch and to require the opinions of heads of executive departments. In addition, the executive branch shall con-

strue section 1513(d) of the Act, which purports to make consultation with specified Members of Congress a precondition to the execution of the law, as calling for but not mandating such consultation, as is consistent with the Constitution's provisions concerning the separate powers of the Congress to legislate and the President to execute the laws.

A number of provisions of the Act, including sections 905, 932, 1004, 1212, 1224, 1227, and 1304, call for the executive branch to furnish information to the Congress on various subjects. The executive branch shall construe such provisions in a manner consistent with the President's constitutional authority to withhold information the disclosure of which could impair foreign relations, national security, the deliberative processes of the Executive, or the performance of the Executive's constitutional duties.

Section 1222 of the Act refers to a joint explanatory statement of a committee of conference on a bill as if the statement had the force of law. The executive branch shall construe the provision in a manner consistent with the bicameral passage and presentment requirements of the Constitution for the making of a law.

The provisions in Title XIV in Division A of the Act are identical, except for a

punctuation change in section 1405(b)(1)(B) and revisions in section 1406, to the corresponding provisions in Title X of Division A of the Department of Defense, Emergency Supplemental Appropriations to Address Hurricanes in the Gulf of Mexico, and Pandemic Influenza Act, 2006 (H.R. 2863 of the 109th Congress) (Public Law 109-148). The statement I issued upon signing H.R. 2863 into law on

December 30, 2005, is incorporated herein by reference insofar as that statement referred to Title X of Division A of that Act.

GEORGE W. BUSH

The White House,  
January 6, 2006.

NOTE: H.R. 1815, approved January 6, was assigned Public Law No. 109-163.

## Letter to Congressional Leaders Transmitting a Notice of Intention To Enter Into a Free Trade Agreement With the Republic of Peru *January 6, 2006*

*Dear Mr. Speaker: (Dear Mr. President:)*

Consistent with section 2105(a)(1)(A) of the Trade Act of 2002, (Public Law 107-210; the "Trade Act"), I am pleased to notify the Congress of my intention to enter into a free trade agreement with the Republic of Peru.

The United States-Peru Trade Promotion Agreement will generate export opportunities for U.S. farmers, ranchers, and companies, help create jobs in the United States, and help American consumers save money while offering them more choices. The Agreement will also benefit the people of Peru by providing economic opportunity and by strengthening democracy.

Consistent with the Trade Act, I am sending this notification at least 90 days in advance of signing the Agreement. My Administration looks forward to working with the Congress in developing appropriate legislation to approve and implement this Agreement.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate. The related notice of January 6 is listed in Appendix D at the end of this volume.

## The President's Radio Address *January 7, 2006*

Good morning. As we begin 2006, we are hearing more good news about the American economy. This week, we learned that our economy added 108,000 jobs in December and has added over 400,000 jobs in the last two months. Our unemployment rate is now 4.9 percent, lower than the average rate of the 1970s, 1980s, and 1990s.

Our economy grew at more than 4 percent in the third quarter of 2005, and it has been growing at nearly that rate for 2 years. Productivity is high. Consumers are confident. And more Americans now own their homes than at any time in our Nation's history.

To keep our economy strong and secure the American Dream for future generations, leaders in Washington must make sound decisions. And one of the best decisions we made since I took office was to cut your taxes so you could keep more of your hard-earned money to save and spend as you see fit. We lowered tax rates to let workers keep more of their paychecks. We doubled the child credit. We reduced the marriage penalty. We also cut taxes on dividends and capital gains, and we created incentives for small businesses to invest in new equipment so they could expand and create new jobs.

Some people in Washington said these tax cuts would hurt the economy. The day the House voted for tax relief in May 2003, one Democratic leader declared it a “reckless and irresponsible tax plan that will undermine opportunity in our country.” Since those words were spoken, our economy has added more than 4.6 million new jobs for the American people.

Unfortunately, just as we’re seeing new evidence of how our tax cuts have created jobs and opportunity, some people in Washington are saying we need to raise your taxes. They want the tax cuts to expire in a few years or even repeal the tax cuts now. In either case, they want you to get a big tax hike. If we allow that to happen, a family of four making \$50,000 would see their Federal income taxes go up by nearly 50 percent.

Inaction by the Congress will mean a tax increase on the American people. When you hear people in Washington say, “We don’t need to make the tax relief permanent,” what they’re really saying is they’re going to raise your taxes. To keep our economy growing, we need to ensure that you keep more of what you earn, and Congress needs to make the tax cuts permanent.

Our economy is also strong because we’ve been wise with taxpayers’ dollars. We’ve now cut the rate of growth in non-security discretionary spending each year I’ve been in office. Working with Congress,

last year, we ended or reduced about 90 low-priority or poorly performing Government programs, cut nonsecurity discretionary spending, and stayed on track to meet our goal of cutting the Federal deficit in half by 2009.

The bigger challenge to our budget is long-term deficits driven by mandatory spending or entitlements. We can solve this problem. We do not need to cut entitlements, but we do need to slow their growth. When Congress returns from its recess, it has an opportunity to show its commitment to controlling entitlement spending. Before Members of the House and Senate left Washington, they agreed to rein in future spending on entitlements by nearly \$40 billion. Now Congress needs to finish its work on this important bill. By passing the first reduction in the growth of entitlement spending in nearly a decade, Congress will send a clear signal that the people’s Representatives can be good stewards of the people’s money.

As we work to keep your taxes low and restrain Federal spending, we have other challenges to address. A growing economy requires secure and affordable sources of energy, free and fair trade, legal reform and regulatory reform, and a health care system where workers can find affordable care. And we must ensure that all Americans get a good education so they will have the skills they need for the jobs of the 21st century.

In the months ahead, we will work on all these issues. By making choices that reward hard work and enterprise, we will keep the American economy prosperous and strong and guarantee opportunity for generations to come.

Thank you for listening.

NOTE: The address was recorded at 7:58 a.m. on January 6 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on January 7. The transcript was made available by the Office of the Press Secretary on January 6 but was embargoed for release until

*Jan. 7 / Administration of George W. Bush, 2006*

the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Message on the Observance of Eid al-Adha *December 21, 2005*

I send greetings to Muslims around the world as you celebrate Eid al-Adha.

When God asked Abraham to sacrifice his son, Abraham placed his faith in God above all else. During Eid al-Adha, Muslims celebrate Abraham's devotion and give thanks for God's mercy and many blessings. Eid is also a time for demonstrating charity and reaching out to family, friends, and those in need.

America is blessed to have people of many religious beliefs who contribute to the

diverse makeup of this country. Through generosity, compassion, and a commitment to faith, Muslim Americans have helped make our country stronger.

Laura and I send our best wishes for a joyous celebration. Eid Mubarak.

GEORGE W. BUSH

NOTE: This message was released by the Office of the Press Secretary on January 9. An original was not available for verification of the content of this message.

## Remarks to Reporters Following a Meeting With Associate Justice-Designate Samuel A. Alito, Jr. *January 9, 2006*

Good morning. I just had breakfast with Judge Alito. I told him I think he conducted himself with such dignity and class in the weeks leading up to the confirmation process, which begins today.

Sam Alito is imminently qualified to be a member of the bench. I'm not the only person who feels that way. The American Bar Association looked at his record, looked at his opinions, looked at his temperament, and came to the same conclusion, that he is well-qualified to be a Supreme Court judge.

Sam's got the intellect necessary to bring a lot of class to that Court. He's got a judicial temperament necessary to make sure that the Court is a body that interprets the law and doesn't try to write the law. And so I'm looking forward to your hear-

ings. I know the American people will be impressed, just like I have been impressed and a lot of other Members of the Senate have been impressed.

And my hope, of course, is that the American people will be impressed by the process. It's very important that Members of the Senate conduct a dignified hearing. The Supreme Court is a dignified body; Sam is a dignified person. And my hope, of course, is that the Senate bring dignity to the process, give this man a fair hearing, and an up-or-down vote on the Senate floor.

Sam, good luck to you. Thanks for your agreement to serve. I appreciate you.

NOTE: The President spoke at 7:52 a.m. in the Rose Garden at the White House. The

Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks on the No Child Left Behind Act in Glen Burnie, Maryland January 9, 2006

Thank you all. Please be seated. Thanks for the warm introduction. It's great to be here with Laura. She is a fantastic mom. She understands something that's very interesting: All education begins at home. I can remember her reading to our little girls all the time. Occasionally, I did, too, but stumbled over a few of the words and might have confused them. *[Laughter]* Laura cares deeply about education, as do I.

Thank you all for coming. We're here at North Glen Elementary School because it is a center of educational excellence. That's why we're here. We're here to herald success. We're here to say—*[applause]*.

It so happens this is the fourth anniversary of when I signed the No Child Left Behind Act. I think the No Child Left Behind Act is one of the most significant accomplishments in education in a long, long time. I want to thank both the Republicans and Democrats who worked together back then to get this piece of legislation passed. It is a really important piece of legislation that is working. And I'm here today to talk about the spirit of the No Child Left Behind Act, the evidence that says it's working, and my deep desire to work with Congress to make sure it continues to have the desired effect on children all across the country.

First, I want to welcome our Secretary of Education, Margaret Spellings. I've known her for a long time. She is a dear friend of mine who also happens to be a significant warrior when it comes to leaving no children behind in our society. She believes that I believe—like I believe, that

every single child can learn, and we've got to make sure that every child does learn. I want to thank you for your leadership, Margaret. You're doing a heck of a job as the Secretary of Education.

I want to thank the first lady, as well, for being here—Kendel, thanks for coming. Tell that old husband of yours, it's okay to sleep in occasionally. *[Laughter]*

Dutch, I want to thank you for being here—Congressman Ruppberger's district—real proud you took time out of your life to be here. Thanks for coming. I also want to thank Congressman Wayne Gilchrest for being here as well. Wayne, appreciate you taking time.

I want to thank all the local and State officials who've joined us. I want to thank Nancy Mann, the superintendent of schools for this school district. Julie, thank you—the principal, Julie Little-McVearry, who is the—listen, let me say something—and by the way, Maurine Larkin, who is the former principal here.

One of the things that's interesting, that when you look at public schools, when you find centers of excellence, you always find a principal that is capable of setting high standards, working with teachers, demanding results and following through to make sure that the schools achieve the results. Every school requires a dedicated educational entrepreneur, someone willing to challenge the status quo if there's failure and being imaginative about how to achieve results. And you've got such principals here. Again, I want to congratulate Julie and Maurine for leading this school. You've

done a heck of a job, and we're proud—we're proud to honor you.

We went to Laneie Taylor's fifth grade class. I see that they're here. Laneie, thank you—second-year teacher. Listen, schools succeed because they've got teachers that care. And I want to thank all the teachers who are here.

One of my predecessors as the Governor of Texas was Sam Houston. You may have heard of him, may not have heard of him—*[laughter]*—interesting old guy. He was the President of the Republic of Texas. He was a United States Senator. He was a Congressman from Tennessee. He was the Governor of Texas. He had done a lot of things. He led the battle of San Jacinto. I mean, he was a heck of a guy. They asked him, "Of all the things you've done in your life, what is the most important job?" He said, "Teacher." And so, all the teachers here, thanks for teaching. It is really an important job, and we appreciate your dedication in the classroom.

And to the parents of the students who come here, thanks for caring. Schools that succeed have got parents who are involved at the school. And so, whatever is working here in terms of parental involvement is—needs to be duplicated around this State and around the country, because parental involvement is a very important part of the success of schools around America.

So the No Child Left Behind Act—we got here to Washington, and I decided to make sure that the public school system in America met the promise of—and the hopes of our country. I understand how important it is to have a public school system work really well. A vibrant America is one in which the public schools provide a avenue for success. And it's really important we have a good public school system. It's been important in the past that the public school system function well, and it's going to be really important in the future.

Secondly, we have a moral obligation to make sure every child gets a good education. That's how I—it's a moral obligation

to make sure that we herald success and challenge failure. It's not right to have a system that quits on kids. I mean, some schools may not think they're quitting on kids, but when you shuffle kids through the schools without determining whether or not they can read and write and add and subtract, I view that as quitting on kids. I called it the soft bigotry of low expectations. In other words, you believe certain children can't learn, so, therefore, just move them through. It's kind of a process world, isn't it? It's more important that somebody be shuffled through than it is to determine whether or not they're capable of meeting certain standards in certain grades.

And it troubled me to realize that in my own State of Texas, as well as other States, there wasn't that sense of urgency; there wasn't that sense of focus on results. It was kind of a process world we lived in. And we were beginning to realize that as a result of a process world, the kids were coming out of the school system that were—who were illiterate. And it wasn't right. It was morally wrong, in my judgment, not to challenge a system that wasn't achieving great national goals such as an illiterate—a literate workforce. See, we live in a competitive world. And we'd better make sure our—the future of this country has the got the capacity to compete in that world.

And the best place to start is to make sure every child can read and write and add and subtract. And so that was the spirit behind proposing the No Child Left Behind Act. And as I mentioned, there was a lot of nonpartisan cooperation, kind of a rare thing in Washington. But it made sense when it come to public schools.

The No Child Left Behind Act embodied these principles: First, there is a role for the Federal Government, a funding role. In other words, the Federal Government has committed and should be committed to helping Title I students, for example.

As a matter of fact, Title I program spending has increased 45 percent since 2001. There is what's called the elementary and secondary school program; that's up by 41 percent. In other words, there is a Federal dollar commitment, certainly not as big as the State government or as local government, nor should it be. I don't think you want the Federal Government funding all public schools. But I do think you want the Federal Government focusing money on certain aspects of public education.

I also believe that sometimes you can have so many goals there are no goals. In other words, there's just this kind of long list of goals, and so nothing gets accomplished. I'm the kind of person that believes that we ought to set specific goals, and one of the most specific goals we've set is that every child should be reading at grade level by the 3d grade and remain at grade level. That's a clear goal; it's easy to understand, there's no ambiguity with it. It says every child—not just some children, every child—ought to be reading at grade level by the 3d grade—no doubt—it's not the 2d or 10th; it's 3d—and remain there.

And so we back that goal up. And by the way, it's the understanding that if you can't figure out—if you can't read, you can't do math or science. Reading is the gateway to educational excellence. That's why I asked the kids in your classroom whether or not they read more than they watched TV. I was pleased to see a lot of hands went up. It's kind of a hard question to ask in this day and age, isn't it, particularly since we've got too many TV channels to begin with. [*Laughter*]

And so we quadrupled the amount of money available for what's called the Reading First Program. In other words, we set the goal, and the Federal Government has provided the money for certain parts of the education system around the country. We're not going to fund it all, but we're going to make targeted funding. And it's a good use of money, in my judgment.

On the other hand, it seems like to me if we're going to spend money, we ought to be asking the question, is it—are we getting the results for the money? In other words, once there's a commitment, a logical followup to that commitment is, why don't you show us whether or not we're meeting goals? So, in other words, let's measure, finally. And so the No Child Left Behind Act has said that in return for Federal money, we'll test 3 through 8. Children will be tested grades 3 through 8.

And why do we do that? Well, one is to figure out whether or not kids are learning. It's an interesting way to determine whether or not the curriculum you're using works. I remember when I was the Governor of Texas, there was a lot of debate about different types of curriculum, different ways to teach reading. You might remember those debates. They were full of all kinds of politics. The best way to cut through the political debate is to measure. The best way to say, the program I'm using is working, is because you're able to measure to determine whether or not it's working. That's what this school has done. They said, "We welcome accountability, because we believe our teachers are great, and the system we use can work."

Another reason to measure is so that the parents stay involved. You know, there's a lot of anecdotal evidence about parents believing that the school their kids go to is doing just fine. That's what you would hope if you were a parent. I mean, it's a natural inclination to say, "Gosh, my kid goes to a really good school. I like the principal. I like the teachers." But sure enough, in some cases, the performance might not have been up to par.

And so making sure there's an accountability system that the parents get to see is one that says to a parent, you know, if things aren't going so well, get involved with the school and help. Or if things are going well, make sure you thank the teachers. Make sure you take time out of your

day to thank the person whose soul is invested in the future of your child. It's like the teachers right here in this school have invested their time and efforts to make sure the children learn to read. I bet there's nothing better than a teacher to have a thankful parent come up and say, "Thank you for making sure my daughter or my son has got the capacity to be able to succeed in this great country."

Measurement also is a way to let schools understand how they're doing relative to other schools, or school districts to see how they're doing relative to other school districts. In other words, if you're living in the school district here, and one school like this was doing fine, another one is not, it should provide an opportunity for the principal of that school or the parents of that school to say, "Wait a minute. Look at this school over here; it's doing fine. How come we're not?" You can't solve a problem until you diagnose it, is what I'm telling you. And our accountability system helps us all diagnose problems and solve them early, before it's too late.

One of the interesting parts of the No Child Left Behind Act was what's called supplemental service money. I don't know if you've used it here or not—bet you have to a certain extent. It basically says, if a child is falling behind, here is extra money from the Federal Government to help you catch up. If a child needs help in reading, we've diagnosed a problem early and said, let's make sure this child is not left behind. That's what it says.

This is a bill that says, in return for Federal money, we're going to measure; we'll adjust. We'll change to achieve the most important objective of all, to make sure every single child in America can read by the third grade and stay at grade level, that children can read and write and add and subtract.

Listen, I've been through this debate about testing. Again, I remember when I was the Governor of Texas, there was a lot of people saying, "How can you be for

testing?" My answer is, how can you not be for testing? They said it was discriminatory to test. I said it's discriminatory not to test. If you can't know what a child—whether a child can read and write, how can you solve the problem? I've heard people say, "Oh, all you're doing is teaching to test." My answer is, if you teach a child how to read, they will pass the test. Accountability is crucial, in my judgment, for making sure the public school system meets the important goals of our society.

Having said all that, an important part of the No Child Left Behind Act is the understanding that one size does not fit all when it comes to public schools, and that the governance ought to be local. If you've noticed, I've never said the Federal Government is going to tell you how to teach. That would be the worst thing that could happen to the public school system. The worst possible thing is, we're sending you money and now we're going to tell you how to use it and how to teach and what curriculum to use. That's the opposite of the spirit of the No Child Left Behind Act. The No Child Left Behind Act understands there needs to be flexibility and local control of schools.

We did not design a Federal test. There was great pressure to say, let's have a Federal test. All that would mean, that once you have a Federal test, it could lead to local prescriptions for that test. We said the States ought to develop their own accountability systems, and that local people ought to have input into the design of the State at the—of local accountability systems. And so for those of you who think, well, the Federal Government has reached too far into the governance issue, it's just not true. It's not the case. As a matter of fact, quite the contrary; it makes sure that there was local control of schools. It made sure that the State had the option and opportunity to say to the local superintendent and principals, "Design your program that works. You're closest to the people; you listen to the parents; you see the

issues firsthand in the neighborhood in which you live. Come up with a curriculum that meets your own needs.”

The system is working. That’s what’s important for people to understand. And by the way, any attempt to roll back the accountability in Washington, DC, will be—I’ll fight any attempt to do that. I’m just not going to let it happen. We’re making too much progress. There’s an achievement gap in America that’s closing. We don’t need achievement gaps in this country. It’s not good for us to have achievement gaps where certain kids can read in fourth grade better than others. One of our goals has got to be to achieve that—close that achievement gap. And we’re doing it. How do we know? Because we’re measuring.

There’s what they called the Nation’s Report Card; it’s the National Assessment of Educational Progress, NAEP. It’s a way to kind of norm testing scores across States without having a national test. It’s a way to determine whether or not the great State of Maryland is doing okay relative to your neighboring States, for example. It’s a way for us to kind of get a glimpse about whether or not we’re making progress toward achieving certain goals. In 2005, America’s fourth graders posted the best scores in reading and math in the history of the test. That’s positive. Ever since the test has been issued, 2005 was the best scores. If we didn’t test, by the way, you could never say—I could never stand up and say this. I’d just be guessing, wouldn’t I? It could be that we’re doing fine—maybe not, maybe so.

African American fourth graders set records in reading and math in 2005. Hispanic fourth graders set records in reading and math. That’s really good. It’s important for our country that all children from all walks of life have the ability to realize the great promise of the country. The NAEP also showed that eighth graders earned the best math scores ever recorded; eighth grade Hispanic and African American stu-

dents achieved the highest math scores ever.

As I said, there’s an achievement gap—we know because we measure—and it’s closing, and that’s positive. And our goal has got to be to continue to work to make sure there is no achievement gap in America.

Now, let me talk about North Glen Elementary School. I don’t know if you—those of you interested in this school have paid attention to these results, but I would like to share some—[*applause*—]if I might, I’d like to share some statistics with you, and perhaps this will give you an indication about why Laura and I came here.

In 2003, 50 percent—57 percent of North Glen students scored proficient in reading—57 percent—and 46 percent were proficient in math. Now, that’s unacceptable. Fifty-seven percent is a lousy number. Forty-six percent, obviously, is even worse. But it was unacceptable to the principals and the superintendent and the teachers, that’s most important. And so they got after it, and they figured out how to make sure that goals were met.

I didn’t spend a lot of time talking today to the principal about the different analysis that went on, but I bet it was pretty in-depth. But one thing for certain is, the test in ’03 said we better do something different. When we find out something is going right, let’s stay on it, and if something is going wrong, let’s change. That’s what happened here, because guess what: In 2005, 82 percent of North Glen students were ranked proficient in reading, and 84 percent were ranked proficient in math.

It’s great news, isn’t it? It’s a system that says, why don’t we show everybody whether or not we can succeed. And if we’re not, we’ll change; and if we are, we now have a chance to have the old President come by and say thanks, you know. [*Laughter*]

Interestingly enough, in 2003, 45 percent of the African American students in this school rated proficient in reading; in 2005, 84 percent are proficient. In other words,

this is a school that believes every child can learn. Not just certain children, every child. And then they work to see to it that it happens. This—the statistics I just announced—oh, by the way, in 2003, 35 percent of African American students rated proficient in math. You've got to know math if you're going to compete in this 21st century world. It's really important that math and science become a focal point of our high schools, for example. But it's not going to work if kids coming out of elementary school can't do math. Thirty-five percent of the African American students rated proficient in math; now it's 82 percent. It's a good score.

This is a fine school. We're here to herald excellence. We're here to praise the law that is working. I'm here to thank the teachers not only here but around the State of Maryland and around the country who are dedicating their lives to providing hope for our future. I want to thank the Members of Congress for working together on this vital piece of legislation, a piece of

legislation that's laying the cornerstone for a hopeful tomorrow.

Laura and I's spirits are uplifted any time we go to a school that's working, because we understand the importance of public education in the future of our country. We also believe, strongly believe, that every child can learn, and with the right focus and right energy, every child will learn. And as every child learns, the future of this country will never have been brighter.

Thanks for a job well done. God bless the teachers here and the principal. God bless the parents. And may God bless the students as well. Thank you.

NOTE: The President spoke at 10:26 a.m. at North Glen Elementary School. In his remarks, he referred to Kendel S. Ehrlich, wife of Gov. Robert L. Ehrlich, Jr., of Maryland. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks to the Veterans of Foreign Wars January 10, 2006

Thank you all. Please be seated. Thanks for the warm welcome. It is an honor to stand with the men and women of the Veterans of Foreign Wars again. This is one of America's great organizations. I appreciate the proud and patriotic work you do across America. Thanks for your hard work in our Nation's Capital to make sure our Government listens to the concerns of our veterans.

Your members include veterans who served in World War II—I just happened to spend Christmas with one of your members—[laughter]—the Korean war, the Vietnam war, the Persian Gulf war, Panama, Bosnia, Kosovo, and many other operations. In the past 4 years, you've welcomed

into your ranks new veterans who have defended liberty in places like Afghanistan and Iraq as a part of the global war on terror. No matter where you deployed or which century you wore the uniform, each of you stepped forward when America needed you most. And these days, first days of the year 2006, a grateful nation says, thank you for your service and the great example you set for today's men and women who wear the uniform.

I want to thank the commander in chief of the VFW, Jim Mueller. I had the honor of welcoming him to the Oval Office the other day, where we discussed issues important to our Nation's veterans and issues important to our Nation's security. He's a

clear thinker. He's a patriot. I appreciate the invitation, Jim.

I'm also proud to be joined today by the Secretary of State, Condi Rice, the Secretary of the Department of Veterans Affairs, Jim Nicholson, Mr. Secretary.

Two Members of the United States Congress, one Republican and one Democrat, have joined us. [Laughter] Americans' quest for freedom and peace is a bipartisan quest, and I'm honored that Senator Pat Roberts is with us and Congressman Adam Schiff. Thank you both for coming.

Lieutenant General Bob Shea of the Joint Chiefs is with us today. As is my friend Lieutenant General Danny James, who was the Texas Adjutant General when I had the honor of being the commander in chief of the Texas Guard. [Laughter] Good to see you, Danny.

To all those who wear the uniform who are here, I particularly want to pay my respects to those wounded soldiers from Walter Reed. Thanks for serving. I'm proud you're here. And I want to report to our fellow citizens that we've got a fantastic health care system for those who wear the uniform. Any man or woman wounded in combat is removed immediately from the battlefield into the best possible care. I want to thank those at Walter Reed, those healers and helpers—not only at Walter Reed but at Bethesda and Brooke's, where I recently went—for the great compassion and great skill that they show in helping those who have been wounded on the battlefield. May God bless you all.

As veterans and soon-to-be veterans, you have placed the Nation's security before your own lives. You took an oath to defend our flag and our freedom, and you kept that oath under seas and under fire. All of us who live in liberty live in your debt, and we must never forget the sacrifice and the service of our veterans.

A new generation of Americans is carrying on your legacy, defending our Nation in another great struggle for freedom, the global war on terror. This war began with

a sudden attack on September the 11th, 2001. That morning we saw the destruction our enemies intend for us, and we accepted new responsibilities. Like generations before us, we're taking the fight to those who attacked us and those who share their murderous vision for future attacks. Like generations before us, we have faced setbacks on the path to victory, yet we will fight this war with resolve and without wavering. And like generations before us, we will prevail.

Like earlier struggles for freedom, the war on terror is being fought on many battlefronts. Yet the terrorists have made it clear that Iraq is the central front in their war against humanity. And so we must recognize Iraq as the central front in the war against the terrorists.

Our goal in Iraq is victory. And in a series of speeches last December, I described the enemy we face in that country, our strategy to defeat them, and how we have adapted our tactics to meet changing conditions on the ground. Today I've come before you to discuss what the American people can expect to see in Iraq in the year ahead. We will see more tough fighting, and we will see more sacrifice in 2006 because the enemies of freedom in Iraq continue to sow violence and destruction. We'll also see more progress toward victory. Victory will come when the terrorists and Saddamists can no longer threaten Iraq's democracy. Victory will come when the Iraqi security forces can provide for the safety of their own citizens. Victory will come when Iraq is not a safe haven for terrorists to plot new attacks on our Nation.

And when victory comes and democracy takes hold in Iraq, it will serve as a model for freedom in the broader Middle East. History has shown that free nations are peaceful nations. And by helping Iraqis build a lasting democracy, we spread the hope of liberty across a troubled region. We will gain new allies in the cause of

freedom. By spreading democracy and freedom, we're laying the foundation of peace for generations to come.

Our work in Iraq in 2006 will be focused on three critical areas. On the political side, we will help Iraqis consolidate the democratic gains they made last year and help them build democratic institutions, a unified government, and a lasting, free society. On the security side, we will stay on the offense against the terrorists and Saddamists. We will continue to strengthen the Iraqi security forces, with an emphasis on improving the capabilities of the Iraqi police, so that over the next 12 months, Iraqi forces can take control of more territory from our coalition and take the lead in the fight. And on the economic side, we will continue reconstruction efforts and help Iraq's new Government implement difficult reforms that are necessary to build a modern economy and a better life.

In all three aspects of our strategy—democracy and security and reconstruction—we're learning from our experiences, and we're fixing what hasn't worked. And in the year ahead, we will continue to make changes that will help us complete the mission and achieve the victory we all want.

On the political side, we've witnessed a transformation in Iraq over the past 12 months that is virtually without precedent. Think back to a year ago. At this time last year, the Iraqi people had an appointed government, no elected legislature, no permanent constitution, and no recent experience with free national elections. Just one year later, they have completed three successful nationwide elections.

Iraqis voted for a transitional government, drafted the most progressive, democratic Constitution in the Arab world, approved that Constitution in a national referendum, and elected a new Government under their new Constitution. Each successive election has seen less violence, bigger turnouts, and broader participation than the one before. One Iraqi voter in Tall 'Afar described the December elections this way:

"We want democracy. This is our answer to the decades of slavery we had before."

When the final election results come in, Iraqi leaders will begin working to form a new Government. And in the weeks ahead, Americans will likely see a good deal of political turmoil in Iraq as different factions and leaders compete for position and jockey for power. Our top commander in the region, General John Abizaid, has said he expects the coming weeks to produce "some of the hardest, bare-knuckle politics ever in the Arab world." We should welcome this for what it is: freedom in action.

Dictatorships seem orderly—when one man makes all the decisions, there is no need for negotiation or compromise. Democracies are sometimes messy and seemingly chaotic, as different parties advance competing agendas and seek their share of political power. We've seen this throughout our own history. We've seen this in other democracies around the world. Yet out of the turmoil in Iraq, a free government will emerge that represents the will of the Iraqi people, instead of the will of one cruel dictator.

Iraqis are undertaking this process with just a year's experience in democratic politics, and the legacy of three decades under one of the world's most brutal tyrannies still hangs over them. Many of the institutions and traditions we take for granted in America—from our party structures to our centuries' experience with peaceful transitions of power—are new to Iraq. So we shouldn't be surprised if Iraqis make some mistakes and face setbacks in their effort to build a Government that unites the Iraqi people.

Despite the obstacles they face, Iraqis have shown they can come together for the sake of national unity. Think about what happened after the January 2005 elections: Shi'a and Kurdish leaders who did well at the polls reached out to Sunni Arabs who failed to participate, giving them posts in the Government and a role in fashioning the new Constitution. Now Iraqis must

reach out once again across political and religious and sectarian lines and form a Government of national unity that gives voice to all Iraqis.

Because Sunni Arabs participated in large numbers in the December elections, they will now have a bigger role in the new Parliament and more influence in Iraq's new Government. It's important that Sunnis who abandoned violence to join the political process now see the benefits of peaceful participation. Sunnis need to learn how to use their influence constructively in a democratic system to benefit their community and the country at large. And Shi'a and Kurds need to understand that successful free societies protect the rights of a minority against the tyranny of the majority.

The promise of democracy begins with free elections and majority rule, but it is fulfilled by minority rights and equal justice and an inclusive society in which every person belongs. A country that divides into factions and dwells on old grievances cannot move forward and risks sliding back into tyranny. Compromise and consensus and power sharing are the only path to national unity and lasting democracy. And ultimately, the success of Iraqi democracy will come when political divisions in Iraq are driven not by sectarian rivalries but by ideas and convictions and a common vision for the future.

When the new Iraqi Government assumes office, Iraq's new leaders will face some tough decisions on issues such as security and reconstruction and economic reform. Iraqi leaders will also have to review and possibly amend the Constitution to ensure that this historic document earns the broad support of all Iraqi communities. If the new Parliament approves amendments, these changes will be once again taken to the Iraqi people for their approval in a referendum before the end of the year. By taking these steps, Iraqi leaders will bring their nation together behind a strong de-

mocracy and help defeat the terrorists and the Saddamists.

America and our coalition partners will stand with the Iraqi people during this period of transition. We will continue helping Iraqis build an impartial system of justice so they can replace the rule of fear with the rule of law. We'll help Iraqi leaders combat corruption by strengthening Iraq's Commission on Public Integrity so Iraqis can build a transparent, accountable government. And we will help Iraq's new leaders earn the confidence of their citizens by helping them build effective government ministries.

It's especially important in the early months after Iraq's new Government takes hold, that its leaders demonstrate an ability to deliver measurable progress in the lives of the Iraqi people. So we will continue helping the new Government to develop their ministries to ensure they can lead effectively and produce real results for the Iraqi people.

The foreign terrorists and Saddamists will continue to fight this progress by targeting the citizens and institutions and infrastructure of a free Iraq. An enemy that sends suicide bombers to kill mourners at a funeral procession is an enemy without conscience. These killers will stop at nothing to undermine the new Government, divide the Iraqi people, and try to break their will. Yet with the recent elections, the enemies of a free Iraq have suffered a real defeat. The Saddamists and rejectionists are finding themselves increasingly marginalized, as Sunni Arabs who once rejected the political process are now participating in the democratic life of their country.

And as democracy takes hold in Iraq, the terrorists like Zarqawi and his Al Qaida associates are suffering major defeats. Zarqawi tried to stop the elections throughout the year 2005, and he failed. He tried to stop the writing and ratification of a new Constitution, and he failed. The advance of freedom is destroying his and Al

Qaida's greatest myth. These terrorists are not fighting on behalf of the Iraqi people against a foreign occupation; they are fighting the will of the Iraqi people expressed in free elections.

In the face of these thugs and terrorists and assassins, the Iraqi people have sent a clear message to the world: Iraqis will not cower before the killers, and the terrorists and regime loyalists are no match for the millions of Iraqis determined to live in liberty.

As we help Iraqis strengthen their new Government, we're also helping them to defend their young democracy. We're going to train the security forces of a free Iraq. We have been doing so, and we will continue to do so in 2006. Last November, I described many of the changes we made over the past year to improve the training of the Iraqi Army and the police. And we saw the fruits of those changes during the December elections. Iraqi forces took the lead in the election security. They were in the lead; we were there to help. They protected over 6,000 polling centers. They disrupted attacks, and they maintained order across the country.

Thanks in large part to their courage and skill, the number of attacks during the elections declined dramatically compared with last January's vote. One Iraqi general put it this way on election day: "All the time and money you have spent in training the Iraqi Army, you harvest it today."

The Iraqi security forces are growing in strength and in size, and they're earning the trust and confidence of the Iraqi people. And as Iraqis see their own countrymen defending them against the terrorists and Saddamists, they're beginning to step forward with needed intelligence. General Casey reports that the number of tips from Iraqis has grown from 400 in the month of March 2005 to over 4,700 last month and that some of the new intelligence is being passed by Iraqi civilians directly to Iraqi soldiers and police. Iraqis are gaining confidence that their security forces can de-

feat the enemy, and that confidence is producing the intelligence that is helping to turn the tide in freedom's way.

There's more work to be done in the year ahead. Our commanders tell me that the Iraqi Army and police are increasingly able to take the lead in the fight. Yet the Iraqi police still lag behind the army in training and capabilities. And so one of our major goals in 2006 is to accelerate the training of the Iraqi police. We'll focus our efforts on improving the performance of three categories of the Iraqi police. First, we will work to improve the Special Police under the Ministry of the Interior, who are fighting alongside the Iraqi Army against the terrorists and Saddamists. Second, we will expand and strengthen the border police charged with securing Iraq's frontiers. And third, we will increase our focus on training local station police, so they can protect their communities from the criminals and the terrorists.

The Interior Ministry's Special Police are the most capable of Iraq police forces. There are now about 19,000 Iraqi Special Police trained and equipped, which is near our goal for a complete force. Many of these Special Police forces are professional; they represent all aspects of society. But recently, some have been accused of committing abuses against Iraqi civilians. That's unacceptable. That's unacceptable to the United States Government; it's unacceptable to the Iraqi Government as well. And Iraqi leaders are committed to stopping these abuses. We must ensure that the police understand that their mission is to serve the cause of a free Iraq, not to address old grievances by taking justice into their own hands.

To stop abuses and increase the professionalism of all the Iraqi Special Police units, we're making several adjustments in the way these forces are trained. We're working with the Iraqi Government to increase the training Iraqi Special Police receive in human rights and the rule of law. We're establishing a new Police Ethics and

Leadership Institute in Baghdad that will help train Iraqi officers in the role of the police in a democratic system and establish clear lesson plans in professional ethics for all nine Iraqi police academies. To improve their capability, we will soon begin implementing a program that has been effective with the Iraqi Army, and that is partnering U.S. battalions with Iraqi Special Police battalions. These U.S. forces will work with and train their Iraqi counterparts, helping them become more capable and professional, so they can serve and protect all Iraqis without discrimination.

Second, we're working to increase the number of border police that can defend Iraq's frontiers and stop foreign terrorists from crossing into that country. Iraqis now have about 18,000 border police on the job, manning land and sea and airports across the country. Our goal is to have a total of 28,000 Iraqi border police trained and equipped by the end of this year.

To better train Iraqi police, we've established a new customs academy in Basra. We're embedding border police transition teams with Iraqi units, made up of coalition soldiers and assisted by experts from our Department of Homeland Security. The Iraqi border police are growing increasingly capable and are taking on more responsibility. In November, these forces took the lead in protecting Iraq's Syrian border, with coalition forces playing a supporting role. In other words, they're beginning to take the lead and take responsibility for doing their duty to protect the new democracy. And as more skilled border police come on line, we're going to hand over primary responsibility for all of Iraq's borders to Iraqi border police later on this year.

Finally, we're helping Iraqis build the numbers and capabilities of the local station police. These are the Iraqi police forces that need the most work. There are now over 80,000 local police officers across Iraq, a little more than halfway toward our goal of 135,000. To improve the capabilities of these local police, we're taking a concept

that worked well in the Balkans and applying it to Iraq: partnering local Iraqi police stations with teams of U.S. military police and international police liaison officers, including retired U.S. police officers.

These officers will work with provincial police chiefs across Iraq and focus on improving local police forces in nine key cities that have seen intense fighting with the terrorists. By strengthening local police in these cities, we can help Iraqis provide security in areas cleared of enemy forces and make it harder for these thugs to return. By strengthening local police in these cities, we'll help them earn the confidence of the local population, which will make it easier for local leaders and residents to accelerate reconstruction and rebuild their lives.

The training of the Iraqi police is an enormous task, and frankly, it hasn't always gone smoothly. Yet we're making progress, and our soldiers see the transformation up close. Army Staff Sergeant Daniel MacDonald is a Philadelphia cop who helped train Iraqi police officers in Baghdad. He says this of his Iraqi comrades: "From where they were when we got here to where they are now, it's like two different groups of people. They're hyped-up; they look sharp; they're a lot better with their weapons. I'd take these guys out with me back home." If he's going to take them back home in Philadelphia, they must be improving. [Laughter]

As we bring more Iraqi police and soldiers on line in the months ahead, we will increasingly shift our focus from generating new Iraqi forces to preparing Iraqis to take primary responsibility for the security of their own country. At this moment, more than 35 Iraqi battalions have assumed control of their own areas of responsibility, including nearly half of the Baghdad province and sectors of south-central Iraq, southeast Iraq, western Iraq, and north-central Iraq. And in the year ahead, we will continue handing more territory to Iraqi forces, with the goal of having the Iraqis in control of

more territory than the coalition by the end of 2006.

As Iraqi forces take more responsibility, this will free up coalition forces to conduct specialized operations against the most dangerous terrorists like Zarqawi and his associates so we can defeat the terrorists in Iraq, so we do not have to face them here at home. We will continue to hand over territory to the Iraqis so they can defend their democracy, so they can do the hard work, and our troops will be able to come home with the honor they have earned.

I've said that our strategy in Iraq can be summed up this way: As the Iraqis stand up, we will stand down. And with more Iraqi forces demonstrating the capabilities needed to achieve victory, our commanders on the ground have determined that we can decrease our combat forces in Iraq from 17 to 15 brigades by the spring of 2006. That's what they've decided. And when they decide something, I listen to them. This adjustment will result in a net decrease of several thousand troops below the preelection baseline of 138,000 U.S. troops in Iraq. This decrease comes in addition to the reduction of about 20,000 troops who were in Iraq largely to assist with the security during the December elections.

Later this year, if Iraqis continue to make progress on the security and political sides, we expect to discuss further possible adjustments with the leaders of Iraq's new Government. Having said this, all of my decisions will be based on conditions on the ground, not artificial timetables set by Washington politicians. Our commanders on the ground will have the forces they need to complete the mission and achieve victory in Iraq.

As we help Iraqis defend their democracy, we will continue to help Iraqis build their infrastructure and economy in the coming year. Iraqis face real challenges from the long-term economic damage caused by Saddam Hussein's regime. They face challenges because of acts of sabotage

by the enemies of a free Iraq. Yet despite these challenges, our coalition and Iraqi leaders have made progress in a number of areas: Iraq now has a stable currency, an independent stock exchange, an independent Central Bank. Iraqis have new investment laws to welcome foreign capital, tax and commercial laws to encourage private sector growth, and low-tariff trade regime that has opened Iraq's economy to the world. Under Saddam, private property was not protected. Today, Iraq's new Constitution guarantees private property rights that are the foundation of any free society.

Iraqi leaders are also beginning to make the tough choices necessary to reform their economy, such as easing gasoline subsidies. Until recently, Government subsidies put the price of fuel in Iraq at artificially low prices, really low prices. And that created incentives for black-market corruption and crime, and changing these subsidies is a necessary step on the path for economic reform. So Iraqi leaders have begun a series of price increases aimed at dismantling the gas subsidy system. That's hard political work. But gasoline subsidies, along with other subsidies, consume over half of Iraq's annual budget; it diverts critical resources from health care and education and infrastructure and security. Addressing these subsidies will allow Iraqi leaders to better provide for their people and build a modern economy.

One of the biggest challenges facing Iraq is restoring the country's oil and electric power infrastructure. These sectors were devastated by decades of neglect. And since liberation, terrorists have targeted these areas for destruction. As a result, oil and power production are below prewar levels. To help increase production, we're helping Iraqis better maintain their refineries, build their oil supply and transportation capabilities, improve their capacity to generate power, and better protect their strategic infrastructure.

The struggles with oil production and the shortage of electricity remain sources of

frustration for the Iraqi citizens. Yet they're putting these challenges in perspective. Today, 7 in 10 Iraqis say their lives are going well. Nearly two-thirds expect things to improve even more in the next year. The vast majority of Iraqis prefer freedom with intermittent power to life in permanent darkness of tyranny and terror. Iraqis are optimistic about the future, and their optimism is justified.

To realize their dreams, the Iraqi people still need help. And in the coming year, the international community must step up and do its part. So far, other nations and international organizations have pledged more than \$13 billion in assistance to Iraq. Iraqis are grateful for this promised aid, so is the United States. Yet many nations have been slow to make good on their commitments.

I call on all governments that have pledged assistance to follow through with their promises as quickly as possible, so the Iraqis can rebuild their country and provide a better future for their children. Many nations have still not returned all Iraqi assets frozen during the regime of Saddam Hussein. I call on all nations to return these assets to their rightful owners. The free people of Iraq own those assets, not the foreign governments.

Many of the world's smallest nations have been among the most generous. Last month, for example, Slovakia announced its plans to forgive 100 percent of Iraq's \$145 million debt. This makes Slovakia only the third country, along with the United States and Malta, to write off Iraqi debt completely. More nations should do the same so the Iraq people are not held back by the crushing burden of debt accumulated by Saddam Hussein.

International lending institutions are also stepping forward with needed assistance. Last month, the International Monetary Fund approved Iraq's request for a \$680 million loan to carry out economic reforms. The World Bank recently approved its first loan to Iraq in over 30 years, lending the

Iraqi Government \$100 million to improve the Iraqi school system and making up to \$400 million available to fund water, electricity, roads, and sanitation projects.

The international community must meet its responsibilities in Iraq, and here in America, we have responsibilities as well. The coming year will test the character of our country and the will of our citizens. We have a strategy for victory, but to achieve that victory, we must have the determination to see this strategy through. The enemy in Iraq knows they cannot defeat us on the battlefield, and so they're trying to shake our will with acts of violence and force us to retreat. That means that our resolve in 2006 must stay strong. We must have the patience as Iraqis struggle to build democracy in a volatile region of the world. We must not allow the images of destruction to discourage us or obscure the real progress that our troops are making in Iraq. And we must continue to provide these troops with all the resources they need to defend our Nation and prevail in the global war on terror.

We face an added challenge in the months ahead. The campaign season will soon be upon us, and that means our Nation must carry on this war in an election year. There is a vigorous debate about the war in Iraq today, and we should not fear the debate. It's one of the great strengths of our democracy, that we can discuss our differences openly and honestly, even in times of war. Yet we must remember there is a difference between responsible and irresponsible debate, and it's even more important to conduct this debate responsibly when American troops are risking their lives overseas.

The American people know the difference between responsible and irresponsible debate when they see it. They know the difference between honest critics who question the way the war is being prosecuted and partisan critics who claim that we acted in Iraq because of oil or because

of Israel or because we misled the American people. And they know the difference between a loyal opposition that points out what is wrong and defeatists who refuse to see that anything is right.

When our soldiers hear politicians in Washington question the mission they are risking their lives to accomplish, it hurts their morale. In a time of war, we have a responsibility to show that whatever our political differences at home, our Nation is united and determined to prevail. And we have a responsibility to our men and women in uniform, who deserve to know that once our politicians vote to send them into harm's way, our support will be with them in good days and in bad days, and we will settle for nothing less than complete victory.

We also have an opportunity this year to show the Iraqi people what responsible debate in democracy looks like. In a free society, there is only one check on political speech, and that's the judgment of the people. So I ask all Americans to hold their elected leaders to account and demand a debate that brings credit to our democracy, not comfort to our adversaries.

Support for the mission in Iraq should not be a partisan matter. VFW members come from all across the country and both sides of the political aisle, yet your position on the war is clear. In a recent resolution, the VFW declared, quote, "It is critical that the United States succeed in Iraq, which will result in stability and security in the region." I appreciate your support for the

mission in Iraq, and so do our troops in the fight. Your lives of service, from the first time you put on the uniform to this day, are a credit to our country and an inspiration to our military. A new generation of soldiers and sailors, airmen, marines, and coastguardsmen is now carrying out an urgent and noble mission, and they're doing so with the same determination and courage as you who came before them.

Some of our finest men and women have given their lives in freedom's cause. Others have returned home with wounds that the best medicine cannot heal. We hold all who sacrificed and their families in our thoughts and our prayers. And I'm going to make you this pledge: We will not waver, we will not weaken, and we will not back down in the cause they served. By their sacrifice, we are laying the foundation of freedom in a troubled part of the world. And by laying that foundation, we're laying the foundation of peace for generations to come.

Thank you for letting me come by today. God bless.

NOTE: The President spoke at 10:17 a.m. at the Omni Shoreham Hotel. In his remarks, he referred to Gen. John P. Abizaid, USA, commander, U.S. Central Command; former President Saddam Hussein of Iraq; and Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks on Signing the Trafficking Victims Protection Reauthorization Act of 2005

*January 10, 2006*

Thank you all. Please be seated. Thanks for coming. I appreciate you all being here. In a moment, I'll have the honor of signing

the Trafficking Victims Protection Reauthorization Act.

Human trafficking is an offense against human dignity, a crime in which human

beings, many of them teenagers and young children, are bought and sold and often sexually abused by violent criminals. Our Nation is determined to fight and end this modern form of slavery. And this bipartisan bill will help expand our efforts to combat this brutal crime that steals innocence and destroys lives.

I want to thank the Members of the United States Congress who have joined me here. I appreciate Senator Sam Brownback, Chris Smith, Deborah Pryce, and Carolyn Maloney for their hard work on this important legislation.

I appreciate the Secretary of State, who has joined us here, and the Attorney General, Al Gonzales, and his wife.

In today's world, too often, human traffickers abuse the trust of children and expose them to the worst of life at a young age. It takes a perverse form of evil to exploit and hurt those vulnerable members of society. Human traffickers operate with greed and without conscience, treating their victims as nothing more than goods and commodities for sale to the highest bidder. Recent years, hundreds of thousands of people around the world have been trafficked against their will across international boundaries, and many have been forced into sexual servitude. Thousands of teenagers and young girls are trafficked into the United States every year. They're held hostage. They're forced to submit to unspeakable evil. America has a particular duty to fight this horror, because human trafficking is an affront to the defining promise of our country.

We're attacking this problem aggressively. Over the past 4 years, the Department of Homeland Security has taken new measures to protect children from sexual predators, as well as pornography and prostitution rings. The Department of Health and Human Services has partnered with faith-based and community organizations to form antitrafficking coalitions in 17 major cities across our country. The Department of Justice has more than tripled the num-

ber of cases brought against these traffickers.

The bill I sign today will help us to continue to investigate and prosecute traffickers and provide new grants to State and local law enforcement. Yet, we cannot put the criminals out of business until we also confront the problem of demand. Those who pay for the chance to sexually abuse children and teenage girls must be held to account. So we'll investigate and prosecute the customers, the unscrupulous adults who prey on the young and the innocent.

We also have a duty to reach out to victims of trafficking, some of whom were smuggled into this country as children. The legislation I sign today will help us provide important new services to these victims, including appointing a guardian for young victims and providing access to residential treatment facilities to help victims get a chance at a better life.

We'll continue to call on other nations to take action against trafficking within their own borders. Three years ago at the United Nations, I asked other governments to pass laws making human trafficking a crime. Since then, many have risen to the challenge. Secretary Rice and I will continue to press the others to rise to the challenge. We are working with the nations of Southeast Asia and others to crack down on sex tourism. America is a compassionate and decent nation, and we will not tolerate an industry that preys on the young and the vulnerable. The trade in human beings continues in our time, and we are called by conscience and compassion to bring this cruel practice to an end.

For those of you who've worked on this bill, thank you very much. For those of you who are involved in this important struggle, I appreciate your efforts, continue to do so. For those of you who are providing the compassionate care to those who've been affected by human trafficking, thank you for your love. And for those of

you in Congress who've worked to make this reality, good work.

NOTE: The President spoke at 1:33 p.m. in Room 350 of the Dwight D. Eisenhower Ex-

ecutive Office Building. In his remarks, he referred to Rebecca Turner Gonzales, wife of Attorney General Alberto R. Gonzales. H.R. 972, approved January 10, was assigned Public Law No. 109-164.

## Statement on Signing the Trafficking Victims Protection Reauthorization Act of 2005

January 10, 2006

Today, I have signed into law H.R. 972, the "Trafficking Victims Protection Reauthorization Act of 2005." This Act enhances our ability to combat trafficking in persons by extending and improving prosecutorial and diplomatic tools, and also adds new protections for victims.

Section 104(e)(2) purports to require the Secretary of State, prior to voting for a new or reauthorized peacekeeping mission under the auspices of a multilateral organization (or, in an emergency, as far in advance as is practicable), to submit to the Congress a specific report. The executive

branch shall construe this reporting requirement in a manner consistent with the President's constitutional authority as Commander in Chief and the President's constitutional authority to conduct the Nation's foreign affairs.

GEORGE W. BUSH

The White House,  
January 10, 2006.

NOTE: H.R. 972, approved January 10, was assigned Public Law No. 109-164.

## Letter to Congressional Leaders on Continuation of the National Emergency Relating to Cuba and of the Emergency Authority Relating to the Regulation of the Anchorage and Movement of Vessels

January 10, 2006

*Dear Mr. Speaker: (Dear Mr. President:)*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent to the *Federal*

*Register* for publication the enclosed notice, which states that the emergency declared with respect to the Government of Cuba's destruction of two unarmed U.S.-registered civilian aircraft in international airspace north of Cuba on February 24, 1996, as amended and expanded on February 26, 2004, is to continue in effect beyond March 1, 2006.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate. This letter was released

by the Office of the Press Secretary on January 11. The notice is listed in Appendix D at the end of this volume.

Remarks on the War on Terror and a Question-and-Answer Session in  
Louisville, Kentucky  
January 11, 2006

*The President.* Thank you all. Please sit down. I think I will. Bad view. [*Laughter*] Thanks for having me. What I thought I'd do is maybe make some opening comments and answer any questions you got. I probably can't stay here all day, since I've got a job to do, but I'm interested in your opinions and your point of view.

I hope the questions are broader than the war on terror; if you want, you can ask me anything you want. We got an economy that's going good, and perhaps you want to know what we're going to do to keep it growing. You know, we got a health care system that needs reform. We got an energy problem in the United States. I mean, there's a lot of issues that I'd be more than happy to talk about.

I do want to talk about how to secure this country and keep the peace. Before I do, I want to thank Joe. He stole my line "Reagan-Bush"—[*laughter*]. It was going to work just fine, until he took it. [*Laughter*] But thank you for setting this up. Thanks a lot for the sponsors. I appreciate you all taking time out of your day, and I appreciate your interest.

Before I begin, I do want to say I married well. I'm sorry the First Lady isn't with me. She is a heck of a person. I love her dearly, and she sends her very best to our friends here in Louisville, Kentucky.

I thank the Governor for being here and the Lieutenant Governor. And I want to thank your mayor. The mayor showed me a pair of cufflinks that my dad gave him when he was the President and the mayor

was the mayor. [*Laughter*] It looks like the mayor is going to outlast both Bushes. [*Laughter*]

I also want to thank Congresswoman Anne Northup. I call her a friend because she is one. She brings a lot of dignity to the halls of the United States Congress. I'm sure there are some folks here who don't necessarily agree with the party she's picked, and that's okay. But one thing you've got to agree with is she's honest; she's capable; and she's a decent, honorable soul. And I appreciate you. I want to thank Ron Lewis. He's a Congressman from Kentucky as well. And you let somebody slide across the border in Congressman Mike Sodrel. I appreciate both the Congressmen being here as well. I'm looking forward to working with you in the year 2006. We've got a lot to do.

Let me—I wish I didn't have to say this, but we're still at war, and that's important for the citizens of this Commonwealth to understand. You know, no President ever wants to be President during war. But this war came to us, not as a result of actions we took; it came to us as a result of actions an enemy took on September the 11th, 2001. And I vowed that day, starting when I was in Florida and got on the airplane to head across the country, that I would use everything in my power—obviously, within the Constitution—but everything in my power to protect the American people. That is the most solemn duty of Government, is to protect our people from harm.

And I vowed that we'd find those killers and bring them to justice, and that's what we're doing. We're on the hunt for an enemy that still lurks. I know because I'm briefed on a daily basis about the threats that face the United States of America. And my duty is to assess this world the way it is, not the way we'd like it to be. And there's a danger that lurks—and there's a danger that lurks because we face an enemy which cannot stand freedom. It's an enemy which has an ideology that does not believe in free speech, free religion, free dissent, does not believe in women's rights, and they have a desire to impose their ideology on much of the world.

Secondly, after September the 11th, not only did I vow to use our assets to protect the people by staying on the offense, by defeating an enemy elsewhere so we don't have to face them here at home, I also said that, "If you harbor a terrorist, if you provide safe haven to a terrorist, you're equally as guilty as the terrorist." And I meant it. And the Taliban in Afghanistan—a barbaric group of individuals who suppressed women, suppressed religious freedom, suppressed young girls—had harbored these terrorists. They provided safe haven. These folks were there plotting and planning a vicious attack against the United States of America in a safe haven called Afghanistan.

And so we took action. We took action because the Taliban refused to expel Al Qaida. And we took action because when an American President says something, he better mean it. In order to be able to keep the peace, in order to be able to have credibility in this world, when we speak, we better mean what we say, and I meant what we said. And we sent some brave souls into Afghanistan to liberate that country from the Taliban.

I also said, after September the 11th, that oceans no longer protected us. You know, when I was growing up, or other baby boomers here were growing up, we felt safe because we had these vast oceans

that could protect us from harm's way. September the 11th changed all that. And so I vowed that we would take threats seriously. If we saw a threat, we would take threats seriously before they fully materialized, and I saw a threat in Saddam Hussein.

I understand that the intelligence didn't turn out the way a lot of the world thought it would be. And that was disappointing, and we've done something about it. We've reformed our intelligence services. But Saddam Hussein was a sworn enemy of the United States. He was on the nations-that-sponsor-terror list for a reason. I didn't put him on the list; previous Presidents put him on the list. And the reason why is because he was sponsoring terrorism. He was shooting at our airplanes. He had attacked his own people with chemical weapons. I mean, the guy was a threat.

I went to the United Nations; some of you were probably concerned here in Kentucky that it seemed like the President was spending a little too much time in the United Nations. But I felt it was important to say to the world that this international body that we want to be effective, spoke loud and clear not once, but 15-odd times to Saddam Hussein—said, "Disarm. Get rid of your weapons. Don't be the threat that you are, or face serious consequences." That's what the international body said. And my view is, is that in order for the world to be effective, when it says something, it must mean it.

We gave the opportunity to Saddam Hussein to open his country up. It was his choice. He chose war, and he got war. And he's not in power, and the world is better off for it.

The hardest decision I made as your President is to put troops into harm's way, because I understand the consequences. I see the consequences when I go to the hospitals. I see the consequences when I try to comfort the loved ones who have lost a son or a daughter in combat. I understand that full—firsthand: War is brutal.

And so I didn't take the decision lightly. Now that I've made the decision, we must succeed in Iraq. I've tried to explain to my fellow citizens, I can understand folks who said, "I wish you hadn't done that. We don't agree with your decision." Now that we're there, in my humble opinion, we have got to succeed.

I said I'd try to be short and answer your questions. I'm getting a little windy. [Laughter] But let me talk real quick about the goals in Iraq. The goal is victory, nothing short of victory. When you put these kids in harm's way, we owe them the best equipment, the best training, and a strategy for victory. And victory is a country that—where the Saddamists and the terrorists can't unwind the democracy. Victory is when Iraq is no longer a safe haven for the terrorists. Victory is—will be achieved when the Iraqis are able to defend their democracy.

In the last couple of weeks, I've been talking about the strategy to achieve victory. It's one thing to say we want victory; the other thing is, can you get there? And the answer is, absolutely, we can get there. And the strategy is threefold. One, there's a political strategy. First, let me make sure you understand the enemy. The enemy is, in our judgment, my judgment, three types of people. One, we call them rejectionists; these are Sunnis who had privileged status under Saddam Hussein, even though they were in the minority in the country. They had a pretty good deal because the tyrant was a Sunni and made sure that the Sunnis got special treatment, as opposed to the Shi'a or the Kurds. And they liked that kind of special treatment. They liked privileged status.

The second group is the Saddam loyalists. These are the thugs and people that basically robbed the country blind, and not only had privileged status but they were the all-powerful. And needless to say, they don't like it with their man sitting in prison and them no longer being able to exploit the people of Iraq. They're irritated.

Finally, the third group, and this is a dangerous group; it's Al Qaida and its affiliates. A guy named Zarqawi is the chief operating officer in Iraq on behalf of Al Qaida. Al Qaida has made it very clear their intentions in Iraq, which is to drive the United States out so they will have a base from which to operate to spread their ideology. That's what they have said. This is what Mr. Zawahiri said. It's important for those of us involved in trying to protect you to take the enemy seriously, to listen to their words closely. In other words, Al Qaida has made Iraq a front in the war on terror, and that's why we've developed a strategy for victory.

The first part of it is to have a political process that marginalizes the rejectionists and isolates the dissenters. And it's happening. Under any objective measurement, what took place last year in Iraq was remarkable, when you think about it. This country is a country that lived under the brutal dictatorship of Saddam Hussein, and last year they had elections for a transitional government. They wrote a Constitution and got the Constitution approved, and then had elections for a permanent Government under the new Constitution, all in one year. And every election had more participants. And most importantly, in the last election, the rejectionists who had sat out the first couple of elections—many Sunnis had sat out; they said, "We're not going to be involved in the political process"—got involved. Slowly but surely, those who were trying to stop the advance of democracy are becoming marginalized.

Secondly, this is a country, obviously, that has got brutal action; this enemy we face has got no conscience. They will kill innocent people in a heartbeat in order to achieve their objectives. And it's hard for Americans to deal with that. I understand that. It's hard for me to believe that there is such brutality in the world where people going to a funeral to mourn the dead, and a suicider shows up and kills people. It's

hard for me to believe that we've got soldiers passing out candy to young kids, and a killer comes and kills the kids and the soldiers. It is beyond the imagination of most Americans, but it should say something about this enemy. They will go to no ends to defeat us, but they can't beat us on the battlefield. The only thing they can do is create these brutal scenes.

And they're trying to drive us out of Iraq, as I mentioned. And the best way to deal with them is train Iraqis so they can deal with them. And that's what's happening. There are two aspects of our training. And, listen, the training hasn't gone smoothly all the time. I mean, this is a war. And you're constantly adjusting your strategies and tactics—not strategies—tactics on the ground to meet an enemy which is changing.

And so the army is getting on its feet. We've turned over a lot of territory to the army. And they're good fighters; they really are. I spent a great deal of time with General Abizaid and General Casey; they were in Washington this past week. These are generals, you'd be happy to hear, who tell me the way it is, not the way they think I would like it to be. I can't tell you how good the caliber of our military brass and those in the field, by the way, all the way up and down the line, are good; they are good people. [*Inaudible*—better trained, not just numbers. I'm talking about capacity to take the fight and stay in the fight. And as I've said, as the Iraqis stand up, we'll stand down. So the strategy, the security strategy is to let the Iraqis do the fighting. It's their country. The people have shown they want democracy; millions voted. And now part of the mission is to give this Government a security force which will help fight off the few who are trying to stop the hopes of the many.

One of the places where we've lagged is training police. There are three types of police. There's a national police force, kind of like a SWAT team, a national SWAT team, that can move; they're pretty well trained. They need some human rights

training. In other words, part of the problem in Iraq is you've got people that are plenty irritated at what took place in the past, and they're going to use their positions of power to take revenge. You can't have a democracy in which the police don't enforce the rule of law but enforce their view of revenge. And so you got ethics training, rule of law training, all done by good troops who are embedded, who are side by side with this Iraqi police force. And it's getting better; it really is.

Secondly, you've got the Border Patrol. The reason why the border is necessary is because there's suiciders coming in from Syria into Iraq. And the Iraqis have got to be able to enforce their border in order to be able to protect their democracy.

And thirdly, you've got local police, and we're lagging in the local police. And the local police, it's just that, local. And so what we're going to do is use what worked in the Balkans and embed people in the local police units to teach them how to—effective enforcements of the law. And so, 2006 you're going to see a lot of police training and a lot of police focus.

Finally, there's the economic and reconstruction front. We started up grand projects in Iraq when we first got there, said we're going to build some grand projects. It turns out, a more effective use of reconstruction money was localized projects to empower those who were willing to take a risk for democracy with the capacity to say, "Follow me, your life is going to be better." By the way, democracy works in Iraq just like it does here; you're going to vote for somebody who thinks that they can bring character to the office and they're going to help your life. Same anywhere else. You're out there campaigning. They want to know, "What are you going to do for me?" And so part of the reconstruction effort was to focus on local reconstruction projects.

The Iraqi economy has got a great chance to succeed. They got oil and gas revenues. They had been having trouble

getting some oil and gas revenues up to the levels we anticipated because of the infrastructure damage—done by Saddam Hussein, by the way—and because the terrorists, every time there's some progress, tend to blow things up. Now, having said that, they got these surveys—and I must confess I'm not much of a survey guy, but they got them—and most Iraqis are optimistic about the future. And as I said yesterday, they're willing to live with intermittent darkness, as opposed to the darkness—and freedom—as opposed to the darkness of tyranny. That's what you're seeing.

But this economy is going. Small businesses are flourishing. They got a—they had to deal with gasoline subsidies. Saddam Hussein, in order to make sure people kept him around and thought he was all right—they didn't have much choice, by the way, because he had a force behind him—but, nevertheless, he subsidized gasoline, which meant a lot of the central budget was going for subsidization of fuel, as opposed to education and health. And so the new Government made a difficult decision; they started floating that price of gasoline up a little higher, to take the pressure off their budget and to introduce markets, market-based forces into the economy.

It's not going to happen overnight. You can't go from a tightly controlled economy to an open market overnight, but it's happening. In other words, the Government is making difficult choices to help the entrepreneurial spirit begin to flourish.

And so things are good. I'm confident we'll succeed. And it's tough, though. The enemy has got one weapon, I repeat to you, and that's to shake our will. I just want to tell you, whether you agree with me or not, they're not going to shake my will. We're doing the right thing.

A couple of quick points, then I'll answer your questions. You hear a lot of talk about troop levels. I'd just like to give you my thinking on troop levels. I know a lot of people want our troops to come home. I do too. But I don't want us to come home

without achieving the victory. I mentioned to you—[*applause*—we owe that to the mothers and fathers and husbands and wives who have lost a loved one. That's what I feel. I feel strongly that we cannot let the sacrifice—we can't let their sacrifice go in vain.

Secondly, I—these troop levels will be decided by our commanders. If you run a business, you know what I'm talking about when I say it's called delegating. You count on people to give you good advice. The best people to give any politician advice about whether or not we're achieving a military objective is the people you put out there on the ground. I told you I've got good confidence in these generals and the people who report to them. These are honest, honorable, decent, very capable, smart people, and they'll decide the troop levels. They hear from me: Victory. And I say to them, "What do you need to achieve victory?"

I don't know if you've noticed recently, but we're beginning to reduce presence in Iraq based upon the recommendation of our commanders. We've gone from 17 to 15 battalions. We kept up to about 60,000—160,000 troops in Iraq for the elections. We held over about 25,000 or so on a—that were to rotate out—to help in the elections. Those 25,000 are coming back, plus the reduced battalions. And people say, "Well, how about more for the rest of the year?" And the answer to that is, I'm going to do what they tell me to do. And that depends upon the capacity of the Iraqis to help us achieve victory.

And why is victory important? Let me just conclude by this point. You know, it's hard for some to—in our country to connect the rise of democracy with peace. This is an ideological struggle, as far as I'm concerned, and you defeat an ideology of darkness with an ideology of light and hope. History has proven that democracies yield the peace. If you really look at some of the past struggles where—in which the

United States has been involved, the ultimate outcome, the final product, was peace based upon freedom. Europe is whole, free, and at peace because of democracy.

One of the examples I like to share with people in order to make the connection between that which we're doing in Iraq today, and laying—what I call, laying the foundation of peace, is my relationship with Prime Minister Koizumi of Japan. And the reason I like to bring up this story is I find it amazing that my dad, old number 41, at the age of 18, fought the Japanese. They were the sworn enemy of the United States. Many in this audience, I know, had relatives in that war. They were the bitter enemy. They had attacked us, just like we were attacked on September the 11th. People in America said, "We'll do everything we can to defeat this enemy," and thousands of people lost their lives.

Laura and I were over in the Far East recently. I was sitting down at the table with the Prime Minister of our former enemy talking about how to keep the peace. We were talking about the spread of democracy in Iraq and in the Middle East as a way to counter an ideology that is backwards and hateful. We were talking about North Korea, how to keep the peace on the Korean Peninsula.

Isn't it amazing—at least it is to me—that some 60 years after an 18-year-old fighter pilot joined the Navy to fight the Japanese, his son is talking with the Prime Minister of the former enemy about keeping the peace. Something happened. And what happened was, Japan adopted a Japanese-style democracy. Democracies yield the peace. And I firmly believe, I firmly believe that years from now people are going to look back and say, "Thank goodness the new generation of Americans who rose to the challenge of a war against terror had faith in the capacity of freedom to help change the world." And someday, an American President is going to be talking to a duly elected leader from Iraq, talking about

how to keep the peace for a generation to come.

I want to thank you all. That is the definition of a short speech. [Laughter] Probably hate to hear a long one. [Laughter] All right, I'll answer some questions. Start us off.

*Progress in the War on Terror/Democracy*

*Mr. Joe Reagan.* Mr. President, thank you very much. As I told you, we'd like to have some tough and challenging questions—

*The President.* —Washington, DC, press conference?

*Mr. Reagan.* I thought you'd be at home here with that. We do want to keep these questions respectful, and we really do thank you for making the time to share this dialog with us; we really do.

You've talked a lot about history. In your State of the Union after September 11th, you defined this war as a war on terror. In history, our parents' generations had V-E Day and V-J Day. And in our time, we've seen the fall of the Berlin Wall and the end of the cold war. If you define this as a war on terror, will there ever be a V-T Day? And, if not, what do you need to do to prepare us to be able to go the duration?

*The President.* I also said that this is a different kind of war, the kind of war we've never faced before. We're not facing a nation-state per se; we're facing a shadowy network of people bound together by a common ideology that—by the way, the enemy knows no rules of war. They just—they kill innocent people.

And so, you're right, I did say it's a war. It's the first war of the 21st century, but I've been emphasizing it's a different kind of war. So I don't envision a signing ceremony on the USS *Missouri*. As a matter of fact, this is a war in which the enemy is going to have to be defeated by a competing system in the long run.

The short-term objective is to use our intelligence and our allies to hunt these

people down. And we're getting—we're doing it. And we're on the—we got brave, brave souls, who, every single day, are trying to find the Al Qaida leadership and the network. We're doing—we've done a good job so far. If Usama bin Laden were the top guy, and Mr. Zawahiri—he was the person that put out the strategy, by the way, for Al Qaida, for everybody to see. I don't think he put it out for everybody to see. It just happened to be exposed for everybody to see eventually. But Abu Zubaydah, Khalid Sheikh Mohammed—there's a series of chief operators who are no longer a threat to the United States. I mean, we are dismantling the operators. And when we find them, we bring them to justice as quickly as we can.

That's the short-term strategy. There's also the strategy of making it clear, if you harbor a terrorist—the short-term strategy of dealing with threats before they come to hurt us—I say, before they fully materialize. One of the lessons of September the 11th is, when you see a threat out there, you can't assume that it's not going to come to our shore anymore. And so we've got to deal with it.

Obviously, the best way to deal with these kinds of threats is diplomatically. We're doing so in Iran. If somebody has got a question on Iran, I'll be glad to answer it in a minute. But that's what we're trying to get done. The military option is always the last option. The long-term victory will come by defeating the hopelessness and despair that these killers exploit with a system that is open and hopeful, and the only such system is a free system.

And I have got faith in the capacity of people to self-govern. Now, there is a point of view in this world by some that say, "Well, maybe certain kind of people can't self-govern"—which, by the way, was the attitude of some right after World War II—"The enemy can't possibly self-govern." The attitude was somewhat blinded by the fact that we were so angry at the Japanese

that no one could see a hopeful tomorrow for them.

I believe everybody desires to be free. That's what I believe, and I believe everybody has the capacity to self-govern. I'm not—never have I said nor do I believe that we are trying to impose our style of democracy on another country. It won't work. Each country has got its own cultures and own history and own tradition, and they ought to have their own style of democracy. But I do know that tyrants breed resentment and hatred. And I do know that if a person is—if they want to be free and not allowed to express their belief, it causes resentment, the breeding grounds for a terrorist movement which exploits the unsettled attitudes of the people.

So, in other words, it's not going to be that kind of—it's not the kind of war that you talked about earlier, and so the peace won't be the kind of peace that we're used to.

Thank you. Good question. Okay.

#### *Terrorist Surveillance Program/PATRIOT Act*

Q. I'd like to ask, recently in the media, you've been catching a lot of flak about that National Security Agency thing.

*The President.* Yes.

Q. There's people in our States and there's people that are in DC that will take and jeopardize what I feel is our national security and our troops' safety today for partisan advantage, for political advantage. They're starting an investigation in the Justice Department about the—looking into this, where these leaks came from. Is the Justice Department going to follow through and, if necessary, go after the media to take and get the answers and to shut these leaks up?

*The President.* First, let me talk about the issue you brought up, and it's a very serious issue. I did say to the National—it's called the NSA, National Security Agency, that they should protect America by taking the phone numbers of known Al

Qaida and/or affiliates and find out why they're making phone calls into the United States, and vice versa. And I did so because the enemy still wants to hurt us. And it seems like to me that if somebody is talking to Al Qaida, we want to know why.

Now, I—look, I understand people's concerns about Government eavesdropping, and I share those concerns as well. So obviously, I had to make the difficult decision between balancing civil liberties and, on a limited basis—and I mean limited basis—try to find out the intention of the enemy. In order to safeguard the civil liberties of the people, we have this program fully scrutinized on a regular basis. It's been authorized, reauthorized many times. We got lawyers looking at it from different branches of Government.

We have briefed the leadership of the United States Congress, both Republican and Democrat, as well as the leaders of the intelligence committees, both Republicans and Democrats, about the nature of this program. We gave them a chance to express their disapproval or approval of a limited program taking known Al Qaida numbers—numbers from known Al Qaida people—and just trying to find out why the phone calls are being made.

I can understand concerns about this program. Before I went forward, I wanted to make sure I had all the legal authority necessary to make this decision as your President. We are a rule—a country of law. We have a Constitution, which guides the sharing of power. And I take that—I put that hand on the Bible, and I meant it when I said I'm going to uphold the Constitution. I also mean it when I'm going to protect the American people.

I have the right as the Commander in Chief in a time of war to take action necessary to protect the American people. And secondly, the Congress, in the authorization, basically said the President ought to—in authorization of the use of troops—ought

to protect us. Well, one way to protect us is to understand the nature of the enemy. Part of being able to deal with this kind of enemy in a different kind of war is to understand why they're making decisions they're making inside our country.

So I want to thank you for bringing that up. There will be a lot of hearings and talk about that, but that's good for democracy, just so long as the hearings, as they explore whether or not I have the prerogative to make the decision I made, doesn't tell the enemy what we're doing. See, that's the danger.

The PATRIOT Act is up for renewal. That's another piece of legislation which is important to protect. Do you realize that the PATRIOT Act has given our FBI and intelligence services the same tools of sharing information that we have given to people that are fighting drug lords? In other words, much of the authorities that we ask for in the PATRIOT Act to be able to fight and win the war on terror has already been in practice when it comes to dealing with drug lords. And I can't tell you how important it is to reauthorize the legislation.

There's a lot of investigation, you're right, in Washington, which is okay. That's part of holding people to account in a democracy. But at one point in time the Government got accused of not connecting the dots. You might remember that debate; we didn't connect the dots. And all of a sudden, we start connecting the dots through the PATRIOT Act and the NSA decision, and we're being criticized. Now, you know, I got the message early: Why don't you connect dots? And we're going to. And we're going to safeguard the civil liberties of the people. That's what you've got to know.

That was a great question, thank you for asking it. I'm going to avoid the part on the press. *[Laughter]*

*Threat of Terrorism/Separation of Church and State*

Q. Mr. President, we hear a common expert opinion all the time that the terrorists are going to attack us; it's not a question of whether, it's a question of when. And, yes, that might happen. But the facts are that since 9/11, we haven't had any, so thank you.

And now to my question. You have said many a time to all those who will listen that the two major pillars of democracy are free and fair elections and the separation of church and state. However, historically and to date, a vast majority of the Islamists across nations do not believe in that simple fact of separation between church and state. Therefore, how can we help change their belief, that for democracy to succeed, certain elements must be in place? Thank you.

*The President.* It's a great question. First, let me say that the enemy hasn't attacked us, but they attacked others. Since September the 11th, there have been multiple attacks around the world. These guys are active. You might remember Beslan, an attack on Russian schoolchildren, just killed them coldblooded. I remember going to the G-8, and there were the attacks in London. You know, there's—are they Al Qaida, not Al Qaida? These are people that are inspired, at the very minimum, by Al Qaida. The enemy is active. They are. And we're just going to do everything we can to protect you.

Look, there have been—when you think about the Far East, democracy didn't exist for a long period of time. And so principles, such as separation of church and state, were foreign to a lot of people where democracy doesn't exist, until democracy begins to exist, and then it becomes a logical extension of democracy.

I made a foreign policy decision in the Middle East that said, "We can't tolerate the status quo any longer for the sake of inexpensive energy." In other words, there

was a period of time when people said, "Let's just kind of deal with the situation as it is," sometimes tolerating strong men for a economic objective. I changed our foreign policy that said, that attitude of kind of accepting the things the way they are is going to lead to the conditions that will allow the enemy to continue to breed hatred and find suiciders and soldiers in their attempt to do harm.

What I'm telling you is, is that the part of the world where we've started this democracy initiative hasn't known democracy, except for in Israel and Lebanon. So to answer your question, it's going to be the spread of democracy, itself, that shows folks the importance of separation of church and state. And that is why the Constitution written in Iraq is an important Constitution, because it separates church and state for the first time in a modern-day constitution in Iraq.

The Iraqi example is going to spread. I believe that—one of the big issues in the Middle East is women's rights, the freedom of women, that they're not treated fairly. And yet, when you're guaranteed rights under a Constitution and people are able to see that life is improving, it will cause others to say, "I want the same kind of right."

Part of our strategy in order to keep the peace is to encourage the spread of democracy, and the enemy understands that. The enemy knows that a democracy, as it spreads, will help deal with issues such as the separation of—it will encourage the separation of church and state, will encourage women to rise up and say, "We want to be treated equally," will mean that mothers will be able to have confidence that their young daughter will have an opportunity to achieve the same as a young son. And those thoughts frighten the enemy. It's hard to believe, but it does.

So to answer your question, concepts that we take for granted in democracy are foreign because the system of government has yet to take hold. But when it takes hold,

it will become—people will begin to understand the wisdom of that part of the democratic process.

Let's see, let me—kind of searching around. Yes, sir?

*Immigration/Mexico-U.S. Border*

*The President.* *Hola—en Mexico?*

*Q.* Monterrey. We went for Christmas, to spend Christmas with my family in Mexico. And, you know, my family, friends, media, President Fox, they're talking about the wall that the United States wants to build across the border with Mexico. My question for you is, what is your opinion or your position about that wall? And, you know, when people ask me how can I justify the answer to build a wall, other than saying, "We don't want you here," you know?

*The President.* Yes, great question.

*Q.* Thank you.

*The President.* His question is on immigration. Let me talk about immigration. We have an obligation to enforce our borders. There are people—[*applause*]*—hold on—let me just—save it for a full answer. [Laughter]* And we do for a lot of reasons. The main reason is security reasons, seems like to me. And security means more than just a terrorist slipping in. It means drugs. The mayor was telling me that there's a lot of crime around the country—he's been studying this—because of drug use. And who knows if they're being smuggled in from Mexico, but drugs do get smuggled in. So it's a security issue. It's more than just the war on terror security issue. It's the issue of being able to try to secure the lifestyle of our country from the use of drugs, drug importation, for example. A lot of things get smuggled across. Generally, when you're smuggling something, it's against the law. So we have an obligation of enforcing the border. That's what the American people expect.

Now, you mentioned wall. The intent is to use fencing in some areas, particularly in urban centers, where people have found

it easy to cross illegally into the country. It is impractical to build a wall all the way up and down the border. Look, I was the old Governor of Texas; you can't build a wall up and down the entire length of the border of the United States. But you can find those border crossing points in high urban areas and use some construction. You can be able to put berms up in order to prevent people from smuggling people across the border. There are ways to use electronics to be able to help our Border Patrol agents detect people who are illegally coming into the country. And we're getting—we're kind of modernizing the border, I guess is the best way to put it.

I mean, there is an electronic wall, to a certain extent, on parts of our border where there may be an unmanned drone flying along that radios to a Border Patrol center that says, "Hey, we've got people sneaking across illegally; find them." The second aspect—and so we are going to enforce the border as best as we possibly can. It's our duty.

Secondly, one of the problems we've faced is that people get stopped, and they get let back out in society and say, "Come on back for your hearing." But guess what? They don't come back for the hearing. That's the catch-and-release. And we're trying to change that, particularly for those from Central America who've come up from Central America through Mexico and the United States.

The reason most people come is to work. I always have said that family values do not stop at the Rio Grande River. There are some jobs Americans will not do that are being filled by people who want to feed their families. And that's what's happening. And my attitude about that is, is that when you find a willing worker and a company who can't find an American to do the job, there ought to be a legal way, on a temporary basis, to fill that job.

And so let me finish real quick. It is compassionate—by the way, it is important

to enforce the border. President Fox understands he's got to enforce his border in the south of Mexico, by the way, from people coming up from the south. It is compassionate to recognize why most people are here, and they're here to work.

It also makes sense to take pressure off the border by giving people a legal means, on a temporary basis, to come here, so they don't have to sneak across. Now, some of you all may be old enough to remember the days of Prohibition. I'm not. [Laughter] But remember, we illegalized whiskey, and guess what? People found all kinds of ways to make it and to run it. NASCAR got started—positive thing that came out of all that. [Laughter]

What you're having here is, you've created a—you've made it illegal for people to come here to work, that other Americans won't do, and guess what has happened? A horrible industry has grown up. You've got folks right here in Kentucky who are hiring people to do jobs Americans won't do, and you say, "Show me your papers," and they've been forged, and the employer doesn't know about it.

Part of making sure that immigration policy works is, you hold employers to account. But how can you hold them to account when they're being presented with forged documents? A whole forgery industry has grown up around this. We've got good, honorable people coming to work to put food on their tables, being stuffed in the back of 18-wheelers. We've got people being smuggled by what they call *coyotes* into the deserts and asked to walk across. And they're dying because they're trying to get to work, and they're being mistreated. In other words, this underground industry is creating a human condition that any American wouldn't accept. I mean, it's just not right.

And so I think, yes, absolutely enforce the border but, at the same time, have a recognition that people are going to come here to work if an American won't do the job, so let's make it legal on a temporary

basis. And I mean a temporary-worker's card that's tamper proof, that gives the employer satisfaction they're not breaking the law, that says, "You can come here for a period of time, and you go home."

Now, the big issue on this, besides enforcing the border, is amnesty. I am against amnesty. And the reason I am against amnesty—amnesty means automatic citizenship—I'm against automatic citizenship, in all due respect to others in our country that believe it's a good thing. And I'm against it because all that, in my judgment, would do would cause another 8 to 11 million people to come here to try to be able to get the same—hopefully, put the pressure on the system to create automatic citizenship. So I think the best solution is the one I just described. And it's an issue that's going to be important for the American people to conduct in a way that honors our values.

We value—every life is important. We hold everybody up to respect. We should, you know? But we're going to enforce our laws at the same time. And I think you can do both in a compassionate way. I appreciate you asking that question. Thank you.

Yes, ma'am.

#### *Education/No Child Left Behind Act*

Q. President Bush, I've been an educator in five States for 36 years.

*The President.* Thank you.

Q. Thank you. Right up there with national security, I think, is the issue of education of every single person in the United States. It's of crucial importance to our future. And given the challenges in the world, the fact that we have to keep this Nation secure in the future and that we have to deal with all sorts of threats—many of which we don't know—what do you think we need to do better in education to provide a well-educated citizenry that will meet those challenges and keep us secure?

*The President.* No, I appreciate it. Listen, part of security is economic security. And

one way to make sure we're economically secure in a competitive world is to make sure every child gets a good education. It's a huge issue for America to make sure the public school system functions.

First, let me just say, the public school system is important for our country, and we want it to work. The public school system in the past has provided an avenue for success, and we've got to make sure we continue to do so.

Let me start with grades K through 12. We passed what's called the No Child Left Behind Act. It is a really good piece of legislation, at least, in my humble opinion. And the reason why is, it says every child can learn, and we expect every child to learn. In other words, in return for Federal money—and we've increased spending for Title I kids up somewhere about 40-something percent, and elementary and secondary school programs gone up 41 percent. Listen, I'm a local control guy, but I also am a results person, and I said we're spending a lot of money, particularly on poor kids. And I think it makes sense for the taxpayers to know whether or not those kids can read and write and add and subtract.

And so we said, "In return for receiving this money, you've got to test"—not the Federal Government is going to test—"You test. You design the test," Governors can figure out the right way to test, to determine whether or not children can read and write and add and subtract.

You can't solve a problem until you diagnose it. And I was worried—when I was the Governor of my own State, I was worried about a system that did not test. And so we were just kind of hoping things went well, and we're just going to shuffle through. And guess who gets shuffled through? Poor black kids get shuffled through. Young Latinos get shuffled through. You know, let's just kind of socially promote them. And so step one of making sure that the education system

works is to measure to determine whether it is working.

Step two is to correct problems early, before it's late. And so part of the No Child Left Behind bill is supplemental services money, per child, to help a child get up to speed at grade level by the appropriate time.

Step three is to be able to use the accountability system to determine whether the curriculum you're using is working. I don't know if you've had these debates here in Kentucky, but I can remember them a while ago; we were debating what kind of reading instruction works, and it was a hot debate. Everybody had their opinion. The best way to determine what kind of reading program works is to measure to determine what kind of reading program works.

Four, you've got to have your parents involved in your schools. The best way—one good way to get your parents involved is to put the scores out there for everybody to see. It's amazing how many people go to schools and say, "Gosh, my kid is going to a fabulous school," until they see the score for the school next door may be better.

Step five is—on the accountability system is what we call disaggregate results. Do you realize in the old accountability systems, they didn't bother to look at the African American kids stand-alone? They just kind of looked at everybody and assumed everybody was doing good. That is not good enough for the future of this country. If we expect every child to learn, we got to measure every child and analyze whether or not those children are learning.

Step six is to make sure local folks run the schools. I can remember talking about No Child Left Behind. I saw a lot of my friends in Texas glaze over: "He's going to Washington, and he's going to change. He's going to start telling us how to run the schools." Quite the contrary. The No Child Left Behind Act actually devolves power to the local level. All we say is, "You

measure. You show us. And if there's something wrong, you figure out how to correct it." You don't want Washington, DC, telling people how to run their schools. And it's working. No Child Left Behind is working.

And how do we know? Because we're measuring. There's an achievement gap in America that's not right. And that's wrong. Not enough African American fourth grade kids could read at grade level. But it's increasing dramatically. Something is happening out there, thanks to good principals and good teachers and concerned parents and a system—and a system—that focuses on results. We've got to extend this to high schools.

Now, we've got a problem when it comes to math and science. Our kids test fine. Math and science eighth grade test lousy—math and science in high school—and that's a problem. In my State of the Union, I'm going to address this. I'm going to hold a little back here. But in order for us to be competitive, we better make darn sure our future has got the skills to fill the jobs of the 21st century.

It was one thing in the past to go to a public school, become literate, and then go out there and make a living with your back. That's not what's going to happen in the next 30 or 40 years. We've got to have children that are Internet savvy. We've got to have kids that are the best in science and engineering and math; otherwise, jobs are going to go to where the workforce is that got those skills. And that's the real challenge facing us.

Fantastic question. Thanks. I'm pandering, I know, but it is really one of the most important challenges we face.

And I'm looking forward to working with Congress to, one, build on No Child Left Behind. I will refuse to allow any weakening of accountability. I remember people saying to me, "It's racist to measure." I'm telling you, it's racist not to measure. That's what I think. They say, "You're teaching the test"—I'm telling you if a child can read, it can pass a reading comprehensive

test. And so accountability coupled with a smart use of resources to focus on math and science, I think, is the proper strategy to help deal with an issue that is an important issue for the future of this country.

Yes, ma'am.

### *Education/National Economy/Social Security Reform*

*Q.* Hello, Mr. President. You just made a very poignant—about math and science. I am a—number one, I'd like to thank you for taking time to be here. I think all of us would reiterate that. I am a businessowner, and I am living the American Dream. And I would like to personally thank you for having a will that will not be broken, and the men and women of the Armed Forces that protect the freedoms that we have had and that we oftentimes take for granted and give us this way of life.

So as a businessowner, though, my greatest challenge is, I worked 20 years in the civil engineering arena before starting my companies. And the thing that is really frightening to me is our—we have a true weakness, a wave that's coming in both the engineering arena, the sciences, as well as construction—construction inspectors. There's going to be a huge—these baby boomers that are starting to retire, that knowledge base that's getting ready to go away, and there is no one to replace it that's compelling enough. What could you suggest that corporate America can do to help in this deficit?

*The President.* No, I appreciate it. First, thanks for owning your own business. I love being the President of a country where people can—I'm not saying you started with nothing, but, you know, have a dream and end up with owning your own business. As a matter of fact, the small-business sector of America is really the job creators of America. Things are going good when it comes to job creation, 4.5 million new jobs since April of 2003. A lot of it has

to do with the fact that the entrepreneurial spirit is strong and vibrant and alive.

Corporate America—big corporate America does a good job of training people. It's in their interest. It would be helpful if they didn't have to spend so much time on training people by having a literate workforce to begin with: literate in math, literate in science, literate in all different aspects of what is going to be necessary to fill the skill base of the 21st century.

One of my initiatives, and one that I hope you're taking advantage of here in Kentucky, is the use of the community college system. The community college system is really an interesting part of our education network and fabric because the community colleges are available; in other words, they're plentiful. They are affordable, relative to the different kinds of higher education institutions. And interestingly enough, I'd like to describe them as they're market driven, if run properly. In other words, their curriculum can adjust.

And what you want is a community college system that works with the local industry and says—just take the health care industry. You know, we need a certain type of nurse practitioner, for example. Or we need x-ray technologists or whatever. And that you have a community college system that will help design the system that will enable a person to go from one industry to the next, where there's a bright future. So a lot of job training to make sure that people have the skills that you're talking about, they are transferable and trainable skills. But there needs to be the place where they can find those skills, particularly those who have already gotten out of college.

Do you realize that between age 18 and 38, it's estimated that a person will change jobs 10 times, coming down the future, which means that there's a lot of activity in our economy, a lot of vibrancy. But the danger is, is that people aren't going to have the skills that fill the jobs that keep us competitive. And the community college

system is a wonderful opportunity. The Federal Government can provide job training grants, which we do, 125 million last budget cycle; I'm asking for the same this budget cycle, if you don't mind, Members of Congress. [Laughter]

Let me talk about small businesses real quick. In order for America to be competitive, not only do we need a skilled workforce, we've got to have certainty in our Tax Code. In order to get this economy going out of a recession and a stock market collapse and scandals, I had called upon Congress, and they delivered meaningful tax relief. The worst thing that could happen when you're trying to plan your small business, or any business, is to wonder what the taxes are going to be like. You know, when old George W. leaves, are the taxes going to go—I mean, how do we plan for the future? I strongly urge the United States Congress, this year, to make all the tax relief we passed permanent.

People will say, "Well, how are you going to balance the budget?" Well, let me warn you that raising taxes doesn't necessarily equate to balancing budgets. As a matter of fact, in my judgment, if we raise the taxes, all that will mean is Congress will increase spending. The way to balance the budget is to set priorities and to hold people to account in Washington, which is what we're doing.

Now, the biggest increases in the budget, however, are not the discretionary accounts; they're what's called mandatory accounts. And that's the increase of Medicare and Social Security. And this is a big issue that I know you didn't ask me about, but I'm going to tell you anyway, my opinion. Because you mentioned baby boomer, and that happens to be me. And a lot of people like me, my age, are fixing to retire. I'm going to be 62 in 2008, which is a convenient year to turn 62. [Laughter] And a lot of them—and there are fewer people paying into the system. And the benefits I've been promised are going up faster than the rate of inflation. And we can't afford

it, and we need to do something about it now.

One of the real drains and real threats to our economy is the inability of Congress to be able to confront the Medicare and Social Security issue, the unwillingness to take on the tough political job. I worked hard last year. I laid out a lot of solutions that I think will work. It didn't work. We've still got a problem. I'm going to keep talking about it. My job is to confront problems, as your President, and not just hope they go away. This one is not going away. And so we need to deal with the fact that a bunch of baby boomers are retiring with fewer workers paying into the system in order to make sure we're competitive, in order to make sure that we can balance the budgets.

Now, Congress took a good step in cutting mandatory spending by \$40 billion over the next years. And that's important. By the way, that was just reforming the systems. It wasn't cutting meat out of the systems; it was reforming the systems so they work better. And then when you get back, you need to pass that—I know you will—in order to show the country that you've got the will necessary to take on the tough issues. And so, you didn't ask, and I told you. Anyway. [*Laughter*] Hope I can do something about it. I'm going to keep talking about it until we can get something done. It's really important. One of these days, more and more Americans are going to realize that the Congress has got to make something happen; otherwise, we're going to pass on a disaster for our kids. And that's just the truth. And, you know, the truth wins out when it's all said and done. So don't be surprised if I keep talking about it.

Yes, sir, and then I'll get the little guy up there.

### *Health Care Reform*

Q. Mr. President, we'd like to talk about health care a little bit.

*The President.* Okay.

Q. As a small-business owner, like a lot of people in this room, we look at the dramatic cost increase that has been passed along, and that we all really struggle with. How do we provide our employees with health insurance that's comprehensive? And we all view you as a very pragmatic problem solver, and we'd like you to take this one on, sir.

*The President.* Okay, I am. Thank you. Here's my view of the role of the Federal Government. The Federal Government needs to help the poor, and we do that through a program called Medicaid. I was just talking to the Governor today about how best to get the Medicaid program in Kentucky able to meet the needs, both budget needs, but more importantly, the social needs.

The Federal Government made a commitment when Lyndon Baines Johnson was the President that we would take care of the elderly when it came to health care, and that's why it was important to reform Medicare, to make sure the Medicare system was a modern system.

There's two different issues in Medicare. One is the long-term structural problem of paying for Medicare as more baby boomers retire and fewer people paying in the system. But the short-term issue was to have a Medicare system that frankly was not modern enough. If you're going to make a commitment to your seniors, you've got to make sure the seniors have got modern medicine. And part of modern medicine was prescription drugs.

And so the new Medicare law that came into being in January of this year, for the first time incorporates prescription drug coverage available in Medicare, as a modernization of the system. The rest of the people ought to be encouraged to have affordable health care that really does put the consumer and the provider in touch with each other, I guess is the best way to put it. We need a more consumer-driven pricing mechanism in health care in order

to be able to properly deal with the inflation you're talking about. One aspect of it is, people make purchases in the health care without really realizing there may be other options available to them.

We need to make sure we expand information technology. I am told—a lot of health care guys here can tell you—that the modernization of health care, when it comes to information technology, should save up to 20 to 25 percent of cost, as well as reducing a lot of medical errors. By that I mean, everybody ought to have an electronic medical record that you're able to transfer from provider to provider. You know, the day of a person carrying these thick files of medical paper, and most of the time it's hard to read because doctors can't write hardly at all, and—but it needs to be modernized. There's a lot of inefficiency, what I'm telling you, in the health care field, particularly when it comes to information sharing.

Thirdly, it seems like to me, and this is a—health care is a particular problem for small businesses, and I fully understand that. It's becoming an unmanageable cost, putting our CEOs of small businesses in the unfortunate position of saying, "I can't pay for you anymore."

Three ideas. First, health savings accounts, which is a new product passed as part of the new Medicare bill, which is an evolving product that enables a business and/or worker to be able to buy a catastrophic plan and put the incidental costs of medicine into the plan on a tax-free basis. That's a lot of words. Look into it, is what I'm telling you. And I think Congress needs to expand HSAs and their use and their tax advantages, relative to corporate taxation when it comes to health care. Look at them. I'm not kidding you. Take a look at health savings accounts. Any small-business owner in Kentucky ought to be looking—and Indiana ought to be looking.

Secondly, we must allow small businesses to pool risk across jurisdictional boundaries.

These are called association health plans. In other words, a restaurateur in Kentucky ought to be allowed to put his or her employees in the same risk pool as a restaurateur in Texas in order to be able to get the economies of sharing risk, just like big companies are able to do. These are called association health plans.

Thirdly, one of the reasons why the cost of medicine is going up and the availability of medicine is declining, particularly in specialty fields like ob-gyn, is because of lawsuits. Make no mistake about it, medical liability lawsuits is driving up the cost of your insurance. Now, when I went to Washington, I said, "This is a local issue. This is something the Governors ought to figure out how to solve," until I began to analyze the cost of lawsuits on the Federal budget. And those costs go up as a result of increased premiums and what's called the defensive practice of medicine. If you're living in a society that's got a lot of lawsuits and you're worried about getting sued, you're going to practice extra medicine to make sure that if you do get sued, that you can say in the court of law, "I did not only everything expected, I did double what was expected, Your Honor. I'm innocent."

So the defensive practice of medicine runs up the cost that you pay at the Federal level. And so I decided to do something about it and proposed a piece of legislation—it got out of the House, and I want to thank you all for passing it—that says, "If you're injured, you're going to be taken care of," but we're not going to let these frivolous lawsuits run up the cost of medicine. There ought to be reasonable limits. There ought to be reasonableness in the legal system so that the small-business owner can get affordable health care.

And so there are three ideas that should address—I think it will address—your concerns. There is a philosophical struggle in Washington on this issue. There are some really decent people who believe that the

Federal Government ought to be the decider of health care, not just for the elderly, not just for the poor, but for all people. I strongly disagree. I believe the best health care system is one in which there is a direct connect between provider and customer, where there is transparency in the pricing system, where there is an information system that is modern and flows, and in which people are held to account for medical errors but not to the point where the cost of medicine has gotten out of control. Good question.

Little guy, how old are you?

*Public Support for the War on Terror/  
Responsible Debate*

Q. Seven.

*The President.* See. That's good. [Laughter]

Q. How can people help on the war on terror?

*The President.* Well, that's the hardest question I've had all day. [Laughter]

First of all, I expect there to be an honest debate about Iraq, and welcome it. People can help, however, by making sure the tone of this debate is respectful and is mindful about what messages out of the country can do to the morale of our troops.

I fully expect in a democracy—I expect and, frankly, welcome the voices of people saying, you know, “Mr. President, you shouldn't have made that decision,” or, you know, “You should have done it a better way.” I understand that. What I don't like is when somebody said, “He lied,” or, “They're in there for oil,” or, “They're doing it because of Israel.” That's the kind of debate that basically says the mission and the sacrifice were based on false premise. It's one thing to have a philosophical difference, and I can understand people being abhorrent about war. War is terrible. But one way people can help as we're coming down the pike in the 2006 elections, is remember the effect that rhetoric can have on our troops in harm's way

and the effect that rhetoric can have in emboldening or weakening an enemy.

So that was a good question. Thank you.

Let's see, yes, ma'am. I'm running out of time here. You're paying me a lot of money, and I've got to get back to work. [Laughter]

*Progress in Iraq*

Q. Thank you for taking the time with us.

*The President.* I'm thrilled to be here.

Q. Along with the 7-year-old, my question is, how is it that the people of Iraq, when polled, have more hope about their future than the rest of the world has, with regard to what we're doing in Iraq? How can we get the positive things that are happening in Iraq—how can we get everybody to know what's happening out there?

*The President.* Well, I appreciate that question. And obviously, I've thought long and hard about it. Part of my job is to make sure and to keep explaining and explaining and explaining in as realistic a way as possible about why we're there and why it's necessary, in order to remind the American people about the stakes involved. That's why I've come here, for example.

You don't want your Government running your press. That would be the worst thing that could happen. That would mean we have just fallen prey to exactly that which we're trying to liberate people from in Iraq. And my own judgment is that action on the ground will win the day. I mean, results will ultimately trump kind of the short-term glimpse at things. So my job and the job of those of us in the administration, the job of those who have made the decision to go in there—not just me but Members of Congress that voted to support our military must continue to explain and keep the American people engaged.

I am not surprised that Iraqis feel more confident about the future than Americans do. They were the ones who lived under

the tyrant. They were the ones whose families got gassed by his chemical weapons. They were the ones who, if they spoke out, were harassed by a police state. It must be a magnificent feeling to be liberated from the clutches of a tyrant.

Secondly, much of life is normal in Iraq. And you talk to people who go there, and they come back and tell you that change is significant and palpable. People can see the difference; there's vibrancy. What we see, of course, is isolated incidents of terror. And as I mentioned earlier to you, it hurts—it hits our conscience. America is a wonderful country because we're a country of conscience. It bothers us to see not only our own troops die but it bothers us to see an Iraqi kid killed. That's the nature of our society; we don't treat life in a cavalier way. We believe in America—and it's one of the really beautiful things about America—that every life is precious. That's what we believe. And so I'm not surprised that there is a different attitude inside the country than our own.

Ultimately, here in America, success on the ground in Iraq—and I've defined what victory means before—will buoy the spirits of our people. And in the meantime, I've got to go to places like Louisville, Kentucky, and sit down and spend time giving it my best shot to describe to you my decisionmaking process, the philosophy behind which this Government is operating, and my optimism about our capacity to achieve our objective.

And my deep belief, my firm and deep belief is that the sacrifices being made today will inure to the benefit of our chil-

dren and grandchildren. On the one hand, we have got to protect America, and we're working hard to do so. Every day you've got good citizens in your country making sacrifices to either find an enemy that's hiding somewhere or picking up information that we can use to protect us. In the long run, we have got to have faith in a great system of government that, over the ages, has proven to be the foundation for peace.

Listen, I want to thank you all for giving me a chance to come by. May God bless you all.

NOTE: The President spoke at 1:18 p.m. in the Kentucky International Convention Center. In his remarks, he referred to Joe Reagan, president and chief executive officer, Greater Louisville, Inc.; Gov. Ernie Fletcher and Lt. Gov. Stephen B. Pence of Kentucky; Mayor Jerry E. Abramson of Louisville, KY; former President Saddam Hussein of Iraq; Ayman Al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al Qaida associate; Gen. John P. Abizaid, USA, commander, U.S. Central Command; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Usama bin Laden, leader of the Al Qaida terrorist organization; Abu Zubaydah, senior Al Qaida associate, who was captured in Pakistan on March 28, 2002; Khalid Sheikh Mohammed, senior Al Qaida leader responsible for planning the September 11, 2001, terrorist attacks, who was captured in Pakistan on March 1, 2003; Prime Minister Junichiro Koizumi of Japan; and President Vicente Fox Quesada of Mexico.

## Remarks Prior to a Meeting of Small-Business Owners and Community Leaders in New Orleans, Louisiana *January 12, 2006*

Mr. Mayor, thank you. It's good to be back in your city. I appreciate the Lieuten-

ant Governor and Members of the United States Congress for being here as well. I

particularly want to thank the small-business owners of New Orleans. I'm looking forward to hearing what you have to say about your traditions and your hopes and your frustrations. We all share the same goal, and that's to have this great city rise again, to be a shining part of the South.

It was in the past, and I think this can be a better city, and to this end, I've done a couple of things. One, I appointed my friend Don Powell to be down here to help implement the strategy developed by the mayor and the Governor and Lieutenant Governor. In other words, I believe the best strategy for the rebuilding of New Orleans and the revitalization of the parishes around New Orleans is for the local folks to design the strategy and to have the Federal Government become a partner.

And I want to thank you for putting a committee together; I know you did as well, Mitch. Powell's job is to come down and help interface and interact. I've told the people down here that the Federal Government has got a major role to play. So far we've appropriated or made available \$85 billion in reconstruction and relief along the gulf coast. About 25 billion of that has been spent; there's \$60 billion in the pipeline, thanks to the good work of the Members of the Congress and the United States Senate.

One issue I do want to touch on is the levees. Now, the mayor made it very clear to me that we need a Federal policy, a strong Federal policy on the levees in order to encourage investors and investment in New Orleans. In other words, if there's any doubt about levees, people wouldn't be willing to reinvest in this city. If we couldn't get people to reinvest in this city, the recovery wouldn't be as strong as we hope it to be.

Working with the Corps of Engineers, we've put forth a plan that said that the levee system will be stronger and better than the previous levee system. And we put a request in for \$3.1 billion, plus money to study how possibly to make this

system even better. Unfortunately, at the very last minute in the appropriations process, some Members of Congress moved 1.4 billion of that 3.1 billion to projects not directly related to New Orleans and the surrounding area. And so, in order to make sure that this city gets the money necessary to make sure that the levees are stronger and better, Congress needs to restore that 1.4 billion directly into projects for New Orleans and the surrounding parishes. I'm looking forward to working with the Members of the Congress to make sure that that money is restored.

Secondly, I understand that one of the keys to success is going to be private-sector initiatives. That's why we've got the small-business owners here and the man responsible for making sure New Orleans is well represented to the rest of the country, and that is Stephen, who is a part of the Chamber. One way to make sure that the private sector leads the recovery for New Orleans is to make sure the tax laws encourage investment. And I want to thank the Members of Congress for passing the GO Zone legislation which encourages investment. And that will be helpful for the folks here.

And finally, I know housing is a particularly difficult issue, an important issue. You can't have a revitalized New Orleans unless people have a place to live. And we want to—we look forward to working with the mayor and the State on implementing the vision, but want to remind people that in the new appropriations bill I signed is \$11.5 billion of CDBG money. In Mississippi, the Governor intends to use that money on uninsured housing—to pay for the uninsured folks who didn't have flood insurance. And the law is written so that the State, in working in conjunction with the local authorities, can spend that money in a way to help the recovery.

We're aware of the issues here. I'm looking forward to hearing more from you all about how we can continue to work together. I will tell you, the contrast between when I was last here and today, Stephen,

is pretty dramatic. It may be hard for you to see, but from when I first came here to today, New Orleans is reminding me of the city I used to come to visit. It's a heck of a place to bring your family. It's a great place to find some of the greatest food in the world and some wonderful fun. And I'm glad you got your infrastructure back on its feet. I know you're beginning to welcome citizens from all around the country here to New Orleans. And for folks around the country who are looking for a great place to have a convention or a great place to visit, I'd suggest coming here to the great New Orleans.

Anyway, thank you all very much.

NOTE: The President spoke at 11:12 a.m. in the New Orleans Metropolitan Convention Center and Visitors Bureau, Inc. In his remarks, he referred to Gov. Kathleen Babineaux Blanco and Lt. Gov. Mitchell J. Landrieu of Louisiana; Donald E. Powell, Chairman, Federal Deposit Insurance Corporation, in his capacity as coordinator of Federal gulf coast relief efforts; Mayor C. Ray Nagin of New Orleans, LA; Stephen J. Perry, president and chief executive officer, New Orleans Metropolitan Convention and Visitors Bureau, Inc.; and Gov. Haley Barbour of Mississippi.

## Remarks on Gulf Coast Reconstruction in Bay St. Louis, Mississippi January 12, 2006

Thank you all. Please be seated. Haley said that it's protocol not to introduce the President. Well, that shows what he knows about protocol. *[Laughter]* He just introduced me. *[Laughter]* Thanks for having me back. My first observation is, it's good to see—to be able to look in people's eyes and not see them all bloodshot. *[Laughter]*

I can remember coming here, the times I came and looked hard in people's eyes and saw a sense of desperation and worry and deep, deep concern about the future. I'm sure there is still concern about the future, but the eyes have cleared up. There's a sense of optimism. There's a hope. There's a little bounce in people's step. I'm not surprised; the people down here have showed incredible courage. And I want to thank you for showing the rest of our country what it means to survive an incredible hardship with high spirits.

Your Governor has done a magnificent job. He went up to Washington—*[applause]*. You know, it's nice of him to give me the credit to sign the bill. It's nice of him to compliment Congressman Taylor,

who deserves to be complimented, and compliment—and Congressman Chip Pickering, both of whom are here, and I thank them for coming. It's wise of him to compliment Senator Lott and Senator Cochran. *[Laughter]* And he's right to compliment them. But the truth of the matter is, the person who deserve the biggest compliment, in my judgment, is the man who brought the will of the Mississippi people, the needs of the Mississippi people up to Washington, DC, and fashioned one heck of a piece of legislation for the people of this important State. Thank you, Governor, for your hard work.

And I want to thank Marsha for being here as well. I don't know how you put up with him for all these years. *[Laughter]* You must be a patient soul. But he married well, just like me. And speaking about that, Laura sends her best wishes to all of you all. She's looking forward to coming back down here. She's not going to believe the difference between the last time she was here and today.

It's hard sometimes, unless you've got a perspective. I have the perspective of having spent some time here but not all my time. And I can remember what was and now what is, and I can see what's going to be too. And it's going to be a better gulf coast of Mississippi.

I want to thank Roy Bernardi, who is the Deputy Secretary of HUD. He's going to have some stuff to do to make sure this part of the world rebounds. I like your mayors. They're down-to-earth people. They are good, solid people—Mayor Eddie Favre. You know, one time a buddy of mine said, when the baseball players and owners couldn't figure out an agreement and they went on strike and quit Major League Baseball, he said, "I'm never going back to a baseball game for 10 years." And I said, sure, you know. And he's a great baseball fan. And, sure enough, last year was his 10th year, and he finally went to a game. The reason I bring that up is Eddie said, "I'm not going to wear long pants"—[laughter]—and I'm saying to myself, "One of these days, the President is going to show up, and Eddie sure enough will put on long pants." [Laughter] I didn't know him very well. [Laughter] I arrived here at this important school, and he's got short pants on. Eddie, I like a man who sticks to his guns. [Laughter] Thanks for hosting us.

And so I'm standing in the White House at a Christmas reception, and in walks Tommy Longo. He's the mayor of Waveland, of course. And he had on a fantastic suit. [Laughter] I nearly fell out. [Laughter] Tommy Longo in a suit? [Laughter] I said, "Where did you get that thing?" He said, "It's amazing what you can find in the rubbish." [Laughter]

I've learned something about the mayors up and down the gulf coast. You've got some young mayors east of here who have been in office, what, 3 or 4 months, and the storm hit. They were incredibly tested—Pascagoula and other places. You got some veterans who have been around for

a while, never dreamt they'd see a day like the day they saw. But whether they're veterans or rookies, all of them have stood strong. All of them have rallied with the first-responders. All of them have shown great compassion to the people. I am proud of your local mayors, your local governments, people like Rocky Pullman of the Hancock Board of Supervisors, the people working in these counties. You got some good folks down here. And one of the reasons why I'm confident about your recovery is because you've elected good people to take on the job.

Finally, I want to thank Brother Talbot and Brother Hingle of this fantastic school. Thanks for hosting us. Tommy Longo was in the class of '75. I hope that means you didn't lower your academic standards in that year. [Laughter] He and old Doc Blanchard, they told me. Doc Blanchard went here, in case you didn't know it, the Heisman Trophy winner who carried the leather for West Point. And one of the things the Brother told me, he said, "We wanted to make sure we saved the Heisman Trophy that Doc Blanchard had made sure was housed here at this facility." But I do want to thank you all for letting us come by. Thanks for your being in education, really an important part of the future of this State and this country, to make sure people get a good education.

I stood in Jackson Square early on in—after the storm hit, and I said, "We're not just going to survive but thrive." By that I meant, it's one thing to kind of ride it out; it's another thing to take out of the harm that came, convert this into a better life. I said, "We're not just going to cope, but we'll overcome." I meant what I said. I couldn't have said that if I didn't have confidence, though, in the people in the local area that have such a spirit to be able to do so.

I'm here to report to you some of the progress made and to let you know that people in faraway places like Washington, DC, still hear you and care about you.

Signing all the legislation I've signed, the Federal Government has committed 85 billion so far to helping folks and to help rebuild the gulf coast of our country. Of that 85 billion, about 25 billion has been spent. So 85 million [billion]\* is available; 25 of it is already in the pipeline. That's 60 billion more coming your way.

Part of the strategy to make sure that the rebuilding effort after the recovery effort worked well was to say to people like Haley and the Governor of Louisiana and the mayor of New Orleans, "You all develop a strategy. It's your State. It's your region; you know the people better than people in Washington. Develop the rebuilding strategy." And the role of the Federal Government is to coordinate with you and to help.

I thought that was an important first statement to make when people began to wonder what life would be like after the storm hit. My view is, and a lot of my political philosophy is based on, the local folks know better than the folks in Washington, DC. I remember when Haley invited me down, and he said—I think we were in a tent at that time, and there wasn't a lot of electricity—it was like an old-time daytime revival without electricity. It was hot in the tent. It was the first meeting, I think, at least the first called meeting, of the commission headed by Jim Barksdale. Citizens from all walks of life, all occupations, all aimed at one thing: putting together a strategy that will help this part of the world become even better than it was before.

I have an obligation to make sure that the Federal Government responds and coordinates and stays in touch with not only the commission and the Governor but local folks as well. And I picked a fellow that I trust, a person who's had a lot of experience, a person who understands how people think down here; after all, he is from Texas. He understands urban life, and he

understands rural life, and he knows the importance of county commissioners; you call them county supervisors, I guess. He's a guy who's a good listener, and he's got my full confidence. And that's my friend Don Powell who's with me today. He's going to be the Federal coordinator. His job is to come down here and listen and report back.

And I recognize there are some rough spots, and I'm going to mention some of them here in a minute, and we're going to work to make them as smooth as possible. The first challenge we had after the storm hit was to take care of the people that were displaced, millions of people, or over a million people evacuated and scattered. It was an amazing period in our history, when you think about it. One day people's lives are turned upside down, and they're looking for help, and they're looking for compassion, and they found it. People found it in churches, in synagogues, in community centers, in private homes. It's an amazing part of our history, when you think about it. It's like there's a great capacity to absorb hurt in our country, because we've got individuals that are so decent and honorable.

The Government had a role to play, and that was to get money in people's pockets. I mean, when you have to evacuate, you don't have time to plan. And so one of the first things we did was, we got \$2,000 in people's pockets as quickly as possible, to help them. In other words, it was a response geared toward the individual. We had a special designation for all evacuees, so they can become available for Medicaid or family services or the Federal programs. The idea was to get a response as quickly as possible to people who are scattered all over the country so they could—to help get their feet on the ground.

We gave waivers to States. In other words, we kind of deregulated the system so States could respond quickly to the people who needed help. We provided 700,000 households with rental help. In other

---

\* White House correction.

words, the goal is for people to be back in their homes, in a home they call their own. That's the goal. But in the meantime, we had to deal with people evacuated and people without homes. And so a part of the plan has been to provide temporary housing with rental vouchers; \$390 million went out as HUD vouchers for a group of people that qualified.

I can remember people hollering for trailers. We became the largest consumer of trailers probably in the history of mankind. [Laughter] And I know it was slow to begin with. The production needed to be ramped up, and, frankly, the Government crowded out other purchasers in order to set priorities for people down in this part of the world. We've now put out 61,000 trailers, and there are more in the pipeline. I was asking Haley, does he have a feel for how many more we need, and he said, "We're getting close to the end, but there's still a need." And we understand that. And the manufacturing is making—we put cruise ships out at one point to help people house on a temporary basis, particularly in New Orleans, so that we could get the police and the firefighters a place to stay so they could do their job.

People ended up in hotel rooms. At one time there was about 80-some thousand people in hotel rooms. It's now down to 25,000 families in hotel rooms. We're in the process of trying to locate every single family and provide the rental assistance help for them, so they can move from the hotel into rental housing, all aimed, by the way, at providing some kind of housing until the permanent housing market takes off. We're trying to bridge from being an evacuee to a person in a place until their own home gets ready to move into.

And so what can we do? Well, first thing is, we can focus on repairing homes. That's not going to do you very good down here in Waveland. I understand that. Tommy and I and the Governor and Marsha just drove by; there's no homes to repair. It's just been flattened. That's what the people

of America have got to understand. Sometimes hurricanes go through, and, you know, there's a home and a structure you can maybe put a roof on or do something—not here. Our fellow citizens have got to know when this hurricane hit, it just obliterated everything. It just flattened it.

But in parts of the hurricane zone, there's repairs that can be done. FEMA assistance will help with that. SBA loans have gone out to about—for about \$2.1 billion to help people repair their homes. Now, the most innovative approach, however, to getting the homes rebuilt is the CDBG grants that Haley Barbour negotiated on behalf of the people of Mississippi. That's government initials for, direct money to help people who weren't able to get their insurance to pay them off.

I remember being down in Biloxi. I think it was my first trip. And it was hot, and it was steamy. An old lady walked up to me and said to me—I said, "How are you doing?" And she looked at me and she said, "Not worth a darn." [Laughter] And I said, "Well, I don't blame you." She said, "I've been paying all my life for my insurance. Every time that bill came, I paid it, every single month. And all of a sudden the storm hit, Mr. President, and I came time to collect, and they told me no." And she was plenty unhappy, and she was looking for anybody she could be unhappy with, and I just happened to be the target. [Laughter] I think Gene was with me then; I might have shared the story with Gene about that.

One way to handle the issue—I know you got a lawsuit here; I'm not going to talk about the lawsuit. But Haley did something innovative, which was take the CDBG grants, a lot of money for Mississippi and going to help the people do the job that many think the insurance companies should have done in the first place.

Having said that, the Government has paid out \$12 billion in flood insurance. For

those who had flood insurance, the Government is making good on it—on the bargain with the people. If you got an FHA loan, your loan will be forgiven for a year. In other words, there is an attempt to try to make sure that things are being done so that we can—people can get back in their homes, and people can get to be rebuilding.

There's going to be a building boom down here; there just is. It's going to be an exciting time for people. One of the real challenges is whether or not people are going to have the skill set necessary to be able to meet the needs of the people. Are there going to be enough electricians, enough plumbers, enough roofers? But you're going to have yourself a building boom; you watch. There's going to be work; people are going to be working hard here.

And Don Powell and I, to this end, met with a group of leaders in Washington, DC, from building trade unions and businesses, and the whole idea was to come up with a strategy to make sure people have got the skills necessary to fill the jobs which are going to exist. See, our goal, and I know it's the Governor's goal, is to make sure the jobs first go to Mississippi people, when it comes to rebuilding this—[*ap- plause*—and Mississippi businesses. And we want this opportunity to be an opportunity where minority-owned businesses and women-owned businesses have a chance to flourish. An ownership society has got to be a part of a new vision, where people from all walks of life can say, "I'm owning my own business. I'm operating my own business. I'm owning my own home."

It's a fantastic opportunity. And—but it's not going to work unless people have the skill set necessary to be able to fill those jobs and to be able to provide for the—to meet the consumer demand. And so the idea is—and Powell is going to work on this strategy—is to work with your community college system or the building trades and have centers where people can go to learn how to get the skills necessary to

fill the jobs which are coming. They're coming. It's going to be an exciting time down here, just so long as you're able to get enough material and enough labor.

One of the important—and by the way, speaking about jobs, not only we got to make sure people have the skills necessary to fill the jobs, the Federal Government has got a lot of facilities down here, and there's a lot of Federal employees in this part of the world. We're going to rebuild the Federal facilities so that the people will be able to work.

This recovery is going to be led by the private sector. However, the Federal Government is going to help, and \$85 billion is a good—I would call that "help"—so far. But the truth of the matter is, the jobs and the quality of life, the recovery, is going to be led by the private sector. I was asking Haley about some of the industries down here, and he told me, for example, at the year end, a casino opened. I mean, it's remarkable. If you'd have seen what I—I'm sure you saw what it looked like up and down this coast, and all of the sudden, there's businesses, and people are thriving. People are beginning to work. It's happening. It's the private sector that's going to carry much of the recovery.

Congress did a smart thing, in my judgment—was to provide tax incentives for businesses who are in this part of the world. They provide tax incentives for small businesses to expense up to \$200,000 of investment and private—and incentive for all businesses to provide a 50-percent bonus depreciation for investment made. What I'm telling you is, it's kind of economic talk for saying, if somebody spends money in an investment in this part of the world, they get a tax incentive to do so. In other words, if you're able to make the Tax Code attract capital so people invest, it means you're more likely to be able to find work here. It goes on. It's a smart idea, and again, I want to thank the Members of Congress for working on that. I think it's going to make a big difference.

If you're a small-business owner—we just met today, by the way, with some small-business owners in New Orleans. And one of the things that became loud and clear to me there was that because a lot of people haven't moved back into the area, and if you're a small-business owner, there's no customers, so you have no cash flow, which makes it awfully difficult to survive. There are SBA loans for this, and I understand for some the word "SBA" means "slow bureaucratic paperwork." [Laughter] I hear it loud and clear. I will tell you that SBA has put out about \$470 million worth of SBA loans. In other words, the loans are going out.

But this small agency has been overwhelmed. And so Don Powell is working on an interesting idea, and that is to work with the local bankers, people who understand the local customer, as to how to become the agent for the SBA to get money out the door to help small businesses manage their cash flow needs until the customer base comes back.

The other thing that happened quickly—and I'm real proud of your folks down here—was that the energy sector rebounded unbelievably fast. This part of the world is really important for national security and economic security of the United States of America. Remember, when the storms hit, a lot of folks were really worried about the price of crude oil and gasoline. We, fortunately—we just did two things I thought were wise.

One, we suspended reformulated gasoline rules, which enabled us to import gasoline from Europe, which helped to take the pressure off the market. And the price of gasoline, although it went up, didn't go up nearly as high as a lot of people thought, and is now heading back down, thank goodness, for people who are working for a living. And the price of crude oil stayed reasonable because we opened up the Strategic Petroleum Reserve. I was confident in being able to do that because I knew how fast this industry could move

if just given a chance. The suspension of some regulations to help these refineries and these gas processing plants get up on their feet was important. In other words, if you can get government out of the way, amazing things can happen sometimes in the private—[applause].

And so I want to thank those of you who work in the energy industry for doing what you're doing. I remember going to the plant—I think Haley was with me—went to the plant in Pascagoula. And we had people there camped out there working as hard as they could to get the refineries up so that our citizens from all around the country would be able to have gasoline at a reasonable price. And these people worked hour after hour after hour and did the Nation a great service. In the meantime, we did our part, tried to do our part to make sure that we cleaned out the waterways so that the ships could move better. Our Coast Guard, by the way, provided invaluable service here in this part of the country.

Part of the recovery of this part of the world is going to be when you get your infrastructure up and running. And I can remember first choppers over here and seeing the incredible devastation done to the bridges and highways. First of all, there has been some incredible construction done. The Slidell Bridge there, to the west of you, got up in record time. It's amazing what happens when you provide a completion bonus for people doing work. [Laughter]

And I know you're concerned about the I-90 bridge, but they're getting ready to start on it, as I understand. And the bills I've signed provide \$2.3 billion for repair of highways and bridges in this part of the world. That's going to provide not only jobs but it's going to make the quality of life come back to what it was. You're dependent upon good highways and good bridges in this part of the world. The Government recognized that and put the money out there, available for reimbursing the States

when they get these highway projects moving.

One of the really interesting things that happened was education, how the country responded for the kids who have been moved around. And school districts all over America took children from Louisiana and Mississippi and helped educate them. It was really remarkable to watch the education system rise to the challenge. In the bill there is \$1.6 billion worth of operating money. It was money to help these schools stay afloat; it was to reimburse school districts for taking in the children who had evacuated to their part of the world. That's in addition to the Federal commitment to replace every school. In other words, part of the commitment is that if your school got destroyed, the Federal Government will help rebuild the school or will rebuild the school.

Plus, we understood that there was a lot of kids that were going to higher education and these—higher education institutions were affected by the storm, obviously, and they were allowed to retain their Federal aid, even though children weren't going to school. In other words, we made a concerted effort to help these schools to cope with the crisis. We're going to make a concerted effort to help the schools deal with the long-term reconstruction as a result of the crisis.

Ninety-three percent of the schools here in Mississippi are up and running, and it's an amazing feat in 4 months time. It's a great credit, again, to your Governor and your education institution, but more importantly, it's a great credit to the teachers and superintendents and principals of your local schools.

Finally, the first issue I was confronted with as the President was debris. I remember the meeting very well when the mayor showed up and said, "We can't possibly say to our people things are going to get better so long as we got piles of debris lying around." It was not only a practical issue, but it was a psychological issue. And

I can understand—I mean, I understood right off the bat what they were talking about. And we had a slow start, because we had a little bit of a—we had an issue of how to get debris off of private property. And, thankfully, there was some creative work done here at the local and State level, with the Federal Government—it really was—as to how to deal with the liability issue.

I don't want to go into the law; I'm not even a lawyer. Got too many of them up there in Washington, anyway. But my point is, is that by listening to the local folks and by being flexible about how to deal with an important issue like debris, we're making pretty good progress. Out of 42 million cubic yards of debris, 27 million have been removed.

Now, there's still debris. It's estimated about 15 million cubic foot—cubic yards of debris left. But there's a certain momentum that's gathering. Haley believes that by the end of March, we can get most of the debris off of the public property. In other words, they're making progress.

Don Powell's job is, to the extent that the Federal Government is contracting out—we want to make sure that they just don't hustle when the President shows up, that they're hustling all the time, because the rebuilding and rebirth of this area is really going to depend in large measure to getting these lots clean, to getting your public access roads cleaned up, getting that debris out of people's sight. There's something—there's a certain confidence to be gained when you see this beautiful countryside cleared of the damage of Katrina. Things have changed a lot when it comes to debris. It looks a lot different, a whole lot different. And we got more work to be done, and we're going to stay on it until it gets done.

And so we've done a lot, and there's a lot more to do, but there's a certain optimism and hope that's coming. I hope you feel that. You've come a long way in 4 months. Seems like an eternity to you, I

know. Seems like a lot of time for a lot of people to have gone through what you went through. Four months is not all that long, and a lot has happened in that 4-month period. And a lot more is going to happen in the next 4 months, and then the next 4 months. I can't wait to come back, and keep coming back and seeing the progress that's being made.

We've learned some lessons about Katrina, and we're going to analyze every lesson learned. Obviously, the Federal response in parts of this devastated area could have been a lot better. We want to know how to make them better. We want to make sure that when there's a catastrophe of any kind, this Government, at the Federal level, is capable of dealing with it, in conjunction with the State and local governments.

There's going to be some lessons learned about having agencies that get overwhelmed by a size of a storm, agencies whose job it is to help people get on their feet and maybe aren't able to do it quite as efficiently as some would like. Those are the lessons we're going to continually analyze. That's what you ought to expect of those of us who have been given the high honor of serving you, to constantly look for ways to do things better. And I just want to assure you, we are. We are.

But there's some other lessons learned where we don't need to change: the lesson of courage. We saw great courage. I'll never forget going to the hangar to see those Coast Guard kids that were flying those choppers. I think it's something like 30,000 citizens were saved by rescue efforts by Coast Guard men and local responders. And the people here on the frontlines of saving lives showed great courage during Katrina.

I remember seeing the determination of our citizens. One of the lessons learned is when people are determined, they can get things done. At the Pass Christian school system, for example, this is a place where they consolidated all the schools at

the elementary school. It was kind of inconvenient, when you think about it, but the inconvenience didn't bother the people in charge of that school system. As a matter of fact, they viewed it as a fantastic opportunity to be able to come together and share—and that school was up and running, with broken windows and—but there wasn't a broken heart, and their spirit wasn't broken.

One of the lessons, of course, as I mentioned, is the compassion of our fellow citizens. Think about lonely folks being sent out, having all their property, their material goods destroyed, wondering what the future meant for them, and there's a loving family saying, "I love you, brother. I love you, sister." Think about a country where the compassion is so strong that a neighbor in need can find a stranger that wants to help them get their feet back on the ground.

One of the lessons of this storm is the decency of people, the decency of men and women who care a lot about their fellow citizens, whether they be elected officials or just folks on the ground here just trying to make somebody else's life even better than it was before. So we learned some lessons about how to respond, and we're going to change. But some of the lessons shouldn't change, and that is the decency and character of the American people.

It's been an amazing experience for you. You just got to know, though, that a lot of people in this country, many of whom have never been down here, care for you; they pray for you, and they're pulling for you. God bless.

NOTE: The President spoke at 1:47 p.m. at St. Stanislaus College. In his remarks, he referred to Gov. Haley Barbour of Mississippi, and his wife, Marsha; Mayor Edward A. Favre of Bay St. Louis, MS; Brothers Ronald Talbot, president, and Ronald Hingle, principal, St. Stanislaus College; Gov. Kathleen Babineaux Blanco of Louisiana; Mayor C. Ray Nagin of New Orleans, LA; James L.

Barksdale, chairman, Governor's Commission on Recovery, Rebuilding, and Renewal; and Donald E. Powell, Chairman, Federal

Deposit Insurance Corporation, in his capacity as coordinator of Federal gulf coast relief efforts.

## The President's News Conference With Chancellor Angela Merkel of Germany January 13, 2006

*President Bush.* Thank you all. It's such an honor to welcome Chancellor Angela Merkel here to the White House. We just had a long visit. The first thing I did was ask everybody to leave the room except for the Chancellor. And we talked about our philosophy and our hopes. We talked about our desire to work together to accomplish important goals for the world, starting with peace. We share a deep desire to help those who suffer. We care about the hungry and the sick.

Germany is a valued ally. We've got a friendship that's important. We share common values based upon human rights and human decency and rule of law, freedom to worship and freedom to speak, freedom to write what you want to write.

We've got an important job ahead of us, to work on key issues like Iran. We spent some time talking about the Iranian issue and the desire to solve this issue diplomatically by working together.

We talked about the war on terror. I told the Chancellor that there's still an enemy that wants to do harm to the American people and others who like freedom, an enemy there that lurks, and that we've got to share information and share intelligence and work carefully to protect our peoples, that the threat is real, and that my obligation as the President of this country is to do everything in my power to protect the people, and we can't do it alone.

We talked about Eastern Europe and the Balkans. I thanked the Chancellor for Germany's contribution in Afghanistan. Afghan-

istan is a country that has gone from being ruled brutally by the Taliban, a group of people who have values the exact opposite of the values of Americans and the German people, to one that's now beginning to see the light of freedom. Democracy yields the peace, and it's important that democracy succeed in Afghanistan, and I want to thank the German people and the German Government for their contributions.

We talked about Iraq, and we've had our disagreements on Iraq, obviously. It's been a difficult issue in our relationship, and I fully understand that. But in spite of disagreements, we share the desire for the Iraqi people to live in freedom. I want to thank the German Government for help with reconstruction.

We talked about Israel and Palestine. Both of us care deeply about the health of Ariel Sharon, Prime Minister Sharon. We wish him all the very best and hope for his recovery. We also care deeply about the plight of the people in that part of the world, and we hope that there will be two states living side by side in peace.

We talked about NATO as the foundation of our collective defense and consultations. We talked about the importance of trade relations and business relations and commerce so that people on both sides of the Atlantic in our respective countries can find meaningful, high-paying jobs.

We talked about a lot, and the reason we talked about a lot is because we've got a lot in common. And the reason we talked about a lot, because there's a lot of issues

in the world that require our intense cooperation and desire to work together. And I appreciate the candid conversation, and I appreciate the beginning of what's going to be an important relationship for the sake of our respective peoples.

Welcome.

*Chancellor Merkel.* Well, thank you very much. And let me say that we indeed had a very open, a very candid discussion, one that was characterized by a spirit of trust that builds on a long tradition of German-American relations. But I think that will open up, also, a new chapter, as I hope, in our relationship.

This is my first visit as Chancellor, heading a new Federal Government. And I explained that there are two objectives that we have set out for ourselves. First of all, as regards our domestic agenda, we would like to strengthen our economic force, our economic strength. We look at the challenges that globalization entails, and we would like to explain to our people that in order to meet the social challenges ahead, we need to be economically strong.

And I think there is a lot of common ground here because we are at one in thinking that, obviously, we ought not to fall back into isolationist tendencies. We know that these tendencies are there, for example, in the European Union. We think we ought to meet these challenges of competition head on. And I think what we need to do is we need to convince our people to believe in themselves and to believe that even in the face of the challenges of globalization, prosperity and social equality is possible.

Secondly, apart from the domestic component, Germany wants to be a reliable partner to our partners in the world but also to our partners in Europe. And in order to be able to do that—well, Europe, as you know is composed of smaller and larger nations. We talked about the European Union. We talked about the possibilities and the chances open to the European Union. And I think it's essential that those

countries that feel that they share common ground as regard to values in the Western World stand together. And for Germany, I would like to say that throughout the period of the cold war, the fact that for more than 40 years, we believed in the value of freedom actually was the firm foundation for what was possible later on in European unification.

The fact that your father, sir—partnership and leadership, that was an incredible offer that was made to us by President Bush at the time. And I think that this is certainly in our vested interest to work together with you. What does that mean, “our vested interest”? It means that we face the challenges in the world today head on. It means that after the threat through the cold war is no longer with us, obviously, the threat of terrorism is certainly the greatest challenge to our security in the 21st century.

There may sometimes be differences as to the acuteness of the danger, as to what form it presents itself, how we actually also counteract here and how we face up to this matter. Afghanistan, for example, is a case in point. We are engaged, and we're committed to Afghanistan because we see that as a vested interest. We think it is only in our interest that the whole of this region is stabilized. The same goes for Iraq. Secure democratic structures ought to be in existence in Iraq. This is in our vested interest. In spite of the fact that we don't have troops on the ground there, stability there is in our very own vested interest, and we've shown that through commitments that we've entered on in other areas.

On the Balkans, the Balkans, too, their stability is the only promising sign which can actually ensure stability for the whole of the region. And NATO, for me, is the forum where we need to discuss, where we need to debate strategic issues and what we think is necessary as regards further military capabilities.

We also openly addressed that there sometimes have been differences of opinion. I mentioned Guantanamo in this respect. But I think that at the end of the day, what counts is that we come back to the situation where we openly address all of the issues, not only how we envisage the fight against terrorism, but I just mean a very broad-based debate, for example, on trade issues; how do we see our relationship with China; how do you see our relationship with Russia; what sort of strategic relationships do we want to forge as Western nations. And this is why I'm so happy about the fact that we were at one in saying we need to intensify our contacts further; we need to address all of these issues.

And I think a very successful chapter, for example, was opened over the past few days and weeks as regards Iran. To us Germans, too, it is totally unacceptable what Iran has said recently, for example, as regards the questioning the right of existence of Israel, the statements that were made with relevance to the Holocaust. And it's essential, we feel, that the EU-3, together with the United States, take a common position here, become active, that we try to persuade as many other countries as possible to join themselves to us, to ally themselves with us, and we will certainly not be intimidated by a country such as Iran.

I must say that I was greatly encouraged by our meeting here today, Mr. President, and I hope and trust that we shall continue our very good discussions, that we will further intensify them. We have every opportunity, I think, to intensify our economic relations, our business relations, relations in the area of research and development, in foreign policy. And I'm very, very pleased that we made such a good start here today.

*President Bush.* Terry [Terence Hunt, Associated Press].

#### *Guantanamo Bay Detainees*

Q. Thank you, Mr. President. Chancellor Merkel has said that the U.S. prison camp

at Guantanamo should not be kept open indefinitely. Are you willing to close it down anytime soon? And Chancellor, what are your concerns about Guantanamo?

*President Bush.* Yes, she brought up the subject, and I can understand why she brought it up, because there's some misperceptions about Guantanamo. First of all, I urge any journalist to go down there and look at how the folks that are being detained there are treated. These are people picked up off a battlefield who want to do harm. A lot of folks have been released from Guantanamo.

Like the Chancellor, I'd like to see a way forward there. The way forward, of course, is ultimately through a court system. I think the best way for the court system to proceed is through our military tribunals, which is now being adjudicated in our courts of law—to determine whether or not this is appropriate path for a country that bases itself on rule of law, to adjudicate those held at Guantanamo.

The answer to your question is that Guantanamo is a necessary part of protecting the American people, and so long as the war on terror goes on, and so long as there's a threat, we will inevitably need to hold people that would do ourselves harm in a system that—in which people will be treated humanely, and in which, ultimately, there is going to be an end, which is a legal system. We're waiting for our own courts to determine how that's best to proceed.

*Chancellor Merkel.* Well, it is true that we addressed this issue openly, and I think it's, after all, only one facet in our overall fight against terrorism. I made it very clear that I completely share your assessment as regards the nature and dimension of this threat, and that the Federal Republic of Germany, just as other European countries, need to come up with convincing proposals as to how we ought to deal with detainees, for example, who do not feel bound by any law; and how do we deal with people

who come from countries where such state structures don't exist.

So I think what we need to address is how we further want to proceed. We need to, for example, find a reform of the international law in this respect, and I think the United Nations is indeed a good forum to do that. But I think that's part of a permanent dialog between our two countries, where we really need to debate how we wish to proceed further. And the basis and the common ground needs to be, we have shared values, and I have seen that this is a very best precondition, even though, from time to time, we may have differences of opinion here.

*The President.* Want to call on somebody?

*Iran*

*Q.* —been discussed. Are you in favor of sanctions against Iran in the Security Council, and what kind of sanctions should that be? And another question is, in Germany, there's a discussion about intelligence, secret service people working in Baghdad during the Iraq war. From your knowledge, did the German intelligence help the U.S. before and during the Iraq war in Baghdad?

*President Bush.* I have no idea about the latter. [*Laughter*] You did say secret intelligence, right? [*Laughter*] I understand. I really—the truth of the matter is, the Chancellor brought this up this morning. I had no idea what she was talking about. The first I heard of it was this morning, truthfully.

Secondly, the first part of your question was Iran.

*Q.* Iran, sir.

*President Bush.* Okay, good. Sometimes when you mix them up, it throws us off balance, you know?

I'm not going to prejudge what the United Nations Security Council should do. But I recognize that it's logical that a country which has rejected diplomatic entreaties be sent to the United Nations Security

Council. I want to put it in this perspective: The U.N. Security Council is part of a diplomatic process started by Germany, France, and Great Britain representing the interests of a lot of countries like ourself, which made it abundantly clear to the Iranians that the development of the know-how and/or—a nuclear weapon was unacceptable. And the reason it's unacceptable is because Iran, armed with a nuclear weapon, poses a grave threat to the security of the world.

And countries such as ours have an obligation to step up, working together, sending a common message to the Iranians that it's their behavior—trying to clandestinely develop a nuclear weapon or using the guise of a civilian nuclear weapon program to get the know-how to develop a nuclear weapon—is unacceptable. And Germany has played an incredibly constructive role in this dialog, and I want to thank the Chancellor for continuing that dialog.

As I say, we're working very carefully together in consultation about how to proceed next. One of the things friends do is they spend time discussing strategies before we make a common statement about what next ought to happen. And we spent a fair amount of time today, and I know Condi Rice has spent a fair amount of time with the current Government about strategizing how best to achieve the objective. That's what we want to do. We want an end result to be acceptable, which will yield peace, which is that the Iranians not have a nuclear weapon in which to blackmail and/or threaten the world.

I want to remind you that the current President of Iran has announced that the destruction of Israel is an important part of their agenda. And that's unacceptable. And the development of a nuclear weapon seems like to me would make them a step closer to achieving that objective. And we have an obligation, in order to keep the peace, to work together to achieve the objective that we're trying to achieve through the current diplomatic process.

I don't know if you want to add to that brilliance or not. [*Laughter*]

Steve [Steve Holland, Reuters].

Q. Thank you, sir. If I could just follow up on that. China's U.N. Ambassador says referring Iran to the Security Council might complicate the issue. How hard is it going to be to get a—

*President Bush.* Say that again, Steve. I'm getting a little old. I'm getting old; I'm having trouble hearing.

Q. China's U.N. Ambassador—

*President Bush.* The Chinese Ambassador said what?

Q. It might complicate the issue if you refer Iran to—

*President Bush.* Might complicate the issue?

Q. Yes, sir—of how hard it's going to be. What's your timetable? Should the sanctions include the threat of military force?

*President Bush.* First of all, I want to repeat what I said before. We should not prejudice the strategy in the Security Council until they get to the Security Council. What we're doing now is beginning to lay out the strategy of what happens in the Security Council. That's what friends do. We consult, we talk, we strategize as to how to achieve an important objective, which is not allowing an—for Iran not to have a nuclear weapon.

And you're going to see a lot of public discussion about this matter. And the Chinese, you know, have got an opinion; the Russians have an opinion; we have opinions; everybody has opinions. Our job is to form a common consensus. And so you're—this is what's called diplomacy. I know you know that, Steve. I don't mean to insult you. But diplomacy is out talking to friends, allies, and others about a common objective. This meeting has got a lot of diplomacy in it today, because this is a subject in which we've spent a lot of time. I'm very interested in the Chancellor's opinion on this subject.

We did talk about the Chinese statement. Our job is to make it clear to all parties that it is in the world's interest that Iran not have a nuclear weapon, in other words, share the same goal. Once that goal is established, it makes it easier to come up with the strategy to achieve the goal.

And so, of course, we'll reach out to the Chinese and remind them, once again, that it's not in their interest or the world's interest for the Iranians to develop the capacity to—and/or a nuclear—to build a weapon and/or to possess a weapon. And I just gave you one reason why.

Another reason why is, it's very important for nontransparent societies not to have the capacity to blackmail free societies. We're thinking about how to lay the foundation for peace. We must be proactive. And that's what you're seeing. You're seeing the evolution of a proactive diplomatic policy—

Q. What about—

*President Bush.* Military option?

*Chancellor Merkel.* Allow me, if I may, and give you my German perspective on the matter. What is essential and is crucial is that over the next—when we look at the next step to be taken by the EU-3 and the United States together in a genuine consultation process that where we say at one point in time, "We actually did everything we could." They refused it. Iran refused every offer we made, even the Russian offer. Now we refer this matter back to the Board of Governors of the IAEA. But they, too, do their utmost to try to enlist as large a number of member states to join in on a proposal that will then be made to the Iranians. And I think this is going to be absolutely crucial for the Iranians to see how serious we are about all of this.

So what is at stake now is what sort of attempt—and serious attempt—is taken by all of us. And we've seen it with Syria, that it does leave an impression. It does leave an impact, if as large a number of nations in this world as possible makes it

abundantly clear we are not accepting a stance that says, in effect, the right of existence of Israel is questioned. "You are trying to lie to us. You are trying to cheat." This is something that we don't accept. And this is what we need to discuss: who is going to take which role, who is going to play which part, and what will be the final proposal? And then I think this has—it was what made this EU-3 approach so successful. They stood together, and they had one uniform position.

Thank you.

### *Germany-U.S. Relations*

*Q.* A question addressed to you, Madam Chancellor, and then one to you, Mr. President. Chancellor, would you say that this visit today has opened up a new chapter in German-American relations? And how do you think this should look, better than with Chancellor Schroeder at the last year? [*Laughter*]

*Chancellor Merkel.* Well, for my part, I can say that there is every opportunity for us to further enhance our relations, and such enhancement of relations is founded on a shared experience, no doubt about this. Afghanistan was mentioned here; the Balkans were mentioned. And here, too, we're also able to tell you that, after all, we have been successful in WTO negotiations.

So what is important to me, I think, is to have as many international contacts as possible, because I think, to a very large part, misunderstandings occur when you don't meet often enough, when you don't talk to each other often enough. The President just pointed out how much intellectual effort has to go further into trying to come up with a convincing strategy as how to deal with Iran, and we can't resort to some kind of ivory tower and think for ourselves. We have to do it in exchange with others.

Secondly—and I do see a chance here, a climate of openness has to exist, an area where one says quite clearly and candidly to one another, "Well, there we agree;

there we disagree." But there also has to be a climate of absolute trust, of reliability, where one stands by what one has agreed upon.

Thirdly, in spite of the great threat of terrorism that is the great threat to us in the 21st century, we need to point out that U.S.-Germany relations cannot only rest on fighting terrorism, but we have common interests. We have, for example, competitors, such as China and other countries, who don't abide by any rule. And we would like to see the rules kept. And now we need to find a common basis, a common approach, even though we sometimes may be, ourselves, competitors in certain business fields, for example, where we vie for orders.

So I see opportunities and I think that we need to be aware of the fact that after the end of the cold war, many of the contacts that existed in the past and also because of our cooperation as allies, that these cannot be taken for granted these days anymore. So it's going to be essential for us not to only talk at governmental level—it's a good experience, obviously—but that also our societies have to be engaged, that they have to understand that we need their contribution, too, to have good relations. And I think I made a little start in the right direction. So in about six months you may ask me again whether I've been able to add a few more chapters to it.

*President Bush.* We've got something in common; we both didn't exactly landslide our way into office. [*Laughter*]

I'm convinced that we will have a really important and good relationship.

First, I do want to send my best regards to Gerhard Schroeder. We spent a lot of time together, and we talked about important issues. Listen, there was room for agreement and room for disagreement. And I do hope he's doing well.

Our job now is to work together. We've got big interests. Germany is a really important country. It's right in the heart of

Europe; it's vital that Germany take the lead on a lot of issues. And I look forward to working with the Chancellor on common objectives. And my first impressions, with 45 minutes alone in the Oval Office, were incredibly positive. She's smart—[laughter]—she's plenty capable. She's got kind of a spirit to her that is appealing. She loves freedom.

I was particularly touched by hearing about her early life in Communist Germany. There's something uplifting to talk to somebody who knows the difference between just talking about tyranny and living in freedom and actually done it.

So we're going to have a very good relationship. And that's important for our respective people. I'm looking forward to consultations, visits, contacts, phone calls,

all the things you do. And now I'm going to take her to lunch. [Laughter]

Thank you.

*Chancellor Merkel.* Thank you.

NOTE: The President's news conference began at 11:37 a.m. in the East Room at the White House. In his remarks, he referred to Prime Minister Ariel Sharon of Israel; President Mahmud Ahmadi-nejad of Iran; China's Ambassador to the United Nations Wang Guangya; and former Chancellor Gerhard Schroeder of Germany. Chancellor Merkel and two reporters spoke in German, and their remarks were translated by an interpreter. The Office of the Press Secretary also released a Spanish language transcript of this news conference.

## Remarks Following a Meeting Business Leaders on Central American Relief and Reconstruction Efforts

*January 13, 2006*

I want to thank Secretary Rice and Ambassador Hughes for joining three of our Nation's most distinguished business leaders here at the White House to discuss a very important project, and that's raising money for those affected by the storms and natural disaster in Guatemala and Honduras.

Ours is a Nation that when we see human suffering, we respond. And we responded at the governmental level, because we had our military help provide infrastructure and logistics and get supplies to people who were hurting. We helped through USAID. And now it's time for the private sector in our country to step up and support the efforts of those Guatemalans struggling to get their lives back together and those in Honduras doing the same thing.

The fund that's going to be raised is made up of private donations. People can find out more about it on what's called—

a web site called [hurricaneaction.org](http://hurricaneaction.org). I think the site went up today, if I'm not mistaken. It's a place for people to come and access and to find out how they can join other Americans as to how to contribute. The money will go for things such as education of displaced families or infrastructure rebuilding, with a particular emphasis on reforestation or on microloans to help the economy get back on its feet in these countries.

So I want to thank you all very much for coming. I appreciate your interest. Thank you for traveling down to the region to take an assessment of the needs. And most importantly, thanks for coming back and calling our citizens to action. Appreciate it.

NOTE: The President spoke at 1:34 p.m. in the Oval Office at the White House. A tape

was not available for verification of the content of these remarks.

## The President's Radio Address *January 14, 2006*

Good morning. Last October, I was proud to nominate Judge Sam Alito to be an Associate Justice on the Supreme Court of the United States. This week, Judge Alito testified before the Senate Judiciary Committee, and the American people saw a man of character and intelligence. He forthrightly answered questions with grace and composure and showed his personal humility and legal brilliance, qualities that have made him one of America's most accomplished and respected judges.

In his opening statement to the committee, Judge Alito offered an eloquent description of the proper role of a judge. He put it this way: "A judge cannot have any agenda; a judge cannot have any preferred outcome in any particular case. The judge's only obligation is to the rule of law. In every single case, the judge has to do what the law requires."

Judge Alito has embodied this understanding of a judge's proper role throughout his distinguished career. He has participated in thousands of appeals, and he has authored hundreds of opinions. His record shows that he strictly and fairly interprets the Constitution and laws and does not try to legislate from the bench or impose his personal preference on the people. As the American people saw this week, Judge Alito always approaches the law in a thoughtful, fair, and openminded way.

Throughout his life, Sam Alito has demonstrated a mastery of the law, great decency, and a strong commitment to public service. As a young man, he wore his country's uniform in the Army Reserve and achieved the rank of captain. Early in his legal career, he worked as a Federal pro-

secutor. As Assistant to the Solicitor General, Sam Alito argued 12 cases before the Supreme Court. He later served in the Justice Department's Office of Legal Counsel, where he provided constitutional advice for the President and the executive branch.

In 1987, President Reagan named Sam Alito the United States Attorney for the District of New Jersey, the top Federal prosecutor in one of the Nation's largest Federal districts. The Senate confirmed him by unanimous consent. In this important post, Sam Alito showed a passionate commitment to justice and the rule of law and earned a reputation for being both tough and fair. He moved aggressively against white-collar and environmental crimes, drug trafficking, organized crime, and violations of civil rights. In 1990, President Bush nominated Sam Alito for the United States Court of Appeals for the Third Circuit, and the Senate once again confirmed him by unanimous consent. He's served with distinction on that court for 15 years, and he has more prior judicial experience than any Supreme Court nominee in more than 70 years.

Sam Alito's brilliance, integrity, and accomplishments have gained him respect and praise from his colleagues and from attorneys across the political spectrum. This week, fellow judges from the Third Circuit publicly testified in support of his confirmation, and they praised his integrity and fairness. The American Bar Association gave Judge Alito a unanimous rating of "well-qualified," the ABA's highest possible rating. The ABA concluded that Judge Alito meets "the highest standards" of "integrity,

*Jan. 14 / Administration of George W. Bush, 2006*

professional competence, and judicial temperament.” In the past, leading Democratic Senators have called the ABA’s rating system the “gold standard” for judicial nominees.

During this week’s hearings and over the course of his career, Judge Alito has demonstrated that he is eminently qualified to serve on our Nation’s highest Court. I’m grateful to Senator Arlen Specter for his superb work in chairing the hearings. I also thank Judge Alito’s wife, Martha, and the Alito children for their patience and dignity during the confirmation process.

Now the Senate has a duty to give Judge Alito a prompt up-or-down vote. I look forward to the Senate voting to confirm Sam

Alito as 110th Justice of the Supreme Court. America is fortunate to have a man of his intellect and integrity willing to serve, and as a Justice on our Nation’s highest Court, Sam Alito will make all Americans proud.

Thank you for listening.

NOTE: The address was recorded at 8 a.m. on January 13 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on January 14. The transcript was made available by the Office of the Press Secretary on January 13 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks to Reporters Following a Visit to the National Archives and Records Administration

*January 16, 2006*

It seems fitting on Martin Luther King Day that I come and look at the Emancipation Proclamation in its original form. Abraham Lincoln recognized that all men are created equal. Martin Luther King lived on that admonition to call our country to a higher calling, and today we celebrate the life of an American who called Americans to account when we didn’t live up to our ideals.

Allen, thanks for having me. I would strongly recommend our fellow citizens come to this house of archives, a house

that archives a lot of our important documents. It’s really an amazing place; it’s really fascinating. I appreciate you and your staff—thanking you.

All right, thank you all. See you later today.

NOTE: The President spoke at 9 a.m. in the East Rotunda Gallery. In his remarks, he referred to Archivist of the United States Allen Weinstein. A tape was not available for verification of the content of these remarks.

## Remarks at Georgetown University’s “Let Freedom Ring” Celebration

*January 16, 2006*

Thank you all. Thanks for the kind introduction, and thanks for the invitation to be here. It’s an honor to join you on this national holiday celebrating one of Amer-

ica’s most important lives, Martin Luther King, Jr.

Every year on this day, we reflect on the great movement for civil rights that

transformed our country. We remember leaders like Rosa Parks, who today is being honored with the John Thompson, Jr., Legacy of a Dream Award. And we recommit ourselves to working for the dream that Martin Luther King gave his life for: an America where the dignity of every person is respected, where people are judged not by the color of their skin—by the content of their character, and where the hope of a better tomorrow is in every neighborhood in this country.

I'm sorry Laura is not with me. She's leading a delegation to Liberia for the swearing-in of President Johnson Sirleaf, who, by the way, is the first elected woman President on the continent of Africa.

I want to thank Dr. DeGioia and the good folks at Georgetown University. I want to thank the members of my Cabinet who are here. By the way, Condoleezza Rice is not here, because she's with Laura. [Laughter] I want to thank Majority Leader Bill Frist and his wife, Karyn, other Members of Congress who are here. I appreciate Bruce Gordon, the president of the NAACP, for his strong leadership.

It is such an honor always to be in the presence of Dorothy Height. And I want to thank Tiffany Thompson for being here to represent her good dad—wondering where your brother was. [Laughter] DeGioia hired him, and he's working. [Laughter] Thank you all for being here.

When our Founders declared America's independence, they invoked the self-evident truth that all men are created equal. Our Constitution was written to put the principles of a free and equal society into practice. It is a living document. It required amendment to make sure that promise was fulfilled, amendments like the abolishment of slavery, the guarantee of equal protection, and the right to vote for all Americans. Dr. King called these documents America's great "Charters of Freedom," and he continued to trust in their power even when the practice of America did not live up to their promise.

As children of the South, Martin Luther King and Rosa Parks both came to the civil rights movement with long personal experience of the evils of discrimination and segregation. Dr. King called the daily humiliations endured by black Americans "the jangling discords of our Nation." And Rosa Parks famously experienced it when that bus driver had her arrested for refusing his order to give up her seat to a white man.

But Mrs. Parks and Dr. King shared a deep belief in a hopeful future. They strongly believed that segregation could not stand once it was held up to the light in all its ugliness. And because of their spirit and their work, the cruelty and humiliation of Jim Crow is a thing of the past.

As well, Martin Luther King, Jr., and Mrs. Parks's faith in the future reflected their faith in a Higher Being. Martin Luther King and Mrs. Parks both believed that the answer to hate and discrimination was love. Dr. King once wrote, "It is quite easy for me to think of a God of love, mainly because I grew up in a family where love was central and where lovely relationships were ever-present." Mrs. Parks was a devout member all her life of the African Methodist Episcopal Church and a woman who saw the face of God in every human being. These two leaders knew that freedom was not a grant of government but a gift from the Author of All Life.

So when they made their appeal to equal rights, they aimed straight for America's soul, and they roused the dozing conscience of a complacent nation. By calling us to be true to our founding promise of equality, Martin Luther King, Jr., and Mrs. Parks helped African Americans gain their God-given rights.

As leaders, Martin Luther King and Mrs. Parks believed their calling was to be involved, to be active, to work for change. Long before Mrs. Parks refused to move from her bus seat, she'd been active in community efforts to advance opportunities

for African Americans and to register them to vote.

At the dawn of this new century, America can be proud of the progress we have made toward equality, but we all must recognize we have more to do. The reason to honor Martin Luther King is to remember his strength of character and his leadership but also to remember the remaining work. The reason to honor Mrs. Parks is not only to pay homage to her strength of character but to remember the ideal of active citizenship. Active citizens in the 1960s struggled hard to convince Congress to pass civil rights legislation that ensured the rights of all, including the right to vote. And Congress must renew the Voting Rights Act of 1965.

Martin Luther King did not live to celebrate his 40th birthday. Yet in the short time he walked upon this earth, he preached that all the powers of evil are

ultimately no match for one individual armed with eternal truths. And one evening, on a bus ride home from work, a tired but brave woman named Rosa Parks proved that Dr. King was right.

And so today we honor Dr. Martin Luther King and Rosa Parks. We ask for God's blessings on their legacy, and we ask for God's blessings on our great Nation.

Thank you.

NOTE: The President spoke at 3:50 p.m. at the John F. Kennedy Center for the Performing Arts. In his remarks, he referred to President Ellen Johnson Sirleaf of Liberia; John J. DeGioia, president, Georgetown University; civil rights leader Dorothy I. Height; and former Georgetown University head men's basketball coach John Thompson, Jr., and his daughter, Tiffany, and son, John Thompson III.

## Remarks Following a Meeting With Prime Minister Guy Verhofstadt of Belgium

January 17, 2006

*President Bush.* You're probably wondering what the Prime Minister is sharing with me. First of all, welcome. We're talking mountain biking; actually, he's talking about the Tour de France. He's a huge advocate and a follower of the bike scene around the world. He's also an avid mountain biker, and one of these days, he and I are going to ride. He's going to give me a lesson on how to ride a mountain bike.

First of all, welcome. Thanks for the wide-ranging discussion. I've been honored to know Guy for a long period of time. We have got a close relationship. And we talked about the importance of transatlantic relations, about how it's important for the United States to work with the European Union to reach common objectives and to help work together to make this world a

more peaceful place and a better place for people.

We talked about bilateral relations, and the Prime Minister brought up an antiquated tax treaty that he believes needs to be looked at by our Government in order to facilitate trade between Belgium and the United States.

We talked about Africa, in particular, the Congo. And I want to thank you for your leadership, Mr. Prime Minister, on this very important issue. I told the Prime Minister my Government would work very closely with the Belgium Government to help the people of the Congo realize their full potential.

We had a wide-ranging discussion, as to be expected among friends, and it's been

my honor to welcome him here. And I'm glad you're here.

*Prime Minister Verhofstadt.* Well, we had, in fact, a very good and intense discussion, not only about biking, that was only at the end, the biking, in the search of who can be the successor of Lance Armstrong. [Laughter] We have not made a final choice on who can be his successor.

But we had a very good, I think, discussion about transatlantic relationship. I'm very pleased that since our last meeting, we have started with this transatlantic informal meetings in New York and in Brussels. And it improves, I think, the relationship, the transatlantic relationship. There is certainly a lot of work still to do, and I think that common point of view and a common policy of the U.S. and of Europe on issues like the Middle East, like Iran, is certainly absolutely necessary and can improve this transatlantic relationship.

And we also discussed the need to have more reflection on future of North Atlantic Alliance, on the relationship between European defense and North Atlantic Alliance,

and maybe we can develop a number of initiatives with Belgium in Brussels on that issue.

About the Congo, it's very clear that we have to help. The transition period is, at this moment, successful. We hope for elections in April, a second round in June. But we have already discussed what after these elections. The international community has to continue to help and to seek good governance in the Congo and in Central Africa.

So that were, in any way, the most important elements, and then at the end, in fact, we shall start a negotiation with the American administration to have a new tax treatment between Belgium and the U.S., to avoid double taxation in the future.

Thank you.

*President Bush.* Good job. Thanks, Guy. Appreciate you.

NOTE: The President spoke at 10:02 a.m. in the Oval Office at the White House. Prime Minister Verhofstadt referred to 2005 Tour de France winner Lance Armstrong.

## Statement on the Death of Sheikh Jabir al-Ahmad al-Jabir al-Sabah of Kuwait

*January 17, 2006*

I was deeply saddened to learn of the death of His Highness Sheikh Jabir al-Ahmad al-Sabah, the Amir of Kuwait. Sheikh Jabir was a friend and steadfast and reliable ally of the United States. He supported the U.S. service men and women who fought to liberate Kuwait and later Iraq from the aggression and tyranny of Saddam Hussein. Sheikh Jabir worked tirelessly to provide a better future for Kuwait's citizens and was the driving force

behind many reforms, including the establishment of a vibrant, elected Parliament and a free press. In his last months, he provided critical leadership to ensure that Kuwait's women achieved political rights. On behalf of the American people, Laura and I send our deepest condolences to Sheikh Jabir's family and to the Government and people of Kuwait on the passing of this historic leader.

*Jan. 17 / Administration of George W. Bush, 2006*

## Letter to Congressional Leaders on Review of Title III of the Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1996

*January 17, 2006*

Dear \_\_\_\_\_ :

Consistent with section 306(c)(2) of the Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1996 (Public Law 104–114)(the “Act”), I hereby determine and report to the Congress that suspension for 6 months beyond February 1, 2006, of the right to bring an action under title III of the Act is necessary to the national interests of the United States and will expedite a transition to democracy in Cuba.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to Richard G. Lugar, chairman, and Joseph R. Biden, Jr., ranking member, Senate Committee on Foreign Relations; Thad Cochran, chairman, and Robert C. Byrd, ranking member, Senate Committee on Appropriations; Henry J. Hyde, chairman, and Tom Lantos, ranking member, House Committee on International Relations; and Jerry Lewis, chairman, and David R. Obey, ranking member, House Committee on Appropriations.

## Remarks Following a Meeting With Iraqi Citizens

*January 18, 2006*

Listen, thank you all for coming. It’s been my honor to visit with folks who know firsthand the brutality of Saddam Hussein. These are folks who have suffered one way or the other because the tyrant was a law unto himself and was willing to deny people basic human rights. The stories here are compelling stories. They’re stories of sadness and stories of bravery.

In the course of our discussion, we were also able to talk about what a contrast it is between a society which was willing to jail people, torture people, and beat people and kill people, to a society that is beginning to understand the fruits of democracy and freedom.

Last year was an amazing year in Iraq. Millions of people went to the polls to vote, first in January, then to ratify a Constitution, and then back to the polls again to elect a Government under the new Constitution. It’s a testimony to the courage of the Iraqi people. Obviously, we still have got work to do and fully intend to do it.

And one of the interesting moments will come here this year when Saddam Hussein’s trial is brought forth for the world to see, to see the butcherer, the person who brutalized many people or ordered the brutality of many people here at this table, get his due justice under rule of law.

And so I want to thank you all for coming. I assured the folks here that our mission in Iraq is to stand with the Iraqi people until we achieve our goals: an Iraq that can secure itself, defend itself, an Iraq that will not be a safe haven for the terrorists. And of all the countries in the Middle East, I’m convinced Iraq is going to lead that part of the world to a more democratic future. The Iraqi people are brave and courageous and smart people.

And so thank you for being here. Thank you for sharing your stories. I appreciate it very much.

NOTE: The President spoke at 11:50 a.m. in the Roosevelt Room at the White House. In

his remarks, he referred to former President Saddam Hussein of Iraq. A tape was not available for verification of the content of these remarks.

## Letter to Congressional Leaders on Continuation of the National Emergency With Respect to Terrorists Who Threaten To Disrupt the Middle East Peace Process

January 18, 2006

*Dear Mr. Speaker: (Dear Mr. President:)*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent to the *Federal Register* for publication the enclosed notice, stating that the emergency declared with respect to foreign terrorists who threaten to disrupt the Middle East peace process is to continue in effect beyond January 23, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on January 21, 2005 (70 *FR* 3277).

The crisis with respect to the grave acts of violence committed by foreign terrorists who disrupt the Middle East peace process that led to the declaration of a national emergency on January 23, 1995, as ex-

panded on August 20, 1998, has not been resolved. Terrorist groups continue to engage in activities that have the purpose or effect of threatening the Middle East peace process and that are hostile to United States interests in the region. Such actions constitute an unusual and extraordinary threat to the national security, foreign policy, and economy of the United States. For these reasons, I have determined that it is necessary to continue the national emergency declared with respect to foreign terrorists who threaten to disrupt the Middle East peace process and to maintain in force the economic sanctions against them to respond to this threat.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate. The notice is listed in Appendix D at the end of this issue.

## Remarks on the National Economy and a Question-and-Answer Session in Sterling, Virginia

January 19, 2006

*The President.* Thanks for having me. Please be seated. Thanks for coming to say hello. What I thought I'd do is share some thoughts with you and then answer questions for a while. Before I do, I want to

thank Randy and the Loudoun County Chamber of Commerce for setting this up. I appreciate you all coming.

I've got something to say, and I hope you do as well, as we have a conversation

about how to make sure this economy of ours continues to stay robust and strong, so people can find work and realize their dreams.

Before I talk about the economy, I do want to say Laura sends her regrets. She came home last night about 12:45. She just came back from Africa, where she and my daughter Barbara and Condi Rice went to witness the swearing-in of the first elected woman President on the continent of Africa. They had a great trip. She said it was an inspiring inauguration. I just wish she'd have tiptoed in a little quieter. [Laughter]

She's doing great. You know, one of the best things about the Presidency is how close our family has remained and how wonderful a wife and mother she is. And the American people are getting to see that.

Speaking about families, Chuck Kuhn's family is pretty remarkable, turns out his mother works for him. [Laughter] That's the opposite in my family. [Laughter] I need a little advice on how to—[laughter]—restructure the chain of command in the Bush family. [Laughter] But I love being here in a place where a guy who had a dream at age 17 years old—that's how old Chuck was when he started to act on his entrepreneurial instincts—said, "If I work hard and if I'm smart and if I figure out what the market wants, I can build something that I call my own." And 23 years later, we're standing, obviously, in what has become a very successful business enterprise, successful because he is thriving and expanding, successful because he has provided people a good place to make a living. And so I want to thank you, Chuck, for being a great entrepreneur.

I want to thank the folks who work here for setting this deal up. I'm here to talk about how to make sure that America is the place where the entrepreneur can succeed. That's what we're really here to discuss, isn't it? And it's a wonderful place to have that discussion.

Before we get there, I want to thank the attorney general, Bob McDonnell, of the State of Virginia—the Commonwealth of Virginia for being here. Appreciate you. He's sitting next to an old Governor buddy of mine, Bill Graves. He was the Governor of Kansas during the time I was the Governor of Texas. And I used to remind him he made a really smart move when he married a woman from Texas. [Laughter] Still married, aren't you? Yes. [Laughter] Good move—[laughter]—the best deal that's ever happened to you. It's great to see you. Bill is the president and CEO of the American Trucking Association.

I want to thank all the other State and local officials who are here, but most importantly, I want to thank the small-business owners who are here.

I was interested to find out that Loudoun County is the home of 10,000 small businesses, 80 percent of which have got 10 employees or less. It's pretty strong, isn't it? Amazing. Probably one of the reasons why you're growing so fast is that people realize this is a good place to take risk, and that's really the role of government, when you think about it.

I like to tell people the role of government is not to try to create wealth; that's not the role of government. Oh, sure, the role of government is to help the poor and help the elderly with medicine, but it's not to try to create overall wealth. The role of government is to create an environment in which people are willing to risk capital, to take risk, an environment in which people are willing to work to realize their dreams, just like here at this trucking company. That's the fundamental policy, the principle on which I'm basing my decisions as I ask Congress to think about how to make sure the economic growth that is now prevalent in America continues.

We have got a robust economy, but it wasn't necessarily going to be that way; when you think about what we've been through, it kind of helps point to what good policy may be. We've been through a stock

market correction. We've been through corporate scandals, which affected the confidence of people. We have been through a terrorist attack, which hurt our economy. We have been through war. We've had significant natural disasters. All of which could have sent us into a downward spiral had we not put good policy in place.

We've overcome these issues, and I believe one of the main reasons why is because we let people keep more of their own money. I asked Congress for tax relief. I believe strongly that if the entrepreneurs of America have more money in their pocket, they will use it to expand their businesses. I believe more—very strongly that if a consumer has more money in their pocket, they will demand extra goods and services. And when somebody demands an extra good and service in a market economy, somebody is going to produce it to meet that demand.

And so I went to Congress and said, "Look, we've got problems; let's be aggressive about how we address it; let's cut the taxes on everybody." I remember the debate. They said only some people should have tax cuts. So we lowered rates for everybody. If you all have tax relief, everybody who pays taxes ought to get relief; you ought not to try to play favorites with who gets it and who doesn't get it.

We mitigated the damage of the marriage penalty. I always thought it was a little contradictory to have a Tax Code that discouraged marriage. Seems like to me we ought to encourage marriage in this country, and the Tax Code ought to encourage that.

We lowered taxes on dividends and capital gains because we want to encourage investment. We put the death tax on the road to extinction. The death tax is a punitive tax for small businesses and farmers and ranchers. It's a tax you pay; you know, you're paying income tax when you're making money. You're paying tax to the Government; that's fine. And then you die, and then your heirs get to pay it all over again,

and that doesn't seem fair. It seems like to me that you want a tax system that encourages families to be able to—a family member to pass their assets on to whom-ever they choose without the Government making it impossible to do so. And so the death tax was put on its way to extinction. I said, put on its way to extinction; the problem is the way the law was written. It's coming back to life in 2011, which is going to make some interesting estate issues, particularly in 2010.

We increased the child credit. We want to help families who have got children. One of the things that's really important for Congress to recognize is that most new jobs in America are created by small businesses. If you're interested in job growth, then you've got to be thinking about, where's the engine for growth? And it's the small-business owner. Seventy percent of new jobs in America are created by small-business owners and entrepreneurs. Many small businesses pay tax at the individual income tax level, sole proprietorships, subchapter S, you know. These are structures in which people are able to grow their businesses, but they're advantageous to the owners of business. And yet you pay individual income tax rates.

So when you hear me talking about, "We cut taxes on individuals," you also have to recognize we cut taxes on small businesses. And if you want there to be job creation to offset the trauma that our economy has been through, our country has been through, then it makes sense to say to the job creators, "Here's a little more money for you in your pocket."

We also encouraged investment. You might remember, we made it tax advantageous to increase investment in plant equipment if you're a small-business owner. All the policies that I'm describing to you were aimed at saying to the small-business sector, "We understand your importance; here's how to help you grow."

The other thing that you've got to understand in Washington is that you hear a lot

of debate about the deficit, and it's an important debate, don't get me wrong. But in my judgment, the best way to solve the deficit is to grow the economy, not run up your taxes. See, there is a myth in Washington; they say, "All we've got to do is just raise the taxes a little bit, and we'll solve the deficit." No, that's not how it works. They're going to run up your taxes, but they're going to find new ways to spend the money and not solve the deficit. That's how Washington works.

The best way, it seems like to me, to solve the deficit is to keep progrowth tax policies in place and do something on the spending side. And so I'm working with Congress; and I want to thank the Speaker and the Leader for supporting and passing lean budgets. I say "lean" because we've got one aspect of our budget that is not going to be lean. And that is any time we've got a kid in harm's way, he or she is going to have the best equipment, best training, best possible pay. That's what we owe the families of our military.

But on nonsecurity discretionary spending, we've slowed it down every year I've been in office. And, actually, the nondiscretionary—nonsecurity discretionary spending—I'm from Texas—[laughter]—is lower in '06 than it was in '05. We've actually reduced nonsecurity discretionary spending. The issue for the budget is mandatory spending. See, that's when—that means you don't have discretion over it; it's fixed by formula. The two biggest programs we face, of course, are—for mandatory spending increases—are Medicare and Social Security. And we're going to have to do something about it, and a lot of folks in Washington don't want to do anything about it. It's too hard, politically.

I want to share some thoughts with you about my view of "too hard, politically." I think we're supposed to do the hard things, politically. I think the job of a President and jobs of leaders in Congress from both political parties should—confront problems now and not pass them on to

future generations. And we've got a problem with Social Security and Medicare, and I'll tell you why. We've got a bunch of baby boomers like me getting ready to retire. As a matter of fact, I'm 62 years old in the year 2008. It's a perfect fit. [Laughter] And there are a lot of us. I'm looking at some of them here. And we've been promised greater benefits than previous generations.

The politicians that ran for office said, "Vote for me; I'll make sure your Social Security benefits go faster than the rate of inflation." And as a result of a lot of us retiring and fewer people paying the system, the deal is going broke. And it's hard for me to travel our country and look at hard-working people paying payroll taxes to a system that I know is going broke. And it should be hard for Republicans and Democrats on Capitol Hill as well.

And so I just want to assure you that no matter how hard it may seem for some, I'm going to keep talking about it. That's the job of a President, is to remind people of the challenges.

There's a long-term deficit issue as a result of a system which is out of balance and out of kilter, and we need to do something about it now. We have that obligation. The Senate has the chance—or the House now has the chance to pass a budget bill, or an appropriations bill, reconciliation bill that actually starts to cut mandatory spending by making reforms. The deal passed out of the House, passed out of the Senate. Now it has to go back to the House. And it would be a good-faith gesture on people from both political parties to say, "We see we've got a problem on mandatory spending; why don't we start reforming the system for the sake of future generations of Americans."

Things are going well, by the way, in the economy. We added 4.6 million new jobs since April of 2003. What I'm telling you is, the tax plan is working, and here's why I can say it to you without having to throw some hot air your way. Since April

of 2003, 4.6 million new jobs have been created, not by government, but by entrepreneurs. We had a national unemployment rate of 4.9 percent; I think it's 2 percent, 2-point-something percent here in Loudoun County. But think about—[applause]—the economy grew at 4.1 percent in the third quarter. And that's in spite of high energy prices, or higher energy prices and two storms. Think about that. Think of how robust our economy is when it's growing at 4.1 percent in the third quarter of this year, in the face of storm and high energy prices. It's got to affect your business, doesn't it, all those high energy prices. And yet you're growing.

In other words, we've got an economy which is robust. The interesting statistic is the manufacturing activity has been up for 31 straight months. You hear a lot of talk about manufacturers and the trouble with manufacturers, and of course, there are some trouble. But we've had growth for 31 straight months. Productivity is up. That's a really important statistic for our country because productivity—as a worker becomes more productive, as the workforce is more productive, higher wages follow. That's just a fact of life.

Do you realize that from 1973 to 1995, productivity in America grew at 1.4 percent. At that rate, the standard of living doubles every 50 years. Today, our productivity is up, averaged 3.4 percent over the past 5 years. In other words, we're more productive as time goes on. Technology enables our workers to be more productive. Education enables our workers to be more productive. Smart business leaders are constantly trying to figure out how to make their companies more productive. The more productive a workforce is, the faster incomes go up.

So what I'm saying is, things are going fine. I mean, you know, we've got more minorities ever before in our country owning their own home. Homeownership is on the rise. And the fundamental question facing us is, what do we do to keep it going?

What do we do? Well, first thing is, Congress needs to make the tax relief permanent. You know, this relief is set to expire. The easy course is, of course, say, "Well, then just let it expire." That's a tax increase if the tax relief expires. When you hear people say, "Well, we're not going to make it permanent," what they're telling you is they're going to run up your taxes; that's what they're saying.

Failure to make tax relief permanent is a tax raise on the working people and the small businesses in this country. If you're a small-business owner, there's got to be certainty in the Tax Code. Congress needs to put themselves in the shoes of people who are trying to plan. Good businessowners, good small-business owners don't think, you know, 2 months in advance; they think years in advance. They're making capital schedules; they're thinking about how to grow their company; they're constantly strategizing. Uncertainty in the Tax Code makes it hard for the small-business sector to stay confident and to make investments. And when there is uncertainty, it makes it harder for this economy to show steady growth.

So people need to make this tax cut permanent so we don't take money out of your pocket. And we need to make the tax cuts permanent so there will be certainty when it comes time for small businesses to plan.

I understand there's a problem in health care, and I suspect during the question-and-answer, we'll get questions on health care. One of the biggest problems our small businesses have is the increase in health care. The role of government, in my judgment, is to take care of the poor through Medicaid and community health centers. The role of the government, in my judgment, is to take care of the elderly through a Medicare program which is modern and, by the way, provides choices for our seniors. But I also think the role of government is to encourage a direct relationship between the consumer/the patient, and the

provider/the doctor, without a lot of go-between.

I think that—I know that small businesses should be allowed the same affordability of health care that big businesses get by being able to pool across jurisdictional boundaries, pool your risk. If you're a restaurant owner in here—Loudoun County and a restaurant owner in Crawford—I think there are a couple of restaurants here. [*Laughter*] If not, there will be. No, there is a good one, the coffee shop—I mean, Coffee Station, excuse me. But they should be allowed to pool their risk across jurisdictional boundaries. In other words, the larger the risk pool, the more employees you're able to get in a risk pool, the easier it is to manage your costs when it comes to health insurance. You can't do that now. And Congress should be allowed—encourage you to be able to pool risk.

An interesting product available is called health savings accounts. I strongly urge every small-business owner here to look at them. It's an innovative product that enables the small-business owner and the employee to combine, work together to come up with a plan where the employee owns it. It provides for a high deductible catastrophic plan, coupled with tax-free contributions in the plan, basically gives the consumer control over his or her medical decisions. The plan can grow tax-free, which is an encouragement for people to make wise decisions about how they treat their body. If you have a catastrophic event, the insurance kicks in and covers it. It's portable; if you change jobs, you can take it with you. It's a good—it's an interesting idea.

It certainly stands in stark contrast with a system in which the Federal Government gets to make the consumers decisions, or tells the providers what they can charge. It's the opposite of Federal control; it is patient control.

We need—do a lot on information technology. The health care industry is ineffi-

cient in that you've still got people filing out forms with handwritten notes. And doctors can't write anyway—[*laughter*—and it creates a lot of confusion, as you can imagine.

We need to have legal reform. I mean, you can't have a legal system—I mean, a medical system that's available and affordable when you've got your doctors being sued. Do you realize we've got a crisis when it comes to ob-gyns in America? These good docs who have got the great compassionate job of taking care of youngins, they're getting run out of business because of frivolous and junk lawsuits. It makes no sense.

When I first came to Washington, I said, you know, "This is a State issue." But the problem with all these junk lawsuits is that they cause doctors to practice defensive medicine. In other words, they prescribe more than they should because they're afraid of getting sued. And when you practice defensive medicine, it makes the cost of medicine go up. And when you couple that with increasing premiums, it costs us a lot of money at the Federal level, I'm talking billions a year as the result of junk lawsuits.

And good small-business owners have trouble affording health care; part of the reason why is because of these junk lawsuits. And so I've decided this is a national issue that requires a national response. We need medical liability reform in Washington, DC, so that health care is available and affordable.

Laura always says I get too long-winded when I come to one of these deals—[*laughter*—and so I'll try to rein it in here. I've got something to say, though.

We've got to do something about lawsuits, in general, not just medical lawsuits. One of the things I hear a lot from small-business owners is they're afraid of getting sued. I mean, we've got a society which is litigious in nature. People are just suing right and left. That makes it—that runs up the cost of staying in business. It makes

it harder for people to work. Of course, if you have a legitimate lawsuit, you ought to get—you know, have your day in court. Everybody understands that. It's just these frivolous lawsuits.

And we're trying to do some things about it in Washington. We've got a class-action lawsuit reform passed. We're trying to get asbestos reform passed. We got bankruptcy passed. We got manufacturers liability passed when it comes to firearms. I mean, we're making some progress when it comes to lawsuit reform. I urge the attorney general here to—urge the Governor in the Commonwealth to pass good lawsuit reform as well. It's a really important issue for the vibrancy of our economy.

Now, energy, real quick—look, we're hooked on foreign sources of oil, and we need to do something about it, pure and simple. I've got a strong faith in technology being able to lead us away from a hydrocarbon society. It's going to take awhile. But the Federal Government has a role to invest in research and development. I envision a day when we're using corn, corn husks, different kind of grasses to be able to convert that into energy.

Down in Brazil, they've got enormous amounts of energy they get from their sugarcane. Their automobiles are flex-fuel automobiles; they're able to convert from gasoline to ethanol made by sugarcane on an easy basis. I mean, it's coming. And the role of the Federal Government is to encourage these new technologies, to be able to make us less dependent on foreign sources of oil.

We need to be—we ought to have more nuclear power in the United States of America. It's clean; it's renewable; it's safer than it ever was in the past. And we need to be thinking about how we can use solar batteries better. I mean, there's a lot of things we can be doing. I'm confident that with the right policies and the right incentives, technology will help us diversify away from a hydrocarbon world.

But we've got plenty of certain kinds of hydrocarbons we can use—coal. I'm also convinced, with the right expenditure of money, that we'll be able to have zero-emissions coal-fired plants that will make us less dependent. Do you realize we've got about 250 years of coal here in America? It seems like to me a wise investment is to figure out how to use that coal in a way that heats your homes and fuels your businesses and, at the same time, protects the environment. So we have to think about how to incorporate new technologies to diversify away from foreign sources of energy, not only for economic security but for national security purposes.

I want to talk real quick about trade. I believe it's important to open up markets. I think it's a mistake for this country to go isolationist when it comes to economic policy. Do you realize we're 5 percent of the world's population, which means 95 percent of the rest of them could be customers, so long as we've got a level playing field. My job is to make sure that if you're producing a product, that it has fair access to markets. We ought to treat people—people ought to treat us just like we treat them. And I'm a strong believer that if the playing field is level, this country can compete with anybody, anytime, anywhere. And if we can't, we ought to figure out why not. Competition is good, so long as it's fair competition.

And finally, I want to talk about education. As you expand your businesses, as they become—you know, as they change because of technology, you're going to need a workforce that is capable of filling the jobs. We've got to make sure we get education right in the United States; otherwise, the jobs of the 21st century are going to go somewhere else. This is a competitive world in which we live; there's no way to deny that there's competition in the world. We can play like it. We can put up, you know, foolish, short-term economic policies that will hurt the small-business sector, protectionist policies. But it's a competitive

world, and people are going to go to where the skill sets of the labor market are such that they'll be able to produce the products of the 21st century. It's a reality.

So what do you do about it? Well, the first thing you do about it is you make sure your kids at the elementary school get an education; teach them how to read, write, and add and subtract. The No Child Left Behind Act is a great piece of legislation. I think as small-business owners, you'll understand where I'm coming from. It says, you've got to measure to determine whether or not you're succeeding.

I was concerned when I was the Governor of Texas that we had an education system that didn't measure, and therefore, we didn't know. And oftentimes when you don't know whether a child can read and write and add and subtract, they just end up being shuffled through the system. I believe that we ought to measure. As a matter of fact, we are now measuring as a result of the No Child Left Behind Act that says, "We want to determine whether or not you can read at grade level by the third grade and whether or not you're grade level at the fourth grade and the fifth grade and so on. And if not, here's some money to help you make sure the child is up at grade level."

You cannot solve a problem until you diagnose a problem. And the No Child Left Behind Act is a diagnostic tool for local school districts. We're not telling you how to run your schools; that's up to you. We didn't design a Federal test; we just said, "You design an accountability system." And it's working. We have an achievement gap in America that is not right and needs to be closed. We have too many African American kids not reading at grade level, and they should be. And I say a lot of that is due to just moving kids through without determining early whether or not they've got the skills necessary to read, write, and add and subtract. And we're changing that. The achievement gap is closing. It's a really positive development. I

can tell you how I know, because we measure, and we solve problems early, before it's too late.

We've got to have these same high standards in high school, with an emphasis on math and science. We've got to use our community college systems to constantly upgrade the skills of people. As you know, the job market changes. And the easiest thing for a society is to have technological change; the hardest thing is to make sure that the education systems are flexible enough to help the job market change with technology.

Community college is a great asset in our country. They're available; they're affordable. And if they're run right, they have a curriculum that changes with the times. They're not one of these institutions to just stay stuck. They're an institution that says, "We're going to change our curriculum to be able to educate people for the jobs which actually exist." That's what we need to do, what I'm telling you.

So I'm going to go to Congress here pretty soon and call on them to put economic policy, energy policy, health policy in place that understands that this economy is strong, but we need to do the right things to keep it going, with the centerpiece of our economic policy being the small business in America.

Anyway, that's all I've got to tell you right now. I'll be glad to answer a few questions. Yes, sir.

#### *Transportation*

Q. [Inaudible]

The President. Thank you.

Q. [Inaudible]

The President. You have got a transportation problem here.

Q. [Inaudible]—northern Virginia. Downtime in traffic is loss of productive time for businesses, and it's time away from home and family for individuals. We don't get to use helicopters. [Laughter]

The President. Right. I won't in 3 years, either. [Laughter]

Q. How can the Federal Government help States and localities address transportation problems?

*The President.* We passed the highway bill, and it's set. Congress argued about it, and I argued with them about it. And it's a \$270 billion-plus bill that is the law for a period of time, and now it's up to you to spend the money allocated to you by formula in a wise way. I think it's an issue where the Federal Government's responsibility is clear on the law. And that is that we take the gasoline taxes and pass them back to you, but you get to decide where the roads go. And that's probably the way it should be.

I was noticing that the inauguration—or the campaign for Governor here, part of the campaign was roads. And that's good; that's the way it should be. People say, "Vote for me; I'm going to do something about your roads," or, "I hear your problem with your roads." And so you want the decisionmaking about the roads to be here at the local level. But the Federal Government's role in highways is pretty well fixed for 5 or 6 years.

Yes, sir. Go ahead and yell it out.

#### *Taxation/Public Accountability*

Q. Yes, good morning. I'm a CPA here in Loudoun County.

*The President.* Right.

Q. [*Inaudible*—prepare a couple hundred tax returns a year, and the IRS does not spend a lot of time auditing. The last administration turned the IRS into a customer service department. And here, the last 3 years, it's been reorganized. There's quite a few people that do not comply. I really think that the IRS needs to get out there and audit. I hope none of my clients are here. [*Laughter*]

*The President.* That's a very unbelievably interesting statement from a—[*laughter*]. No, but you've got a good point. Look, here's the point the man is saying. He's right. There are too many honest people—first of all, there are people who feel like

they don't have to pay taxes, and that's not fair to the millions of honest people who do. A tax system is—[*applause*].

Look, I don't know the inner workings of the IRS; I know there is strong enforcement. And with the millions of filings, I would suspect there's programs in place that highlight irregularities that then call up the audits. I don't think you can ever audit everybody, nor would you subscribe for everybody being audited who files a return. But if there's flagrant anomalies in reporting, I suspect they take a good look at it.

You'll be pleased to hear that I'm audited every year—[*laughter*—one way or the other. More than happy to put out my income tax returns for my friends in the press to scrutinize. [*Laughter*] I see them nodding—yes, they love—[*laughter*—as it should be, by the way, for people in public office. Those of us in public office have the high responsibility to uphold the integrity of the process. And people ought to be held to high standards. In Washington, DC, there needs to be high standards for conduct of public officials.

Yes, sir.

#### *Homeownership/Market Adjustments*

Q. [*Inaudible*]

*The President.* Homebuilder, good.

Q. [*Inaudible*—substantially over the past housing boom. And I guess my question is, as the consequence of this great housing boom has increased the cost of housing so much, not only in this area but throughout the country, it's very difficult for me to envision my kids being able to afford a home, or even the workforce that drives much of, you know, our school systems and our police and fire forces—[*inaudible*]. How do you see the Federal Government helping this workforce out—[*inaudible*—to be able to afford housing close to where their jobs are?

*The President.* Markets adjust, and the role of the government is to make sure the market is able to adjust in a way that

is not precipitous and disruptive. When you have wage and price controls, for example, in history, it's tended to not allow the market to adjust in a smooth function, a smooth way. It doesn't function properly. And therefore, the consequences of government trying to either manage price or demand is very severe.

So to answer your question, one role of the government is to make sure that markets are given the flexibility to adjust in a way that doesn't cause major disruption. If houses get too expensive, people will stop buying them, which will cause people to adjust their spending habits.

Secondly, setting of interest rates affects your business. You'll be happy to hear that the White House doesn't set interest rates; the Federal Reserve Board sets interest rates. I get to name the Chairman; I named a good guy in Ben Bernanke. But it's their job to be independent from the political process and look at market forces—in all aspects of our economy—to determine the interest rate to be set. Obviously, they look at inflation, consumer demand, et cetera.

And so to answer your question, a simple answer is let the market function properly. Let the market function properly. I guarantee that your kind of question has been asked throughout the history of homebuilding; you know, prices for my homes are getting bid up so high that I'm afraid I'm not going to have any consumers—or my kid—and yet things cycle. That's just the way it works. Economies should cycle. We just don't want the cycles to be so severe that it gets disruptive so that, you know, you get thrown out of business, for example, or somebody gets thrown out of work.

Yes, ma'am.

### *Health Care Reform*

Q. Thank you for coming to Loudoun County, Mr. President. I run a nonprofit that provides health care to the uninsured—

*The President.* Good.

Q. —something near and dear to your heart—45 million uninsured people in the country, and of course, Loudoun County is no different. We provide health care free by volunteer physicians who are involved in a nonprofit, and it's a good private-public partnership. You talked about creating health—[inaudible]—as part of the health care delivery systems. We, too, are part of health care delivery systems. How do you see your role and the government's role in helping us do what we do, when we've discovered recently that we're not going away anytime in the near future?

*The President.* Yes. Well, first, I think there ought to be—well, first, there are tax incentives to encourage people to contribute to your nongovernmental organization, which is good. That's what we want. We want people to have a Tax Code such that if you give to your group or a church, synagogue, or mosque, or somebody whose job it is to help the unfortunate, you get a deduction for it.

Secondly, the uninsured is—first of all, there's the working uninsured; a lot of them work for small businesses because small businesses can't afford insurance. A small-business owner would like to pay for the insurance, but the cost of medicine is increasing.

And I just gave you two prescriptions for that. One is—well, a bunch of prescriptions—to help control the cost and enable small businesses to be able to manage the expense. If you stand alone as a small-business owner—10,000 businesses, 80 percent of which have got 10 employers or less—and you try to buy insurance as an employer of 10 people, it's going to cost you a heck of a lot more than if you try to buy insurance with your 10 people in a pool of 5,000 people. It's just the way insurance works. It's called spreading the risk.

There are some in the uninsured world who simply choose not to buy insurance. That would be your bulletproof 22-year-old person—you know, just out of college—

[laughter]—“I’m never going to be sick; nothing ever bad is going to happen. I just don’t think I’m going to want any.” [Laughter]

Health savings account is an interesting opportunity for the young 22-year-old healthy person, who is able to put money aside, tax-free, and watch that money grow, tax-free, and take the money out of the health savings account, tax-free, coupled with a high deductible catastrophic health plan. In other words, this is a product that will say to those who choose, here’s an opportunity for you. You start putting aside \$1,000 a year; in other words, you buy a high deductible policy with a \$1,000 deductible, and you put the \$1,000 cash—you do or your employer does, or however you negotiate it—that \$1,000 grows. And it can grow to be pretty substantial, particularly as you’re a healthy person, over a period of time, tax-free. And all of a sudden, you’ve got quite a nest egg.

I’m going to call on Congress, by the way, to make these health savings accounts more attractive, more portable, more individualized.

There are some who come to our country that don’t have any health insurance but work. We’ve got immigrants coming that can’t afford health care. Their employers—the type of job they have is one that doesn’t lend itself to health care. One way the Government can help is to have community health centers as primary care facilities to deliver health care and take the pressure off the emergency rooms. We’re expanding these a lot. In my judgment, it’s a good use of taxpayers’ money to provide health clinics for the poor and the indigent, so that they don’t go to where the health care is more expensive, the emergency room, but go to where the health care—primary health is more manageable.

And so there’s a series of ways to address the issue. But the truth of the matter is, Government policy has got to aim at the increasing cost of health care.

Part of the issue in Medicare is the projections of health care costs going up the way they are. The issues that small-business owners face in the short term is increasing premiums. And so we need medical liability reform to help address the costs. We need to encourage information technologies, and I’m told that there would be a significant reduction of medical costs as we modernize medicine and bring medicine into the 21st century through the use of information technology.

Health savings accounts encourage consumers to pay attention to price. There needs to be transparency in pricing. Do you realize the medical field is one where you don’t do any comparative shopping? When you buy tile, I presume, for your house, you’re out there shopping it. You know, say, look, what am I bid? You know, when you’re buying pipe or things you put in the wall, insulation, you’re out there bidding price. There’s no transparency in pricing in medicine. You don’t know whether the guy next door is going to offer a better deal when it comes to some kind of medical procedure.

It seems like to me the more transparency in pricing, the more likely it is consumers will have an input into the cost of health care. And so these are ways to address the cost of health care. Obviously, as health care costs—the rate of increase is manageable, there will be less people coming in to see you.

One of the reasons why the uninsured is going up, because the cost is going up. And so the Government needs to address the cost. There is a debate in Washington. Some will say the way to address the cost is to have the Federal Government be the decider, the decider for the consumer and the decider for the provider, and that will be—in my judgment—terrible for this country. And so this is—we’re talking about a very important and interesting debate. And I’m going to continue pushing policies that address cost and empower the patient and the doctor into a relationship that is

not only good for the patient but also one in which, I think, will affect the pricing mechanisms and the prices here in the country.

Yes, ma'am.

*U.S. Armed Forces*

Q. [*Inaudible*]*—*and we're proud of you Mr. President, and your*—*

*The President.* Keep it up, will you? [*Laughter*] About time.

Q. [*Inaudible*]

*The President.* Thank you. [*Laughter*] It's always good to have a plant in every audience, you know? [*Laughter*]

Q. Well, the timing of this opportunity is uncanny. I want to thank you for your unwavering support of the Veterans Administration. My father spent the last 2 years at the Martinsburg, West Virginia VA, where he was loved and respected and so well cared for. And we buried him 2 weeks ago in Arlington, and it struck me then how strong the promise still is for our veterans and our wonderful men and women of the service. And I thank you.

*The President.* Thanks. You know what I thought just when you said that at first? Our country is great because we've got a lot of people who have been willing to serve. It's really important that we keep an all-volunteer military. And one way to do that is to make sure that people are paid well, or as good as you can pay them; that they're trained well; that their loved ones have got adequate housing on the bases—in other words, family life is good; that the education systems work on our bases. But also after service, there is a health care system that will provide modern health care for them.

So thanks for bringing that up. The Volunteer Army is really an important part of our Nation, and it's a really important part of fighting this war on terror. We've got kids who know the stakes. They saw the attack on September the 11th. They have made a conscious decision to swear in to serve the country. So thanks for bringing

that up. I just wanted to share that with you, to tell you that our troops are always on my mind; their families are always on my mind. And it's important to leave a legacy behind of a strong military based upon patriotic Americans saying, "I want to serve. I'm stepping up. Nobody is telling me to. I have made the decision to do so."

Yes, sir.

*President's Personal Values/Leadership*

Q. Good morning, Mr. President, thank you for being here. My son is one of those young men, at 18 years old almost—I hope I don't cry, but I*—*

*The President.* I hope you don't too, because I will as well, and then we*—*[*laughter*].

Q. Okay. He asked me to take him to the Army recruiter. He didn't drive yet, but he wanted to go to the Army recruiter to join the Army. He's in the National Guard in Christiansburg, Virginia. And he's also at the Virginia Tech Corps of Cadets.

*The President.* Oh, good, thanks. I know you're proud of him.

Q. Yes, I am.

*The President.* Good.

Q. He sends his best wishes to you.

*The President.* To the old Commander in Chief, that's a smart move, you know. [*Laughter*]

Q. He and I discussed a question, and I want to ask you. Most people in this room today are leaders of some type. I'm a leader of an adult education center for Marymount University. And my question to you is, how do you remain upbeat when you're surrounded by the burdens of leadership?

*The President.* Thanks. My faith and my family and my friends, for starters. I like going home to be with my family. I was teasing about Laura waking me up this morning at 12:45 a.m., but I'm glad she did. I take great pride in my little girls. I'm not going to talk about them too much; otherwise, these people will put it in the

newspaper. And I'm trying—[*Laughter*]. Right, Jackson [David Jackson, USA Today]? I'm trying to spare them because I think that one of the hardest decisions about going into public life is exposing people you love to the public nature of public life.

I'm proud to tell you that my friends that I knew before I became in public office are still my friends. One of the coolest things to do in my Presidential work, one of the—[*laughter*—seeing if you're paying attention up there—[*laughter*—things I like to do is to welcome my buddies, and Laura feels the same way—people we grew up with—we both grew up in Midland, Texas. I remember having some of my friends that I went to first grade with, a guy I grew up across the street with, Michael Proctor, they came up to have dinner at the White House. You know, and they kind of walk in there. You can imagine what it's like. It's a great honor, pretty awe-inspiring deal. They walk in there and, kind of, "What are you doing here, Bush?" You know. [*Laughter*]

But I really like it. And they're my friends. They help me keep—help me remind myself that what's important is what you believe. And leaders have got to know the core principles on which you'll make decisions, and you can't change. There's a lot of temptation to change to try to make people want to like you. That's not the job of a leader. The job of a leader is to know where he or she wants to lead and know the principles on which you'll make decisions.

I take great comfort in having people around me who can walk in my office and tell me what's on their mind. Part of my job is—they say, "What's your job?" My job is, decisionmaker. I make a lot of decisions, obviously, some of which you've seen, and a lot of them you don't. And they're big ones and little ones, but you make a lot of decisions. And if you don't—if you're uncertain about all the facts surrounding a decision, you've got to rely upon people.

And you've then got to create an environment in which people are willing to come in and say, "Here's what's on my mind."

It's important at the Presidential level. It's important in business. You've got to have people comfortable about saying, "Here's what I think you ought to do, Mr. CEO." You've got to listen and have a—I've always believed in a flat organizational chart. I think the worst thing that can happen for decisionmakers is to get a filtered point of view.

And it's pretty hard as President, needless to say, but I've got a group of people around me that are empowered to walk in. Condi Rice, when she walks in, she comes in as a close friend, but as someone who knows that our friendship will be sustained, whether she agrees with me or not. Rumsfeld comes in—and he's a crusty old guy who—[*laughter*—and he's got an opinion, and he tells it. And that's important. And that's the way it is throughout the White House.

I like to tell people, the first decision I made as President was this—the guy called me—I was at the Blair House looking at my Inaugural speech, trying to get comfortable with it, get ready to go; it was a pretty big event coming up, and wanted to make sure that it worked well. And he said, "Mr. President-elect, what color rug do you want in the Oval Office?" I said, "Man, this is going to be a decisionmaking experience. [*Laughter*] What color rug do I want in the Oval Office?" [*Laughter*] He said, "No, I'm not kidding you." Turns out Presidents design rugs. [*Laughter*] Or somebody designs them for them. And I said, "I don't know anything about rug designing," so I delegated to Laura. [*Laughter*]

Interestingly enough, the job of a leader is to think strategically. It's important for your businesses; it's important for the country. And so she said, "Tell me about the rug." And I said, "I want it to say, 'optimistic person comes here to work every day.'" It was the strategic thought for the

rug. She figured out the colors. It looks like a sun, with nice, open colors. You walk into that Oval Office, I think you're going to say, it looks like, you know, this guy is optimistic. I'm optimistic—by the way, you can't lead your company and say, "Follow me, the world is not going to be good." You're not going to have a lot of employees say, "Great, I love working here," you know. [Laughter] It's got to be, "Follow me, the world is going to be better, and I have a plan to do it."

And one reason I'm optimistic is because I'm sustained by my faith, family, and friends. I'm also sustained by the fact that I believe strongly in the values of the United States of America: human rights, human dignity, individuals count, freedom is the future of the world. And I'm sustained by those beliefs.

And thanks for the question. It was an interesting question.

Yes.

### *Broadband Technology*

Q. On behalf of the Loudoun County Board of Supervisors, we welcome you.

*The President.* Thanks. Thanks for having me. You don't look old enough to have run. [Laughter]

Q. I'm the youngest member of the board. [Laughter]

*The President.* Yes, is this your board, here?

Q. This is—[inaudible].

*The President.* Yes, you certainly are the youngest, I can—[laughter]. He's a pretty young guy too.

Q. And you probably know we've got health savings accounts for our county employees—[inaudible].

*The President.* Good move. Good move.

Q. But on transportation, one of the solutions that I've been putting forward is telework and expansion of broadband.

*The President.* Yes.

Q. [Inaudible]—so that people don't get caught in traffic. But Congress is contemplating revisions to the Telecommunication

Act of '96 that would essentially shut down the options that States and localities are exploring to give broadband to every business and every home. So what is your thought on, as we are falling behind in the world on delivering broadband to businesses and homes and residences—what will you do to—

*The President.* Yes, I need to find out—it's interesting you said that because I laid out the opposite vision, which was that broadband ought to be available and accessible all throughout the country by a set period of time. I need to make sure I understand what you mean—Congress is trying to unwind that vision, because it sounds like you and I share—I believe you. Thank you for the heads-up. I'll take a look.

You're very smart to—part of the role of government is to create an environment in which people are willing to risk capital. Broadband expansion is part of creating an environment in which it will make it easier for people to be competitive in this part of the world. It's a brilliant idea. People are able to do so much more from their home, particularly if you've got the technology capable of carrying information.

You're right—want to make sure—you mentioned that other nations are ahead of us. True, we're catching up, and we'll do better, by the way. But if—part of making sure America is competitive is to make sure that we've got broadband available and accessible. One of the interesting questions we're going to have is the last-mile issue, and a lot of that, hopefully, will be changed, or at least options—more options will be available with the development of a dish that is capable of passing broadband over the air, as opposed to cable.

Good question. I need to check and see what you're talking about, and will. Thanks for bringing it up.

Yes, ma'am.

*First Lady Laura Bush*

Q. [Inaudible]

*The President.* Yes, well—

Q. —who happens to be one of the best First Ladies we've had.

*The President.* Thank you. I thought you might say "top two," but you know—[laughter].

Q. Well, the top two.

*The President.* If not, I won't tell her. [Laughter]

Q. I was just wondering when we'll see our lovely First Lady run for the Senate in the—

*The President.* Never. [Laughter]

Q. Come on. Ask her, will you?

*The President.* No, I'm not going to ask her. Never. [Laughter] You know, I think—I'm pretty certain when I married her, she didn't like politics or politicians. [Laughter] She's a great lady. She's interested—she's not interested in running for office.

She is interested in literacy. We're going to meet with foundations later on today to encourage them to step in where government can't step in, in New Orleans and the gulf coast. Laura is coming to the meeting. And the reason why is she wants to help these schools get their libraries up. She was a school librarian, and she believes strongly in literacy.

I can remember her reading to the girls all the time. And I would encourage moms all over the country—and dads—to sit down and read to your young children over and over and over again. It's one of the lessons she taught me, right after she taught me how to read. [Laughter] She's great. Thank you for bringing her up. She's not going to run for office.

Yes, sir.

### *Democracy in the Middle East/Domestic Agenda*

Q. Mr. President, my wife, Sandy, and I send our prayers and our appreciation for all that you're doing and these difficult issues that you're dealing with. I'm a grandfather, about your age, but I have—

*The President.* You got started earlier.

Q. I got started a little earlier. And I'm really proud of my family. You touched on

a lot of issues that really affect us. We have a health care provider and an attorney in the building industry, in the defense industry, and a young grandson who is espousing to—[inaudible]—the Military Academy. We are very happy with the foundations that President Reagan and your father laid 23 years ago, about the time that—[inaudible]—started. We're building off of that today. We're living in that security, with a good defense system, and we have a strong economy, some of which extends from those days. Do you look forward—and what can I tell my grandchildren—do you look forward 20, 25 years from now and see a vision of America?

*The President.* Yes. I tell people this story a lot. When my dad was 18, he went to fight the Japanese. And some 60 years later, his son sits at the table with the Prime Minister of Japan to help keep the peace. Someday, I firmly believe that leaders in the broader Middle East will be duly elected and will be sitting down with future American Presidents to keep the peace.

So part of the vision for your children and grandchildren is to understand history and the power of democracy and freedom and liberty to change enemies into allies. And I talk about a lot in my speeches, laying the foundation of peace. And I firmly believe that what we're doing today is laying the foundation of peace.

I know that some say democracy can't take hold in parts of the world—"You're wasting your time, Mr. President." I strongly disagree with that. The natural rights of men and women—that's part of our founding—says that inherent in every soul, I believe implanted by a higher being, is the desire to live in freedom, no matter the color of your skin or the religion you embrace. And so part of the vision is to lay that foundation of peace by believing and acting on the principles that caused our own existence to be and on principles and values that have proven over time to yield the peace.

Think about Europe. It's hard for some of us to think about Europe because Europe didn't really affect our lives, did it, much. But if you look back over the recent history of the United States and the world, two world wars started in Europe. And today, Europe is whole, free, and at peace because of democracy, in my judgment. The Far East—[*applause*].

And the reason this is important is because we're in an ideological struggle. The enemy which attacked us on September the 11th was not just acting out of anger, although they were not acting out of hate, although I believe their hearts are hateful, but they were acting based upon an ideology.

The best way to make sure the American people understand what happens when their ideology takes hold is to think about life in Afghanistan under the Taliban. If you're a young girl in Afghanistan under the Taliban, you have no chance for success. You have no chance for education. If your mother speaks out in the public square, you get whipped—she would get whipped. These people have a vision that is the opposite of America. Their vision is, "Here is my view of religion, and if you don't agree with me, you're in trouble."

Our belief is, is that what matters is your view of religion; you can choose. The great freedom in America is the ability to choose your religion, to be religious or not religious. We're equally American—Jew, Muslim, Christian—we're all equally American in this country. That's the opposite of what these people think. They have got a strategy; they've got a goal, which is to spread this vision throughout the world, starting in the broader Middle East. I say it's to go from Spain to Indonesia, to establish their—a caliphate with their point of view. These are ideologues.

And so you defeat an ideology with a better ideology. If there's no competition, if there's a vacuum, if there's poverty, hunger, and anxiety and a vacuum is created because of that, this ideology will move in.

However, there is a competing ideology available. If there's an alternative for people to choose from, then all of a sudden, their march to their vision is impeded in the long run. And democracy is the alternative, liberty.

It's not American-style democracy. Japan didn't say, "Let's just look like America." Japan said, "We'll have a democracy that suits our needs." That's the way democracies develop. They develop with history and culture of the people in mind.

And so what you're seeing in Iraq is two-fold: one, a commitment to defeat an enemy overseas so they don't hit us again, coupled with allowing these Iraqis to live a dream of being free. And it's tough work. It's tough because some of the enemy are these ideologues that are trying to stop the march of freedom. Some of them are people that are irritated because Saddam is not in power. They liked it being the, you know, the power elite. Some of them are wondering whether or not—the Sunni rejectionists are wondering whether or not they'll even have a say in the future government and, therefore, are nervous given the dynamics and the demographics. But some of them are people there intent upon destroying the advance of democracy because they understand—they know that they can't compete with liberty.

And the amazing thing that happened last year that I hope—at least gives me heart is that millions of Iraqis made a choice. They defied terrorists. We see them. The terrorists have got a weapon; it's called our TV screens. These people are coldblooded killers, I'm telling you. As you know, I don't need to tell you that. And what they're trying to do is they're trying to drive us out before democracy can take hold because they understand—I haven't talked to one so I'm not exactly sure—I'm putting words in somebody's mouth. I would suspect, though, deep in their soul, they understand they can't compete. Their ideology cannot compete with liberty.

And so to answer your question—it's a long answer, but it's an important question. The President has got to be thinking down the road. We've got a short-term battle we're going to win, but there's a long-term struggle as well. It's an ideological struggle.

At home, I think two things that I would like to be remembered for, and one is promoting ownership. I want people to own something. I want people owning their own small business. I want people owning their own homes. I think people ought to be allowed to own their own health care account and make decisions for what is best for them. And there ought to be incentives. I know a vibrant Social Security system is one in which people are able to take some of their own money if they so choose and put in a personal savings account so they can get a better rate of return on their own money than the Government can get through the Social Security trust. But more importantly, I want people owning something.

I'll never forget going to a Mississippi automobile manufacturing plant. And I was on—a lot of the floor workers there, you know. And I said, "How many of you own your own 401(k)?" Just needless to say, it was a very diverse audience. I don't know, I'd say 95 percent of the hands went up—men, women, black, white. I said, "How's it feel to own your own assets?"

See, one of the problems we've had that shows—what we found out in New Orleans—there's not—there wasn't a lot of—we take—some things we take for granted, like the generations passing assets from one generation to the next just didn't happen in the African American community, and should. We ought to encourage—we take that for granted, don't we? Some of us do. You know, you pass the house on. A lot of these people didn't own their own homes. A lot of them didn't have checking accounts. And yet one of the things we ought to encourage is systems—is reforms that enable somebody to own something so they can pass it on to their child. It's

part of creating stability and healthy families and strength. And so I want to be known as an ownership guy.

I also want to be known as the person that kept the de Tocqueville vision for America alive. De Tocqueville was a Frenchman. He came to America in the 1830s, and he studied America, and he came away impressed by our democracy, but really impressed by the fact that people came together to serve a greater cause through voluntary organizations. People said, well, how best to help—in a vibrant society, help a neighbor? And that is, they formed what you call voluntary organizations to help a neighbor in need. The great strength of this country is the fact that there are millions of loving souls in America who are willing to reach out to somebody in need.

I always say, government can't love; it's just not a loving organization. There are people who work for government who have love in their heart, but government, itself, is not loving. It ought to be law and justice. In my judgment, government ought to be constantly thinking about ways to rally what I call the armies of compassion, so that light can head into the dark corners of our country, so that people who have heard the call to love a neighbor are empowered to do so and encouraged to do so.

One of the most—I think one of the most important and interesting domestic initiatives, which I agree has created an interesting philosophical debate, is to allow faith-based programs and community-based programs to access Federal money in order to achieve the results we all want. I mean, for example, if you're trying to encourage people to quit drinking, doesn't it make sense to give people—somebody an alternative? He can maybe go to a Government counselor; or how about somebody who calls upon a higher being to help you quit drinking? All I care about is the results. And the Government ought to be—

So to answer—and that’s a long answer, and, by the way, it’s my last answer, because you’re paying me a lot of money, or probably—[*laughter*]. I’m not going to argue about my salary. [*Laughter*] But I’ve got to get back to work. I do want to thank you for your interest. I hope you can tell I understand the importance of making sure America is entrepreneurial heaven.

You know, one of the things that I love when I travel the world is you can get a sense for the country by asking questions. One of the things about our country is it’s a place where you can start with zero, you start with a dream and a good idea—in this case, a good mom and dad—and take risk and realize your dream. And it’s really important we keep it that way forever.

America has got to be a place where dreamers can realize their dreams, and I love being in the midst of dreamers.

Thanks for letting me come by. God bless you all.

NOTE: The President spoke at 10:06 a.m. at JK Moving & Storage. In his remarks, he referred to Randy Minchew, chairman, Loudoun County Republican Committee; President Ellen Johnson Sirleaf of Liberia; Charles Kuhn, president, chief executive officer, and founder, JK Moving & Storage, Inc., and his mother, Shirley; Linda Graves, wife of former Gov. Bill Graves of Kansas; Gov. Timothy M. Kaine of Virginia; Prime Minister Junichiro Koizumi of Japan; and former President Saddam Hussein of Iraq.

## Remarks Following a Meeting With Foundations Involved With Gulf Coast Recovery

January 19, 2006

Laura and I are so thankful that Dr. Francis and Leland Speed—Dr. Francis is from Louisiana; Mr. Leland Speed is from Mississippi—are here to brief not only Don Powell and myself and Laura but also members of the compassion community here in America. We’ve got charities from all across the country, foundations from all across the country who have come to listen to the needs of the good people in Mississippi and Louisiana and the gulf coast region.

Don and I talked about the commitment of the Federal Government; we’ve committed \$85 billion thus far. But we also made it very clear that we’re going to need the help of—the continued help, I might add, of America’s charities and foundations. Part of making sure the money is spent well is to hear from the local folks about what is needed; how can we help; how best can the money be spent.

And that’s exactly what we’ve done today. We’re going to make sure that the Federal money is spent wisely and local money and charitable money is spent wisely as well, all aimed at making sure that the folks in Louisiana and Mississippi get back on their feet and this vital region of our country is up and running again. There’s no doubt in my mind that out of this incredible devastation will come a better tomorrow.

And again, I want to thank all the people who have taken time out of your busy schedules to come and show your interest and represent your foundations and let the good folks know, in that troubled part of the world, that their voices of despair and concern are being heard all around the country.

So thank you all for coming. I appreciate it very much.

NOTE: The President spoke at 2:07 p.m. in Room 350 of the Dwight D. Eisenhower Executive Office Building. In his remarks, he referred to Norman Francis, chairman, Louisiana Recovery Authority; Leland Speed, director, Mississippi Development Authority;

and Donald E. Powell, Chairman, Federal Deposit Insurance Corporation, in his capacity as coordinator of Federal gulf coast relief efforts. A tape was not available for verification of the content of these remarks.

## The President's Radio Address *January 21, 2006*

Good morning. This past Thursday, I visited a thriving company in Loudoun County, Virginia, named JK Moving & Storage. I met with the owners and workers and with small-business people from the area, and I discussed my agenda to keep America's economy growing and to help our small businesses stay vibrant and strong.

Our agenda for growing the economy and helping small businesses starts with wise tax policy. Our economy grows when American workers and families can keep more of their hard-earned money to spend, save, and invest as they see fit. Small businesses create most of the new jobs in our country, and tax relief helps them as well, because most small businesses pay taxes at individual income tax rates.

So after I took office, we cut taxes on everyone who pays income taxes, leaving more money in the hands of workers and families and giving small businesses more resources to expand and hire. We increased the tax incentives for small businesses to invest in new equipment, and we cut taxes on dividends and capital gains. We also put the death tax on the road to extinction, because farmers and small-business owners should not be taxed twice after a lifetime of work.

Thanks to tax relief, spending restraint, and the hard work of America's entrepreneurs and workers, our economy today is strong. We've added over 400,000 jobs in the last 2 months and over 4.6 million jobs since May 2003. Our unemployment

rate is now 4.9 percent, lower than the average rate of the 1970s, 1980s, and 1990s. Our economy grew at 4.1 percent in the third quarter of 2005, and it has been growing at nearly that rate for 2 years. Real after-tax income has grown 7 percent per person since 2001. Productivity is high; inflation is contained; consumers are confident; and more Americans now own their homes than at any time in our Nation's history.

Unfortunately, just as we are seeing how our tax cuts have created jobs and opportunity, some in Washington want to repeal the tax relief. Others want to just let it expire in a few years. Either way, they want to raise your taxes. If that happens, families across America would see their taxes increase dramatically. Small businesses would also pay higher taxes, which would mean less money to hire workers and buy new equipment. To keep our economy growing and our small-business sector strong, we need to ensure that you keep more of what you earn, so Congress needs to make the tax cuts permanent.

For the sake of America's small businesses, workers, and families, we must also make health care more affordable and accessible. A new product known as health savings accounts helps control costs by allowing businesses or workers to buy low-cost insurance policies for catastrophic events and then save, tax free, for routine medical expenses. This year, I will ask Congress to take steps to make these accounts

more available, more affordable, and more portable. Congress also needs to pass association health plans, which allow small businesses across the country to join together and pool risk so they can buy insurance at the same discounts big companies get.

Our small businesses are confronting other challenges that we must address. Too many entrepreneurs face the threats of costly junk lawsuits. Last year, we passed bipartisan class-action reform to ease this burden. Now Congress needs to curb abusive asbestos litigation, pass medical liability reform to reduce the costs of frivolous litigation on our doctors and patients, and penalize those who abuse the legal system by repeatedly filing junk lawsuits.

Rising energy costs are also a concern for small businesses, so we're going to continue to work to develop new technologies and alternative and renewable fuels that will make us less dependent on foreign sources of energy. And we will continue to open up new markets for small businesses so they can sell their products and

services overseas. On a level playing field, I know our workers, farmers, and businesses can compete with anybody, anytime, anywhere.

America's economy is strong and growing stronger. Small businesses have been a driving force behind the tremendous growth and job creation of recent years. By adopting sound policies that help our small businesses continue to grow and expand, we will keep the economy moving forward and extend prosperity and hope in our country.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on January 20 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on January 21. The transcript was made available by the Office of the Press Secretary on January 20 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Telephone Remarks to the March for Life January 23, 2006

Nellie, thank you very much. I appreciate the invitation to speak. I'm calling from Manhattan, Kansas. [*Applause*] Sounds like you've got some good folks from Kansas there. I want to thank everybody there—if you're from Kansas or anywhere else in our country—for your devotion to such a noble cause.

You believe, as I do, that every human life has value, that the strong have a duty to protect the weak, and that the self-evident truths of the Declaration of Independence apply to everyone, not just to those considered healthy or wanted or convenient. These principles call us to defend the sick and the dying, persons with disabilities

and birth defects, all who are weak and vulnerable, especially unborn children.

We're making good progress in defending these principles, Nellie, and you and I are working together, along with others, to build what I've called a culture of life. One of my first acts as the President was to ban the use of taxpayer money on programs that promote abortion overseas. I want to thank you all for getting that ban on partial-birth abortion to my desk, a bill I was proud to sign and a law which we are going to defend and are defending vigorously in our courts.

Because we acted, infants who are born despite an attempted abortion are now protected by law. Thanks to "Laci and

Conner's Law," prosecutors can now charge those who harm or kill a pregnant woman with harming or killing her unborn child as well.

We're vigorously promoting parental notification laws, adoption, teen abstinence, crisis pregnancy programs, and the vital work of our faith-based groups. We're sending a clear message to any woman facing a crisis pregnancy: We love you; we love your child; and we're here to help you.

There's more work to be done. The House has passed a bill to ensure that State parental involvement laws are not circumvented by those who take minors across State lines to have abortions. And the United States Senate needs to pass this bill so I can sign it into law.

We also must respect human life and dignity when advancing medical science, and we're making progress here as well. Last month, I signed a pro-life bill supporting ethical treatment and research using stem cells from umbilical cord blood. I also renew my call for Congress to ban all forms of human cloning. Because human life is a gift from our Creator and should

never be used as a means to an end, we will not sanction the creation of life only to destroy it.

By changing laws, we can change our culture. And your persistence and prayers, Nellie, and the folks there with you, are making a real difference. We, of course, seek common ground where possible. We're working to persuade more of our fellow Americans of the rightness of our cause. And this is a cause that appeals to the conscience of our citizens and is rooted in America's deepest principles, and history tells us that with such a cause, we will prevail.

Again, Nellie, thank you for letting me come to speak to you. Tell everybody there that I ask for God's blessings on them and their families, and, of course, may God continue to bless our grand country.

NOTE: The President spoke at 11:40 a.m. from Manhattan, KS, to march participants on the National Mall in Washington, DC. In his remarks, he referred to Nellie J. Gray, president, March for Life Education and Defense Fund.

## Remarks on the War on Terror and a Question-and-Answer Session in Manhattan, Kansas

January 23, 2006

*The President.* Thanks for the warm welcome. Thanks for inviting me here to give the Landon Lecture. For those students who are here, I want you to know I can remember what it was like to sit through lectures. [Laughter] I didn't particularly like it then. [Laughter] Some will take a little different approach. I'm here to tell you how I see the world and how I've made some of the decisions I've made and why I made them.

Before I get there, I want to thank the introducer. So he's on Air Force One; he

says, "That's a cute-looking blue tie you have—[laughter]—but I strongly suggest, Mr. President"—[laughter]. I said, "I don't know, Senator, if I can take it; I'm worried about all those lobby laws or the lack of them." [Laughter] He said, "Fine, I'll just loan it to you." I said, "Well, now that you're helping me dress, you got any hints on how I ought to do my hair?" [Laughter]

Pat Roberts is a good man. He's got a great sense of humor. He loves the people of Kansas, and he loves Kansas State, and I'm proud to be with him on this stage.

And I'm proud to be here, as well, with the other United States Senator, Senator Sam Brownback, former president of the Kansas State student body.

I want to thank your Governor. Governor Sebelius, thanks for putting up with me, Roberts, and Brownback as we drove from the airport to here. One hour with the three of us required a lot of patience. [Laughter] I'm proud the Governor came with us, and I want to thank you.

I want to thank Congressman Jim Ryun, right from this district. I appreciate you being here, Congressman. I'm not interested in jogging with you. [Laughter] I also thank Congressman Dennis Moore and Congressman Jerry Moran, both fine Members of the United States Congress from the State of Kansas. Thank you all for coming.

I appreciate President Wefald for having me come. I know Laura was his first choice. [Laughter] That's why he's the head of such a fine institution; he's got good judgment. [Laughter] By the way, she sends her best. I married really well.

And I want to thank Charles Reagan and Edward Seaton. Charles is the chairman of the Landon Lecture Series. And Edward is the head of the patrons. He said to me, he said, "I so appreciate you believing in free speech; thanks for giving a free one." [Laughter] I want to thank Tom Herald, who is the faculty senate president. I want to thank all the faculty members who are here. Thanks for teaching. It's such a noble profession, and I appreciate you lending your expertise to help youngsters learn what is possible and how to think and how to be creative. And I want to thank the president of the student body, Michael Burns, for being here as well.

I appreciate the students being here. I particularly want to thank those who've come from the Last Chance Bar. [Laughter] Better than watching daytime TV, I guess. [Laughter] I appreciate your interest in your country. Looking forward to sharing

some thoughts with you, and then I'll answer some questions.

Before I get there, I do want to pay tribute to our wonderful men and women in uniform. Thank you for serving our country.

You know, really one of the interesting things about being the President is to invite my guys, buddies I grew up with from Texas, to the White House. It's really neat to see how they react to the majesty of the White House and the Oval Office and the South Lawn and just the beauty of Washington. And most of them, after they get over the initial shock of seeing the White House, then come to the shock of wondering how in the heck I got there. [Laughter]

But they—oftentimes, they ask me, they say, "What's it like, being the President of the United States?" And my answer to them is, first, it's a huge honor. But secondly, if I had to give you a job description, it would be a decisionmaker. I make a lot of decisions. I make some that you see that, obviously, affect people's lives, not only here but around the world. I make a lot of small ones you never see, but have got consequence. Decisionmaker is the job description.

First of all, when you make decisions, you've got to stand on principle. If you're going to make decisions, you've got to know what you believe. I guess the best way to summarize me is I came from Texas, and I'm going back to Texas with the exact same values I had when I arrived in Washington, DC.

In order to make good decisions, you've got to rely upon the judgment of people you trust. I'll never forget the first decision I had to make as the President. I wasn't even sworn in yet, and a fellow called me on the phone and he said, "What color rug do you want to have in the Oval Office?" [Laughter] "You've got to be kidding me, man." [Laughter] He said, "No, what color rug would you like to have in the Oval Office?" I said, "I don't know." He

said, well, it turns out that Presidents—you've just got to know, Presidents design their rugs. I said, "Well, to be honest with you, I don't know much about designing rugs."

So I called—I delegated—that's one of the things you do in decisionmaking. [Laughter] I said, "Laura, how about helping design the rug?" [Laughter] Part of being a decisionmaker, though, is you've got to help—you've got to think strategically. And so I said to her—she said, "What color do you want?" I said, "Make it say 'This optimistic person comes here to work every single day.'" You can't lead the Nation, you can't make good decisions unless you're optimistic about the future.

So for the students here, as you take over organizations or head out of college and become involved in your life, you've got to be optimistic about—if you're going to lead somebody. Imagine somebody saying, "Follow me; the world is going to be worse." [Laughter] That's not a very good organizing principle about which to lead people. I'm optimistic about our future, and the reason I am is because I believe so strongly in what America stands for: liberty and freedom and human rights and the human dignity of every single person.

Sometimes decisions come to your desk unexpectedly. Part of the job of a President is to be able to plan for the worst and hope for the best, and if the worst comes, be able to react to it. On September the 11th, the worst came. We got attacked. We didn't ask for the attack, but it came. I resolved on that day to do everything I can to protect the American people.

You know, a lot of us grew up thinking that oceans would protect us, that if there was a threat overseas, it really didn't concern us, because we were safe. That's what history had basically told us. Yes, there was an attack on Pearl Harbor, obviously, but it was a kind of hit and run, and then we pursued the enemy. A lot of folks—at least, my age, when I was going to college, I never dreamt that the United States

of America could be attacked. And in that we got attacked, I vowed then, like I'm vowing to you today, that I understand my most important priority. My most important job is to protect the security of the American people.

I knew right after September the 11th, though, that the attack would begin to fade in people's memories. I mean, who wants to constantly go through life thinking that you're going to get hit again? Who wants to, kind of, relive those days in your memory? As a matter of fact, I asked the American people to go on about your life. But given the fact that it's human nature to forget or try to put in the past, put the pain in the past, I want to assure you and our fellow Americans, I'm not going to put it in the past. The threat to the United States is forefront in my mind. I knew that at times people would say, you know, "It may be an isolated incident; let's just don't worry about it." Well, for me, it's not an isolated incident. I understand there is still an enemy which lurks out there.

And so part of my decisionmaking process, part of it, as you see when I begin to make decisions to protect you, to do my number-one priority, rests upon this fact: that there is an enemy which is relentless and desirous to bring harm to the American people because of what we believe in. See, we're in an ideological struggle. It's very important for the students here to understand that there is an enemy which has an ideology, and they're driven by an ideology. They make decisions based upon their view of the world, which is the exact opposite of our view of the world.

Perhaps the best way to describe their political vision is to remind you what life was like for people living in Afghanistan when the Taliban was running that country with Al Qaida as the parasite. If you were a young girl in that society, you had no chance to get educated. If you spoke out against the view of these folks, their religious view, you could be taken to the public square and whipped. In other words,

there was not freedom. There wasn't freedom to worship the way you want to, just like we believe here in the United States of America. You can worship, you cannot worship in our country, and you're equally American. You can be a Christian, Jew, or Muslim, and you're equally American. It's the greatness of the United States of America which stands in stark contrast to what these ideologues believe.

Their vision of the world is dark and dim. They have got desires to spread a totalitarian empire. How do we know? Because they told us. Mr. Zawahiri, the number two in the Al Qaida network, told the world such. He might not have wanted us to read that particular thing he was sending, but nevertheless, we did. And he said that, "Here's our designs and our desires." In other words, these people have got an ideology and strategy to implement the ideology. They've got a—they have no heart, no conscience. They kill innocent men, women, and children to achieve their objective. These folks cannot be appeased. We can't hope that nice words will change their point of view.

And so the decision I made right off the bat is, we will find them, and we will hunt them down, and we will bring them to justice before they hurt America again. But that requires a different kind of response than the old days of nations fighting nations. First of all, I want to step back and just tell you—I probably—I hope I say this more than once, but committing U.S. troops into harm's way is the last option of the President. It's the hardest decision a President can make. And so when I'm telling you I made the decision, you all have got to understand, I did not take that decision lightly. I knew the consequences, but I also believed that the consequences of not acting against this enemy would mean I wasn't doing my job of working with others to protect the United States of America.

So we sent our men and women into harm's way, all volunteers. It is really im-

portant for the United States of America to have an all-volunteer army. The best way to keep people volunteering in the Army is to make sure they got good pay, good training, good equipment, and good housing for their loved ones.

But since we're not able to track vast battalions or armadas, we've got to have intelligence, good intelligence, to help us locate the dark corners of the world where these people hide. A lot of the decisions I make and decisions future Presidents make will be based upon the capacity of our intelligence services to find the enemy and to understand the intentions of the enemy and to share information with our allies. This is a different kind of struggle and requires the best intelligence possible. That's why we're reevaluating, constantly reevaluating how best to use our intelligence services to be able to protect the American people.

We've got to be strong in diplomacy. Secretary Rice, who is a great diplomat—she followed another great diplomat in Colin Powell—they're constantly working to remind people about the stakes. Just like part of my job is to educate the American people about the threats we face, at a lecture series such as this, our Government must constantly remind our friends and allies the nature of the enemy and the stakes that all free countries face. There's a diplomatic effort that's constantly going on.

You can't run your network without money, and so we're working with our friends and allies to seize terrorist assets and choke off their funding sources. In other words, what I'm telling you is, we're using all assets at our disposal to protect you in a different kind of war. In order to make the right decision about how to win this war, it's important to understand the nature of the enemy and to take the enemy's word seriously and to understand their lethality and not let the kind of lull in the action lull us to sleep.

Secondly, right after they attacked us, I laid out a doctrine, and it said, "If you

harbor a terrorist, you're equally as guilty as the terrorist." The reason I said that is because I understand that a terrorist network can sometimes burrow in society and can sometimes find safe haven from which to plot and plan. The perfect example of that was Afghanistan. For those of you who didn't pay much attention to the initial stages of this war, it became apparent to the world that Afghanistan became safe haven. You'll hear stories about people that went into Afghanistan to be trained: trained as to how to brutally kill people, trained in different methodologies, trained in how to communicate.

So, in other words, the enemy was able to burrow in and felt safe and confident and secure. And I understood in this different kind of war that we had to make it clear to any country that if they harbored a terrorist, they would be held to account. And when the American President speaks, it's really important for those words to mean something. And so when I said to the Taliban, "Get rid of Al Qaida," and they didn't, I made the difficult decision to commit our troops, to uphold the doctrine that if you harbor a terrorist, you're equally as guilty as the terrorist. And our kids went in, men and women alike, and liberated a country from the clutches of the barbaric regime, the Taliban.

And today, today in Afghanistan—think about what has happened in a brief period of time—today in Afghanistan, there is a fledgling democracy. Al Qaida no longer has run of the country. The Taliban is routed. There's an elected Parliament and a President dedicated to democratic institutions.

The doctrine still stands: If you harbor a terrorist, you're equally as guilty as the terrorists who commit murder.

Thirdly—and this is very important for the students to understand, and others—because oceans no longer protect us, the United States of America must confront threats before they cause us harm. In other words, in the old days, we could see a

threat and say, "Well, maybe it will cause harm; maybe it won't." Those days changed, as far as I'm concerned. Threats must be taken seriously now, because geography doesn't protect us, and there's an enemy that still lurks.

And so early in my first term, I looked at the world and saw a threat in Saddam Hussein. And let me tell you why I saw the threat. First of all, there was an immediate threat because he was shooting at our airplanes. There was what's called no-fly zones; that meant the Iraqis couldn't fly in the zones. And we were patrolling with British pilots, and he was firing at us, which was a threat, a threat to the life and limb of the troops to whom I'm the Commander in Chief. He was a state sponsor of terror. In other words, the Government had declared, "You are a state sponsor of terror." And remember, we're dealing with terrorist networks that would like to do us harm.

There's a reason why he was declared a state sponsor of terror: because he was sponsoring terror. He had used weapons of mass destruction. And the biggest threat that this President and future Presidents must worry about is weapons of mass destruction getting in the hands of a terrorist network that would like to do us harm. That is the biggest threat we face. Airplanes were horrible; the attacks of aircraft were horrible. But the damage done could be multiplied if weapons of mass destruction were in the hands of these people.

The world thought Saddam Hussein had weapons of mass destruction. It wasn't just me or my administration. My predecessor thought he had weapons of mass destruction. And there's a logical reason why—the data showed that he would likely have weapons of mass destruction, and he'd use them. I told you, the last option for a President is to send troops into combat, and I was hoping that we could solve the issue, the threat, the threat to the United States by diplomatic means.

So I went to the United Nations. Secretary Powell carried our message to the

United Nations. It said—see, now, I actually gave a speech to the United Nations, you might remember, and I said to them, basically, how many resolutions is it going to take before this threat will take us seriously? I mean, we passed, I don't know, 14, 15 different resolutions. That's a lot of resolutions. Pretty soon, if you pass that many resolutions, somebody is going to say, "Well, they may not mean anything." I want this body to be effective. It's important for the world, when it speaks, that people listen.

And so we passed another resolution that said that Saddam is in—and it unanimously passed, and the reason why is because the world thought he was a danger. It said, "Disarm, disclose, or face serious consequences." I'm the kind of fellow, when I—when we say something, I mean it, like I told you before. And I meant it.

And so Saddam Hussein was given a choice. He chose war. And so we moved, and he was removed from power. And there is absolutely no doubt in my mind, America is safer for it, and the world is better off without Saddam Hussein.

A lot of people, I understand, disagreed with that decision, and that's what democracy is all about. That's what we believe in; we believe you can disagree. There's a custom in our country for people to express themselves, and it's good. It's what makes us a great country, that people can stand up and tell people what's on their mind. And we're going to keep it that way. It's very important for those who didn't agree with the decision, though, to understand the consequences of success in Iraq. It's really important we succeed for a lot of reasons.

And the definition of success, by the way, is for there to be a country where the terrorists and Saddamists can no longer threaten the democracy, and where Iraqi security forces can provide for the security of their own people, and where Iraq is not a safe haven from which the terrorists—Al Qaida

and its affiliates—can plot attacks against America.

We got a strategy, and I'm going to keep talking about the strategy; it will yield a victory. And the strategy is political security and economic in nature. In economic, we're going to help them rebuild their country, help secure their oil supply so they'll have cash flow in order to invest in their people.

On the political front, you've seen it; you've seen what happened in one year's time. It's just amazing, I think. I guess we take it for granted; some of us do. I don't. The fact that people have gone from living under the clutches of a tyrant who ordered the murder of thousands of his own citizens, to a society in which people last year started voting for an interim government, voting for a Constitution, and then voting for a permanent Government under the new Constitution. The Government is now—they're beginning to form.

In other words, you're seeing a lot of sharp elbows, probably kind of like American politics seem to some people, a lot of throwing of sharp elbows. You didn't see a lot of elbows, political elbows being thrown under the tyrant, did you? That's because tyrants don't allow for the political process to evolve. But we're watching the political process evolve, made complicated by the fact that the terrorists still want to cause destruction and death as this Government is forming to try to stop it.

We got to step back and ask why. Why would they want to stop democracy? And the answer: Because democracy stands for the exact opposite of their vision. Liberty is not their credo. And they understand a defeat to their ideology by the establishment of a free Iraq will be a devastating blow for their vision.

And so the Iraqis are showing incredible courage. When somebody says, "If you vote, I'm going to get you," sometimes people maybe say, "Well, maybe I don't want to vote." Eleven million or so Iraqis went to the polls in defiance of these killers.

It's a magical moment in the history of liberty.

And then on the security front, our strategy can be summed up this way: As the Iraqis stand up, we'll stand down. Look, we want the Iraqis to be prepared to take the fight to the enemy. Let me talk about the enemy, real quick, in Iraq. There are what we call rejectionists. These are Sunnis that kind of like the fact that they—even though a minority inside the country—had the upper hand for a long period of time with Saddam. And they're worried about whether or not a Constitution that says it will protect minority rights actually will protect minority rights. But the good news is, more and more Sunnis started to vote. And if you watch the news, they're beginning to negotiate; they're beginning to see a better way. In other words, the political process is beginning to marginalize the remaining elements of those who are trying to stop the progress.

One of those elements is Saddamists. These are the thugs that kind of controlled the country. They loved power; they don't want to give it up. And they'd like to return to the good old days, which isn't going to happen.

And the other group, of course, is the Al Qaida types—Mr. Zarqawi, who wants us to leave Iraq. They want us to get out of Iraq so Iraq can be a safe haven. It is their stated objective: Don't worry, take your time, keep killing the innocent because America will lose its will. That's what the enemy has said. That's their words.

The way to defeat the enemy is for the political process to marginalize the rejectionists and for us to train the Iraqi forces so they can find the few that want to dash the hopes of the many. And that's what we're doing. Our strategy is twofold: We're on the hunt for the terrorists, and we're training Iraqis. And we're making decent progress. There are more and more Iraqi units in the fight. There's more and more country being turned over to the Iraqis. We got a lot of bases around Iraq,

and more of those bases are being given to the Iraqi troops.

This is the year that we'll not only continue to focus on the troops, we'll continue to train Iraqi police. We've seen some problems about what it means to have lived in a society where people want to seek revenge. In other words, they use their police—status as a police person to take it out on others because of past grievances. That's not acceptable to the United States of America, and it's not acceptable to most Iraqis either.

And so part of the training for police is not only to give them the capacity to handle the enemy but to make sure they understand human rights and ethics involved with police work. And so that's what you'll be seeing. You're going to see more Iraqi troops in the fight and more police providing security. And as a result, our commanders on the ground informed me that they thought we could reduce our troop level from the 168,000 that were there—165,000, more or less, that were there for the elections—below 138,000.

Now, I want to emphasize something to you. You heard me say, "Our commanders on the ground said." You see, sometimes in the political process, people feel beholden to polls and focus groups. You don't have to worry about me. I'm going to be listening to the people that know what they're talking about, and that's the commanders on the ground in Iraq. They'll make the decisions. They will give the advice. Conditions on the ground will dictate our force levels over the next year, but the strategy is what I said it is: We'll stay on the offense, and we'll give these brave Iraqis the skills and training necessary to defend their own democracy.

Look, this enemy cannot beat us. They cannot defeat us militarily. There's no chance. The one weapon they have, which is a lethal weapon, is the willingness to kill people. I remember the story—and it just broke my heart to think about the young soldier that was giving candy to a

kid, and they set off the car bomb next to the kids. I mean, it's just—I cannot describe to you how brutal these people are. And they understand that their scenes will get on TV.

And I don't know if they can adequately understand the compassion of the American people, but we're compassionate. I told you one of the great beliefs of our country is every life matters, every person counts, whether it be a child here in America or a child in Iraq. And they understand. And so part of my decisionmaking process is to understand the strength of the enemy—the only strength they have—and continue to remind the people that is their only strength, and the only way we can lose is if we lose our nerve and our will. The American people are resolute. They are strong. And we're not going to lose our will to these thugs and murderers.

In the long term—in the short term, we'll stay on the offense; in the long term, the way to defeat these people is to spread liberty. As you study history, I want you to watch the effects of freedom around the world. One of my favorite ways to describe my belief in the capacity of freedom to help achieve peace—not only security for the American people but peace—is to give people the example of my dad and me, in terms of Japan.

My dad was an 18-year-old kid and went to fight the Japanese. I promise you, a lot of folks here's relatives did the same thing. They were called into action because the enemy had attacked us. They were the sworn enemy of the United States of America. It was a brutal war against the Japanese. Took a lot of lives—Japanese lives and American lives—to win that war. And today, like my recent trip to the Far East, I sit down with Prime Minister Koizumi, who is the Japanese Prime Minister, and talk about the peace. Now, think about that. I particularly want the students to think about what took place when 18-year-old President 41 was fighting the Japanese, and 59-year-old 43—that would be me—

is talking to the Prime Minister of the former enemy about peace. And you know what took place? A Japanese-style democracy came to be.

History has shown that democracies yield the peace. Europe is free, whole, and at peace because the nations are democratic. That wasn't always the case, obviously, in the 1900s. Two major wars were fought where a lot of Americans died, and yet systems and forms of government changed. And now Europe is completely different, in terms of security and peace. The Far East—I just mentioned the Japanese example. And that's what the enemy understands, and that's why they're so brutal and relentless. They understand the march of peace will be contagious. Part of my decisionmaking process is my firm belief in the natural rights of men and women, my belief that deep in everybody's soul is the desire to live free. I believe there's an Almighty, and I believe the Almighty's great gift to each man and woman in this world is the desire to be free. This isn't America's gift to the world; it is a universal gift to the world. And people want to be free.

And if you believe that and if you believe freedom yields the peace, it's important for the United States of America, with friends, to lead the cause of liberty. I'm not saying to any country, "You must have a democracy that looks like America." I am saying, "Free your people. Understand that liberty is universal, and help lay that foundation of peace for generations to come." Someday, an American President will be sitting down with elected leaders from a country like Iraq talking about how to keep the peace. This generation is rising to the challenge. We're looking at history. We understand our values, and we're laying that foundation of peace for generations to come.

We've also got to be diligent here at home. I'm getting ready to answer some questions. Laura said, "Whatever you do, don't get too windy." [Laughter]

We've created the Department of Homeland Security. We're reorganizing our intelligence services. I want you to know that every morning, I meet with the Director of National Intelligence or his Deputy, sometimes with the head of the CIA, and always with a briefer, CIA briefer that comes and gives me the latest intelligence and the analysis of intelligence. That's every morning in the White House, except for Sunday.

And the reason I do is because I told you early that my job is not to be complacent; my job is to be on the lookout, along with a lot of other people, I want you to know. We've got 800,000 State and first-responders that have been trained. Security is strong at the airports. I hope they stop taking off the shoes of the elderly. [*Laughter*] I must confess, they haven't taken off my shoes lately at the airport. [*Laughter*]

We're doing a lot of stuff, but I want to talk about two tools necessary to protect you. First, before September the 11th, our law enforcement and intelligence services weren't able to share information. For example, within the FBI, you had your law enforcement division and your intelligence division—and for a lot of reasons, if they had information about a potential terrorist, they couldn't share it. That's hard to fathom, but it's the truth. There was a wall built up, and there's a lot of reasons why the wall was built up, some of it historical, obviously, legal ramifications.

And I didn't think you could ask our frontline officers to defend us if they didn't have all the tools necessary to share intelligence and to share information—by the way, tools which have been granted to use in tracking down drug dealers, for example. My attitude was, if it's good enough—these tools are good enough to find a drug dealer, then they ought to be good enough to protect us from the new threats of the 21st century.

And so the Congress passed what's called the PATRIOT Act by huge majorities. They saw the threat, and they said, "Wait a

minute. Let's make sure that if we ask the administration and, more importantly, people in the administration to defend us, let's give them the tools necessary to defend us." Interestingly enough, the PATRIOT Act, some of its provisions, are set to expire. I like to remind people the PATRIOT Act may be set to expire, but the threats to the United States haven't expired. And exactly what has changed, I asked out loud, after the attack of September the 11th and today? Those tools are still needed for our law enforcement officers. I want you to know that this PATRIOT Act is under constant review, and there has been no documented abuses under the PATRIOT Act.

In other words, Congress, in its wisdom when it passed the Act, said, "We'll make sure that the civil liberties of the United States are protected as we give the tools to those who are asked to take the fight to the enemy, to protect us." Congress extended this PATRIOT Act to February the 3d. That's not good enough for the American people, it seems like to me. When they get back there, they need to make sure they extend all aspects of the PATRIOT Act to protect the American people.

The threat still exists, is my message to members of both political parties. The tools, if they were important right after September the 11th, they're still important in 2006. The enemy has not gone away.

Let me talk about one other program—and then I promise to answer questions—something that you've been reading about in the news lately. It's what I would call a terrorist surveillance program. After the enemy attacked us and after I realized that we were not protected by oceans, I asked people that work for you—work for me, "How best can we use information to protect the American people?" You might remember, there was hijackers here that had made calls outside the country, to somebody else, prior to the September the 11th attacks. And I said, "Is there anything more

we can do within the law, within the Constitution, to protect the American people?" And they came back with a program—designed a program that I want to describe to you. And I want people here to clearly understand why I made the decision I made.

First, I made the decision to do the following things because there's an enemy that still wants to harm the American people. What I'm talking about is the intercept of certain communications emanating between somebody inside the United States and outside the United States; and one of the numbers would be reasonably suspected to be an Al Qaida link or affiliate. In other words, we have ways to determine whether or not someone can be an Al Qaida affiliate or Al Qaida. And if they're making a phone call in the United States, it seems like to me we want to know why.

This is a—I repeat to you, even though you hear words, "domestic spying," these are not phone calls within the United States. It's a phone call of an Al Qaida, known Al Qaida suspect, making a phone call into the United States. I'm mindful of your civil liberties, and so I had all kinds of lawyers review the process. We briefed Members of the United States Congress, one of whom was Senator Pat Roberts, about this program. You know, it's amazing, when people say to me, "Well, he was just breaking the law." If I wanted to break the law, why was I briefing Congress? [Laughter]

Federal courts have consistently ruled that a President has authority under the Constitution to conduct foreign intelligence surveillance against our enemies. Predecessors of mine have used that same constitutional authority. Recently there was a Supreme Court case called the Hamdi case. It ruled the authorization for the use of military force passed by the Congress in 2001; in other words, Congress passed this piece of legislation. And the Court ruled, the Supreme Court ruled that it gave the President additional authority to use what

it called "the fundamental incidents of waging war" against Al Qaida.

I'm not a lawyer, but I can tell you what it means. It means Congress gave me the authority to use necessary force to protect the American people, but it didn't prescribe the tactics. It said, "Mr. President, you've got the power to protect us, but we're not going to tell you how." And one of the ways to protect the American people is to understand the intentions of the enemy. I told you it's a different kind of war with a different kind of enemy. If they're making phone calls into the United States, we need to know why—to protect you.

And that's the world in which you live. I view it as a chance for—an historic opportunity to make this place better for your children and your grandchildren, "this place" being the world. I'm just confident that if we don't lose our will and stay strong and that as that liberty advances, people may look back at this lecture and other speeches by people who profess the same devotion to freedom that I've had, and say, you know, maybe they're just right. Maybe America, that was founded on natural rights of men and women, is a ticket for peace. Maybe that kind of view—that every person matters, that there are such things as human dignity and the basic freedoms that we feel—that becomes a huge catalyst for change for the better. These troops are defending you with all their might, but at the same time, they're beginning to help change that world by spreading liberty and freedom.

It's such an honor to be the President of the great country that we are, during such historic times, and I want to thank you for giving me a chance to describe to you some of the decisionmaking processes I've used to do my duty to defend the American people. God bless.

Be glad to answer some questions if you've got some. Thank you. I think there's some people with microphones and all that, that are going to be out there. Anybody

has any questions? Any boys from the Last Chance Bar got any questions?

Q. [Inaudible] [Laughter]

Q. Mr. President.

*The President.* Thank you, yes. Yes, ma'am.

### *Trade/Beef Industry*

Q. Mr. President, we salute what you have done, your aggressive stance on terrorism. But more than that, as you know, Kansas is a beef State. The number-one industry in the State of Kansas is beef production and beef processing. A strong beef industry indicates a strong Kansas, and it affects all of us. We sincerely appreciate your efforts in regaining our markets with Japan, your aggressive stance on trade. We support that tremendously. I wondered if you would just comment on what's happened recently.

*The President.* Yes, well, thanks. Thank you for your leadership. We think we grow pretty good beef in Texas too. [Laughter] Now is not the time to compare, of course. [Laughter]

Look, here's the thing: There's an interesting debate in the United States about markets, about whether or not we should aggressively seek markets or whether or not we should become protectionists. Protectionism means tariffs and policies that make it difficult for people to trade in the United States and for people in the United States to trade outside the United States. I'm a big believer in opening markets. There's a practical reason why. One is that we're 5 percent of the people, which means—in the world—that means 95 percent of the people are potential customers for U.S. farmers and ranchers and small businesses and entrepreneurs. And so what madam president—former president is referring to is that I have been very aggressive about opening up markets through trade agreements.

I'm a little concerned about trade agreements, though, because it's more and more difficult to get them passed out of the

United States Congress. It seems like they're becoming so political that people either are becoming protectionist or lose sight—are losing sight of the value about opening markets.

Look, if you're a cattle raiser in Kansas, you want to be able to sell your product in Japan or South Korea or China. I mean, people want the beef. And the problem we've recently had, as you mentioned, reflects what is necessary to make sure that trade works. And that is, if there are problems, like in this case, some beef coming out of Brooklyn, I think it was, and if the Japanese balk at opening their markets, we have got to be aggressive about explaining to people why our beef is safe. And so part of being—part of making sure that the ranchers, in this case, see the benefits of open markets is when a market gets open, to work hard to make sure that market stays open if there happens to be a problem, or a short-term problem.

Secondly is to make sure that we're treated fairly. And that part—when you see me arguing for trade agreements, a lot of times it means that a country is getting a better deal from us than we are from them. All I'm saying is, "Look, just treat us the way we treat you. If we open up our markets for your product, you open your markets for our products."

And so my—and I believe, and this is going to sound—let me just say to people, as you study the economics of how to make sure this economy continues to grow, one way to do it is to make sure the markets are available, that there be a level playing field. I believe we can compete with anybody, anytime, anywhere, so long as it's fair.

And obviously, one area where we're trying to keep those markets open is when it comes to beef. And we had the BSE, and one of the jobs of the Federal Government is to respond quickly to the BSE issue, is to try to settle people's nerves down so we can get those markets reopened. And when I went to see Prime

Minister Koizumi, as well as President Roh in South Korea, one of the items I discussed was, "You're missing out on some Kansas beef." [Laughter]

*Sudan*

*Q.* Thank you, Mr. President. One of the things that both of our Senate delegation has worked tirelessly on is the situation in the Sudan. Sudan was, of course, slated to be the chair of the African Union next year, which is—they have tried, much like the United Nations, to do something. Does the United States have a larger role to play in the Sudan and the entire sub-Saharan African region?

*The President.* Yes, great question. We have played an active—first of all, I do want to thank both Senators. I'm on treacherous ground here to kind of credit one versus the other, but I guess I will, since one of them is going to want a free meal going back to Washington—[laughter]—I guess both. Sam, I mean—Roberts is great on the issue, and Sam is the person I've been interfacing with the most, frankly, in the whole United States Senate, about his deep concern for life in the Sudan. Matter of fact, in the vehicle driving over here, he brought the issue up.

We have got an important role to play and have played it. I don't know if you remember the Danforth Commission, where Jack Danforth, the former Senator from Missouri, was my Envoy to the Sudan to help resolve the North-South conflict. And there was a peace agreement in place. And the peace agreement was set back, unfortunately, because—well, it's still intact, don't get me wrong, but the implementation was delayed somewhat because of John Garang's untimely death—he was the leader of the south of Sudan. So the important thing there is that we showed, through diplomacy, that it's possible to resolve differences and to begin to reduce the abhorrent issue of slavery.

As you now know, the issue in Sudan is—and by the way, one of the great

strengths of this country is our faith-based programs that rose up in indignation about the slavery that was taking place in the Sudan. Much of the first wave of help that went into the Sudan—some of it was Government—most of it was the response of the private sector, particularly the religious communities.

The issue now is Darfur. And when Colin was still the Secretary of State, he declared the policy of the U.S. and our deep concern that we are headed toward genocide. I think we're the only nation that has uttered those words thus far in Darfur. The strategy—and it's a very complex situation. It would take yet another lecture to give you all the kind of ins and outs. But suffice it to say that we are deeply concerned about poor folks who have been run out of their villages into refugee camps, who are still being threatened by Janjaweed militia and some rebellious groups that are trying to extract political gain through marauding and death and rape and destruction.

We've empowered the AU, and this is what your question really kind of—part of your question leads to—to provide forces on the ground, to provide stability. And what he's referring to is that the Sudanese Government is going to be the head of the African Union—that's what AU stands for—which would then put them the titular head of the troops on the ground. And obviously, that should be of concern—concern to us. It is a concern to us, and it should be a concern to the AU nations.

That issue has yet to be resolved as to whether or not Sudan will be the AU. This is an important issue. We will continue to work with Congress to provide aid, food aid, and help. We helped fly the AU troops into Sudan. We're watching it very carefully. We are considering different strategies as to how to make sure that there's enough protection, at least to get people help and protection and, at the same time, see if we can't try to broker the same kind of agreement we did North-South, with the

Darfur and the Government. Thank you for asking the question.

Yes, sir.

*Iran/China*

Q. What is your position, or would you comment on a long-term strategy with respect to the geopolitical ambitions of China and Iran?

*The President.* Yes, great question. First, let me start with Iran. I'm deeply concerned about Iran, as should a lot of people be concerned about Iran. I'm concerned when the country of Iran, their President announces his desire to see that Israel gets destroyed. Israel is our ally. We're committed to the safety of Israel, and it's a commitment we will keep.

Secondly, I'm concerned about a non-transparent society's desire to develop a nuclear weapon. The world cannot be put in a position where we can be blackmailed by a nuclear weapon. I believe it is very important for the Iranian Government to hear loud and clear from not only the United States but also from other nations around the world. I also want the Iranian people to hear loud and clear, and that is, we have no beef with you. We are worried about a Government that is transparent, whose aims and objectives are not peaceful. And therefore, we don't think that you should have the capacity to make a nuclear weapon.

The diplomatic strategy is being led right now by what's called the EU-3: France, Germany, and Great Britain. And they're doing a good job of keeping together a common message to say to the Iranians that we expect you to adhere to international norm. The next logical step, if the Iranians continue not to adhere to international norm or the demands of the free world, is to go to the United Nations Security Council.

At the same time, the development of Iraqi democracy is an important message to people inside of Iran. I told you what I believe. I believe everybody desires to

be free. I believe women want to be treated equally. And I think that a message of democracy and freedom in that part of the world will embolden reformers. But this is a serious issue.

China is—we have a complex relationship with China. Unlike with Iran, which we sanctioned a long time ago, we've got a lot of relations with China. We've got trade relations with China. We have got diplomatic relations with China. I've met with the Chinese leadership quite often and will tell you my personal relations with Hu Jintao are warm, warm enough to be able to sit with him in private and talk about things that matter to me. And one thing that matters to me is the freedom of the Chinese people.

I think any time in the diplomatic arena, you want the President to be in a position where he can have a relationship where you can speak with candor and your words can be heard, as opposed to a relationship that gets so tense and so off-putting because of distrust. Nobody likes to be lectured in the public arena; let me put it to you that way. I don't like it, and I'm sure other leaders don't like it. And so I've worked hard to make sure that my personal diplomacy is such that I'm able to make certain points with the Chinese.

One such point is that, you know, treat us the way we treat you. You've got a trade imbalance with the United States. And if we don't get it under control, there could be a backlash here. And therefore, we expect you to treat our products the same way we treat you. And by the way, if you happen to dump—choose to dump products, like in textiles, we'll hold you to account under our law.

I talk about their currency with the Chinese. You've got to let your currency float. The market currency ought to be priced through market, not by government edict, which is—they're beginning to move a little bit on the currency, if you're paying attention to the issue.

Now, I went to church in China. And I was a little nervous, at first, frankly, about a licensed church. I wasn't sure whether or not I was going to go to a church or not a church, and went—Laura and I went with a guy named Luis Palau. And I was impressed by the spirit I felt in the church. And after it was over, I told Hu Jintao, I said, you know, "I'm a religious person, and the more free religion is in your country, the better off your society will be, and you shouldn't fear the church. You ought to come to the church. You know, you ought to see what I saw, which is peaceful people honoring something greater than themselves."

I would hope that China will continue to move in the—or move in the direction of human dignity. I talked to him about, of course, the Dalai Lama, talked to him about the Catholic Church's inability to get their bishops in. In other words, what I do is I press the freedom issue. We don't always agree with China, of course. It's a complex relationship, but it's one in which, in my judgment, it's best to be in a position where we can dialog and discuss things in order to keep relations on keel and keep peace in that part of the world.

It's really interesting: Do you realize that it takes China 25 million new jobs a year to stay even? Think about that—I'm out there blowing when we get 4 million in the past—since April of 2003—this guy needs to get 25 million a year. [Laughter] And Sam and I and Pat and the Governor were talking about the Chinese demand for energy. One reason they've got such a huge demand for energy is because they've got to grow their economy, 25 million people a year. And their economy is just beginning to modernize, so they're using a lot of raw materials. I'm kind of wandering here, but—which says two things to me, by the way; it's called a filibuster—[laughter]—it says we've got to diversify away from hydrocarbons in the United States of America.

When we were driving through the beautiful country coming here, I told the

Governor and I told the two Senators I firmly believe a day is coming when we're going to be able to grow saw grass and convert that into energy. And secondly, we've got to share technology with China so that they become better users of energy and better protectors of the environment. It's a complex relationship that we spend a lot of time thinking about. And I appreciate your question very much. Hu Jintao is coming, I think, here pretty soon, to the United States. And as I say, I enjoy my visits—personal visits with him.

Yes, ma'am.

#### *Iraqi Government*

Q. Hello, Mr. President. I am an American Iraqi Kurd. I would like to salute you and salute all the troops are freeing 27 million people. They are free.

*The President.* Thank you.

Q. Mr. President, I would like to share this thought with all our Nation and everybody who is questioning what happened to the chemical weapons. Saddam burned 4,500 villagers. I lost more than 10 members of my family underground. We found their bones after, when we freed Iraq. Saddam himself and his people, his followers, they are chemical weapons. Please stop questioning the administration and their decision. It was the best decision anybody could take, freeing 27 million people.

*The President.* Okay, this is a question and answer period.

Q. Mr. President—

*The President.* I hate to cut you off. You're on a roll, but what's the question?

Q. Mr. President, all I could tell you, I have two members of my family—they are in the Iraqi Parliament. And both of them are women, my sister-in-law and my aunt. They are in the Iraqi Parliament. And I would like you to share this happiness with me and with all the Iraqi people. Thank you, Mr. President.

*The President.* Thank you. And here's my message—here's my message to your relatives in the Iraqi Parliament: Work to

form a unity government, a government that includes the minorities in the country—a Shi'a, Kurd, and Sunni—no, no, no—[laughter]—no, no. [Laughter] Thank you. [Laughter].

Q. My husband is Sunni. My mother-in-law was a Christian, Catholic—

*The President.* All right. [Laughter]

Q. I have two kids—

*The President.* Thank you. Got a question? Only in America. Hold on. [Laughter]

*Prime Minister Tony Blair of the United Kingdom*

Q. I'm from the United Kingdom.

*The President.* Welcome.

Q. Thank you. Although I might be living here for a while now, and you haven't kicked me out, and I thank you very much for that. [Laughter]

*The President.* Write your Senator. [Laughter] Anyway, go ahead.

Q. Us British, we're a querulous people, and we know that we're one of your greatest supporters in the world, and Tony Blair, who I have the greatest respect for, is my leader. When you say, "Jump," he says, "How high?" At least, that's the perception of many of the British people. And when he agrees and does your bidding, then it weakens him on the homefront at home. And many people enjoy this, but some of the more vocal ones will say, "He's a yes-man." Have you discussed that with him, and do you have any—

*The President.* I appreciate that a lot. First, I'm aware that that is a criticism of Tony, and I just strongly disagree with that. Frankly, it's demeaning to his character and his strength of conviction. But I've heard the criticism, and it's just simply not the case.

Like you, I admire him a lot. He's an independent thinker. He and I share this interesting moment in history together, and we also share this deep belief that liberty will transform the world—it can transform the world. That's what we believe. In other words, there is a philosophical core of Tony

Blair that I—belief, core beliefs that Tony and I share.

You know, sometimes we disagree on tactics. We try to work through what we—we've had a lot of disagreements. I mean, a classic came on the Kyoto treaty. You might remember the treaty. I said I just wasn't going to support it. I didn't think it was good for the American economy; I thought there was a better way to go about being good stewards of the environment. He disagreed with me. There's a series of issues where we—International Criminal Court is another good example. I think the International Criminal Court is something we shouldn't join. I just don't want unelected prosecutors prosecuting our troops or our diplomats in a court overseas. Tony disagreed strongly.

I can give you a series of examples where—but we agree strategically. And that's what's important. Look, I'm sorry that his relationship with me causes him political problems at home. Sometimes I can be a little allergic for people overseas, if you know what I mean. [Laughter] But I think I would classify our relationship as historic. You don't know this—I'm about to tell you something interesting—that we talk once a week, or try to. And it's a really interesting way to share just thoughts and concerns. And the British-U.S. relationship is unique. It's been unique in the past. It is unique today, and I'm convinced it will be unique in the future, for the good of the world.

But, no, I'm very aware of the political difficulties he's faced. By the way, when you make hard decisions, like Tony has made, and frankly, I've made, it creates angst. I mean, the easy route would have been to do nothing and just hope for the best. And that's why I admire Tony. Tony is a person of great courage.

I can remember—I'll tell you an anecdote—you didn't even ask, and I'm going to tell you. [Laughter] And it's been published in a book a guy wrote in Washington.

Tony was very worried about his Government. You might remember when the second resolution—we had the first resolution; then there was an argument about what “serious consequences” meant—I guess that’s what the problem was. I kind of knew what it meant. He knew what it meant. Others, all of a sudden, had a different view of “serious consequences” when Saddam chose to not deal squarely with the world and not deal with the inspectors. He was worried about his Government, and so was I. And I told him one time, I said, “If you’re worried about your Government”—I said, “You don’t want your Government to fall, and if you’re worried about it, just go ahead and pull out of the coalition, so you can save your Government.”

And he said to me, he said, “I’m going to”—he said, “I have made my commitment on behalf of the great country of Britain, and I’m not changing my mind.” Basically, what he told me, he said, “George,” he said, “politics—I’m not interested in politics; what I’m interested in is doing the right thing.” And that’s why I admire Tony Blair; he’ll do the right thing.

Good question. Yes, sir.

#### *President’s Personal Values/Leadership*

Q. I have a question less with politics and more with leadership in general. You’re in a situation where you’re under a lot of flack, especially for your character. And that’s something that, it seems to me, means a lot to you, as it does to many of us here. As a leader, as many of us are going to need to know here because we’re going to be leaders in just a few years, what’s the best way that you go about preparing yourself for attacks on your character, and how do you deal with others in those matters?

*The President.* Yes, I appreciate that. I would summarize it: faith, family, and friends. I am sustained mightily by the fact that millions of citizens—for whom I’ll never get to thank personally—pray for me. It’s hard for me to describe why I feel

that way, why I’m so sustained. I guess it’s just called faith. And I’m sustained by my family. And there’s nothing better than going home to somebody who understands and is sympathetic and is part of—we’re working together. I mean, Laura’s job is just as important as mine in many ways.

The girls still love me. [*Laughter*] I really love them. And then there’s my man, Barney, a little Scottish terrier. [*Laughter*] I say this—and Laura will be furious at me—he’s the son I never had, you know? [*Laughter*]

I believe in what I’m doing. And I understand politics, and it can get rough. I read a lot of history, by the way, and Abraham Lincoln had it rough. I’m not comparing myself to Abraham Lincoln, nor should you think just because I mentioned his name in the context of my Presidency—I would never do that. He was a great President. But, boy, they mistreated him. He did what he thought was right.

A lot of politicians, a lot of Presidents have gone through some tough times in the Presidency, and I understand that. One of my biggest disappointments is the tone in Washington, DC. I’ve done my best to try to elevate the tone. I just—needless name-calling, to me, is beneath the dignity of the office of the President.

I also make time in my day not only for prayer but also—and my family, but also for exercise. I found that part of keeping a positive outlook is to kind of burn off that excess energy, you know what I’m saying? [*Laughter*] I work out. I try to work out 5 or 6 days a week. It’s really important—if you feel that’s important for your life—to schedule your life. In other words, I have trouble with people saying, “I’m so busy, I can’t exercise.” I don’t think you’re too busy for things that are important in your life, and you can figure out ways to make time in your life.

And so I’m the kind of guy—I’m not running too well these days; I’m not running hardly at all. It’s kind of like my knees are like tires, you know, and they’re bald.

[*Laughter*] I'm a mountain bike guy. And it's a fantastic experience.

I think to answer your—summarize your question, is to make sure that you've got good priorities in your life. By having good priorities in your life, it helps you keep perspective on your life. And perspective is very important as you assume responsibility. Thanks for the question.

Yes, ma'am.

*Associate Justice-Designate Samuel A. Alito, Jr.*

*Q.* Mr. President, I thank you for being here. I served under your father; he was my Commander in Chief during Desert Storm. And it was with great interest that I followed your campaign; my husband and I both are great fans of yours. I thank you for making the hard decisions, for making—not listening to the critics and keeping your campaign promises.

And I've been following the confirmation hearings of Judge Alito. And I certainly hope he's confirmed. I think he's a good man.

*The President.* Well, I appreciate that.

*Q.* But I'd like to kind of know how it stands right now.

*The President.* Yes, what's happening. First of all, I told the people—and thank you for your kind comments—and I told the people when I ran for President I would put people on the bench who would strictly interpret the Constitution—in other words, not use their position to write law. We've got legislators to write law; that's their job. The judges are to interpret law.

And Sam has been one of the picks I made for the Supreme Court, Sam Alito. He's a very, very smart, capable man. When you talk to Sam Alito, you think, "smart judge." He's written a lot of opinions. His judicial philosophy is clear, and his judicial temperament that is sound. That's why the American Bar Association gave him the highest possible rating. And now the question is, will Sam Alito be given an up-or-down vote on the Senate floor?

I don't know whether or not in our history there's ever been a filibuster of a Supreme Court judge. One, years ago, according to—Sam, by the way, is on the Judiciary Committee and helps conduct the hearings in a way that I thought has brought dignity to the process.

And so to answer your question, I don't know. You hear gossip about a filibuster, meaning a minority of Democrats—Senators could stop Alito from getting a vote. It would really—I didn't mean to slip; I'm not trying to be—[*laughter*]*—*I'm not taking political shots. It just so happens that it would be the Democrats who would try to not give him an up-or-down vote on the Senate floor. I think he deserves an up-or-down vote. I believe that if given an up-or-down vote, he'll be confirmed and the decisionmaking—you know, we're in the process now of hearing from the Democrat leadership.

There are 14 Senators, 7 from both political parties, who have vowed to try to prevent a filibuster from taking place without extraordinary circumstances. In other words, if there is extraordinary circumstance, they would agree to a filibuster. There has been no sign of any extraordinary circumstance, except for this extraordinary thing: He's extraordinarily capable to serve on the Supreme Court. And so thank you for your question on Sam. It's going to come to a head here pretty soon. I think the vote in the committee is—Wednesday is the vote in the Judiciary? Tomorrow, yes. You don't have to worry about it in the committee—the floor possibly later this week. That's great.

Okay, a couple more and then I've got to head back home. Yes, ma'am.

#### *Social Security Reform*

*Q.* Hi. First I'd like to say that when I was first able to cast my vote for President, it was my honor to vote for you—[*inaudible*]. Can you hear me?

*The President.* I like that part. [*Laughter*]

*Q.* My question is about Social Security.

*The President.* Social Security?

Q. Yes. What are your plans to make sure that it's still viable when all the students sitting here are of an age that it would make a difference in our lives? And also, do you have any advice for us to plan for the problems—[inaudible]?

*The President.* I couldn't hear the question, so I'll put the words in your mouth. [Laughter] I guess you asked, is the system going to be viable when you get—yes? No. [Laughter]

If I were you, I'd pay attention to the issue. And the reason why is because there's a lot of us getting ready to retire. There's a baby boomer bulge. I was born in '46, on the leading edge of what we call the baby boomers, and there's a lot of us getting ready to retire, which means you are going to have to pay for a lot more people in the system, plus we've been promised greater benefits than the previous generation. So the system is going to go broke unless we do something about it.

Last year I talked about doing something about it, and the Congress didn't do anything about it. So this year I'm going to talk about doing something about it and the next year something about it and the next year something about it. I have a duty to confront problems and not hope, you know, and just kind of—shuffling them along. And so this is a big issue; both Medicare and Social Security are big issues. They're big issues for long-term deficits, and they're big issues for the individuals who are going to be having to pay in the system for people like me. And the fix isn't all that hard.

What is first required is people setting aside needless politics in Washington, DC, and saying, "Why don't we come together and get something done for the sake of a future generation?" And we can make sure that this generation—that the up-and-coming generation—see, nothing changes if you're over 55. It's the young people paying into a broke system. By the way, they call it a Social Security trust; there's no "trust."

The money is paid, and it's spent on other programs, and all that's left in the Social Security is an IOU. And so it seems like to me that it's really important to kind of lay out all the facts on the table for people to determine whether or not there's a problem or not. And once they see a problem, then they ought to be calling on people on the phone, their elected representatives, saying, "Do something about it."

And I believe we can fix this problem by slowing down the rate of growth of benefits, not cutting benefits; benefits will increase. But the promises have been just too great, and we need to be frank about it. And we need to be open about it to make sure that we save the Social Security system for our younger generation.

I also happen to believe we have a fantastic opportunity to promote ownership in America. I believe younger workers ought to be able to take some of their own money and set it aside in a personal savings account. And the reason I believe that is, I think if you own an asset, it helps provide stability in American society. I am concerned that—I'm concerned at the low rate of return people get on their money through the Social Security—you know, quote, "Social Security trust." I know the power of compounding rate of interest. For those of you studying in economics, look it up. It says money grows exponentially over time. And if you put your money in just a safe series of instruments, it will grow. If you start saving at age 20, it grows quite dramatically over time, and then that's your nest egg. It's what you call—it's a part of a Social Security benefit system. Again, those of us who are retiring, I'm not talking about you, I'm talking about younger workers being given an option.

I'm also concerned about people in our society who've never owned anything. You know, I'm worried about—and I know that if you own—can you imagine a single mom working and able to put some of the money aside for herself if she wants and watch that grow with just safe investments over

time, and when she retires, she's got a nest egg that she calls her own, that Government can't spend on another program, a nest egg that she can pass on to her loved one.

I mean, ownership and the ability to pass wealth from one generation to the next is an important part of busting the cycle of poverty, for example. And so this is a great opportunity to think differently about this very important program. And I appreciate you bringing it up, and thanks for being concerned about it. You need to be.

Yes, ma'am.

Q. [Inaudible]

The President. Do what?

Q. [Inaudible]

The President. Yes, I'll look at it. Thank you. Appreciate it. Is your return address on there so I can write you back? No? Okay. [Laughter] Make sure I get that.

#### Education

Q. I was just wanting to get your comments about education. Recently, \$12.7 billion was cut from education, and I was just wanting to know how that's supposed to help our futures?

The President. Education budget was cut—say it again. What was cut?

Q. Twelve point seven billion dollars was cut from education, and I was just wanting to know how is that supposed to help our—

The President. At the Federal level?

Q. Yes.

The President. I don't think that—I don't think we've actually—for higher education? Student loans?

Q. Yes, student loans.

The President. Actually, I think what we did was reform the student loan program. We're not cutting money out of it. In other words, people aren't going to be cut off the program. We're just making sure it works better. It's part of the reconciliation package, I think she's talking about. Yes, it's a reform of the program to make sure it functions better. It is—in other words,

we're not taking people off student loans, we're saving money in the student loan program because it's inefficient. And so I think the thing to look at is whether or not there will be fewer people getting student loans. I don't think so. And secondly, on Pell grants, we're actually expanding the number of Pell grants through our budget.

But, great question. I think that the key on education is to make sure that we stay focused on how do we stay competitive into the 21st century. And I plan on doing some talking about math and science and engineering programs, so that people who graduate out of college will have the skills necessary to compete in this competitive world.

But I'm—I think I'm right on this. I'll check when I get back to Washington. But thank you for your question.

Yes, ma'am.

#### First Lady Laura Bush

Q. Again, I just wanted to thank you for coming. Your speech was very good. I'm a big admirer of your wife. I know that you said that your role as a President was as a decisionmaker, and I would like you to comment, please, on how your wife contributes to your decisionmaking process and how you confide in her. Thank you.

The President. Yes, thanks. Yes, she's great. She keeps—she tells me when I'm out of line. [Laughter]

First of all, Laura pays attention to what's going on. And so she offers her advice, and it's sound advice. She's a west Texas woman, born and raised in west Texas. Kind of a—I would say she brings common sense. Kind of remind people from here—reminds me of people here from Kansas, down-to-earth, no airs, commonsense point of view. And so I appreciate very much when she does give me her advice, which can be too frequent sometimes. [Laughter] Not true, honey. [Laughter]

It's like the time—she tells the story about the time when I was running for Congress in 1978 in west Texas, and she

criticized one of my speeches, and I ran into the garage door. [Laughter] But the best—I guess the best way to describe it is, one, I value her judgment, and I know it comes from her heart. And I appreciate the perspective she brings. Common sense is just a very important part of being a decisionmaker. There is something reassuring to me when I get advice from somebody who's got the best interests in mind, has got my best interests in mind, as well as just this kind of down-to-earth read on the situation. And that's how I view my advice from Laura.

Plus, she does—I mean, I said some things—“wanted dead or alive”—and she said, you might be able to explain that a little—express yourself a little better than that, George W. [Laughter] And so we've got a great relationship. You know, when I married her, she really didn't like politics, and particularly—didn't care particularly for politicians either. And here she is, the First Lady of the United States. And she is good. Boy, I tell you, she's—when she speaks, she's very credible because she's a decent, credible person. And I love her a lot.

Yes. Is that a Washington National hat?

“Brokeback Mountain”

Q. Wisconsin, actually.

The President. Okay, yes.

Q. “W” is for Wisconsin. You're a rancher. A lot of us here in Kansas are ranchers. I was just wanting to get your opinion on “Brokeback Mountain,” if you've seen it yet? [Laughter] You would love it. You should check it out.

The President. I haven't seen it. I'll be glad to talk about ranching, but I haven't seen the movie. [Laughter] I've heard about it. I hope you go—you know—[laughter]—I hope you go back to the ranch and the farm is what I'm about to say. I haven't seen it. [Laughter]

### Nuclear Proliferation

Q. Mr. President, I have a question about the nuclear weapons the United

States is keeping. It's around 3,000 nuclear weapons, so I want to know your opinion when you are going to destroy them.

The President. Do what, now? I didn't hear what you said.

Q. When you are going to—

The President. I can't hear you very well. I'm sorry. I'm not trying to avoid the question; I just didn't get it.

Q. United States has 3,000 nuclear weapons.

The President. Three thousand nuclear weapons.

Q. Yes. And I want to know your opinion about these weapons of mass destruction, that when the United States is going to destroy the nuclear weapons to prevail the peace in the world.

The President. Got it. No, I appreciate it. One of the first things I did as the President was to negotiate a reduction of nuclear—deployable nuclear weapons with Vladimir Putin. Actually, I think we had 6,000 at the time, and we agreed to reduce our nuclear—deployable nuclear arsenals to between 1,700 and 2,200. And we're in the process of doing that now. And then of course, there will be—another President can then evaluate where we are. So we're in the process of honoring what's called the Moscow Treaty.

A couple of more, and then I've got to hop. Yes, ma'am.

### Immigration/Border Security

Q. Mr. President—[inaudible]—I know that the relationship between United States and Venezuela is no good. That's not my problem. My problem is—or the question I have for you is what are you doing in the borders? You know, we try to secure the United States for terrorism, I know. So we're trying to secure the borders, but as well, some of us who are Hispanics and professional sometimes are denied the opportunity to work and advance in the workplace because we are minorities.

What are you going to do? I represent—*[inaudible]*—what are you going to do provide the most secure job in which we serve the country, we serve the university? I can't complain in this university; I've been treated like royalty here. But when you work outside the university as a Hispanic, you are not look good enough because they think you come from Mexico.

I come from Venezuela, which is a different country, but all of us are Hispanics, and all of us embrace ourselves in America because America is—North America, the United States, in Central and South America, where one continents embrace each other. So what are you going to do to provide opportunities for the Hispanics who come to this country legally, like I did or who are illegal here? We should help them to get legal here, not provide directly a green card, but help them to become legal in step by step—

*The President.* Okay.

Q. —like all of us have done. Thank you.

*The President.* Yes, I got the question. Immigration. *[Laughter]*

First of all, *bienvenidos*. And we have an obligation in this country to enforce our borders. And there's huge pressure on our borders. We've got a long border, obviously, with Mexico and a long border with Canada. And the biggest, most problematic area right now is the border with Mexico—California, Arizona, New Mexico, and Texas.

The issue is not only Mexican citizens who are coming across the border illegally, but it's other citizens who are coming across the border. And our obligation is to use a wise strategy to shut down the trafficking of anything illegal across the border. We're a country of law, and we must enforce the border. And we spend a lot of time in Washington, DC, analyzing the border issues and strategizing with Congress about how to do a better job including the following things: One, increasing the number of Border Patrol agents; two,

increasing the use of technology on the border, so that you can see people coming, through drones, for example, and then be able to rally the Border Patrol to stop people from crossing—coming across.

Some physical barriers, particularly in urban centers, are now being constructed. Some berms—there's parts of our border, where, literally, you can just drive across, I mean, there's nothing. You know, you just land, and in you come. And it's hard—the demarcation zone is different, and it makes it hard for people to enforce the border.

Secondly, when we detain somebody at the border, we've got to have a rational policy to help back up the people we're paying to enforce the border. And by that I mean, if you're somebody from Central America, for example, caught coming into our country, that the policy has been to give you a notification to report back to a judge, and they'll hear your case. Well, guess what? A lot of them don't come back. They're here because they're trying to better their lives, and they're going to move into our society as best as they can. And they're not going to return back. So we're ending what's called catch-and-release, and we're beginning to provide more detention space for our Border Patrol to be able to say to people, particularly from Central America and South America, "You've come illegally; we're sending you back home."

Thirdly, in terms of workers, we do have H1, H2B visa programs that we're constantly analyzing with the United States Congress. It makes sense that highly skilled workers, for example, be given work permits here in the United States if it helps us meet an economic objective. But I feel strongly that we need to take the worker program a step further, and I'll tell you why. I'm mindful that most people come here to work. There are a lot of people in your State dependent upon people coming here to work.

I tell you, I used to say that—when I was Governor of Texas—family values

didn't stop at the Rio Grande River. And people, if they could make 50 cents and had mouths to feed or \$5 and had mouths to feed, a lot of people would come to try find that \$5 work. And so here's my position, and that is that if there is someone who will do a job an American won't do, then that person ought to be given a temporary-worker card to work in the United States for a set period of time.

I do not believe that any guest-worker program ought to contain amnesty, because I believe that if you granted amnesty to the people here working now that that would cause another 8 million people or so to come here. I do believe, however, it is humane to say to a person, "You're doing a job somebody else won't do; here is a temporary card to enable you to do the card."

The length of the stay here will be dependent upon the actions of the Congress. It's conceivable you could have a 3-year period with a renewal period. I've thought a lot about this issue; I just want you to know. And by the way, when you mention guest worker, a lot of people automatically spring to amnesty—all he wants to do is grant legal status—that's just not the case; I don't believe we ought to do that. But I do believe we ought to recognize there are people doing work others won't do.

And there's a lot of good employers here in Kansas employing these people, and the employers don't know whether or not somebody is here legally or not, because what's happened is, a whole kind of industry has sprung up around people coming here. And it's inhumane. It's inhumane for the people being trafficked into the United States, and it's not fair to employers who may be breaking the law.

And here's what I mean. You've got people being smuggled into the United States of America by these criminal networks. They're called *coyotes*—*coyotes*. And they're bringing them in the back of 18-wheelers—stuffing human beings to come and do work in America that Americans

won't do, in the back of 18-wheelers. You've got a whole forgery industry up and running, you know? And so these guys show up with documents that—so the employer says, "Well, you look legal to me." They don't know whether they're legal or not legal.

I think it is a—and I know that we've got a lot of our Border Patrol agents trying to catch people sneaking in the country. And so it seems like to me that why don't we recognize reality, give people worker cards on a temporary basis so somebody can come back and forth legally, with a tamper-proof card that will enable an employer to know whether or not they're hiring somebody who is illegal. And if we catch employers after that hiring somebody illegal, there's got to be a fine and a consequence.

And so a compassionate way to enforce our border is to give people a temporary-worker card without granting amnesty. That's a long answer to a very important problem that is—now is the time for the United States to take it on squarely, in a humane way, that recognizes the situation and deals with it in an upfront way. And I want to thank you for your question.

Look, I've got a dinner tonight. [Laughter] I'd like to be here for a longer period of time, but Laura is serving dinner for retiring Alan Greenspan, and I better not be late, otherwise all that advice, it will be kind of—have a little different tone to it. [Laughter] I've really enjoyed being here. I want to thank you for your courtesy for having me. Thank you for supporting a great university in Kansas State University.

May God bless you all, and may God continue to bless our country. Thank you very much.

NOTE: The President spoke at 11:51 a.m. in Bramlage Coliseum at Kansas State University. In his remarks, he referred to Gov. Kathleen Sebelius of Kansas; Jon Wefald, president, Kansas State University; President

Hamid Karzai of Afghanistan; senior Al Qaida associate Abu Musab Al Zarqawi; President Roh Moo-hyun of South Korea;

President Mahmud Ahmadi-nejad of Iran; President Hu Jintao of China; and President Vladimir V. Putin of Russia.

## Statement on the Death of President Ibrahim Rugova of Kosovo *January 23, 2006*

I am deeply saddened by the death of President Ibrahim Rugova. For many years, President Rugova led the campaign for peace and democracy in Kosovo. He was a friend of the United States, and he earned the world's respect for his principled stand against violence. Throughout years of conflict, he was a voice of reason and moderation that helped Kosovo's peo-

ple lay the groundwork for a peaceful future. The United States remains committed to working with the people of Kosovo to build a future that is stable, democratic, and prosperous. On behalf of the people of the United States, Laura and I extend our condolences to President Rugova's family and to the people of Kosovo.

## Remarks Following Discussions With Prime Minister Shaukat Aziz of Pakistan *January 24, 2006*

*President Bush.* Mr. Prime Minister, welcome. We have just had a wide-ranging discussion, which one should expect when we've got a strategic relationship like we have with Pakistan. I think the relationship with Pakistan is a vital relationship for the United States, and I want to thank the Prime Minister and thank the President for working closely with us on a variety of issues. We're working closely to defeat the terrorists who would like to harm America and harm Pakistan.

We talked about the importance of trade and commerce and investment, and we also talked about the world response to the terrible tragedy that Pakistan has gone through. It's hard to imagine the devastation. The country lost 75,000 people; 4 million people were made homeless. I was very pleased that the United States, our taxpayers, our military could contribute to helping the people of Pakistan recover.

They are our friends, and we consider this friendship to be a vital friendship for keeping the peace.

And so, Mr. Prime Minister, thank you for coming. I'm really looking forward to going to your country. I'll be traveling to India and Pakistan in March. And I want to thank you for your invitation and your hospitality in advance.

*Prime Minister Aziz.* Thank you, Mr. President. Thank you for receiving us. The United States and Pakistan have a multifaceted relationship, covering a host of areas. It goes back in history, and the people of Pakistan value the relationship very much.

Let me, at the outset, say that the assistance the United States has given to Pakistan—the Chinooks, the MASH hospitals, the engineers, and the financial assistance after the earthquake—has touched the

hearts and minds of all Pakistanis—and including your private sector and civil society. We really appreciate what has been done, and it will help restore the lives of the people who've been impacted by the earthquake. A sense of caring and sharing always builds a better relationship between countries. And that's what we are seeing between Pakistan and the United States.

Mr. President, we have a multifaceted relationship, and our discussions today, which we'll continue later, have covered a host of areas: the economic side, trade and investment—we are very keen to expand that. Pakistan has a growing economy, and U.S. investors can take part in this growth.

We also strive for peace in our area. It's an area which has a lot of challenges, and we are pursuing peace with all our neighbors. We want a solution of all disputes, including the Kashmir dispute. We want to see a strong, stable Afghanistan. We are against proliferation of nuclear

weapons by anybody, and we want to fight terrorism in all its forms and manifestations. There is no good terrorist or bad terrorist, and terrorism knows no borders. Our coalition with the United States in fighting terrorism is very important to all of the world and all of civil society.

We are delighted we are here to share this time with you, and the people of Pakistan and the President and all of our Cabinet and various stakeholders in Pakistan are looking forward to your visit, because we think that this is an important visit for building relations further between our two countries and serving the cause of peace in the world.

*President Bush.* Thank you, sir.

NOTE: The President spoke at 11:50 a.m. in the Oval Office at the White House. In his remarks, he referred to President Pervez Musharraf of Pakistan.

## Remarks Following a Visit to the National Security Agency at Fort Meade, Maryland

*January 25, 2006*

Thank you very much. I just had a really interesting visit here at the National Security Agency, and I want to thank General Alexander and all the folks who work out here for their hospitality and their briefing. I gave a speech to the men and women who are dedicating their lives to serving the American people and preventing this country from being attacked again. I was also able to talk to folks who work for the NSA, via video. They're around the world—some are in Iraq, some in Afghanistan. And it's just such an honor to be able to tell these people that the work they do is vital and necessary, and I support them 100 percent.

Most of the accomplishments, of course, that happen out here have got to be secret.

But I know the good work they're doing. And so I want to assure the American people that we are lucky to have such professional, smart people working day and night to protect us.

The National Security Agency is playing a crucial part in the war on terror. First of all, the good folks who work out here understand we are at war, and they know what we know—that we face determined enemies who will strike without warning. And they know what I know, that we must learn the intentions of the enemies before they strike. That's what they do here—they work to protect us. The efforts of the people out here are a crucial part in protecting the homeland, and they've been a crucial

part in success in Iraq and Afghanistan as well.

Officials here learn information about plotters and planners and people who would do us harm. Now, I understand there's some in America who say, "Well, this can't be true—there are still people willing to attack." All I would ask them to do is listen to the words of Usama bin Laden and take him seriously. When he says he's going to hurt the American people again, or try to, he means it. I take it seriously, and the people of NSA take it seriously. And most of the American people take it seriously as well.

Part of the war on terror—we've seen that part of the terrorists' strategy is to place operatives inside of our country. They blend in with civilian population. They get their orders from overseas, and then they emerge to strike from within. We must be able to quickly detect when someone linked to Al Qaida is communicating with someone inside of America. That's one of the challenges of protecting the American people, and it's one of the lessons of September the 11th.

When terrorist operatives are here in America communicating with someone overseas, we must understand what's going on if we're going to do our job to protect the people. The safety and security of the American people depend on our ability to find out who the terrorists are talking to and what they're planning.

In the weeks following September the 11th, I authorized a terrorist surveillance program to detect and intercept Al Qaida communications involving someone here in the United States. This is a targeted program to intercept communications in which intelligence professionals have reason to believe that at least one person is a member or agent of Al Qaida or a related terrorist organization. The program applies only to international communications. In other words, one end of the communication must be outside the United States.

We know that two of the hijackers who struck the Pentagon were inside the United States communicating with Al Qaida operatives overseas. But we didn't realize they were here plotting the attack until it was too late.

Here's what General Mike Hayden said—he was the former Director here at NSA. He's now the Deputy Director of the National Intelligence—Deputy Director of National Intelligence—and here's what he said earlier this week: "Had this program been in effect prior to 9/11, it is my professional judgment that we would have detected some of the 9/11 Al Qaida operatives in the United States, and we would have identified them as such."

The 9/11 Commission made clear, in this era of new dangers, we must be able to connect the dots before the terrorists strike, so we can stop new attacks. And this NSA program is doing just that. General Hayden has confirmed that America has gained information from this program that would not otherwise have been available. This information has helped prevent attacks and save American lives. This terrorist surveillance program includes multiple safeguards to protect civil liberties, and it is fully consistent with our Nation's laws and Constitution. Federal courts have consistently ruled that a President has authority under the Constitution to conduct foreign intelligence surveillance against our enemies.

My predecessors have used the same constitutional authority on numerous occasions. And the Supreme Court has ruled that Congress gave the President additional authority to use the traditional tools—or "fundamental incidents"—of war in the fight against terror when Congress passed the authorization for the use of military force in 2001. These tools include surveillance to detect and prevent further attacks by our enemies. I have the authority, both from the Constitution and the Congress, to undertake this vital program. The American people expect me to protect their lives

and their civil liberties, and that's exactly what we're doing with this program.

I'll continue to reauthorize this program for so long as our country faces a continuing threat from Al Qaida and related groups. This enemy still wants to do harm to the American people. We cannot let the fact that we have not been attacked lull us into the illusion that the threats to our Nation have disappeared. They have not disappeared; the terrorists are still active. And we've seen their activity in London and Madrid and Bali and Beslan and Amman and Baghdad and many other places since September the 11th. Just last week, as I mentioned earlier, we heard from Usama bin Laden. The terrorists will do everything they can to strike us. And I'm going to continue to do everything I can within my legal authority to stop them, and so are the good people here at NSA.

In the long run, we can be confident in the outcome of this struggle, because we've seen the power of freedom to defeat tyranny and terror before. And we can be confident because we know our military and law enforcement and homeland security and intelligence professionals are working day and night to protect us.

I'm grateful for the skill and dedication of the good folks who work out here. These are fine patriots, and they're making America safer. Thank you all very much.

NOTE: The President spoke at 2:10 p.m. In his remarks, he referred to Lt. Gen. Keith B. Alexander, USA, Director, National Security Agency; and Usama bin Laden, leader of the Al Qaida terrorist organization. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following a Meeting With Former Clerks of Associate Justice-Designate Samuel A. Alito, Jr.

*January 25, 2006*

Thank you all very much. Thank you all for being here. I just finished a meeting in the Oval Office with a group of distinguished lawyers, many of whom come from different backgrounds, and they've got a wide range of political views. They share two things in common: They all clerked for Judge Sam Alito; and they strongly support his nomination to be an Associate Justice to the Supreme Court.

The relationship between a judge and a law clerk is extremely close. Each judge has only three or four clerks a year, and these clerks serve as the judge's aides and advisers. They provide legal research; they discuss and debate pending cases; and they see firsthand how the judge arrives at decisions.

These fine men and women with me

today have worked side by side with Sam Alito, and they are uniquely qualified to assess what kind of Supreme Court Justice he would be. As the full Senate takes up Judge Alito's nomination, it is important for the American people to hear what his former clerks say about this fine judge and his approach to the law.

One of the clerks I met today who describes himself as a Democrat said this about Judge Alito: "He is meticulous in the way he goes about deciding cases. He's meticulous in the way he goes about finding what the law is. I can't think of better qualities for anyone to serve as a judge on the Supreme Court."

Another former clerk here today says this: "I am a Democrat who always voted Democrat, except when I vote for a Green

candidate—but Judge Alito was not interested in the ideology of his clerks. He didn't decide cases based on ideology."

Another former clerk who described himself as a proud member of the NAACP and the ACLU says, "After a year of working closely with the Judge on cases concerning a wide variety of legal issues, I left New Jersey not knowing Judge Alito's personal beliefs on any of them."

Another former clerk who describes herself as a left-leaning Democrat told the Senate this about Sam Alito: "He's a man of great decency, integrity, and character. I believe very strongly he deserves to be confirmed as the Court's next Associate Justice."

Another of Judge Alito's former clerks worked for Senator Kerry's Presidential campaign. She said this about Judge Alito: "I learned in my year with Judge Alito that his approach to judging is not about personal ideology or ambition but about hard work and devotion to law and justice."

In case you were wondering, Judge Alito has also the support of Republican clerks. *[Laughter]* In fact, he has the strong support of all 54 of his former clerks, regardless of their political beliefs. Judge Alito has earned broad support from his fellow judges on the Third Circuit. Seven of them took the extraordinary step of testifying on his behalf before the Senate Judiciary Committee.

Former Chief Judge Ed Becker, who sat with Judge Alito on more than 1,000 cases, said this about his colleague: "I have never seen a chink in the armor of his integrity, which I view as total. He is a real judge deciding each case on the facts and the law, not his personal views, whatever they may be."

Another colleague on the Third Circuit who was appointed by President Clinton said this about Judge Alito: "He is a fair-minded man, a modest man, a humble man, and he reveres the rule of law." The judge went on to say, "If confirmed, Judge

Sam Alito will serve as a marvelous and distinguished Associate Justice."

All these brilliant legal minds are united in their strong support of Sam Alito. And in his confirmation hearings, the American people saw why. Judge Alito is openminded and principled. He gives every case careful attention, and he makes decisions based on the merits. Judge Alito understands that the role of a judge is to interpret the law, not to advance a personal or political agenda. Judge Alito is a man of character and integrity. Judge Alito will bring to the Supreme Court a broad range of experience and accomplishment.

Before he became a judge, Sam Alito served as a Federal prosecutor, Assistant to the Solicitor General, where he argued 12 cases before the Supreme Court; an attorney in the Justice Department's Office of Legal Counsel; and the U.S. Attorney for the District of New Jersey—the top Federal prosecutor in one of the Nation's largest Federal districts.

In 1990, Sam Alito was unanimously confirmed by the Senate to serve on the United States Court of Appeals for the Third Circuit. He now has more prior judicial experience than any Supreme Court nominee in more than 70 years. The American Bar Association gave Judge Sam Alito its highest possible rating, a unanimous well-qualified. It based its rating on its assessment of his integrity, professional competence, and judicial temperament.

In the past, leading Democrat Senators have called the ABA's rating the gold standard for judicial nominees. Yesterday, Ed Rendell, the Democratic Governor of Pennsylvania and former chairman of the Democratic National Committee, came out in support of Judge Sam Alito. Governor Rendell said he was not pleased with the way his fellow Democrats have handled Sam Alito's nomination and said that Democrats should vote to confirm him. Governor Rendell put it this way: "As long

as a Supreme Court Justice has high academic qualifications and significant integrity—and Judge Alito certainly does—we should confirm him.”

There’s no doubt about Judge Alito’s qualifications, his intellect, or his complete dedication to our Constitution and laws. He is exactly the kind of person Americans want on the Supreme Court.

The Senate has a constitutional responsibility to give every judicial nominee an up-or-down vote. In its 216-year history, the Senate has held an up-or-down vote on every Supreme Court nominee with a majority of Senate support. And I call on the United States Senate to put partisanship aside and give Judge Alito the up-or-down

vote he deserves and to confirm him as the next Associate Justice of the Supreme Court.

I’m grateful to Judge Alito. And I appreciate his wonderful wife, Martha, and their children for their dignity throughout the confirmation process. America is fortunate that this good, humble man is willing to serve, and all of us look forward to seeing him take a seat on our Nation’s highest Court.

Thank you all for being here. Appreciate it.

NOTE: The President spoke at 3:35 p.m. in Room 350 of the Dwight D. Eisenhower Executive Office Building.

## The President’s News Conference January 26, 2006

*The President.* Sorry to interrupt. [Laughter] Thank you all very much. I look forward to answering some of your questions here in a minute. I’m also looking forward to going up to Capitol Hill next Tuesday to give my State of the Union Address. I thought it probably best not to practice my speech in front of you here, so you’ll pay attention to it when I deliver it. But I do want to give you some thoughts about what I’m thinking about.

First, I recognize we live in a momentous time——

[At this point, there was technical difficulty with a camera attached to the ceiling.]

For those of you watching, we seem to have a mechanical flaw. [Laughter]

Q. That was an accident, right?

*The President.* Are you wearing your helmets?

Q. It’s that renovation project.

*The President.* Exactly. [Laughter] I’ll take it up with the First Lady. [Laughter]

I’m going to remind people we’re living in historic times and that we have a chance to make decisions today that will help shape the direction of events for years to come. I’m going to continue to talk about an optimistic agenda that will keep—that will remind folks we’ve got a responsibility to lead. We’ve got a responsibility to lead to promote freedom and a responsibility to continue to put policies in place that will let us be a leader when it comes to the economy in the world.

I recognize this is an election year, but I believe that we can work together to achieve results. In other words, I think we can set aside the partisanship that inevitably will come with an election year and get some stuff done. And that’s what I’m going to call Congress to do.

We’ve got—must work together to protect our Nation’s security. I’m going to continue to do everything within my authority to protect the American people. We’re going to stay on the offense in the war against terror. We’ll hunt down the enemies

in Afghanistan and in Iraq and elsewhere. We'll continue our terrorist surveillance program against Al Qaida. Congress must reauthorize the PATRIOT Act so that our law enforcement and intelligence and homeland security officers have the tools they need to rout out the terrorists—terrorists who could be planning and plotting within our borders. And we'll do all this and, at the same time, protect the civil liberties of our people.

We're going to continue to lead the cause of freedom in the world. The only way to defeat a dark ideology is through the hopeful vision of human liberty.

Here at home, we're also—we've got great opportunities. And to seize those opportunities, we have got to lead. Our economy is growing; it is strong. This economy has created millions of new jobs, yet it's an economy that is changing rapidly. And we live in a competitive world. And so policies must be put in place to recognize the competition of the global economy and prepare our people to be able to continue to compete so America can continue to lead.

Of course, we'll talk about fiscal policy in my State of the Union, talking about the Congress to be wise about how we spend the people's money and to make the tax cuts permanent.

I will talk about initiatives to make sure our health care and education and energy is—recognizes the realities of the world in which we live today and anticipates the problems of the world tomorrow so that we can remain competitive.

I will talk about the values that are important for our country. I'm going to remind people we show the character and compassion of America by taking focused action to confront disease and to help devastated areas of our country that have been—areas that have been devastated by natural disasters, and ensure that medical research is conducted in a manner that recognizes the dignity of every human life.

I look forward to the speech; I really do. As you can imagine, it's an interesting experience to walk out there and not only talk to Members of Congress but, as importantly, talk to the American people.

I'm also looking forward to the Senate finishing its business on the confirmation of Sam Alito. He's a man of character, and he's a man of integrity. He understands that the role of a judge is to interpret the law. He understands the role of a judge is not to advance a personal or political agenda. Yesterday I had an interesting experience standing with his law clerks, and I could—started reading the notes that, of course, were adequately prepared for me, and the first person said he's a Democrat who supports Alito; the second person was a person who voted Green that supported Alito; the third, a left-leaning woman Democrat who supported Alito; the fourth person I talked about was somebody who worked in the John Kerry campaign who supported Alito. I was wondering, where are all those Republican clerks? *[Laughter]*

My point is, is that he has broad support from people who know him, people from both political parties, because he's a decent man who's got a lot of experience, and he deserves an up-or-down vote on the floor of the Senate. I was interested in Ed Rendell's comments—he's the Governor of Pennsylvania. He was the former chairman of the Democrat National Committee. He did not like the way the debate was headed. He believed that Sam Alito should be confirmed, and so do I. The Senate needs to give him an up-or-down vote as quickly as possible.

Listen, thank you all for giving me a chance to share some thoughts with you. I'd be glad to answer some questions, starting with you, Terry *[Terence Hunt, Associated Press]*.

#### *Palestinian Elections/Hamas*

*Q.* Mr. President, is Mideast peace-making dead with Hamas's big election victory? And do you rule out dealing with

the Palestinians if Hamas is the majority party?

*The President.* Peace is never dead because people want peace. I believe—and that's why I articulated a two-state solution early in my administration, so that—as a vision for people to work toward, a solution that recognized that democracy yields peace. And the best hope for peace in the Middle East is two democracies living side by side.

So the Palestinians had an election yesterday, and the results of which remind me about the power of democracy. You see, when you give people the vote, you give people a chance to express themselves at the polls. And if they're unhappy with the status quo, they'll let you know. That's the great thing about democracy; it provides a look into society.

And yesterday the turnout was significant, as I understand it. And there was a peaceful process as people went to the polls, and that's positive. But what was also positive is, is that it's a wake-up call to the leadership. Obviously, people were not happy with the status quo. The people are demanding honest government. The people want services. They want to be able to raise their children in an environment in which they can get a decent education and they can find health care.

And so the elections should open the eyes of the old guard there in the Palestinian Territories. I like the competition of ideas. I like people who have to go out and say, "Vote for me, and here's what I'm going to do." There's something healthy and—about a system that does that. And so the elections yesterday were very interesting.

On the other hand, I don't see how you can be a partner in peace if you advocate the destruction of a country as part of your platform. And I know you can't be a partner in peace if you have a—if your party has got an armed wing. And so the elections just took place. We will watch very carefully about the formation of the Gov-

ernment. But I will continue to remind people about what I just said, that if your platform is the destruction of Israel, it means you're not a partner in peace. And we're interested in peace.

I talked to Condi twice this morning. She called President Abbas. She also is going to have a conference call today about the Quartet—with the Quartet, about how to keep the process on the road to peace.

Steve [Steve Holland, Reuters].

### *Palestinian Democracy*

Q. If I can follow up, sir.

*The President.* Yes.

Q. Are you cautioning Prime Minister Abbas not to resign? And—

*The President.* We'd like him to stay in power. I mean, we'd like to stay in office. He is in power; we'd like him to stay in office. Sorry to interrupt. I knew this was a two-part question, so I tried to head it off.

Q. Will this affect aid to the Palestinians? Will you be able to work with Hamas if they're—assuming they take on a large share of the Government?

*The President.* Well, I made it very clear that the United States does not support political parties that want to destroy our ally Israel and that people must renounce that part of their platform. But the Government hasn't formed yet. They're beginning to talk about how to form the Government. And your question on Abbas was a good one. And our message to him was, we would hope he would stay in office and work to move the process forward.

Again, I remind people, the elections—democracy is—can open up the world's eyes to reality by listening to people. And the elections—the election process is healthy for society, in my judgment. In other words, it's—one way to figure out how to address the needs of the people is to let them express themselves at the ballot box. And that's exactly what happened yesterday. And you'll hear a lot of

people saying, “Well, aren’t we surprised at the outcome,” or this, that, or the other.

If there is corruption, I’m not surprised that people say, “Let’s get rid of corruption.” If government hadn’t been responsive, I’m not the least bit surprised that people said, “I want government to be responsive.”

And so that was an interesting day yesterday in the—as we’re watching liberty begin to spread across the Middle East.

Let’s see here. Yes, David [David Gregory, NBC News].

Q. Mr. President, good morning. I have a different question, but I’d like to pin you down on this point about Hamas because I don’t think you’ve completely answered it. Are you ruling out dealing with a Palestinian Government comprised, in part, of Hamas?

*The President.* Dave, they don’t have a Government yet, so you’re asking me to speculate on what the Government will look like. I have made it very clear, however, that a political party that articulates the destruction of Israel as part of its platform is a party with which we will not deal.

Q. Okay, can I—

*The President.* No, it’s—

Q. But, sir, I’m sorry—

*The President.* Well, it’s unfair to the other people.

Q. No, I’m just following up—

*The President.* You’re trying to hoard. [Laughter]

Q. I’m not trying—I have a question about New Orleans, sir.

*The President.* This is—I agree with you. I can see the expressions on your colleagues’ faces that it’s—

Q. Well, I hope it will be worth your time. [Laughter]

*The President.* They don’t think so. [Laughter]

### *Gulf Coast Relief Efforts*

Q. The administration has rejected a local plan to rebuild New Orleans, and your

administrator down there, Don Powell, said that the focus for Federal money should be to rebuild for those 20,000 homeowners who were outside the flood plain. Critics, local officials say that that ignores so many people in New Orleans, the poorest of the poor, the hardest hit areas, people who didn’t have flood insurance or didn’t expect the levees to break. And they feel, sir, that this is a certain betrayal of your promise that New Orleans would rise again. So why did you reject it? And do you think that the people of New Orleans have to expect that there is a limit for the extent to which the city can be rebuilt?

*The President.* The Congress has appropriated \$85 billion to help rebuild the gulf coast. And that is a good start; it’s a strong start; it’s a significant commitment to the people whose lives were turned upside down by that—by those—by that hurricane.

Secondly, we have said that we look forward to the time when each State develops its recovery plan. I, early on in the process, said it’s important for the folks in Mississippi to come forward with a recovery plan. And it’s important for New Orleans and the State of Louisiana to work together to develop a State recovery plan. And the reason I said that is because I was aware that folks in Congress will want to spend money based upon a specific strategy. In other words, we’ve got to get comfortable with how to proceed. Those plans haven’t—the plan for Louisiana hasn’t come forward yet, and I urge the officials, both State and city, to work together so we can get a sense for how they’re going to proceed.

Now, having said that, I recognize there were some early things we needed to do to instill confidence. One of them was to say that we will make the levees stronger and better than before and study further strengthening of the levees. In other words, I recognize that people needed to be able to say, “Well, gosh, we can’t even get started until we got a commitment from the Federal Government on the levees.”

A lot of the money we're spending is prescribed by law, but we also went a step further and proposed to Congress, and they accepted, the CDGB money so that monies can actually go directly to individual families that need help. We'll continue to work with the folks down there. But I want to remind the people in that part of the world, \$85 billion is a lot, and secondly, we were concerned about creating additional Federal bureaucracies, which might make it harder to get money to the people.

Q. But is there a limit, sir?

*The President.* John [John Roberts, CBS News].

Q. I have five questions, sir. I hope you'll indulge me. [Laughter]

*The President.* That's only two-and-a-half times more—

### *Terrorist Surveillance Program*

Q. On the NSA eavesdropping program, there seems to be growing momentum in Congress to either modify the existing law or write some new law that would give you the latitude to do this and, at the same time, ensure that people's civil liberties are protected. Would you be resistant to the notion of new laws if Congress were to give you what you need to conduct these operations?

*The President.* The terrorist surveillance program is necessary to protect America from attack. I asked the very questions you asked, John, when we first got going. Let me tell you exactly how this happened. Right after September the 11th, I said to the people, what can we do—can we do more—"the people" being the operators, a guy like Mike Hayden—can we do more to protect the people? There's going to be a lot of investigation and a lot of discussion about connecting dots, and we have a responsibility to protect the people, so let's make sure we connect the dots. And so he came forward with this program. In other words, it wasn't designed in the White House; it was designed where you

expect it to be designed, in the NSA.

Secondly, I said, before we do anything, I want to make sure it's legal. And so we had our lawyers look at it—and as part of the debate, the discussion with the American people as to the legality of the program, there's no doubt in my mind it is legal.

And thirdly, will there be safeguards for the—to safeguard the civil liberties of the American people? There's no doubt in my mind there are safeguards in place to make sure the program focuses on calls coming from outside the United States in, with an Al Qaida—from a—with a belief that there's an Al Qaida person making the call to somebody here in the States, or vice versa—but not domestic calls.

So as I stand here right now, I can tell the American people the program's legal; it's designed to protect civil liberties; and it's necessary. Now, my concern has always been that in an attempt to try to pass a law on something that's already legal, we'll show the enemy what we're doing. And we've briefed Congress—Members of Congress. We'll continue to do that, but it's important for people to understand that this program is so sensitive and so important, that if information gets out to how it's—how we do it, how we run it, or how we operate, it will help the enemy.

And so, of course, we'll listen to ideas. But, John, I want to make sure that people understand that if it—if the attempt to write law makes this program—is likely to expose the nature of the program, I'll resist it. And I think the American people understand that. Why tell the enemy what we're doing if the program is necessary to protect us from the enemy? And it is. And it's legal. And we'll continue to brief Congress. And we review it a lot, and we review it not only at the Justice Department but with a good legal staff inside NSA.

Yes.

*Lobbying Reform/Jack Abramoff Investigation*

Q. What do you hear or your staff hear about releasing of photographs of Jack Abramoff with you, Mr. President? If you say you don't fear anything, tell us why you won't release them?

*The President.* She's asking about a person who admitted to wrongdoing and who needs to be prosecuted for that. There is a serious investigation going on, as there should be. The American people have got to have confidence in the ethics of all branches of Government. You're asking about pictures. I had my picture taken with him, evidently. I've had my picture taken with a lot of people. Having my picture taken with someone doesn't mean that, you know, I'm a friend with them or know them very well. I've had my picture taken with you—[laughter]—at holiday parties.

My point is, I mean, there's thousands of people that come through and get their pictures taken. I'm also mindful that we live in a world in which those pictures will be used for pure political purposes, and they're not relevant to the investigation.

Q. Do you know how many?

*The President.* I don't have any idea.

I'm coming your way. Carl [Carl Cameron, FOX News].

*Iran*

Q. Thank you, Mr. President. Good morning. On the subject of Iran, what parameters might the U.S. be willing to accept Iran having a nuclear power program? And to the extent that you've said in the past that the United States supports the Iranian people, would you support expedited legislation or a move that would send resources to such groups in Iran that might hasten regime change or democratic reform?

*The President.* I have made it clear that I believe that the Iranians should have a civilian nuclear program—power program under these conditions: that the material used to power the plant would be manufac-

tured in Russia, delivered under IEEA—IAEA inspections—inspectors to Iran to be used in that plant, the waste of which will be picked up by the Russians and returned to Russia. I think that is a good plan. The Russians came up with the idea, and I support it.

And the reason why I think it makes sense is because I do believe people ought to be allowed to have civilian nuclear power. However, I don't believe nontransparent regimes that threaten the security of the world should be allowed to gain the technologies necessary to make a weapon. And the Iranians have said, "We want a weapon."

And it's not in the world's interest that they have a weapon. And so we are working hard to continue the diplomacy necessary to send a focused message to the Iranian Government, and that is, your desires for a weapon are unacceptable. Part of that is—part of that diplomacy was to provide an acceptable alternative to the Iranian desire to have a civilian nuclear power industry.

Secondly, we will support freedom movements all around the world. I constantly talked about today's reformers will be tomorrow's leaders, and therefore, we will work with groups that demand for people to be given the natural rights of men and women, and that right is to live in a free society.

Dana [Dana Bash, Cable News Network].

*Lobbying Reform/Jack Abramoff Investigation*

Q. Mr. President, you talked about Jack Abramoff in the context of pictures, but it may not necessarily just be about pictures. He also had some meetings with some of your staff. So you remember, you ran on the idea of restoring honesty and integrity to the White House. So why are you letting your critics, perhaps, attack you

and paint you with, maybe, a guilt by association? Why not just throw open your books and say, look, here is—

*The President.* There is a serious investigation going on by Federal prosecutors, and that's their job. And they will—if they believe something was done inappropriately in the White House, they'll come and look, and they're welcome to do so. There's a serious investigation that's going on.

Q. But, sir, don't you want to tell the American people look, as I promised, this White House isn't for sale, and I'm not for sale?

*The President.* It's hard for me to say I didn't have pictures with the guy when I did. But I have also had pictures with thousands and thousands of people. I mean, people—it's part of the job of the President to shake hands and—with people and smile. [Laughter] And I do. And the man contributed to my campaigns, but he contributed, either directly or through his clients, to a lot of people in Washington. And this needs to be cleared up so the people have confidence in the system.

Yes, Peter [Peter Baker, Washington Post].

#### *Palestinian Elections*

Q. Mr. President, the U.S. Government has spent about \$2 million to help promote the Palestinian Authority in the lead-up to this week's elections. I wonder, sir, whether you feel like it's consistent with your push to spread democracy around the world if the U.S. puts its thumb on the scale? Or are there moments when it's okay to compromise that because you want to keep organizations with a terrorist threat out of government?

*The President.* I talked to Secretary Rice about the story that you're referring to, and what she told me was, is that this money was part of a USAID package that had been in the pipeline for a while. The—kind of the allegation or the insinuation that we were funding a political effort just simply isn't the case, as far as I can tell.

Q. It was designed to promote the image of the Palestinian Authority among its own people—

*The President.* As I say, this money was part of a USAID package. We had—I proclaimed, I made it very clear that Jim Wolfensohn was going to be in the region with an economic aid package to help the Palestinian people. Our programs are aimed to help the people. And—

Q. I'm talking about who gets credit. Part of the thing was there would be no—

*The President.* Well, obviously—obviously—

Q. Credit would go to the Authority.

*The President.* Yes, well, our attempt was to help the Palestinian people through a active USAID program. And you saw the results of the election.

Q. Why, then, not disclose the USAID involvement?

*The President.* It is disclosed; you just disclosed it. [Laughter]

Elisabeth [Elisabeth Bumiller, New York Times]. Thank you. Are you trying to help the man out there?

Q. He's my colleague.

*The President.* Okay, good.

#### *Terrorist Surveillance Program*

Q. Members of your administration have said that the secret eavesdropping program might have prevented the September 11th attacks. But the people who hijacked the planes on September 11th had been in this country for years, having domestic phone calls and e-mails. So how, specifically, can you say that?

*The President.* Well, Michael Hayden said that, because he believes that had we had the capacity to listen to the phone calls from those from San Diego elsewhere, we might have gotten information necessary to prevent the attack. And that's what he was referring to.

Q. They were domestic calls—

*The President.* No, domestic outside—we will not listen inside this country. It is a

call from Al Qaida, Al Qaida affiliates, either from inside the country out or outside the country in, but not domestically.

### *Jack Abramoff Investigation*

Q. Can I ask you again, why won't you release the photos of yourself with Jack Abramoff?

*The President.* I just answered the question.

Yes.

### *Terrorist Surveillance Program*

Q. Your explanation on the monitoring program seems to say that when the Nation is at war, the President, by definition, can order measures that might not be acceptable or even, perhaps, legal in peacetime. And this seems to sound like something President Nixon once said, which was, "When the President does it, then that means it is not illegal," in the areas involving national security. So how do the two differ?

*The President.* Well, I said yesterday that other Presidents have used the same authority I've had, to use technology to protect the American people. Other Presidents—most Presidents believe that during a time of war, that we can use our authorities under the Constitution to make decisions necessary to protect us.

Secondly, in this case, there is an act passed by Congress in 2001 which said that I must have the power to conduct this war using the incidents of war. In other words, we believe there's a constitutional power granted to Presidents as well as, this case, a statutory power. And I'm intending to use that power—Congress says, "Go ahead and conduct the war; we're not going to tell you how to do it." And part of winning this war on terror is to understand the nature of the enemy and to find out where they are so we can protect the American people.

There's going to be—there will be a constitution—there will be a legal debate about whether or not I have the authority to do

this; I'm absolutely convinced I do. Our Attorney General has been out describing why. And I'm going to continue using my authority. That's what the American people expect.

Yes, Mark [Mark Smith, Associated Press Radio].

### *U.S. Armed Forces*

Q. Mr. President, the Pentagon recently studied U.S. forces overseas and concluded that between Iraq and Afghanistan, that the military was very seriously overextended. Then Secretary Rumsfeld told us yesterday, well, that's really not what the study concluded. But this morning General Casey told us, in Iraq, U.S. forces there are stretched. Who's right here?

*The President.* I haven't seen General Casey's comments, his specific comments. I will tell you this, that after 5 years of war, there is a need to make sure that our troops are balanced properly, that threats are met with capability. And that's why we're transforming our military. The things I look for are the following: morale, retention, and recruitment. And retention is high; recruitment is meeting goals; and people are feeling strong about the mission, Mark. But I also recognize that we've got to make sure that our military is transformed. And that's what's taking place right now. We're transforming the United States Army so that capabilities and the threats are better aligned.

And I'll give—go ahead.

Q. It's not overextended then?

*The President.* The question is whether or not we can win victory in Iraq. Our troops will have what they—I mean, our commanders will have the troops necessary to do that. The question is, can we help keep the peace in a place like the Far East? Absolutely.

And let me use the Far East as an example of what I'm talking about. There was some 30,000 troops on the South Korean Peninsula. As you might remember, we reduced the amount of manpower, replaced

it with technology. A lot of people—some people at the time said, “Well, wait a minute. They’re lessening their commitment to peace and security in the Far East by moving people out.” I made the case that, no, what we’re doing is replacing manpower—we’re transforming our military presence in South Korea to be able to meet the threats of the 21st century. And that’s what you’re seeing all throughout our military.

And so this is a time where we’ve been in theater for—been in this war against terror for 5 years and, at the same time, transforming. And I think if you look at what our commanders are saying and what are people like Pete Schoomaker are saying is that this transformation is going to make it more likely America will be able to continue in the out years of doing what we need to do to keep the peace.

Yes, Holly [Holly Rosenkrantz, Bloomberg News].

### *Federal Budget*

*Q.* Mr. President, do you think you need to be more aggressive with vetoing or at least threatening to veto more spending bills this year? I mean, every year you say, “I want Congress to show spending restraint; this is important for our budget and our economy.” But do you think they’re doing enough? Do you need to be more aggressive—

*The President.* Yes, I do think they are when they meet our budget targets. And here’s the way—hold on, let me finish, please. Here’s the way it works. We sit down and say, “Here’s what we’d like you to do. We’d like you to reduce nonsecurity discretionary spending.” Or we present a budget target, and they meet them. They have met those targets.

And I am pleased that I’ve got a working relationship with the Speaker and Leader Frist and other Members of Congress to help meet those targets.

Go ahead; you’ve got a followup?

*Q.* So essentially, then, you think everything is going fine with the budget, and there’s no need to use a veto or anything like that?

*The President.* Well, I’m fully prepared to use the veto if they overspend. They’ve got a chance now to continue to show the American people that they’re willing to be—have fiscal discipline by voting on the reconciliation package in the House of Representatives. We’ve still got a lot of work to do, don’t get me wrong. And I’ll present a—in the process of laying out a budget that will continue to eliminate programs that don’t work or that are duplicative in nature, one that says we can cut our deficit in half by 2009 and make sure the American people still get their tax relief.

We don’t need to be running up the taxes right now, in my judgment. And I think it is—you know, people say, “Well, let’s raise the taxes and balance the budget.” That’s not how it works. They’re going to raise your taxes, and they’re going to continue to expand the Government. And I understand that.

Now, in terms of how they spend the money once they meet the budget targets, that’s going to be an interesting discussion on Capitol Hill. That’s about this business about earmarks and people making special deals in the budget. And they need to—there needs to be earmark reform. And we look forward to working with responsible Members on the Hill about earmark reform.

Yes.

### *North Korea*

*Q.* Mr. President, last year, your administration imposed a package of economic sanctions on North Korea. Now North Korea says it will not come back to the table in the nuclear talks unless those sanctions go. South Korea is warning of a dispute on the issue. Would you consider removing them, suspending them, making some gesture to get North Korea back to the negotiation table?

*The President.* Actually, I think what you're referring to is the fact that we're trying—that we are cutting off the transfer of monies generated by illicit activities. When somebody is counterfeiting our money, we want to stop them from doing that. And so we are aggressively saying to the North Koreans, "Just—don't counterfeit our money." And we are working with others to prevent them from illicit activities. That's different from economic sanctions.

*Q.* Fair enough.

*The President.* And no, we think it's very important for the North Koreans to come back to the table. There's a six-party talk framework that is hopeful and positive for them. It requires them to make some difficult decisions, and, of course, one of them is to get rid of their nuclear arsenal. But we're more than willing to—and want the six-party talks to continue forward. I think the framework is a framework that can eventually yield to a peaceful settlement of the issue. But the other issue is one that I just wanted to make sure I clarify for you why we're doing what we're doing.

Jonathan\* [Joseph Curl, Washington Times]—

*Q.* You see this as completely separate then, sir?

*The President.* I think—

*Q.* There's no room to suspend them or—

*The President.* Well, if somebody is cheating on us, we need to stop it. I mean, the American people—if we know people are counterfeiting our money, they expect the Government to act. And there is no compromise when it comes to, you know, "Hey, come back to the table so you can counterfeit our money; just counterfeit 20s and not 100s, or whatever it is." I mean, no. We are going to uphold the law and protect the currency of the American people.

Jonathan.

---

\* The President mistakenly referred to Joseph Curl as "Jonathan."

### *Terrorist Surveillance Program*

*Q.* Stepping back from the immediate NSA debate that's going on right now, Vice President Cheney recently said that the White House is reasserting its executive power. Is the NSA program part of that effort? And what do you say to Democrats who charge that you are abusing your constitutional authority?

*The President.* I would say that there has been a historical debate between the executive branch and the legislative branch as who's got what power. And I don't view it as a contest with the legislative branch. Maybe they view it as a contest with the executive; I just don't. I view it—I view the decisions I've made, particularly when it comes to national security, as necessary decisions to protect the American people. That's how—that's the lens on which I analyze things, Jonathan. And I understand we're at war with an enemy that wants to hit us again. Usama bin Laden made that clear the other day, and I take his words very seriously. And I also take my responsibility to protect the American people very seriously.

And so we're going to do what is necessary, within the Constitution and within the law and, at the same time, guaranteeing people's civil liberties, to protect the people. And that's how I look at this debate. Now, there's all kinds of people taking a step back and saying, well, this is this, this is that. And I recognize throughout history, people—there have been a debate about legislative power and executive power. Part of the questions asked here today kind of reflect that debate.

And I'm going to leave that to the lawyers. I believe I've been hired by the people to do my job, and that's to protect the people, and that's what I'm going to do, mindful of my authorities within the Constitution, mindful of our need to make sure that we stay within the law, and mindful of the need to protect the civil liberties of the people.

Q. Mr. President, though—this is a direct followup to that—the FISA law was implemented in 1978, in part because of revelations that the National Security Agency was spying domestically. What is wrong with that law that you feel you have to circumvent it and, as you just admitted, expand Presidential power?

*The President.* May I—if I might, you said that I have to circumvent it. There—wait a minute. That’s a—there’s something—it’s like saying, you know, “You’re breaking the law.” I’m not. See, that’s what you’ve got to understand. I am upholding my duty and, at the same time, doing so under the law and with the Constitution behind me. That’s just very important for you to understand.

Secondly, the FISA law was written in 1978. We’re having this discussion in 2006. It’s a different world. And FISA is still an important tool. It’s an important tool. And we still use that tool. But also—and we—look—I said, “Look, is it possible to conduct this program under the old law?” And people said, “It doesn’t work, in order to be able to do the job we expect us to do.”

And so that’s why I made the decision I made. And you know, “circumventing” is a loaded word, and I refuse to accept it, because I believe what I’m doing is legally right.

Bob [Bob Deans, Cox Newspapers]—

Q. There are going to be hearings on Capitol Hill starting February 6th regarding—

*The President.* Regarding that point, right. And Al Gonzales has recently given a speech laying out the administrative position, and I’m sure you analyzed it carefully.

Deans.

#### *U.S. Policy on Detainees in the War on Terror*

Q. Sir, you said a few minutes ago the United States needs to continue to lead in the cause of freedom around the world, and yet in recent weeks, a couple of

groups—Human Rights Watch and Amnesty International—have criticized the U.S. handling of terrorist suspects. They say that has undermined the U.S. voice as a champion of human rights and even, perhaps, undercut a generation of progress in human rights. And my question, sir, is, how do you respond to that?

*The President.* I haven’t seen the report, but if they’re saying we tortured people, they’re wrong—period.

Q. Could you call on your Texas straight talk and make a clear and unambiguous statement today that no American will be allowed to torture another human being anywhere in the world at any time—

*The President.* Yes. No American will be allowed to torture another human being anywhere in the world. And I signed the appropriations bill with the McCain amendment attached on because that’s the way it is. I know some have said, “Well, why did he put a qualifier in there?” And one reason why Presidents put qualifiers in is to protect the prerogative of the executive branch. You see, what we’re always doing is making sure that we make it clear that the executive branch has got certain responsibilities. Conducting war is a responsibility in the executive branch, not the legislative branch.

But make no mistake about it, the McCain amendment is an amendment we strongly support and will make sure it’s fully effective.

Let’s see, Richard [Richard Benedetto, USA Today].

#### *2006 Elections*

Q. Mr. President, you mentioned earlier that this is an election year. Republicans are expressing great confidence that they’re going to be able to take back the Congress.

*The President.* Who are?

Q. The Democrats, I mean, they’re expressing—

*The President.* We already have the Congress. [Laughter]

Q. They say that they can use issues such as corruption and the war in Iraq and high energy prices against Republicans and against you. How much do you plan to go out and campaign—

*The President.* I'm looking forward on the campaign, but I'm also looking forward to reminding people we have a responsibility to get some things done. And that's part of what the State of the Union is going to be about, but, no, I'm looking forward to getting out there. I've got one more off-year campaign in me as a sitting President, and I'm looking forward to it, Richard. As you know, I like to get out and tell people what's on my mind, explain to people we're a party with ideas, we know how to lead, that—remind people of the stakes in the world in which we live, and that we have a plan to deal with them.

And we've got a good record here in Washington, DC, and I'm looking forward to talking about the economy, for example. That seems like a debate worthwhile having—not only what we have done to make sure that we've overcome a lot of hurdles but how to make sure policies are put in place that this economic growth continues, and remind people we've added a lot of jobs since April of 2003, that the economy is pretty strong this year given the fact—in spite of the fact there was high energy prices and storms. I look forward to debating people whether or not we ought to raise their taxes. I don't believe we should. Matter of fact, I think raising taxes will hurt the economy. And that's a debate I look forward to having with the people as we get closer to the 2006 elections.

And so, look, I don't blame people for saying, "I'm confident about the elections." Can you imagine right here at the election year saying, "I'm not very confident about the elections"? [*Laughter*] No wonder the Democrats are saying that.

But we've got a record—and a good one. And that's what I intend to campaign on, and explain to people why I've made the decisions I've made, and why they're nec-

essary to protect the American people, and why they've been necessary to keep this economy strong, and why the policies we've got will keep this economy strong in the future. And this election is about peace and prosperity. And I intend to get out there and campaign.

*Abril*—April [April Ryan, American Urban Radio Networks].

Q. Yes, Mr. President. Good morning.

*The President.* You're going to have to speak loudly because somebody took your seat. Your name was on my seating chart, and you're not sitting down.

Q. Isn't that a shame.

*The President.* Well, I mean, look, you're probably going to blame it on me. [*Laughter*]

Q. I'm going to let you pass that time.

*The President.* Just trying to rattle you before you get going.

#### *Gulf Coast Response Investigation*

Q. I know. Mr. President, as you're saying Hurricane Katrina and the aftermath is one of your top priorities—

*The President.* Yes.

Q. Why is it that this administration is not allowing the senior—your senior staff that you conversated with prior to Hurricane Katrina, during, and after to testify, to interview, or talk with congressional leaders? And why not push Michael Brown, who is now a private citizen, to go before them, as he is what many are calling a linchpin to the whole issue?

*The President.* Well, let me make sure you have the facts. We have given 15,000 pages of White House documents to the investigators, congressional investigators; some—I think it's 600,000 pages, administrative documents. We have sent a fellow named Rapuano to talk about—he's a White House staffer—to talk to the committee. There have been a lot of interviews. There have been public testimony.

As a matter of fact, we are so concerned about this that we've started our own investigation to make sure that lessons—that we

understand the lessons learned from this. This is a problem we want to investigate thoroughly so we know how to better respond on behalf of the American people.

And so we're fully cooperative with the Members of the House in—of the Senate, and we'll do so without giving away my ability to get sound advice from people on my staff. You see, April, here's—and this is an issue that comes up all the time, and you might—we've had several discussions like this since I've been the President. If people give me advice and they're forced to disclose that advice, it means the next time an issue comes up, I might not be able to get unvarnished advice from my advisers. And that's just the way it works. But we've given thousands of pages of documents over for people to analyze.

Q. Does that include Michael Brown?

*The President.* Pardon me?

Q. Does that include Michael Brown?

*The President.* People who give me advice—it will have a chilling effect on future advisers if the precedent is such that when they give me advice that it's going to be subject to scrutiny.

Now, we've analyzed—we've given out all kinds of pages of documents for people, and we're cooperating with the investigators. And that's important for the American people to know. What's also important is we want to know how we can do a better job. And so we're having a lessons-learned investigation, led by Fran Townsend. And—anyway, we need to know.

Let's see here—yes, Mark [Mark Knoller, CBS Radio].

### *Lobbying Reform/Jack Abramoff Investigation*

Q. Sir, back on lobbying—never mind about the photographs, but can you say whether—

*The President.* It's easy for a radio guy to say. [Laughter]

Q. Can you say, sir, whether you were lobbied by Jack Abramoff or other lobby-

ists, and what your policy is about lobbyists meeting with senior staff?

*The President.* You know, I, frankly, don't even remember having my picture taken with the guy. I don't know him. And this investigation will—needs to look into all aspects of his influence on Capitol Hill, and if there's some in the White House, I'm sure they're going to come and knock on the door. But I—I can't say I didn't ever meet him, but I meet a lot of people. And evidently, he was just like you were the other day, at a holiday party—came in, put—the grip-and-grin. They click the picture, and off he goes. And that's just—I take thousands of—I mean, somebody told me I maybe take over 9,000 pictures this holiday season. And he obviously went to fundraisers, but I've never sat down with him and had a discussion with the guy.

Q. Do you meet with lobbyists?

*The President.* I try not to. Have I ever met with one? Never having met with one is a—if I ever say that, sure enough, you'll go find somebody. But, no, I don't have them come in.

Now, when, for example, people are helping on issues, like on promoting trade, you bet we bring them in, and I say, "Thank you for promoting CAFTA," or, "Thanks for working on the vote," or, "Thanks for helping on tax relief." That may be—if you consider that a meeting, the answer is, yes, I'm sure I have, in a roomful of people, as we either thank people for success in policy or thank people for going out of their way to get a piece of legislation passed on the Hill.

Listen, thank you all very much. Looking forward to Tuesday evening. I hope you are as well. Thank you.

NOTE: The President's news conference began at 10:15 a.m. in the James S. Brady Press Briefing Room at the White House. In his remarks, he referred to President Mahmoud Abbas (Abu Mazen) of the Palestinian Authority; James D. Wolfensohn,

Quartet Special Envoy for Gaza Disengagement; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq.; Usama bin Laden, leader of the Al Qaida terrorist organization; and Deputy Assistant to the President for Homeland Security

Kenneth Rapuano. Reporters referred to Donald E. Powell, Chairman, Federal Deposit Insurance Corporation, in his capacity as coordinator of Federal gulf coast relief efforts; and Mike Brown, former Director, Federal Emergency Management Agency.

## Remarks Following Discussions With Parliament Member Saad Hariri of Lebanon

*January 27, 2006*

It's my honor to welcome a Member of the Lebanese Parliament, Saad Hariri, here to the Oval Office. We've just had a very interesting and important discussion about our mutual desire for Lebanon to be free—free of foreign influence, free of Syrian intimidation, free to chart its own course.

The American people mourn the loss of life. I know it's been hard on you and your mom, who we had the honor of meeting in Paris, and your family to think about your dad, a man who cared about Lebanon a lot. It's very important for the investigation into your dad's death to go forward. We expect there to be a full and firm investigation, and the people who are responsible for your dad's death need to be held to account.

I want to thank you for your passion for the people of Lebanon. I was telling him I was raised in west Texas, and I can remember Lebanese-American Texans being such great citizens of our State and our country. Many people of Lebanese extraction want Lebanon to flourish and

thrive, and so do I. It will be very important for the region for Lebanon's democracy to be able to reach its full potential. And there's no doubt in my mind, with the focused effort of the free world reminding Syria to uphold to U.N. Resolution 1559, we will be able to achieve the objective.

So I talked about a donors conference—he's going to work the world community to try to help organize a conference to help the Lebanese people get going. And we appreciate very much your suggestions and your advice.

In the meantime, welcome to the Oval Office. Thank you for your courage. I appreciate it very much. Thank you.

NOTE: The President spoke at 12 p.m. in the Oval Office at the White House. In his remarks, he referred to Nazek Hariri, widow of former Prime Minister Rafiq Hariri of Lebanon, who was assassinated on February 14, 2005, in Beirut.

## The President's Radio Address

*January 28, 2006*

Good morning. The United States Senate is now considering my nomination of Judge Sam Alito to be an Associate Justice on

the Supreme Court. As Americans saw in his confirmation hearings, Sam Alito is a man of great character and integrity. He

has more prior judicial experience than any Supreme Court nominee in more than 70 years. He understands that the role of a judge is to strictly interpret the law, not to advance a personal or political agenda. And throughout his extraordinary career, Sam Alito has earned the tremendous respect of his colleagues and attorneys across the political spectrum.

This past Wednesday, I met with a distinguished group of 39 former law clerks to Judge Alito. During Judge Alito's 15 years on the bench, these fine men and women have worked side by side with him, providing legal research, discussing and debating pending cases, and seeing firsthand how he arrives at decisions. They are uniquely qualified to assess what kind of Supreme Court Justice Sam Alito would be, and they are united in their strong support of Judge Alito's nomination.

One of Judge Alito's former clerks, who describes herself as a left-leaning Democrat, says this about Sam Alito: "He's a man of great decency, integrity, and character. I believe very strongly he deserves to be confirmed as the Court's next Associate Justice." Another former clerk worked on Senator Kerry's Presidential campaign. She says this about Judge Alito: "His approach to judging is not about personal ideology or ambition but about hard work and devotion to law and justice." In fact, Judge Alito has the strong support of all 54 of his former clerks, regardless of their political beliefs. They know him well, and they know he'll make an outstanding Supreme Court Justice.

Judge Alito has also earned broad support from his fellow judges on the Third Circuit Court of Appeals. Seven of them took the extraordinary step of testifying on his behalf before the Senate Judiciary Committee. Former Chief Judge Ed Becker, who sat with Judge Alito on more than 1,000 cases, said this about his colleague: "He's a real judge, deciding each case on the facts and the law, not on his personal views." Another colleague on the Third Cir-

cuit who was appointed by President Clinton said this about Judge Alito: "He is a fair-minded man, a modest man, a humble man, and he reveres the rule of law." This judge went on to say that, if confirmed, Judge Alito "will serve as a marvelous and distinguished Associate Justice."

Judge Alito received the American Bar Association's highest possible rating, a unanimous "well-qualified." The ABA based its rating on its assessment of Judge Alito's integrity, professional competence, and judicial temperament. In the past, leading Democratic Senators have called the ABA rating the gold standard for judicial nominees.

This past week, Judge Alito gained the endorsement of Pennsylvania's Democratic Governor, Ed Rendell. Governor Rendell said he was not pleased with the partisan way some of his fellow Democrats have handled Sam Alito's nomination. Democratic Senator Robert Byrd of West Virginia announced he was voting for Judge Alito, and he said that many people in his State were calling the treatment of Judge Alito by some Democrats, quote, "an outrage and a disgrace," endquote. Another Democratic Senator expressed concern that the Senate confirmation process in recent years has become, quote, "overly politicized, to the detriment of the rule of law," quote.

The Senate has a constitutional responsibility to hold an up-or-down vote on Judge Alito's nomination. Throughout its 216-year history, the Senate has held an up-or-down vote on every Supreme Court nominee with majority Senate support. Judge Alito has demonstrated that he is eminently qualified to serve on our Nation's highest Court, and America is fortunate to have a man of his integrity and intellect willing to serve.

I'm grateful to Judge Alito, his wife, Martha, and the Alito children for their patience and dignity during the process. And I look forward to the Senate voting to confirm Judge Sam Alito as the 110th Justice of the Supreme Court.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on January 27 in the Roosevelt Room at the White House for broadcast at 10:06 a.m. on January 28. The transcript was made available by the Office of the Press Secretary on

January 27 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Letter to the Speaker of the House of Representatives Revising Budget Amendments for the Department of Veterans Affairs *January 28, 2006*

*Dear Mr. Speaker:*

My Administration is committed to ensuring that our Nation's veterans continue to receive timely and high-quality health care.

On July 14, 2005, I submitted an FY 2006 budget amendment to the Congress of \$1.977 billion to cover increased costs in the Department of Veterans Affairs medical care system. I did not designate the funds as an emergency requirement when I submitted the FY 2006 budget amendment. While I believe this funding should be categorized as part of the VA's base budget, it is critical that this funding be made available to meet veterans' needs. As a result, to provide the needed funds to veterans in a timely manner and consistent with the 2006 Military Quality of Life and

Veterans Affairs Appropriations Act, Public Law 109-114, I hereby revise that request to designate \$1.225 billion of the amount proposed in that amendment as an emergency requirement. I appreciate your cooperation in working with me to ensure the highest quality of care for our veterans.

Additional information on this action is set forth in the enclosed letter from the Director of the Office of Management and Budget. The details of the FY 2006 amendment were included in the previous transmittal.

Sincerely,

GEORGE W. BUSH

NOTE: This letter was released by the Office of the Press Secretary on January 30.

## Remarks Following a Cabinet Meeting and an Exchange With Reporters *January 30, 2006*

*The President.* I want to thank the members of my Cabinet for being here. We just had a really good discussion about the year 2006. Tomorrow night I'm going to be speaking to the Congress, giving the country my State of the Union Address. I can't tell you how upbeat I am about our future, so long as we're willing to lead.

We talked about how to make sure that America continues to spread the peace and

to protect ourselves. I heard from the Secretary of Defense and Deputy Secretary of State about very positive initiatives, not only in the Middle East but in the Far East as well. We talked about how to make sure this economy of ours stays the strongest economy in the world and that we recognize we can't just sit back and hope for the best, that we've got to lead. And so we had a good discussion about matters

such as health care and energy and education, all of which I'll address tomorrow night.

I'm looking forward to speaking to the country. We've got a lot to be proud of. We've got a lot of work to do. One of the things I will do is call for Congress and the executive branch to have a good, honest dialog but to speak candidly with each other, but to do so in a way that brings credit to the process. And I'll do my best to elevate the tone here in Washington, DC, so we can work together to achieve big things for the American people.

I'll answer a couple of questions. Nedra Pickler [Associated Press].

#### Iran

Q. Thank you, Mr. President. The talks between Iran and the EU-3 appear to be making little progress. A senior British official there said that they detect nothing new in their approach. What can be done now?

*The President.* Well, obviously, one option is to—for the Perm 5 to work together to bring Iran to the U.N. Security Council. That's an option. And we're going to continue to work with our friends and allies to present a united front to the Iranians. And the message is, give up your nuclear weapons ambitions. And the good news is, most of the world recognizes that Iran, being the nontransparent society that it is, a Government that had violated IAEA rules, is one that cannot be trusted with technology that could enable it to develop a nuclear weapon. And so we're united in our goal to keep the Iranians from having a weapon, and we're working on the tactics necessary to continue putting a united front out.

The other thing is that we want the people of Iran to be able to live in a free

society. And so tomorrow night I am going to talk about this issue and make clear the policy of the United States.

Patsy [Patricia Wilson, Reuters].

#### *Palestinian Elections/Hamas*

Q. Mr. President, Israeli officials are seeking an international boycott of a Palestinian Government that includes Hamas. Do you support this? And if so, isn't that punishing the Palestinian people for exercising the democratic rights that you've called for in the region?

*The President.* The Hamas party has made it clear that they do not support the right of Israel to exist. And I have made it clear, so long as that's their policy, that we will not support a Palestinian Government made up of Hamas. We want to work with a government that is a partner in peace, not a government that is—whose declared intentions might be the destruction of Israel.

Secondly, this new democracy that's emerging in the Palestinian Territories must understand that you can't have a political party that also has got a armed wing to it; that democracies yield peace. And so the second half of our message to Hamas is, get rid of your arms; disavow terrorism; work to bring what you promised to the people of the Palestinian Territories. Listen, these folks ran on the campaign, "We're going to get rid of corruption," and that "We're going to provide services to the people," and that's positive. But what isn't positive is that they've got parts of their platform that will make it impossible for them to be a peaceful partner.

Thank you all very much.

NOTE: The President spoke at 11:06 a.m. in the Cabinet Room at the White House.

Statement on Senate Action To Vote on the Nomination of Samuel A. Alito, Jr., To Be an Associate Justice of the United States Supreme Court  
*January 30, 2006*

I am pleased that a strong, bipartisan majority in the Senate decisively rejected attempts to obstruct and filibuster an up-or-down vote on Judge Sam Alito's nomination. The Senate has a constitutional responsibility to hold an up-or-down vote on every judicial nominee, and throughout its 216-year history, the Senate has held an up-or-down vote on every Supreme Court

nominee with majority Senate support. Judge Alito is extraordinarily well-qualified to serve on our Nation's highest Court, and America is fortunate that this good and humble man is willing to serve. I look forward to the Senate voting to confirm Sam Alito as the 110th Justice of the Supreme Court.

Statement on the Death of Coretta Scott King  
*January 31, 2006*

Laura and I are deeply saddened by the death of Coretta Scott King. Mrs. King was a remarkable and courageous woman and a great civil rights leader. She carried on the legacy of her husband, Dr. Martin Luther King, Jr., including through her extraordinary work at the King Center. Mrs.

King's lasting contributions to freedom and equality have made America a better and more compassionate nation. Laura and I were fortunate to have known Mrs. King, and we will always treasure the time we spent with her. We send our condolences and prayers to the entire King family.

Statement on Senate Confirmation of Samuel A. Alito, Jr., To Be an Associate Justice of the United States Supreme Court  
*January 31, 2006*

I am pleased that the Senate has voted to confirm Judge Sam Alito as the 110th Justice of the Supreme Court. Sam Alito is a brilliant and fair-minded judge who strictly interprets the Constitution and laws and does not legislate from the bench. He is a man of deep character and integrity, and he will make all Americans proud as a Justice on our highest Court. The son of an Italian immigrant, Judge Alito's appointment to the Supreme Court is the realization of the American dream for this good man and his family. I congratulate

Judge Alito, his wife, Martha, the Alito children, and Judge Alito's mother, Rose, on this historic achievement and momentous day in the life of our country.

Judge Alito replaces Justice Sandra Day O'Connor. Justice O'Connor was the first woman ever to sit on the Supreme Court, and she is one of the most admired Americans of our time or any time. Our Nation is grateful to Justice O'Connor for her extraordinary and dedicated public service, and Laura and I wish her and John all the best.

## Statement on Senate Confirmation of Ben S. Bernanke To Be Chairman of the Federal Reserve System

*January 31, 2006*

I am pleased that the Senate has voted to confirm Ben Bernanke to be the next Chairman of the Federal Reserve. Ben is a man of impeccable credentials, sound policy judgment, and strong character, and he will make an outstanding Chairman. Ben has provided wise counsel and good advice as a member of my economic team, and

he will serve our Nation with great distinction at the Federal Reserve.

America's economy is strong for a lot of reasons, and one reason is the excellent work done by the men and women of the Federal Reserve. Under the leadership of Chairman Ben Bernanke, the Federal Reserve will continue to help provide Americans with a high quality of living.

## Address Before a Joint Session of the Congress on the State of the Union

*January 31, 2006*

Thank you all. Mr. Speaker, Vice President Cheney, Members of Congress, members of the Supreme Court and diplomatic corps, distinguished guests, and fellow citizens: Today our Nation lost a beloved, graceful, courageous woman who called America to its founding ideals and carried on a noble dream. Tonight we are comforted by the hope of a glad reunion with the husband who was taken so long ago, and we are grateful for the good life of Coretta Scott King.

Every time I'm invited to this rostrum, I'm humbled by the privilege and mindful of the history we've seen together. We have gathered under this Capitol dome in moments of national mourning and national achievement. We have served America through one of the most consequential periods of our history, and it has been my honor to serve with you.

In a system of two parties, two chambers, and two elected branches, there will always be differences and debate. But even tough debates can be conducted in a civil tone, and our differences cannot be allowed to harden into anger. To confront the great issues before us, we must act in a spirit

of good will and respect for one another, and I will do my part. Tonight the state of our Union is strong, and together we will make it stronger.

In this decisive year, you and I will make choices that determine both the future and the character of our country. We will choose to act confidently in pursuing the enemies of freedom, or retreat from our duties in the hope of an easier life. We will choose to build our prosperity by leading the world economy, or shut ourselves off from trade and opportunity. In a complex and challenging time, the road of isolationism and protectionism may seem broad and inviting, yet it ends in danger and decline. The only way to protect our people, the only way to secure the peace, the only way to control our destiny is by our leadership. So the United States of America will continue to lead.

Abroad, our Nation is committed to an historic, long-term goal: We seek the end of tyranny in our world. Some dismiss that goal as misguided idealism. In reality, the future security of America depends on it. On September the 11th, 2001, we found that problems originating in a failed and

oppressive state 7,000 miles away could bring murder and destruction to our country. Dictatorships shelter terrorists, and feed resentment and radicalism, and seek weapons of mass destruction. Democracies replace resentment with hope, respect the rights of their citizens and their neighbors, and join the fight against terror. Every step toward freedom in the world makes our country safer, so we will act boldly in freedom's cause.

Far from being a hopeless dream, the advance of freedom is the great story of our time. In 1945, there were about two dozen lonely democracies in the world. Today, there are 122. And we're writing a new chapter in the story of self-government—with women lining up to vote in Afghanistan, and millions of Iraqis marking their liberty with purple ink, and men and women from Lebanon to Egypt debating the rights of individuals and the necessity of freedom. At the start of 2006, more than half the people of our world live in democratic nations. And we do not forget the other half—in places like Syria and Burma, Zimbabwe, North Korea, and Iran—because the demands of justice and the peace of this world require their freedom as well.

No one can deny the success of freedom, but some men rage and fight against it. And one of the main sources of reaction and opposition is radical Islam—the perversion by a few of a noble faith into an ideology of terror and death. Terrorists like bin Laden are serious about mass murder, and all of us must take their declared intentions seriously. They seek to impose a heartless system of totalitarian control throughout the Middle East and arm themselves with weapons of mass murder.

Their aim is to seize power in Iraq and use it as a safe haven to launch attacks against America and the world. Lacking the military strength to challenge us directly, the terrorists have chosen the weapon of fear. When they murder children at a school in Beslan or blow up commuters in London or behead a bound captive, the

terrorists hope these horrors will break our will, allowing the violent to inherit the Earth. But they have miscalculated: We love our freedom, and we will fight to keep it.

In a time of testing, we cannot find security by abandoning our commitments and retreating within our borders. If we were to leave these vicious attackers alone, they would not leave us alone. They would simply move the battlefield to our own shores. There is no peace in retreat, and there is no honor in retreat. By allowing radical Islam to work its will, by leaving an assaulted world to fend for itself, we would signal to all that we no longer believe in our own ideals or even in our own courage. But our enemies and our friends can be certain: The United States will not retreat from the world, and we will never surrender to evil.

America rejects the false comfort of isolationism. We are the nation that saved liberty in Europe and liberated death camps and helped raise up democracies and faced down an evil empire. Once again, we accept the call of history to deliver the oppressed and move this world toward peace. We remain on the offensive against terror networks. We have killed or captured many of their leaders. And for the others, their day will come.

We remain on the offensive in Afghanistan, where a fine President and a National Assembly are fighting terror while building the institutions of a new democracy. We're on the offensive in Iraq with a clear plan for victory.

First, we're helping Iraqis build an inclusive government, so that old resentments will be eased and the insurgency will be marginalized. Second, we're continuing reconstruction efforts and helping the Iraqi Government to fight corruption and build a modern economy, so all Iraqis can experience the benefits of freedom. And third, we're striking terrorist targets while we train Iraqi forces that are increasingly capable of defeating the enemy. Iraqis are

showing their courage every day, and we are proud to be their allies in the cause of freedom.

Our work in Iraq is difficult because our enemy is brutal. But that brutality has not stopped the dramatic progress of a new democracy. In less than 3 years, the nation has gone from dictatorship to liberation, to sovereignty, to a Constitution, to national elections. At the same time, our coalition has been relentless in shutting off terrorist infiltration, clearing out insurgent strongholds, and turning over territory to Iraqi security forces. I am confident in our plan for victory; I am confident in the will of the Iraqi people; I am confident in the skill and spirit of our military. Fellow citizens, we are in this fight to win, and we are winning.

The road of victory is the road that will take our troops home. As we make progress on the ground and Iraqi forces increasingly take the lead, we should be able to further decrease our troop levels. But those decisions will be made by our military commanders, not by politicians in Washington, DC.

Our coalition has learned from our experience in Iraq. We've adjusted our military tactics and changed our approach to reconstruction. Along the way, we have benefited from responsible criticism and counsel offered by Members of Congress of both parties. In the coming year, I will continue to reach out and seek your good advice. Yet there is a difference between responsible criticism that aims for success and defeatism that refuses to acknowledge anything but failure. Hindsight alone is not wisdom, and second-guessing is not a strategy.

With so much in the balance, those of us in public office have a duty to speak with candor. A sudden withdrawal of our forces from Iraq would abandon our Iraqi allies to death and prison, would put men like bin Laden and Zarqawi in charge of a strategic country, and show that a pledge from America means little. Members of

Congress, however we feel about the decisions and debates of the past, our Nation has only one option: We must keep our word, defeat our enemies, and stand behind the American military in this vital mission.

Our men and women in uniform are making sacrifices and showing a sense of duty stronger than all fear. They know what it's like to fight house to house in a maze of streets, to wear heavy gear in the desert heat, to see a comrade killed by a roadside bomb. And those who know the costs also know the stakes. Marine Staff Sergeant Dan Clay was killed last month fighting in Fallujah. He left behind a letter to his family, but his words could just as well be addressed to every American. Here is what Dan wrote: "I know what honor is—it has been an honor to protect and serve all of you. I faced death with the secure knowledge that you would not have to. Never falter. Don't hesitate to honor and support those of us who have the honor of protecting that which is worth protecting."

Staff Sergeant Dan Clay's wife, Lisa, and his mom and dad, Sara Jo and Bud, are with us this evening. Welcome.

Our Nation is grateful to the fallen, who live in the memory of our country. We're grateful to all who volunteer to wear our Nation's uniform. And as we honor our brave troops, let us never forget the sacrifices of America's military families.

Our offensive against terror involves more than military action. Ultimately, the only way to defeat the terrorists is to defeat their dark vision of hatred and fear by offering the hopeful alternative of political freedom and peaceful change. So the United States of America supports democratic reform across the broader Middle East. Elections are vital, but they are only the beginning. Raising up a democracy requires the rule of law and protection of minorities and strong, accountable institutions that last longer than a single vote.

The great people of Egypt have voted in a multiparty Presidential election, and

now their Government should open paths of peaceful opposition that will reduce the appeal of radicalism. The Palestinian people have voted in elections, and now the leaders of Hamas must recognize Israel, disarm, reject terrorism, and work for lasting peace. Saudi Arabia has taken the first steps of reform; now it can offer its people a better future by pressing forward with those efforts. Democracies in the Middle East will not look like our own, because they will reflect the traditions of their own citizens. Yet liberty is the future of every nation in the Middle East because liberty is the right and hope of all humanity.

The same is true of Iran, a nation now held hostage by a small clerical elite that is isolating and repressing its people. The regime in that country sponsors terrorists in the Palestinian territories and in Lebanon, and that must come to an end. The Iranian Government is defying the world with its nuclear ambitions, and the nations of the world must not permit the Iranian regime to gain nuclear weapons. America will continue to rally the world to confront these threats.

Tonight let me speak directly to the citizens of Iran: America respects you, and we respect your country. We respect your right to choose your own future and win your own freedom. And our Nation hopes one day to be the closest of friends with a free and democratic Iran.

To overcome dangers in our world, we must also take the offensive by encouraging economic progress and fighting disease and spreading hope in hopeless lands. Isolationism would not only tie our hands in fighting enemies, it would keep us from helping our friends in desperate need. We show compassion abroad because Americans believe in the God-given dignity and worth of a villager with HIV/AIDS or an infant with malaria or a refugee fleeing genocide or a young girl sold into slavery. We also show compassion abroad because regions overwhelmed by poverty, corruption, and despair are sources of terrorism

and organized crime and human trafficking and the drug trade.

In recent years, you and I have taken unprecedented action to fight AIDS and malaria, expand the education of girls, and reward developing nations that are moving forward with economic and political reform. For people everywhere, the United States is a partner for a better life. Shortchanging these efforts would increase the suffering and chaos of our world, undercut our long-term security, and dull the conscience of our country. I urge Members of Congress to serve the interests of America by showing the compassion of America.

Our country must also remain on the offensive against terrorism here at home. The enemy has not lost the desire or capability to attack us. Fortunately, this Nation has superb professionals in law enforcement, intelligence, the military, and homeland security. These men and women are dedicating their lives, protecting us all, and they deserve our support and our thanks. They also deserve the same tools they already use to fight drug trafficking and organized crime, so I ask you to reauthorize the PATRIOT Act.

It is said that prior to the attacks of September the 11th, our Government failed to connect the dots of the conspiracy. We now know that two of the hijackers in the United States placed telephone calls to Al Qaida operatives overseas. But we did not know about their plans until it was too late. So to prevent another attack—based on authority given to me by the Constitution and by statute—I have authorized a terrorist surveillance program to aggressively pursue the international communications of suspected Al Qaida operatives and affiliates to and from America.

Previous Presidents have used the same constitutional authority I have, and Federal courts have approved the use of that authority. Appropriate Members of Congress have been kept informed. The terrorist surveillance program has helped prevent terrorist attacks. It remains essential to the

security of America. If there are people inside our country who are talking with Al Qaida, we want to know about it, because we will not sit back and wait to be hit again.

In all these areas—from the disruption of terror networks, to victory in Iraq, to the spread of freedom and hope in troubled regions—we need the support of our friends and allies. To draw that support, we must always be clear in our principles and willing to act. The only alternative to American leadership is a dramatically more dangerous and anxious world. Yet we also choose to lead because it is a privilege to serve the values that gave us birth. American leaders—from Roosevelt to Truman to Kennedy to Reagan—rejected isolation and retreat, because they knew that America is always more secure when freedom is on the march.

Our own generation is in a long war against a determined enemy, a war that will be fought by Presidents of both parties who will need steady bipartisan support from the Congress. And tonight I ask for yours. Together, let us protect our country, support the men and women who defend us, and lead this world toward freedom.

Here at home, America also has a great opportunity: We will build the prosperity of our country by strengthening our economic leadership in the world.

Our economy is healthy and vigorous and growing faster than other major industrialized nations. In the last 2½ years, America has created 4.6 million new jobs, more than Japan and the European Union combined. Even in the face of higher energy prices and natural disasters, the American people have turned in an economic performance that is the envy of the world.

The American economy is preeminent, but we cannot afford to be complacent. In a dynamic world economy, we are seeing new competitors like China and India, and this creates uncertainty, which makes it easier to feed people's fears. So we're seeing some old temptations return. Protec-

tionists want to escape competition, pretending that we can keep our high standard of living while walling off our economy. Others say that the government needs to take a larger role in directing the economy, centralizing more power in Washington and increasing taxes. We hear claims that immigrants are somehow bad for the economy, even though this economy could not function without them. All these are forms of economic retreat, and they lead in the same direction, toward a stagnant and second-rate economy.

Tonight I will set out a better path: an agenda for a nation that competes with confidence; an agenda that will raise standards of living and generate new jobs. Americans should not fear our economic future because we intend to shape it.

Keeping America competitive begins with keeping our economy growing. And our economy grows when Americans have more of their own money to spend, save, and invest. In the last 5 years, the tax relief you passed has left \$880 billion in the hands of American workers, investors, small businesses, and families. And they have used it to help produce more than 4 years of uninterrupted economic growth. Yet the tax relief is set to expire in the next few years. If we do nothing, American families will face a massive tax increase they do not expect and will not welcome. Because America needs more than a temporary expansion, we need more than temporary tax relief, I urge the Congress to act responsibly and make the tax cuts permanent.

Keeping America competitive requires us to be good stewards of tax dollars. Every year of my Presidency, we've reduced the growth of nonsecurity discretionary spending, and last year, you passed bills that cut this spending. This year, my budget will cut it again and reduce or eliminate more than 140 programs that are performing poorly or not fulfilling essential priorities. By passing these reforms, we will save the American taxpayer another \$14 billion next

year and stay on track to cut the deficit in half by 2009.

I am pleased that Members of Congress are working on earmark reform, because the Federal budget has too many special interest projects. And we can tackle this problem together, if you pass the line-item veto.

We must also confront the larger challenge of mandatory spending, or entitlements. This year, the first of about 78 million baby boomers turn 60, including two of my dad's favorite people—me and President Clinton. [Laughter] This milestone is more than a personal crisis—[laughter]—it is a national challenge. The retirement of the baby boom generation will put unprecedented strains on the Federal Government. By 2030, spending for Social Security, Medicare, and Medicaid alone will be almost 60 percent of the entire Federal budget. And that will present future Congresses with impossible choices: staggering tax increases, immense deficits, or deep cuts in every category of spending. Congress did not act last year on my proposal to save Social Security, yet the rising cost of entitlements is a problem that is not going away. And every year we fail to act, the situation gets worse.

So tonight I ask you to join me in creating a commission to examine the full impact of baby boom retirements on Social Security, Medicare, and Medicaid. This commission should include Members of Congress of both parties and offer bipartisan solutions. We need to put aside partisan politics and work together and get this problem solved.

Keeping America competitive requires us to open more markets for all that Americans make and grow. One out of every five factory jobs in America is related to global trade, and we want people everywhere to buy American. With open markets and a level playing field, no one can outproduce or outcompete the American worker.

Keeping America competitive requires an immigration system that upholds our laws, reflects our values, and serves the interests of our economy. Our Nation needs orderly and secure borders. To meet this goal, we must have stronger immigration enforcement and border protection. And we must have a rational, humane guest-worker program that rejects amnesty, allows temporary jobs for people who seek them legally, and reduces smuggling and crime at the border.

Keeping America competitive requires affordable health care. Our Government has a responsibility to provide health care for the poor and the elderly, and we are meeting that responsibility. For all Americans, we must confront the rising cost of care, strengthen the doctor-patient relationship, and help people afford the insurance coverage they need.

We will make wider use of electronic records and other health information technology to help control costs and reduce dangerous medical errors. We will strengthen health savings accounts, making sure individuals and small-business employees can buy insurance with the same advantages that people working for big businesses now get. We will do more to make this coverage portable, so workers can switch jobs without having to worry about losing their health insurance. And because lawsuits are driving many good doctors out of practice, leaving women in nearly 1,500 American counties without a single ob-gyn, I ask the Congress to pass medical liability reform this year.

Keeping America competitive requires affordable energy. And here we have a serious problem: America is addicted to oil, which is often imported from unstable parts of the world. The best way to break this addiction is through technology. Since 2001, we have spent nearly \$10 billion to develop cleaner, cheaper, and more reliable alternative energy sources. And we are on the threshold of incredible advances.

So tonight I announce the Advanced Energy Initiative—a 22-percent increase in

clean-energy research at the Department of Energy—to push for breakthroughs in two vital areas. To change how we power our homes and offices, we will invest more in zero-emission coal-fired plants, revolutionary solar and wind technologies, and clean, safe nuclear energy.

We must also change how we power our automobiles. We will increase our research in better batteries for hybrid and electric cars and in pollution-free cars that run on hydrogen. We'll also fund additional research in cutting-edge methods of producing ethanol, not just from corn but from wood chips and stalks or switchgrass. Our goal is to make this new kind of ethanol practical and competitive within 6 years.

Breakthroughs on this and other new technologies will help us reach another great goal: to replace more than 75 percent of our oil imports from the Middle East by 2025. By applying the talent and technology of America, this country can dramatically improve our environment, move beyond a petroleum-based economy, and make our dependence on Middle Eastern oil a thing of the past.

And to keep America competitive, one commitment is necessary above all: We must continue to lead the world in human talent and creativity. Our greatest advantage in the world has always been our educated, hard-working, ambitious people. And we're going to keep that edge. Tonight I announce an American Competitiveness Initiative to encourage innovation throughout our economy and to give our Nation's children a firm grounding in math and science.

First, I propose to double the Federal commitment to the most critical basic research programs in the physical sciences over the next 10 years. This funding will support the work of America's most creative minds as they explore promising areas such as nanotechnology, supercomputing, and alternative energy sources.

Second, I propose to make permanent the research and development tax credit to encourage bolder private sector initiative

in technology. With more research in both the public and private sectors, we will improve our quality of life and ensure that America will lead the world in opportunity and innovation for decades to come.

Third, we need to encourage children to take more math and science, and to make sure those courses are rigorous enough to compete with other nations. We've made a good start in the early grades with the No Child Left Behind Act, which is raising standards and lifting test scores across our country. Tonight I propose to train 70,000 high school teachers to lead Advanced Placement courses in math and science, bring 30,000 math and science professionals to teach in classrooms, and give early help to students who struggle with math, so they have a better chance at good, high-wage jobs. If we ensure that America's children succeed in life, they will ensure that America succeeds in the world.

Preparing our Nation to compete in the world is a goal that all of us can share. I urge you to support the American Competitiveness Initiative, and together we will show the world what the American people can achieve.

America is a great force for freedom and prosperity. Yet our greatness is not measured in power or luxuries but by who we are and how we treat one another. So we strive to be a compassionate, decent, hopeful society.

In recent years, America has become a more hopeful nation. Violent crime rates have fallen to their lowest levels since the 1970s. Welfare cases have dropped by more than half over the past decade. Drug use among youth is down 19 percent since 2001. There are fewer abortions in America than at any point in the last three decades, and the number of children born to teenage mothers has been falling for a dozen years in a row.

These gains are evidence of a quiet transformation, a revolution of conscience, in which a rising generation is finding that a life of personal responsibility is a life of

fulfillment. Government has played a role. Wise policies, such as welfare reform and drug education and support for abstinence and adoption have made a difference in the character of our country. And everyone here tonight, Democrat and Republican, has a right to be proud of this record.

Yet many Americans, especially parents, still have deep concerns about the direction of our culture and the health of our most basic institutions. They're concerned about unethical conduct by public officials and discouraged by activist courts that try to redefine marriage. They worry about children in our society who need direction and love, and about fellow citizens still displaced by natural disaster, and about suffering caused by treatable diseases.

As we look at these challenges, we must never give in to the belief that America is in decline or that our culture is doomed to unravel. The American people know better than that. We have proven the pessimists wrong before, and we will do it again.

A hopeful society depends on courts that deliver equal justice under the law. The Supreme Court now has two superb new members on its bench, Chief Justice John Roberts and Justice Sam Alito. I thank the Senate for confirming both of them. I will continue to nominate men and women who understand that judges must be servants of the law and not legislate from the bench.

Today marks the official retirement of a very special American. For 24 years of faithful service to our Nation, the United States is grateful to Justice Sandra Day O'Connor.

A hopeful society has institutions of science and medicine that do not cut ethical corners and that recognize the matchless value of every life. Tonight I ask you to pass legislation to prohibit the most egregious abuses of medical research: human cloning in all its forms; creating or implanting embryos for experiments; creating human-animal hybrids; and buying, selling, or patenting human embryos.

Human life is a gift from our Creator, and that gift should never be discarded, devalued, or put up for sale.

A hopeful society expects elected officials to uphold the public trust. Honorable people in both parties are working on reforms to strengthen the ethical standards of Washington. I support your efforts. Each of us has made a pledge to be worthy of public responsibility, and that is a pledge we must never forget, never dismiss, and never betray.

As we renew the promise of our institutions, let us also show the character of America in our compassion and care for one another.

A hopeful society gives special attention to children who lack direction and love. Through the Helping America's Youth Initiative, we are encouraging caring adults to get involved in the life of a child. And this good work is being led by our First Lady, Laura Bush. This year, we will add resources to encourage young people to stay in school, so more of America's youth can raise their sights and achieve their dreams.

A hopeful society comes to the aid of fellow citizens in times of suffering and emergency and stays at it until they're back on their feet. So far the Federal Government has committed \$85 billion to the people of the gulf coast and New Orleans. We're removing debris and repairing highways and rebuilding stronger levees. We're providing business loans and housing assistance. Yet as we meet these immediate needs, we must also address deeper challenges that existed before the storm arrived.

In New Orleans and in other places, many of our fellow citizens have felt excluded from the promise of our country. The answer is not only temporary relief but schools that teach every child and job skills that bring upward mobility and more opportunities to own a home and start a business. As we recover from a disaster,

let us also work for the day when all Americans are protected by justice, equal in hope, and rich in opportunity.

A hopeful society acts boldly to fight diseases like HIV/AIDS, which can be prevented and treated and defeated. More than a million Americans live with HIV, and half of all AIDS cases occur among African Americans. I ask Congress to reform and reauthorize the Ryan White Act and provide new funding to States, so we end the waiting lists for AIDS medicines in America. We will also lead a nationwide effort, working closely with African American churches and faith-based groups, to deliver rapid HIV tests to millions, end the stigma of AIDS, and come closer to the day when there are no new infections in America.

Fellow citizens, we've been called to leadership in a period of consequence. We've entered a great ideological conflict we did nothing to invite. We see great changes in science and commerce that will influence all our lives. Sometimes it can seem that history is turning in a wide arc toward an unknown shore. Yet the destination of history is determined by human action, and every great movement of history comes to a point of choosing.

Lincoln could have accepted peace at the cost of disunity and continued slavery. Mar-

tin Luther King could have stopped at Birmingham or at Selma and achieved only half a victory over segregation. The United States could have accepted the permanent division of Europe and been complicit in the oppression of others. Today, having come far in our own historical journey, we must decide: Will we turn back or finish well?

Before history is written down in books, it is written in courage. Like Americans before us, we will show that courage, and we will finish well. We will lead freedom's advance. We will compete and excel in the global economy. We will renew the defining moral commitments of this land. And so we move forward, optimistic about our country, faithful to its cause, and confident of the victories to come.

May God bless America.

NOTE: The President spoke at 9:12 p.m. in the House Chamber of the Capitol. In his remarks, he referred to Usama bin Laden, leader of the Al Qaida terrorist organization; senior Al Qaida associate Abu Musab Al Zarqawi; and President Hamid Karzai of Afghanistan. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks in Nashville, Tennessee February 1, 2006

*The President.* Thank you all very much. Thanks for coming. Please be seated.

*Audience member.* We love you—[*inaudible*].

*The President.* Thanks for being here. Yes. I can see—[*applause*]. Did you say you love Laura? So do I. You stole my line. [*Laughter*] Thanks for coming. This is an amazing experience to be here. I can see why my buddy Gatlin finds that extra

note when he stands out here and sings. It's a fantastic hall. The last time Laura and I were here, we were honoring Mother and Dad for their 50th wedding anniversary. Mother thought he'd lost his mind when he said, "Honey, I want to celebrate the 50 years of marriage at the Grand Ole Opry." I said, "Gosh, you got good judgment, Dad, you know." [*Laughter*] So

thanks for coming. I'm really thrilled to be here.

I should have probably come before I gave my speech. When I was on the plane flying down here, I thought, how cool would it be to give a State of the Union address in a Porter Wagoner outfit. [*Laughter*]

I do want to give you some of the thoughts behind what I said in my State of the Union. That's what I've come to do. You know, it's one thing to give the speech—I think it's important to come here to Nashville to tell people the reason why I said some of the things I said. I think it will help you understand why I have made some of the decisions I have made.

One of the interesting things about the Presidency is we get to entertain a lot, and my favorite—the favorite folks to entertain are the people that Laura and I grew up with. I like my buddies from west Texas. I liked them when I was young; I liked them when I was middle-age; I liked them before I was President; and I like them during President; and I like them after President. And it's fun to have them come to the White House. It's neat to show off this fantastic experience that Laura and I are being able to go through. When they first walk in there, they're amazed at the White House. And the second thing is, they're amazed I'm in the White House. [*Laughter*] And they always say, "What's it like to be President of the United States?" And after I say it's just a huge honor, which it is, I say, "If I could give you the job description, it would be decisionmaker." I have to make a lot of decisions. And today what I'd like to do is share with you why I have made decisions in the context of the State of the Union I gave last night.

Before I do, I really am thrilled Laura's traveling with me. She's a great First Lady. She is—[*applause*]. I'm proud to be traveling with your two United States Senators—the majority leader of the United States Senate, Bill Frist. He's a good man.

He's a good guy to deal with. He is doing a fantastic job of herding cats. [*Laughter*] And I'm proud to be here with Senator Lamar Alexander as well.

A little later on, I'm going to talk about a key component of the competitive agenda, and that is to make sure our folks are educated for the jobs of the 21st century. And I will tell you that Lamar had a lot to do with planting this in my mind. He's, as you know, made his fame here in Tennessee for being a great education Governor. You'll be pleased to hear he's carried over that passion into the Halls of the United States Senate. And so in case I forget to give him credit later on, he deserves a lot of credit for making sure that we're competitive in the 21st century.

I appreciate the members of the statehouse who are here. Thanks for serving. I appreciate those in local government who are here. I understand the mayor is here, Mayor Purcell. I appreciate you taking time out of your busy day. I know you didn't ask for any advice. My only advice is, fill the potholes. [*Laughter*] Works every time, Mayor. [*Laughter*]

I want to thank the good folks here at Gaylord Entertainment for letting me come by and just explain some things to the people of Tennessee. This is such a fantastic facility. I had been here before my mother and dad's 50th wedding anniversary when I was—happened to be involved in the baseball business. I can remember the winter meetings we held here. And we're still looking for two of our guys that worked for us. They got lost—[*laughter*—] in one of the 14 lobbies in this fantastic facility. It's a wonderful place.

I want to thank those of you who wear our Nation's uniform who have joined us today. We particularly want to recognize Lieutenant Colonel Dan Epright. He's in active duty, U.S. Air Force. He's on a 2-week leave from Iraq, where he's stationed in the International Zone in Baghdad as the American Forces Network—Iraq, commander. He's in his 20th year of active

duty. I don't know where Colonel Epright is, but wherever you are, thanks for serving. Welcome back—Epright. Thank you very much. Is that your wife? I knew exactly where Epright was; I just forgot. [Laughter] And I'm proud that his wife is with him.

Yesterday I said something I really mean: As we give praise to our troops who wear the uniform, we must also remember to give praise to military families who support the troops.

Our state of the Union is strong. I say that because America is working hard to protect ourselves; we're spreading freedom; our economy is vigorous and strong as well. But there's some uncertainty in people's minds. People are uncertain, in spite of our strong union, because of war. And I understand that. I think it is—my job is as much educator in chief as it is Commander in Chief. And during times of uncertainty, it's important for me to do what I'm doing today, which is to explain the path to victory, to do the best I can to articulate my optimism about the future.

But I understand there's an anxiety about a time of war. That's natural, it seems like to me. Even though this economy is roaring—and it's strong, particularly when you think—recognize we've overcome a lot. This year alone we've overcome higher energy prices and natural disasters, and yet we really are the envy of the world. Our economy is the envy of the world. And yet people are changing jobs a lot, and there's competition from India and China, which creates some uncertainty.

My worry is, is that people see that uncertainty and decide to adopt isolationist policies or protectionist policies. In other words, in uncertain times, it's easy to—for people to lose confidence in the capacity of this country to lead and to shape our future.

Last night in my speech, I talked about a couple of themes. And one of the themes was that we must never lose sight of our capacity to lead this world toward peace, and that we must never fear—and we must

never fear competition. But, on the other hand, we've got to put solid policy in place to make sure that we can compete.

First, let me talk about foreign policy and why I'm concerned about isolationism. We're at war, see. A lot of my thinking in the speech I gave last night—and speeches that I have been giving—is based upon my understanding that we're at war. On September the 11th, 2001, I vowed to the American people that we would not rest and tire in order to protect us. And I have never forgotten that vow. As a matter of fact, every day of my Presidency, I think about this war. That's what you've got to understand. And so when you hear me give a speech and talk about the dangers to America, they are real, not imagined. Some would like us to look at the world the way we would hope it would be. My job as your President is to look at the world the way it is.

And I clearly see the threats to America. My job is to worry about those threats. That's not your job. We got a lot of people in Government worrying about those threats on your behalf, so you can go about your life. That's what we want. I knew after September the 11th, people would—they would tend to forget the nature of the enemy and forget the war, because it's natural. Who wants to live all your day worried about the next attack? That's my job, to worry about the attack. It's the job of the intelligence community and our military and law enforcement. That's what you pay us to do. But I also recognize that if we ever get weary or tired or uncertain and withdraw within our boundaries, the enemy is not going away.

The enemy is a bunch of coldblooded killers that have taken a great religion—taken parts of a great religion and converted it into an ideology that is—they perverted a great religion, and they have an ideology. We've been through ideological struggles in the past. We've had an ideological struggle against fascism and communism. And we're in that same kind of

struggle now. That's what's important for the American people to understand. They have ambition. They want to spread their totalitarian empire.

People say, "What do you mean by that?" I say, the best thing to think about is what life was like in Afghanistan for the Taliban—under the Taliban, for the people under the Taliban. It's a life where young girls couldn't get an education. Think about that. You talk about a dark vision of the future—it's a life where if you didn't agree with their view of religion, you were punished. It's a life in which freedom of expression was not encouraged. It was a dim view of the world. That's what these people think like.

They have stated clearly their desire to hurt us. And we got to take what they say seriously. When the enemy says something, an enemy which attacked us brutally on September the 11th, I would hope you would want the people in Government to take their word seriously—which I do. They have said they want to drive us out of Iraq. They have said they want weapons of mass destruction. In other words, they've got an ideology that they want to spread, and they want us to retreat. That's what they have openly stated. And that is why it's essential that we remain active in the world and keep the lead for peace. We have the duty to protect the American people. And so our strategy is to never give in, and never be—and never—[*applause*]. It's to never lose heart. This enemy has got one weapon, and it's the weapon of fear.

What a fantastic country America is. We deeply care about every human life. The life of a child in Baghdad is precious. And so when we see these killers kill somebody—a young child outside a hospital where one of our soldiers is handing out candy—we weep, because Americans have a deep compassion for every human being. And the only weapon they have is to cause us to weep and lose our nerve. And as I said last night—it's something I truly believe—they don't understand the nature of

America. We love our freedom, and we will do everything in our power to defend our freedom.

And so we're on the hunt for Al Qaida, and we're going to stay on the hunt. And we will bring them to justice. No doubt in my mind—no doubt in my mind we are bringing them to justice. We're making great progress in dismantling Al Qaida, and the others who hide won't be able to hide long enough. We're using every asset in our power to keep them on the defense, to find them and bring them to justice.

Secondly, I said something that I meant early on in this war against these terrorists, and that is, is that—to countries, "If you harbor a terrorist, you're equally as guilty as the terrorist." In other words, one of the—[*applause*]. Because I understand that these terrorist networks need safe haven in order to plan and plot. We're not dealing with nation-states; we're dealing with an ideological movement that needs a nation in which to hide. And so we made it clear that if you're complicit with the murderers, you're just as guilty as the murderers themselves. And that's why we took the action in Afghanistan. We gave the Taliban an opportunity to get rid of Al Qaida. They chose not to, and we acted.

So, thirdly, when we see a threat, we've got to deal with the threat. I remember growing up in Midland—Gatlin grew up in Odessa, by the way, right down the road—or the Gatlins did. I was white collar; he was blue collar. Anyway—[*laughter*]. I'm President; he's a singer. Anyway—[*laughter*]. You can tell I like him, because when I put the needle out, it's a sign of affection. Just don't give him the mike. Anyway—[*laughter*].

When we grew up, oceans protected us, it seemed like. We felt pretty safe and secure from a attack on American soil. We were concerned about a nuclear threat, but nevertheless, we felt secure because we were isolated from threats, it seemed like. September the 11th changed my way of thinking. It changed my way of thinking

on a lot of things, and one way it changed is that when we see a threat, we got to deal with it. We can't hope for the best. One of the lessons of September the 11th is we—threats should not be allowed to fully materialize; otherwise, it will cause harm to the American people.

I saw a threat in Iraq. The world saw a threat in Iraq. We gave Saddam Hussein a chance to deal with the world in good faith by honoring the United Nations Security Council resolutions. He chose—it was his choice; he chose to defy the resolutions. And so we took action. The world is safer and America is more secure without Saddam Hussein in power.

I recognize in a free society like ours, there can be and should be debate on big matters. I welcome the debate. But as I said last night to Congress, whether you agree or not agree with the decision, this country has one option, and that's victory in Iraq. I say that because the enemy has said they want to drive us out of Iraq and use it as safe haven. We've got to take the word seriously of those who want to do us harm.

I want to describe right quick our plans for victory in Iraq. First of all, anytime we put our troops in harm's way, we got to go in with victory in mind. And the victory is for Iraq to be a democracy that can sustain itself and govern itself and defend itself, a country which will be an ally in the war on terror, a country which will deny safe haven to the Al Qaida, and a country which will serve as a powerful example of liberty and freedom in a part of the world that is desperate for liberty and freedom.

The Iraqis have shown incredible courage and a strong desire to live in democracy. If you really think about last year, the year 2005, the progress toward democracy was remarkable. Anyway you look at it, it was remarkable. This young democracy has gone from tyranny—[inaudible]—a brutal dictator that killed or had killed thousands of people to a country which had

a transitional government in an election, to a country which wrote a progressive Constitution for the Middle East and had that Constitution ratified, to a country in which 11 million people voted in elections last December. You see, one of the things that—[applause]—one of the inherent parts of my foreign policy is my strong belief that liberty is universal, that everybody desires to be free, that freedom is not just a Western idea or an American idea; freedom is lodged in the soul of every person. I used—I put it—let me put it another way to you: I believe there's an Almighty, and I believe the Almighty's gift is freedom to every single person in this world.

And if you believe that—I'm just getting wound up here. [Laughter] I told Laura, I'd try to keep it under a couple hours. [Laughter] If you believe that, that freedom is universal, then it shouldn't surprise you that 11 million people, more or less, went to the polls. People want to be free, and the Iraqis are showing the world that.

Secondly, we've got to make sure their economy is able to function as good as possible so that people see the benefits of democracy. It's one thing to have elections; it's another thing for people to say, "Democracy is good for me; democracy is good for my family." And so we're working on reconstruction and fighting corruption and making sure that there are tangible benefits. And it's been difficult because the enemy is not only brutal in terms of killing people, the enemy is just relentless in trying to destroy infrastructure so that people cannot see the benefits of democracy.

And the third aspect—and it's one that I know is dear to the hearts of many people—is, how long will we be in Iraq? And the answer is this: It's a security aspect. And that is that if people want to be free and if 11 million people chose to vote, the question on people's mind is, is there a willingness for the Iraqis to defend their own freedom? And I will tell you, the answer we have seen, our commanders on

the ground have seen, is, absolutely. Absolutely. There is great bravery amongst these Iraqi soldiers. Our job is to convert their desire to protect their new democracy into effective forces. And that's what we're doing.

We've changed our training patterns. When we first got in there—one of the things I talked about over the Christmas season or the holiday season—prior to the holiday season—was that we've adjusted. That's what happens. We see things, and we change. We've done things differently. When we first went in there, we helped train an army for an external threat. Well, sure enough, the external threat wasn't nearly as significant as the internal threat. And so we started adjusting our training tactics. And we got good advice from Members of the Senate and the House from both political parties who went to Iraq and came back and said, "Here's what we've seen." And so we're changing.

And the security forces of Iraq are up to about 230,000, more or less. But the question is not just numbers. I first asked about numbers. You'd read about these suiciders knocking people off that were trying to stand these recruiting stations, and so the question is, are you able to get recruits? If it's dangerous to sign up, are you able to sign people up? And the answer is, absolutely. People wanted to serve the Iraqi military, which is a good sign about whether or not we're succeeding in our mission in training folks to defend their freedom. And if they're willing to sign up in the face of suiciders, it says something about their desire to protect their country.

The second question is, can they do the job? Are we training them well enough so they can take the fight on their own? And the election was an interesting example where the Iraqis were in the lead, and the violence in the last election was significantly lower than the violence in the first election.

Today, by video, I met with my—I met not only in the room with my national security team, but we had the Ambassador and

General Casey from Baghdad. And it's interesting to be able to communicate with your commanders on the ground in real time. And the reason I bring that up is that they are constantly updating the national security team and me about the effectiveness of these troops and how much territory we're turning over to the Iraqi troops.

What I have told the American people is, as the Iraqis stand up, we will stand down. As the Iraqis are capable of taking the fight to the enemy, we will reduce our troop levels. We have two less brigades there than we thought. In other words, these troops are being trained—the troops that we're training are more effective, more capable of taking the fight to the enemy. The commanders on the ground say, "We need less American presence."

Now, I'm going to talk—tell you something about timetables and withdrawals and all that business. It is a mistake to have a definitive timetable of withdrawal, because the enemy will react; the Iraqis will react. And it's not fair to our men and women who wear the uniform.

So I will make my decisions based upon what these commanders tell me. That's what you expect of the Commander in Chief. My job is to set the strategy. I just told you what victory is all about. We've defined victory. And now it's up to the commanders on the ground to help us achieve that victory. And if they say these Iraqis are capable of taking the fight, they're there firsthand to tell me that, and then we'll reduce our troops based upon their recommendation, not based upon the politics in Washington, DC.

Another reason—in other words, we can't be isolationists and win the war on terror. And we can't be isolationist, either, because it would prevent us from doing our duty around the world, and not only make this world a place where terrorists have trouble recruiting, but to live to that admonition, "To whom much is given, much is required."

Effective foreign policy is—recognizes that we can help change conditions on the ground to make life better for future generations of Americans. And I believe that helping defeat HIV/AIDS on the continent of Africa is—not only reflects the great compassion of America, but it will improve lives for generations of Americans to come. I believe defeating hopelessness and despair and helping others defeat poverty is in our national interest. I also know it reflects the deep character of the American people.

If this country were to become isolationist and withdraw and say we don't care about conditions of life elsewhere, we're not only ceding the ground to terrorists, we're not doing our duty as a compassionate nation.

Do you realize we feed a lot of the hungry in the world—and I'm proud of that record—that we're providing incredibly important lifesaving antiretroviral drugs to help defeat HIV/AIDS on the continent of Africa? There is a pandemic sweeping that continent, and the United States of America is leading the world in helping save lives. Do you realize that when the tsunami hit earlier this past year, it was the United States military that moved in and provided immediate help and aid and comfort and organization? Our choppers were flying rescue missions in Pakistan after the devastating earthquake. In my judgment, an active foreign policy, one that aids the suffering and helps the poor, is one that is in the interest of the United States of America, both short term and long term.

And finally, if we were to withdraw, not only would we cede ground to the terrorists and endanger this country, we would miss a fantastic opportunity to help spread liberty. In my speech, I mentioned Roosevelt and Kennedy, Truman, and Reagan. I did so because I wanted to remind the American people that these leaders were one that acted in confidence in our values. They understood when America led, not only was

America better off, but the world was. And we're spreading freedom now.

For those of you who are young, I want you to watch the spread of freedom in our world. It's amazing to see, when you think about it. The vote in Afghanistan was part of freedom's march. The vote in Iraq is part of freedom's march. People in Lebanon want to be free from Syria, and we're working—the Palestinians voted. Now, that election was an important election because it said what the people on the street wanted. They wanted clean government. They want people to pay attention to the education needs and their health needs. In order for us to—and Hamas, by the way, now has a choice to make. If they want to work with the United States of America, they must renounce their desire to destroy Israel; they must be a partner in peace.

Last night I spoke to the people of Iran—spoke first to the Government of Iran and said, “The world will continue to come together in unity to say you can't have nuclear weapons.” But I also spoke to the people, because I believe that everybody desires to be free, and I just wanted to assure them that someday, that they will be able to have a choice in their Government, and the United States looks forward to a friendship with a free and democratic Iran.

Liberty is universal, but it's important also to understand that freedom and liberty yield the peace we all want. One reason to be active in the world is to spread peace. If the United States were to withdraw, we'd miss an opportunity to make this world a more peaceful place for generations to come.

I like to tell people about my relationship with Prime Minister Koizumi because it helps drive home the point about freedom yielding peace. You know, my dad and, I suspect, a lot of your relatives fought against the Japanese in World War II. They were the sworn enemy of the United States of America. If there are any World War II vets here, they'll tell you what it was

like during that period of time. The Japanese attacked us, and we vowed to do everything in our power to defeat them. And we sent a lot of kids into battle, and we lost a lot of lives, and the Japanese lost a lot of lives. It was a brutal battle, and we won.

Interestingly enough, one of the people that I work closest with in the world is the Prime Minister of Japan. Isn't that interesting? At least it is to me. My dad fought them, and now his son is working to keep the peace with the Prime Minister of the country that he went to war against. And so what happened between when he was 18 and I'm sitting here at 59? I'll tell you what happened in between: Japan adopted a Japanese-style democracy. Freedom has the capacity to convert enemies into allies. Freedom has the capacity to lay—[*applause*—]freedom has that capacity to lay that foundation for peace for generations to come.

I believe we will be victorious in Iraq, and I know that by laying that foundation of peace in the Middle East, we'll be able to say, job well done. We have laid—we have made a better chance for peace for a generation of Americans coming up. Someday, an American President will be sitting down with a duly elected leader of Iraq, working on keeping that peace, and a new generation of Americans will say, thank goodness this generation accepted the responsibilities given to them.

Talk about a couple of other issues. There is a duty of us in Washington to protect you. One of the important aspects of protecting you is to make sure our law enforcement has all the tools necessary to do their job. Right after September the 11th, members of both political parties came together and said, "Let us make sure that we tear down walls between intelligence gathering service and law enforcement services in America so they can share information to connect dots and protect the people." And so they passed what's called the PATRIOT Act.

The PATRIOT Act is an important piece of legislation, in my judgment, because it says to folks, "Here's some tools that we use in other areas of law enforcement now applicable to intelligence, to protecting you." For example, some of the tools in the PATRIOT Act were already being used by people fighting off drug lords or Medicaid fraud, interestingly enough. The PATRIOT Act had safeguards designed in it where the programs were reviewed, and if people had complaints about abuse of civil liberty, they could bring them, and we would know whether or not the law was meeting intended consequences.

The law has worked. It's been a very important tool for our law enforcement officials. The PATRIOT Act is set to expire. The war against terrorists is not expiring. These people need the tools necessary to do their job. It's essential that Congress reauthorize the PATRIOT Act.

I want to take a little time to explain the terrorist surveillance program to you. First, if I was trying to pull a fast one on the American people, why did I brief Congress? In other words—[*applause*]. Right after September the 11th, it was apparent that there was some of the hijackers in the United States who were calling Al Qaida—Al Qaida operatives calling overseas. We don't know what they were talking about. Matter of fact, we found out about the calls after it was too late. But I was concerned about a system that wasn't doing everything we could to protect the American people, within the Constitution. And so, as you would hope that the Commander in Chief would do, I said to our operators, people responsible for protecting you, "Are we doing everything we can to protect you? Come up with other ways to connect the dots." And this terrorist surveillance program was designed by very capable operatives.

But before I implemented the program—I'm mindful of the fact that I took an oath to uphold the Constitution and the

laws of the United States. So I had lawyers—the Attorney General and the Justice Department—look at what I was doing. I'm also mindful that people want to make sure the President safeguards civil liberties while we protect the country, that there needs to be a balance. And so this is a program—and I became comfortable with that balance and confident that I had the legal authority to do what I did.

And so let me tell you what I did without talking about the operating details. I'm sure you can understand why you don't want the President or anybody talking about the operating details. If you're at war and you're trying to stop an enemy from attacking you, why in the world would you want to tell the enemy what they're doing to stop them, because they'll adjust. So I've authorized NSA to listen to a phone call from outside the United States in, or inside the United States out. In other words, this is not a program where we're listening to phone calls inside the United States. One of the people making the call has to be Al Qaida, suspected Al Qaida, and/or affiliate.

This is a program in which we have briefed key Members of the Congress a lot of times. It is constantly reviewed by a legal team, constantly reviewed. It is constantly reviewed inside NSA by a legal team. We are safeguarding your liberties.

Federal courts have ruled that the President—a President has constitutional authority to use foreign intelligence surveillance against enemies. Previous Presidents have used the same constitutional authority I have. I've got statutory authority as well. The Congress passed the authorization to use military force against Al Qaida after September the 11th, and the Supreme Court, in a recent opinion, ruled that the President—the Congress gave me the authority to use what's called the “fundamental incidents of war.” In other words, Congress authorized me to use force in the fundamental incidents of war, which means in this case, you can't defeat the enemy

until you know when the enemy is going to hit. And therefore, using this surveillance to find out the intention of the enemy is a fundamental incident of war to protect the American people. Let me put it to you in Texan: If Al Qaida is calling into the United States, we want to know.

Here's the challenge at home—we got a great economy. The American people are amazing when you unleash their creativity and talent. The entrepreneurial spirit of this country is strong when we reinforce that entrepreneurial spirit. Over the past 2½ years, this economy has created 4.6 million new jobs; the unemployment rate is 4.9 percent. Small businesses are flourishing. After-tax income since '01 is up 7 percent. Productivity is very high, which is important for quality of life and higher standards of living. Homeownership is at an alltime high; more minorities own a home today in America than ever before in our Nation's history. This economy is doing just fine.

But the question is, how do we stay competitive? What do we do to make sure, in a world in which competition is becoming fiercer and fiercer—what do we do to stay ahead of it? Now, some would say, “Protect yourselves by withdrawing from the world.” I think that is a huge mistake. Protectionism doesn't work. Protectionism would default to other countries in the world. That's not the American way. America must be confident and lead and do what is necessary to keep us competitive.

And I've got some ideas for you. First, in order to make sure we're competitive, this economy has got to continue to grow. Last night I said an interesting statistic, at least I thought it was; otherwise, I wouldn't have said it, but—[laughter]. I said the tax relief we passed left \$880 billion in the hands of American families and small businesses and entrepreneurs. See, my philosophy is that the more money you got, the more of your own money you keep, you will save and invest and spend, and that's how this economy grows. And the tax relief

we passed is working because the American people are responding.

And so how do we make sure that we have economic vitality and growth. Well, one thing you don't want to do is take money out of—if it has worked, why take money out of your pocket? And the tax relief we passed is set to expire. If Congress doesn't do anything, your taxes are going to go up, which, in my judgment, would be bad for the economy. In order to keep America competitive, the Congress needs to make the tax relief permanent.

You'll hear folks say, "Well, we got to run up your taxes in order to balance the budget." That's not the way it works in Washington. They're going to raise your taxes so they can find new ways to spend your money. That's how it works. So I want the tax cuts permanent, and I want to work on the deficit by controlling Federal spending.

We can meet priorities. We can meet priorities. See, you got to set priorities in order to meet priorities. So long as we've got kids in harm's way, a priority will be to make sure our troops have what's necessary to do their job.

We got a plan to cut this deficit in half by 2009. It's just going to take Congress making some hard choices. Part of my job is to present a budget that gives them a chance to show how to cut that deficit in half by 2009. Looking forward to working with them on achieving this objective. [Laughter] But the long-term problem we got is the mandatory spending. And I want to spend a little time on it.

There's—we got a real issue with Social Security and Medicare. And the reason why is, guys like me are fixing to retire. I'm turning 62, retirement age, in 2008, which is a convenient coincidence. [Laughter] I'm looking around and I see some other baby boomers out there too. And we're going to stress the system. There's a lot of us getting ready to retire, a heck of a lot more than have been retired. And we've been promised a lot. And a lot of young guys

are going to be having to pay into a system that is flat going broke. That's the reality.

It's hard for me to be the President and look at young workers, young people coming into the workforce, paying payroll taxes into a system that I know is going broke. And it is. We've been promised too much, and too few people paying into the system. And now we need to do something about it, because this mandatory spending, these entitlement programs, are going to make it really hard for future Congresses and future taxpayers.

I tried last year with the Social Security plan. I thought my job was not only to raise the issue but to come up with some solutions. One of my first objectives was to explain to the American people, we got a problem. I believe that until Congress hears from the people that we got a problem that their attitude is going to be, "Nobody thinks we got a problem; why do anything about it?" People now know we got a problem.

Last night I said to Members of Congress the truth: We're not going to be able to solve this issue until we bring Republicans and Democrats together. It's a big issue solving the baby boomer—[applause]. We can get the job done. You don't have to cut benefits to people; you just got to slow them down so that the next generation can afford them. Do you realize my benefits or your benefits grow faster than the rate of inflation? I mean, in other words, there's ways to make it work. But it's going to require a new attitude in Washington, DC. There's too much politics up there. There's too much zero-sum. I want the Democrats on Capitol Hill to hear loud and clear: I want a bipartisan solution on mandatory and entitlement spending for the sake of future generations of Americans.

I want to talk about four other issues right quick. You still awake? [Laughter] They didn't come all the way to hear this, kind of getting shortchanged. I'll make it

quick. It's important for us to stay competitive, to open up markets. The temptation is to shut markets down. I'm confident in our ability. I'm confident in our farmers; I'm confident in our entrepreneurs. I think the job—I know the job of the President is to work to open up markets and level the playing field. My attitude is this: We say to countries, "You treat us the way we treat you," and when they do, nobody can outcompete the American worker and farmer and entrepreneur.

A big issue is immigration. It's important for us to get this issue solved so that we can be competitive as we go out into the 21st century. First of all, the obligation of the Federal Government is to enforce our borders, is to make sure that—[*applause*]. And I want to thank Leader Frist for passing a strong appropriations bill to provide resources necessary for more Border Patrol technology along the border. Listen, the border is long, and it's not easy to enforce. But with proper use of technology, some physical barriers, I think we'll be able to do a much better job.

The second issue along the border, by the way, is that when we catch somebody sneaking into our country illegally, we just can't release them out into the system. We've got to have more detention space so that—it used to be they'd catch them, a lot of the folks, they'd say, "All right, check back in with your immigration judge here in 45 days." And the guy would say, "Yes, you bet—[*laughter*—see you later." So we're changing that along the border.

I do want to talk about the worker issue. A lot of people here in America have come to do jobs Americans won't do. And they're here because they can make money for their families. I used to tell people in Texas that family values didn't stop at the Rio Grande River. If you're a mother or a dad and you want to put food on the table for your children, and you had the choice between \$5 and \$50, you'd head for \$50 if you could.

I believe a very significant part of enforcing our border—make it easier for our Border Patrol to do the job—is to end this system that encourages smuggling and pressure on the border by people sneaking across, and saying if there is somebody that's willing to do a job an American won't do, let's give him a fool-proof pass so they can be here on a temporary basis.

Now, I'm against amnesty, and the reason I am is, I believe if you grant amnesty to people that are here, it will cause another wave of people to want to come. But I am for recognizing reality and saying that if you're doing a job, if you're an employer and you're looking for somebody to do a job an American won't do, then here is a card for a temporary worker. That's a humane way to treat the issue. I can't stand a system that has caused people to get stuffed in the back of 18-wheelers and they're driving across the desert. We have—because of our policy, we have caused there to be a whole smuggling industry and a forgery industry. If you're out there working and somebody shows up, and you can't find somebody to find work, and they show up and you say, "Show me your card"—you don't know whether it's real or not real. There's people forging cards in order to help these people find work.

We've got Border Patrol agents chasing people getting smuggled across the border to do work. If you are able to have a rational plan on a temporary-worker basis, it doesn't seem like to me—they're not going to have to try to sneak across the border, and our Border Patrol will be able to do a better job on drugs and terrorists and guns that are trying to be snuck in and out of this country. Immigration is an important issue, and I'm looking forward to working with Congress to get a job done on behalf of the American people.

I want to talk about health care right quick. The job of the Federal Government is to take care of the elderly and the poor. We're rolling out a Medicare plan that is going to make medicine for our seniors

modern, up to date, and work well. It's a really important reform.

Listen, if you say, "We're going to provide medicine for our seniors," you need to provide the best medicine possible for our seniors. And that means including prescription drug coverage for the seniors. And that's what's happening. We got—millions of people are signing up for this program. We've been in it for about 4 weeks. We're going to correct problems. Most of the people signing up are finding out it's a good deal. I urge seniors to look at this program carefully and sign up.

We also have an obligation to the poor, which we're taking care of in Medicaid. But I want to give you another way of dealing with medicine other than having the Federal Government run it all, which I am unalterably opposed to. I think, one, we ought to have policies that encourage the doctor-patient relationship, strengthen that relationship. Secondly, we got to be wise about how we help control costs. One way to control costs is to spread information technology out—throughout the health care field.

Let me put it to you this way: Health care is kind of lagging behind when it comes to using modern technology. Think about it. You got docs still writing out those files. And they hand that file to you and say, "Take it down the hall." You're moving paper still in a paperless world. The problem is, not only are you moving paper, but doctors can't write in the first place. [Laughter] It creates inefficiencies in the system. There are too many medical errors. By spreading information technology, which—Bill Frist and I went to a hospital—I think it was here in Nashville—where they've got a modern information technology system being put in place. They're going to save 20 percent to 30 percent on health care costs. It's a rationale way of helping control health care without the Federal Government getting in your business.

I'm for allowing small businesses to pool risk across jurisdictional boundaries so they have the opportunity of buying health care at the same discount big businesses get.

I am big believer in health savings accounts. For those of you who don't know health savings accounts, investigate health savings accounts. They're an innovative way to make sure the doctor-patient relationship is strong, that people are in charge of making the health care decisions themselves, that there is an incentive to taking care of your body through good exercise and good nutrition. It's a way to save money tax-free in your health care and, at the same time, get coverage for catastrophic illness. These make sense for small businesses; they make sense for individuals. And I'm going to ask Congress to make them more available and more attractive for individual consumers all across the United States.

Finally, if you want to do something about availability of health care and affordability of health care, we have got to get the United States Senate to pass medical liability reform. You don't have to worry about Frist. No, he understands. We got a problem with ob-gyns. I said last night a statistic which should alarm the American people: There are 1,500 counties in America in which a woman can't find an ob-gyn. And a lot of that has to do with lawsuits driving good docs out of practice. This isn't right, folks. This isn't right. It's time for those Senators who are blocking that bill, those Senators who are representing the trial lawyers of America, to understand the damage they're doing to the health care industry of this country.

I'm just getting warmed up. [Laughter] In order to stay competitive, America must end its dependence on oil. When you're hooked on oil from the Middle East, it means you've got an economic security issue and a national security issue. And I spoke last night to some exciting opportunities here in America. I believe—I know that technology is going to enable us to

diversify away from being dependent on hydrocarbon, from oil.

Let me talk about cars, and that's really the area where we can achieve a lot of independence. We use a lot of foreign oil in our automobiles, and we drive a lot. And people say, well, CAFE this and CAFE that. Actually, we have increased CAFE standards for certain types of vehicles during my administration, and that's important, as is giving people choice, and marketplace function is important. But most important of all, it seems like to me, if you recognize the fact that being dependent upon oil is a problem for the long term, then why don't we figure out how to drive our cars using a different type of fuel?

Now, let me talk about two things that we're working on. We spent—I said last night, we've spent \$10 billion, since I've been President, on research, and we're close to some really interesting breakthroughs. One such breakthrough is advanced batteries, which will make the hybrid car or the electric car much more affordable and much more suitable to the consumer demands. You don't want your battery running out halfway between here and somewhere else.

But I do want to talk about ethanol right quick. You know, we're making ethanol out of corn right now. We're very close to a breakthrough where we'll be able to figure out how to make ethanol from other forms, other materials, like grasses, woods. Now, think about that. All of a sudden—we may be in the energy business by being able to grow grass on the ranch—[laughter]—and have it harvested and converted into energy. And that's what's close to happening. We're told that if we continue to focus on research, we'll be able to, within 6 years, have a competitive fuel to gasoline.

Now, people say, "Well, that's great. How about the automobile?" Will they be able to use it? Four-and-a-half million cars today are flex-fuel automobiles. In other words, they can either use gasoline or eth-

anol. So the technology is there for the automobile, and we're close to the technology of providing a competitive fuel to gasoline by converting that which we grow into fuel. It's coming. It's an exciting time. I can't wait to work with Congress to continue promoting this kind of research so that someday we're no longer dependent on Middle Eastern oil.

People say, "Well, why can't—once you get the fuel, why can't you just convert your fleet instantly?" We've got 200 million cars out there. It takes a while for new automobiles to become the main, dominant part of the automobile fleet. What I'm telling you is, is that we're close to some breakthroughs. These are exciting times. Technology is going to help keep this country competitive.

But the thing that's going to keep the country most competitive is making sure our workforce has got the skills to compete. This is a dynamic world. Whether the people want to recognize it or not, we're in a competitive world. Some will say, "It's so competitive; let's withdraw and protect ourselves." That's not my attitude. My attitude is if it's competitive, let's get in a position where we can out-compete the rest of the world. And the most important place is going to be to make sure our kids have got the skills to fill the jobs of the 21st century. If our kids don't have those skills, those jobs will go somewhere else.

And so this is the initiative that I praised Lamar about; it's called the America Competitiveness Initiative. It basically says that we're going to focus on research, both in public and private sector, to make sure that the technologies and skill base of our science and engineering community leads the world. It also recognizes that we've got to make sure our children have got math and science skills.

By the way, that starts with making sure children can read. One of Laura's most important initiatives and inherent in the No Child Left Behind Act is the absolute demand by our Government that schools

teach every single child how to read by fourth grade—or third grade—and remain at grade level throughout their entire public school career.

One of the ways to make sure that our children have got math and science skills that will give them the basis on which to compete—and, by the way, when you test our scores relative to other children, we're doing just fine in elementary school, and we start slipping off in middle school, and we're not doing worth a darn in high school. And so one way to reverse that trend is to make sure our high school teachers have got the necessary skills to teach kids the skill sets to be able to compete. And so we believe that we can help train 70,000 high school teachers to lead Advanced Placement courses in math and science.

Advanced Placement works. AP is a vital program. If you study your AP results here in Tennessee schools, you'll see it makes a lot of sense. We want AP programs to be available to children from all walks of life so that they have the skills necessary to compete. We got a plan to get 30,000 math and science professionals to teach in our classrooms. And we want to make sure, just like we do on No Child Left Behind, that we focus on math as well, and we find math deficiencies early—we provide money to correct them. See, if you diagnose and don't correct, you're doing a child a disservice. If you don't diagnose, you're doing a child a disservice. The best thing to do is what we're doing, is diagnose and solve problems early, before they're too late. And that's what we're going to do in this very exciting initiative.

A couple of other things I want to talk about. What I just told you is how to stay competitive. See, we have a choice. We can withdraw and say, "Okay, you all go do your thing, and we'll just protect ourselves inside America," or we can compete. And I just laid out an agenda for America to lead. I believe that the way you enhance prosperity for the American people is you

shape your own destiny. And America has been a leader and will continue to be a leader in the world economy.

What really matters in the long term is the character of the American people. The great strength of this country is the compassion of our citizens. It really is. I like to remind people that de Tocqueville got it right when he came and looked at America in the 1830s and recognized the voluntary associations. The ability for people to serve something greater than themselves was the strength of America then, and it's the strength of America now.

One of the reasons why I mentioned Laura last night and her program is not only I want her to get a little air time—[laughter]—but she's heading up a very important effort to encourage mentors to help say to a child, "I love you. What can I do to help you? How can I help you realize you need to make the right choices in life in order to succeed?"

I see a Scout there. The Scouting program is a great mentoring program. But there are all kinds of ways you can help, all kinds of ways you can help get involved with people's lives. Last night we honored some folks by putting them in the box there during the State of the Union. I guess it's an honor when you sit there and have to listen to an old guy for an hour. But anyway, nevertheless, they were there. And one of them was a young guy that was volunteering down there in—for those affected by the hurricanes.

One of the things about that hurricane is we're going to make sure that we analyze the response. And, as I said, we just didn't do as good a job as we should have done at all levels of government. As the head of the Federal Government, I take responsibility for that. But having said that, the response of the American people to these hurricanes was unbelievable. People were uprooted out of their homes. They were wandering out there, wondering whether or not anybody cared. And thousands of our fellow citizens had open arms and said, "I

care about you. How can I help you?" It was a remarkable, remarkable thing to watch. It's reconfirmed my great faith in the American people.

The Government has got a role. As I mentioned last night, we've committed \$85 billion to help the people get on their feet down there. We're going to stay with them. We'll help them. And the American people are helping them as well.

Another thing I talked about last night, to make sure that our country is hopeful and the spirits are up, is that when you look at Washington, you've got to be assured that people are upholding the integrity that you expect them to. I look forward to working with Congress on ethics reform. We have a solemn duty and an obligation to say to the American people that we will uphold the honor of the offices to which we have been elected.

I do want to say something about judges. I want to thank both Senators here for voting to confirm a good man. Laura and I are going to—if I can ever stop speaking here—[laughter]—we're going to go back and have a swearing-in ceremony for Judge Sam Alito. The reason I bring this up is that part of making sure America knows there's a hopeful tomorrow is that—a lot of Americans don't like it when judges kind of write the law. We've got plenty of legislators in Washington. Believe me, we've got plenty of legislators in Washington. And so I'm going to put judges on the bench who know the difference between interpreting the Constitution and trying to write the law. I'll continue to do that.

And so that's what's on my mind, and it took me an hour to tell you. [Laughter] I hope you get the sense of my optimism

about the country. I told you mine is a decisionmaking job. I first learned that when the guy called me—I was getting ready to give my Inaugural Address, right before the swearing-in of the first Presidency—the first term. And a guy called me and said, "What color rug do you want in the Oval Office?" I said, "Man, this is a decisionmaking job." [Laughter] "What color rug do I want?" The second thing about decisionmaking is you've got to know when it's time to delegate. So, not knowing much about rug designing, I said, "Laura, give me a hand." [Laughter]

And the third thing about my job is you've got to set a strategic vision. I set the strategic vision last night for our country: active in the pursuit of our own security and the spread of freedom; confident in our ability to compete in the world; understanding we need to continually recommit ourselves to serving others. And so I said, "Laura, the only thing I want is that rug to say—you figure out how to say it—is, 'Optimistic person comes here to work every day.'" And she captured my spirit, because I am optimistic about our future.

Thanks for giving me a chance to share that optimism with you. God bless.

NOTE: The President spoke at 12:01 p.m. at the Grand Ole Opry House. In his remarks, he referred to entertainer Larry Gatlin of the Gatlin Brothers; entertainer Porter Wagoner; Mayor Bill Purcell of Nashville, TN; former President Saddam Hussein of Iraq; U.S. Ambassador to Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; and Prime Minister Junichiro Koizumi of Japan.

Remarks at a Swearing-In Ceremony for Samuel A. Alito, Jr., as an Associate Justice of the United States Supreme Court  
February 1, 2006

Good afternoon. Laura and I welcome you to the White House. Mr. Chief Justice, thank you for coming. Members of the Supreme Court, thank you all for being here. Members of the Senate, honored you're here. Ladies and gentlemen, appreciate you joining us on this historic occasion. This afternoon we're also honored by the presence of a strong and graceful woman, Mrs. Cissy Marshall. Thank you for coming, Mrs. Marshall.

Yesterday the United States Senate confirmed Sam Alito as the 110th Justice of the Supreme Court of the United States. Last night he looked pretty good in that black robe sitting there. [Laughter]

It's a proud day for Judge Alito and his entire family. We extend a special welcome to Martha, who has been at his side for more than 20 years. And with us, you can see his son, Phil, and daughter, Laura. If they're anything like our daughters, they're probably telling their dad how to behave and how to testify. [Laughter]

I appreciate Rosemary being with us today. And we're thinking of Sam's mom, Rose, who turned 91 in December. And of course, as we think of Rose, we think of her husband, Sam's late father. He came to our country as an immigrant from Italy in 1914. Sam Alito, Sr., instilled in his son a deep commitment to serving his fellow Americans. And I'm sure he's looking down with pride as Sam takes his place on the highest Court of the United States of America.

Sam Alito is replacing an extraordinary Justice, Sandra Day O'Connor. Justice O'Connor has been an admired member of the Supreme Court for 24 years. She has served our Nation with decency and spirit and great devotion, and I thank her on behalf of all the American people.

Sam, you've drawn quite a distinguished crowd here. I appreciate the Vice President being here, and Lynne. I want to thank the Attorney General and other members of my Cabinet who have joined us today. I want to thank the members of my team who have worked so hard to help Sam, particularly former Senator Dan Coats of Indiana.

I want to thank Secretary Mike Chertoff, who's with us. The reason I bring up Chertoff is they worked together, and Chertoff kind of put in a good word for Sam, you know—[laughter]—at a crucial moment. [Laughter]

I particularly want to thank the Members of the Senate who are here. I'm sorry I'm a little late. I've just come in from Tennessee. I got a little windy. And Senator Frist was with me. I appreciate you, Leader, for working hard to get this good man through. And thank you, Mitch McConnell, Senator McConnell, as well. I don't want to name all the Senators since we're running a little late, but I do want to mention the chairman of the Judiciary Committee, Arlen Specter, who did a heck of good job.

Judge Alito becomes Justice Alito. As he becomes Justice Alito, our Nation completes a process that was ordained by our Founders in Philadelphia more than 200 years ago. Under the Constitution, the President nominates and, by and with the consent—advice and consent of the Senate, appoints the Justices of the Supreme Court. This process has been carried out many times since the beginning of our democracy. And each new appointment represents a renewal of the promise of our country and our constitutional order.

Our Founders thought carefully about the role they wanted judges to play in the American Republic. They decided on a

court system that would be independent from political or public pressure, with judges who serve for life. America expects members of our judiciary to be prudent in exercising judicial power and firm in defending judicial independence. So every member of the Supreme Court takes an oath to uphold the Constitution and administer justice faithfully and impartially. This is a solemn responsibility.

And the man we honor today has demonstrated his devotion to our courts and law through years of service to our country. Sam Alito has distinguished himself as a member of our military, a Federal prosecutor, Assistant to the Solicitor General, U.S. Attorney in New Jersey, and for the last 15 years, a highly respected judge on the Third Circuit Court of Appeals.

Sam Alito is known for his steady demeanor, careful judgment, and complete integrity. Throughout his career he has treated others with respect. In return, he has earned the admiration of his colleagues on the bench, the lawyers who have come before it, and, of course, a very devoted group of proud law clerks.

During the confirmation process, the American people saw a man of character and legal brilliance. Like our fellow citi-

zens, I was impressed by the dignity Sam Alito and his family displayed during the Senate hearings, and by the thoughtful scholarship and reverence of the Constitution that have always defined his approach to the law.

A Supreme Court Justice must meet the highest standard of legal excellence, while serving with humility and fidelity to our founding promise of equal justice under the law. These are qualities Americans want in a Supreme Court Justice. These are qualities Americans see in Sam Alito. He will make a superb Justice of the Supreme Court, and I know this son of New Jersey will make all Americans proud.

Sam, I thank you for agreeing to serve our country again and for accepting this new call to duty.

Now I ask the Chief Justice of the United States, John Roberts, to please step forward and administer the oath.

NOTE: The President spoke at 4:22 p.m. in the East Room at the White House. In his remarks, he referred to Cecilia Marshall, wife of former Justice Thurgood Marshall. The transcript released by the Office of the Press Secretary also included the remarks of Associate Justice Alito.

## Statement on House of Representatives Passage of Spending-Reduction Legislation

*February 1, 2006*

As I said last night, keeping America competitive requires us to be good stewards of taxpayer dollars. The House today passed a significant spending-reduction package that will curb the growth of entitlement spending for the first time in years and help us stay on track to cut the deficit

in half by 2009. I look forward to signing this bill into law. The budget I propose next week will continue to build on the spending restraint we have achieved.

NOTE: The statement referred to S. 1932.

## Statement on the New Freedom Initiative February 1, 2006

Five years ago, I announced the New Freedom Initiative to build on the progress of the Americans with Disabilities Act and more fully integrate people with disabilities into all aspects of life. Since the announcement of this important initiative, we have expanded educational opportunities for children with disabilities and provided essential funding for the Individuals with Disabilities Education Act. We have launched [disabilityinfo.gov](http://disabilityinfo.gov) to serve as an online resource for people with disabilities and their families, employers, service providers, and

other community members. To provide expanded employment opportunities, we are assisting persons with disabilities by implementing the Ticket to Work program and strengthening training and employment services at One-Stop Career Centers.

As a result of these efforts, Americans with disabilities have greater access to the opportunities of America. My administration will continue to work to remove barriers that still confront Americans with disabilities and their families.

## Remarks at the National Prayer Breakfast February 2, 2006

*The President.* Thank you all. Please be seated. Thanks for the warm welcome. Laura and I are delighted to be here. This lovely personality said this morning, “Keep your remarks short.” [Laughter]

I appreciate this prayer breakfast a lot, and I appreciate the spirit in which it was formed. Ike said he was living in the loneliest house in America—for what he got to say is, the rent is pretty good. [Laughter]

It’s great to be here with distinguished guests from all around the world. Your Majesty and Prime Ministers and former Prime Ministers, friends with whom I have the honor to work, you’re welcome here. I appreciate the fact that people from different walks of life, different faiths have joined us. Yet I believe we share one thing in common: We’re united in our dedication to peace and tolerance and humility before the Almighty.

I want to thank Senators Pryor and Coleman for putting on this breakfast. I appreciate Senator Frist, Representative

Blunt, Representative Pelosi, other Members of the United States Congress who’ve joined us on the dais and who are here for this breakfast. I thank the members of my Cabinet who are here. Get back to work. [Laughter]

I find it interesting that the music is from Arkansas. [Laughter] I’m glad it is, because they know how to sing down there. [Laughter]

You know, I was trying to figure out what to say about Bono. [Laughter]

*Bono.* Careful. [Laughter]

*The President.* And a story jumped to mind about one of these really good Texas preachers. And he got going in a sermon, and a fellow jumped up in the back and said, “Use me, Lord, use me.” And the preacher ignored him and finished his sermon. Next Sunday, he gets up and cranking on another sermon, and the guy jumps up and says, “Use me, Lord, use me.” And after the service, he walked up to him and said, “If you’re serious, I’d like for you to paint the pews.” Next Sunday, he’s

preaching; the guy stands up and says, “Use me, Lord, use me, but only in an advisory capacity.” [Laughter]

So I’ve gotten to know Bono. [Laughter] He’s a doer. The thing about this good citizen of the world is, he’s used his position to get things done. You’re an amazing guy, Bono. God bless you. God bless you.

It is fitting we have a National Prayer Breakfast, because our Nation is a nation of prayer. In America, we do not prescribe any prayer; we welcome all prayer. We’re a nation founded by men and women who came to these shores seeking to worship the Almighty freely. From these prayerful beginnings, God has greatly blessed the American people, and through our prayers, we give thanks to the true source of our blessings.

Americans remain a prayerful people today. I know this firsthand. I can’t tell you the number of times out there traveling our country, people walk up, total strangers, and say, “Mr. President, I’m praying for you and your family.” It is one of the great blessings of the Presidency and one of the most wonderful gifts a person can give any of us who have the responsibility to govern justly. So I thank my fellow citizens for their gracious prayers and wonderful gifts.

Every day, millions of Americans pray for the safety of our troops, for the protection of innocent life, and for the peace we all hope for. Americans continue to pray for the recovery of the wounded and to pray for the Almighty’s comfort on those who have lost a loved one. We give thanks daily for the brave and decent men and women who wear our Nation’s uniform, and we thank their families as well.

In this country, we recognize prayer is a gift from God to every human being. It is a gift that allows us to come before our Maker with heartfelt requests and our deepest hopes. Prayer reminds us of our place in God’s creation. It reminds us that when we bow our heads or fall to our knees, we are all equal and precious in the eyes of the Almighty.

In prayer, we’re reminded we’re never alone in our personal trials or individual suffering. In prayer, we offer our thanksgiving and praise, recognizing our lives, our talents, and all that we own ultimately flow from the Creator. And in these moments of our deepest gratitude, the Almighty reminds us that for those to whom much has been given, much is required.

In prayer, we open ourselves to God’s priority, especially His charge to feed the hungry, to reach out to the poor, to bring aid to the widow or the orphan. By surrendering our will to God’s will, we learn to serve His eternal purposes. Through prayer, our faith is strengthened, our hearts are humbled, and our lives are transformed. Prayer encourages us to go out into the world and serve.

In our country, we recognize our fellow citizens are free to profess any faith they choose, or no faith at all. You are equally American if you’re a Hebrew—a Jew or a Christian or a Muslim. You’re equally American if you choose not to have faith. It is important America never forget the great freedom to worship as you so choose.

Yes, what I’ve found in our country, that whatever our faith, millions of Americans answer the universal call to love your neighbor just like you’d like to be loved yourself. Over the past 5 years, we’ve been inspired by the ways that millions of Americans have answered that call. In the face of terrorist attacks and devastating natural disasters here and around the world, the American people have shown their faith in action again and again. After Katrina, volunteers from churches and mosques and synagogues and other faith-based and community groups opened up their hearts and their homes to the displaced. We saw an outpouring of compassion after the earthquake in Pakistan and the tsunami that devastated entire communities. We live up to God’s calling when we provide help for HIV/AIDS victims on the continent of Africa and around the world.

In millions of acts of kindness, we have seen the good heart of America. Bono, the true strength of this country is not in our military might or in the size of our wallet; it is in the hearts and souls of the American people.

I was struck by the comment of a fellow who was rescued from the gulf coast and given shelter. He said, "I don't—I didn't think there was so much love in the world." This morning we come together to recognize the source of that great love. We come together before the Almighty in prayer, to

reflect on God's will, to seek His aid, and to respond to His grace.

I want to thank you for the fine tradition you continue here today. I pray that our Nation will always have the humility to commend our cares to Providence and trust in the goodness of His plans.

May God bless you all.

NOTE: The President spoke at 9:09 a.m. at the Hilton Washington Hotel. In his remarks, he referred to musician and activist Bono.

## Remarks in Maplewood, Minnesota February 2, 2006

Thank you all. Please be seated. Thanks for coming. Appreciate the warm welcome. Got to take my Post-it note off my speech here. *[Laughter]* My fault. My fault. *[Laughter]* I should have cleaned off the podium. *[Laughter]* I saw that I could get—I see the Governor out there—he says, "You want to have some lunch?" I said, "Sure, what are you serving?" He said, "Lutefisk." *[Laughter]* I said, "No, I think I'll eat on Air Force One." *[Laughter]*

It's great to see you, Governor. Thanks for being here. Laura and I are delighted to be here at 3M. We're glad to be with the Governor and the first lady, Lieutenant Governor.

I was greeted by your chairman and CEO, George W. *[Laughter]* I'll just call you "W." *[Laughter]* Thanks for having me. I appreciate it. I want to thank Jay Ihlenfeld, the senior vice president, for the tour we just went on. I want to thank all the employees here for giving me a chance to come by and visit with you.

I really want to send a message to the United States of America that in order for us to keep the standard of living that we're accustomed to, that in order for us to be the leader in the world that we want to

be, that we must remain a flexible, technologically based economy.

You know, it's amazing when you come to 3M to talk to George W. about the number of products you make and—products that people just take for granted, but products, many of which started in a laboratory as the result of a really smart, capable person making the technological advances necessary to get these products to market.

Innovation is a vital part of the future of the United States of America, and the fundamental question is, how do we keep our society innovative? That's what I'm here to talk about.

You know, one way for our fellow citizens to understand the importance of innovation and technology is just think about what has taken place over 25 years. Now, for a 59-year-old guy, that doesn't seem like much these days. If you're 26, it seems like a lot. Twenty-five years ago, most Americans used the typewriter. Isn't that interesting? Twenty-five years ago, they had such a thing as pay phones. *[Laughter]* Now we're using cell phones. Carbon paper was used. For those youngsters here, carbon paper was kind of a messy way to duplicate things. Now we're using laser

printers. They had bank tellers that were distributing most money in those days. Twenty-five years ago, you had to go to the bank and say to the teller, "Good day, may I have some money?" Now you can go to the ATM machine.

Technology is changing the way we think. I don't know if you remember those awful trips when you had to drive with your family; you played the license plate game. [Laughter] Now we got the DVDs—[laughter]—right there in the car. Technology happens quickly if you remain an innovative society. And it's those technological improvements that help create high-paying jobs and enhances the standard of living of the American people.

Do you realize that economists say that as much as half of our Nation's economic growth in the last half-century is directly due to technological progress fueled by research and development, the kind of research and development you do right here? Think about that. One-half of the progress of our economy is due to research and development. Well, if that's the case, if that's the truth, we got to make sure we continue to encourage research and development.

Technology has enabled us to be the preeminent economy in the world. I think it's good that we're the preeminent economy in the world. I think it's good for the American people that we're in a leadership position. And the reason why I think it's good is because when you lead, your people benefit. By being a leader in the economy of the world, it means somebody is more likely to find work. And somebody is able to—likely to realize dreams and opportunity.

I say we're the preeminent economy in the world because the facts bear me out. We're growing faster than other industrial—major industrialized nations. We've added 4.6 million new jobs in 2½ years. That's more than Japan and the European Union combined. And the fundamental question is, one, do we want to remain the leader, and two, how do you do it?

There's some uncertainty in America today, and I can understand why. There's uncertainty when it comes to our economy. People are beginning to see competitors emerge, India and China. I'm a fellow who likes competition. I think it's good to have competition. I think it makes us do things better. But some people in our country look at competition and say, "Well, we can't possibly compete with China or India or other countries, and therefore, why don't we just think about walling ourselves off?" That's called protectionism. It's a trend that we need to worry about. See, there's uncertainty when people see jobs go overseas. I can understand that. Somebody's working hard all their life, and all of the sudden, the job gets moved overseas because of competition. That creates uncertainty in the workplace. And one of the reactions to that uncertainty could be, "Well, I'm tired of competing. Maybe what we need to do is instead of competing, just kind of leave ourselves apart from the world."

The United States of America has been through this before. This isn't a new thought. If you look at our history, our economic history, you'll find that we've been through periods of protectionism before. If you'll look at our foreign policy history, you'll find there's been periods of isolationism before. I think that—and so the first thing I want to share with you is, it's important for us not to lose our confidence in changing times. It's important for us not to fear competition but welcome it.

There's a global economy. The Internet has really changed a lot, when you think about it. It is—I happen to think it's good news that countries are becoming more wealthy; that through the global competition, that people's lives are improving. I believe that because most Americans—all Americans believe in the dignity of every human being. But I take a practical look at it, and so should you at 3M. You ought to say, "We welcome this developing world, this new economy, because as wealth

spreads, there are new customers for our products.” In other words, instead of saying, “We fear the competition; the global economy frightens us,” the United States of America ought to say, “We want more people to be able to buy our products.”

And so what I’m telling you is I think the role of government is to shape the future, not fear the future. And I think the role of a President is to say to the American people, “Be bold; be confident. And if we do the right things, we’ll remain the leader in the world.”

And here are the things I think we ought to do. First, I know we got to keep our economy growing. You can’t be a world leader in the economy if your economy is flat. You can’t be a world leader—world economic leader if your economy is flat. I mean, you got to have progrowth policies in place.

One of the interesting debates in Washington, DC, is, how do you encourage growth? Well, I’ll give you my position. I think when people have more money in their pocket to save, earn, or spend, the economy grows. I think when a small-business person has more money to invest, the economy grows.

We passed tax relief. As I said in my State of the Union the other night, the tax relief that we passed left \$880 billion in the hands of individuals and families and small businesses and entrepreneurs. And I believe that is why our economy is the most preeminent in the world.

And this—[*applause*]—and that tax relief is set to expire. And when it does, you’re going to get a tax increase. There’s—not only do I think it’s wrong to take money out of your pocket at this point in our economic history, I also believe that uncertainty in the Tax Code makes it difficult for people to make wise decisions about investment. And I meant what I said to the Congress: In order to make sure this expansion is not temporary, they need to make sure that tax relief is permanent.

You’ll hear them say, “Well, we need to raise taxes to balance the budget.” That’s not the way Washington works. They’ll raise taxes to increase spending. That’s the way it works. And so I think the best way to balance the budget is to have progrowth policies in place so these tax revenues remain strong, and be wise about how we spend your money. That’s hard in Washington. Everybody has got a great idea about how to spend your money. But when you’re running 3M Company or you’re running your family budget, you learn how to set priorities. And that’s what Congress must do.

I’m going to tell you something: If Congress does set its priorities—and we’ve got a few suggestions for them how to set the priorities—we can cut this deficit in half by 2009. The real issue on spending, though—and this is important, by the way; the current deficit is important, don’t get me wrong. But if you’re a younger person sitting out there, you need to worry about the long-term deficit caused by baby boomers like me fixing to retire. I don’t know if you know this or not, but I turn 62, retirement age, in 2008. That’s a convenient year for me to be in retirement. [*Laughter*]

And there’s a lot of us getting ready to retire. And when we retire, this baby boom generation retires, we’re going to put a big strain on Social Security and Medicare. Interestingly enough, my generation has been promised better benefits than the previous generation. And yet per worker, there’s fewer people paying into the system to support me. We got a problem.

You know, it’s really hard for me to realize we have a problem and travel around the country and look at younger workers paying payroll taxes into a system that I know is going bankrupt. It’s not right for Members of Congress, by the way, to travel around the country and talk—and look at workers paying into a system that’s going bankrupt and not tell the truth. We can fix this problem. This is a problem—we

don't have to cut benefits of younger workers. We need to slow the rate of benefits down.

Do you realize the benefits grow faster than the rate of inflation? Congress over here—and people say, “Vote for me; I’m going to make sure the benefits grow faster than the rate of inflation.” Listen, Social Security was meant to supplement income, retirement income, initially. And so what I’m telling you is, there’s a solution to be had. Unfortunately, the atmosphere in Washington appears that there will be no solution because there’s too much politics. And my call to members of both parties—and I mean this—is we need to set aside this needless politics in Washington, this zero-sum attitude, and fix mandatory spending so a younger generation of Americans can confidently contribute into a system that’s going to—[*applause*].

If we live in a global economy—which we do—with competition, it’s—the countries that are able to fix their entitlement programs will be the countries that remain competitive. Congress needs to remember that. When we fix this—and I’m confident we can, and I believe we will—when we reform the program, it will keep the United States of America competitive. Because if we don’t, the majority of tax revenues will go to—there will have to be massive tax increases to pay for the promises, or significant cuts throughout our Government.

To keep us competitive, we’ve got to make sure we keep markets open. I told you—I’m telling you something you already know—61 percent of your revenue is as a result of sales from the United States elsewhere, which says to me—listen, my theory is this: If you’re good at something, let’s make sure we can sell it all around the world. And so I believe in open markets. As a matter of fact, I know that in order to keep us competitive in the 21st century, that the United States of America should be doing everything we can to open markets and level the playing field.

We’ve signed a lot of free trade agreements, and at the same time we’ve done so, we’ve said to countries, “Listen, treat us the way we treat you.” That’s all we ask; level the playing field. There is no doubt in my mind, American farmers and entrepreneurs and business people and 3M employees can compete with anybody, anytime, anywhere, so long as the rules are fair.

In my speech, I talked about a health care system that takes care of the elderly and takes care of the poor. We’ll do that. But it needs to be a health care system, as well, in which there’s transparency in pricing, information technology in the health care field to help reduce costs, a doctor-patient relationship that is the center of the decisionmaking, a plan that encourages preventative medicine. People need to be incented to make right choices with their bodies, in what they eat and how they exercise.

Another aspect of making sure that medicine is affordable and available is—listen, there’s too many lawsuits. I said a startling statistic the other night: Do you realize there are 1,500 counties in America without an ob-gyn? Now, think about that. And the reason why is, a lot of good docs are getting run out of practice because of needless lawsuits. It’s one thing to make sure that there’s justice; it’s another thing to have a system that encourages junk lawsuits that are running up your cost of medicine and running good docs out of practice. Congress needs to pass medical liability reform now.

And speaking about legal reform, you talk to people that take risk, one of the things they tell you about is these lawsuits hamper strong investment. If we want to be competitive, we’ve got to have balance in our legal system. Congress has the chance to send a signal again—we did a pretty good job on class-action lawsuits, but now they got a chance to do something on asbestos. And there’s a bill going to be moving out of the Senate. It’s time to

send a clear message to investors and markets and employees that we've got to have a legal system, in regards to asbestos, that's fair to those who have actually been harmed and reasonable for those who need to pay.

I talked about energy the other day, and Tim mentioned it. I guess I shocked some people, being from Texas, to say we're addicted to oil, but we are, and it's a problem. It's a problem; it's a national security problem and an economic security problem. Touring here and seeing the great benefits of nanotechnology, I'm beginning to get a better sense of how nanotechnology plays into fuel cells, for example, and the capacity for us to have hydrogen automobiles. I know that technology will end up leading away from dependence on oil. I know it's going to happen. I'll tell you why I'm optimistic about it, is because the scientists there in Washington, those in the Energy Department, believe we're darn close to a couple of very important breakthroughs.

Before I get to them, I did talk about the need to use safe nuclear energy to power our plants. I mean, if you're worried about the environment, which I am, it seems like to make sense that we use nuclear power. It's renewable, and it's clean.

We're pretty close to some interesting breakthroughs on solar energy as well. I truly believe that with continued research and development, focusing on interesting technologies, that we'll have coal-fired plants that will be emitting zero emissions. And it's coming. And what I'm telling you is, is that technology is important for your jobs, but it's also important for the quality of life.

Automobiles—if we want to get rid of dependence on oil, we got to do something with automobiles. I mean, that's the place where we use a lot of oil. We got to change how we drive. We got to change how cars are powered. This administration has done some things on CAFE standards, but that recognizes that we're still dependent upon oil to manufacture our fuel. What I'm inter-

ested in doing is providing alternative choices for the consumers like ethanol or plug-in hybrid vehicles. We're close to some breakthroughs on battery technologies, that I'm sure some of you know about, to make these hybrid automobiles even better and more cost-effective for the American consumer.

I'm excited about ethanol. Now, we've been making ethanol out of corn, mainly. But now we got a chance, with breakthroughs in research and development, new technologies, to make ethanol out of switchgrass or wood products or weeds. And we're close. And I said the other night in the State of the Union, within 6 years, this kind of fuel ought to be competitive with gasoline.

Now, people say, "That's fine; how about the automobiles?" Well, I had an interesting experience. I went down to Brazil, and I saw President Lula down there. I don't know if you know this, but the vast majority of fuel to fuel the cars in Brazil is made from sugar. And guess who makes the cars that run on sugar? General Motors. So the technology is available for flex-fuel automobiles. As a matter of fact, I am told there's over 4 million flex-fuel automobiles operating in the United States today. And so the hope is and the belief is, is that with a breakthrough with these cellulosic technologies—big word for a history major—[laughter]—I don't want to try to spell it—[laughter]—the car industry has got the capacity to manufacture automobiles that can burn that stuff.

Now, people say, "Well, if you can get the technology and you got the cars, how come it takes until 2025 to reduce—significantly reduce dependence on the Middle Eastern oil?" Well, the answer is, we got a lot of automobiles, and it takes awhile for the fleet to turn over. Things just don't happen instantly when it comes to an automobile fleet.

And so—but what I'm telling you is, and what I'm telling the American people is, research is going to lead to an important

breakthrough here, when it comes to our energy. I'm confident that we'll be able to say to the American people when this research is complete, that the United States is on our way to no dependence on oil from the Middle East.

I want to talk about another important issue, and I've come to 3M to highlight this issue. And the truth of the matter is, in order to stay competitive, we have got to lead the world in research and development, and got to lead the world in having people, scientists and engineers, that are capable of helping this America stay on the cutting edge of technology. And 3M is a perfect place to come.

There's an economic reason why we need to do this. The economic reason why we got to stay on the leading edge of technology is to make sure that people's standard of living here in America goes up—that's what it is. And there's a direct correlation by being the most innovative country in the world and how our citizens live.

Secondly, the second practical application to make sure we've got young scientists and engineers coming up is that if we don't have people that have got the skill set to fill the jobs of the 21st century, because we're in a global world and a competitive world, they're going to go somewhere else. And so I want to talk about an initiative to make sure America remains competitive.

The first element is, is that for the Federal Government to continue its role—oh, by the way, when we went on the tour, so I asked, "How are you doing?" "Fine." "What do you do?" "This." "Where did you get your education?" We met engineers and chemists and physicists. I didn't meet any history majors. [Laughter] I met people who are incredibly capable, smart thinkers that are able to take their brainpower and come up with ways to make practical products that change Americans' lives. And so—and the Federal Government has a role in this, and our taxpayers have got to understand, a good use of your taxpayers'

money is to promote research and development—research into the physical sciences.

Again, I'd repeat to you that if we can remain the most competitive nation in the world, it will benefit the worker here in America. People have got to understand, when we talk about spending your taxpayers' money on research and development, there is a correlating benefit, particularly to your children. See, it takes awhile for some of the investments to—that are being made with Government dollars to come to market. I don't know if people realize this, but the Internet began as the Defense Department project to improve military communications. In other words, we were trying to figure out how to better communicate. There was research money spent, and as a result of this sound investment, the Internet came to be.

The Internet has changed us. It's changed the whole world. It's an amazing example of what a commitment to research dollars can mean. The iPod—I'm a bike guy, and I like to plug in music on my iPod when I'm riding along to, hopefully, help me forget how old I am. [Laughter] But it was built—when it was launched, it was built on years of Government-funded research and microdrive storage or electrochemistry or single compression—signal compression. See, the nanotechnology research that the Government is helping sponsor is going to change the way people live.

And so what I said to the Congress was, "Let's be wise with taxpayers' money. Let's stay on the leading edge of technology and change, and let's reaffirm our commitment to scientific innovation." I think we ought to double the Federal commitment to the most basic critical research programs in physical sciences over the next decade.

This year alone, we're proposing \$6 billion go to the National Science Foundation to fund research in physics and chemistry and material science and nanotechnology. We're proposing \$4 billion goes to the Energy Department's Office of Science to

build the world's most powerful civilian supercomputer. We're proposing \$535 million to the Commerce Department's National Institute of Standards and Technology to research electronics information technologies and advanced computers.

I wouldn't be proposing this if I didn't believe that there will be tangible benefits for the American people. We may not see them tomorrow, but you're children will see them. We're staying on the leading edge of technology for a reason. If America doesn't lead, if we try to kind of forget that we're in a competitive world, generations of Americans won't be able to realize the standard of living that we've been able to realize.

Secondly, I also realize that, by far, the vast majority of research and development is done at the private level by companies—3M, you're spending a lot of money on research and development. So the Government can help, but the truth of the matter is, two-thirds of all research and development spending in America comes from the private sector. And so the fundamental question is, what can the Government do, if anything, to encourage that money to continue to be invested? If it makes sense to develop new technologies and the private sector provides most of the money for that, is there anything we can do to encourage this kind of investment?

And the answer is, yes, there is. There's something called the research and development tax credit. Interestingly enough—obviously, if you think about tax credit, it says if you spend money on research and development, the Tax Code—it treats you generously, more generously than if you didn't. It says, go ahead and do it; there's an advantage for you to make this decision. The problem is, it expired. The research and development tax credit expires in 2005. And so the Congress is saying, "Well, why don't we just temporarily extend it?" You cannot run a business and plan to make long-term investments if the incentive program is only temporary.

Congress needs to understand that nations like China and India and Japan and Korea and Canada all offer tax incentives that are permanent. In other words, we live in a competitive world. We want to be the leader in this world. And therefore, in my judgment, in order—one important part of staying the leader, when it comes to innovation and research and technology, is for the Congress to make the tax credit on research and development permanent.

Third part of the competitiveness agenda is to make sure our kids learn math and science. It's one thing to research, have incentives for money, but if you don't have somebody in that lab, like those chemists I met, we're not going to be that good. And so I got some ideas for the Congress to consider. The first is to emphasize math and science early, and to make sure that the courses are rigorous enough that our children can compete globally.

We made a pretty good start on, by the way, high standards with the No Child Left Behind Act. I was talking to—it about the Governor. He said, "People get a little nervous when Government says, 'Measure.'" And he didn't say that; he's reflecting the opinion of others. As the Governor of Texas, I remember that attitude too. But here's my attitude: If you spend money, doesn't it make sense to determine whether or not the results are halfway decent? As a taxpayer, it seems like that's something you'd want to know. It's certainly—it's part of, I'm sure, how 3M succeeds and continues to compete. You set high standards, and then you measure.

Well, I think schools ought to do the same thing. I don't think we ought to tell you how to design your test. I don't think we ought to dictate curriculum, but I do know, in return for Federal money, it makes sense to say, "Can the child read, write, add, and subtract when he or she is supposed to?" And so we're measuring in return for Federal money. That's the whole thing behind No Child Left Behind.

When I was the Governor of Texas, schools that didn't measure thought they were doing pretty well until—that's a natural assumption for a parent, right? "I'm happy. They're paying attention to me." And things are going fine, and then the child gets out there and has to take remedial reading courses in college. And so you've got to measure. I remember the debate in Texas. They said, "It's racist to measure." I said, "Uh-uh, it's racist not to measure." Think about a system that just shuffles kids through.

So we're making good progress at the early grades, particularly in reading and math. Matter of fact, America is competitive in math in the early grades. How do we know? Because we test. We test. And by the way, we make the test results known locally, and we compare tests State to State, so people can figure out—old Pawlenty can figure out how he's doing against other States. [*Laughter*] It's a nice tool if you're a reformist, by the way. See, if you believe in reform, it gives you leverage on a system that tends to be status quo-oriented.

The other thing that we did in No Child Left Behind, which makes a lot of sense, is there's supplemental service money. That means extra money so that when we find a child lagging behind in reading, that family got extra money for extra tutoring. In other words, we said, let's diagnose the problem and solve it early, before it's too late.

Accountability does a further thing that is important. It kind of helps resolve curriculum disputes. You might remember the old debates—at least I certainly remember them—over which kind—how do you teach reading. And there was this kind of theory and that kind of theory. Well, when you measure, it kind of makes it pretty clear which works and what doesn't work. We need to have the same emphasis in math that we have in reading, and the reason why is, is that because when you test early, we do fine in math, and yet when our kids start heading into junior high and high

school, it's clear they can't compete in the world. And now is the time to do something about it.

Well, so what do you do? What do you do? Well, the first thing, you've got to make sure your teachers have the skills necessary to be able to teach math and science. And I think the most practical way to do that is to teach teachers how to teach Advanced Placement. If you believe in high standards and if you want your kids to compete, a proven system is the AP programs. And they work. And therefore, we're going to ask Congress to appropriate money so that we can have a full-scale effort to train 70,000 teachers in how to teach AP.

Another way to make sure that we have high standards in math and science is to take the same approach we took in reading, and that is intervention early, but apply that to math in the sixth, seventh, and eighth grade. In other words, have supplemental service money, extra money, tutorial money, money that could be used at the public school or private school or tutoring service to say, when we find a child that's lagging behind in math in the junior high schools, let's intervene. Let's not let them slip. Let's make sure that same high standard we've achieved in the fourth grade applies throughout the junior high level. So you got intervention in junior high, teachers able to send that—spend that—get that curriculum right in high school.

The third thing we need to do is what you do here at 3M. And I want to applaud those scientists who are here who have gone in the classroom and said, "This is a good deal. You're not going to believe how exciting it is to be a physicist or a mathematician or a chemist. Let me tell you the practical applications of what it means to be a scientist and tell you what a—how cool a job it is, how exciting it is." See, these kids need somebody to walk in to their classrooms and say, "Follow me; follow my example." And so we've got a plan to help 30,000 adjunct professors—that would be you—to be able to go into

the schools all across America and set a good example to excite kids about the potential.

One of the other things we're going to do that makes sense is to have a—what we call a national math panel. Again, we made great progress in reading, and one of the reasons why is that we've—there's a science to reading. I mean, it's not guesswork anymore. We've got a lot of really smart people, particularly out of NIH, that helped develop curriculum go-bys. We're not telling you what to use, but we are saying, "If you're interested in teaching every child to read, here are some things that are necessary to make it work." We want to do the same thing with the math curriculum so that every school district, if they so choose, has got a resource base in which to figure out what works.

Sometimes you have a good teacher sitting there, but they really don't understand what works when it teaches a child—how to teach a child math. And we believe we can figure it out. I believe we have figured it out, and now we'll make that available to school districts all around the country through the Governors and the States.

And so the initiative I just described is, America will remain competitive by being wise about how we encourage research and development but, most importantly, by making sure our kids have the skill sets for the jobs of the 21st century.

Now, in the meantime, there's another issue that I want to discuss right quick—two other quick issues, then you'll be liberated. [*Laughter*] One of them is, there are more high-tech jobs in America today than people available to fill them. And if that's—so what do we do about that? And I said—the reason it's important, and the American citizen has got to understand it's important, is if we don't do something about how to fill those high-tech jobs here, they'll go somewhere else where somebody can do the job. In other words, there are some who say, "We can't worry about competition. It doesn't matter; it's here. Don't

worry about it; do something about it. It's a real aspect of the world in which we live."

And so one way to deal with this problem, and probably the most effective way, is to recognize that there's a lot of bright engineers and chemists and physicists from other lands that are either educated here or received an education elsewhere but want to work here. And they come here under a program called H1B visas. And the problem is, is that Congress has limited the number of H1B visas that can come and apply for a job—a H1B visa holder can apply for a job at 3M. And I think it's a mistake not to encourage more really bright folks who can fill the jobs that are having trouble being filled here in America—to limit their number. And so I call upon Congress to be realistic and reasonable and raise that cap.

We'll educate our kids. That's the goal. Of course, we want every job that's ever generated in America filled by Americans, but that's not the reality today. In order for 3M to remain competitive, in order for this job base to remain strong, in order for us to be a leader in innovation, we got to be wise about letting kids come here who've got the skill sets needed to fill the jobs that help us remain the leader in the world.

And so what I'm telling you is, is that I'm an optimistic guy about America's future because I believe in our system, and I believe in the people. The government's role is to make sure that we're a flexible economy. Its role is to make sure that we apply our resources properly to make sure we're an innovative economy. And certainly, a very vital role at all levels of government is to make sure our children have the skill sets necessary to fill the jobs that will inevitably come in this changing world.

My belief is that we should not fear the future; we should shape it. America has a vital role to play as a leader. And the policies I just outlined will help us remain

the leader that I think most Americans want us to be.

I appreciate 3M's leadership. I appreciate you employing so many people. I appreciate you making this a good place for people to come to work. I could tell it just in the pride of the voices of the researchers I met. Thanks for making this an environment where innovation succeeds and people are able to realize their full human capacity.

God bless you all, and may God continue to bless our country.

NOTE: The President spoke at 11:50 a.m. at 3M Corporate Headquarters. In his remarks, he referred to Gov. Timothy J. Pawlenty of Minnesota, and his wife, Mary; Lt. Gov. Carol Molnau of Minnesota; George W. Buckley, chairman, president, and chief executive officer, 3M; and President Luiz Inacio Lula da Silva of Brazil. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

### Statement on Negotiation of a Free Trade Agreement With South Korea February 2, 2006

The United States and the Republic of Korea have a strong alliance and are bound together by common values and a deep desire to expand freedom, peace, and prosperity throughout Asia and the world. Today we seek to deepen the ties between our nations by negotiating a comprehensive U.S.-Republic of Korea Free Trade Agreement.

A free trade agreement with the Republic of Korea will provide important eco-

nomical, political, and strategic benefits to both countries and build on America's engagement in Asia. The Republic of Korea is our seventh largest trading partner and seventh largest export market, and this free trade agreement advances our commitment to opening markets and expanding opportunities for America's farmers, ranchers, workers, and businesses.

### Remarks in a Discussion on American Competitiveness in Rio Rancho, New Mexico February 3, 2006

*The President.* Thank you all. Thanks for the warm welcome. Thanks for the Mexican food last night, Pete. [Laughter] I hope you picked up the tab. [Laughter] Laura and I are thrilled to be here. This is going to be an interesting discussion. What you're watching—what you'll watch is a way to talk about how to put good policy in place, not only through my voice but through the voices of many who are living exactly the

strategy that we want to implement for the rest of the country.

So I first want to welcome my wife, Laura. We don't get to travel that much—

*The First Lady.* Together.

*The President.* Together. We both were raised in west Texas and occasionally slipped across the border there to go to New Mexico. And every time we did, we

were better for it. [Laughter] It's a great State.

Do you want to have a few words?

*The First Lady.* Well, I'm going to just speak and, as they say in the political business, step off the message a little bit. George is going to be talking today about what we can do to make sure our children are educated and our economy is competitive. But I also just want to remind everyone that earlier this week, he signed a proclamation to make February American Heart Month. And a lot of people are wearing their red tie or their red dress. I'm wearing my Red Dress pin today to remind the American people that heart disease is the number-one killer; it's the number-one killer among women in the United States.

A lot of women don't know that, and if they start to suffer the signs of a heart attack or the symptoms of a heart attack, they wait. They don't go to the emergency room like they might rush their husbands to the emergency room, but they don't go themselves as fast.

So I want to encourage Americans to remember that heart disease is the number-one killer, to talk to people about all the ways we can prevent heart disease through exercise, healthy eating, not smoking, seeing your doctor on a regular basis so you can find out if you have any early signs of heart disease.

The other thing that fits into the message that George is going to talk about is, we know that if our children have the chance to study more math and science, we'll have even more doctors, we can produce even more doctors, and many, many more medical breakthroughs.

So, remember that February is National Heart Month and take good care of your heart.

*The President.* Before we get started, I do want to recognize some folks. Obviously, Senator Domenici is here. I know you are very proud of his service in the United States Senate. What a good man he is. And

with him is Senator Bingaman, who is also doing a fine job.

What happened the other day was, I got a phone call from Domenici, and generally when someone of that—with that much power calls you, you say, "Yes, sir, Mr. Senator." [Laughter] And he said, "I want to come by, and I want to bring Jeff Bingaman with me and Senator Alexander." And I said, "Fine, come on over." And they come over the Oval Office and sit down and say, "Look, at your State of the Union, we want you to seriously consider announcing an agenda that we think is important to make this country competitive." And I said, "I'll consider it." One of the things you want to do when you're the President is kind of keep your cards close to your vest. [Laughter] I said, "I'll give that serious consideration, Senator."

But I knew prior to him coming in that he had looked at the same report I had seen, which is called the Augustine report. Craig Barrett, who I'm going to talk about here in a second, was on that committee. Chuck Vest—I don't know if Chuck is with us or not. We had dinner with Chuck last night, as well as Augustine—Norm Augustine, himself. But they're a group of distinguished citizens and scholars and businesspeople who started looking out beyond the immediate and asking the question, what does America need to do to remain the preeminent economy in the world so our people can have a good life? And they made some suggestions. And Jeff and Pete looked at it, fine-tuned it, brought me some ideas. And at the State of the Union, I talked about how to keep this country strong.

And want to give credit to the Senators. I also want to give credit to the Senators after they get the deal done too, see. [Laughter] And so I want to thank both Senators for being here.

I also want to thank the Congressman from this district, Tom Udall. Thank you, Mr. Congressman, for joining us. Proud you're here. Two other Congresspeople—

Heather Wilson—thank you for coming, Heather; appreciate you and Steve Pearce from eastern New Mexico. Is it Hobbs? Yes, Hobbs, that's right. [Laughter] Flying Eagles—that's the name of the basketball team.

I do want to thank the mayor, Jim Owen. Mr. Mayor, thank you for being here. I appreciate you coming. You're kind to take time out of your day.

Before I talk about the Intel family, I do want to recognize the vice president of the Navajo Nation, and his wife, Virginia—and that would be Frank Dayish. Frank is here. Good to see you again, Frank. The reason I want to bring up Frank and Virginia is that their daughter, Staff Sergeant Felissa Dayish, is with us. She has been to Iraq twice. Thank you for serving. God bless. I remember the pride that Frank had when he described his daughter's service to me. And I know you're doubly proud, Frank. Thanks for being here; proud you're here.

And finally, the Governor of the great State of New Mexico has joined us, Governor Bill Richardson. Governor, thank you for being here. Good to see you. I appreciate you coming. I know you're proud of the Intel facility and the Intel family, as you should be.

One of the things we're going to talk about is the importance of research and development and technology. And the people here in this part of the world understand that when you have a research and development facility that promotes modern technology, it improves the quality of the life of the community in which the facility exists. And that has been, really, Craig Barrett's credo as the CEO of this company. He wants to provide a product that people want to buy, obviously; otherwise, you're not going to be in business. [Laughter]

But he also understands there's something called corporate responsibility. It's in his interest that there be corporate responsibility in Intel. In other words, Intel can

only be strong if it has a workforce that's capable of making sure this company is competitive in a global economy. And so I really want to say thanks to Craig and all the employees here for doing the following things—besides making a good product and providing jobs—to provide people from this company to teach in local schools.

And if corporate CEO is paying attention to this little seminar, I strongly urge you to follow the Intel example of making employees available to make sure math and science becomes an important part of the curriculum of the local schools. They provide internships for young students here to encourage them to become involved with math and science. They help train teachers. And we're going to talk a little bit about teacher training. And then they provide scholarships.

And so for those of you who work here, thanks for being such—so generous with your knowledge and your talent. And Craig, thanks for having us. It's not easy to host the President here. It kind of disrupts—[laughter]—disrupt—yes, I know. [Laughter]

A couple of points I want to make—and the reason why this subject is relevant, first, we've got a strong economy. Today you're going to see that in January, we added 193,000 new jobs, 81,000 new jobs—extra jobs were added as a result of upgrading the November and December numbers. And we got steady growth. And that's important. We want our people working. We want people to be able to realize opportunity and hope. And in order to do that, you got to have a growing economy, obviously.

And we've overcome a lot. I really ascribe that to, mainly, the entrepreneurial spirit of America is strong; the small-business sector is strong. I do happen to think good tax policy helped. I think keeping taxes low is an important way to make sure this economy continues to grow.

But what's interesting about the numbers is that beneath that, there's a certain amount of uncertainty amongst some in America; that, you know, we've got a lot of competition, and people begin to see an emerging China and India, and that makes people uncertain. It creates certain anxiety when they hear the stories about India and China beginning to grow robustly, or jobs going to India and China, or India and China consuming a lot of natural resources.

Secondly, there's a lot of turnover in the job market. People are changing jobs, and that creates uncertainty. And during times of uncertainty, we're—we get faced with certain choices. And there's a tendency throughout our history, our economic history and foreign policy history, to withdraw. Times of uncertainty sometimes encourage folks to say, "Well, why do we need to compete? Why don't we just come within ourselves? Why don't we protect ourselves off from the world? Why do we need to be trying to spread freedom when the world is a dangerous place? Why don't we just come home?"

And I strongly reject that notion, and I want to explain to you why. First of all, with an enemy that lurks, if we were to withdraw, it would only embolden the enemy and make this country less secure. If we were to withdraw from the world, it would be a missed opportunity to lay the foundation of peace for generations to come by spreading liberty and freedom. See, part of my foreign policy is this: I believe that there is an Almighty, and I believe that the Almighty's gift to everybody on the face of the Earth, regardless of where they live, regardless of their religion, is freedom. And I believe deep in everybody's soul is the deep desire to live in freedom. And I believe that this country, if it were to retreat, would miss an opportunity to help others realize their dream. And I also know that history has proven that free societies yield the peace that we all want.

Secondly, when it comes to competition, the world is going to be competitive whether we're in the mix or not. For example, this competitive world is going to demand a job skill set that is—that emphasizes math and science, which we'll talk about here in a second. And if our kids don't have the talents necessary to compete, those jobs won't go away; they'll just go to another country.

I mean, we're in a global competition. Here's my attitude: With the right policy, we can compete with anybody, anytime, anywhere. This has been the history of America, and it's going to be the future of America. We should not fear the future because we intend to shape it.

The American—this American economy leads the world, and we're going to continue to lead it. And here's how: good fiscal policy out of Washington, DC, making sure that this economy is flexible. In other words, when you say that, that means there's not a lot of rules and regulations that prohibit capital moving freely and people making investment.

We've got to have an energy policy that gets us off this dependence on Middle Eastern oil. I spent a lot of time on that before; I'm going to spend a little more time on it next week. But I'm going to tell you something: With research and development and technology, we can change the fuels we put in our cars, and we can become less dependent on unstable sources of energy overseas. And if we intend to be the leader of the world, we've got to do that. It's a goal that can be achieved, and it's a goal that's necessary.

I've talked about health care—and will continue—in the past. I want to talk about trade real quick, and then we're going to talk about the education initiative. Our panelists are beginning to wonder what, you know—[laughter]. It's called a filibuster. [Laughter] First, let us talk about trade. The first sign that the country is becoming protectionist is when we refuse to ratify

trade agreements. That's a sign. It's an indication that the elected officials are beginning to get worried about the capacity of this country to compete. It's hard to get trade agreements through Congress, and I'm worried that that is an indication that we're losing our confidence.

But if you're working at Intel, you better be for open trade, because 80 percent of the products this company makes are sold overseas. Yesterday we were at 3M in Minnesota. It's a great United States company, very much like Intel. Sixty percent of the products they manufacture are overseas—or get sold overseas. We're 5 percent of the world's population, which means the rest of the 95 percent could be, and should be, customers to United States products, either grown or manufactured.

Now, the role of the government, it seems like to me, is to not only open up markets for our products but, at the same time, say to our competitors and/or other markets, "Treat us the way we treat you." That's all we ask. In other words, level the playing field. It is very important if this country is to remain competitive that we do not lose our nerve, that we open up markets for our products, that we level the playing field—because nobody can outcompete us when the rules are fair.

Now, let me talk about education. That's kind of the—that's part of the cornerstone of making us competitive, shaping our destiny, refusing to lose our great desire to continue to lead. But perhaps the most important thing of all is to make sure that we lead the world in innovation and technological development and make sure we have a workforce that has the skill sets necessary to do so. And that's really the heart of the American Competitive Initiative. And that's why we're here at Intel.

Again, I want to repeat to you: All the people who understand the connection between technology and jobs ought to be the people in this part of the world. I remember when this plant didn't exist—and neither did much of the neighborhood around

it. I mean, one of the most exciting things that's happened to the Albuquerque area is the arrival of Intel, not only because it's provided good jobs, but the spinoff of those jobs, the small businesses that have occurred as a result of—when this amazing center of brilliance came here.

I want to talk about three things, and then we'll start visiting. Here's some things, practical things the Government can do. First of all, the Government can't do everything. The Government is a partner. For those of you who think the Government can solve all problems, this is not the way it works. Most problems are solved locally. First—one thing the Government can do is to spend money on research. In other words, we can be a partner with enterprise.

Do you realize that the Internet came to be as a result of Federal Government research into basic sciences? In other words, research yields practical applications that improve people's lives, is what I'm trying to say. And so I proposed to Congress that we double basic research programs in physical sciences over the next 10 years.

They tell me that by doing so, we'll be the leader in nanotechnology research. I'm just beginning to understand what that means. [Laughter] But the smart people tell you, if you're the leader in nanotechnology research, you'll be the leader in quality jobs and quality of life.

The second thing that the Congress needs to do is to encourage private investment in research and development. As a matter of fact, this makes sense. Most of the research done in the United States is done through the private sector. About two-thirds of it is done through private sector research; 15,000 companies take advantage of what's called the research and development tax credit. It's part of our Tax Code. It says, if you spend money on research, you'll be rewarded through the Tax Code.

Seems to make sense, if we're trying to encourage people to spend private sector dollars. The problem is, is that the research

and development tax credit is only a temporary measure. And so you're a CEO of a major company like Intel or a CEO of a small company that's thinking about spending research dollars, and you're uncertain as to whether or not that research and development tax credit will be available.

People don't plan big amounts of money to invest on a short-term basis. It's important to provide stability in the Tax Code so that the planners and thinkers and investors have confidence that if they make an investment 5 years from now, the reason they made the investment in the first place—besides trying to improve product lines—the reason they made the tax—the reason they made the investment because of tax incentive will still exist. And so Congress needs to make the research and development tax credit a permanent part of our Tax Code to encourage more private sector research to keep America on the leading edge of innovation.

Finally—you'll be happy to hear—[*laugh-ter*]—how do we make sure the folks who are going to be running this economy, our workers and entrepreneurs, have the skill set necessary to do so? How do we encourage people to stay focused on math and science? And that's really an important subject. I—here's what the Government can and should do.

First of all, we passed the No Child Left Behind Act. It's a great piece of legislation. It basically says, let's raise standards and measure. I can remember people said, "Why would you want the Government to cause people to measure?" I said, "Because we're spending a lot of money." If you're running a business and you're spending money, you want to measure. You want to look at results. People in America want to know, you see? And if a child can't read at the third grade, we want to know why. And we also want to be able to analyze curriculum to determine if that's one of the reasons why. And equally importantly,

by diagnosing, you're able to say, this child deserves extra help.

I strongly believe all government is locally controlled. However, I believe that it's the responsibility of government that spends money to say to those who designed the curriculum, "Please, show us whether or not you're achieving results; and if not, correct what you're doing, and solve problems early, before they're too late." We need to send that same spirit into—that we've got in reading in the No Child Left Behind Act into math.

Now, the positive news is that we're doing fine, relative to the rest of the world, in math in the early grades. And you know why we know? We measure. I can remember when I was Governor of Texas and we didn't measure, people would say, "Gosh, my schools are doing great"—until the kids graduated from school, and they couldn't read very well and then had to be re-educated at college. Measuring lets you know. Measuring lets you compare. And measuring lets us know how we're doing with the rest of the world. If we're in a competitive world, we want to make sure our students can compete.

And we're doing fine in the fourth grade. We're doing lousy in junior high. Something happens between elementary school, where our teachers are able to get the kids interested in math and they test well, to junior high. And that's where we ought to emphasize focus. In the early—in the initiative—in the reading initiative in No Child Left Behind, we say that if you're not up to grade level, there's extra money for you. It's called supplemental services. There's extra money to correct problems early, before they're too late.

We're now going to ask Congress to apply that same supplemental service to junior high kids in math. If the kids aren't testing well in math in junior high, in other words, if they're part of the falloff, let's intervene. Let's make sure there's tutorials

available, after-school mathematics available, for these children so that they can remain competitive.

And they'll go to high school. So how can we help in high school? Well, one thing that we've learned is that our teachers have got to have the skill set necessary to teach the skills in math and science. And one effective program—and Laura and I are fixing to go to Dallas after this to herald this program—is an Advanced Placement program. And the Federal Government can be a partner in helping teachers train to be AP teachers. Advanced Placement works. Advanced Placement raises standards. Advanced Placement gives teachers the tools to teach kids to take this Advanced Placement test, which is a measurement. It's a go-by to determine how competitive our workforce can be in the 21st century.

And finally, we want to get 30,000 adjunct professors into classrooms. That's a fancy word for saying, we want engineers and chemists and physicists in places like Intel, or retired professionals, to go in the classroom and excite students about the possibility of math and science. That's what we need. We need role models. We need people walking into a classroom full of youngsters and say, "You're not going to believe how cool this profession is. You're not going to believe the horizons that will be available to you." And one of the things Craig has encouraged Intel to do is do just that.

And so here's an initiative that makes sense. Here's a chance for Republicans and Democrats to put aside all the foolishness that's going on in Washington and come together and get something done for the future of this country.

And I want to thank you all for giving me a chance to lay out the strategy. And now I want to turn this over to Craig Barrett. He's the CEO of this company. He himself—he probably won't tell you this, but I will—is an engineer, highly qualified engineer. I asked him last night where he

spent most of his youth. He said, "On the Stanford campus." And here he is now the CEO of one of the great companies. He was able to take his degree—for those of you who are interested in whether or not a degree makes sense—he took his engineering degree, and now he runs one of the world's preeminent companies. And he's sitting right here.

[At this point, Craig R. Barrett, chairman of the board, Intel Corp., made brief remarks.]

*The President.* I appreciate that. One of the good things about being the President is you tend to draw cameras. [Laughter] Good or bad, depending on your perspective. I hope people listening hear what Craig has just said, those particularly in CEO America, corporate America, that there is such a thing as corporate responsibility. He said, "I take this responsibility serious." It's in your interest, by the way, to help train a teacher. It's in your interest to provide a scholarship. It's in your interest to help a young group of Americans learn math and science because, after all, if you intend to stay in business, you better have a workforce that's capable.

And so thanks for setting such a good example. Thanks for joining us.

We're also joined today by Tom Hunter. He's the president of Sandia. The last time I was with him, we were standing out kind of in a desert area, and he fired up one of these new solar research beams. [Laughter] All I can tell you is I was glad I wasn't at the other end of the beam. [Laughter] But they're doing some good stuff when it comes to research and development here at Sandia.

Welcome. Thanks for being here. What's on your mind?

[Thomas Hunter, president, Sandia Corp., made brief remarks.]

*The President.* Tom, let me ask you something. I think it's very important for people listening to understand when you

say nanotechnology, that it's got an application to their life. In other words, when the Federal Government says, "We're going to spend money on research," that the taxpayers got to understand that there's something—their life is going to improve. And the question is, how?

The other day, I was talking about how research is—I mean, how technology has changed our society, and I ended with the example: I remember driving across Texas playing the license plate game, and now they're driving across Texas listening—watching a DVD. And it all happened in 20 years.

But when you talk about supercomputing will have an application that could help somebody, or nanotechnology, share an example with people.

[*Mr. Hunter made further remarks.*]

*The President.* Yesterday we saw nanotechnology being applied to a fuel membrane that will go into a hydrogen-powered automobile at some point in time, which means we'll be using hydrogen as opposed to extract from oil, the byproduct of which will be water. And it's coming. And technology and research will help us achieve that. We want to be the ones with the hydrogen breakthrough. It means there will be jobs here for Americans that will improve your quality of life as well.

Okay, thanks. Good job.

Matt, welcome. Tell everybody what you do.

[*Matthias W. Pleil, faculty member, Albuquerque Technical Vocational Institute (TVI), made brief remarks.*]

*The President.* Wait, let me stop you a minute. NSF is the National Science Foundation. Don't speak in initials, because we're—[*laughter*].

*Mr. Pleil.* I'm originally from industry, and everything was an acronym. [*Laughter*]

*The President.* That's right. Imagine what it would be like if you were originally from government.

*Mr. Pleil.* They have longer acronyms. [*Laughter*]

*The President.* National Science Foundation. And you're doing what?

*Mr. Pleil.* I'm working creating educational materials for college students and also for college and high school teachers so that we can teach the future technologists about microsystems, which a lot of people don't know much about.

*The President.* Right. And microsystems are what?

*Mr. Pleil.* Well, microsystems are here and now, and they include the circuitry that Intel produces, but also micromachines, as well. And we're collaborating with Sandia National Labs. They're on the cutting edge of making surface micromachines, it's called. And I've been fortunate enough to work there part-time, learn from Sandia, and help them create educational materials that they use in their University Alliance program.

And we've also been able to train teachers at several workshops. So we're creating a group of folks now that are understanding microsystems and, hopefully, energizing the kids in school.

*The President.* And is there an interest—I mean, I presume with Intel being here, it serves as a magnet for kids to say, "Gosh, that's a good place to work. I need the skill set necessary, and TVI provides that skill set."

*Mr. Pleil.* Absolutely, Intel supported TVI over the years to create our semiconductor manufacturing technology program. We have a teaching clean room that was sponsored primarily by Intel, and many of our students go and work for Intel. In fact, one of my students is actually working in the lab, probably today.

*The President.* We hope so. [*Laughter*]

*Mr. Pleil.* He'd better be.

*The President.* It's interesting, isn't it—I want to kind of take off on what Matt was talking about. One of the really great assets we have in America is the community college or technical school system. And

the reason why is, is that these schools tend to be market-driven. And by that I mean the curriculum adjusts to the needs of the local folks. And what he just said was, is that here's a job provider, here's an education institute; they collaborated to design a curriculum that actually means something to the graduate.

I'm not saying my history degree didn't mean anything. [Laughter] It did; it meant a lot. But nevertheless, if you're interested in work and you're getting out of school and you want to be trained in a job which actually exists, this collaboration is a vital part. And I urge communities all across the country to utilize their community college or their technical vocational schools to work with the local industry to design curriculum that matters.

And so one of the ways to make sure that we're competitive in the 21st century is to adequately utilize our community college system and make sure that they are incented to constantly adjust by working with the job providers.

And so thanks for bringing that up. It's an interesting idea, and I bet a lot of people in Albuquerque didn't even know this is going on. And for people who are looking to find work, you ought to look at the TVI as an opportunity. And the other thing people ought to do—you may be 35 years old or so; there's money to help you upgrade your job skills. And what education does, it enables you to become a more productive worker. And as your ability to be a more productive worker increases, so do your wages. Education adds—it makes it more likely you're going to have a higher wage. And that's what Matt is doing—I think that's what you just said. [Laughter]

Mr. Pleil. Yes, absolutely. Thank you.

The President. Good job. Now, we've got an interesting person here, Nicole Lopez. Nicole, welcome. Tell people your story, if you don't mind.

[Nicole Lopez, senior, Rio Rancho High School, made brief remarks.]

The President. You have learned to communicate. [Laughter] That was fantastic. So what are your dreams?

Ms. Lopez. I plan on going to the University of New Mexico and majoring in civil engineering.

The President. Fantastic. This isn't exactly on the subject, but it is kind of—Laura is involved, leading what's called Helping America's Youth. The whole spirit of the program is a mentor can make a difference in a person's life; that we can change America one heart at a time. A person can, by just taking time out of his or her life and surrounding somebody with love and compassion, can make a significant contribution to the country.

And so you just described the whole spirit of Helping America's Youth. You also just described the true strength of the country. Our country's strength is not our military or the size of our wallet; it's the fact that there are millions of people that have got great heart who want to improve somebody else's life, love a neighbor like they'd like to be loved themselves.

Nicole, so you're interested in sciences, obviously.

Ms. Lopez. Yes, I have found that math and science have become my niche. And it's my passion, and I want to continue it.

The President. Awesome. You know, a lot of people probably think math and science isn't meant for me—it kind of seems a little hard, algebra. I can understand that, frankly, but—[laughter]. I'm looking for a mentor, by the way. [Laughter] Both in math and English. [Laughter] But I hope people listening hear Nicole's story that, you know, take a look at math and science. I'm sure there's some—kind of the “nerd patrol.” [Laughter] It's not; it's the future. That's what Nicole just said; she said the future is engineering and physics and chemistry and math.

Chris Baca—really good job, by the way. Thanks for coming. Appreciate it.

Chris Baca is with us. Chris, why don't you give everybody your job description.

[Chris Baca, president and chief executive officer, Youth Development, Inc., made brief remarks.]

*The President.* Clubhouses, go ahead and explain what that is.

*Mr. Baca.* Clubhouses are—Intel has provided both mentors and equipment and actually a design for a clubhouse that involves using state of the art technology.

*The President.* You mean there's a physical plant that people go to where there's the latest technology?

*Mr. Baca.* Exactly it. And that's located right in a neighborhood where you won't—you wouldn't expect it to be.

*The President.* And you run the clubhouse?

*Mr. Baca.* Yes, sir. My program runs the clubhouse.

*The President.* I mean, the program. Good.

*Mr. Baca.* And so the kids can walk from—after school, we get these little kids dropping in. They don't even go home. They stop by. We help them do their homework, and then they can play.

[Mr. Baca made further remarks.]

*The President.* Great. Thanks, Chris. Chris just laid out the strategy, which is government, corporate, community involvement, all aiming at making sure that we save the lives of our children, and not only saves their lives but give them the skills necessary to be productive leaders into the 21st century.

You're right; old guys like us, we'd better be—count on the next generation to—[laughter]—now we got to make sure they got the skills. Finally, we want to make sure that we're in entrepreneurial heaven, and by that I mean that if you've got the instinct and the drive to start your own business, that you'll be comfortable in doing so. Government can't guarantee your product is successful. We can guarantee

you good legal policy, good tax policy, good regulator policy, and then go for it.

And one of the things that I notice about our country when I travel the world is we really are entrepreneurial heaven. We got people from all walks of life saying, "I want to realize my dream." One of them is Justin Sanchez.

Welcome, Justin. Let her rip.

[Justin Sanchez, director of Semiconductor Operations, Advent Solar, Inc., made brief remarks.]

*The President.* I think it's going to happen. I think what you're talking about is that one of these days our homes are going to be little sources of power, and to the extent that we have excess power, we'll feed it back into the grid.

*Mr. Sanchez.* That's right; that's absolutely correct.

*The President.* How far away are we from that, in terms of your thinking?

*Mr. Sanchez.* You know, solar is a technology that the time has come, and I think with some of the more recent innovations and some of the things that we're doing now, in the next 5 to 10 years, you could see that happen.

*The President.* One reason why it makes sense for the taxpayers to have research and development into solar energy, which we're doing through the Energy Department in collaboration with Sandia Labs, is because he's just describing a product that's going to come as a result of the research money spent. And that is, it's conceivable that you'll have a little unit on top of your house that will power your own house, and that to the extent that you don't use the power generated from the unit, you actually sell it back to the grid, so you become a mini powerplant.

*Mr. Sanchez.* Absolutely. A million mini powerplants.

*The President.* And what's the average age of your team, would you say?

*Mr. Sanchez.* Average age of the team? Well, that's a good question. Probably about thirty.

*The President.* Management team. Thirty?

*Mr. Sanchez.* Forty.

*The President.* Forty? Old guys.

*Mr. Sanchez.* Of the management team, or the team?

*The President.* Management team.

*Mr. Sanchez.* Management team, it's probably closer to 50.

*The President.* Really?

*Mr. Sanchez.* Yes.

*The President.* So you're bringing down the average.

*Mr. Sanchez.* Bringing down the average. [Laughter]

*The President.* We want Justin Sanchez's of the country to dream big dreams and to think big. Look at the product they're thinking about. I mean, this is a big idea. And there's people willing to risk capital on the idea, and you're willing to risk time in it.

*Mr. Sanchez.* Absolutely.

*The President.* And it's going to happen, isn't it?

*Mr. Sanchez.* It will happen.

*The President.* Yes, and America will be better off for it. This is a good way to end, for our people to understand there's a direct connection between research and development, technology, and quality of life. This country has a chance—in other words, it needs to make a choice: Are we going to lead, or are we going to fear the future? I hope after this discussion, people sitting around here and listening ought to realize we ought not to fear the future but shape the future and continue to be the leader. And by leading, our people will realize a more peaceful world and a more prosperous world and a chance to realize dreams. And that's what America has been all about in the past and it should be about in the future.

Listen, thank you all for the panel. It's been a great discussion. God bless.

NOTE: The President spoke at 9:10 a.m. at Intel New Mexico. In his remarks, he referred to Charles M. Vest, president, Massachusetts Institute of Technology; Norman R. Augustine, chair, National Academies' Committee on Prospering in the Global Economy of the 21st Century; and Mayor Jim Owen of Rio Rancho, NM.

## Remarks Following a Visit to the School of Science and Engineering in Dallas, Texas

February 3, 2006

Let me say a few things, and then we want to get our picture with you, if that's all right. First of all, it's such an honor to be here at this school. Thank you all for coming. Every good school requires a couple of things: one, a good principal—thank you for doing that—and great teachers and good support. Mr. Superintendent, thanks for being here.

Laura and I are here because we believe it's important to spread AP classes all around the country. This is a unique place.

The students here are really impressive people. They have decided to focus on the sciences and math and engineering. And this school helps lift their sights; and one way it does so is to encourage them to take AP.

We want more AP students because we want more engineers and scientists that are able to compete with other students around the world. And so one thing the Government can do is help train 70,000 teachers

all around the country so that they can teach students Advanced Placement.

We also want to encourage scientists and chemists and physicists to come into the classrooms all around the country to excite students about the possibilities of science and engineering. And the reason why is, in order for America to be a competitive nation in the years to come, we have got to have a workforce that is strong in engineering and science and physics. You know, some would hope that the competition around the world will go away; it's not going to. And so we have a choice to make: Do we want to retreat, become protectionist, or do we want to seize the moment and shape our future?

And so the American Competitiveness Initiative I've outlined says that America will continue to lead. We'll shape our fu-

ture, and we'll make sure our kids are well-versed in science and math and engineering.

Again, I want to thank you all for letting us come to your school. It's a fantastic school. It really does brighten my hopes about the future of the country to see you all and see your enthusiasm for the subjects and to listen to your very articulate explanations of the different courses you're studying. Thanks a lot. Appreciate it.

NOTE: The President spoke at 2:13 p.m. at Yvonne A. Ewell Townview Magnet Center. In his remarks, he referred to Richard White, principal, the School of Science and Engineering; and Michael Hinojosa, general superintendent, Dallas Independent School District.

## The President's Radio Address *February 4, 2006*

Good morning. This week in the State of the Union Address, I set forth my American Competitiveness Initiative. This plan will help our Nation to compete with confidence, raise the standard of living for our families, and generate new jobs for our citizens.

Generations of risk takers, inventors, and visionaries have made America the world's most prosperous and innovative nation. Just 25 years ago, most Americans used typewriters instead of computers, rotary phones instead of cell phones, and bank tellers instead of ATMs. Today, America is at the doorstep of even more technological advances. But we cannot afford to be complacent. We're seeing the rise of new competitors like China and India, who are making great strides in technology. In response, some people want to wall off our economy from the world. That is called protectionism. The American people should not

fear our economic future because we intend to shape our economic future.

To keep America the world's most competitive and innovative nation, we must continue to lead the world in human talent and creativity. My American Competitiveness Initiative will encourage innovation throughout our economy and give American children a firm grounding in math and science.

This initiative has three key elements. The first element is to double the Federal commitment to the most critical basic research programs in the physical sciences over the next decade. Most of the technological advances we enjoy today are the fruits of research investments made years ago, and many of these advances benefited from Government support. The increased

funding I have proposed will support America's creative minds as they explore promising areas such as nanotechnology, supercomputing, and alternative energy sources. These investments will lead to new inventions that offer better choices for consumers and a better life for our citizens.

The second element of this new initiative is to encourage bolder private sector investment in technology, because the private sector remains America's greatest engine of innovation. The research and development tax credit gives businesses an incentive to invest in projects that could lead to new discoveries. Congress allowed this tax credit to expire at the end of 2005, and the House and Senate are now considering another temporary extension. But a temporary extension does not allow our innovators to plan and invest with certainty. Other countries offer permanent tax incentives for research and development. To keep America the world's leader in technology and innovation, Congress needs to make the tax credit for research and development permanent.

The third element of this initiative is to make sure our children learn the skills they will need to keep America the world's most innovative country. Math and science are critical to many of our country's fastest-growing industries, so we must encourage our children to take more math and science

classes and make sure those classes are rigorous enough to compete with other nations. I'm proposing that we train 70,000 high school teachers to lead Advanced Placement courses in math and science, bring 30,000 math and science professionals to teach in classrooms, and give early help to students who struggle with math so they have a better chance at good, high-wage jobs. If we ensure that America's children succeed in life, they will ensure that America succeeds in the world.

The American Competitiveness Initiative will help our Nation remain the world's economic leader. By investing in research and development, unleashing the innovative spirit of America's entrepreneurs, and making sure that our economy has workers highly skilled in math and science, we will lay the foundation for lasting economic prosperity.

Thank you for listening.

NOTE: The address was recorded at 10:20 a.m. on February 3 at the Marriott Hotel Albuquerque in Albuquerque, NM, for broadcast at 10:06 a.m. on February 4. The transcript was made available by the Office of the Press Secretary on February 3 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Statement on the International Atomic Energy Agency Board of Governors Vote To Report Iran to the United Nations Security Council *February 4, 2006*

Today in Vienna, the International Atomic Energy Agency Board of Governors voted to report Iran to the United Nations Security Council. This important step sends a clear message to the regime in Iran that the world will not permit the Iranian regime to gain nuclear weapons.

The Security Council will now address the IAEA Board's finding of "Iran's many failures and breaches of its obligations to comply" with its Nuclear Nonproliferation Treaty Safeguards Agreement. We expect the Security Council to add its weight to

the IAEA Board's calls for the Iranian regime to return to the Paris Agreement, suspending all enrichment and reprocessing activity; cooperate fully with the IAEA; and return to negotiations with the EU-3 of Great Britain, France, and Germany. Those steps are necessary for the regime to begin to restore any confidence that it is not seeking nuclear weapons under the cover of a civilian program.

Today's vote by the IAEA Board is not the end of diplomacy or the IAEA's role. Instead, it is the beginning of an intensified diplomatic effort to prevent the Iranian regime from developing nuclear weapons. We will continue working with our international partners to achieve that common objective. The path chosen by Iran's new leaders—threats, concealment, and breaking international agreements and IAEA seals—will not succeed and will not be tolerated by

the international community. The regime's continued defiance only further isolates Iran from the rest of the world and undermines the Iranian people's aspirations for a better life.

I end with a message to the Iranian people. The action today by the IAEA Board of Governors is not about denying the Iranian people the benefits of civilian nuclear power. The EU-3 and Russia, with the support of the United States, have made the Iranian regime offers that would enable Iran to have a civil nuclear energy program. The international community's sole purpose in this vote is to prevent the acquisition of nuclear weapons by the regime. Iran's true interests lie in working with the international community to enjoy the benefits of peaceful nuclear energy, not in isolating Iran by continuing to develop the capability to build nuclear weapons.

## Letter to Congressional Leaders Transmitting a Report on Digital Computer Exports *February 3, 2006*

Dear \_\_\_\_\_ :

In accordance with the provisions of section 1211(d) of the National Defense Authorization Act for Fiscal Year 1998 (Public Law 105-85), I hereby notify you of my decision to establish a new level for the notification procedure for digital computers set forth in section 1211(a) of Public Law 105-85. The new level will be 0.75 WT (Weighted TeraFLOPS). In accordance with the provisions of section 1211(e), I hereby notify you of my decision to remove Bulgaria from the list of countries covered under section 1211(b). The attached report provides the rationale supporting these decisions and fulfills the requirements of Public Law 105-85, sections 1211(d) and (e).

I have made these changes based on the recommendation of the Departments of State, Defense, Commerce, and Energy.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to John W. Warner, chairman, Senate Committee on Armed Services; Richard C. Shelby, chairman, Senate Committee on Banking, Housing, and Urban Affairs; Duncan L. Hunter, chairman, House Committee on Armed Services; and Henry J. Hyde, chairman, House Committee on International Relations. This letter was released by the Office of the Press Secretary on February 6.

## Remarks at a Swearing-In Ceremony for Ben S. Bernanke as Chairman of the Federal Reserve February 6, 2006

Good morning. Thank you for the warm welcome here at the Federal Reserve. The Fed is one of our Government's most vital institutions. And today I congratulate a fine man and a distinguished public servant, Dr. Ben Bernanke, on becoming the 14th Chairman of the Federal Reserve.

It's good to be with Anna, Ben's wife, Alyssa and Joel, his sister Sharon, and the other members of the Bernanke family. Welcome. Thanks for being here. You probably didn't think your brother was going to amount to much. *[Laughter]*

I'm honored—members of my Cabinet who are here, Secretary Carlos Gutierrez, Deputy Secretary Bob Kimmitt. Members of Congress—Congressman Oxley, Congressman Frank—thank you all for coming. It's awfully generous of you both to be here. I appreciate Roger Ferguson, the Vice Chairman, other members of the Board of Governors; thank you for being here as well. Former Chairman Paul Volcker, thanks for coming today, sir. I've got something to say about the other former Chairman who is here, in a minute. *[Laughter]*

Since its creation in 1913, the Federal Reserve has helped bring stability and growth to our Nation's economy. Around the world, the Fed is a symbol of integrity and reliability. Its decisions set our Nation's monetary policy, ensure a sound banking system, and help contain the risks that can arrive in our financial markets. The Fed's actions touch the lives of all Americans, and the Chairman of the Federal Reserve must be a leader of unquestionable credentials, sound judgment, and impeccable character. Ben Bernanke meets those high standards, and he will be an outstanding Chairman of the Federal Reserve.

As Chairman, Ben follows in the footsteps of one of America's most respected

public servants. Alan Greenspan is perhaps the only central banker ever to achieve what one publication called "rock star status." *[Laughter]* For almost two decades, Chairman Greenspan's prudence and wise policies have guided this Nation through major economic challenges, have kept inflation in check, and contributed to phenomenal economic growth and a better life for all our citizens.

Recently he said, "I have only just realized that I have been on 24-hour call for 18 years." Mr. Chairman, you can rest a little easier and know that a grateful nation thanks you for your extraordinary service.

Ben Bernanke now takes up Alan Greenspan's mantle. When I announced Ben's nomination last October, economists and leaders across the political spectrum responded positively. They praised him for his unsurpassed academic credentials, broad policy experience, and a reputation for consensus-building. The son of a pharmacist and a school teacher, Ben graduated from Harvard with top honors and earned a doctorate in economics from Massachusetts Institute of Technology. He rose through the academic ranks to become the chairman of the economics department at Princeton.

Ben is one of the most cited economists in the world and is recognized for his path-breaking work in the field of monetary policy. Ben Bernanke also knows the Federal Reserve System. From 2002 to 2005, he served with distinction on the Fed's Board of Governors. Since last year, he has served as the Chairman of the Council of Economic Advisers at the White House. I came to trust his judgment, his calm demeanor, and his sly sense of humor. *[Laughter]*

Throughout his distinguished career, Ben has earned a reputation for intellectual rigor, integrity, and personal decency. He's earned the respect of the global financial

community. Ben is an economist's economist, one of the most esteemed leaders in the field. He understands that economics is more than just crunching numbers; good economics embraces policies that unleash hope and hard work and the power of free people to be able to fashion and improve their lives. Ben Bernanke will work every day to keep America's economic prospects strong and prosperous. He'll be a superb Chairman.

Mr. Chairman, thank you for agreeing to serve. Congratulations.

NOTE: The President spoke at 10:04 a.m. at the Federal Reserve. In his remarks, he referred to former Chairman of the Federal Reserve Paul A. Volcker. The transcript released by the Office of the Press Secretary also included the remarks of Chairman Bernanke.

### Remarks at a Dinner Honoring the Dance Theatre of Harlem *February 6, 2006*

Good evening, Laura and I welcome you to the White House for what is going to be a very special evening. One of the interesting things about living here is that, on occasion, some of our Nation's finest artists come to perform. Nothing like having great performers in your living room. *[Laughter]* And tonight we're looking forward to a fantastic performance.

As we gather during African American History Month, tonight we honor the Dance Theatre of Harlem and its unique founder, Arthur Mitchell. America is blessed to have people like Arthur Mitchell in our midst. So, Arthur, thank you for coming; thank you for your care and concern for our Nation's youth; and thank you for being dogged in your determination to see that this program flourishes. And we're glad to be a part of seeing that the program does flourish.

Since its creation in 1969, the company has set a new standard for excellence in dance and has won international acclaim. The Dance Theatre of Harlem School has provided thousands of students the opportunity to study dance, some of whom we'll see tonight. The Dance Theatre's community outreach programs are now bringing arts education to people all across America and around the world.

For almost four decades, the Dance Theatre of Harlem has done a lot to enrich countless lives through its brilliant performances and educational efforts. And so tonight I offer a toast to the achievements and continued success of Arthur Mitchell and the Dance Theatre of Harlem.

NOTE: The President spoke at 7:56 p.m. in the State Dining Room at the White House.

### Remarks at the Funeral Service for Coretta Scott King in Lithonia, Georgia *February 7, 2006*

To the King Family, distinguished guests, and fellow citizens: We gather in God's house, in God's presence, to honor God's servant, Coretta Scott King. Her journey

was long and only briefly with a hand to hold. But now she leans on everlasting arms. I've come today to offer the sympathy of our entire Nation at the passing

of a woman who worked to make our Nation whole.

Americans knew her husband only as a young man. We knew Mrs. King in all the seasons of her life, and there was grace and beauty in every season. As a great movement of history took shape, her dignity was a daily rebuke to the pettiness and cruelty of segregation. When she wore a veil at 40 years old, her dignity revealed the deepest trust in God and His purposes. In decades of prominence, her dignity drew others to the unfinished work of justice. In all her years, Coretta Scott King showed that a person of conviction and strength could also be a beautiful soul. This kind and gentle woman became one of the most admired Americans of our time. She is rightly mourned, and she is deeply missed.

Some here today knew her as a girl and saw something very special long before a young preacher proposed. She once said, "Before I was a King, I was a Scott." And the Scotts were strong and righteous and brave in the face of wrong. Coretta eventually took on the duties of a pastor's wife and a calling that reached far beyond the doors of the Dexter Avenue Baptist Church.

In that calling, Dr. King's family was subjected to vicious words, threatening calls in the night, and a bombing at their house. Coretta had every right to count the cost and step back from the struggle. But she decided that her children needed more than a safe home; they needed an America that upheld their equality and wrote their rights into law. And because this young mother and father were not intimidated, millions of children they would never meet are now living in a better, more welcoming country.

In the critical hours of the civil rights movement, there were always men and women of conscience at the heart of the drama. They knew that old hatreds ran

deep. They knew that nonviolence might be answered with violence. They knew that much established authority was against them. Yet they also knew that sheriffs and mayors and Governors were not ultimately in control of events, that a greater authority was interested and very much in charge. The God of Moses was not neutral about their captivity. The God of Isaiah and the prophets was still impatient with injustice. And they knew that the Son of God would never leave them or forsake them.

But some had to leave before their time, and Dr. King left behind a grieving widow and little children. Rarely has so much been asked of a pastor's wife, and rarely has so much been taken away. Years later, Mrs. King recalled, "I would wake up in the morning, have my cry, then go in to them. The children saw me going forward."

Martin Luther King, Jr., had preached that unmerited suffering could have redemptive power. Little did he know that this great truth would be proven in the life of the person he loved the most. Others could cause her sorrow, but no one could make her bitter. By going forward with a strong and forgiving heart, Coretta Scott King not only secured her husband's legacy, she built her own. Having loved a leader, she became a leader. And when she spoke, America listened closely, because her voice carried the wisdom and goodness of a life well lived.

In that life, Coretta Scott King knew danger; she knew injustice; she knew sudden and terrible grief. She also knew that her Redeemer lives. She trusted in the Name above every name. And today we trust that our sister Coretta is on the other shore—at peace, at rest, at home. May God bless you, and may God bless our country.

NOTE: The President spoke at 1 p.m. at the New Birth Missionary Baptist Church.

## Remarks Following Discussions With King Abdullah II of Jordan February 8, 2006

*President Bush.* Your Majesty, welcome back. I have had two good discussions with His Majesty. Last night His Majesty and the Crown Prince came to have dinner with Laura and me and some Members of Congress, and we had a really good discussion. We had a little time by ourselves to talk strategically about the world and our deep desire for this world to be peaceful.

Of course, we talked about Iraq, Iran, the Palestinian Territories. And I appreciate your vision and your desire to achieve a better world for the people in your neighborhood.

We also talked about a topic that requires a lot of discussion and a lot of sensitive thought, and that is the reaction to the cartoons. I first want to make it very clear to people around the world that ours is a nation that believes in tolerance and understanding. In America, we welcome people of all faiths. One of the great attributes of our country is that you're free to worship however you choose in the United States of America.

Secondly, we believe in a free press. We also recognize that with freedom comes responsibilities. With freedom comes the responsibility to be thoughtful about others. Finally, I have made it clear to His Majesty, and he made it clear to me, that we reject violence as a way to express discontent with what may be printed in a free press. I call upon the governments around the world to stop the violence, to be respectful, to protect property and protect the lives of innocent diplomats who are serving their countries overseas.

And so, Your Majesty, thank you for coming. I'm proud to share the moment with you.

*King Abdullah.* Thank you very much for your kind words. And I would just like to

echo what the President said. We've had some very fruitful discussions, and we're appreciative of the vision and the desire that the President has for peace and stability in our part of the world. He has always strived to make life better for all of us in the Middle East, and I tremendously appreciate that role.

The issue of the cartoons, again, and with all respect to press freedoms, obviously, anything that vilifies the Prophet Mohammed—peace be upon him—or attacks Muslim sensibilities, I believe needs to be condemned. But at the same time, those that want to protest should do it thoughtfully, articulately, and express their views peacefully. When we see protests—when we see destruction, when we see violence, especially if it ends up taking the lives of innocent people, is completely unacceptable. Islam, like Christianity and Judaism, is a religion of peace, tolerance, moderation.

And we have to continue to ask ourselves, what type of world do we want for our children? I too often hear the word used as, tolerance. And tolerance is such an awful word. If we are going to strive to move forward in the future, the word that we should be talking about is acceptance. We need to accept our common humanity and our common values. And I hope that lessons can be learned from this dreadful issue, that we can move forward as humanity, and truly try to strive together, as friends and as neighbors, to bring a better world to all.

*President Bush.* Thank you, Your Majesty. I appreciate you.

NOTE: The President spoke at 9:26 a.m. in the Oval Office at the White House. In his remarks, he referred to Crown Prince Hussein of Jordan.

Remarks to the Business and Industry Association of New Hampshire in  
Manchester, New Hampshire  
February 8, 2006

*The President.* Thank you. Please be seated. Thank you for the welcome. It's good to be back here in New Hampshire. We had a little problem scheduling a room here in this State. It turns out, a lot of Judd's colleagues are prebooking for the '08 elections. [Laughter]

I really appreciate you giving me a chance to come by. I want to spend a little time on our economy. I want to talk about your money; I want to talk about the budget I submitted. I hope at the end of this discussion you'll have a better feel for why I make the decisions I've made. You know, one of the interesting things about my job is you get to make a lot of decisions. My buddies from Texas come up, and they say—after they get over the initial shock of me being in the White House in the first place—[laughter]—they say, "What's the job like? What's it like to be President of the United States?"

The best thing I can tell them is it's a job that requires decisionmaking. Decisionmaking is based upon—good decisionmaking is based upon standing for something, making decisions based upon certain principles that won't change even though the political circumstances may appear to be changing. Decisionmaking means listening to people, surrounding yourself with excellence. Decisionmaking means doing what you think is right, not what may be politically expedient.

And so today I hope I give you a sense of why I made some of the decisions that I made on the budget I've submitted to the Congress and why I believe it'll help the American people.

Before I begin, I do want to thank Judd. The guy is a great friend—he's a great friend of mine; he's a great friend of the people of New Hampshire. I've gotten to know him really well. He's a good man—

and he married well too, by the way. [Laughter] So did I. Laura sends her best. She's winging her way, by the way, to Italy to represent the United States at the Winter Games, which is pretty unusual for a woman who was raised in west Texas, where it rarely snows. [Laughter]

I'm also proud to be traveling today with Senator John Sununu. He, too, is a fine man and a great Senator for the people of New Hampshire. I'm proud to be here with the two Congressmen, Jeb Bradley and Charlie Bass. I'm looking forward to flying them back to Washington. It's amazing what people will do to get a free flight. [Laughter]

I want to thank the speaker who is here; Doug, thank you for being here. I remember going to your farm a while back. You know, I don't follow New Hampshire politics that closely these days, at least statehouse politics, but I do know this is a guy who loves his family. And he's got a lot of family to love; I've met them all. Appreciated his hospitality.

I want to thank the president of the senate, Ted Gatsas, who is with us as well. Mr. Mayor, thank you for joining us today. The mayor said he just got elected; he's all excited and fired up. Just fill the potholes, Mayor, and everything will be fine. [Laughter]

I want to thank all the other State and local officials. I want to thank George Gantz. Thanks for the introduction. I asked him what his middle name was; I was hoping it was W. [Laughter] But it wasn't. But, anyway, George, thanks for introducing me, and thanks for having me here. I want to thank Mike Donahue and all the other members of the board of the Business and Industry Association of New Hampshire.

I also want to thank the bankers who are here. Thank you for allowing me to

horn in on your meeting. I hope it's worth your while to have me. Most of all, thank you all for giving me a chance to come.

Let me first start off with our economy. It's strong, and it's getting stronger. That's how I see it. I say that because we're now in our fifth year of uninterrupted economic growth. Last year, this economy of ours grew at 3.5 percent, which is good; that's good, strong economic growth. We did so in the face of higher energy prices and natural disasters, which makes the growth even more extraordinary.

More Americans now own their home than ever before in our Nation's history. I love the fact that America is an ownership society. I think it's important for policy to promote ownership. Low interest rates, by the way, helps promote ownership. You'll be happy to hear that this administration doesn't intend to set the interest rates, but I did name somebody good, named Ben Bernanke, to head up the Fed, to replace Alan Greenspan, and I'm confident he will do a good job of being the Chairman of the Fed.

More minority families now own a home than ever before in our Nation's history as well. See, a hopeful society is one in which all people see a positive future. There's nothing better than saying, "I own my own home; welcome to my home."

Real after-tax income is up by 8 percent—nearly 8 percent per person since 2001. New orders for durable goods like machinery are rising, which is a good sign. Shipments of manufactured goods are up as well. The productivity of the United States was strong last year, and that's important. A productive society is one in which the standard of living rises. It's important for us to have policies in place that keep us the most productive society in the world.

Small businesses are thriving. We've added 4.7 million new jobs over the last 2½ years. The national unemployment rate is at 4.7 percent, the lowest level since July 2001. I was interested to see that your

unemployment rate is still unbelievably low; it's at 3.5 percent. A recent survey of your businesses says that nearly two-thirds of the CEOs expect revenues to increase this coming year. In other words, there's a positive feel here in New Hampshire and around a lot of parts of our country as well.

I like to say it's an exciting time for the economy. We're productive; we're innovative; we're entrepreneurial. And the role of government is to keep it that way. That's the role of the government. The global economy—we're the leader. We're growing faster than other major industrialized nations, and in the past 2½ years, we've created more jobs than the EU and Japan combined.

Now, one of the interesting things we face here in America is in spite of the numbers and the economic growth, there is uncertainty. Some of the uncertainty comes as a result of competition from places like India and China. The temptation with uncertainty and competition is to say, "We can't compete; let us kind of wall ourselves off." If you look at the history of the United States, the economic history, there have been periods of protectionism and isolationism, in the hopes that that will lead to a better lifestyle for our citizens. I strongly reject the notion of becoming a protectionist nation. I don't think this country ought to fear the future. I don't think we ought to fear competition. I know we ought to shape the future with good policies out of Washington, DC, and make sure that we're the preeminent economy in the world.

There's also, you know, kind of a debate in Washington about how to handle your money. There are some that—frankly, whose policies would make us look more like Europe than we should, and that is kind of a centralization of power. The surest way to centralize power is to take more of your own money to Washington. And so I want to talk a little bit about why our economic policies, in my judgment,

should reject the centralization of power, particularly through the budget process, and let the folks at home make the decisions about their own money.

You see, government doesn't create wealth. A lot of my decisionmaking is based upon this principle: The role of government is not to try to create wealth but an environment in which the entrepreneur can flourish; is to create an environment in which people are willing to risk capital; an environment in which a person feels comfortable with making a decision to start their own business. That's the role of government. It's a role of government that says, "We trust people to spend their own money wisely."

And so in the State of the Union Address, which I gave last week, I outlined a series of steps that encompass that philosophy and steps that I believe that will keep America the preeminent economy in the world, the leader in the world, which is what we should be. If we want our people to prosper, if we want lifestyles to improve, if we want our standard of living to go up, America must remain the leader.

I've talked about health care and the importance for us to have a health care system that takes care of the elderly and the poor, but a health care system that strengthens the relationship between doctor and patient, a health care system that provides transparency into pricing, a health care system that uses information technology to bring the medical profession into the 21st century.

You know, some are going to say, "What do you mean by that?" Well, I mean, when you're writing your files by hand, it means you're not in the 21st century. And since most doctors can't write too well, there's a lot of information that didn't pass through—[laughter].

I've talked, as well, about the need to get legal reform in the medical industry. Look, we've got too many lawsuits, pure and simple. We've got a real problem in the country because docs and hospitals are

getting sued. A lot of good docs are being driven out of business. I said an appalling—a statistic that I think is appalling in my State of the Union. Do you realize there are 1,500 counties in America without an ob-gyn? And that's wrong. And one of the reasons that's happening is because there's too many lawsuits driving good docs out of practice. We need a medical liability system that is fair to medical providers in the United States of America.

When I first went to Washington, I thought it might be a State issue. And then I realized that all these lawsuits are causing doctors to practice defensive medicine as well as running up premiums, which costs the Federal Government a lot of money. And so I've decided this is a national issue that requires a national response. And the United States Senate needs to be pass medical liability reform this year.

Part of our plan for a patient-doctor system, one that gives you choices to make and counts on you for making rational choices, is to expand health savings accounts and make sure that individuals and small-business employees can buy insurance with the same tax advantages that people working for big businesses now get. And we're going to make sure those health savings accounts are portable. One of the things about our economy, which is interesting, is that there's a lot of turnover when it comes to jobs. People are changing jobs a lot, which creates uncertainty. And one way to deal with that uncertainty, to bring certainty to people in the workforce, is to make sure they can carry their health savings account with them from job to job, so they don't fear losing their health insurance.

So I've got a lot of ideas on health care that I'm going to be talking to the Nation about in the coming weeks. Also, as we continue to make sure this country is whole, we're going to make sure that we repair parts of our country that have been hurt by natural disaster. Thus far, the Federal Government has committed \$85 billion

to the folks who got hurt by Katrina. I went down there in Jackson Square, and I said, "The Federal Government is going to help you," and we are helping—\$85 billion is a lot. It may not be all it takes, but I want to compliment the Congress for making a strong commitment to helping the people down there get on their feet and get this important part of our country up and running again.

I talked about a very important issue that I think surprised old Judd a little bit—you know, he knows I'm from Texas, a little concerned about my views on energy, I think, at times—prejudged me the wrong way. I meant what I said; we've got to get off our dependence on oil. To stay competitive, this country cannot be reliant upon oil from unstable parts of the world. And therefore—as I said in the State of the Union, we're spending \$10 billion so far to come up with ways to wean ourselves off of oil.

I talked about clean coal technologies. We have got to promote safe nuclear power. We have got to continue our investment in solar energy. But I want to spend a little time—I mean, a little time—on making sure that you understand that I am serious when it comes to spending money so that—to be able to develop the technologies necessary to be able to convert saw grass and wood chips and refuse into energy. It's coming. We believe this technology is close to breakthrough status.

I also want to tell you something interesting that I didn't say in the speech, is that there's 4½ million automobiles on the road today that are flex-fuel automobiles that can switch from gasoline to ethanol already. In other words, the technology is available for the automobiles. When we have the breakthrough, when it comes in ethanol, I'm convinced that this country is going to become what we want it to be—not reliant upon Middle Eastern oil.

It's exciting times. It's important. This is not only an economic security issue, it is a national security issue. And we're intent

at the Federal Government to promote research dollars to see to it that we achieve this important objective.

I also talked about education. One of the things we've got to understand here in America is that if our children don't have the skills necessary to fill the jobs of the 21st century, those jobs are going to go somewhere else. We live in a competitive world, and as I told you, I recognize that competition creates uncertainty, but we've got to be certain about the goal to make sure our children are educated.

And so, laid out a math and science initiative, which embodies a lot of the principles in the No Child Left Behind Act, which basically says, "Look, we're going to measure, and if we determine that you're falling behind in middle school in math, we'll provide extra money so you can catch up." We need more AP teachers trained in the classrooms for our high schools. We're going to have 30,000 adjunct professors from private industry and/or retired scientists to go and excite our children about math and science.

And, as well, we've got to lead the world in basic research. I committed our Government to doubling the basic research for sciences over a 10-year period of time, as well as we've got to understand that most of the money invested in research is done at the private sector. And that's why we've got to make sure the research and development tax credit is permanent. You see, the research and development tax credit expires annually. Now, how can you possibly plan for an aggressive research budget if you're uncertain as to what the Tax Code is going to allow you to do? Congress has got to understand that CEOs of companies that are investing to make our life better can't make sound decisions with uncertainty in the Tax Code. And so they've got to make the research and development tax credit permanent.

And so there are some ways to make sure that we remain competitive. And I'm going to work with Members of Congress

to make sure we get these initiatives passed.

Today I'm going to focus on the budget strategy. We're on our way to cutting our deficit in half by 2009. And I'm going to give you some ideas as to how we can do that. The budget strategy has three parts. The first part is to promote economic growth by keeping taxes low. The second part is to restrain spending. And the third part is to insist that Federal programs produce results. That may sound odd to you. [Laughter] But I'm going to tell you how we—we've got interesting ideas how to promote results-oriented programs in Washington, DC.

First, we're going to keep the taxes low to make sure the economy growing—grows. My philosophy is this: When Americans are allowed to keep more of their own money to spend and save and invest, that helps the economy grow, and when the economy grows, people can find work. If entrepreneurs have more money in their pocket, they're going to use it to expand their businesses, which means somebody is more likely to find work. If consumers have more money in their pocket, they're likely to demand additional goods or services. And in a marketplace economy when somebody demands a good or a service, somebody meets that demand with product or the service. And when that demand is met, it means somebody is more likely to find work. Cutting taxes means jobs for the American people.

We're a confident nation, and one reason we are is because we've overcome a lot. I want you to think about what this economy has been through in a relatively quick period of time. We've been through a recession, a stock market collapse, terrorist attacks, a war, and corporate scandals. And I told you how strong the economy was going. I think one of the reasons why this economy is as strong as it is, is because Congress wisely cut the taxes for the American taxpayers.

We lowered taxes, and in doing so, the message was and the philosophy is, you can spend your money better than the Government can spend its money. We want you making decisions for your families. We want you making investments. And so we cut taxes on families by lowering income tax rates and doubling the child credit. We reduced the marriage penalty. I've never understood a Tax Code that penalizes marriage. Seems like to me, we ought to be encouraging marriage in the Tax Code. We put the death tax on its way to extinction. My view is, is that if you're running a small business, you ought not to have to pay taxes twice, once while you're living and once after you die. If you're a farmer or a rancher, you ought to be allowed—the Tax Code ought to encourage you to be able to pass your property on to whomever you choose.

We cut taxes on small businesses. An interesting part of the debate that a lot of people in America haven't focused—didn't focus on is that when you're cutting individual income tax rates, you're also cutting a lot of taxes on small businesses. See, most small businesses are sole proprietorships or subchapter S corporations, and therefore, they pay tax at the individual income tax level. And so when you reduce all rates, you're really interjecting capital into the small-business sector of the country. And that's important because two-thirds of new jobs in America are created by small businesses. It makes sense, doesn't it, if you're worried about people finding work, if you're trying to overcome economic hardship, to fuel the engine of growth that will provide work—and that's the small-business sector of the United States.

One of the interesting things we did is we understand it's important to encourage investment, particularly for small businesses. And so we raised the amount of investment a small business can deduct immediately from \$25,000 to \$100,000. And why do you do that? Well, one, you want

your small-business sector to remain productive. Investment yields enhanced productivity, which means it's easier to compete and stay in business. We want more productivity. Productivity will yield a higher lifestyle for the American citizens.

Secondly, we want people to invest because it means somebody is going to have to produce the product that they buy. And so this—raising the deduction had a positive effect not only in the small-business sector but throughout the economy. By the way, this deduction is set to expire, and so part of my budget proposal is to double the deduction to \$200,000 to help small businesses and to make this a permanent part of the Tax Code so small-business entrepreneurs have security in planning.

We also lowered the taxes on dividends and capital gains. One of the interesting statistics, and why this is such an important initiative, is that half of America, now 50 million households, have some investment in the stock market. Think about that. Half the households in America have got a stake in the stock market. They either own shares in individual companies or through mutual funds. By cutting the taxes on dividends and capital gains, we helped add nearly \$4 trillion in new wealth to the stock market. In other words, it invigorated the markets. That's positive, particularly if you're one of the one-half of the American family that owns stock. When those stocks go up, you see the value increase in your IRAs or your 401(k)s or your mutual funds.

These gains help American families. See, there's a correlation between cutting taxes on dividends and capital gains and increase in the market and increase in individual net worth. When that happens, that helps American families be able to afford a down payment for a home, or helps a family be able to afford a college tuition, or it helps a family in retirement enjoy a better life. In other words, there is a direct correlation between cutting taxes on the capital gains and dividends and quality of life all across America.

The tax relief on dividends and capital gains has also helped families that don't own stocks. And the reason why is, people out here understand—capital flows will tell you that cutting taxes on dividends and capital gains has reduced the cost of capital. That's economic talk for meaning the money that you borrowed doesn't cost you as much, and that helps investment. An economy in which there is ample investment is an economy in which people are able to find work. So this has been a positive part of our tax plan.

One of the interesting things that I hope you realize when it comes to cutting taxes is this tax relief not only has helped our economy, but it's helped the Federal budget. In 2004, tax revenues to the Treasury grew about 5.5 percent. That's kind of counterintuitive, isn't it? At least it is for some in Washington. You cut taxes and the tax revenues increase. See, some people are going to say, "Well, you cut taxes; you're going to have less revenue." No, that's not what happened. What happened was, we cut taxes, and in 2004, revenues increased 5.5 percent. And last year, those revenues increased 14.5 percent, or \$274 billion. And the reason why is, cutting taxes caused the economy to grow, and as the economy grows, there is more revenue generated in the private sector, which yields more tax revenues.

Revenues from dividends and capital gains are up by an estimated 50 percent. Think about that. We cut the taxes, so if you got a dividend or you sell your stock after a period of time and pay capital gains—and the revenues from those two areas have gone up—the economy kicked into high gear, and we're getting more money in the Treasury.

Now, this tax relief I mentioned to you is set to expire. In other words, when Congress passed it, it wasn't permanent. Kind of like the R&D tax credit, it's kind of—it may be permanent, it may not be permanent, depending upon whether or not Congress acts.

If you're a small-business owner, that's not good for you, to be wondering what your taxes are going to look like. You cannot plan your future if you're a small-business owner if you wonder whether or not your tax rates are going to go up in the short term. I don't think families are looking forward to any tax increases. I think they agree with me. We've got plenty of money to spend in Washington, and we just need to make sure we set our priorities.

If Congress doesn't act, your taxes are going to go up—and you're not going to like it, and it's going to hurt the economy. And so Congress needs to make the tax relief we passed permanent.

You will hear the argument during the budget debates, you know, all the noise coming out of Washington, that you need to raise taxes in order to balance the budget. I've been there long enough to tell you, that's not the way Washington works. They're going to raise your taxes, and they're going to find new ways to spend your money. The best way to reduce the deficit is to make sure we have progrowth economic policies in place and be smart and wise about how we spend your money.

So the second thing I want to talk to you today about—the strategy behind the budget and the decisions I made for the budget—is how we can be wise with your money. In the State of the Union, I outlined priorities. One way you're wise with your money is you set priorities. You know what it's like to manage your own family budget. Of course, you'd like to take a vacation every week, you know, some exotic place; but you've got to set your priorities; you can't do that. You want to do this or do that, go to a fancy restaurant every night, but that's not setting priorities. Families set priorities. Individual Americans set priorities. Business people set priorities all the time when it comes to setting the budget, and that's what the Federal Government needs to do.

And the first priority of our Government is to make sure our troops in harm's way have all they need to complete their mission for the sake of peace.

The budget I've submitted has got other priorities; I mentioned some of them. A priority is to make sure that we help the folks down South get on their feet, those suffering from Hurricane Katrina. I talked about the need to have education as a priority, particularly in math and science. I talk about the priority to spend research money so we become less dependent on Middle Eastern oil. Those are priorities.

Now, when it comes to budget talk, there are two types of spending in Washington. There's called discretionary spending and mandatory spending. Discretionary spending is the kind of spending Congress votes on every year. Mandatory spending is the kind of spending that happens based upon fixed formula. We made good progress in discretionary spending. In the last year of the previous administration, nonsecurity discretionary spending rose by 15 percent. Every year of my Presidency, we've reduced the growth of that spending. And last year, Congress responded to my request and passed bills that actually cut non-security discretionary spending.

There's no question, the war and the hurricanes have stressed our budget—all the more reason to set priorities and to be wise with your money. And so we submitted a budget. The budget I submitted this year proposes to cut discretionary spending that's not related to defense and homeland security. We will keep the growth in overall discretionary spending below the rate of inflation so we can cut the deficit in half by 2009.

One reason we're able to do so and meet priorities is because we've identified \$14 billion in savings from programs that aren't performing very well at all. I'm going to talk a little bit later about that.

Now, the biggest challenge we've got, however—and this is very important for our citizens to understand—when it comes to

deficits—the deficits, the unfunded liabilities inherent in our mandatory programs, such as Medicare and Social Security and Medicaid. And the reason why there's a lot of unfunded liabilities in those programs is because a baby boom generation is fixing to retire, and I'm one. As a matter of fact, I turn 62 in 2008, which is a convenient year for me to be retiring. [Laughter] Old Judd is a baby boomer. I think he's 7 months younger than I am.

And I'm looking around, and I see a couple of baby boomers out there. And we're getting ready to get into the system. And there is a lot of us. A huge number of retirees are getting ready to get on Social Security and Medicare. And there is not a lot of—relative to those of us who retire, the number of payers in the system is shrinking. And there's a burden. The math doesn't work. It's a problem, particularly for people who are going to be having to pay for baby boomers like me.

Medicare recently was modernized. I'm not talking about the recent modernization program—which is the right thing to do, by the way. If you make a commitment to America's seniors, which Lyndon Johnson did and this country has honored, then it makes sense to make sure the health care system you provide the seniors is modern and up to date. A commitment means a commitment of modern medicine, and that's precisely what we did when we provided prescription drug coverage for seniors.

Imagine a system that said, "We will pay for an invasive surgery but not for the drugs that will prevent the surgery from being needed in the first place." It didn't make sense. Medicare was old and antiquated, and I'm proud to have signed the reform. Twenty-four million seniors are now enrolled in this new program. Tens of thousands of more are signing up each day. The prescription drug benefit is saving the typical senior more than \$1,100 on medicine a year. And the average expected premium that seniors pay has gone down

by a third, from \$37 per month to \$25 a month. It's amazing what happens when you interject competition into the health care system.

But the real problem for Medicare is the long-term problem of baby boomers coming into the system. There is going to be 78 million of us. And interestingly enough, we've been promised greater benefits than the previous generation. People ran for office who said, "Vote for me; I'm going to make sure that you get a better Social Security deal or a Medicare deal." And sure enough, Congress passed that. Do you realize that if we don't do anything on fixing this problem—and by the way, if you're a senior, you don't have anything to worry about; you'll get your check. I'm talking about knowing the system is going broke and walking around this country and talking to people who are paying payroll taxes into a broke system. And that's not right. It just doesn't make any sense to me for us not to take care of this problem.

In 2030, spending on Social Security, Medicare, and Medicaid alone will be almost 60 percent of the entire Federal budget. I mean, there is a problem. One of the tricks in Washington is just to pass them on to future Congresses and future Presidents. That's not my style. I want to get something done. I believe the job of a President is to confront problems and not say, somebody else can take care of it. That's why I ran. That's why Judd ran and Sununu ran as well, by the way. And they're strong advocates of doing something about this before it's too late.

Listen, I understand that Congress didn't act last year on the Social Security proposal I laid out, but that's not stopping me from doing what I think is right. I see a problem. And so do the American people, by the way. They see a problem, and they expect us to put aside all that needless political rhetoric, that partisanship and get something done. And I'm serious about it.

So I'm looking forward to putting together a group of both Republicans and

Democrats in the Congress—from the Senate and the House—people who can get something done—and sitting down at the table and doing what the American people expect us to do and solve this problem for a generation of Americans that are coming up in our society.

In the meantime, we've got to do what we can do to make sure that we keep spending under control. Later today we're flying back to Washington, and I'm going to sign a bill that will rein in spending on entitlements, on mandatory spending, by nearly \$40 billion over 5 years. And I applaud Judd and Members of the House and the Senate for putting fiscal sanity back into the budget. By the way, it's hard work up there to get everybody in the same direction. Everybody thinks their own program is special. And the noise can get a little loud up there when you're making some decisions that are apparently tough decisions for some.

Let me talk about the Medicaid decisions that was made. Medicaid is an important program. It's a program that's a part of our commitment to the poor and the elderly. People talked about how the decision to reform Medicaid was immoral. Well, it's not immoral to make sure that prescription drug pharmacists don't overcharge the system. You're a taxpayer, you expect the Medicaid person we're helping to be able to buy drugs at a reasonable cost. But it turns out that there was inflated markups for people who had Government help to buy drugs. That doesn't make any sense, so we reformed that. The people are still going to get their drugs, but the taxpayers aren't going to have to pay inflated prices. That seems to make sense, seems to be fair.

They talk about us slashing resources for the elderly. No, there are resources for the elderly in Medicaid, but what we did was, we said, "We're going to try to stop you from transferring assets from the parent to the child," so that the parent's apparent poverty enabled them to get on Medicaid.

That's not fair. You work hard for your money. We want to take care of the poor, but we don't want to reward people who game the Medicaid system. And so we saved money for the taxpayers by making rational reforms in Medicaid. We're able to keep the commitment to the poor, and that's important for you all to understand. And at the same time, by putting common-sense reforms in place, we saved the taxpayers \$4.7 billion of entitlement reform.

Let me talk about the student loan program. I remember going to Kansas State recently, and a young lady stood up and asked me a question. She said, "Well, here you are on a college campus; why are you cutting our loans?" I said, well, I didn't think we were—as a matter of fact, I thought we were helping you get student loans. She was talking about the reforms within the budget I'm going to sign today.

Let me tell you what those reforms were. There were too many subsidies to folks who were providing loans to the students. And so we decided to reform those subsidies to make it more rational for the taxpayers and, at the same time, to help the students. By reducing the cost of lending, we saved the taxpayers \$22 billion, of which \$10 billion will be used to increase student loans. So here is an example of staying focused on the mission, providing money for loans and, at the same time, providing relief for the taxpayer.

The new budget I submitted builds on our progress in controlling mandatory spending by proposing another \$65 billion in entitlement savings. I'm looking forward to working with Judd to get this passed out of the Senate and the House. It's an important part of maintaining fiscal discipline. Thirty-six-billion dollars of that comes from Medicare, and let me tell you how we achieve that.

The annual growth of Medicare spending is about 8.1 percent. Now, if you think about inflation, the growth in that program far exceeds inflation. And the budget I submitted suggests that we slow that growth

down to 7.7 percent. That doesn't seem too unreasonable to me, if you're trying to bring fiscal sanity into Washington—to slow the growth of the program down from 8.1 percent to 7.7 percent. This isn't a cut. People call it a cut in Medicare. That's not a cut. It's slowing down the rate of growth. It's the difference between slowing your car down to go the speed limit or putting your car in reverse.

In Medicare, we believe that payments ought to be made to the individual we're helping, in a reasonable way. If there are productivity gains and savings to be had at the hospitals, for example, those savings ought to be given to the taxpayers, not to the hospitals. Reform means making health care providers bid and compete for services. That seems to make sense. Competition and bidding creates transparency in the process, but it also helps the taxpayers.

So we brought these reforms into place recognizing that the choices will be tough for Members of Congress—but necessary choices. That's what you expect, it seems like to me. You ought to expect us to ask the tough questions, to make sure the programs focus on the people we're trying to help and, at the same time, achieve savings, if possible to do.

Congress is working on earmark reform, and I appreciate that a lot. It's a necessary part of making sure the budget process is rational. I look forward to helping them. I've got some ideas of my own, in terms of budget reform.

One, I believe any time Washington makes a spending commitment that our children and grandchildren will not be able to afford, I propose that Congress offset those expenditures in entitlement spending. In other words, if they make a commitment to increase entitlement spending somewhere, they've got to decrease it elsewhere, in order to make sure we have rational budgeting.

Secondly, I believe we ought to sunset Federal programs. That means that they ought to be reviewed at a certain period

of time to determine whether or not they're meeting the objectives that Congress set them out to be. And if not, get rid of them.

And finally, I'd like to have the line-item veto.

I mentioned to you getting good results. Let me talk about the last part of our budget strategy. We have worked hard to insist upon results. Perhaps the most vivid example of that is in the relationship between the Federal Government and the State government when it comes to public school education. I was always worried about a system that never asked the question, "Are we getting results for our money?" It's a legitimate question, particularly when it comes to schools.

When I was the Governor of Texas, I remembered what it was like to be the Governor of a State where people just got shuffled through, and we didn't know whether they could read or write, add and subtract, until it was too late. And it was a real problem, and it's been a problem throughout our society. And so we came to Washington with a spirit of innovation and reform—worked with Judd on that bill as well. I don't mean to be mentioning your name too often, Judd, but if it helps you, fine. *[Laughter]*

But we had a new spirit when it came to funding schools, and that is, in return for Federal money—I mean, we spend a fair amount of money, not nearly as much as State and local governments, of course. About 10 percent of all the money spent nationwide is spent at the Federal level—but in return for that money, I thought it made sense to say, "Why don't you show us whether or not a child can read." That seemed to make sense. It wasn't that difficult a request.

It turns out, it's a pretty difficult request politically. You know, "How dare you measure. All they're doing is teaching the test. It's racist to measure." No, it's racist not to measure. It's racist not to know whether a curriculum is working. It makes sense

for the Federal Government to demand results for money spent.

We didn't tell the people of New Hampshire how to teach. We didn't design the test, nor should we have, from the Federal level. I believe in local control of schools. I believe in aligning—[*applause*]*—*but I darn sure want to know. And the interesting thing about these tests—we test three through eight, or we demand that the schools test three through eight. One of the parts of the test that I find most important, and I hope you do as well, is that when we find a child deficient in reading, that family gets supplemental services, extra help, where they can go get tutoring at a private or public institution. In other words, there's a focus on every child, making sure that we solve problems early, before it's too late. And you can't solve a problem unless you measure. We're going to apply that same thing to the math and sciences agenda, as I mentioned to you earlier.

And so that's the spirit of asking for reform. And so I've got a group of folks that are constantly analyzing whether or not the Federal Government is doing what you're doing—doing what you expect us to do. You realize we spend \$2.7 trillion a year, and there are more than 1,000 Federal programs. That's a lot; that's a lot of programs. And it makes sense to make sure that they're working. See, good intentions aren't enough, as far as this administration is concerned. We're insisting that people show us, program managers show us, whether or not they're achieving—these programs achieve results.

Last 4 years, we've had what we call the President's Management Agenda. Employees have been working to help ensure that the programs are doing what we expect them to do. That's what they do. They spend a lot of time on this. We ask Federal managers to achieve good results at reasonable costs, and we measure them. The point is, is that if they can't prove they're achieving good results, then the programs,

in my judgment, ought to be eliminated and/or trimmed back. That's why I told you earlier, we found 141 such programs. And we did the same thing in last year's budget as well.

One of the interesting innovations that we have put forth is a new web site called *expectmore.gov*. It's a program where—it's a web site where we start to put the measurement results up for everybody to see. Nothing like transparency into the Federal bureaucracy to determine whether or not a program is working. And so I think you'll find it innovative—I do—that the White House has put this web site up. And you'll be able to see whether or not results are being achieved for the money spent.

I'll give you one example of what we're talking about. I'll give you two examples—one example of money poorly spent, and one example of money well-spent, as a part of this management initiative—the analyzation as to whether or not the programs are actually delivering results we want.

One of them is, the Department of Energy runs the natural gas technology program that is designed or was designed to help businesses increase natural gas supplies. That sounds reasonable, doesn't it? Let's have a program at the Federal Government that says to producers, produce more natural gas. The problem is when we found out—when we analyzed the program, we found that it's impact on production is minimal. It's not working. It sounds good. Somebody thought of it, had a good title to the bill, but it's not delivering results. The private sector has got better incentives to provide natural gas for you; it's called price, not the Federal Government's program.

And so I'm asking the erstwhile chairman to eliminate the program.

*Senator Judd Gregg.* It's done. [*Laughter*]

*The President.* If it was that easy, government would be a breeze, wouldn't it?

I'm going to talk about an example of something that is working, based upon our

analysis, and these are called community health centers. Community health centers are run by HHS. Their mission is to provide effective health care for the poor and the indigent. It makes sense. If you don't believe in the nationalization of health care, which I don't, then it does make sense to provide good care for people—primary care for people that are poor or indigent.

And so community health centers, which was an idea during the previous administration, is one that we've embraced. We have found that these health care centers work really well. I don't know if you've got one in Manchester, but they're good. [*Applause*] You know what I'm talking about. And so they analyzed the cost relative to the benefit, and it's worthwhile to fund these. And so the budget that I'm submitting increases—has a 10 percent increase for community health centers.

And so that's it. That's why—I hope you get an idea of why I submitted the budget I submitted. You know, the budgets really, kind of, generally are numbers. They look at numbers, but you've got to understand I look behind the numbers and see quality of life issues. When I think about the budget, I think about making sure that the economy grows. You can't be the preeminent economy in the world if your economy doesn't grow.

When I think about the budget, I think about taxpayers and always remember whose money we spend in Washington. It's not our money; it's your money. When I think about the budget, I think about difficult issues like mandatory spending in So-

cial Security and Medicare and how we've got to have political will to not play "gotcha" with the issue but focus on solving it for a generation coming up. When I think about the budget, I think about people that suffer from Hurricane Katrina. When I think about the budget, I think about our troops that are doing everything they can to spread freedom and democracy so we're safe at home.

And so the budget—you'll hear numbers this, numbers that, but you've got to know that those of us who put it together really do see the human dimension behind good budgeting. Ours is a nation that is a generous nation and a compassionate nation. Ours is a nation that I truly believe can achieve anything we put our mind to. And in terms of our economic future, we shouldn't fear it, because we're going to shape it and continue to lead the world so that people who are in this country have got a high quality of life.

I really appreciate you giving me the chance to come back up here to New Hampshire. May God bless your wonderful State, and may God continue to bless our country.

NOTE: The President spoke at 11:33 a.m. at the Radisson Hotel Manchester-Center of New Hampshire. In his remarks, he referred to W. Douglas Scamman, Jr., speaker, New Hampshire State House of Representatives; Mayor Frank C. Guinta of Manchester, NH; George Gantz, chair, and Mike Donahue, chair-elect, board of directors, Business and Industry Association of New Hampshire.

## Remarks on Signing the Deficit Reduction Act of 2005 *February 8, 2006*

Please be seated. Thanks for coming. Welcome to the White House. In a few moments, I will sign the Deficit Reduction Act of 2005. This important piece of legisla-

tion restrains Federal spending, and it will leave more money in the pockets of those who know how to use it best, the American people.

I appreciate the Vice President being here. Mr. Speaker, welcome, Leader Frist—thank you all for coming. Senator McConnell; Senator Santorum; Senator Judd Gregg, chairman of the Senate Budget Committee; Congressman John Boehner, the House majority leader; Roy Blunt, the House Majority Whip; Congressman Nussle, chairman of the House Budget Committee—I want to thank you all for coming. I appreciate the members of the Cabinet who are here, as well as all the Members of the United States Congress and the Senate who have come for this important bill signing.

Our economy is strong, and it's getting stronger. We're now entering our fifth year of uninterrupted economic growth, and last year, our economy grew at a healthy 3.5 percent. Real after-tax income is up nearly 8 percent per American since 2001. Productivity growth is high. Small businesses are thriving. America has added 4.7 million new jobs over the last 2½ years. The unemployment rate is down to 4.7 percent, the lowest level since July 2001.

Our economy leads the world, yet we cannot be complacent. To keep our economic momentum, we need to look at the challenges down the road and respond with wise policies now. And one of the most important policies we need to pursue is spending restraint in Washington, DC.

Earlier this week, I sent Congress a disciplined Federal budget for 2007, and this morning I traveled to New Hampshire with Chairman Gregg, Senator Sununu, Congressman Bass, and Congressman Bradley to discuss the new budget proposal in detail. The budget strategy begins with keeping taxes low so that Americans can spend, save, and invest more of their own money—and that will help keep our economy growing and creating jobs. My budget funds our priorities, starting with funding the United States military, promoting alternative sources of energy, investing in math and science education and basic research,

and helping to care for the poor and the elderly.

At the same time, my budget tightens the belt on Government spending. Every American family has to set priorities and live within a budget, and the American people expect us to do the same right here in Washington, DC.

The Federal budget has two types of spending, discretionary spending and mandatory spending. Discretionary spending is the kind of spending Congress votes on every year. Last year, Congress met my request and passed bills that cut discretionary spending not related to defense or homeland security. And this year, my budget again proposes to cut this spending. My budget also proposes again to keep the growth in overall discretionary spending below the rate of inflation, so we can stay on track to cut the deficit in half by 2009.

In the long run, the biggest challenge to our budget is mandatory spending, or entitlement programs like Medicare and Medicaid and Social Security. Entitlement spending is determined by a specific formula, and it rises automatically, year after year, unless the Congress intervenes. Together, Medicare, Medicaid, and Social Security are now growing faster than the economy, faster than the population, and nearly three times the rate of inflation. And the retirement of baby boom generation will put even more strains on these programs. By 2030, spending for Medicare, Medicaid, and Social Security alone will be almost 60 percent of the entire Federal budget. And that will leave future generations with impossible choices: staggering tax increases, immense deficits, or deep cuts in every category of spending.

Bringing entitlement spending under control is a critical priority of our Government. We need to slow the annual growth of entitlement programs to levels that we can afford; we do not need to cut these programs. There is an important distinction; it is the difference between slowing your car down to the speed limit or putting your

car into reverse. By making wise reforms that will reduce the annual growth of mandatory spending, the Deficit Reduction Act will save taxpayers nearly \$40 billion over the next 5 years; that's about \$300 per taxpayer.

The Deficit Reduction Act is estimated to slow the pace of spending growth in both Medicare and Medicaid. Medicare is a Federal program that provides health care for older Americans. Medicaid is a program administered in conjunction with the States that provides health care for low-income Americans, family with children, and some seniors. These programs are providing vital services to millions of Americans in need, yet the costs of Medicare and Medicaid are straining budgets at both the State and Federal level. The bill I sign today restrains spending for entitlement programs, while ensuring that Americans who rely on Medicare and Medicaid continue to get the care they need.

The Deficit Reduction Act is estimated to reduce the growth in Medicare spending by more than \$6 billion over the next 5 years. The bill, together with the Medicare act of 2003, requires wealthier citizens to pay higher premiums for their Medicare coverage. The savings created by this reform and others will make it possible to increase Federal funding for important areas like kidney dialysis and rural hospitals. With this bill, we're showing that we can keep the promise of Medicare and be good stewards of the taxpayers' money at the same time.

The Deficit Reduction Act will also reduce the growth in Medicaid spending by nearly \$5 billion over the next 5 years. This bill helps restrain Medicaid spending by reducing Federal overpayment for prescription drugs. Taxpayers should not have to pay inflated markups for the medicine that the people on Medicaid depend. The bill gives Governors more flexibility to design Medicaid benefits that meet the needs of their States efficiently and affordably. The bill tightens the loopholes that allowed peo-

ple to game the system by transferring assets to their children so they can qualify for Medicaid benefits. Along with Governors of both parties, we are sending a clear message: Medicaid will always provide help for those in need, but we will never tolerate waste, fraud, or abuse.

The Deficit Reduction Act's reforms in Medicare and Medicaid are a step on the road to long-term stability for these important programs. Now, we need to continue finding ways to make Medicare and Medicaid more efficient. My budget next year proposes another \$36 billion in savings on Medicare and more than a billion in savings on Medicaid. Budget proposals will slow the annual growth in Medicare over the next 5 years from 8.1 percent to 7.7 percent. That seems reasonable. And together with the bill I sign today, my budget will slow the average annual growth of Medicaid over the next 5 years from 6.9 percent a year to 6.6 percent a year. This is progress in the right direction, but these growth rates are still unsustainable.

In the long run, ensuring the stability of Medicare and Medicaid requires structural reform. So I have proposed a bipartisan commission to examine the full impact of baby boomer retirements on Medicare and Medicaid as well as Social Security. The commission will include Members of Congress from both political parties. It will recommend long-term solutions that will keep the promise of these vital programs while addressing their growing costs. I look forward to working with Congress to get this problem solved for generations to come.

As the Deficit Reduction Act delivers savings in mandatory spending, it also shows the compassion of America. This bill provides new resources for programs that serve some of our citizens with the greatest needs, including hurricane victims, children, and low-income families struggling to pay their heating bills.

The Deficit Reduction Act makes important improvements to Federal student loan

programs. The bill cuts excess Government subsidies to lenders and makes other reforms that will help us reduce overall student loan costs by about \$22 billion. With that money, we will save the taxpayers \$12 billion—because we intend to increase student aid by 10 additional billion dollars. What I'm telling you is, the students are getting the money, and we're making the program a lot more efficient for the taxpayers.

The Deficit Reduction Act also reauthorizes welfare reform for another 5 years. Welfare reform has proved a tremendous success over the past decade. By insisting on programs that require work and self-sufficiency in return for Federal aid, we've helped cut welfare cases by more than half since 1996. Now we're building on that progress by renewing welfare reform with a billion-dollar increase in child care funding and new grants to support healthy marriage and responsible fatherhood programs.

One of the reasons for the success of welfare reform is a policy called charitable choice, which allows faith-based groups that provide social services to receive Federal funding without changing the way they hire. Ten years ago, Congress made welfare the first Federal program to include charitable choice. The bill I sign today will extend charitable choice for another 5 years

and expand it to the new healthy marriage and responsible fatherhood programs. Appreciate the hard work of all who supported the extension of charitable choice, including the good-hearted men and women of the faith-based community who are here today. By reauthorizing welfare reform with charitable choice, we will help millions more Americans move from welfare to work and find independence and dignity and hope.

The message of the bill I sign today is straightforward: By setting priorities and making sure tax dollars are spent wisely, America can be compassionate and responsible at the same time. Spending restraint demands difficult choices, yet making those choices is what the American people sent us to Washington to do. One of our most important responsibilities is to keep this economy strong and vibrant and secure for our children and our grandchildren. We can be proud that we're helping to meet that responsibility today.

Now I ask the Members of the Congress to join me as I sign the Deficit Reduction Act of 2005.

NOTE: The President spoke at 3:31 p.m. in the East Room at the White House. S. 1932, approved February 8, was assigned Public Law No. 109-171.

## Statement on Signing the Deficit Reduction Act of 2005 *February 8, 2006*

Today, I have signed into law S. 1932, the "Deficit Reduction Act of 2005." The Act reduces unnecessary spending of taxpayer dollars, reflecting a commitment to fiscal responsibility.

The executive branch shall construe section 1936(d)(2) of the Social Security Act as enacted by section 6034 of the Act, which purports to make consultation with a legislative agent a precondition to execu-

tion of the law, to call for but not mandate such consultation, as is consistent with the Constitution's provisions concerning the separate powers of the Congress to legislate and the President to execute the laws.

Sections 5006(b) and 5008(c) of the Act, and section 401A(a)(2)(C) of the Higher Education Act of 1965 as enacted by section 8003 of the Act, call for executive

branch officials to submit legislative recommendations to the Congress. The executive branch shall construe such provisions in a manner consistent with the constitutional authority of the President to supervise the unitary executive branch and to recommend for congressional consideration

such measures as the President shall judge necessary and expedient.

GEORGE W. BUSH

The White House,  
February 8, 2006.

## Message to the Congress Reporting on the Executive Order on Blocking Property of Certain Persons Contributing to the Conflict in Cote d'Ivoire *February 8, 2006*

*To the Congress of the United States:*

Consistent with subsection 204(b) of the International Emergency Economic Powers Act, 50 U.S.C. 1703(b) (IEEPA), and section 301 of the National Emergencies Act, 50 U.S.C. 1631 (NEA), I hereby report that I have issued an Executive Order (the "order") blocking the property of certain persons contributing to the conflict in Cote d'Ivoire. In that order, I declared a national emergency to deal with the unusual and extraordinary threat to the national security and foreign policy of the United States posed by that conflict, as described below.

The United Nations Security Council, in Resolution 1572 of November 15, 2004, expressed deep concern over the resumption of hostilities in Cote d'Ivoire, the public incitement of hatred and violence, and the repeated violations of the ceasefire agreement of May 3, 2003. United Nations Security Council Resolution (UNSCR) 1572 determined that the situation in Cote d'Ivoire poses a threat to international peace and security in the region and called on member States to take certain measures against persons responsible for the continuing conflict. The United Nations Security Council has continued to express serious concern at the persistence of the crisis in Cote d'Ivoire and of obstacles to the peace and national reconciliation process from all

sides in UNSCRs 1643 of December 15, 2005, and 1652 of January 24, 2006.

Despite the intervention and efforts of the international community, there have been massacres of large numbers of civilians, widespread human rights abuses, significant political violence and unrest, and attacks against international peacekeeping forces in Cote d'Ivoire. Such activity includes the killing of large numbers of civilians in Korhogo in June 2004, and in Abidjan in March 2004; significant violence and unrest, including public incitements to violence, in Abidjan in November 2004; human rights violations, including extrajudicial killings, in western Cote d'Ivoire in April and June 2005; attacks on a police station and prison in July 2005 in Anyama and Agboville, and violent protests in Abidjan and attacks on U.N. and international nongovernmental organization facilities in western Cote d'Ivoire in January 2006. Also, notwithstanding the Linas-Marcoussis Agreement signed by the Ivorian political forces on January 24, 2003, the related ceasefire agreement of May 3, 2003, the Accra III Agreement of July 30, 2004, the Pretoria Agreement of April 6, 2005, and the Declaration on the Implementation of the Pretoria Agreement of June 29, 2005, consolidating the implementation of the Linas-Marcoussis peace and

national reconciliation process, Ivorian parties have continued to engage in military operations and attacks against peacekeeping forces in Cote d'Ivoire leading to fatalities.

Pursuant to the IEEPA and the NEA, I have determined that these actions and circumstances constitute an unusual and extraordinary threat to the national security and foreign policy of the United States and declared a national emergency to deal with that threat and have issued an Executive Order to deal with the threat to U.S. national security and foreign policy posed by the situation in or in relation to Cote d'Ivoire.

The order blocks the property and interests in property in the United States, or in the possession or control of United States persons, of the persons listed in the Annex to the order, as well as of any person determined by the Secretary of the Treasury, after consultation with the Secretary of State,

- to constitute a threat to the peace and national reconciliation process in Cote d'Ivoire, such as by blocking the implementation of the Linas-Marcoussis, Accra III, and Pretoria Agreements;
- to be responsible for serious violations of international law in Cote d'Ivoire;
- to have directly or indirectly supplied, sold or transferred to Cote d'Ivoire arms or any related materiel or any assistance, advice, or training related to military activities; or
- to have publicly incited violence and hatred contributing to the conflict in Cote d'Ivoire.

The designation criteria will be applied in accordance with applicable domestic law, including where appropriate, the First Amendment to the United States Constitution. The order also authorizes the Sec-

retary of the Treasury, after consultation with the Secretary of State, to designate for blocking any person determined to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services in support of, the activities listed above or any person listed in or designated pursuant to the order. I further authorized the Secretary of the Treasury, after consultation with the Secretary of State, to designate for blocking any person determined to be owned or controlled by, or acting or purporting to act for or on behalf of, directly or indirectly, any person listed in or designated pursuant to the order. The Secretary of the Treasury, after consultation with the Secretary of State, is also authorized to remove any persons from the Annex to the order as circumstances warrant.

I delegated to the Secretary of the Treasury, after consultation with the Secretary of State, the authority to take such actions, including the promulgation of rules and regulations, and to employ all powers granted to the President by the IEEPA and the United Nations Participation Act, as may be necessary to carry out the purposes of the order. All executive agencies are directed to take all appropriate measures within their authority to carry out the provisions of the order.

The order, a copy of which is enclosed, became effective at 12:01 a.m. eastern standard time on February 8, 2006.

GEORGE W. BUSH

The White House,  
February 8, 2006.

NOTE: The Executive order is listed in Appendix D at the end of this volume.

## Remarks to the National Guard Association of the United States February 9, 2006

Please be seated. Thanks for that warm welcome. I'm delighted to be here with the men and women of the National Guard Association of the United States. For 128 years, the National Guard Association has been fighting for the citizen soldiers who fight for America. I appreciate your service, and I appreciate you supporting those that America depends on in times of crisis. Our Nation is safer because citizens are willing to put on the uniform and defend our freedom.

The first thing I want to tell you is America is grateful for the service of our guards men and women, and I'm proud to be their Commander in Chief.

I thank Brigadier General Bob Taylor for his service and for his introduction. I appreciate Congressman Jim Gibbons, who is with us today, from the great State of Nevada. Thanks for coming, Congressman. I'm proud you're here. Thanks for supporting the Guard.

I thank Brigadier General Steve Koper, retired president of the National Guard Association of the United States. General, thank you for greeting me. I'm proud to be here with Major General Roger Lempke, the president of the Adjutants General Association. I thank my friend Lieutenant General Danny James. One of the interesting things about my life, I've been the Commander in Chief twice: today and when I was the Governor of Texas. And Danny and I worked together for the good of our State. Thanks for coming, Danny; glad to see you brought your beautiful wife too.

I want to thank Lewis King; he's the Chief Warrant Officer, retired. He helped raise the money for this box, and I appreciate it very much, Lewis, and all those who contributed to it. I want to thank Charles Parks, the sculptor. Charles caught me before my hair went gray. [*Laughter*]

I also want to thank Lanny McNeely for joining us today; he's the head of the 147th Wing Guard at Ellington, where I used to serve. And I appreciate you coming, Colonel. Thanks for being here. Thanks for greeting me when I arrived there, on Air Force One there at Ellington—checking on my mother and father on a regular basis. I also want to thank Chuck Rodriguez, who's the TAG of Texas. When you're a Texan, you always got to make sure you pay attention to your fellow Texans.

And thank you all for having me. I want to share with you some thoughts about the war on terror. Before I do, I want to remind our country that the Guard has been fighting for America since before America was a nation. From the First Muster in 1636 to today's global war on terror, Americans have counted on the Guard to protect our land and defend our way of life. The role of the Guard in our military is unique. It's the only part of the Armed Forces that serves both the State and the Nation. And in the past year, Americans have witnessed the courage of our guards men and women at home and abroad.

When Hurricane Katrina struck the gulf coast last year, more than 40,000 guards men and women rushed to the impact zone; it was the largest stateside deployment in National Guard history. They conducted search and rescue operations, distributed food and water, provided emergency medical care, protected communities from criminality, and worked around the clock to repair homes and restore power. Guard units from all 50 States, three U.S. territories, and the District of Columbia provided assistance. And together, they saved lives and helped evacuate over 175,000 people stranded by the storm.

When the Pennsylvania National Guard came to repair the roof of a Louisiana woman, she said this to the soldiers: "That's

a long way to come to help us. We're really grateful. You boys are going to heaven, I tell you." [Laughter] When tragedy strikes, Americans know they can count on the men and women of the National Guard.

As you protect your neighbors from natural disasters, you're also protecting the American people from terrorist dangers. Since September the 11th, 2001, more than 260,000 members of the National Guard have been mobilized for various missions in the war on terror. At this moment, guards men and women are training the Afghan National Army, standing watch over the world's most dangerous terrorists in Guantanamo Bay, Cuba, and taking the fight to the enemy in Iraq. Across the world and on every front, the men and women of the Guard are serving with courage and determination. And they're bringing us to victory in the global war on terror.

Your service is vital to the security of the country and the peace of the world, and that service would not be possible without the support of the Guard families. Guard loved ones miss their husband and wife or son and daughter; they worry when our guardspeople are deployed overseas. By standing behind our guards men and women, the families of the Guard serve our country as well, and America appreciates their service.

Our Nation also depends on the commitments of the employers of the guards men and women. In offices and schools and factories across America, organizations do without the talents of some really fine people that have been called upon to protect our Nation. Businesses that are putting patriotism ahead of profit deserve the gratitude of all Americans.

Each of the guards men and women have stepped forward to defend our country, and our country owes them something in return. We've taken a number of steps to improve the callup process so it's more respectful to the guards men and women and their families. In most cases, we're now giving you at least 30 days notification be-

fore mobilization so that you and your families have time to make arrangements. We're working to give you as much certainty as possible about the length of mobilizations so you can know when you will be able to resume civilian life. We're working to minimize the number of extensions and repeat mobilizations. We're working to ensure that you and your families are treated with the dignity they deserve.

We're also taking steps to improve the quality of life. We've expanded health care benefits for Guard and Reserve forces and their families, giving you access to the military's TRICARE system. We're also expanding access to education for America's citizen soldiers. I was proud to sign legislation providing our Guard and Reserve forces between 40 to 80 percent of education benefits available to Active-Duty Forces—depending on the length of their mobilization in the war on terror. We've also tripled the amount that can be paid for re-enlisting in the National Guard or Reserve. The last month, I signed into law a new retention bonus for guardsmen and reservists with critical skills needed in this war on terror. Our guardsmen and reservists are standing up for America, and you need to know that this administration supports you in your efforts.

We're working to give you the tools and resources you need to prevail in the war on terror and meet State and homeland security missions as well. Our 2007 budget that I just submitted to the Congress increases funding for our men and women of Armed Forces by \$28.5 billion. That includes vital funds to help the National Guard meet its responsibilities during this war.

The Army National Guard currently has about 330,000 soldiers, and my 2007 budget funds the Guard at that level. As the Guard recruits above that level, we'll make certain that there is funding in place for every citizen who steps forward to wear the uniform. And to ensure that the Army and our Air National Guard are ready for

any challenge, my budget more than doubles funding for equipment and modernization over the next 5 years. Any time we've got folks in harm's way, they deserve the best: the best pay possible, the best training possible, and the best equipment possible. It's a commitment this administration has made since I've been the Commander in Chief, and it's a commitment we will keep.

We remain a nation at war. I wish I could report, you know, a different sentence to you. But my job as the President of the United States is to keep the American people fully informed of the world in which we live. In recent months, I've spoken extensively about our strategy for victory in Iraq. Today I'm going to give you an update on the progress that we're making in the broader war on terror, the actions of our global coalition to break up terrorist networks across the world, plots we've disrupted that have saved American lives, and how the rise of freedom is leading millions to reject the dark ideology of the terrorists and laying the foundation of peace for generations to come.

On September the 11th, 2001, our Nation saw that vast oceans and great distances could no longer keep us safe. I made a decision that day that America will not wait to be attacked again. And since that day, we've taken decisive action to protect our citizens against new dangers. We're hunting down the terrorists using every element of our national power: military, intelligence, law enforcement, diplomatic, and financial. We're clarifying the choice facing every nation: In this struggle between freedom and terror, every nation has responsibilities, and no one can remain neutral.

Since September the 11th, we've led a broad coalition to confront the terrorist threat. Four weeks after the attacks, America and our allies launched military operations to eliminate the terrorists' principal sanctuary in the nation of Afghanistan. I told the world that if you harbor a terrorist, you're equally as guilty as the terrorists. And when an American President says

something, he better mean what he said; I meant what I said.

We removed a cruel regime that oppressed its people, brutalized women and girls, and gave safe haven to the terrorists who attacked America. Because we acted, the terror camps in Afghanistan have been shut down and 25 million people have tasted freedom, many for the first time in their lives. Afghanistan now has a democratically elected President, a new National Assembly, and the beginnings of a market economy. Women are working and starting their own businesses. Boys and girls are back in school. The Afghan people are building the institutions of a lasting democracy and the foundations of a hopeful future for their children and their grandchildren.

Afghanistan still faces serious challenges, from illicit drug trafficking to continued violence from Al Qaida and the remnants of the Taliban regime. So the international community is working together to help Afghanistan's young democracy succeed. Earlier this month, Prime Minister Tony Blair hosted over 40 nations and 9 international organizations for a conference in London, where they pledged \$10.5 billion in aid to Afghanistan. With the help of 35 nations, NATO is leading the International Security Assistance Force in Afghanistan.

The United States, Britain, Norway, Germany, Italy, Spain, Lithuania, Canada, the Netherlands, and New Zealand are all leading Provincial Reconstruction Teams. These teams are helping the Afghan Government extend its authority and provide security in provinces all across the country. Our coalition has trained nearly 27,000 Afghan soldiers and more than 56,000 Afghan police, so they can take the fight to the terrorists and eventually provide security for this new democracy. Afghan forces are risking their lives to fight our common enemy, and coalition forces are proud to serve along with such courageous and bold and determined allies.

Our coalition is also working to root out and destroy terrorist networks all around

the world. More than 90 nations—nearly half the world—are now cooperating in the global campaign to dry up terrorist financing, hunt down terrorist operatives, and bring terrorist leaders to justice.

Some said that an aggressive strategy of bringing the war to the terrorists would cost us international support; it would drive nations from our coalition. The opposite has happened. Today, more governments are cooperating in the fight against terror than ever before. And in one of the most significant developments of this war, many nations that once turned a blind eye to terror are now helping lead the fight against it.

A little over 4 years ago, Pakistan was only one of three countries in the world that recognized the Taliban regime in Afghanistan. Today, Pakistan forces are risking their lives in the hunt for Al Qaida. President Musharraf has faced several attempts on his life since his courageous decision to join the war on terror. Before September the 11th, terrorist supporters were operating with relative ease in Saudi Arabia, where fundraisers and facilitators were providing money and logistical support to Al Qaida. Since the Riyadh bombings in May of 2003, the Saudi Government has recognized that it is a prime target of the terrorists. And in the past 2½ years, Saudi forces have killed or captured nearly all of the terrorists on their most-wanted list. They've reduced the flow of money to terror groups and arrested hundreds of radical fighters bound for Iraq.

These governments are taking important steps to confront terror, and as they do, we will continue to encourage them to take the path of political reform. By respecting the rights and choices of their own people, these nations can marginalize the extremists, strengthen their societies, and eliminate the conditions that feed radicalism.

These and other governments around the world are stepping forward to fight the terrorists because they know the lives of their citizens are at stake. President Musharraf

said something interesting: "Terrorism threatens to destabilize all modern societies. It cannot be condoned for any reason or cause. The people of Pakistan have suffered from terrorism, and we are making our contribution to the fight against terrorism." President Musharraf is right. In the war against terror, there is no separate peace, and no nation can stand on the sidelines.

By standing together, the United States and our partners are striking real blows against the enemy. Since September the 11th, 2001, our coalition has captured or killed Al Qaida managers and operatives in over two dozen countries. That includes many of Al Qaida's operational commanders, the senior leaders responsible for day-to-day planning of terrorist activities across the globe. In November 2001, our coalition forces killed Muhammad Atif with an air strike in Afghanistan. In March 2003, his replacement, Khalid Sheikh Mohammed, was captured in Pakistan. In May 2005, the man who took over for him, a terrorist named al-Libbi, was captured in South Asia.

The terrorists are living under constant pressure, and this adds to our security. When terrorists spend their days working to avoid death or capture, it's harder for them to plan and execute new attacks on our country. By striking the terrorists where they live, we are protecting the American homeland.

Since September the 11th, the United States and our coalition partners have disrupted a number of serious Al Qaida terrorist plots, including plots to attack targets inside the United States. Let me give you an example. In the weeks after September the 11th, while Americans were still recovering from an unprecedented strike on our homeland, Al Qaida was already busy planning its next attack. We now know that in October 2001, Khalid Sheikh Mohammed—the mastermind of the September the 11th attacks—had already set in motion a plan to have terrorist operatives hijack

an airplane, using shoe bombs to breach the cockpit door, and fly the plane into the tallest building on the west coast. We believe the intended target was Liberty [Library]\* Tower in Los Angeles, California.

Rather than use Arab hijackers as he had on September the 11th, Khalid Sheikh Mohammed sought out young men from Southeast Asia, whom he believed would not arouse as much suspicion. To help carry out this plan, he tapped a terrorist named Hambali, one of the leaders of an Al Qaida affiliated group in Southeast Asia called JI. JI terrorists were responsible for a series of deadly attacks in Southeast Asia, and members of the group had trained with Al Qaida. Hambali recruited several key operatives who had been training in Afghanistan. Once the operatives were recruited, they met with Usama bin Laden, and then began preparations for the west coast attack.

Their plot was derailed in early 2002 when a Southeast Asian nation arrested a key Al Qaida operative. Subsequent debriefings and other intelligence operations made clear the intended target and how Al Qaida hoped to execute it. This critical intelligence helped other allies capture the ringleaders and other known operatives who had been recruited for this plot. The west coast plot had been thwarted. Our efforts did not end there. In the summer of 2003, our partners in Southeast Asia conducted another successful manhunt that led to the capture of the terrorist Hambali.

As the west coast plot shows, in the war on terror, we face a relentless and determined enemy that operates in many nations, so protecting our citizens requires unprecedented cooperation from many nations as well. It took the combined efforts of several countries to break up this plot. By working together, we took dangerous terrorists off the streets; by working to-

gether, we stopped a catastrophic attack on our homeland.

Across the world, our coalition is pursuing the enemy with relentless determination. And because of these efforts, the terrorists are weakened and fractured, yet they're still lethal. We cannot let the fact that America hasn't been attacked in 4½ years, since September the 11th, lull us into an illusion that the threats to our Nation have disappeared. They have not. Just last month, we heard Usama bin Laden declare his intention to attack America again. Our military, law enforcement, homeland security, and intelligence professionals take those threats very seriously, and they're working around the clock, day and night, to protect us. We are safer for their efforts, but we're not yet safe. America remains at risk, so we must remain vigilant. We will stay on the offensive. We will hunt down the terrorists, and we will never rest until this threat to the American people is removed.

We will continue to take the fight to the enemy. Yet we must also recognize in the long run, victory will require more than military means alone. Ultimately, the only way to defeat the terrorists is to defeat their dark vision of hatred and fear by spreading the hope of freedom to troubled regions of the world. The terrorists have an ideology. They share a hateful vision that rejects tolerance and crushes all dissent, a world where women are oppressed and children are indoctrinated and those who reject their ideology of violence and extremists are threatened and often murdered.

The terrorists have aims. They seek to impose their heartless ideology of totalitarian control throughout the Middle East and arm themselves with weapons of mass murder. Their stated goal is to overthrow moderate governments, take control of countries, and use them as safe havens to launch attacks against America. When an enemy states a goal and a strategy and tactics, we must take their word seriously.

---

\* White House correction.

To achieve their aims, the terrorists need popular support. We know this from the terrorists' own words. In a letter to his chief of operations in Iraq, the terrorist Zawahiri wrote that popular support is, quote, "a decisive factor between victory and defeat. In the absence of this popular support, the movement would be crushed in the shadows." He went on to say, "Therefore, our planning must strive to involve the Muslim masses in the battle."

So a key part of the terrorists' strategy is to feed public resentment by convincing people across the Muslim world that the future holds just two choices: one of Islam and holiness and virtue; and one of Western decadence, immorality, and imperialism. They use every opportunity to promote this false choice. Sometimes they spread blatant lies about America. Other times, it is American mistakes—like the abuses of Abu Ghraib—that give them ammunition in their campaign to foment anti-Western sentiment and rally Muslims to support their dark ideology.

The problem for the terrorists is they cannot hide the inhumanity of their ideology. Because they lack the military strength to challenge us directly, they have turned to the weapon of fear. They seek to break our will with stunning acts of violence. They don't understand America. They cannot shake our will. We will stay on the hunt. We will never give in, and we will win this war on terror.

In the terrorists' campaign of violence and destruction, the majority of their victims since 9/11 have been innocent Muslims. When the people in the Arab world see Al Qaida murdering Iraqi children or blowing up mourners in an Iraqi mosque, their outrage grows. And as the terrorists spread violence in places like Riyadh and Istanbul and Sharm el-Sheikh and Jakarta and Bali, the people of those countries are starting to turn against the terrorists.

After terrorists bombed a Palestinian wedding at a hotel in Amman last November, thousands of Jordanians took to the

street and rallied against Al Qaida. One protester carried a sign that read, "Jordan's Nine-Eleven." Others chanted, "This is not Islamic; this is terrorism!" The outrage even reached the Jordanian town of Zarqa, birthplace of the terrorist Zarqawi, who heads Al Qaida in Iraq and who was the mastermind of the Jordan bombing. A cousin standing outside the Al Qaida leader family home said this: "We hate him even more than other people do now." Zarqawi was even expelled by his own tribesmen, hundreds of whom declared in a letter to a Jordanian newspaper, quote, "We renounce his actions, pronouncements, or whatever he approves of. We disown him until judgment day."

Before the bombings, most Jordanians reportedly sympathized with Al Qaida. Today, only a minority sympathize with Al Qaida, and most Jordanians say its activities are not in conformity with the teachings of Islam. Similar shifts in public opinion are beginning to appear in other parts of the Muslim world. From Pakistan to Indonesia to Al Qaida's former home base of Afghanistan, more people now say they oppose the terrorists and their tactics.

These are positive signs, but we still have a long way to go. So we'll continue to oppose the terrorists' ideology by offering the hopeful alternative of political freedom and peaceful change. We're working to spread the hope of liberty across the broader Middle East, because we've learned the lessons of history: Free nations don't wage wars of aggression; they don't give safe haven to terrorists to attack other democracies. Free nations are peaceful nations. And when democracy takes hold, nations replace resentment with hope, respect the rights of their citizens and their neighbors, and join the fight against the terrorists. Every step toward freedom in the world makes this country safer, so across the world, the United States of America is acting boldly in freedom's cause.

We're standing with the brave people of Iraq as they risk their lives to build a strong

democracy in the heart of the Middle East. And their courage is changing their country, and it's changing the region, and it's changing the world. Before January 2005 elections, the terrorists threatened anybody who voted with death. The Iraqi people defied the threats and went to the polls in that election and two other elections last year, each with larger and broader participation than the one that came before. Iraqis are rejecting terror; they're rejecting the violence. And they want to replace terror and violence with openness and democracy. They have made their decision, and the world saw their decision. They're showing the world that the terrorists' ideology cannot compete on a level playing field with the ideology of freedom.

Iraqis still face challenges, and they're serious. The terrorists and Saddamists continue to sow violence and terror, and they will continue fighting freedom's progress with all the hateful determination they can muster. The Iraqis still have to overcome long-standing ethnic and religious tensions, and they must build the institutions of a free society that will serve all the people, not narrow political or religious interests. These challenges ahead are complex and difficult, yet the Iraqis are determined to overcome them, and our coalition is determined to help the Iraqi people succeed.

We're carrying out a clear strategy for victory in Iraq. First, we're helping the Iraqis build an inclusive government, so that old resentments will be eased and the insurgency marginalized. Second, we're continuing reconstruction efforts and helping Iraqis build a modern economy, so all Iraqi citizens can experience the benefits of freedom. And third, we're striking the terrorist targets. We're after the terrorists, and at the same time, we're training Iraqi forces, which are becoming increasingly capable of defeating the enemy. The Iraqi forces show courage every day. We are proud to be the allies in the cause of freedom. As Iraqis stand up, America and our coalition will stand down.

Many of you are concerned about troop levels in Iraq. Those decisions will be made based upon conditions on the ground, based upon the recommendations of our military commanders, not based upon politics in Washington, DC.

The courage of Iraqis is inspiring others across the broader Middle East to claim their freedom as well. And the message is going forth, from Damascus to Tehran, that the future of the Middle East belongs to freedom. As liberty spreads in this vital region and freedom produces opportunity and hope for those who have not known it, the terrorist temptation will start to fall away. And as more nations claim their freedom, we will gain new allies in the war on terror and new partners in the battle for peace and moderation in the Muslim world.

Before that day comes, there will be more days of testing. The terrorists remain brutal and determined, and they still have some resources at their disposal. The attacks in London and Madrid and other cities are grim reminders of how lethal Al Qaida remains. Money is still flowing to radical mosques and madrassas, which are still turning out new terrorist recruits. Some countries, like Syria and Iran, still provide terrorists with support and sanctuary. And the terrorists are sophisticated at spreading propaganda and using spectacular attacks to dominate our evening news.

Yet from the vantage point of a terrorist sitting in a cave, the future seems increasingly bleak. Consider how the world looks 4½ years into the war on terror: The terrorists have lost their home base in Afghanistan and no longer have control of a country where they can train recruits and plot new attacks; many of their leaders are dead or in custody, and the rest of them are on the run; they've been reduced to using messengers to communicate; they're running low on funds and have been forced to beg the terrorists in Iraq to send money; countries that once allowed them free reign are now on the hunt.

Their efforts to divide the West have largely failed, and the vast majority of the world's governments are standing firm and working together in the fight against those terrorists. Iraqis are forming a unity government instead of giving into disunity, instead of fighting the civil war that the terrorists hoped to foment. Iraqi Sunnis are joining the political process. The success of democracy in Iraq and Afghanistan is inspiring calls for change across the region. And the terrorists' strategy of attacking innocent Muslims is beginning to backfire and expose them for what they are: murderers with no respect for human life and human dignity.

Despite the violence and the suffering the terrorists are wreaking, we're winning the war on terror. Yet victory will require more courage and sacrifice. In this war, we have said farewell to some very good men and women, including more than 360 heroes of the National Guard. We hold their loved ones in our hearts, and we lift them up in our prayers. These brave Americans gave their lives for a cause that is just and necessary for the security of our country. And their sacrifice is sparing millions from lives of tyranny and sorrow.

And now we will honor their sacrifice by completing the mission. And in this long run, we can be confident in the outcome of this struggle, because we've seen the power of freedom to defeat tyranny and terror before, and because we have on our side the greatest force for freedom in the history of the world: the men and women of the United States Armed Forces.

One of the great strengths of our military is that it's an all-volunteer army and all-volunteer force. And since the attacks of September the 11th, 2001, nearly 1.5 million Americans has stepped forward to put on our Nation's uniform, including nearly 290,000 who have joined the National Guard. Nearly 1.3 million more American

troops have made the courageous decision to re-enlist and stay in the fight, including more than 350,000 members of the National Guard.

These brave Americans saw the future the terrorists intend for us, and they said, "Not on my watch." Four-and-a-half years into the fight, America's Armed Forces are determined, experienced, and ready for any challenge, and our Nation is blessed to have such brave defenders. All of you are bringing honor to the uniform and pride to our country and security to the American people. America will always be grateful for your service in the cause of freedom.

Thank you for letting me come today. God bless you and your families, and may God continue to bless our country.

NOTE: The President spoke at 10:03 a.m. at the National Guard Memorial Building. In his remarks, he referred to Brig. Gen. Robert V. Taylor, USA, assistant adjutant general, Michigan Army National Guard—Army, and chairman, National Guard Association of the United States; Lt. Gen. Daniel James, USAF, director, Air National Guard, and his wife, Dana; Maj. Gen. Charles G. Rodriguez, USA, adjutant general, Texas National Guard; President Hamid Karzai of Afghanistan; Prime Minister Tony Blair of the United Kingdom; President Pervez Musharraf of Pakistan; Abu Faraj al-Libbi, senior Al Qaida associate arrested in Pakistan on April 30, 2005; Nurjaman Riduan Isamuddin (also known as Hambali), Al Qaida's chief operational planner in Southeast Asia, who was captured in Thailand on August 11, 2003; Usama bin Laden, leader of the Al Qaida terrorist organization; and Ayman Al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al Qaida associate. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks Following Discussions With President Lech Kaczynski of Poland February 9, 2006

*President Bush.* Mr. President, welcome to the Oval Office. It's really good to have you here. We have just had a extensive discussion about important issues. After this press statement, we'll go have lunch and continue our discussions. And we've got a lot to discuss, because we're strong allies and friends. We're friends in liberty. We believe in peace.

I told the President it's amazing to be sitting with somebody who knows the difference between living in a society that is not independent and not free, and one that—and now he's the President of a free country. I thanked the President and the Polish people for their support of the democracy movement in Iraq.

We had a very interesting discussion about NATO and the European Union. You can be an active member of the EU, a loyal member of the EU, and a friend of the United States at the same time. I asked the President his advice on Ukraine. That's what friends do; they share information and share strategic thoughts.

We talked about the importance for commercial ties. We'll continue those discussions over lunch. The President of Poland comes to a country that respects Poland. There's a lot of Polish Americans that still got great pride for the homeland. We congratulate you on your victory and welcome you.

Thanks for coming.

*President Kaczynski.* President Bush has spoken of the subject of our talks. The first part has been extended, to a certain extent, and we will continue our discussions during lunch. We have discussed issues relating to NATO, the European Union, Belarus, Ukraine, and Russia and Iraq and Afghanistan. In other words, to speak—say very briefly, we've discussed all issues that both countries are interested in.

Mr. President and myself have discussed issues relating to freedom in Ukraine and Belarus. And the support of the United States for all actions that are leading to freedom in Ukraine and Belarus are very important for Poland at the same time. There have been certain signals that might lead to an improvement of relations between the Republic of Poland and the Russian Federation. We have no certainty yet, but these signals we have received, and we're hoping for an improvement in relations between Poland and Russia.

We shall continue our talks in a few minutes.

*President Bush.* Thank you, sir. Thank you.

NOTE: The President spoke at 11:57 a.m. in the Oval Office at the White House. President Kaczynski spoke in Polish, and his remarks were translated by an interpreter.

## Statement on the Resignation of Claude Allen as Assistant to the President for Domestic Policy February 9, 2006

Claude Allen has been a trusted adviser since 2001. As Deputy Secretary of Health and Human Services, he worked hard to

improve the health and welfare of all Americans. During the past year, he has served as my top domestic policy adviser at the

White House and has helped develop policies that will strengthen our Nation's families, schools, and communities.

Claude is a good and compassionate man, and he has my deep respect and my

gratitude. I thank him for his many years of principled and dedicated service to our country. Laura and I wish Claude, Jann, and their family all the best.

## Remarks to the House Republican Conference in Cambridge, Maryland February 10, 2006

Thank you all. Please be seated. Thank you very much. It's an honor to be back here again. Mr. Speaker, thank you for your leadership and your friendship. One of the real joys of being in Washington is to be able to work with Speaker Hastert. He is a straightforward—[*applause*]. Some of my buddies at home say, "What's he like?" I say, "He's a straightforward, no-nonsense kind of guy who's here to get things done." And, Mr. Speaker, thank you for your leadership and your friendship.

I congratulate the majority leader, John Boehner; looking forward to working with you, John. Congratulations to you. I appreciate Roy Blunt. He's a—right after I called Boehner from Air Force One, I called Blunt, and I said, "I want to say two things to you: One, thanks for waging the race for the majority leader; and second, thanks for passing the reconciliation package." He said, "If I could count votes as good on my race as I did on the reconciliation package"—[*laughter*]. But I appreciate a man who is gracious in defeat. But he's still got an important position, and I'm looking forward to working with you, Roy. Thank you.

I appreciate the rest of the folks up here. Thank you all for coming. It is an honor to serve our country with you. I hope you feel that way as well. There is nothing more heartwarming and exhilarating than to represent the good people of the United States of America here in Washington. I want to thank you all for your service. I particularly want to thank your families for your service

to our country as well. The cause is noble and worthwhile.

A couple of things I want to say, and then I'll be glad to answer some of your questions. First, the state of our Union is strong, and it's getting stronger. And I want to thank you all for putting policies in place that, on the one hand, spread prosperity throughout the country and, at the same time, spread freedom and peace throughout the world.

You know, we've overcome a lot in this country. If you really think about what this economy has been through, it's amazing how resilient and flexible and strong our economy is. We're growing at faster rates than any major industrialized nation in the world. We've added over 4.5 million new jobs since April of 2003. The national unemployment rate is 4.7 percent. Productivity is high.

One of the things we've been working together is to promote an ownership society. More people own a home than ever before in our Nation's history. More minority families own a home than ever before in our Nation's history. Small businesses are thriving. The economic plan we put in place is working. And it starts with saying to the American people, "We trust you with your own money."

We've got a record, and it's a record of accomplishment. We have worked closely together to achieve results for the American people. We've been fiscally wise with the people's money. I want to thank you

for that bill you sent me that I signed yesterday. It's hard work to cut out and cut back on programs that don't work. Every program sounds beautiful in Washington, DC, until you start analyzing the results. And I want to thank you for being wise with the people's money.

You know, you hear people in Washington, DC, saying, "Well, we've got to solve the deficit, and the best way to do it is raise the people's taxes." We understand that's not the way Washington works. What happens is, they'll raise your taxes and figure out new ways to spend your money. The best way to reduce the deficit is to keep progrowth policies in place and be wise with the taxpayers' money.

The House passed a good piece of legislation to help us secure our borders, and I want to thank you for that. The House passed good energy legislation last year. The House passed good tort reform last year, including class-action reform and bankruptcy. The House passed the PATRIOT Act last year. The House passed CAFTA last year. Last year was a year of accomplishment for the House of Representatives, thanks to the leadership here at the table.

And we're ready to lead again. We don't fear the future because we're going to shape the future of the United States of America. And that means supporting our troops in harm's way. I want to thank you for supporting the troops last year, and I look forward to working with you to support our troops this coming year.

We'll continue to lead. And I want to appreciate your steadfast support in the war on terror. Our most important responsibility is to protect the American people from harm. And I want to thank the Members of Congress for working with the adminis-

tration to protect the American people from future attack.

You know, in my State of the Union—thanks for paying attention to it when I got up there the other day—[laughter]—I talked about how best to keep the country competitive. You know, some would lose confidence in the capacity of this country to lead, and kind of hide behind walls. That's not what we think. We're confident in America, and we're confident in our people, and we're confident that we can work together to put good policies in place that will keep this country the world's leader when it comes to the economy. So I'm looking forward to working with you to continue to be fiscally sound with the people's money and to put those tax cuts we put in place in a permanent status.

I'm looking forward to working with you on expanding health savings accounts so we can strengthen the doctor-patient relationship. I'm looking forward to working with you on making sure that we become less dependent on Middle Eastern oil by promoting alternative sources of energy. I'm looking forward to working with you on making sure our education system remains strong and our kids can learn math and science so we remain the most competitive nation in the world.

I'm looking forward to working with you, and I'm confident we'll continue the success we have had together. And so I've come to say thanks for your hard work in the past, and thanks for what we're going to do to make this country—to continue to be the greatest country on the face of the Earth.

God bless your work. May God continue to bless our country.

NOTE: The President spoke at 12:23 p.m. at the Hyatt Regency Chesapeake Bay.

## The President's Radio Address *February 11, 2006*

Good morning. Today I want to talk to you about the new Medicare prescription drug coverage that went into effect on January 1st of this year.

When I came into office, I found a Medicare system that was antiquated and not meeting the needs of America's seniors. The system would pay tens of thousands of dollars for a surgery but not a few hundred dollars for the prescription drugs that could have prevented the surgery in the first place. So working with Congress, we passed critical legislation that modernizes Medicare, provides seniors with more choices, and gives seniors better access to the prescription drugs they need.

Since the program went into effect 6 weeks ago, more than 24 million people with Medicare now have prescription drug coverage, and hundreds of thousands more are enrolling each week. The competition in the prescription drug market has been stronger than expected and is lowering costs for taxpayers and seniors alike. This year, the Federal Government will spend 20 percent less overall on the Medicare drug benefit than projected just last July. The average premium that seniors pay is a third less than had been expected—just \$25 per month instead of \$37 per month. And the typical senior will end up spending about half of what they used to spend on prescription drugs each year.

Last month in Oklahoma City, a senior named Dorothy Brown signed up for Medicare prescription drug coverage. Dorothy has six prescriptions, and previously she paid about \$300 a month for her medicines. A Medicare enrollment counselor at a shopping mall helped Dorothy log on to the Medicare web site, where she typed the information on Dorothy's Medicare card and listed Dorothy's prescriptions. When the counselor was finished, the computer showed five different plans that fit

Dorothy's needs. Dorothy chose the least expensive plan, and now, instead of paying \$300 a month, she will pay about \$36 a month for her medicines. As a result, Dorothy will save more than \$3,000 this year.

For Dorothy and for the vast majority of our seniors, the new prescription drug program is working well. Still, when you make a big change in a program involving millions of people, there are bound to be some challenges, and this has been the case with the new drug coverage. Some people had trouble the first time they went to the pharmacy after enrolling. Information for some beneficiaries was not transferred smoothly between Medicare, drug plans, and the States. And in the early days of the drug coverage, waiting times were far too long for many customers and pharmacists who called Medicare or their drug plans to seek help.

Secretary of Health and Human Services Mike Leavitt has traveled to 18 States in the past 3 weeks to meet with Governors and make sure the prescription drug program is working for everyone, and we're making good progress. We're ensuring that drug plans have more up-to-date information on their beneficiaries, and we're improving data-sharing among Medicare, health plans, and the States. We have also extended the transition period from 30 days to 90 days, to guarantee that seniors do not go without the medicine they need as they switch to a new drug plan. We have also acted to ensure that phone calls to the Medicare help line are now answered with little or no waiting time, and we're working with insurers to help them do the same on their phone lines.

Despite early challenges, the results so far are clear: The new Medicare prescription drug plan is a good deal for seniors. If you're a Medicare recipient and have

not yet signed up for prescription drug coverage, I encourage you to review your options and choose the plan that is right for you. Americans who have parents on Medicare should encourage and help them to sign up. Citizen groups, faith-based organizations, health professionals, and pharmacies across America are working to help answer questions. Seniors can also get information 24 hours a day by calling 1-800-MEDICARE or by visiting the official Medicare web site at medicare.gov.

Prescription drug coverage under Medicare has been available for just a few weeks, but its benefits will last for decades to come. I was proud to sign this Medicare

reform into law. And because we acted, millions of American seniors are now saving money, getting the lifesaving drugs they need, and receiving the modern health care they deserve.

Thank you for listening.

NOTE: The address was recorded at 7:10 a.m. on February 10 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on February 11. The transcript was made available by the Office of the Press Secretary on February 10 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks on Presenting the National Medals of Science and Technology *February 13, 2006*

Thank you all. Please be seated. Thanks and welcome to the White House. It is an honor to be in the company of so many bright and distinguished Americans. Each of our honorees has been blessed with talent, and each has used their talent to the fullest.

The work we honor today has improved the lives of people everywhere. It has helped move our economy forward, and it's helped make sure that America is the leader of innovation in our world. The medals are our Nation's way of expressing gratitude to gifted and visionary citizens. I also appreciate the family members and friends who are here as well.

I want to thank members of my Cabinet who have joined us, Secretary Gutierrez, Secretary Bodman. I want to thank Dr. Jack Marburger, who is the Director of the Office of Science and Technology Policy. I thank David Sampson from Commerce for joining us. I want to thank Dr. Arden Bement, the Director of the National Science Foundation, who is with us, Dr. Kathie Olsen, the Deputy Director of the

National Science Foundation. I want to thank the representatives from the National Science Foundation and members of the board of the National Science and Technology Medals Foundation. Those were the folks who decided that you won. [*Laughter*]

I thank Dr. Bill Jeffrey who is with us, Director of the National Institute of Standards and Technology. I want to thank the previous recipients of the National Medals of Science and Technology who've joined us. I thank my friends Congressman Sherry Boehlert, as well as Dave Reichert from the United States Congress for being here. Thank you both for coming. Most of all, thank you all for joining us.

The medals I'm about to present are the highest award a President can bestow for astounding achievement in science and technology. They recognize work that has helped expand the horizons of human knowledge. The National Medal of Science honors those whose research has enhanced our understanding of life and the world around us. And the National Medal of Technology recognizes innovators whose

work keeps America on the cutting edge with discoveries that change the way we live.

The spirit of discovery is one of our national strengths. Our greatest resource has always been the educated, hard-working, ambitious people who call this country their home. From Thomas Edison's lightbulb to Robert Ledley's CAT scan machine, most of America's revolutionary inventions began with men and women with the vision to see beyond what is and the desire to pursue what might be.

Think back to how much this country has changed since the—since we first created the National Medal of Technology in 1980. Twenty-five years ago, most Americans used typewriters instead of computers. Most of us used pay phones instead of cell phones. Most of us used carbon paper instead of laser printers. Most of us had rolodexes—you might remember those—[laughter]. And on the long family trip, we'd play the license plate game—[laughter]—and now we're watching DVDs.

Many technologies that are in our laboratories today will bring cures and technologies that are beyond our imagination. And we will then wonder how we ever lived without them. These kinds of changes are the result of years of hard work by American innovators, like those we honor here today.

Over the years, National Science and Technology laureates have been responsible for breakthroughs that revolutionized telecommunications, discovered the structure of DNA, led to the invention of the microchip. These laureates have done work that have revolutionized organ transplants and led to development of global positioning systems and helped feed millions around the world.

Our Nation has a vital stake in the research and discovery that makes these advances possible. And so in my State of the Union, I encouraged our Nation to stay on the leading edge of technology and education. I've talked about an American Com-

petitiveness Initiative that will double over the next 10 years the Federal commitment to the most critical, basic research programs in the physical sciences. I think that's a good use of taxpayers' money.

Six of today's eight science laureates have benefited from past investment in this kind of research. If we want this country to but—be the most competitive country in the world, we have got to spend money now to make sure we stay on the leading edge of technological change. We also got to recognize it's in the private sector where most money is spent on research and development, yet we unwisely have allowed the research and development tax credit to expire. If the United States expects to remain competitive in a global economy, we must encourage our private sector to continue to invest in leading-edge technologies, and therefore, we ought to make the research and development tax credit a permanent part of our Tax Code.

We can't be the leading country in the world in science and technology unless we educate scientists and young mathematicians. And so as part of the competitive initiative, I'm going to work with the Congress to make sure we extend the same standards in the No Child Left Behind Act that we apply to reading to math. The facts are that we're doing fine with fourth grade kids in math and science. The facts, also, are these, that we're falling off the face of the charts when it comes to eighth grade math, and we've got to change that. And one of the sure ways to change that is to apply special money for kids who need extra help in junior high for math and science.

We can't make sure our children have got math and science—fine math and science courses unless we've got teachers capable of teaching math and science. And one way to do that is to expand education to high school teachers in how to teach Advanced Placement. Advanced Placement programs work. They make a significant difference in the lives of our children. And

so by making sure more teachers can teach AP, this country will be better off in making sure that we've got the future scientists and mathematicians living right here in the United States of America.

Another part of the initiative is to encourage school districts to recruit 30,000 math and science professionals to teach in our Nation's classrooms. I mean, we want young kids to think math and science are cool subjects, that it's okay to be a mathematician, that it's exciting to be a scientist. And there's no better way to make sure that young students are encouraged to take math and science than to have successful scientists explain to our students just the wonders of exploration.

You know, I was out in Albuquerque and had a good visit in Intel. They've got an interesting program. They provide incentives for their employees to go into the classrooms of local high schools and community colleges to say to youngsters, "Join us in these exciting fields." And the exciting jobs of the 21st century are going to be in math and science, and the American people must understand that if we don't educate our kids in math and science, the jobs are going to go elsewhere in the years to come. The competitive initiative recognizes we're great when it comes to research and development, and we intend to stay that way. But we've also got to be great when it comes to making sure our students have got the skills necessary to compete in the 21st century.

I appreciate the work that today's laureates are doing to inspire young scientists. We've got some young scientists from Benjamin Banneker High School with us. Thank you all for joining us. I appreciate you being here. I hope that you are inspired by the examples of excellence and success that you see right here in this ceremony today.

You know, it's interesting, people generally do not pursue a career in science or technology with the goal of fame. I'm kind of trying to change that today. [Laughter] The work of discovery is quiet and often solitary. Yet all Americans benefit from your imagination and your talent and your resolve. And so today we're here to say thanks for what you've done; thanks for helping improve the quality of life in this country; thanks for inspiring others. Congratulations on your medals, and now the military aide will read the citations.

[At this point, Lt. Col. Christian Cabaniss, USMC, Marine Corps Aide to the President, read the citations, and the President presented the medals.]

*The President.* Again, thank you for coming. Got a little reception back here for the honorees and their families. I'm proud to have you here in the White House. May God continue to bless our great Nation. Thank you.

NOTE: The President spoke at 10:45 a.m. in the East Room at the White House.

## Remarks Following Discussions With United Nations Secretary-General Kofi Annan February 13, 2006

*President Bush.* Mr. Secretary-General, thank you.

*Secretary-General Annan.* Thank you.

*President Bush.* As usual, we had a very constructive dialog. I always enjoy visiting

with the Secretary-General. It gives us a chance to talk about our common interests and our desire for peace and liberty around the world.

We had a good discussion on Sudan, with particular emphasis on Darfur. I told the Secretary-General that Mrs. Garang was in to see me the other day and that we had a long discussion—she and I had a long discussion not only about the Darfur region but about implementing the north-south accords. And I appreciate the Secretary's leadership on that issue.

We talked about the broadened Middle East. And there's a lot to talk about. I am very optimistic, however, that democracy and liberty will prevail. And so I want to thank you for your interest and leadership on those particular issues.

We talked about U.N. reform, structural reform, management reform, as well as the reform of the Human Rights Commission. I was most interested in the Secretary-General's thoughts. I appreciate very much his leading on these issues, and we'll continue to work closely through Secretary Bolton—Ambassador Bolton with the Security Council and the United Nations.

And so, Mr. Secretary-General, thanks for coming. It's always a pleasure to welcome you here to the Oval Office. And the floor is yours.

*Secretary-General Annan.* Thank you very much, Mr. President. I also enjoy our periodic exchanges, and I'm very happy that we have agreed to work together on the Darfur issue, working with other governments from Europe, from Asia, and other regions, to ensure that we do have an effective security presence on the ground to protect the IDPs and ensure that humanitarian workers have access to those in need. And of course, this is an issue where all governments have to play their role.

On security—on the U.N. reform and Human Rights Council, I think the President and I agree that we need to reform the Human Rights Council, and it should

be done as soon as possible. The President of the General Assembly, Jan Eliasson, is working very hard to ensure that we will have that done by this month, and that when the Human Rights Commission meets in Geneva, it will be in the process of transformation; it will not be business as usual. And I also thanked the President for all the support he's given us on U.N. reform, on the broader U.N. reform. And there are quite a lot of things that we're going to do.

We also discussed the Middle East and the Hamas elections and the need for transformation of Hamas into a political party along the lines that the Quartet had discussed. And I think there is an opportunity here for Hamas to transform itself into a political party and work with the international community and the Israeli Government.

We also touched on the issue of the nuclear issue in—of Iran. And here again, I hope the—between now and the time the Atomic Agency issues its next report, there will be indications and steps from the Iranian side to indicate that negotiations are not dead and that both sides can come back to the table and find a way out of this crisis. We need to be able to work to resolve it, and I hope there will be no steps taken to escalate this approach.

Thank you very much.

*President Bush.* I appreciate you. Good job. Thank you.

NOTE: The President spoke at 2:06 p.m. in the Oval Office at the White House. In his remarks, he referred to Rebecca Garang, Minister of Transportation, Roads, and Bridges, Government of Southern Sudan; and Ambassador John R. Bolton, U.S. Permanent Representative to the United Nations.

## Remarks Honoring the 2005 World Series Champion Chicago White Sox February 13, 2006

*The President.* Welcome. Thank you. Be seated. They may be playing basketball, but it's always baseball season here. [Laughter]

The last time the Chicago White Sox won the World Series was 1917. President Woodrow Wilson was living here. Reinsdorf, I don't know if you came here then or not. [Laughter] There were only eight teams in the American League, and the league leader hit a total of nine home runs. After 88 years of waiting, the White Sox have earned the right to be called world champs, and we're glad you're here.

I—first of all, I want to welcome Jerry Reinsdorf. Some of my most joyous times in my life have been during—as a baseball owner. Harold Baines may not have thought they were so joyous, since we never won much. [Laughter] And one of the reasons that I ended up in baseball with my partners is because of Jerry Reinsdorf's help, and I want to thank you for that now that we've got the team here. I know how much you love the game, and I know how much you love the Chicago White Sox. And so it had to be a thrilling moment for you and Eddie and the owners that were patient for all those years you didn't win. And so I congratulate you from the bottom of my heart, and thank you for your friendship. It's great to see you.

I appreciate Ken Williams, a man who obviously knows what he's doing, who is—was able to put a team together. It's easy to put stars on the field. The hard thing about baseball is to put people who can play together, and I congratulate you for being a great general manager.

I welcome Ed Farmer and the broadcasting team. Eddie, good to see you again. Thanks. I can see they all remember you—at least one person does. [Laughter]

It's good to be here with Bob DuPuy of baseball. I thought you're here to sign

the lease, you know, but it's—[laughter]—another subject.

I do want to thank the members of my Cabinet who are here. It's great to see you all. I thought you all told me you were Red Sox fans. [Laughter]

I want to thank the—Senator Durbin and Senator Obama from the great State of Illinois, and Don Manzullo and Roy LaHood. Thank you all for coming.

I—my question to most of these folks is like, “Were you White Sox fans at the beginning of the season?” [Laughter]

*Audience member.* Yes, he puts us on the spot.

*The President.* Yes, he did. No, I'm not putting you on the spot. But I know one person—elected official who was a White Sox fan at the beginning of the season. As a matter of fact, he was a White Sox fan at the beginning of his life. He's been forever a White Sox fan. He is a great mayor of a great city, and that's the mayor, his honor, Dick Daley. Thanks for coming.

Roland Hemond—it's good to see you, Roland. Thank you. Just showing off my baseball knowledge. Anybody that knows—[laughter]—knows Roland Hemond knows something about baseball. And it's good to see Harold Baines and the other coaches.

I understand Ozzie is on vacation, which I fully understand. If he's a Caribbean guy, taking a look at the weather forecast up here yesterday would have made me not want to come as well. [Laughter] But I want to congratulate Ozzie Guillen, as well as the team and the staff, the coaching staff, and the managers, and all those who worked hard to make these guys ready to play. And I want to congratulate Ozzie on being a great manager, manager of the year, as well as becoming a United States citizen earlier this year. We're proud to have him as an American citizen.

I don't want to bring up the Sosa trade, so I won't—[laughter].

*Audience member.* Please don't.

*The President.* I won't. [Laughter] But it's great to see you. Harold Baines is one class act. I mean, that guy can not only hit, but he brought a lot of class into the clubhouse, and I'm really proud to see you here, Harold. Congratulations to you and the buddies you're working with.

And to the players, congratulations. We're really proud to have you here at the White House. It means a lot for baseball fans, White Sox fans, all across the country that you would take time to come and be honored here at the White House, and it's my great honor to honor you. It's a big deal to have you here.

The amazing thing about this team is you went wire to wire, which is really hard to do. You win one-nothing on opening day, and like, they're in your rearview mirror for the rest of the season. It takes a lot to win 99 games and to remain in the lead and not falter. And it says something about the character of the team that you put together and the character of the players.

The—I got a firsthand report from the World Series from two people I love dearly who had actually front-row seats, and that would be my mother and father. [Laughter] I'm not going to tell you who they were rooting for, but it didn't have much effect on the outcome of the series, I'll put it to you that way. [Laughter]

I was impressed as a baseball guy—at least somebody who follows it still, closely—that you had four complete games in a row in the playoffs. That's a good strategy, Jerry, to keep the bullpen—[laughter]—keep the bullpen fresh. [Laughter]

You know, there was great players, but nobody off the chart, if you know what I mean, which means you competed as a team. Jermaine Dye had an interesting quote that I think is worth sharing with people who are paying attention at this moment. He said, "From the start of spring training, everybody was hungry." He didn't

say one player was hungry or a guy going into arbitration was hungry or a free agent for next year was hungry. He said everybody was hungry. They're—everybody wanted to go out there and win together. Everybody was pulling on the same rope. That's why you're the world champs. Everybody was pulling on the same rope. And that's what we're here to honor, a great championship team.

I congratulate Jermaine for being the MVP of the World Series. I congratulate Paul for being the MVP of the American League Championship Series. It must be a pretty cool feeling to hit a grand slam in the World Series. I didn't get one in Little League, much less the World Series. [Laughter] And you had a grand slam; you caught the last out of the season; and you witnessed the birth of your child all in the same month. Man, what a special month. The Lord has blessed you. That's why you're called "Mr. Soxtober." [Laughter]

I know the effect you had on White Sox fans, and it must have been electrifying. One woman in her nineties said, "I've been a Sox fan all my life; I never thought I'd live to see the day." Think about that—think about the joy that you all put in the hearts of this 90-year-old person, and probably some young ones, too, that were pulling for the White Sox.

The people of Chicago turned out en masse not only because you were baseball champs but because you have brought some character to the city. I want to applaud the organization for supporting inner-city Little League. I think it's really important for this great state of baseball to reach out to people of all walks of life to make sure that the sport is inclusive. The best way to do it is to convince little kids how to—the beauty of playing baseball.

I appreciate the baseball fields you're building in Chicago, kind of little centers of hope, little diamonds of joy for people to come and be able to play the greatest game ever invented. I appreciate the Chicago White Sox Charities, your support of

cancer research and cancer treatment in the metropolitan area. Most of all, I appreciate the fact that these players understand they're setting examples for young boys and girls all across Chicago as well as the country. You're setting the example that something—serving something greater than yourself is important in life; coming together as a team is a heck of a lot more important and satisfying than worrying about your own batting average or your own ERA.

And so here we are in the White House, Jerry, honoring the great Chicago White Sox. I'm proud to be with you. God bless your championship and God continue to bless the country.

*Paul Konerko.* Mr. President, on behalf of our organization and all the fans on the South Side and all over the world, we want to present you with this jersey and jacket.

*The President.* I thought you were going to give me a loan. [*Laughter*]

*Jermaine Dye.* And also, we know deep down you probably wish this was a Houston Astros jacket. [*Laughter*]

*The President.* Now wait a minute—  
*Mr. Dye.* Hopefully, this will do.  
*Mr. Konerko.* Thanks for having us here today.

*The President.* Actually it was a Texas Rangers jacket. [*Laughter*]

NOTE: The President spoke at 2:35 p.m. in the East Room at the White House. In his remarks, he referred to Jerry Reinsdorf, chairman, Harold Baines, bench coach, Eddie Einhorn, vice chairman, Ken Williams, general manager, Ed Farmer, radio broadcaster, Roland Hemond, executive adviser to the general manager, Ozzie Guillen, manager, Jermaine Dye, outfielder, and Paul Konerko, first baseman, Chicago White Sox; Robert A. DuPuy, president and chief operating officer, Major League Baseball; Representatives Donald A. Manzullo and Raymond H. LaHood of Illinois; Mayor Richard M. Daley of Chicago, IL; and Sammy Sosa, outfielder, Baltimore Orioles.

## Remarks Honoring the University of Texas at Austin 2005 NCAA Football Champions February 14, 2006

*The President.* Please be seated, except for you guys up there. [*Laughter*] Welcome to the White House. January 4, 2006, is a day that a lot of Texas fans will never forget. I called one of those Texas fans, who shall remain anonymous. I said, "How was it?" He said, "That game was the greatest day in my life." [*Laughter*] I said, "Well, how about your wedding?" [*Laughter*] He said, "Yes, that too." [*Laughter*]

I want to welcome Mack and Sally Brown here. Congratulations, Coach, for doing something that—[*applause*]—leading this group of great athletes to a victory that made a lot of Texans proud. I know

you made a person you admire proud, and a fellow who I wish were here today, but he's not, and that's Coach Darrell Royal. We send Coach Royal—we send him our very best, and you're following in his footsteps. It's a—you know, you've learned something about the press, in all due respect to those that are here—[*laughter*]—they tend to underestimate people sometimes—[*laughter*]—as I remember, they started calling you "Mr. February." Well, today, Mack, you're giving February—the title "Mr. February" a whole new meaning. This February you brought the national champs to the White House.

As you can see, you've brought out a lot of folks here to the South Lawn. We've never had quite a celebration this big here, and it's because there's a lot of Texas fans living here in Washington. But we've got some of the university officials with us. Mr. President, Bill Powers, it's good to see you, sir. I appreciate you coming, and your wife, Kim. It's good to see Mark Yudof and Judy, as well as Samara. Good to see you all again. I see the members of the board of regents, James Huffines and Rita Clements, other members of the board. Thank you for being here. DeLoss Dodds, I appreciate you doing a fine—there he is. Hi, DeLoss. Yes, sir.

I want to congratulate the coaching staff. One of the members of the staff has had an influence on my life. I might ask him to come up here—Mad Dog. My body is what it is today because of Mad Dog. [Laughter]

Jeff Madden. That's right.

The President. I appreciate you. He told me once—he said, "If you ever make it to Washington, I promise you, Mr. President-to-be, I'm coming up there with a team of champions." And he did. Congratulations. I didn't know you owned a suit. [Laughter]

Mr. Madden. I had to get one made.

The President. I didn't know they had one big enough. [Laughter]

But Jeff is—

Audience members. Oh. [Laughter]

The President. Yes. One reason the mighty Horns are here is because they were in good shape, and they were tough, and they were in good condition. And the reason they were was because of Jeff Madden and his belief in them as athletes and his willingness to work hard to get them in shape. And so you guys keep listening to him.

I want to thank the members of my Cabinet who are with us today. We appreciate you being here. I want to thank the Members of Congress—Senator Hutchison is a huge Texas fan—as well as Members of

the House of Representatives. Thank you all for being here to welcome this great football team. Get back to work here quickly. [Laughter]

The—Mack can tell you what it takes to win, but one thing it takes is a team of great athletes playing together. That's how you win national championships. I suspect it's the difference between showing up and, you know, winning all but two and showing up and winning them all, is that people figured out how to put something greater than themselves on the line—in this case, the University of Texas football team. This was a team that—great power, great finesse. They were real quick.

But the thing that impressed me about the team and—you know, we can follow you here in Washington, DC, just as well as we can follow you in Crawford—is that this team never seemed—that they never figured out the word "lose." It never entered their vocabulary. Every time they walked on the field, you knew they were going to win. And perhaps one of the reasons why is because they were winners off the field as well.

I'm impressed by Ahmard Hall, who's the fullback. He—where is he? Where is Ahmard? There he is. He—I don't know if you know this or not, but he was a United States marine. Once a marine, always a marine. He served in Afghanistan and Kosovo. He entered the University of Texas on the GI bill. He's not only a fine blocker—you need to get him to Baltimore—[laughter]—he started something called "Momma Bear Cares," which sends packages to our troops overseas. Congratulations on being a great player, but more importantly, a great citizen.

Mike Garcia is with us. Where's Mike? There he is. Yes. I'm glad we're on the same side. [Laughter] Mike was involved in the Children's Miracle Network last spring. I take it you weren't a wide receiver.

Mike E. Garcia. Afraid not.

*The President.* The point is, is that this guy was good in the trenches of football, and he's good in the trenches of life by supporting people who need our help.

We've got some other—I don't know if you want to call them “big uglies” or not—but Kasey Studdard and Neale Tweedie and David Thomas. Where are those guys? Come on up here. The reason I—waiting on Neale to come down here. The reason these three guys are here—Will Allen was supposed to be with them, but I think he missed the flight. Slept in but—[laughter]—or study hall. [Laughter] These fellas took time out of their lives to go to the Austin Children's Hospital to bring some joy into a kid's life. You might have frightened them when they first saw you. [Laughter] But my point to you is, is that a championship football team is made up of people of character and decency.

One final athlete I want to recognize is, of course, Vince Young, the great quarterback who—[applause].

*Head Coach Mack Brown.* They didn't bring his suit.

*The President.* Oh, that's all right. He doesn't need a suit. [Laughter]

*Mr. Brown.* He was supposed to bring it—forgot.

*The President.* Yes, you can borrow a tie. [Laughter] I think Vince will tell you that the reason he got to where he is today is because of his teammates. One reason why Vince got to where he is, as well, is because he understands that the role of a star is to put something back in the community in which you were raised. I was impressed by his being involved in a program called LEAP, which means, learn, enjoy, and play. It's basically a chance for somebody like Vince to go in and say to some other—to a young child, “Here's what it takes to succeed in life.” It's called mentoring. And all these athletes, whether they know it or not, are mentoring by the way they behave, by the example they set for young kids all across Texas and all across the country.

I want to congratulate Coach and Sally for setting the examples they've set for these players. They're instrumental in what's called the Rise School in Austin. It's a school that helps infants and toddlers and preschool children with developmental disabilities. They're very much involved with the Capital Campaign for the Helping Hands in Austin. They, like these players, are good citizens.

I also want to say congratulations to the coach for not only being a good—having a good football team, being able to raise these young men to butt heads harder than the other ones around the country, but nearly half the team earned a spot on the UT athletic director's honor roll for posting a 3.0 grade point average last fall.

This team won a lot of football games and won the national championship, but of the 32 seniors on the team, 28 will have earned their degrees by the end of this summer—and one of those, who hasn't quite earned it yet, made a promise to his mother. And Vince, I'd suggest you honor that promise to your mother—[laughter]—and get your degree by the end of this summer, which I know he will.

All in all, we're honored to have a great group of individuals, people who brought great pride to our State and pride to a great university. Welcome to Washington. Congratulations to the national champs, the University of Texas.

NOTE: The President spoke at 1:07 p.m. on the South Lawn at the White House. In his remarks, he referred to Darrell K. Royal, former head coach, Mike E. Garcia, Kasey W. Studdard, and William W. Allen, Jr., offensive guards, and Neale Tweedie and John David Thomas, tight ends, University of Texas at Austin football team; William Powers, Jr., president, University of Texas at Austin, and his wife, Kim Heilbrun; Mark G. Yudof, chancellor, University of Texas System, his wife, Judy, and his daughter, Samara; James R. Huffines, chairman, and Rita C. Clements, vice chairman, board of regents, University of Texas

C. Clements, vice chairman, board of regents, University of Texas System; DeLoss Dodds, men's athletic director, University of

Texas at Austin; and Felicia Young, mother of quarterback Vince Young.

Statement on the Anniversary of the Death of Former Prime Minister Rafiq Hariri of Lebanon  
*February 14, 2006*

One year ago today, former Lebanese Prime Minister Rafiq Hariri was assassinated. Mr. Hariri was a great Lebanese patriot who worked to rebuild a free, independent, and prosperous Lebanon after years of brutal civil war. Our thoughts are with the people of Lebanon as they mark this anniversary.

Lebanon has continued to make progress in the year since Mr. Hariri's murder,

thanks to the foundation of freedom he laid and the determination of the Lebanese people. Lebanon has conducted a free and fair parliamentary election and begun economic reforms. Great challenges remain, and the United States will continue to stand with the people of Lebanon as they strive to build a free and democratic future.

Message to the Congress Transmitting a Report by the National Science Board  
*February 14, 2006*

*To the Congress of the United States:*

Consistent with 42 U.S.C. 1863(j)(1), I transmit herewith a report prepared for the Congress and the Administration by the National Science Board entitled, "Science and Engineering Indicators—2006." This report represents the seventeenth in the

series examining key aspects of the status of science and engineering in the United States.

GEORGE W. BUSH

The White House,  
February 14, 2006.

Remarks on Health Care in Dublin, Ohio  
*February 15, 2006*

Thank you all. Thanks for coming. Please be seated. Jack, thanks for the introduction; thanks for letting us convert your lobby into a—[laughter]—place to come and visit.

So I get on Air Force One this morning, I said, "Take me to Dublin"—the guy heads east. [Laughter] I said, "Nuh-uh,

Dublin, Ohio." [Laughter] Proud to be here. Thanks for letting me come and visit with you. It's neat to be in "the house that Dave built." He was a great American.

George Voinovich and I were sharing Dave Thomas stories, particularly when he came and helped educate and lead the

Governors—that's when we were Governors—about adoption. And one of his great legacies is inspiring people to show the ultimate act of love, which is to adopt a child. The other great legacy is, leave behind a great company that is providing thousands with good jobs; another great legacy is to leave behind consumer choice. You can either get your three-quarter pound triple cheeseburger—[laughter]—or your salad. [Laughter]

I appreciate the fact that Wendy's understands that choice for the consumers is important. I also appreciate the fact that Wendy's understands that giving employees the opportunity to make rational choices in health care is an important part of having a workforce that is vigorous, active, and enthused about their jobs. And so today I'm here to talk about innovation in the health place, how we can make sure the health care system in the United States of America remains the best in the world.

And so, Jack, thanks for letting me come. Thanks for being an innovator. I love the entrepreneurial spirit of America. And the entrepreneurial spirit doesn't end if you happen to be a big company. As a matter of fact, it's important to remain entrepreneurial, no matter what your size is. And to have a company like Wendy's introduce HSAs, which I'm about to talk about, reminds me that the entrepreneurial spirit is alive and well here.

I appreciate the team, the management team, and all the employees for giving me a chance to come and visit. I will keep my remarks relatively short so you can get back to work. [Laughter]

Governor, thank you for coming. I appreciate Governor Bob Taft joining us. Yesterday I had the privilege of meeting with his wife, Hope. We were talking about how to rally the great armies of compassion around the United States to help provide love and help and concern for those amongst us who need love and help and concern.

I want to thank my friend Senator George Voinovich. I've known him for a long time. He's steady; he is capable; he is a great public servant. Thank you for being here, George.

I want to thank the Members of the United States Congress who managed to get a free flight on Air Force One—[laughter]—to come and join us. I'm better for the fact that you accompanied me; thank you. And that would be Pat Tiberi, the United States Congressman from this district. Congressman David Hobson is with us as well—as well as Congresswoman Deborah Pryce. Thank you all for coming today.

The speaker of the house is with us; Mr. Speaker, thanks for joining us. The president of the Ohio Senate is with us. Glad you guys are here; thanks for coming. I also want to mention Senator Steve Stivers, United States Senator, Lieutenant Colonel in the Ohio National Guard. He served a 12-month tour of duty in the Middle East and Africa. Appreciate your service. God bless you and your family, and God bless all our troops in harm's way.

I skipped the majority leader—I didn't mean to—Mr. Majority Leader, in fact, it's an oversight, you know? Thank you for being here, Larry Flowers. I want to thank the mayor of the city of Dublin for joining us. Appreciate you coming, Mayor. I'm honored you're here. Thanks for taking time out of your schedule.

I just met with some folks that work here at Wendy's—I'll talk about them later. But I also met with the owner of a restaurant here, Frank Ciotola. I met with Shawn Kessinger; he's the vice president of finance for the Ohio Credit League Union. I met with a farmer, Debbie Carr. We talked about health care from the perspective of small-business owners, entrepreneurs. I listened to their concerns; I listened to their solutions. And as I begin to give this address on the health care system, I want you to know that many of their thoughts are incorporated in what the

vision is for good health care. Thanks for taking time to be here today.

Let me start by giving you kind of a state of the economy: It's strong. I recognize there's parts of Ohio that aren't necessarily as strong as other parts of the country. But from an overall perspective, when you look at the Nation's economy, it's strong, and it's getting stronger. And the reason I say that is because we're now in our fifth year of uninterrupted economic growth.

Last year, this economy, in spite of high energy prices and in spite of natural disasters, grew at 3.5 percent. We've—after-tax income of our people—and that matters a lot, you know, whether or not people have got money in their pocket after paying their taxes—is up 8 percent since 2001. Productivity is high. It's important to have high productivity growth in an economy because that's how economies improve their standard of living for their people. The more productive you are as a citizen or the more productive you are as the—as a company, the more likely it is you will generate higher revenues and higher quality of life.

And so productivity is increasing, which is a measurement of not only this country's competitiveness, but is a measure of whether or not life is improving for our citizens. Small businesses are thriving. That's really good news. Most new jobs in America are created by small businesses. And when the small-business sector is thriving, it means people are working. We've added 4.7 million new jobs over the last 2½ years. The national unemployment rate is 4.7 percent. That's low.

Things are improving here in Ohio. The unemployment rate is still 5.9 percent, but nevertheless, the trends are in good shape. You've gone from 6.4 percent to 5.9 percent. Obviously, there's still work to do. George and members of the delegation are concerned about trade that is fair and free. He wants the manufacturers here in Ohio to be treated fairly in places like China. I assured him I understand it's part of my

job. I'm going to India at the end of this month, and I'm going to make it clear to the Indians, "We will look forward to trading with you, but just treat us the way we treat you; that's all we ask." The reason I say that is because we can compete with anybody, anytime, anywhere, so long as the rules are fair.

The fundamental question is, how do we remain a leader in the world economy? You know, there's uncertainty in this economy of ours. People are changing work a lot—that kind of creates a sense of uncertainty. People see China and India out there looming as competitors, and the reaction with some is, "Let's don't compete; let's just kind of shut her down; let's get protectionist," or, "Why don't we isolate?" I have a different point of view. My attitude is, we shouldn't fear the future; we ought to shape the future. My attitude is, the United States of America must continue to be the leader in the world economy, for the good of our people.

And so here are some ways as to how to make sure this economy remains strong today and remains strong for years to come. And first, in order for us to be a leader in the world, we've got to remain a leader when it comes to technological developments. So I'm proposing to the Congress an American Competitiveness Initiative, which will double the basic research in basic sciences over the next 10 years.

And secondly, I recognize most research is done in the private sector, and yet the incentive for companies to invest in research, which yields technologies, which increases standard of living and makes sure our economy is on the leading edge, is through the research and development tax credit. It expires on an annual basis. It is very difficult for private sector to plan when a Tax Code is uncertain. And so Congress, in order to make sure that we invest in the future, should make the research and development tax credit a permanent part of our Tax Code.

Finally, in order to remain competitive, we've got to have kids who understand math and science. And so I laid out an initiative—[*applause*—I spent some time talking about it last week. I'm going to continue talking about it. I'm looking forward to working with—this is an issue, by the way, where we can put aside needless politics, which tends to dominate Washington, DC, and focus on the good for the future of this country. I'm confident we can get something done on this very important education as well as research and technology issue.

In order to make sure we're competitive, we've got to be wise about your money. The tax relief we passed is working. In order to make sure America is the most competitive Nation in the world, we've got to keep your taxes low and be wise about how we spend your money, which means we've got to learn to set priorities in Washington, DC. We can't try to be all things to all people when it comes to spending your money. We're on the way to cutting this deficit in half by 2009, and I intend to keep us on track to cut the deficit in half by 2009.

But to be wise—to be competitive in the future, we've got to get off being hooked on Middle Eastern oil. In order for us to grow—[*applause*—I said something in the State of the Union that probably surprised some of you. I said, we have a serious problem; we're addicted to oil. But I meant what I said. I fully understand that an economy that requires oil from parts of the world that—where some countries may not like us, puts our economic security at risk and puts our national security at risk. And I'm serious about working with members of both parties to advance technological research that will enable us to drive cars by using switchgrass as a base stock of ethanol—or wood chips, as well as the corn and soybeans we use today. I mean, I can't wait for the day, and I know future Presidents can't wait for the day, when some-

body walks in with the farm report, and says, "Mr. President, the crops are up, and we're less dependent on Middle Eastern oil." And it's coming; it's coming.

To keep this country competitive, we need a health care system that provides Americans with high-quality care at good prices. And that's what I want to talk about today. The health care costs are rising sharply in America. If they continue rising the way are—they are, that will make us less competitive. Many Americans are worried that they're not going to get the treatments they need. Small businesses, in particular, are struggling to pay for health care for their employees. If two-thirds of the new jobs in America are created by small businesses and your small-business owner is struggling to keep their employee base because of health care, then we've got to do something about it. Workers have lost good coverage because they're changing jobs. I've told you, there's uncertainty in the marketplace because people are changing work. And if you fear about losing health care when you change work, it creates even more uncertainty.

More than 45 million Americans have no health insurance at all, and this is unacceptable for our country. We've got the best health care system in the world, make no mistake about it. The question is, how do we keep it that way? And I've got some ideas for you.

First of all, we've got to choose between two competing philosophies when it comes to health care. Behind all the rhetoric in Washington and all the proposals, there's really a philosophical debate. On the one hand, there's some folks who—good-hearted folks, good, decent folks who believe that Government ought to be making the decisions for the health care industry. And there are some of us who believe that the health care industry ought to be centered on the consumer.

I think as we kind of make our minds up about what philosophy works, it's important to look at the world health care systems. Other nations have adopted for Government control of health care for centralized decisionmaking when it comes to health care, which has created long waiting lines and quality of care not as good as the American system and a significant lag in technological development.

We've done a different path up to now in our Nation's history. We believe in private medicine that encourages innovation and change. That's been the cornerstone of American public health up until now. And we have a choice to make. I've made my choice; I'm going to lead the Congress to make sure that our health care system preserves America's system of private medicine, that we strengthen the relationship between doctors and patients, and that we make the benefits of private medicine more affordable and accessible for our citizens. That's our strategy.

Obviously, Government has a role to play. We have made a commitment to the poor and the elderly in the United States, and it's a commitment we're going to keep. When I got to Washington, I took a look at the Medicare system. It's a very important part of our Nation's health care system, and that is Medicare, except it was old and tired and hadn't been changed. It was a centrally-controlled system. I'll give you an example of what I meant by old and tired. This is a system that paid \$28,000 for ulcer surgery—when you've got an ulcer, you check in the hospital—Medicare would write you a \$28,000 check. It wouldn't pay the \$500 necessary to prevent the ulcer from happening in the first place. In other words, medicine had begun to—began to change, and Medicare didn't change with it. One reason why is because it's centrally controlled; all decisions had to be made by people out of Washington, DC.

And so I worked with Members of the United States Congress to modernize the

system. I said, "If we've got a commitment to our elderly, let's make the commitment a good one." We're not going to make the commitment and have it be a mediocre commitment; it ought to be a good, sound commitment. And we did. And we added the prescription drug benefit to Medicare that modernizes the system.

And at the same time, we gave seniors more options from which to choose. See, part of making sure a health care system works, seems like to me, the consumers ought to have more choice. In a centralized system, the Government makes the choice. In a private system that focuses on kind of the markets, people ought to have a choice. People ought to be able to be given different options from which to choose.

And so we did modernize the system. It's tough sledding up there in Washington to get things changed. [Laughter] People like the status quo at times. Twenty-four million Americans have now signed up to the new Medicare plan since January 1st. That's a lot of folks, 24 million. Hundreds of thousands are enrolling each week. Now, needless to say, when you have a change that size, there's going to be some things that need to be adjusted in the system. And you probably read about, kind of, the dual-eligible problem. I don't know if you've had that problem here in Ohio, Governor. We're dealing with it. Our job is to solve problems when they arise. When you have that big a shift, you can imagine there's going to be glitches. But by far, the vast majority of people are signing up to a program that's making a big difference in their lives.

Competition—in other words, when you have choices, it creates a sense of competition in the marketplace—is lowering costs for American seniors. The average premium that seniors now pay for the prescription drug benefit is a third less than what was expected. In other words, when we started rolling out the plan, it was expected that the prescription drug benefit would cost the seniors \$37 a month. The actual cost

is \$25 a month. It's an interesting lesson about what can happen when you give people different options from which to choose.

The other thing that's important for you all to know is that the typical senior will end up spending about half of what he or she used to spend on prescription drugs. I mean, if you want the system to function well, it seemed like to me and others here that we ought to modernize the system to make it good for our seniors. It's working.

If you happen to have a mother or father or a neighbor who's a senior, I strongly urge you to get your loved one or your friend to call 1-800-MEDICARE or to go on the web at medicare.gov and help that person realize the great new options available to him or her.

Medicaid, as well, is a program that we take very seriously. It's a program aimed at helping the poor. It's administered in conjunction with States. It is health care for low-income families with children, poor seniors, and disabled Americans. It's a very important program. It needed to be restructured, however, in order to make the program actually work in a cost-effective way. And so we decided to work with the States to give Governors and folks at the local level more flexibility in how to structure the program to meet the needs at the local level.

See, in the past, if you had a good idea, if old Taft had a good idea, he had to come to Washington and beg permission for a waiver: "I, the Governor, was elected to do something good for the people. I'm worried about those who are qualified for Medicaid. Please give me permission to do what I think is right." The new bill I signed is one which will make the States—give States a lot more flexibility when it comes time to signing up people—to designing eligibility standards to providing what the programs ought to look like. In other words, it's flexibility, all aiming to make sure the Medicaid system works well.

We take the program seriously, but we fully understand what happens when the

bureaucracy becomes so encrusted that it's impossible to design programs that will actually meet States budgetary needs as well as the needs of the people. And we're remedying that fact.

The—I mentioned to you we have the goal of making sure that our budgets are responsible. One of—the budget I just signed or the bill I just signed and the budget I proposed is finally beginning to do something about the growth in Medicare and Medicaid. I want to describe to you a little bit about what we're doing.

Let me give you this story, kind of an analogy—there is a difference between slowing your car down to the speed limit or putting your car into reverse. I want you to think about that as I explain to you that, in working with the Congress, we have slowed Medicare growth down from 8.1 percent a year to 7.7 percent a year. In other words, we found ways to reform the system so that we can slow the growth rate down to make it—Medicare more affordable for future generations. We're not putting the car in reverse; we're just finding the speed limit.

Same thing with Medicaid. It grows—slow it down from 6.9 percent a year to 6.6 percent a year, which means just by slowing the growth rate down on those two important programs and, at the same time, making them more efficient and delivering better services, we're saving the taxpayers \$104 billion over 5 years. I want to thank the Congress for working on this. You hear rhetoric, of course, that we're "starving the poor." The car is going the speed limit; it's not going backwards.

Now, the long-term solution for Medicare requires—and Social Security—requires an understanding that we've got a lot of baby boomers getting ready to retire. The true strain on our budget is really going to be the unfunded deficits caused by a baby boom generation retiring, with fewer workers to pay for guys like me. See? I mean, a lot of us are retiring. As a matter of fact, my retirement date is—I turn 62

on 2008, which is—[laughter]—pretty convenient time to retire. [Laughter] There's a lot of us, a whole lot of us. And there are fewer people paying in the system per person retiring.

And what's interesting—and you've got to know this—is that my generation has been promised greater benefits than a previous generation. So you can imagine when you start to think about the strain, a lot of us have been promised greater benefits with fewer people paying for us. And it's not going to work; it's simply not going to work.

I was very serious in the State of the Union—I explained this to George and the Congressmen—that I understand a solution to Social Security and Medicare in terms of dealing with a bulge of retirees is going to require a bipartisan solution. And I mean it to Members of Congress—I expect there to be a bipartisan effort to come up with a solution. Nothing will pass the House or the Senate unless there's agreement. And now is the time to put aside the politics that have stopped rational people from coming up with a rational answer to a very serious problem, to set it aside, sit down at the table, and solve this problem once and for all—so we can travel the country looking at young workers and saying, “You're not going to pay payroll taxes into a bust system anymore. You're going to pay payroll taxes into the system which will be around not only for baby boomers like me but for a young generation of Americans coming up.” Now is the time for us to get something done.

I want to talk about another program that's working. One of the things that we've got to do is spend time in Washington actually measuring results of programs. You know, every title on a bill sounds just fantastic, you know. [Laughter] The problem is, is that every bill doesn't deliver the results it's supposed to. I will tell you about a program that does. It fits into a vision of a health care system where the Govern-

ment does have responsibility, and that's community health centers.

One of the real strains on local hospitals and local health providers is the fact that the poor and the indigent use emergency rooms for primary care—it's an incredibly inefficient use of assets. It's an important use of assets if somebody can't find care and they need help—I'm not denigrating the people going to the emergency rooms, but I am saying there's a better way to be wise about how we spend your money and to solve a very important problem, and that is, have the emergency rooms be there for emergencies, and have primary care facilities like community health centers being there for primary care for the indigent and the poor.

Since I took office, we've opened or expanded about 800 health centers. There are now 3,700 of these centers around the United States serving 13 million Americans. It is a cost-effective way to provide primary care for those who need help. And I'm going to call upon Congress and work with Congress to put 400 more of those health centers in.

So what I'm telling you is, is that the Federal Government obviously has a role, to make sure the Medicare system is cost-effective and works well, make sure Medicaid is—works well and gives flexibility to States, and to expand community health centers.

I now want to talk to you about how the rest of us need to have a health care system, if you don't fall into those categories. What should the role of the Government be? And I believe the role of the Government ought to be to empower consumers to make choices. And so let me talk to you about five ideas I have to make sure that health care is more available and more affordable.

And the first one is to expand health savings accounts. We—I call them HSAs. When you hear me say HSA, that's kind of government-speak for health savings account. They—HSAs are helping to begin

a movement away from what's called a third-party payer system to one where the consumer is very much involved in making wise purchases of health care. That's a very important philosophical point.

The traditional insurance today will cover your health care costs—most of your health care costs—in exchange for a high premium payment up front. The costs are generally shared by you and your employer. You may also pay a small deductible and copayment at the time of treatment. What's interesting about this system is that those payments cover only a fraction of the actual costs of health care, the rest of which are picked up by a third party, basically your insurance company.

It means most Americans have no idea what their actual cost of treatment is. You show up; you got a traditional plan; you got your downpayment; pay a little copay, but you have no idea what the cost is. Somebody else pays it for you. And so there's no reason at all to kind of worry about price. If somebody else is paying the bill, you just kind of—hey, it seems like a pretty good deal.

There's no pressure for an industry to lower price. And so what you're seeing is price going up. If you don't care what you're paying and the provider doesn't have any incentive to lower, the natural inclination is for the cost to go up. And the insurance companies, sure enough, pass on the costs—the increase in cost to you and your employer. That's what's happening.

The fundamental problem with traditional coverage is that there's no incentive to control how their health care dollars are spent. You don't have any incentive, whatsoever. And that's one of the cost drivers in our system. If we want to solve health care problems, if we want to make health care affordable and available, we've got to analyze and address the cost-drivers of health care. And there's one right there. If patients controlled how their health care dollars are spent, the result is better treatment at lower cost.

I'll give you an interesting example of a procedure called LASIK—laser eye surgeries. It's a good example of how the market can work when there's not a third-party payer involved. You might remember when LASIK first appeared, was approved about a decade ago for its use. It went through the process of getting a Government approval, and when approved, it was an opportunity for people to have their eyesight—feeling a little nervous about LASIK surgery when it first came out, and it was awfully expensive. Consumers began to, however, inquire as to why something costs the way it costs, how safe it was. Doctors felt more comfortable starting to offer more and more of the surgery. More providers came in the market; there was transparency of pricing. You might—I can remember billboards springing up with people advertising LASIK surgery. Today, the price of LASIK surgery has dropped dramatically. More people are getting the surgery; they're giving up their glasses and contact lenses.

The market is working. I think if you go back and look at the history of the pricing of LASIK surgery, the availability of LASIK surgery, you'll find that when consumers start showing up saying, "I want to know more information; I'm interested in this idea. How about—how does your cost compare to old Joe's over here"—the market began to adjust. LASIK surgery is now more widespread, at much more reasonable cost for consumers.

And so, how to affect those kinds of cost changes in the health care industry, that's what we're really here to discuss. And one way to do so is to—to make health care more responsive is through health savings accounts. Many people in our country don't know what a health savings account is. I will start to try to explain it here.

First, it is a part of our drive to make health care more consumer-driven. There's two components to a health savings account; one is low-cost catastrophic insurance coverage and a tax-free health savings

account. Those are the two components of what I'm talking about. Catastrophic coverage protects you and the family in the event of devastating medical illness—if you're really sick, a catastrophic plan kicks in.

The health savings account portion of this product allows you and your employer to contribute tax-free to pay for routine medical costs. In other words, your company or yourself or a combination of the two makes a tax-free contribution into a health savings plan, a savings plan that you own. It's yours to call your own. And the savings within that plan are tax-free. In other words, you're not just going to put it under your pillow; you put it into a bank until you use it. The interest will be tax-free. Your money is growing.

It means that if you don't spend money in your savings account on health care, you can roll it over to the next year, tax-free. You have money growing for health care to pay incidental expenses; it's growing at a reasonable interest rate; it's yours you call your own. And if you don't spend it in a year, you can put it into the next year and the next year and the next year.

For many routine medical needs, HSAs mean you can shop around until you get the best treatment for the best price. In other words, it's your money; you're responsible for routine medical expenses; the insurance pays for the catastrophic care. You're responsible for paying for the portion of your health care costs up to your deductible. And so you—you talk to your doctor; you say, "Well, can't we find this drug at a little cheaper cost?" Or you go to a specialist, "Maybe we can do this a little better—old Joe does it for X; I'm going—why don't you try it for Y?" It allows you to choose treatment or tests that meet your needs in a way that you're comfortable with when it comes to paying the bills.

In other words, decisions about routine medical treatments are made by you and the doc, not by third-party people that you

never know. And all of a sudden, when you inject this type of thinking in the system, price starts to matter. You're aware of price. You begin to say, "Well, maybe there's a better way to do this and more cost-effective way."

The combined cost of catastrophic insurance coverage and HSA contributions are usually less expensive than traditional coverage. That's important to know. In other words, HSAs are making health care more affordable. By the way, these HSAs became expanded—George tried to do it in the mid-1990s, 1996 I think—yes—medical savings accounts, he called them. He couldn't get them going. People who had the business didn't want any competition, which sometimes happens in the marketplace. [Laughter] But he thought of the idea; it made sense. This really—these HSAs have kicked off big time because of the Medicare bill I signed. And they haven't been around a long time. They're just kind of a fresh product that the marketplace is becoming used to.

Forty percent of those who own HSAs have family incomes below \$50,000 a year. In other words, if people are having trouble affording traditional insurance, all of a sudden, the HSA becomes a more affordable product. HSAs make a difference—are making health care more accessible to those without insurance. In the first year HSAs were available, more than a third of those who bought HSAs had been uninsured. In other words, as health care becomes more affordable, it makes it easier, obviously, for somebody who is uninsured to be able to pick up health insurance.

You know, a lot of young folks are uninsured. You might remember the days when you kind of felt like you were never going to get sick. [Laughter] So why should you buy insurance? Why do you need coverage? A lot of young folks are saying, "Wait a minute; this is a pretty good deal. If I'm going to stay healthy and can save a portion of that money, tax-free, and I'm not going to spend money on health care for a while,

all of a sudden, a nest egg really begins to build.” By the way, it’s a nest egg they call their own; it’s not something the Government—if there’s excess money in your account, the Government can’t take it away, or insurance can’t take it away; it’s yours. You own the thing. It’s a vital part of kind of—a responsible society is when there’s a sense of ownership in important parts of our economy.

Over the last 10 months, the number of HSAs has tripled. In other words, people are becoming aware. One of the reasons I’m here talking about HSAs at Wendy’s is because you’ve decided to implement this product. I want people to be aware of it. The number of people who bought HSAs has gone from a million to 3 million. And I’m going to talk today about ways to make sure that HSAs are—even expand even further.

You know, I can remember the debate in Washington—I’m sure you can as well—I remember one person who said, “Health savings accounts are not a solution for the uninsured; they’re regressive; they favor the wealthy.” It’s just not the facts. They’ve helped the uninsured, and a lot of folks with incomes under \$50,000 are buying these plans. It’s kind of basically saying, “If you’re not making a lot of money, you can’t make decisions for yourself.” That’s kind of a Washington attitude, isn’t it: “We’ll decide for you; you can’t figure it out yourself.” I think a lot of folks here at Wendy’s would argue that that point of view is just simply backwards and not true.

People have said that expanding HSAs would fail to reduce health care costs. It’s just not the case. I’ve just talked to Joe Cava—he knows what it’s done to your costs. Wendy’s decided to take on this product. They—you were facing double-digit increases in the cost of providing health care. That’s a strain if you’re a CEO. In order to have a workforce, you’ve got to have a workforce that’s comfortable with the health care plan, and all of a sudden, it’s beginning to take big bites out of the

balance sheet. It’s hard to expand your business, it’s hard to grow when more and more of your costs are being consumed by health care. And it provides a real tension for small-business owners or large business managers—how do you take care of your people? No corporation, no entity can run unless the people are taken care of and, at the same time, expand your business.

The company wanted to reduce projected health care increases. You didn’t want to pass—keep passing on the high costs of—increasing costs to your employees. So they adopted HSAs. Nine—about 9,000 of Wendy’s full-time employees and their families have got HSAs. In other words, Wendy’s said, “Why don’t we give people a chance to make health care decisions themselves?” They don’t have some of the attitude in Washington. If you believe like Washington believes, you would never try an HSA because, “People can’t decide for themselves,” see. That’s not what the folks here at Wendy’s thought.

At the end of the first year with HSAs, more than 90 percent of Wendy’s employees had positive balances in their savings accounts. In other words, there’s a sharing ratio. The company paid—helped pay the premium for the catastrophic care. They shared the money that goes in to help pay for incidental or routine expenses. And—but 90 percent of the folks didn’t use all the money for the routine expenses. It’s kind of interesting that maybe it helps preventative medicine, I guess—when you’re watching your own money, and you realize that if you take care of your body and you exercise and you don’t do stupid things, you end up saving money. [*Laughter*] And when you save money, it’s your money, not the company’s money.

Medical claims through this company have decreased by 17 percent since they’ve implemented HSAs. It’s an interesting statistic, I think. After more than 5 years of health care costs going at double-digit rates, Wendy’s overall health care costs rose only by 1 percent last year. HSAs have had a

positive effect. This has a positive effect on the individual employee; it's had a positive effect on the income statement of the company. They work.

They're doing—and, Jeff, you made a good—get the boy a raise. [Laughter] It's a—here's what he said—you know, never mind. He said, “We entered into this plan to use our money more wisely and to allow our employees to use their money wisely.” Kind of an interesting corporate concept, to allow our employees to use their own—more money wisely. “It's making health care more transparent,” Jeff says, “and making improved health more sustainable for our employees and for all the consumers of health care.” I think he gets it. He gets the philosophy of having a consumer-driven system.

The savings have allowed Wendy's to raise the company's contribution to its employees' HSA accounts. By saving money on health insurance, it enables them to put more money into your account, which has got to be a heck of a good benefit, working for this company. It's your money now; it grows tax-free. It goes in tax-free; it grows tax-free; and you take it out tax-free.

The—I met with Marla Hipsher. Thanks for coming, Marla. She works here. She is a senior paralegal for 4 years. She was part of the briefing party that was there when I arrived. She is a single mom with a 24-year-old daughter and two teenage sons. As an aside, she has the toughest job in America, being a single mother. She obviously cares about her health care for herself and, more importantly, for her children. Marla's sons are on her HSA plan with her, which is a family plan. She enjoys the choice. She's comfortable with the control she has over her HSA. Marla's premiums with her HSA are 18 percent lower than the traditional plan she used to have at Wendy's. She's saving money. It makes it easier to do the hardest job in America, which is being a single mother. She likes her HSA so much, she's helping her 24-year-old daughter look into setting one up

herself. I—listen to your mother; it makes a lot of sense. [Laughter]

I want folks who don't understand HSAs to listen to what Marla has to say: “It has made me more informed, because you discuss it with your doctor now.” She's talking about health care. “You want to know up front what it's going to cost and what you need to know. You become a better informed consumer.” HSAs are working; they're working. And I'm looking forward to working with Congress to expand them to more Americans.

I'm going to talk about three ways to make them more attractive, so more people can have the benefits of an HSA, like Marla or the small-business owners we had. The greatest obstacle—one of the greatest obstacles to expansion of HSAs is the Tax Code. One problem is that under current law, employers and employees pay no income or payroll tax on any health insurance provided through the workplace. The health care plan here at Wendy's, you don't pay for it. It's a benefit that's not taxable. Those who buy their insurance on their own don't get the same tax break. That means that the self-employed, the unemployed, and workers at companies that do not provide insurance are at a disadvantage. The playing field isn't level. And so I believe that one thing Congress needs to do is to give Americans who purchase their own HSA policies the same tax breaks as those who get their health insurance from their employers.

Another problem is that under current law, the amount you can put into your HSA tax-free is limited to the amount of your deductible. But sometimes your out-of-pocket expenses are greater than your deductible. That's because at—on some catastrophic plans, there is an additional copay, and therefore, when you—you're paying after-tax dollars under the current law if you exceed the amount of money you spend beyond your deductible. We can change that. We can raise the cap on the amount of money you put into your HSA

so it remains tax-free, so that all out-of-pocket expenses can be covered. That's the important—[*applause*].

And finally, HSAs—we want to make sure they meet the practical needs of today's workers. I told you, people are changing jobs. And one of the problems is a lot of folks fear that when they change jobs, they're going to lose their health care. And that means—people feel like they've got to get locked into a job because of health care, and that's not right. We need more flex—they need to be more thoughtful to our workers and recognize that this is a changing world in which we live. And so we ought to make sure people can take their own health savings account with them job to job.

Today, the savings in your health account—health savings account are portable; portable means you can take it job to job. So you've got savings in your own account; you can take it with you. But the health insurance that comes with the account you can't take with you, because of outdated laws and practices that prevent insurers from offering portable policies. So I believe that health insurers should be allowed to sell portable HSA policies nationwide.

You see, it's like car insurance. If you change jobs, you can take your car insurance with you. You can't take your insurance in your HSA with you. In order to make sure this economy works better, in order to make sure the health care system functions better for our workers, we've got to make sure portability in HSAs is consistent and real. It's going to make a difference in people's lives when Congress gets that done.

The second policy—way to make—making sure health care is affordable and accessible is to increase transparency in our health care system. To be smart consumers, you need to be informed consumers. It's hard to make wise choices unless you have information available. In order to spend your HSA dollars wisely, you need to know in advance what your options are. You need

to know the quality of doctors and hospitals in your area; you need to know the full extent of procedures that someone recommends to you.

You know, like when you buy a new car, you have access to consumer research on safety, you have access to information on reliability, you can compare price. There's performance data. You can become an informed consumer before you purchase your automobile. And that same sense of transparency and information ought to be available in health care. A modern health care system recognizes that people ought to be encouraged to shop for quality and price. So the health care industry and the insurance industry needs to provide reliable information about prices and quality on most common medical procedures.

Tomorrow I'm going to have a little visit with people in the insurance industry and the health care industry and the business industry to encourage transparency. I know Members of Congress are working on a bill. It would—better this be done with people saying, "Oh, we understand it's important to be transparent." There's always a bill out there in case the voluntarism is not quite as strong as it should be. [*Laughter*]

Third policy that's important is to apply modern information technology to our medical system. Doctors practice 21st century medicine; they still have 19th century filing systems. And this is an important issue. One reason it's an important issue, because when a doc writes their files by hand, you generally can't read the writing. [*Laughter*] That leads to inefficiency and error. In hospitals, there is more risk of preventable medical error when records are handwritten, instead of being cross-checked on a computer. Oftentimes doctors duplicate expensive tests because they do not have access to previous results. In other words, the medical system has not taken advantage of information technology like I'm sure Wendy's has, or other industries around the country.

And so I set a goal in 2004 that most Americans would have an electronic health record within 10 years. You'd have your own health record on a chip. And we're making pretty good progress toward that goal. Mike Leavitt is the Secretary of Health and Human Services. He's got a whole division inside HHS aiming towards getting information technology spread throughout health care.

First thing is, they've got to have a language that kind of can talk between a hospital in Dublin and a hospital in Crawford, you know? We don't have a hospital in Crawford. [Laughter] How about a hospital close to Crawford? [Laughter] And that's important, because there's a lot of different—the language needs to be standardized. And Mike's making pretty good progress on that.

And we're developing solutions for a nationwide health information network. One of the things I've insisted upon is that it's got to be secure and private. There's nothing more private than your own health records. So any system that works is one that is—it's your record; you decide the disclosure of your health records.

And let me give you an example about how such a system can work and what I'm trying to explain to you about how to help control costs and reduce medical errors. After Katrina hit, there was hundreds of veterans that had to be relocated. What's interesting is, is that the Veterans Department has already started this information technology modernization. There are medical—electronic medical records for veterans. And so when these poor folks got scattered around the country, they—the doctors and providers had access to the electronic records of our veterans.

So if a person had a diabetes issue, up pops on the screen the information, the latest test, the medicine being taken. It was an incredibly efficient way to make sure that the health care needs of our veterans were met during this time of catastrophe. It helped people fill out the prescription

drugs of our seniors without fear of error. It helped a local doc say, "Well, gosh, look, you've been taking this medicine in the past; I'm going to prescribe it for you in the future, in order to make sure that your health care needs continue." If you have your own medical record, your own electronic medical record, and you get sick in a remote part of our country, people instantly see your blood type, the issues that you've faced in the past, really important information about you—about who you are and what you're going to need to help you.

And we're on our way to providing a nationwide information network. It's going to help save maybe 25 percent of the costs in medical care. I told you that one of the important things we've got to be worried about is how to deal with the cost-drivers, how to come up with ways to, practically, with a commonsense solution, deal with rising costs. One way is to modernize health care. Another way is to put consumers in charge of making decisions with transparency in pricing.

I want to talk a little bit about small businesses. The—obviously, I've told you once and I really mean it, I understand how important small businesses are for the economy. I also love the thought of America being a great place for entrepreneurship. There's nothing better than talking to somebody and saying, "I started my own business," or, "I own my own company." It's just—I love—it's refreshing to me. And it's just really an important part of the American experience. And obviously, as I mentioned, health care is a really important issue for small business. If you sat down with a roundtable of small businesses, the first issue that comes to their mind is, "I can't provide health care for my people. How do you expect me to stay in business when health care costs are driving us out?" Well, HSAs help a lot, and I really urge American small businesses to take a look at HSAs. They're good for Wendy's; they'll be good for you as well.

Here's another idea. One of the problems that small businesses have is that they enter into the market—they're trying to provide traditional insurance without any risk pool behind them. If you've got three people you're trying to insure, it's a heck of a lot more expensive than if you're trying to insure 3,000 people or 10,000 people. In other words, the more people that are in the risk pool, the lower the cost of traditional insurance is for a small business. And so I look forward to working with the Congress to expand what we call associated health plans. That's kind of Washington-speak for allowing small firms to band together to buy insurance at the same discounts that big companies get.

I'll give you an example. You've got yourself a family restaurant here in Dublin, Ohio. They've got 10 employees, and you try to go in the marketplace, and it's prohibitively expensive. It seems to make sense to me that the family restaurant in Dublin ought to team up with family restaurants all across the country, so that the employees provide one big risk pool to help lower the cost for small businesses. It is a practical way of helping small businesses that choose not to go into HSAs to be able to buy traditional insurance in a cost-effective way.

The bill passed the House of Representatives; it remains stuck in the United States Senate. I urge the Senate—I urge the Senate, for the sake of affordable health care for small businesses and their employees, to pass associated health plans.

I'll talk about one other issue. I hope you're hanging in there with me here. [Laughter] And that issue is one that I remember well when I was traveling your State, and that is the number of good docs that are getting driven out of practice because of frivolous lawsuits. If you're worried about affordability of health care and availability of health care, then you have got to be concerned about junk lawsuits. You just have to be, because a lot of docs and providers, thinking they're going to get

sued, practice what's called defensive medicine. They order tests; they write prescriptions that simply are not necessary so they can protect themselves from being sued in a court of law by a trial lawyer. That's just a fact of life.

I find interesting a quote from an emergency physician here. Here's what this person said, "In an effort to reduce our malpractice exposure"—that means, in an effort not to get sued—"we're being encouraged to overtreat, overtest, and overadmit patients." It has to be driving medical costs right out of the roof, and it is. It is.

In order to address the rising cost of health care, we've got to have a rational liability system. If you're harmed, you ought to have your day in court. You ought to—there ought to be justice for you, if you're injured. But we can write laws that make sure that you get your due claims without encouraging a plethora of junk lawsuits that is costing you a lot of money.

I'll tell you how it's costing you money. The cost of defensive medicine—in other words, practicing medicine that is otherwise not necessary—is estimated to cost our society \$60 to \$100 billion a year. It raises the cost of Medicare, Medicaid, Veterans Affairs, and other health programs by an estimated \$28 billion a year.

You're paying it. You're working hard. You're putting money into the—paying your taxes, and \$28 billion of those taxes goes to pay for the cost of frivolous and junk lawsuits. As equal—more importantly, in my judgment, actually, is that good docs are leaving the practice of medicine.

I said something in the State of the Union, and it's a startling statistic, if you really take time to think about it, and that is there are 1,500 counties in America without an ob-gyn. There are 15 counties in your State of Ohio without an ob-gyn. Now, that isn't right. I mean, these are good docs who are involved with the precious—the delivery of precious life. And they're getting sued—a lot. And they're leaving the practice, and it's putting a lot of women in

a bind. Women are having to travel miles. There's nothing worse than being—having uncertainty at this very important time of life.

And we need to do something about it, you know. I thought when I got to Washington it was a State issue, Governor—not when I see the effect on the Federal budget of \$28 billion a year, it's a national issue. It requires a national response. The House of Representatives passed a good piece of legislation. The trial lawyers have got it stuck in the United States Senate. For the sake of affordable health care and available health care, for the sake of good health care for our women across the United States of America, we need medical liability reform this year.

So that's what I wanted to talk about—[laughter]—ways to make health care more affordable and more available. I hope you can get a sense of my philosophy that when you trust the American people to make wise decisions about their health care, positive things happen. Free markets and competition transform our world. They have the power to transform our health care system. It's important to recognize—Wendy's recognized that when you introduced health savings accounts.

The agenda I just talked about, one I'm looking forward to working with both

Democrats and Republicans in Congress, builds on the strengths of the private sector, recognizes what's good, and let's continue to build on that. It focuses on practical, market-based solutions. It offers the potential to deliver real improvements, genuine improvements in the lives of our fellow citizens.

The heart of the reform is that you got to trust the people of the United States of America. And I do. And I do. I want to thank you for giving me a chance to come by and visit with you. God bless you. God bless our country.

NOTE: The President spoke at 12:13 p.m. at Wendy's International, Inc. In his remarks, he referred to John T. "Jack" Schuessler, chairman and chief executive officer, and Jeffrey Cava, executive vice president of human resources and administration, Wendy's International, Inc.; Gov. Bob Taft of Ohio; Jon A. Husted, speaker, and Larry L. Flowers, majority leader, Ohio State House of Representatives; Bill M. Harris, president, and Steve Stivers, senator, Ohio State Senate; and Mayor Marilee Chinnici-Zuercher of Dublin, OH. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks in a Discussion on Health Care Initiatives February 16, 2006

*The President.* Thank you all. Thanks for the warm welcome. Thanks for coming. We're about to have a discussion about how this country can make sure our health care system is available and affordable. And I want to thank our panelists for joining us. It's an interesting way to describe and discuss policy. It's a lot better than me just getting up there and giving a speech—you don't have to nod. [Laughter]

Do you want to kick things off, Mark?  
*Mark B. McClellan.* I'd be glad to. I'd like to welcome all of you to the Department of Health and Human Services. As you know, there are many people here who are working day and night to protect the public health, to help our health care system work better.

We have the privilege of working with the best health professionals in the world—

doctors, nurses, others who have some great ideas about delivering better care and about finding ways to do it with fewer complications and at a much lower cost. But in many ways, our health care policies haven't kept up with what our health care system can do, and we're going to spend some time talking about that today.

So, Mr. President, we're very pleased to have you here today to lead this discussion of some new ideas for improving our health care.

*The President.* Yes, thank you, Mark. Thanks. Mike Leavitt—where are you, Michael? Surely, he's here? *[Laughter]*

*Dr. McClellan.* He's in Florida, Mr. President.

*The President.* Oh, he's in Florida. Okay. Surfing. *[Laughter]* Actually, I saw him this morning—now don't make excuses for him. He's doing a heck of a job—he really is—and I hope you enjoy working for him.

I am really pleased that Nancy Johnson is here. Madam Congresswoman, thank you for coming. If you want to meet somebody in Congress who knows something about health care, talk to Nancy; she is a tireless advocate for making sure the health care systems are efficient and compassionate. And I really want to thank you for coming. It's a joy to work with you on these big issues.

I thank all the folks here at HHS. Thank you for working hard on behalf of our fellow citizens. You've got a tough and important job, and you're doing it well. One of the reasons why is because, you know, we've clearly defined roles of government—with the role of Government in health care. And one of the roles is to make sure our seniors have a modern, reformed Medicare system. And I want to thank those of you who are working on making sure that the Medicare system is explained to and available for seniors all across the country.

We did the right thing when it came to saying that if we're going to have a program for seniors, let's make sure it works as good as possible. And part of that meant

modernizing the system so it included a prescription drug benefit. It's not easy to sign up millions of people in a quick period of time to a new program, and there were some glitches. The good thing about this Department, and the good thing about Mike and Mark is that they have prioritized problems to be fixed and have gone around the country fixing them.

Millions of folks—about 25 million people have signed up for the new Medicare benefit. I don't know if you remember when we first had the discussions about the Medicare benefit, people said, "It will cost about \$37 a month per beneficiary." One of the interesting reforms was not only making sure that medicine was modernized, but seniors actually were given choices to make in the program. And Mark's done a fine job of encouraging providers to be in the markets. And as a result of choice in the marketplace, the average per—anticipated cost is \$27 a month.

In other words, giving people a decision to make is an important part of helping to keep control of cost. We have a third-party system—third-party payer system. When somebody else pays the bills, rarely do you ask price or ask the cost of something. I mean, it seems kind of convenient, doesn't it? You pay your premium; you pay your copay; you pay your deductible; and somebody pays the bills for you.

The problem with that is, is that there's no kind of market force. There's no consumer advocacy for reasonable price when somebody else pays the bills. And one of the reasons why we're having inflation in health care is because there is no sense of market. We're addressing the cost-drivers of health care, and this discussion today is a part of helping to make sure health care is affordable. And as it becomes affordable, it becomes more available, by the way.

A couple of ideas, other than the subject at hand, to make sure health care is affordable is—and we'll talk a little bit about information technology. I know there's a

great initiative here at HHS to help bring the health care industry into the modern era by implementing information technology reforms. And for those of you working on the project, thanks, and we take it very seriously at the White House, and I know you take it seriously here.

Secondly, I want to thank those of you who are working on community health centers. One way to help control costs is to help people who are poor and indigent get costs in places that are much more efficient at delivery of health than emergency rooms. And so we're committed to expansion of community health centers. Again, thanks on that, Nancy, for helping in Congress. They work. We're measuring results, and the results are good results.

Thirdly, lawsuits are running up the cost of medicine. The practice of—the defensive practice of medicine or the practice of defensive medicine—I'm a Texan—[laughter]—it costs about 28 billion a year when doctors overprescribe, to make sure that they kind of inoculate themselves against lawsuit. It runs up Federal budgets. It costs the economy about 600 to 100 billion—60 to 100 billion a year.

And so we've got to do something about these junk lawsuits. I mean, they're running good people out of practice. I said a statistic the other day in the State of the Union that's got to startle you if you're involved with the health care delivery in America: 1,500 counties don't have an ob-gyn because lawsuits have driven a lot of good docs out of those counties. And that's not right.

And so we've got to get medical liability reform. The House has done a good job of passing it. It's stuck in the Senate. So for the sake of affordable and available health care and if—is to get a good, decent bill passed.

One other way to help control costs is to interject market forces, as I mentioned. And one way to do that is through what's called health savings accounts. Health savings accounts are an innovative product that

came, really, to be as a result of the Medicare bill that I was honored to sign. And they're an innovative account that combines savings on a tax-free basis with a catastrophic health care plan. We'll have some consumers here of health savings accounts that will describe how they work and whether or not they're working worth a darn.

But the key thing in a health savings account is you actually put a patient in charge of his or her decisions and—which we think is a vital aspect of making sure the health care system is not only modern, but a health care system in which costs are not running out of control. And part of making sure consumers, if they have a decision to make, can make rational decisions is for there to be transparency in pricing. In other words, how can you make a rational decision unless you fully understand the pricing options or the quality options. When you go buy a car, you know, you're able to shop and compare. And yet in health care, that's just not happening in America today.

And so one of the—this discussion is centered around encouraging consumer-based health care systems and strengthening private medicine through transparency and pricing and quality. And I hope you find this as interesting a discussion as I will.

I'm going to start off with Dr. Gail Wilensky. Do you know anything about health care? No. [Laughter] She knows a lot about health care. You've been working the health care industry for, what—tell us what you do.

[At this point, Gail Wilensky, senior fellow, Project HOPE, made brief remarks.]

*The President.* Thank you for the lead-in. We spend a lot of money at the Federal level, and you would expect that if we're sitting up here talking about transparency then we ought to do something about it. I mean, the Federal Government is the

largest purchaser of health care—am I right—46 percent of all health care dollars.

*Dr. McClellan.* That's right.

*The President.* Okay. What are you going to do about it? [Laughter]

*Dr. McClellan.* Well, Mr. President, we are doing a lot about this already, as you know. With—before the Medicare drug benefit, Medicare provided a drug discount card for millions of seniors to enable them to save billions of dollars. And with that card, we made available information on discounted drug prices for all the prescription drugs and all the pharmacies around the country. Seniors use that information to keep prices down. They shopped, and we saw during the course of this program, savings actually increase over time.

*The President.* Yes.

*Dr. McClellan.* GIWe also saw lots of seniors switching to drugs that they found out about that could meet their medical needs at a much lower cost.

*The President.* One thing a person watching out there—what we're talking about, for example, when it comes to putting information out on drugs, a brand name drug and a generic drug do the same thing, but there's a huge price differential. And what Mark is saying is, is that we made, as a result of our Government policies, the providers to provide a shopping list, a comparison for people to get on the Internet and find out whether they can buy a drug cheaper or not.

*Dr. McClellan.* That's right. And many people are saving 70 or 80 percent or more on their drug cost by switching to generics. You can get this information on the Internet. You can also get it by calling 1-800-MEDICARE. And we're doing the same thing with the drug benefit. And that's one reason the drug benefit costs now are so much lower than people expected, as you mentioned earlier.

We're trying to make more information available on hospital quality, on nursing home quality, on many other aspects of health care. But we can't do this alone;

we've got a public/private health care system, so we need to work with health professionals, with consumer groups, with business purchasers, and with the health plans in this country to get useful information out. We started to do that through collaborative efforts, like the Hospital Quality Alliance and the Ambulatory Care Quality Alliance. These are groups that include all of the different key stakeholders in our health care system working together to make useful information available on quality and cost.

Some of that's happened already, but I think with the leadership from the President and with the full backing of the Federal Government, we can move this effort along much more quickly and much more extensively to get information out about satisfaction with care, to get information out about outcomes of care and complications, and to get information out about cost. And, Mr. President, we're very pleased to be starting right now a new program that will be piloted in six large communities around the country, where all these different groups—the health professionals, business groups, Government organizations, including Medicare and the Agency for Health Care Research and Quality, and health plans—are going to be working together to make useful information available to consumers and health professionals in these communities about the quality and costs of their health care. And hopefully, we'll be able to move this project along very, very quickly.

*The President.* Good.

*Dr. McClellan.* We're working.

*The President.* Nice going. Yes, I know you are. You're working hard. Mark also has been responsive to some of the issues of the Medicare rollout. And they've been moving hard and traveling around the State. And thanks for responding to what's going to end up being a really, really important program for our seniors—let me say, a revitalized, important program for

our seniors. It's going to make a big difference. Thanks for working so hard.

Robin Downey. What do you do, Robin?

*Roberta "Robin" Downey.* I'm head of product development for Aetna.

*The President.* Yes.

*Ms. Downey.* And I was instrumental in launching our HSA program. We've been doing consumer-directed plans since 2002. And so we're the first national plan to offer an HSA in the health plan arena.

*The President.* Good move. I bet you're really selling a lot of them.

*Ms. Downey.* Yes, we are. The adoption is higher in the HSA than it is in the HRA now. It's increasing, and I'm probably one of Aetna's first members in the HSA.

*The President.* You and I both. We own an HSA.

*Ms. Downey.* Yes, yes, both in it.

*The President.* Let me ask you something. Aetna, obviously, is a big health insurance company. Do you—obviously you've got an opinion on transparency, otherwise you wouldn't be sitting here—but give us from your perspective, from the insurance company's perspective, tell us what transparency means to you and how best we can work together to implement the transparency.

[*Ms. Downey, vice president and head of product development, Aetna, made brief remarks.*]

*The President.* Good. And I presume there was resistance at first?

*Ms. Downey.* Not resistance; they wanted to know why. I think physicians are wondering why the consumers need that kind of information. So they're getting used to that. And then they were actually pretty helpful when we were talking about how we were going to display it. They were saying, make it easy for the patients to understand, so they're helping us take the medical terminology, put it into layman's terms. They wanted to make sure it wasn't going to create more work for them; were people going to be calling their offices con-

stantly. And that's what we want to do; we want to put it on the web site so they don't have to constantly call. So we want to provide easy access.

And so they were also concerned with, if you put cost information there, and you don't have quality, then people will price shop on cost alone, and they're very afraid of that—and they should be, because people should understand the—

*The President.* So how do you handle that?

*Ms. Downey.* We're marrying that now. We're going to expand that pilot. It was so successful, we're going to expand it into more locations in the fall of 2006, and we're going to be marrying that information with the quality information so the consumer can go out and see what the unit cost is, what the efficiency is, what the clinical quality is. And so they can look at the overall value. We're pretty pumped about it.

*The President.* Well, I appreciate you doing it. It must be exciting to be on the leading edge of an interesting innovation and to a—into health care.

*Ms. Downey.* Very much.

*The President.* It's hard to believe that ours is a market society in which people are able to shop based upon price and quality in almost every aspect of our life, with the exception of health care. And it's no wonder that we're dealing with what appears to be ever-increasing costs.

You know, it's really interesting. LASIK surgery is a good example of a procedure that was really didn't—was not a part of a third-party payer, just came to be. People could choose it if they wanted to choose it, could pay for it if they didn't want to—would pay for it themselves if they chose to use it. And more doctors started offering LASIK surgery. There was more information about LASIK surgery, and the price came down dramatically over time, and the quality was increasing. And now LASIK surgery is eminently affordable for a lot of people, because the market actually

functioned. And I think what Robin is saying is that they're trying to introduce those same kind of forces in Cincinnati.

Thanks for doing what you're doing. I met with your old boss today. Maybe he's watching out there. [Laughter]

*Ms. Downey.* He talks to me just the way you talk to Mark—"just do it." [Laughter]

*The President.* A little bossy. [Laughter]

*Ms. Downey.* Yes. But you get stuff done.

*The President.* Yes, that's right.

Dan Evans is the president and CEO of Clarion Health Partners in Indianapolis, Indiana. Thanks for coming. They're doing some interesting things. He's a hospital guy.

*Daniel F. Evans, Jr.* Yes. We're—I'm the CEO of an academic medical center, so we have both a university and a hospital. We have 4,000 peer review projects ongoing right now, including—

*The President.* Tell everybody what a peer review project is.

[*Mr. Evans, president and chief executive officer, Clarian Health Partners, Inc., made brief remarks.*]

*The President.* So how easy is it to establish a matrix, or a—information for consumers to be able to really accurately understand?

[*Mr. Evans made further remarks.*]

*The President.* The—we're really talking about making sure each American has an electronic medical record, over which he or she has got control of the privacy. An interesting—another example was what happened—the Veterans Administration, by the way, has implemented electronic medical records. In other words, they're using modern technology to bring this important agency into the 21st century. A lot of files at your hospital still—probably not your hospital but the typical hospital—are handwritten.

*Mr. Evans.* Well, you know, what happens is, they may be electronic in the hos-

pital, but handwritten in the doctor's office—

*The President.* Yes, and the doctors can't write anyways, so—[laughter].

*Mr. Evans.* Well, the pen is a very dangerous thing.

*The President.* Yes, it is.

*Mr. Evans.* Yes, as you well know. [Laughter]

*The President.* And so the idea is to modernize doctors' offices and hospitals and providers through information technology. And so the Veterans Department has done this. In other words, each veteran has got an electronic medical record. And so when Katrina hit, a lot of veterans were scattered, and they were just displaced. And you can imagine the trauma to begin with, and the trauma is compounded if you're worried about your record being lost somewhere, your medical record.

And fortunately, because the veterans at the Department had already acted, these medical records went with the patient, and a lot of veterans got instant help. And so a doc could just, you know, kind of download their record, take a look at what was prescribed before, take a look at other procedures, and boom, the medicine and the help was brought up to speed quickly, which is great. And I want to thank you for doing that.

Information technology is going to help change medicine in a constructive way, and it does dovetail with price and equality.

Yes. Getting kind of adrift of what we're talking about here? I hope so. If not, we'll go over to Jerry; she'll help—[laughter]. Jerry, welcome. Where do you live? What do you do?

*Jerry W. Henderson.* Mr. President, I live in Baltimore, Maryland.

*The President.* Welcome.

*Ms. Henderson.* And I am a nurse, and I've been in health care for over 30 years. And for the last 9 years, I've had the responsibility of running an ambulatory surgery center in Baltimore.

*The President.* Good. Called?

*Ms. Henderson.* The SurgiCenter of Baltimore.

*The President.* Very good. And tell us, you know, the transparency issue—you—we had a little visit ahead of time, so it's not the first time I've seen her; she gave me a little hint about what she was going to talk about. Go ahead and share with people—small clinic, relatively small clinic, big hospital guy, small clinic person.

[*Ms. Henderson, executive director, SurgiCenter of Baltimore, made brief remarks.*]

*The President.* Right. And the reason why they can't yet is because you happen to be on the leading edge of what is an important reform.

*Ms. Henderson.* I think so.

*The President.* Yes, it is. Well, so do the patients, more importantly. And thank you for sharing that with us.

You have—happen to have a patient here.

*Ms. Henderson.* I do.

*The President.* You've known Gail before?

*Ms. Henderson.* Gail Zanelotti was a patient at our center, and I think she'll tell you that probably it was a more convenient and comfortable and patient—

*The President.* You're not putting words in her mouth are you? [*Laughter*]

*Ms. Henderson.* No, no. But I bet she would tell you that. [*Laughter*]

*Gail Zanelotti.* It was more convenient and comfortable. [*Laughter*]

*The President.* It was? Very good. [*Laughter*]

*Ms. Henderson.* See? [*Laughter*]

*The President.* You were diagnosed with what?

*Ms. Zanelotti.* With bilateral breast cancer in October. And I had several procedures performed at the Surgical Center of Baltimore. And they treated me as if I were the main event. That's how I felt—socially, emotionally, physically. The whole gamut was covered. And I chose the surgeon first

for quality and then went on to find the pricing and everything else through them—

*The President.* Sure.

*Ms. Zanelotti.* —which they were very transparent about. It was a very positive experience. And I'm still in communication with them because—through the reconstructive process.

*The President.* Yes.

*Ms. Zanelotti.* And I would do it the same way again.

*The President.* And so how does—I mean, so you're the consumer. You walk in, obviously, pretty well traumatized to a certain extent. You've got this horrible disease that's attacked you. And you come to them, and they—and you're asking what questions?

*Ms. Zanelotti.* I saw the surgeon that night, and I think we were there at 10:30 p.m. at night.

*The President.* Oh, great.

*Ms. Zanelotti.* I mean, it's amazing how dedicated some of these doctors are. And then they take you through the process of different diagnostic steps that you have to take. And really, you see how curable things can be if it's caught early. And I was very lucky to be able to be faced with step-by-step approach to get back to my journey of full health.

*The President.* Good job. Congratulations.

*Ms. Zanelotti.* Thank you.

*The President.* You've got that sparkle in your eye, you know. [*Laughter*]

*Ms. Zanelotti.* Thank you. Very lucky.

*The President.* And so—no, I appreciate it. It's an interesting—the transparency reform is going to take place in both large entities and smaller entities, because consumers shouldn't be restricted to shopping only in a large entity or a small entity. "Shopping" isn't the right word, but you know what I mean—in other words, out there looking for the procedure that fits their needs at the right cost and the right price.

It almost doesn't matter if we have transparency if consumers, however, are not in a position to make decisions. In other words, if somebody is making the decision for you, transparency only matters to the decider.

And so Bruce is with us today—Bruce Goodwin. He's an HSA owner. Bruce, describe HSAs—well, first of all, tell us what you do.

*William "Bruce" Goodwin.* My company manufactures computer plate technology for the graphic arts printing business.

*The President.* How many employees?

*Mr. Goodwin.* We have 20 employees. We're a small company.

*The President.* Yes. By the way, two-thirds of new jobs in America are created by small businesses. And if a small business can't afford health care, it's pretty likely they're not going to be aggressive in expanding. And I presume you have some health care issues.

*Mr. Goodwin.* Well, I'm here as an employer who is concerned about health care costs for sure, and a strong advocate of health savings accounts. I'm a firm believer that for employers, health savings accounts is probably the best weapon we've got in the battle of these rapidly escalating health care costs. And I'm very much hopeful, and I appreciate very much your leadership in trying to help strengthen the health savings accounts.

*The President.* Yes, we'll talk about it in a minute. So tell people what a health savings account is. This is kind of a foreign language to everybody but the 3 million people who own one. It's just a new product. And it's just beginning to happen.

[*Mr. Goodwin, president, Glunz and Jensen, Inc., made brief remarks.*]

*The President.* An insurance plan with a health savings account is a high-deductible catastrophic plan coupled with a tax-free health savings account to pay routine medical costs up to the deductible. That's the way they're structured now. Many em-

ployees—I was at Wendy's yesterday. Wendy's has now got 9,000 employees using health savings accounts. The company pays for part of the premium, as well as the contribution into the cash account to be paid by the customer for routine medical expenses.

If you don't spend all your money in your cash account, you can save it tax-free and roll it over to the next year, and then you contribute again. Wendy's premiums rose this year, I think, at less than 2 percent—maybe even less than 1 percent, if I'm not mistaken. And they were increasing at double-digit rates—I hope I'm not exaggerating—they were going up quite dramatically, let me put it to you that way. And now their premiums were significantly lower. And the savings enabled them to put additional money into their employees' accounts, additional contributions.

It's an interesting concept, because all of a sudden, it puts an individual in charge of health care decisions. There's an incentive, by the way, for people to make rational choices about what they consume—like, if you don't smoke and drink, it's more likely you'll stay healthy and not spend money in your account. If you exercise—I'd strongly urge mountain biking—[*laugh-ter*—it helps you stay healthy. And by staying healthy, you actually save money. There's a remuneration for good choice.

And what Bruce is saying is that it's helped his business afford health care. It's helped a lot of small businesses. If you're a small-business owner, please look into health savings accounts for the good of your employees.

Interestingly enough, about a third of those who've purchased the new health savings accounts were uninsured. Many of the uninsured in America are young people, kind of the bulletproof syndrome—you're never going to get sick, so therefore, why buy insurance. Now, there's an incentive to buy insurance because it means you can save tax-free.

And so Bruce has used them, and it's—and he reports that he's able to better control his costs, which is really important for the small-business sector. And it's also important for the large-business sector to say to their employees, “Here is something that's really beneficial for you and your families because when you saved the money, it's your money.” Savings in health care doesn't go to a third party entity; it goes to the consumer. It's a new concept that's just coming in to be.

In order for it to work, there has to be transparency. How can you expect somebody to make rational decisions in the marketplace if they don't see price and quality? It's going to be a very important—what we're talking here is a very important reform to really fit into a—making sure the private medicine aspect of our medical system remains the center of medicine.

There's a debate here in Washington about who best to make decisions. Some up here believe the Federal Government should be making decisions on behalf of people. I believe that consumers should be encouraged to make decisions on behalf of themselves. And health savings accounts and transparency go hand in hand.

There are some things we need Congress to do to make health savings accounts work even better than they are. One is to make sure that one's contributions into the health savings account is—can be—it will be equal to the deductible, plus any copays that may have to be made. In other words, we shouldn't cap the contribution, cash contribution at where it is; it needs to be raised.

Secondly, we need to make sure the Tax Code treats employees in large companies and employees in small companies equally when it comes to purchasing health savings

accounts. And thirdly, and a key component of making sure health savings accounts works, that addresses one of the real concerns in our society, and that is people changing jobs but fearful of losing health care as they do change jobs, is to make sure health savings accounts are portable in all aspects, a health care plan that encompasses health savings accounts. Today, the rules enable one to take with them the cash balances in their health savings accounts but not the insurance in their health savings accounts. In order to make these plans truly portable, so as to bring peace of mind to people, we've got to make sure that health savings accounts are genuinely portable accounts.

I look forward to working with Congress to strengthen, not weaken, but strengthen these very important products that puts the doctor and the patient in the center of the health care decision. Today we've heard some interesting, innovative ideas that are taking place from the insurance industry to the providers to the Federal Government. And we will continue to implement transparency. And it's just the beginning. And I predict that when this—as this society becomes more transparent, as the consumers have more choice to make, you'll see better cost containment. And as we're able to contain costs, we achieve some great national objectives: One is to make sure health care is affordable, and two, make sure it's available.

I want to thank you all for coming to join us. It was an interesting discussion. Appreciate your time. God bless.

NOTE: The President spoke at 1:18 p.m. in the Great Hall at the U.S. Department of Health and Human Services.

Remarks Following Discussions With President Alvaro Uribe Velez of  
Colombia and an Exchange With Reporters  
February 16, 2006

*President Bush.* Thank you all for coming. The President and I will make a statement. We'll be glad to take two questions per side.

Mr. President, *bienvenidos*. We're glad you're here.

First of all, the President and I are friends, and we are personal friends, and we're friends of freedom as well. Every time I visit with President Uribe, I am impressed by his strength of character and his belief in the future of his country. Mr. President, I'm proud that you're here. I want to thank you for the wide-ranging discussions we have had.

The President, of course, has got trade on his mind. I've explained to him very carefully that we are interested in a trade agreement that we will negotiate in good faith. The agreement must be good for the people of Colombia and—as well as the people of the United States. And I assured him that our trade negotiators will be fair in our approach.

So, Mr. President, thank you for your strength of character, and thank you for your friendship. And welcome here to the Oval Office.

[At this point, President Uribe made remarks in Spanish.]

*President Bush.* Si, señor.

*Q.* Señor Presidente—

*President Bush.* Hold on for a second. Hold on for a second. *Un momento, por favor.* [Laughter] You want to say it?

[The interpreter then translated President Uribe's remarks as follows.]

*President Uribe.* President Bush, this meeting has been very constructive, as it always is whenever we meet. I want to thank you, I want to thank the Government, and I want to thank the Congress

and the people of the United States for their permanent interest in Colombia.

Our peoples have a relationship that is historic, and it's also a relationship that is close. We also have a convergence, a convergence that is based on democratic values and the belief that democracy needs security in order to build those values.

We have been negotiating an FTA for the last 23 months. All of us have come to this negotiation in good faith, and I'm sure that we will see a conclusion. This meeting has been good for democracy, and it has been good for the interests of our people, as well as for our shared war on terror and our war against the drugs that finance that terror.

Thank you.

*President Bush.* I understood you. [Laughter]

*President Uribe.* Thank you.

*President Bush.* Nedra [Nedra Pickler, Associated Press].

*Vice President's Hunting Accident*

*Q.* Yes, Mr. President, do you feel it was appropriate that the Vice President didn't reveal his shooting accident until the next day and through a private citizen? And do you think it was okay that he didn't talk to you about it, personally, until Monday?

*President Bush.* I thought the Vice President handled the issue just fine. He went through—and I thought his explanation yesterday was a powerful explanation. This is a man who likes the outdoors, and he likes to hunt. And he heard a bird flush, and he turned and pulled the trigger and saw his friend get wounded. And it was a deeply traumatic moment for him, and obviously, for the—it was a tragic moment for Harry Whittington.

And so I thought his explanation yesterday was a very strong and powerful explanation, and I'm satisfied with the explanation he gave.

Q. But are you satisfied about the timing?

*President Bush.* I'm satisfied with the explanation he gave.

Mr. President is about to ask somebody to ask a question.

#### *Colombia-U.S. Free Trade Agreement*

Q. Mr. President, is there going to be a free trade agreement with Colombia or not?

*President Bush.* *Espero que si.*

Q. *Pronto?* Soon?

*President Bush.* *Vamos a ver.* I spent time visiting with the President about the progress on negotiations. Free trade agreements are never easy to negotiate—*es muy dificil*e and—because there's interests. He represents the people of your country very well. He's a good negotiator, as is his trade minister. They're strong in representing the interests of the people, whether they be farmers or manufacturers. And our people are good, strong negotiators too.

I'm very hopeful. I'm very hopeful we reach a conclusion. It's a—trade agreements are never easy, and that's what's very important to understand. But they—in my judgment—and by the way, I, too, have to convince the American people of the importance of trade agreements—in my judgment an agreement with this important country, Colombia, will be a very important agreement. And so we're working hard.

Steve [Steve Holland, Reuters].

#### *Vice President's Hunting Accident*

Q. Some Democrats say that this shooting episode has contributed to a perception of White House secrecy. What do you say to that, sir?

*President Bush.* I think people are making the wrong conclusion about a tragic accident. The Vice President was involved in a terrible accident, and it profoundly

affected him. Yesterday when he was here in the Oval Office, I saw the deep concern he had about a person who he wounded. And he—again, I thought yesterday's explanation was a very strong and important explanation to make to the American people.

And now our concerns are directed toward the recovery of our friend. I knew Harry Whittington when I was the Governor of Texas, down there in Austin. He's a fine man. He was been involved in our State's politics for a long period of time. And, you know, my concern is for Harry, and I know the Vice President feels the same way.

#### *Colombia-U.S. Free Trade Agreement*

Q. President Bush, do you think the negotiators are making the link between the fact that it's important to prove legal economy as a way to fight against terror and illegal drugs?

*President Bush.* That's a great question. I believe that when we work together in a free trade, it strengthens markets and the appreciation for open markets, whether it be in Colombia or here at home. I believe free commerce between nations will enable countries—people in countries to realize their full potential. I think one of the things that's very important—I know the President is dedicated on—is a strategy on the one hand that says he will deal harshly with those who deal in drugs. But he also recognizes there needs to be economic activity to compete.

We've had a lot of discussions about crop substitution and microloans for people to be able to develop ways to make a living that is distinct from and different from being involved in the drug trade.

And so absolutely we understand the connection between trade of legal products in a free way between nations as a way to compete against illegal activities. I appreciate the President's leadership on working hard to make sure that Colombia is rid of narco-trafficking. It's a great country with a wonderful history. And the determination

to rid the country of narcotrafficking will go down as a very important part of your nation's history, and we'll continue to say to the world Colombia is a great country with great enterprise and great hope and great opportunity.

So thank you for coming. *Adios.*

NOTE: The President spoke at 4:16 p.m. in the Oval Office at the White House. In his

remarks, he referred to Harry M. Whittington, chairman, Texas Funeral Service Commission, who was injured on February 11 while hunting with the Vice President on a ranch in Corpus Christi, TX; and Minister of Commerce, Industry, and Tourism Jorge Humberto Botero of Colombia. President Uribe spoke in Spanish, and his remarks were translated by an interpreter.

## Letter to the Speaker of the House of Representatives Transmitting a Request for Fiscal Year 2006 Supplemental Appropriations for Ongoing Military and Intelligence Operations and Selected Other International Activities

February 16, 2006

*Dear Mr. Speaker:*

Today, I am submitting a request for Fiscal Year 2006 supplemental appropriations of \$72.4 billion for ongoing military and intelligence operations in support of Operation Iraqi Freedom, Operation Enduring Freedom, and selected other international activities. These funds support U.S. Armed Forces and Coalition partners as we advance democracy, fight the terrorists and insurgents, and train and equip Iraqi security forces so that they can defend their sovereignty and freedom. Already more than 35 Iraqi battalions have assumed control of their own areas of responsibility. This request provides the resources necessary to continue that effort so the Coalition can continue to hand over control of more territory to Iraqi forces.

In Afghanistan, our Armed Forces continue to track down terrorists, help the Afghan people rebuild their country, and train and equip Afghan security forces so that Afghanistan may continue to take control of its democratic future. Our coalition has trained many thousands of Afghan soldiers and police. These forces are risking their lives to fight our common enemy. This request provides the resources necessary to

continue the train and equip effort so Afghan forces can eventually provide for the security of their own citizens.

The request includes funds to confront the threat from Improvised Explosive Devices and to improve the protection of our forces. In addition, the request addresses the need for substantial investment to repair or replace equipment worn out or lost in military operations. It also provides additional funding to cover the costs of restructuring the Army and Marine Corps into more agile, self-sustaining units that provide increased combat effectiveness critical to winning the Global War on Terror.

The request includes bonuses and incentive pay to properly compensate American troops for the sacrifices they make in defense of freedom. It also includes funds to cover enhanced benefits for survivors of all military members and provides for newly authorized benefits for those injured in combat.

The request also provides funds for the extraordinary security and operating costs associated with supporting U.S. diplomatic activity in Iraq and Afghanistan.

The request includes funds to help create political and economic stability in post-conflict areas, help Iraqis protect and sustain their infrastructure, and build Iraqi capacity at the national and provincial levels for better, more responsive, and transparent governance. The request also supports the successful Commander's Emergency Response program that enables military commanders to respond to urgent, small-scale, humanitarian relief and reconstruction needs in their area of responsibility. These counter-insurgency and stabilization activities help build civilian capabilities to ensure the transition to greater Iraqi self-reliance. Coupling increased civilian capacity with increased military capacity is essential to sustained progress in all realms—security, political, and economic—and is essential to neutralizing the insurgents and defeating the terrorists.

Finally, the supplemental requests funds for urgent, unanticipated needs to help re-

lieve human suffering associated with a number of humanitarian crises, including Sudan and other parts of Africa, assistance for refugees, and the costs of humanitarian relief and reconstruction efforts in response to the devastating earthquake in Pakistan. The request also includes funding to address urgent democracy-promotion activities in Iran.

I hereby designate the specific proposals in the amounts requested herein as emergency requirements. This request reflects urgent and essential requirements. I ask the Congress to appropriate the funds as requested and promptly send the bill to me for signature. The details of the request are set forth in the enclosed letter from the Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

## Letter to the Speaker of the House of Representatives Transmitting a Request for Additional Funds To Support Recovery Efforts in the Gulf Coast

February 16, 2006

Dear Mr. Speaker:

Hurricane Katrina was one of the worst natural disasters in our Nation's history. Katrina devastated an area roughly the size of Great Britain. This devastation has required an unprecedented response by Federal, State, and local governments, as well as the private sector. So far, the Federal Government has committed more than \$87 billion in spending and \$8 billion in tax relief for the people of the Gulf Coast and New Orleans.

To provide additional resources to assist the region in its recovery, I ask the Congress to consider the enclosed requests, totaling \$19.8 billion. This request includes critical funding to: replenish the Depart-

ment of Homeland Security's Disaster Relief Fund in support of ongoing response efforts; support the Small Business Administration's Disaster Loan program; provide funding for the Community Development Block Grant program to support Louisiana's flood mitigation plans; achieve my commitment through the Corps of Engineers for stronger and better levee protection for New Orleans; and continue rebuilding of the region's Federal infrastructure.

I urge the Congress to act expeditiously on this request to ensure that the Federal response and recovery efforts continue uninterrupted. I designate this proposal in the amount requested herein as an emergency requirement.

The details of this request are set forth in the enclosed letter from the Director of the Office of Management and Budget.

Sincerely,

GEORGE W. BUSH

Remarks on the War on Terror and a Question-and-Answer Session in Tampa, Florida  
February 17, 2006

*The President.* Thank you all. Please be seated. Thanks for the warm welcome. Thanks for the warm weather. [Laughter] It's nice to be back here. I just came from MacDill, where I was talking to General Abizaid and General Brown, and one of the things that's clear is folks there at MacDill really do appreciate the support that the citizens of the communities of Tampa and St. Pete and the surrounding area provide them. So I want to thank you all very much for being—[applause].

I'd like to share some thoughts with you and then answer questions as time allows, if you've got any. First, I send Laura's greetings. She's doing great, by the way. She's a fantastic First Lady and a—[applause]. She's obviously got to be a woman of enormous patience. [Laughter]

I appreciate Congressmen Adam Putnam, Bill Young, Mike Bilirakis, and Katherine Harris for being here today. Oh, there they are, yes. Proud to give them a ride on Air Force One. [Laughter] Some of them aren't going back, by the way. [Laughter] Mark Kennedy—is Mark here with us, from Minnesota? I think he was going to drop by—he supposedly was going to be here. You don't know him because he's from Minnesota, but I do, and he's a fine guy. [Laughter]

I want to thank my buddy Mel Sembler, Ambassador Sembler, who represented our country so well, once in Australia under 41, and then to Italy under 43—and Betty. I want to thank the chambers of both Tampa and St. Pete. I want to thank the mayors from Tampa and St. Pete—Mayor

Iorio and Mayor Baker are with us. Thank you both for coming. Appreciate you being here.

I didn't mean to take you away from your work. Any excuse is a good one on Friday, right? [Laughter] So long as I keep the speech short. I want to thank members of the statehouse who are here. I want to thank you all for letting us use this beautiful facility. And thank you for coming.

First of all, the economy's in good shape; it's growing. I guess that's an easy thing to say in the State of Florida, when the unemployment rate is 3.3 percent. Pretty amazing, isn't it? I'm sure the Governor is going to try to take credit for it, you know. [Laughter] I'm not going to, because the role of government is to create an environment where the entrepreneurs can flourish and small businesses can grow.

And the fundamental question facing this country of ours is, how do we keep ourselves to be the economic leader of the world? It's really the interesting question. You know, in spite of the good economic numbers—4.7 percent unemployment around the country; our economy growing at over 3 percent, in the face of hurricanes as well as high gas prices; homeownership is an alltime high; small businesses are growing. In spite of all that, there's a certain sense of uncertainty. People are worried. They're worried because they're changing jobs a lot. They're worried because of competition from India and China. There's a certain sense of uncertainty.

And so we have a choice to make about our economy: Do we retreat in the face

of uncertainty, or do we lead? And I will be working with the Congress, Members of—from both political parties, to be the leader of the world. And here's some ideas. One, keep taxes low. We can't be the economic leader of the world if we run up your taxes, and so we're going to keep them low.

And you'll hear a debate in Washington, DC, that says, "Well, we've got to run up your taxes to balance the budget." That's not the way it works in Washington. They will run up your taxes, and they'll figure out new ways to spend money. The best way to balance the budget is to keep the taxes low and be wise about how we spend your money. That's how we're going to balance the budget.

In order for us to be competitive and lead in the world, we've got to get off of Middle Eastern oil. I know it shocks some of you to hear a Texan say, "We're addicted to oil." And we are, and it's a problem. It's a problem. It's a national security problem, and it's an economic security problem to be reliant upon oil from parts of the world that may be unstable or parts of the world that simply don't like us. And so the best way to deal with that is to continue to foster new technologies because of research and development that will enable us to use different fuels in our cars, for example.

There's Kennedy right there. Good to see you, Kennedy. The reason I thought of him is because he's from a part of the world that's growing a lot of crops that can be converted into energy. We're close. We're close to technological breakthroughs that will enable us to convert wood chips and saw grass. We already convert sugar, corn, and soy into fuel. And think about that. If this technology comes true, which we believe it will, then pretty soon a President is going to say, "We're growing a lot of crops, and we're less dependent on Middle Eastern oil." There are 4.5 million cars today that are flex-fuel cars that can either run on gasoline or ethanol. In other words,

the technology is available inside the automobile. And it's coming.

And we're making some great breakthroughs on battery technology. Next week I'm going to travel around the country going to some of the most innovative places around our country that are providing new technologies to enable us to become less dependent on oil, which will keep us a leader in the world.

Another thing we need to do is to make sure that our health care system is modern. I want to talk real quick about Medicare here. First of all, I'm aware there's a lot of seniors in this State that rely upon Medicare. The Federal Government made a commitment to the seniors around the United States, starting with Lyndon Baines Johnson, that we would provide good health care to the seniors. And when I got to Washington, I found that we were not providing modern medicine. I mean, we would provide the money for ulcer surgery in old Medicare, but not the prescription drugs necessary to prevent the ulcer from happening in the first place. And that didn't seem to make sense to me. It's an old, centralized system that was not modern and was not fulfilling the promise we made.

And so I worked with Congress—Republicans and Democrats—to get a new bill out of Congress that said, "We're going to provide a prescription drug benefit, and as we do, we're going to give seniors more choices and more options from which to choose."

About 25 million seniors have signed up for this new plan since January 1st. That's a lot of folks in a quick period of time. And needless to say, when you make that kind of transition to a modern system, there's going to be some glitches. And our job is to fix those glitches. And that's what the Department of Health and Human Services, under Mike Leavitt, is doing. And it's important for our seniors to take advantage of this new program. Call 1-800-MEDICARE. Or if you've got a mom or a dad who's eligible for Medicare, sit down

with them and explain the new benefit. It is a really good deal for America's seniors.

To make sure that health care works, we'll continue to take care of the poor. In other words, the Government has made a commitment to the elderly and the poor, but the Government has also got to understand, the best medicine is private medicine. And we should not get in between the doctors and the patients in America.

Finally, I want to spend a little time on education, briefly. First of all, No Child Left Behind Act is working. It's a piece of legislation that says, "We're going to raise the standards for every child, and we're going to measure to make sure children are meeting those standards." Can you imagine—you might remember the old—well, I'll tell you. When I was Governor of Texas, we had a system that didn't measure right early on. And guess what happened? We just shuffled kids through the system who couldn't read, and we found out too late. And that is a terrible system. It lets people down. And we're spending a lot of your money. It seems like to me, it makes sense to say, when we spend your money, we ought to insist upon results. Results are good for the taxpayers; more importantly, they're good for the students. So now we measure early, before it's too late, and we're correcting problems, before they're too late. And our kids are learning to read.

And we need to apply that same rigor to children in math and science, particularly in junior high. Fourth grade tests, our kids are doing fine compared to other countries. But there's a big dropoff when it comes to math and—mathematics, particularly in junior high. And so we need to apply that same standard. We'll measure in junior high, and if you need help, we'll provide it for you. And the reason why is, the jobs of the 21st century are going to require mastery in math and science and engineering. And if we don't make—and if we don't educate our kids, the jobs are going to go elsewhere, whether we like it or not. So

to make sure America remains the leader in the world, we're going to stay on the leading edge of research and development, and educate the young scientists of tomorrow, today.

And so, look, my attitude about the future is this, when it comes to the economy, and when it comes to foreign policy: We shouldn't fear it; let's shape the future. Let's be the leader tomorrow that we are today.

Now, we're living in historic times. But when you think about this world we're in, it is a time of challenge, and it's a time of opportunity. We've got the challenge to protect the American people. My most important duty is to protect you from harm. And we have an opportunity to lay the foundation of peace for generations to come.

I make a lot of decisions. My buddies in Texas, when they show up to Washington, after they get over the initial surprise that I'm still there—[laughter]—or got there in the first place—[laughter]—say, "Like, what's it like, you know? What is the job description? What's it like to be President?" And the best way to answer it is, I make a lot of decisions. And part of the reason's—my thinking was shaped on September the 11th, let me put it to you that way. And I think it's important for you to understand how the President thinks and why I make decisions I make, particularly decisions relating to war and peace.

I knew we're at war when they attacked us. As a matter of fact, I was down here in Florida. It didn't take long to figure out what was going on. And I vowed that day that I would not rest, so long as I was the President, in protecting the people. So a lot of my decisionmaking is based upon the attack. And I know we're at war, see—I knew it then, and the enemy has, unfortunately, proved me right because they continue to attack. In order to win the war against the enemy, you've got to understand the nature of the enemy.

First of all, these people are coldblooded killers, people who will kill the innocent in order to achieve a tactical objective and a strategic objective. They have no conscience. You can't negotiate with these people. You cannot reason with them. You must bring them to justice.

Secondly, they have an ideology; they believe in something. The best way to describe what they believe in is to think about what life was like in Afghanistan under the Taliban. These were people that saw to it that young girls didn't get educated. If you didn't agree with their view of religion, you were whipped in the public square. They tolerated no dissent, no different point of view—tearing down the—destroying the culture from the past. They had no sense of history other than their dim view of history. That's what they think.

And they have made it clear their objectives. You probably have read some of Zawahiri's writings, admonitions to his fellow fighters. They've made it clear that they believe the United States is soft and weak and that they can shake our will. They've made it clear that it's just a matter of time before we vacate parts of the world which they can then occupy in order to be able to plan, plot attacks against the United States of America. They have made it clear they're interested in weapons of mass destruction. In other words, they've laid out a strategy, you know, for the world to see.

And my job is to take that strategy seriously. My job is to see the world the way it is, not the way some would hope it would be. If 9/11 affected our thinking, then we've got to make sure when the enemy speaks, we take every single sentence that they say seriously and deal with it. And that's what we're doing.

So I want to share some of the strategy in winning this war on terror. Make no mistake about it, we're going to win the war on terror. We'll protect the American people.

First, when we see threats, we've got to deal with them. When I was growing up in west Texas, oceans protected us. You might remember some of those days. Old Mayor Martinez, I know he remembers those days when we felt pretty comfortable here in America that we could see a threat overseas, but oceans made it pretty clear that—to a lot of folks—that nothing would happen, you know. September 11th came along and made it clear that we are vulnerable, that the enemy can hit us if they want to.

And therefore, when you see a threat, you've got to deal with it. You can't take things for granted anymore. The best way to deal with this enemy is to defeat them overseas so we don't have to face them here at home and to stay on the hunt. And that's what we're doing.

And we've got a coalition of countries. I spent a lot of time reminding people about the nature of the war. Listen, the tendency for folks is to say, "Well, this really isn't a war." I can understand that. Who wants to walk around thinking there's a war about to hit us. I mean, that's my job to worry about it and not yours. How can you have an economy recover from a recession if people are afraid to risk capital because they're worried about thinking something is going to happen? And the same thing happens overseas. People kind of want to slip to the comfortable. They don't believe it's a war, some of them, and I understand that. And so we spend a lot of time reminding people that we've got to work together because the enemy can't stand what we stand for, and that's freedom. They just hate freedom. And so we've got a good coalition, and we're on the hunt. We're keeping the pressure on them. It's hard to plot and plan and execute attacks when you're on the run.

And so the first step of our strategy is defeat them there so we don't have to face them here. And we've got some great Special Forces. I met the Special Forces

command guy here—and there’s great intelligence officers and wonderful coalition folks. We’re cutting off their money. It makes it kind of hard to operate when you can’t get your bank accounts full of money in order to—we’re just doing a lot of stuff. And it’s important for citizens to know that there’s a constant, constant pressure. I think about it every day.

And we’re making progress. Khalid Sheikh Mohammed, September the 11th plotter/planner, is incarcerated; his successor brought to justice. Slowly but surely, we’re finding them where they hide, and they know we’re on their trail.

Secondly, we got to deny them safe haven. These people can’t operate without safe haven. It’s an interesting war we’re in. It’s totally different from what we’re used to because we’re not facing nation-states; we’re dealing with an enemy that is international in nature, that hides in states.

When the President says something like, “If you harbor a terrorist, you’re equally as guilty as the terrorists,” those words mean nothing unless you act upon them. And I said that to the people of Afghanistan—the Taliban. They didn’t listen, and so we acted. And removing the Taliban is a clear signal that we won’t tolerate safe haven. In other words, if you harbor the terrorist, you’re just as guilty as the murderers. And that’s a clear signal that the United States must continue to send in order to win the war on terror.

We saw a threat in Saddam Hussein. Obviously, this issue is one that has caused a lot of people to wonder about certain aspects, caused me to wonder about the capacity of our intelligence services to provide good intelligence. And that’s why we’re constantly working to reform the intelligence services, to make sure we get the best intelligence, because I thought there would be weapons of mass destruction, and so did everybody else in the world, and so did people in the United States Congress from both political parties—thought that

there would be weapons of mass destruction.

The United Nations and the United Nations Security Council thought there would be weapons of mass destruction. After all, they passed a unanimous resolution that said, “Disclose, disarm, or face serious consequences.” In other words, we worked the diplomatic front.

And so when Saddam Hussein chose war—and believe me, he made the choice. The hardest thing for the President of the United States to do is commit troops into combat. It’s the last option, the very last option. Except September the 11th taught me—and September the 11th taught me that we’ve got to take threats seriously. And the world saw a threat. This man was harboring terrorists. He was on the state sponsor of terrorists lists. I didn’t put him on there; he was put on there by previous Presidents. He was firing at our pilots. He had invaded countries. He was a threat. And the world spoke with one voice and said, “Disclose, disarm, or face serious consequences.” And when the United States says something, it must mean it. And we said, “Disclose, or face serious consequences.” And when he wouldn’t, he faced serious consequences. Removing Saddam Hussein has made America safer and the world a better place.

And we have a plan to achieve victory. Victory is a state, a democracy that can sustain itself and defend itself and join America in fighting the war on terror. That’s the goal of victory. That’s the definition of victory.

First, part of our strategy is a political strategy. I try to tell people how I make decisions. And part of making good decisions is you’ve got to believe something. You have a belief system that, by the way, can’t alter because of politics or polls or focus groups or what somebody wants you to think. And I believe that freedom is universal. I believe that deep in everybody’s soul is the desire to be free. That’s what I believe. I don’t believe freedom or liberty

is confined here to Methodists from Texas. I believe everybody wants to be free—white, black, brown, Muslim, Jew, Christian, agnostic. I believe there is a deep desire for people to be free.

And if you believe that, then you have faith in people demanding freedom, if given a chance. And the Iraqis proved that theory right. Eleven million people went to the polls in the face of unbelievable terror, terrorist threats, and said, “I want to be free; let me vote; let me decide my future.” And so on the political front, they’re making progress because of the courage of the Iraqis.

And now the task at hand is to work with the—those who won votes in the new parliament to set up a unity government, one that is—can help deal with the grievances of the past, one that unites under the fabric of democracy. And that’s what we’re doing. I talked to the Ambassador, Zal Khalilzad, there yesterday. He’s spent a lot of time working with making our position known that we want the Government to be a unified government.

Secondly, we’re helping the country rebuild itself after years of neglect, so that people can see the benefits of democracy. And we started off initially with, kind of, these grand projects. We got the Congress to appropriate money, and we tried to build some great electricity-type renovations. And the enemy kept blowing them up, and so we’ve altered our strategy. One of the things that you’ve got to do in a situation like this is constantly adjust. You can’t just get stuck in one kind of response mode. You’ve got to think and watch the enemy and adjust to the enemy in order to achieve an objective. And we’re doing that. So now we’ve got much smaller-scale projects that are yielding instant results for the people on the ground, so people say, “Wait a minute—this democracy deal is a pretty good thing,” you know.

Businesses are flourishing in Iraq. I mean, freedom is coming; freedom is coming. There’s a determined enemy trying to

stop it, of course. They can’t stand freedom. I told you, they think the exact opposite we do. They don’t believe that everybody desires to be free. They want everybody to live under their totalitarian thumb. That’s what they want. Not America and our coalition, we want governments to be responsible and responsive to the people. That’s what we believe in.

Thirdly, in order to achieve our objective, the Iraqis are going to have to fight the enemy. They’ve proven their worth, in terms of defying the terrorists when it comes to making the vote, and they’re proving their desire to defend themselves against the enemy too. You know how I know? I’m listening to the people on the ground. I talk to our commanders a lot. They’re the ones who are giving me the appraisal about how well these Iraqis are being trained.

An interesting measurement, right off the bat, however, was how the Iraqis responded to these attacks on the police stations and the recruiting stations. You remember that they had a series of attacks on the recruiting stations? Guess what my question was to them out there: Are there still people lining up to join up? If you’re getting blown up line—standing in line, are they still coming? And the answer was, absolutely. And we’re training them, and there’s a command structure—command and control structure getting in place. And this military is getting better and better. We’re turning over a lot of territory to the Iraqis. They now have two divisions, which is a lot of folks, that are capable of taking the fight nearly on their own. The training mission is working.

So on the security side, we’re on the hunt. We’re after Zarqawi. See, he wants us to leave. He believes we’ll lose our nerve, so he can establish a safe haven in Iraq. And we’re not going to let him do it. And so we’ve got great special operators and U.S. forces and coalition forces on the hunt. And at the same time, we’re training the Iraqis.

There's a big debate in Washington about who gets to decide the troop levels. Well, those troop levels will be decided by this administration, and this administration is going to listen not to politicians but to the commanders on the ground of what we need on the ground in order to win this deal.

After I leave here, I'm going to go visit with a family of one of the fallen troops. I have to be able to look that person in the eye, and say, "The cause is just." I believe it is just and necessary. And I have to look that person in the eye and say that the sacrifice of your loved one will not go in vain, that we will complete the mission. And that's what I want to assure my fellow citizens. No matter what it looks like in Washington, DC, I'm committed to victory in Iraq so—to achieve peace.

And so in the short term, we're going to succeed in Iraq. We'll deny them safe haven. We'll stay on the hunt. But there has to be a long-term strategy as well, to win. And that long-term strategy is to liberate people and give them the chance to live under the greatest system of government ever, and that's democracy—because democracies respond to people.

You know, our foreign policy in the broader Middle East for a long period of time was just kind of, tolerate the status quo and hope for the best. It didn't work. The surface looked placid, but beneath the surface was brewing resentment and anger and fertile recruiting opportunities for those who have got a dark vision of the future. And so we're working to help the Iraqis develop a democracy.

Elections are only the beginning of democracy, not the end. Election is the beginning of a process where government listens to the people. In order to make sure democracy works, there has to be institution-building and support for young, fledgling democracies. And that's what you're seeing. This is an historic moment. The world is changing because freedom is on the march. And we shouldn't be discouraged about set-

backs—short-term setbacks or the enemy's capacity to take innocent life, because we've seen democracy change the world in the past.

I think about all the wars fought in Europe over the past 100 years. A hundred years seems like a long time, probably, for the little guy there—me too. It seems like a while—I'm only 59 years old. But Americans shed a lot of blood in Europe, World War I and World War II. And yet the continent is—Europe is peaceful. You know why? Because there's democracies living side by side in peace. Democracies don't fight each other. Generally, people in a democracy don't campaign and say, "Vote for me; I promise you war." They say, "Vote for you—vote for me; I'll work for the peace. I want your children to grow up in a peaceful world." That's what people say to get elected.

Japan—one of my favorite analogies and stories about this is my friend Koizumi, Prime Minister of Japan. He's an interesting guy. I like him a lot. We spend time talking about the peace. He understands that democracy in the heart of the Middle East, a democracy in a part of the world that is desperate for freedom, is an important part of laying the foundation for peace. And so he committed Japanese troops to help the Iraqis rebuild their country and to provide security so they could rebuild their country.

What's amazing about this is that, like many whose relatives—like many here whose relatives fought against the Japanese, my dad did too. Isn't that interesting? Eighteen-year-old kid, Navy fighter pilot, country calls him; like thousands, he goes overseas to fight the sworn enemy, the Japanese. And today, this guy's son is sitting down with the Prime Minister of Japan working to keep the peace. And what happened in between was that a Japanese-style democracy grew. Democracies yield the peace. And what the youngsters here have to see that's happening is, we're laying that foundation for peace. Someday, when

you're old and—older, I know you never think it's going to happen, but it does—you'll look back and say, "Maybe old George W. Bush and the United States Congress was right in keeping the faith that democracies can yield the peace we all want."

I got two other things—two other things I want to tell you, then I'll answer questions. We not only protect ourselves by keeping the pressure on the enemy and defeating them over there so we don't have to face them here at home, we've got to protect ourselves by doing smart things in America. I hope—I appreciate working with the mayors on homeland security issues. We're training a lot of first-responders and getting people ready in case something happens.

Secondly, in order to ask our folks on the frontline of protecting America to do the job, they've got to have all the tools. And the PATRIOT Act passed right after September the 11th—had a little problem getting it out of the United States Senate, it got kind of hung up there. My reminder to those Senators is that the bill may—about ready to lapse, but the threat isn't. And if people in Washington expect those on the frontline of protecting America to do their job, they got to give them the tools. The PATRIOT Act needs to be passed.

Finally, I made a decision that has been in the news lately, and I want to share with you my thinking, because it's an important decision. The—September the 11th made it clear to me that an enemy would do anything it could to hurt us. We're at war. And I understand some don't think that, that we're at war. There are good, decent Americans who believe that. I know that. This is not what I—I don't believe it, see. I got a different point of view. I asked our people on the ground there in Washington, is there anything more we can do to protect the American people? What can we do? The enemy wants to hit us; they're planning to hit us. Is there anything

we can do so I can go around the country saying, "Go about your business. We're taking care of your security for you"? I think most people would ask that question.

And General Mike Hayden of the NSA—he's a wonderful person—said he thought there was something more we could do. And he showed me the plans for this country to pick up conversation—listen to conversations from people outside the country, inside the country, who had an affiliation with Al Qaida or were Al Qaida. He said, "I think we can design a program, Mr. President, that will enable us to have quick response to be able to detect and deter a potential attack."

I said, that's interesting, General. I said, that makes a lot of sense to me. I said, you're not going to listen inside the country. "No, this is calls from outside the country in, or inside out, to people who we know or suspect are affiliated with Al Qaida." And I remember some of those phone calls coming out of California prior to the September the 11th attacks by the killers—just thinking maybe if we'd have listened to those on a quick-response basis, you know, it might have helped prevent the attacks.

My second question was, is it legal? See, I take that oath of office seriously—I've taken it twice as your President—to uphold the laws and the Constitution. And so we got lawyers all over Washington, as I'm sure you can imagine. [Laughter] I'm not one. I said, is it legal? I'm asking this to the Attorney General of the United States, the Legal Counsel in the White House; NSA has got lawyers. I mean, a lot of lawyers looked at this, and they said, "You bet, Mr. President, it's legal." And they gave me the legal ramifications. You'll see this all—this is part of the debate.

Thirdly, I knew I needed to tell Members of Congress. See, they like to be a part of the process. They're a co-equal branch of Government, and I recognize that, and I honor that. And so we briefed Members of the United States Congress on

the full program so that they would know—appropriate Members of Congress, leaders, Republicans, and Democrats, leaders of the Intelligence Committee whose job it is to provide oversight on intelligence operations. They were abreast. Like my old buddy called me, he said, “You know something, if you’re trying to pull one over on them, if you’re trying to have an illegal program, why are you briefing the Congress?” I said, “Because I want people to know.”

Unfortunately, we’re having this discussion. It’s too bad, because guess who listens to the discussion: the enemy. If you don’t think we’re at war, it doesn’t matter then, does it? I know we’re at war. And the enemy is adjusting. But I’m going to tell you something. I’m doing the right thing. Washington is a town that says, “You didn’t connect the dots,” and then when you do connect the dots, they say, “You’re wrong.” In order to protect America, if somebody is talking to Al Qaida, we want to know who they are and why they’re talking to them.

Okay. That’s what’s on my mind. Now, what’s on yours? Yes, sir. Go ahead and yell it.

#### *Homeownership*

Q. Mr. President, I just wanted to take an opportunity to tell you that I think our country is blessed to have you as our President.

*The President.* Thank you.

Q. That—we are very thankful that you don’t make your decisions based on the polls, like previous Presidents have.

*The President.* Well, I appreciate that.

Q. And my comment is, is that I’m a homebuilder. I’m very happy right now.

*The President.* You’ve got to be. [*Laughter*]

Q. But I wanted to just keep you apprised that things are good now. The economy is good; interest rates are low. There are people that still can’t afford homes in our country today. Affordable housing is very important. We, as homebuilders—I

serve on the Board of Directors of the National Association of Homebuilders.

*The President.* Well, good.

Q. We’ll be up in Washington in about a month or so to see you guys. But we’re concerned with the environment just as much as anyone else is, and—but there’s got to be a balance to make sure that we can develop land and provide homes, affordable homes. And also, Congress is working on some things now that has an affect on financing and interest rates for people buying their first homes. And let’s make sure that we have affordable homes for people.

My daughter is a school teacher here in Tampa, and it’s important to people like her, people that protect us—the fire department, the sheriffs—they need homes. And the times are good now, and I was a builder when your friend Jimmy Carter was President, and interest rates weren’t so good back then, and those were tough times. And I just want to tell you that I’m blessed to be here today with you in this room, and we all love you.

*The President.* Well, thanks. Let me talk about that. Thank you. You’ll be happy to hear, I don’t set interest rates. [*Laughter*] That’s set by an independent body. And I just named a new Chairman of the Fed to do that. And he’s a good fellow. And so if I were you, I’d be worried about interest rates, because when the interest rates go up, it makes it harder for your school teacher.

Well, there’s help, to help certain folks who qualify with their downpayments. We want people owning their own home. See, that’s—we want this to be an ownership society. We want people owning their own business; we want people owning their own home; we want people owning their own health account they can take with them from job to job like health savings accounts. And homeownership is high right now. More minorities own a home than ever before in our Nation’s history, which is a fantastic statistic.

And—but interest rates matter, as does good tax policy. And, I know—maybe you're hinting at whether or not the mortgage deduction would be part of a plan. I don't think you have to worry about the mortgage deduction not being a part of the income tax law. But thank you for bringing that up.

Yes, sir. Go ahead and yell it. Let me get a mike for you.

*Florida Coastline/Energy*

Q. Mr. President, you mentioned a trip next week to visit the sources of renewable, additional technology to reduce our dependence on foreign oil. We have a not-so-renewable resource, which is our precious Florida coastline. And because of your great brother, we do have an unemployment rate of 3.3 percent. How can you work with us to protect our Florida shoreline—

*The President.* Yes.

Q. —with respect to offshore drilling?

*The President.* Well, I made a commitment that nothing is going to happen within 100 miles of this coastline, and I'm honoring the commitment. I don't care what people might be saying—I guess maybe they quit saying it after the '04 campaign—but it's a commitment that this Government has—at least my Government has made, and I'm going to honor it. When we say 100 miles off the coastline, we don't mean 99 or 89, we mean 100. And so rest easy.

Now, the thing about—look, we've got to get off of hydrocarbons. We just do. And it's—I'm a believer in nuclear power. I think it's a—[*applause*—] maybe someday, and I think we'll—I'll figure out—I'll find out how close we are when I visit with some of these solar technology people, but it's very likely that you'll become a little power generator on—in your own home, and that the excess power that you do not use, you feed back in the grid. Hybrid batteries—batteries for plug-in hybrid automobiles are pretty close, they tell me. And

I'm going to see firsthand—sometimes the President gets the cook's tour, I know it—[*laughter*—] but nevertheless, I'm going to see firsthand.

And what's interesting is, is that a lot of people in urban areas are not going to drive more than 30 miles a day. And it's—so we're developing automobile engines that can run on electricity for 30 miles, and then if you go more, your gasoline kicks in. But it requires a battery that has got good storage capacity and is easy to recharge. It's coming.

And so there's a lot of technologies that are coming on the market, and we're spending money. And it's a good use of taxpayers' money, it seems like to me, to—in order to achieve some big objectives.

I'm going to India on March the 1st, around that period of time, and I believe that it's good policy for the United States to encourage these emerging economies to use clean energy, nuclear power, so as to help reduce demand for, kind of, non-renewables. And so I'm going to talk to them about development of a civilian nuclear power industry. They're telling me China has got about 34 plants on the market, which is good. But this expansion of nuclear power—which is in our interests, by the way; it's in our interests because of the quality of the air; it's in our interests because it takes—reduces demand, kind of global demand—is going to create another issue, and that is, what are we going to do with this spent fuel? This country doesn't reprocess spent fuel; we should. Reprocessing spent fuel means that we're able to continue to reuse the base material that went through the burn the first time in a plant and reduce the amount that we have to then eventually store. And we chose not to do that in the late seventies because of proliferation concerns. I'm convinced we can work internationally to address those issues.

And so I'm just sharing with you—we got a full strategy to help us make us less

dependent on energy—on foreign sources of energy.

Yes, sir.

#### *Transportation*

Q. Commissioner Reynolds from Winter Garden in the central part of the State.

*The President.* Oh, yes, I know where you are.

Q. Pressed into service by your brother, Honorable Jeb Bush.

*The President.* Is that good or bad?

Q. Well, it's been a riot, sir.

*The President.* If it's bad, take it up with him. [Laughter]

Q. I thought about calling him and asking him if he'd like to have the job back.

*The President.* That's right. [Laughter]

Q. The concerns from the central part of this State is, we've got a really unprecedented growth rate there in the middle part. The challenge is for mass transportation to free us from the oil that you talk about. Unfortunately, the proportionate share of funding that we're able to secure seems to be tied into porkbarrel, like light rail which does—Congressman Mica needs to buy into the fact that it's not realistic. So how do we—can get free from that so we can get direct funding—

*The President.* Yes.

Q. —for mass transit?

*The President.* Yes. That will be something that you'll be able to effect 5 years from now, because I signed the highway bill, and it's done. And nobody wants to deal with it again until it expires, to be frank with you. But I understand—but what he's saying is, how come you just don't let Floridians decide how to spend the money that's supposed to go back to them? Why do you earmark parts of the bill? That's what you're saying. And I do think Congress needs to work on earmark reform. I'm just not one of these guys—if there's no hope, I got to let you know, brother. There ain't no hope. [Laughter] They're not going to revisit the highway bill. They're just not going to revisit the highway bill

until the highway bill expires. And then perhaps you can get the kind of—they can get the kind of reforms. As you know, I ain't going to be around. [Laughter]

Yes, sir. I've heard from Jeb on this issue, by the way.

#### *Alternative Sources of Energy*

Q. Mr. President, welcome back to Tampa.

*The President.* Thank you.

Q. And my question is, you've talked a lot about our addiction to oil today. You've also talked about advanced, alternative fuel sources, in particular for household vehicles as a potential mitigant to that dilemma. But we have a very robust, industrialized economy—air, rail, shipping, trucking—that has depended on oil, frankly, for generations to be successful and vibrant. So my question is, how do we maintain the most advanced, industrialized economy on Earth and actually reduce our dependency on oil going forward?

*The President.* Yes. Well, I believe—first of all, natural gas has driven a lot of our industrialized growth, as you know. And we are—we need to have—import liquefied natural gas if we're going to be modern and stay competitive.

Listen, we're going to need oil. The question is, are we able to reduce dependency from certain parts of the world? And I think that by relieving pressure on how we drive our cars, we'll, in fact, help segments of our economy that are going to take a while to diversify away from hydrocarbons, I guess is the best kind of macro look.

Things don't happen instantly; I understand that. But nevertheless, there are some practical ways that we can reduce our dependency, and it seems like to me, the most practical way is to change automobiles, change how we drive. In the short term, ethanol and hybrid batteries makes the most sense to me. It's the most practical way and most economic way to get—to begin the reduction of dependency.

Now, listen, we've got a large fleet—I told you, there's 4½ [million]\* flex-fuel cars. That's good, except there's about 200 million cars. And it takes a while for fleets to renew. And so things don't happen instantly, but they will happen quicker as we continue to press for innovation and technology.

Ultimately, I believe that we're going to be using hydrogen to power our automobiles. But that's 15 years down the—for the technology to be applicable is 15 years down the road. And I guess what I'm not only—I guess I am, what I'm telling you is that we see technological breakthroughs pretty darn quick when it comes to ethanol and hybrid batteries, which is a positive development for the people. And it's an interesting thing about ethanol, is that the barriers to entry are pretty low, when it comes to manufacturing the—if the technology says that we can—yields the capacity to convert switchgrasses and refuses to ethanol, once that technological breakthrough comes, the barriers to entry are pretty low when it comes to building the manufacturing capacity that converts raw material to ethanol. Much different from a big cracker refinery. And so that's positive. So we've got the car technology, hopefully have the breakthrough technology on fuel, and then the infrastructure will follow.

And so what I'm saying is this is the most practical way to become less dependent on oil. And the economy will continue to function. But things are happening, by the way, in diesel. I don't know visiting your area—if any of you know something about trucking, you know that diesel, clean diesel engines are coming. We did a deal in my administration to work with diesel engine manufacturers to come up with a very low-emission engine that is now being applied in trucks, and it's going to make a difference—on Caterpillar tractors. We're getting there; we're getting there.

Thanks for the question.

---

\* White House correction.

Yes, sir.

*Spread of Democracy/America's Influence Abroad*

Q. The dilemma, it seems to me, that we are facing in this country—I've had the opportunity to interface with people of Muslim countries, and the war is bad enough, and I applaud what you're doing because freedom is important, but what concerns me is if the youth in these nations are being taught that you and I and us Americans are, in fact, the devil incarnate or Satan himself—I guess my question is, what can we do about that, to win over the people, the children, the youth, so that the next generation will not be facing this same dilemma? I think this is an incredible problem.

*The President.* I appreciate that. First is to support and work with moderate governments, and there are a lot. The largest Muslim nation is Indonesia. And we're working closely with the President there to help promote a better understanding of different religions. I will be seeing President Musharraf, who I like, and he's a good fellow who understands that moderation is an important part of a hopeful future. And so support governments that practice moderation.

Secondly, provide assistance when assistance is needed. In my State of the Union, I said, we've got to reject isolationism. Isolationism is the tendency for a nation to withdraw and not feel an obligation to be involved in the world. And I—we cannot defend ourselves if we're isolationist. I just made the case. But I also believe—and part of my philosophy in the decisionmaking is that to whom much has been given, much is required. And therefore, when we see suffering in places like Pakistan or because of the tsunami, the United States of America is leading the way in.

And it helps. It helped a lot in Pakistan, for example, to see those choppers flying relief supplies up for poor folks who had

been—whose lives had been just devastated. I can't remember the exact numbers, but President Musharraf told me; we're talking hundreds of thousands of people either dead, injured, or displaced. And there was the United States of America military flying in supplies. I believe John Abizaid—General Abizaid told me today that we turned over our MASH unit to the Pakistani Government to help so they could continue to provide aid and comfort.

And so there are practical ways. One is to support moderation, and two, help where help is needed. Our HIV/AIDS initiative, by the way, is a fantastic initiative. It is—I can't tell you how proud I am of the American people for supporting this. It is necessary for the United States of America to be taking the lead on this issue to save lives. If we say, human dignity matters and every life is precious, if that's part of a credo as a country, which it is—that's what we say. We say, "People matter; every human life is precious." Then those human lives apply not just here at home but on the continent of Africa or in Muslim countries. And there's a lot of Muslims in Africa who've seen the great compassion of the United States of America when it comes to helping to battle HIV/AIDS. There's a pandemic taking place. And you ought to be proud of this country, like I am, that we're filling that void of compassion and need and hope.

Yes. Right here. Yes. You're next. Yes. Yes, ma'am.

#### *Helping America's Youth Initiative*

Q. I know that you and First Lady Bush have talked much about our hurting generation of teens and our unproductive teens in our communities. Just wanted you to talk a little bit about the efforts being made with the work that you're doing in initiatives—

*The President.* Thanks.

Q. —that will help that.

*The President.* I appreciate that. First, there's positive news. Teen pregnancies are

down; teen drug use is down. And that's positive. That's good—[*applause*]—because of people at the grassroots level—people at the grassroots level. I think one of the most important initiatives of this administration is to—is the Faith-Based and Community Initiative, which recognizes what de Tocqueville saw in the 1830s. He's a French guy who came over here—[*laughter*]*—*in case you don't remember. And he recognized that the great strength of America was the capacity for individualists—or the willingness of individualists to work together in what he called voluntary associations to make the community in which they live a better place. And he saw that in the 1830s.

It's a—what he saw is still the strength of our country, if you really think about it. You know, government can hand out money, but government cannot put a hope in a person's heart. A lot of people miss one of the basics ingredients of life, and that is love. And love happens when somebody puts an arm around a person and says, "What can I do to help you, brother or sister?"

And so part of our initiative in dealing with loneliness, discouragement, lack of self-esteem, is to encourage faith-based programs will—which all exist because they hear a universal call to love a neighbor, by the way—to have access to Federal money, in other words, level the playing field for grant money so that these programs—which have been set up to love somebody and provide love—have got equal access to Federal money. It's a really important initiative.

There are targeted monies, of course. There's monies aimed at the different community groups dealing with drug use. But I think the most important initiative of all is to empower groups that really do provide mentoring and care and decency on an individual basis for somebody who needs it. And it's happening. It's happening in America.

Yes.

### *Culture of Life*

Q. Mr. President, it's an honor to be here with you today, and I thank you so much for the time that you take to share with us. I'm a 40-year-old father of a 3-year-old.

*The President.* There you go.

Q. And I'm also an adopted child. And it seems that anymore, through the results of legislation from the bench, that maybe the unsafest place for a child in this country is in his or her mother's womb. And my question for you is—and I commend you for your Supreme Court picks. I thank you for your bold stance in who you picked. My question is, with my son—this is the future of America. And my question is, where do you believe we're headed? Long after your term of serving us has ended and long after we've had other Presidents serve this country, where do you think we're headed in the areas of abortion, in the areas of traditional marriage, in the areas of faith and the foundations that this country was founded upon that are so under attack anymore? Where do you believe we're going?

*The President.* I'm an optimist. I believe we're headed toward a period of personal responsibility, where people understand that they're responsible for the decisions they make in life.

I just gave you some statistics. Abortions are down in America as well, by the way. People are—I—one of my jobs is to promote a culture of life. And I just told you every life is precious, and I meant it, whether it be here at home or on the continent of Africa where somebody's suffering from HIV/AIDS. And so I'm an optimist. I think people are beginning to understand that there is virtue in being personally responsible for the decisions you make in life.

And that—there's a—and cultures change, and it takes a while for cultures to change. All of us—I'm not going to peg anybody a certain age around here, but those of us born, like, around '46, '47, '48,

we've seen a culture change in our lifetime, if you really think about it. The culture changed, and it can change again. And I think these statistics that show that some problems that seemed incurable at one point in our history indicate that there is a cultural shift. A lot of it has to do with people being responsible. Some of it has to do with there's a religious awakening around many communities in the country, not just Christian religion, Jewish religion, Muslim religion. People are becoming religious in America. And that, in itself, helps people realize that you've got to be conscious of the decisions you make and mindful of the needs of others.

And—but we still got challenges. One of the things that obviously undermines good teaching at home is TV and some of the movies. But I remind people, they put “off” and “on” knobs on TVs for a reason. You don't have to go to a movie if you don't want to go to a movie. See, I think you can promote responsibility at home and still live in the free society where people are allowed to express themselves. And my advice to parents is, pay attention to the Internet. Part of the problem we have in our society is people aren't paying attention to their kids' habits. And when you've got your child on the Internet, make sure you know what that child is looking at, because that's your responsibility. It's not the government's responsibility to take care of your child; it's your responsibility to take care of that child.

### *President's Personal Values*

Q. Thank you for being our President. We are all way better off and very safe—

*The President.* Thanks. It's my high honor, by the way.

Q. Thank you.

*The President.* I'm glad I did it.

Q. We appreciate it. How do you—earlier you shared with us some intimacy about how you make decisions, and I felt that was heartfelt. How do you keep it together? What do you really think about

when the biggest story this week was Dick Cheney's hunting trip and not Al Gore blasting our troops and being treasonous in his regard to this war on terror in the Middle East? How do you keep it together?

*The President.* Well, I appreciate that. That's a loaded question. [Laughter] I keep it in perspective. There's a lot of noise in Washington. There's a lot of flattery; there's a lot of criticism; there's just a lot of noise. And I keep it in—I try to keep my life in perspective. I try to—I don't try to; I do keep my life in perspective. And I am focused on achieving certain objectives. Every day—I've said this, and I mean this—every day I think about how to protect America. Every day in the morning, first thing in the morning, I get briefed by our intelligence officers about potential threats. So every morning I'm aware of the world around us. And I told you that it's—9/11 changed my thinking. So my focus is there.

And, you know, I care deeply about troubled youth. I'm worried about Katrina victims. I'm worried about people that got moved out of their home, and they ended up somewhere else. Put yourself in their perspective. I said homeownership is valuable. We talked about homeownership here, how important it is—and somebody wakes up the next morning and their home is gone. And not only that, they ended up out in—somewhere else, you know. The good news is those people found love, which is a wonderful thing about our country. And I think about those kind of things.

So to answer your question—and I appreciate that—first, I'm wise enough not to fall into your trap because—[laughter]—there are some keen reporters paying attention to every word I'm saying. [Laughter] But I really don't let that bother me. I've got my perspective, and I've got my priorities. My faith is a priority. My family is a priority. Look, we got to deal with issues, of course, when they come up. That's part of the—it's part of Washington. It's part of being the President. There's—issues

come, and they go. And they and—but I hope that when it's all said and done, people see me as a strategic thinker and that I'm able to stay focused on a strategy that will leave behind peace and hope—peace around the world and hope not only around the world but equally importantly, here at home, so people have this sense of the greatness of America. It's a—we're a fantastic country.

Think about a country—when you really put America in perspective, ours is a country where somebody can come with nothing except drive and desire, and end up being able to raise a family and realize dreams. It is a fantastic land. And the great thing about America is it doesn't matter who you are, you know, if you got the drive and the desire and the willingness, you can make it in this country. And it's such a powerful—it's a powerful—that's a powerful statement to make. And that's the way we need to keep it, by the way. And so—I don't even know how I got there, but anyway. [Laughter]

Yes, ma'am.

#### *Immigration/Social Security Reform*

*Q.* In light of national security, some of us baby boomers are going to retire in the next 3 to 5 years.

*The President.* There you go. I know how you're thinking, baby. [Laughter] I'm right there with you. [Laughter]

*Q.* And the number of people replacing us is only at about 63 percent. So what are we going to do with immigration to make sure we have enough people to fill those positions?

*The President.* Yes, it's interesting. I thought you were going a different direction. [Laughter] I'm going to answer two questions. I thought you were taking me down that Social Security route, because it's a really interesting—that's a really interesting way to frame the immigration debate. Really is, I haven't heard it put that way.

Let me answer immigration first and then talk about the unfunded liabilities inherent in Medicare and Social Security as a result of baby boomers like me and you retiring with not enough people to pay it, to pay the bill.

First, immigration—there are a lot of people working here in America doing jobs Americans will not do. And that is a fact. And it's a—and as I told you, we deal with the way the world—the way it is, not the way we hope that it is, and therefore, how to deal with that issue; what do you do? You got people working here, doing jobs Americans won't do.

My attitude is, you recognize it for what it is, and you say, "You can do this on a temporary basis." You say, if there's a willing employer and a willing worker on a job an American won't do, then it's okay to fill that job, so long as you're not here permanently, so long as this is not—[*ap- plause*]. And so I believe there ought to be a temporary-worker program. We've tried this in America before—pretty successful, at least in my own home State of Texas. You got people—old Red Putnam over there, he's got people—probably have been bringing people in to pick oranges for a while, I don't know. Agriculture relies upon a lot of people willing to do the work that others won't do. And it seems like to me that there ought to be a legal way to make this happen so that—but without creating a sense of amnesty or permanency.

And so, one, I have a deal with immigration rationally. Now, we've got an obligation to enforce our borders and our coastlines, and we're spending a lot of money to do so. The Texas border is long, and it's hard to enforce. I mean, it's a lot of miles, a lot of empty country. And so we're using new technologies, drones, infrared, some mounds, some fencing in cities, to try to make it harder for people to cross. But the truth of the matter is, a lot of our Border Patrol agents are chasing people who are coming here to work, see. And it seems like to me that if we could have

a rational system that would enable people to do this on a temporary basis, it would take the pressures off the borders. People would be able to come in here in a rational, legal way.

Now, as I told you, I'm not for amnesty. You got about 8 million-plus people here illegally. My worry is if they—all of a sudden legal citizens, then another 8 million comes. And I don't think that makes any sense. So in terms of immigration, I'm for border enforcement, and strong border enforcement, with a rational guest-worker program that's temporary in nature, where it's understood that you're working here for a period of time, then you're going back on home.

Now, I want to talk to you about what's happened as a result of the current program. When you make something illegal, and there's a—you know, people coming here to work; people figure out ways around it. I'm not old enough to remember the old whisky days of Prohibition, but I remember reading about it—people still made whisky because people wanted to drink it.

And so guess what's happening today? We've got people getting stuffed in the back of 18-wheelers, driving across hot desert to find jobs that, most often or not, Americans won't do. There's a whole smuggling industry as a result of making temporary work—not making it legal. A whole smuggling industry—*coyotes* they're called—and it's inhumane. It just is, any way you look at it.

You know, family values don't stop at the Rio Grande River. If you've got starving children and there's a job over here in America that pays you more than it does in Mexico that an American won't do, you'll come and do that job and get that money back to your family.

Secondly, one way to make immigration policy work is you've got to enforce the law. And so you've got to go to employers. I'm not going to come to your home building site—but anyway. [*Laughter*] You come

to enforce the law, right? And so you're a homebuilder out here in the Tampa area; a bunch of people show up, roofers show up, and say, you know, "We're legal; here's my card." You're not in the business of telling me whether or not that's a forged document or not. You don't know. It looks real. And that's all you're expected—but I'm telling you, they're forging these documents. There's a whole underground industry. They're smuggling people, and they're forging documents. And our borders are being over—it makes it much harder to enforce. And so I think by having a rational plan—temporary worker, no amnesty—will expose these people runners and drug—document forgers for what they are. So that's my answer on immigration.

Now, Social Security and Medicare—they're giving me the hook, by the way; I've got another speech here in Florida. Laura said, "Whatever you do, don't be too windy." [Laughter] I didn't listen to her.

You bring up a huge problem, and that is, she identified something younger workers better be asking politicians to do something about, and that is, just to put it blunt, Social Security is going broke. And the reason why is a baby boom generation, like some of us here, are fixing to retire. And there's a lot of us, and we've been promised greater benefits than the previous generation, and there are fewer people paying in the system. And it's difficult—

*Audience member.* [Inaudible]

*The President.* —and we're living longer, yes, thank you. [Laughter] Yes, cameras and everything, they're—leave your name with them. [Laughter] She's right, and we're living longer. I wish I'd have thought of that. [Laughter]

And we've got to do something about it, and I tried last year. The job of the President is not to pass problems on but to confront them. That's my job. That's what you expect people to do. And I'm going to continue trying. And so they said, "Well, we don't have a problem." Well,

one thing people now have recognized is we got a problem. I succeeded. Not only did I succeed, others succeeded too, in reminding—we've got the issue, talking it up.

People are now beginning to realize what you realize and I realize, that we're going to fine—it's just the people paying in the payroll taxes. Can you imagine looking at youngsters in the eye, and say, "Pay in the payroll taxes," and you know the system is going broke? That's not a good deal. And so in the State of the Union, I said, "Look, I tried it; I'm going to try it again," is basically what I said. This time I believe that we need to have a table with Republican and Democrats sitting around it, and sit down and get something done. This isn't going to pass unless it's—people from both parties can come up with something to do. There's just too much opposition one way or the other, unless there's a bipartisan solution. I believe the American people are pretty sick and tired of needless partisanship in Washington, DC, and I know they expect us to get some stuff done.

And so I just want to assure you, I'm going to keep trying and keep trying and keep trying because it's the right thing to do. It's the right thing to uphold the honor of our offices by confronting these problems now, and not saying, "It's okay for another President," or "It's okay for another Congress," and just keep shuffling it down the path. Now is the time to get it done, because the longer you wait, the worse the problem gets. Every year that goes by, the problem gets worse for a next generation of Americans.

Okay, I've got the hook. Listen, let me conclude—yes, ma'am. Anybody who makes that kind of noise—

*Uganda/Sudan*

*Q.* I did not do that.

*The President.* Okay, good. [Laughter]

*Q.* It's a small part of the world, but it's very important to me—I'm concerned about the children in northern Uganda who are the victims—

*The President.* Yes, warlords.

*Q.* —of the rebel Joseph Kony.

*The President.* Yes.

*Q.* And I'm wondering if you can bring any pressure to bear on President Museveni to stop that 20-year war and free those children from the bondage that they're under.

*The President.* Really interesting question. She's talking about the—northern Uganda. There's a group called the Lord's Group that has been terrorizing both northern Uganda and southern Sudan. I talked to Mrs. Garang, John Garang's widow. John Garang was the head of the Sudanese in the southern part of the country that, by the way, became adopted by a church in Midland, Texas, my old hometown, interestingly enough. And early in my administration, I got Jack Danforth, a former United States Senator, to go and negotiate an agreement between northern Sudan and southern Sudan. And John Garang was a partner in peace. Unfortunately, he died in a helicopter accident about a year ago, I think. And the reason I bring this up is that there's no doubt it would be easier to deal with the Lord's Group if we were able to achieve peace between north and south Sudan. They take advantage of instability.

I have talked to this—I've talked about this issue with Mrs. Garang, as well as—now, there are peacekeepers in the region, by the way, U.N. peacekeepers on the north-south accord. I hope they're effective at helping the people of southern Sudan. I have talked to Museveni, President Museveni, about the issue as well, and I've been with him, I think, two or three times. I know on two occasions we've talked about this—and will continue to talk to him about it. It's—I'm very aware of the issue.

My hope is that by having a southern Sudanese—having the peace agreement negotiated between north and south so the southern Sudanese can begin to get their lives back in order, get the oil money moving that's guaranteed to them, will help

provide—help drive them out of any safe haven in the south, which will make it easier for all of us to deal. It's kind of a round-about answer, but I'm aware of the problem, first of all. And secondly, I'm surprised that anybody in this audience would bring it up, and I thank you for that.

We also have got a major issue in Darfur, Sudan. I presume if you're worried about northern Uganda, you're also worried about western Sudan, as am I. The strategy there was to encourage African Union troops to try to bring some sense of security to these poor people that are being herded out of their villages and just terribly mistreated. We need more troops. It's—the effort was noble, but it didn't achieve the objective.

And so I'm in the process now of working with a variety of folks to encourage there to be more troops, probably under the United Nations. I talked to Kofi Annan about this very subject this week. But it's going to require a—I think a NATO stewardship, planning, facilitating, organizing, probably double the number of peacekeepers that are there now, in order to start bringing some sense of security. There has to be a consequence for people abusing their fellow citizens.

At the same time, part of the issue in the Darfur region is that the rebel groups are not united in their objectives. And so politically or diplomatically, we have to work to make sure there's one voice from which to speak, so that we can then create kind of the same agreement between Government in Darfur that was created between north and south. A lot of talk, but we've got a strategy, and it's of concern, to the point where our country was the first country to call what was taking place a genocide, which matters—words matter.

And so thank you for bringing up that part of the world. That's very interesting that you would have that on your mind. You're a decent soul, a decent soul.

All right, I've got to go. Thanks for your time. God bless. Appreciate it.

NOTE: The President spoke at 1:26 p.m. at the Port of Tampa. In his remarks, he referred to Gen. John P. Abizaid, USA, commander, U.S. Central Command; Gen. Bryan D. Brown, USA, commander, U.S. Special Operations Command; Betty Sembler, wife of U.S. Ambassador to Italy Melvin Sembler; Mayor Pam Iorio of Tampa, FL; Mayor Rick Baker of St. Petersburg, FL; Gov. Jeb Bush of Florida; Ayman Al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al

Qaida associate; former Mayor Robert Martinez of Tampa, FL; U.S. Ambassador to Iraq Zalmay Khalilzad; senior Al Qaida associate Abu Musab Al-Zarqawi; President Susilo Bambang Yudhoyono of Indonesia; President Pervez Musharraf of Pakistan; President Yoweri Kaguta Museveni of Uganda; and Secretary-General Kofi Annan of the United Nations. A participant referred to Joseph Kony, leader of the Ugandan rebel group the Lord's Resistance Army.

## Remarks at a Republican Party of Florida Dinner in Lake Buena Vista, Florida

February 17, 2006

Thank you all. Thanks for the warm welcome. Please be seated. Florida is a Republican State because Jeb Bush has done in office what he promised the citizens of Florida he would do. He has been a great Governor because he doesn't waver in the face of criticism, because he doesn't rely upon polls and focus groups to tell him what to think, and because he has a clear vision for a better future for the people of this State.

And on top of all that, he married well. I'm proud to be here with my sister-in-law, Columba Bush. I married well too. And Laura sends her love to Columba and Jeb and to our friends here in Florida.

It is so wonderful to be here to be able to thank the many people that helped me get to where I got and helped Jeb get to where he got. And, you know, you just can't take anything for granted in the political business. You can't say thanks enough, and particularly when I look around the room and see so many people that I know I can't thank enough. I'll try: Thank you from the bottom of our hearts for being here. Thank you for helping the party.

I'm proud to be here with Mel Martinez and Kitty—the United States Senator from the State of Florida. I want to thank Mel

for standing strong with the administration and with me when it came time to ratify and confirm judges who would strictly interpret the Constitution, judges like Judge Roberts and Judge Alito. And it would sure be nice to have two United States Senators who would confirm conservative judges.

To that end, I welcome Congresswoman Katherine Harris. Thank you for coming. Congressman Ric Keller, Congressman Mike Bilirakis and Evelyn—where's Michael? There he is. Michael, good to see—flew down on Air Force One—kind of wanted a little comfortable ride back home. [Laughter] John Mica is with us, and Pat. John, thank you for being here. Ginny Brown-Waite and Harvey—where's Ginny Brown? Thank you for coming. I appreciate Toni Jennings, the Lieutenant Governor. The attorney general, Charlie Crist—thank you for coming, Charlie; the chief financial officer, Tommy Gallagher.

I guess I shouldn't feel too uncomfortable reading the names back to back, you know? [Laughter] Thanks for running. Good luck. [Laughter]

I appreciate Charlie Bronson, the commissioner of agriculture. Thanks for being here, Charlie. Members of the statehouse—

Senator Tom Lee, the president of the senate, as well as Allan Bense, the speaker of the house. It's good to see you, Allan. Thank you. Look, my only advice to the speaker and the president, just do what the Governor tells you. It's real easy. [Laughter] That's all it takes. [Laughter] Not exactly the way they do it in Washington. [Laughter]

I want to thank Carole Jean Jordan, the chairman of the Florida Republican Party. You'd have thought they gave you a better seat than that, you know, after all the hard work. I want to thank Al Austin, who is the finance chairman, and his wife, Beverly. They're great friends of Jeb and mine. Thank you, Al. Jim Blosser, finance cochairman—thank you, Jim. And Jim MacDougald—I appreciate you all being here. Thanks for coming.

Finally, I've got to say something about Rich Crotty. Now, you might remember, Rich raised a little fellow named Tyler. [Laughter] I don't know if you remember the moment or not, but I got up there to give what I thought was going to be a stemwinder of a speech, and Tyler went flat asleep. [Laughter] So I asked Rich, where is Tyler? He said, "Well, Mr. President, he's taking a nap in anticipation of this address." [Laughter] Crotty, give him my best.

I am amazed by this number: The unemployment rate in Florida is 3.3 percent. It's an amazing statistic. It's a tribute to people in office who understand the role of government is not to try to create wealth, but the role of government is to create an environment in which people are willing to risk capital, in which small businesses grow to be big businesses, in which people can realize their dreams.

Feeney, I forgot to mention you. [Laughter] I was thinking about entrepreneurship and looked right at you. [Laughter] This Florida economy is strong, and so is the economy around the United States. We've overcome a lot. We've overcome attacks and corporate scandals and stock market

collapses. And yet we're growing—amazing growth last year, over 3 percent growth, in spite of the fact we had high energy prices and a devastating hurricane.

And the reason why is because people feel there's an incentive to work in America. The tax relief we passed is working, and the United States Congress needs to make that tax relief permanent.

You'll hear them say in Washington, "Well, we need to balance the budget." And they're right. But then they say, "We're going to raise the taxes to balance the budget." I just want to warn you that that's not the way Washington works. It may sound good in the newspapers, but Washington works this way: If you give them more money, they will spend it. A tax increase, raising your taxes will mean there is more money to spend in Washington, and this economy isn't going to grow as strong. No, the way to balance the budget is keep progrowth economic policies in place and be wise about how we spend your money.

There's uncertainty in our economy today. It's an interesting phenomenon, isn't it? You get unbelievable economic growth, and yet people are worried. They're worried about changing jobs and not having a health care plan they can take with them. They're worried about having the skill set necessary to find the jobs of the 21st century. People are worried about China and India. And any time people worry about an economy, the reaction sometimes in our country is to wall ourselves off from the world, is to be protectionist. That's the wrong attitude for the United States of America. America needs to be confident about the future because we intend to shape the future.

And that's what this Republican Party stands for. This Republican Party stands for leadership based upon sound principles. And let me share some ideas with you.

To keep this economy the leader in the world, we got to make sure we do something about all these frivolous and junk lawsuits that are making it hard to risk capital. And I applaud your Governor, and I urge the Florida Legislature to join him in enacting meaningful, real tort reform.

We can become independent from oil from the Middle East. In order to remain a competitive nation, in order to remain a world leader, this country has got to use technology to get us off being hooked on oil. I know that may sound strange from a guy from Texas. [Laughter] But I sit there and think about the world on a daily basis. I see what happens when there's instability in parts of the world from which we get our oil. Listen, we're close to some amazing technological breakthroughs that will enable us to drive automobiles fueled by ethanol or have a plug-in hybrid battery that will make it much easier for you to use electricity when it comes to driving your cars.

Our party stands for innovation. Our party stands for change. And our party is going to stand for economic and national security by doing something about our dependence on Middle Eastern oil.

We're getting some things done. One of the commitments this Federal Government has made is to take care of the elderly. And when we go to Washington, DC, and the commitment is to take care of the elderly, it seems like to me, we want to make sure we do it in a way that is modern. So I saw an old, tired, stale Medicare system there. You know, this Government of ours would pay thousands of dollars for ulcer surgery but not one dime for the prescription drugs that would prevent the ulcer surgery from being needed in the first place. That's a waste of your money, and it wasn't that—we weren't fulfilling a promise to our seniors. So we reformed Medicare. And today, seniors are getting modern medicine, thanks to the Republican Party.

And I want to tell you something. We've signed up 25 million people since January

1st for this new, reformed system. And sure, there's some glitches. But we're also the party that knows how to solve problems. And you mark my words: When seniors get settled in and realize what we have done for them, they will realize the Republican Party has delivered good medicine.

But we also know something else, that the best practice of medicine is in the private sector, and the most important relationship is between doctor and patient. And so we're going to continue to promote HSAs, health savings accounts, which puts patients in charge of their health care, and it helps small business afford insurance.

I want to say something about Jeb and education. This guy understands, and so does our party, that we must challenge the soft bigotry of low expectations if we want the United States to be the leader in the world's economy. You cannot allow a system to develop in education that just simply shuffles kids through and hopes for the best. It doesn't work. It just doesn't work.

I remember when I was Governor of Texas, and we saw these statistics about kids coming out of high school not able to read. I decided—I dedicated myself then, just like Jeb has dedicated himself as Governor of Florida, to stop this business of socially promoting kids. You know who suffers? Inner-city African American kids suffer; families who don't speak English as a first language suffer. Ours is a party that believes in high standards and excellence when it comes to education.

And so we've said something pretty easy for people to understand. We said, "We're going to spend your money, but we're going to insist that schools measure, because you can't solve problems unless you diagnose the problem." Ours is the party that says no child will be left behind—be left behind, and we're delivering on the results.

And so we're going to take this attitude of high standards and accountability and apply it to math, particularly in junior high grades. If our kids do not have the skills of the 21st century, jobs are going to go

somewhere else. In order for this country to remain competitive and the world leader, we must lead the world in research and development, and we must make sure we're educating the young scientists and engineers for the 21st century. And that's exactly what we're going to do.

I am always amazed to hear some talk about, well, you know, maybe the best days are behind us when it comes to our economy. You just got to know something about me. I think this country can do anything we put our mind to. I think we've got such a strong entrepreneurial spirit, such wonderful people, that we're a land of doers and accomplisners and risk takers, that just given the right impetus and the right leadership, this country will still remain the preeminent economic leader in the world. And that's good for our people, and that means a higher living—standard of living.

I said in my State of the Union, we must reject isolationism. You see, when you get nervous about things or get a little despondent, the tendency is not only to wall yourself off but to withdraw from the world. And in the 21st century, we can't afford to do that. We can't afford to do it because there's an enemy that still lurks, an enemy that wants to attack the American people.

Today in Tampa, I was trying to explain to people how I make decisions, and I said, 9/11 affected my way of thinking, because I made the determination that so long as I'm the President of the United States, I will use everything at my disposal to protect the American people. That is our most solemn duty. I knew the further we got away from 9/11, the more likely it is people would kind of get comfortable and forget the challenges. And that's good, actually. It's hard to have economic growth if you walk around wondering when the next attack is going to occur. My job and the job of those of us in Washington is to constantly worry on behalf of the American people and to act on behalf of the Amer-

ican people so the American people can go about their business.

In order to be able to defeat an enemy, you've got to understand the nature of the enemy. I will tell you, these people are fierce ideologues. They have a totalitarian view of the world. In other words, they want to decide how people think and act and how they worship the Almighty. It's their judgment that matters, not an individual's judgment. And they are nothing but coldblooded killers that kill innocent life at the drop of a hat in order to achieve their objectives.

They have clearly stated their objectives, and I hope you appreciate a President who listens carefully to the words of the enemy. See, my job is to see the world the way it is, not the way some would like it to be. And this enemy—[*applause*]. They have openly stated, it's just a matter of time for the United States to lose its nerve. To what end? They want to find safe haven in which to plan, plot, and strike the United States. They look forward to having safe haven in which they can develop weapons of mass destruction to use against our people. This is what the enemy has said.

They made a big mistake, however, when they attacked the United States. They roused a mighty nation that understands the stakes in this war on terror. And we will not relent, and we will not tire until we win the war on terror. So we're on the offense, and we will stay on the offense so long as I'm the President of the United States.

One of the lessons of September the 11th is, we've got to prevent attacks before they occur. There are some old enough out here to remember the era when oceans protected America, and if we saw a threat overseas, we could decide to deal with it if we wanted to, or not. But we no longer have that luxury. And so part of my thinking and part of my rationale for our policy is my clear understanding that we must defeat the enemy overseas so we do not face them here at home.

And that's what we're doing. We got a lot of good people on the hunt right now. It's hard to plot and plan if you're trying to hide from Special Forces of the United States military.

I also made it clear that if anybody harbors a terrorist, they're equally as guilty of murder; that if you provide safe haven for a terrorist organization, you're equally as guilty as the terrorist. And when the United States—and when the President of the United States says something, for the sake of peace and stability, he better mean it. And I meant it when I told the Taliban to kick Al Qaida out. They refused to listen, and the United States military and our coalition rid Afghanistan of one of the most barbaric regimes in the history of mankind, and America is safer for it.

The whole world thought Saddam Hussein had weapons of mass destruction. The United Nations Security Council voted resolution after resolution after resolution because they felt he had weapons of mass destruction. Members of the United States Senate, both Republicans and Democrats, felt he had weapons of mass destruction. Members of the United States Congress, both Republicans and Democrats, in voting to give me the right to use force to remove Saddam Hussein, felt he had weapons of mass destruction. So did I. And he didn't. But he had the capacity to make weapons of mass destruction. He was a state sponsor of terror. He was shooting at American airplanes. The decision I made was the right decision, and America is safer for it. [*Applause*]

Thank you all. And now we're implementing a strategy for victory, where Iran—I mean, Iraq becomes a ally in the war on terror, where this young democracy can sustain itself and defend itself, where this democracy becomes an example of hope for people in Iran and Syria, where this country can be an example for others who demand the natural rights of men and women.

I want to assure you this—that we have one goal in mind, and that's victory, and we're going to achieve it. And the Iraqi people are helping. Think about what happened in one year. We live in a world where, I guess, there's too many television stations or something—[*laughter*—but there's a lot of opinion; that's for sure. [*Laughter*] But in one year's time, these people who were threatened by brutal terrorists went to the polls three time, every time in increasing numbers, with more and more people voting from different religious groups, saying loud and clear to the world, we love our freedom; we want to be free. The political part of our strategy is working.

And now you'll watch the formation of a government, and we're helping to make sure there's a unity government. But isn't it fun to watch a government being formed by people who had just finished living under the thumb of one of the most brutal tyrants in the history of mankind, Saddam Hussein?

Secondly, we'll help this country grow its economy by being wise about reconstruction money. We understand that in order for people to accept democracy, there has to be tangible benefits in their lives. But the good folks in Iraq are entrepreneurial, and businesses are beginning to flourish. Oh, I know sometimes it's hard to tell it, but it's happening.

And the final part of our strategy is, not only chase the terrorists down inside of Iraq but to train the Iraqis so they can take the fight to the enemy. And there are about 235,000 Iraqis now taking more and more control over their country. You know, one of the interesting measurements early on was when the enemy started bombing recruiting stations. I don't know if you remember that, but they'd drive by with a suicider or an IED and destroy people standing in line trying to serve their nation.

So one of the first questions I asked our commanders was, are you having any trouble finding anybody to sign up? The answer

was, absolutely not. The people of Iraq want their freedom, and they're willing to stand up and defend their freedom. And the United States of America is proud to help them do so.

The enemy has got one weapon; they've got one weapon: their willingness to kill innocent life and have those images on the TV screen. The only way we can possibly lose is if we lose our nerve, and we're not going to lose our nerve so long as I am the Commander in Chief.

And the stakes are high, because not only are we defending ourselves, not only are we preventing Iraq from becoming a safe haven for Al Qaida and their killers, we're helping spread freedom, which is an incredibly important part of achieving peace. I want the youngsters here to go back and think about the history of Europe over the last 100 years. Americans lost—America lost thousands of lives in World War I and World War II because of war on the European Continent. Today, there are no wars on the European Continent because of democracy. Democracies do not fight.

You can't imagine somebody saying, "Vote for me; I promise you war." [*Laughter*] Generally, the person doesn't get elected. [*Laughter*] People tend to run and say, "Vote for me; I'll promise to fight corruption," or, "Vote for me; I'll help your child get educated," or, "Vote for me; I'll help your health care system be modern." I believe that everybody in the world desires to be free. I believe there is an Almighty, and I believe the greatest gift of the Almighty, besides salvation, is freedom. And if you believe that—if you believe that, then you shouldn't be surprised that 11 million Iraqis have gone to the polls. And you shouldn't be surprised that Lebanon wants to be free. And you shouldn't be surprised that people are demanding their freedom in Afghanistan. Freedom is on the march,

and we're laying the foundation of peace for generations to come.

I'm excited. I am excited to be your President. It has been a fantastic experience. I can't tell you how great it is to represent the United States of America around the world. We're a land of entrepreneurs and doers and dreamers. And when we find people that hurt, we help lead the world. One reason you don't become isolationists in this world is because—let me just say, to whom much has been given, much is required. And a lot has been given in the United States of America.

And the world requires our help in helping defeat HIV/AIDS on the continent of Africa, to feed the hungry, to provide relief in the outreaches of Pakistan, to help those who suffer from tsunami. No, ours is not only a nation laying the groundwork for peace, ours is a nation that's leading the world in compassionate help for people who suffer. We've got a great country. We've got a great country, and we're going to keep it great by making strong decisions that rally and play to the great strength of America, which is the hearts and souls of the American people.

Thanks for letting me be your President. Thanks for supporting Jeb. God bless. God bless America.

NOTE: The President spoke at 5:50 p.m. at Disney's Contemporary Resort. In his remarks, he referred to Kitty Martinez, wife of Senator Mel R. Martinez of Florida; Evelyn Bilirakis, wife of Representative Michael Bilirakis of Florida; Patricia Mica, wife of Representative John L. Mica of Florida; Harvey Waite, husband of Representative Ginny Brown-Waite of Florida; Jim MacDougald, finance cochairman, Florida Victory 2006; and Mayor Richard T. Crotty of Orange County, FL.

## The President's Radio Address *February 18, 2006*

Good morning. This coming week, I will visit Wisconsin, Michigan, and Colorado to discuss our strategy to ensure that America has affordable, reliable, and secure sources of energy. The best way to meet our growing energy needs is through advances in technology. So in my State of the Union Address, I announced the Advanced Energy Initiative. We will pursue promising technologies that will transform how we power our vehicles, businesses, and homes so we can reduce our Nation's dependence on foreign sources of energy.

This morning I want to speak to you about one part of this initiative: our plans to expand the use of safe and clean nuclear power. Nuclear power generates large amounts of low-cost electricity without emitting air pollution or greenhouse gases. Yet nuclear power now produces only about 20 percent of America's electricity. It has the potential to play an even greater role. For example, over the past three decades, France has built 58 nuclear powerplants and now gets more than 78 percent of its electricity from nuclear power. Yet here in America, we have not ordered a new nuclear powerplant since the 1970s. So last summer, I signed energy legislation that offered incentives to encourage the building of new nuclear plants in America. Our goal is to start the construction of new nuclear powerplants by the end of this decade.

As America and other nations build more nuclear powerplants, we must work together to address two challenges: We must dispose of nuclear waste safely, and we must keep nuclear technology and material out of the hands of terrorist networks and terrorist states.

To meet these challenges, my administration has announced a bold new proposal called the Global Nuclear Energy Partnership. Under this partnership, America will work with nations that have advanced civil-

ian nuclear energy programs, such as France, Japan, and Russia. Together, we will develop and deploy innovative, advanced reactors and new methods to recycle spent nuclear fuel. This will allow us to produce more energy while dramatically reducing the amount of nuclear waste and eliminating the nuclear byproducts that unstable regimes or terrorists could use to make weapons.

As these technologies are developed, we will work with our partners to help developing countries meet their growing energy needs by providing them with small-scale reactors that will be secure and cost-effective. We will also ensure that these developing nations have a reliable nuclear fuel supply. In exchange, these countries would agree to use nuclear power only for civilian purposes and forego uranium enrichment and reprocessing activities that can be used to develop nuclear weapons. My new budget includes \$250 million to launch this initiative. By working with other nations under the Global Nuclear Energy Partnership, we can provide the cheap, safe, and clean energy that growing economies need while reducing the risk of nuclear proliferation.

As we expand our use of nuclear power, we're also pursuing a broader strategy to meet our energy needs. We're investing in technologies like solar and wind power and clean coal to power our homes and businesses. We're also investing in new car technologies like plug-in hybrid cars and in alternative fuels for automobiles like ethanol and biodiesel.

Transforming our energy supply will demand creativity and determination, and America has these qualities in abundance. Our Nation will continue to lead the world in innovation and technology. And by building a global partnership to spread the benefits of nuclear power, we'll create a safer,

cleaner, and more prosperous world for future generations.

Thank you for listening.

NOTE: The address was recorded at 7:37 a.m. on February 17 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on

February 18. The transcript was made available by the Office of the Press Secretary on February 17 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks on Energy in Milwaukee, Wisconsin February 20, 2006

John, thanks. Thanks for letting me come by to say hello. *[Laughter]* I've got something on my mind I want to share with you. First, happy President's Day. It turns out, most folks in Washington don't work on President's Day. *[Laughter]* The only one working is the President. *[Laughter]*

I want to talk to you about the fact that I think we're in an important moment in history and that we have a chance to transform the way we power our economy and how we lead our lives. That's what I'm here to talk about. It's a good place to come to talk about it because the truth of the matter is, in order to seize the moment, this country has got to remain technologically advanced.

Johnson Controls has been on the cutting edge of energy technology and other technologies for more than a century. And the innovators that work here and the smart folks who work here are on the leading edge of change, and that's why I've come. And there's a role for government to help, and I want to explain that role.

Before I do, again, I want to thank you, John. I want to thank all the folks who work for Johnson Controls. It's not easy to host the President. *[Laughter]*

I had the honor of touring the laboratory on the other side of town there, and it was really neat to see the engineers and the scientists and the Ph.D.s all working hard to apply their God-given talents to help this country remain on the leading

edge of technology. It reminded me of one of the challenges we have in America, and that's to make sure a new generation of our citizens are interested in science and engineering and physics. And part of making sure this country is the leader in the world, we've got to make sure our children are properly educated so they'll be ready for the jobs of the 21st century.

I want to thank Congresswoman Gwen Moore for joining us. I appreciate you coming; nice to see you. They tell me this is your congressional district, so it's awfully kind of you to let two other Congresspersons join us—that would be Congressman Mark Green and Congressman Paul Ryan. Thank you both for coming. We have eaten a lot of custard in the past. *[Laughter]* I'm still recovering, I want you to know. *[Laughter]*

I want to thank the speaker of the house who has joined us. The mayor of the great city of Milwaukee has joined us, and the county executive has joined us. Thank you all for coming; proud you're here.

By the way, it's always important, if any of you ever run for office, to always remember to recognize the sheriff. *[Laughter]* Sheriff Clarke, thank you for being here. Good to see you again. Thank you.

Our economy is strong. It's gaining steam too. We're now in our fifth year of uninterrupted economic growth. Last year, our economy grew at a healthy rate of 3.5 percent, in spite of high energy prices and

devastating storms. Real after-tax income is up nearly 8 percent per American since 2001. And that's one of the explanations, one of the reasons why retail sales last month made their biggest gain in more than 4 years. Homeownership is at record levels. That's a good sign. We want people owning things in America. More minorities own a home than ever before in our Nation's history. America's unemployment rate is down to 4.7 percent. That's the lowest level since 2001. We've added 4.7 million new jobs over the last 2½ years. We're doing fine.

The fundamental question is, how do we keep doing fine? The challenge that faces us is, is how we make sure that the economic growth today carries over for tomorrow. And that's what I want to talk about. In order to understand what to do, you've got to understand what got us to where we are today. Part of it is keeping taxes low, by the way, and that's exactly what I intend to do so long as I'm the President, is keep taxes low. Part of it is being wise about how we spend our money. Part of it is understanding how technology plays in the future of the country.

Think back 25 years ago, in the start of the 1980s. It's not all that long ago, really. Some of us remember the eighties pretty clearly—[laughter]—a lot of kind of gray-haired folks here that lived through the eighties. [Laughter] Then most Americans used typewriters instead of the computers. They used pay phones—you remember what those were—instead of cell phones. They used carbon paper instead of laser printers, bank tellers instead of ATMs, and they played the license plate game on trips, as opposed to DVDs. [Laughter] Times have changed a lot in 25 years because of technology.

We're seeing new develops all the time—new developments. Advanced battery technology allows cell phones to last about 50 percent longer than they did just 5 years ago. In your laboratory, we're seeing—first-hand seeing the progress being made be-

cause of your scientists and engineers in lighter, more potent battery technology. Lightweight parts and better engines allow cars to travel 60 percent farther on a gallon of gas than they did three decades ago.

Technologies are helping this economy become more efficient. Listen to this: Over the last 30 years, our economy has grown three times faster than our energy consumption. The economy has grown three times faster than energy consumption. During that period of time, we created 56 million jobs while cutting air pollution by 50 percent. Technology is really important for the future of this country. And so in the State of the Union, I said that by using technology, we can help make sure this country remains a world leader. And that starts with making sure we change our energy habits.

I know it came as a shock to some to hear a Texan stand up there in front of the country and say, "We've got a real problem; America is addicted to oil." But I meant it, because it's a true fact, and we've got to do something about it now. Oil is the primary source of gasoline; it is the primary source of diesel; it is the primary source of jet fuel. And that means that oil accounts for virtually all energy consumption in the vital transportation sector of our economy.

The oil we consume in this important sector comes from foreign countries; most of it does. In 1985, three-quarters of the crude oil used in U.S. refineries came from America; today, that equation has changed dramatically. Less than half the crude oil used in our refineries is produced here at home. Sixty percent comes from foreign countries. Things have changed since 1985.

Some of the nations we rely on for oil have unstable governments or fundamental differences with the United States. These countries know we need their oil, and that reduces influence. It creates a national security issue when we're held hostage for energy by foreign nations that may not like us.

Energy is also part of our economic security as well. That's obvious. I mean, the global demand for oil has been rising faster than supply because there's new economies that are beginning to gin up, new economies growing, like China and India. Oil prices rise sharply when demand is greater than supply. And when they do, it strains your budgets. It hurts our families; it hurts our small entrepreneurs. It's like a hidden tax. And so we're vulnerable to high prices of oil, and we're vulnerable to sudden disruptions of oil. What I'm telling you is oil—the dependence upon oil is a national security problem and an economic security problem. And here's what we intend to do about it.

First, Congress passed a good energy bill last summer; I was pleased to sign it. It took a little bit of work. It's kind of hard to get things done in Washington; there's a lot of sharp partisan elbows up there these days. But we got something done, and it's a good bill. It encourages conservation and new technologies and alternative sources of energy. But there's a lot more that needs to be done.

The first thing that needs to be done is to make sure that there's an incentive for private business to invest in research and development. If technology is going to help us change our energy habits and change the way we live, it makes sense for the Government to incent people to invest in research and development. Right now we've got what we call a research and development tax credit, which is a major incentive for private companies such as yourselves to invest in research and development, which will yield new technologies. The problem is, is that the R&D tax credit expires. As a matter of fact, they've only renewed it on an annual basis.

Now, I don't know how in the heck Congress thinks that people can plan properly if they're uncertain as to whether or not the tax credit is going to exist. So therefore, if we want to be on the leading edge of research and development, then Congress

needs to make the R&D tax credit a permanent part of the Tax Code.

Secondly, Government can help. Government provides about a third of the dollars for research and development. Two-thirds come from the private sector; one-third comes from the Government. And so I propose to double the Federal commitment to the most critical basic research programs in the physical sciences over the next decade.

Let me explain our strategy when it comes to energy. So in other words, part of our strategy is to make sure people continue to invest. The research you're doing at Johnson Labs will change people's lives appreciably. But we've got to continue to make sure we conduct research and development if we want to be a leader in the world. If we don't want to be a leader in the world, fine; we'll just quit. That's not how I view America. I want America to lead the world, because by leading the world when it comes to the economy, we're helping our people. We're making our people more productive, and productivity increases enhance standard of living, and increased standards of living means the American people are doing better.

Now, I laid out what's called an Advanced Energy Initiative. And a cornerstone of the initiative is a 22-percent increase in funding for clean energy research at the Department of Energy. And it's got two major goals, or two objectives: first, to transform the way we power our cars and trucks; and secondly, to transform the way we power our homes and offices.

So let me talk to you about the first one. Our Nation is on the thresholds of some new energy technologies that I think will startle the American people. It's not going to startle you here at Johnson Controls because you know what I'm talking about. *[Laughter]* You take it for granted. But the American people will be amazed at how far our technology has advanced in order to meet an important goal, which is to reduce our imports from the Middle

East by 75 percent by 2025 and eventually getting rid of our dependence totally.

The first objective is to change the way we power our cars and trucks. Today's cars and trucks are fueled almost exclusively by gasoline and diesel fuel, which, of course, comes from oil. To transform the way we power the vehicles, we have got to diversify away from oil. I just gave you a reason from a national security perspective as well as economic security perspective why reliance upon oil is not good for the United States.

And so here are three ways that we can do that, change our reliance from oil. First, invest in new kinds of vehicles that require much less gasoline. It's a practical thing to do. Secondly, find new fuels that will replace gasoline and, therefore, dependence on oil. And finally, develop new ways to run a car without gasoline at all.

The most promising ways to reduce gasoline consumption quickly is through hybrid vehicles. Hybrid vehicles have both a gasoline-powered engine and an electric battery based on technologies that were developed by the Department of Energy. In other words, this technology came to be because the Federal Government made a research commitment. That's why I think it's double—important to double research as we go down the next decade. The gasoline engine charges the battery, which helps drive the vehicle. And the twin sources of power allow hybrid cars and trucks to travel about twice as far on a gallon of fuel as gasoline-only vehicles. That is a good start, when something can go twice as far on a gallon of gasoline than the conventional vehicle can.

Hybrid vehicles are a good deal for consumers, and the American people are figuring it out. More than 200,000 hybrids were sold in the United States last year—the highest sales on record. There's growing demand for hybrid automobiles. And working with the Congress, we came up with an additional incentive, and that is, we provide a tax credit up to \$3,400 per

hybrid vehicle purchaser. In other words, we want to stimulate demand. In the marketplace, when there is demand, suppliers will meet that demand, and that's positive, because if you can go twice as far on a gallon of gasoline than otherwise, it means we're becoming less dependent on oil. Hybrid vehicles on the road today are delivering impressive gasoline savings.

But there is more to be done, and that's why I'm here at Johnson Controls, because engineers here are working on ways to replace the current hybrid battery technology with advanced lithium ion batteries that are now used in cell phones and laptops. These batteries are lighter; they are more powerful; and they can be recharged quickly. Using new lithium ion batteries, engineers will be able to design the next generation of hybrid vehicles, called plug-in hybrids, that can be recharged through a standard electrical outlet. Start picturing what I'm talking about: You've got your car; you pull in; you plug it right in the wall. [Laughter]

Development will make a big difference in the performance of hybrid cars and trucks. Instead of depending on the gasoline engine to recharge the electric battery, the plug-in hybrids will have fully charged batteries as soon as you get in the automobile. And that means plug-in hybrids will be able to travel much greater distances on electricity alone, thereby saving more gas for our consumers, thereby making us less dependent on oil.

The plug-in hybrid, they estimate, can initially go 40 miles on electricity alone. So you've got a lot of folks living in cities like Milwaukee, Wisconsin, who generally don't drive more than 40 miles a day. Therefore, within 40 miles, you'll be on electricity and using no gasoline. Eventually, plug-in hybrids with lithium ion batteries will be able to get 100 miles per gallon. And now all of a sudden, you're beginning to see the effects of this important technology on our national security and on our economic security, but more important, for the pocketbook of our consumers.

Plug-in hybrids are a really important part of the strategy I've announced, and we're going to provide \$31 million to speed up research on these advanced technologies. This is a 27-percent increase over current funding levels. In other words, we like to—the experts tell me this is a very good chance to have major breakthroughs, and we want to accelerate those breakthroughs. And, again, I want to thank you all for being on the leading edge of change.

We're also supporting the development of advanced fuels that can replace regular gasoline. Here again I'm talking to folks who know what I'm talking about; I'm talking about ethanol. You've got a lot of it here in Wisconsin because you've got corn. Ethanol is produced—primarily produced from corn; it's blended with gasoline to produce clean and efficient fuel. And blends with that ethanol concentration of less than 10 percent, ethanol can be used in any vehicle. With minor modifications—I emphasize "minor modifications"—cars and trucks can become what we call flex-fuel vehicles that run on a fuel blend called E-85, which is a mix of 85 percent ethanol and 15 percent gasoline. That's a positive development.

Ethanol, by the way, can be used in hybrid vehicles. So the more ethanol we use, the less crude oil we consume. And using ethanol has the added benefit of supporting our farmers. I like to kind of tease in a way, but beneath the tease is serious—it will be good one day when the President is given the crop report. [Laughter] It says, "Mr. President, corn is up—[laughter]—and we're less dependent on foreign sources of energy."

America produced a record 3.9 billion gallons of ethanol in 2005—was the record levels. That's twice the level produced when I got sworn in first time. There are five ethanol plants that are up and running here in Wisconsin, and more are coming. We offer a tax credit to ethanol blenders of 51 cents per gallon. We're committed

to ethanol. It makes sense. Ethanol benefits a lot of folks, but most importantly, it benefits those who are driving cars.

Now, we're on the edge of advancing additional ethanol production. New technology is going to make it possible to produce ethanol from wood chips and stalks and switchgrass and other natural materials. Researchers at the Energy Department tell me we're 5 or 6 years away from breakthroughs in being able to produce fuels from those waste products. In other words, we're beginning to—we're coming up with a way to make something out of nothing. And this is important because it's—economics are such that it's important to have your ethanol-producing factories or plants close to where the product is grown.

That's why E-85 has spread throughout the Midwest; that's where you're growing the corn. Pretty soon, you know, if you're able to grow switchgrass and convert that into ethanol, then you're going to have availability for ethanol in other parts of the country. I mean, there's a lot of stuff that gets thrown away that may be converted into fuel, but it's not just located in one part of the country; it's located around the country. And one of the goals is to make sure that ethanol is widespread. If we want to affect our consumption of oil, we want ethanol to be readily available for consumers outside certain parts of the—certain regions of the country.

And so we proposed spending \$150 million for Government and private research into these homegrown fuels. It's an important initiative. We want to provide our consumers with reasonable, cost-effective ways to help us become less dependent on foreign sources of oil.

And we've got another initiative that I find interesting, and it's important. And that is, we're spending money—your hard-earned money—on research to develop a vehicle that will not use gasoline, and it won't produce any pollution whatsoever, and that's through hydrogen. When hydrogen is used in a device called a fuel cell,

it can deliver enough electricity to power a car that emits pure water instead of exhaust fumes. It's an exciting new technology. We're a ways down the road from bringing it to fruition, but we are spending \$1.2 billion over 5 years to research this important opportunity.

We're seeing some progress, by the way, when it comes to hydrogen fuel cells. They tell me that the cost of manufacturing hydrogen fuel cells has been cut in half, which is good. Research is taking place. There could be a new technology available so that when your children take their first driver's test—or when some of your children take their first driver's test, they will do so in a hydrogen-powered automobile.

And so those are three steps—three important steps—three steps in which we can help change our driving habits. And by changing our driving habits, we've changed our dependency on foreign sources of oil.

Now, the second objective of the Advanced Energy Initiative is to transform the way we power our homes and offices. And so we've got to diversify our electricity supply, is what I'm about to—I'll give you the bottom line first: We must diversify. Right now American electricity is generated by four principle sources: Coal accounts for about 50 percent; nuclear power, about 20 percent; natural gas, about 18 percent; and renewable sources like hydroelectric, solar, and wind power account for the rest.

The most versatile of these fuels is natural gas, and there we have a problem. We have a problem because natural gas is used for more than just heating your homes. Natural gas is important for—to help create fertilizer for farmers. Natural gas powers heavy duty machinery used for manufacturing and chemical production. In other words, there's a lot of uses for natural gas. And yet natural gas has become really popular for electricity generation in recent years, and the price has tripled recently. And these price increases obviously affect our farmers; they affect our ranchers; they affect our consumers.

And they affect our businesses. Businesses that rely upon natural gas feedstocks have found that in order to stay in business, they've got to move their plants closer to where vast quantities of natural gas are being discovered, and that's not here in the United States; that's elsewhere.

And so we've got to figure out how to confront this issue. And here's two ways to do it. First, we've got to make sure that we've got enough natural gas to meet our home heating and industrial needs. And one of the best ways to secure supply is to expand our ability to receive liquefied natural gas. It's a supercool form of natural gas that can be transported from overseas on tankers. Natural gas inside of America is generally transported by pipeline. Huge supplies of gas exist outside the reach of pipelines. And technology is being developed that can cool the gas. They can bring the gas over in tankers in liquefied form, deliquesce it, and put it into our pipeline system.

The problem is, is that we didn't have enough sites to set up terminals to receive the LNG. And until there's a place for the LNG to unload, the liquefied natural gas, what I'm talking about isn't going to come to fruition. And so one of the things in the energy bill that was important is it clarified Federal authority to site new receiving terminals for LNG. And that's good. In other words, if we need more natural gas to make sure that we take the pressure off the heating bills as well as meet our industrial needs, we've got to have places for the liquefied natural gas to come into the country.

And the bill also did another important thing, and that is to streamline permitting processes for onshore natural—off—onshore, offshore natural gas exploration. In other words, we've got to make it easier—and at the same time, protect our environment—to make sure that we can find natural gas that fits into the pipeline to help take the pressure off of price.

Secondly, we need to reduce our reliance on natural gas for electricity generation. In other words, we've got to substitute other forms of power for natural gas if we expect to be able to maintain a manufacturing base that relies upon natural gas. And the best way to do that is to expand our use of coal, nuclear power, and renewable sources of energy like wind and solar.

Let me start with coal. Coal is by far our country's most abundant and affordable energy resource. It's estimated we've got more than 250 years of reserves. That's a lot; that's a lot. And I'm sure you recognize this—or realize this, but in Wisconsin, when you flip on the light switch, there's a 75-percent chance that electricity is generated by coal-powered plants. In other words, you use it here in Wisconsin.

Coal has the potential to reduce our reliance on natural gas. The problem is, we've got to make sure that we can keep our commitment to the environment. Coal requires investment to make sure that we don't pollute our air. And that's the conundrum; that's the difficulty with coal. This country is—I told you we've reduced our air pollution by 50 percent, in spite of the fact that our economy has grown substantially. We want to continue that commitment.

I told folks when I was running for President the first time around that we would invest \$2 billion over 10 years to promote clean coal technology. In other words, I believed, as did many others, that technology will help us deal with this dilemma. And we're on our way, by the way, to complete the promise several years ahead of schedule. In other words, we are committing research dollars to see if we can't use this abundant resource and, at the same time, protect our environment.

The coal research has helped pioneer more effective pollution controls. We're helping coal plant efficiency. We've also implemented new clean air regulations that use a cap and trade system, which gives utility companies incentives to continue in-

vesting in clean coal technology. Congress needs to pass my Clear Skies legislation.

But we're getting closer to an interesting, important goal—that by continuing to invest at the Federal level as well as encourage private investment, we will build the world's first powerplant to run on coal that produces zero emissions, by 2015. That will be a positive development for future generations of Americans.

I'd like to talk about nuclear power. Today, there are more than 100 nuclear plants in America that operate in 31 States, including right here in Wisconsin. The plants are producing electricity safely, and they don't emit any air pollution or greenhouse gases. America hasn't ordered a nuclear plant since the 1970s, and that's the result of litigation—or because of litigation and complex regulations.

It's interesting when you think about a country like France, however. They have built 58 plants since the 1970s; they get 78 percent of their electricity from nuclear power. It's an interesting contrast, isn't it? We haven't done anything since the seventies. This country has decided to recognize the importance of having renewable sources of energy that protect the environment, and 78 percent of their electricity comes from this form of energy. China has 8 nuclear plants in the works, by the way, and plans to build at least 40 more over the next two decades.

I'm going to India later on—at the beginning of next month, March 1st. I'm going to talk about a civilian nuclear power program for India. I'll tell you why I am in a minute, but first, let's talk about here at home.

I think we ought to start building nuclear powerplants again. I think it makes sense to do so. Technology is such that we can do so and say to the American people, "These are safe, and they're important." To encourage construction of nuclear powerplants, there's new Federal risk insurance for the first six new plants that will be

built in the country. That's part of the energy bill I signed. This insurance helps protect the builders of these plants against lawsuits or bureaucratic obstacles and other delays beyond their control. In other words, there's an incentive to say, "Let's get six of them started."

The administration has also launched what's called Nuclear Power 2010 Initiative. It's a \$1.1 billion partnership between the Government and industry to facilitate new plant orders. Chairman Nils Diaz of the Nuclear Regulatory Commission is taking steps to streamline the licensing process for new plant construction. In other words, we're analyzing barriers and hurdles and trying to eliminate them so we can start this process.

If we're trying to become less dependent on foreign sources of oil or energy like natural gas—we want to free up our natural gas to keep our manufacturing base intact—we need to move forward when it comes to alternative sources like nuclear power. And there's some encouraging results, and the mindset is beginning to change. After all, the mindset needed to change. We haven't built a plant since the 1970s. That's a fairly long period of time.

This time last year, only two companies were seeking to build nuclear powerplants; now nine companies have expressed a new interest in new—interest in new construction. They're considering as many as 19 new plants. This progress is going to help an important goal. We'll start building nuclear powerplants again by the end of this decade. As part of our strategy, as part of our way to make sure that the future is bright and that America remains a leader in the world, is to understand the promise of nuclear power.

We're also going to work with other nations to help them build nuclear power industries. And the reason why is, this is a global world in which we live, and demand for oil in China and India affects price here in America. And so, therefore, if we can

help relieve the pressure off of demand for fossil fuels, it helps the entire world.

And so we've got some challenges, however, in dealing with this issue. And that's why I put together what's called a global nuclear energy partnership. It's a partnership that works with countries that have got advanced nuclear energy programs or civilian nuclear energy programs like France and Great Britain and Japan and Russia. And here are the objectives of the partnership.

First, supplier nations will provide fuel for nonsupplier nations so they can start up a civilian nuclear energy program. In other words, a lot of countries don't know how to enrich; a handful do. And it makes sense that we share that—share the benefits of our knowledge with others—but not share the knowledge, because there's concern about proliferation.

One of the concerns you hear from the critics of expanding nuclear power is, all this will do to create proliferation concerns. Well, here's one way to address those concerns—to say, "We'll provide the fuel for you, and we'll collect the fuel from you, by the way, and after we collect the fuel from you, we need to reprocess the spent nuclear material." By reprocessing, you can continue to use the fuel base, but equally importantly, we'll reduce the amount of nuclear waste that needs to be stored.

So here is an initiative that affects us here at home and an initiative that will help others develop nuclear power so they can generate their economic growth. We want people growing in the world. We want people—economies to be in good shape. And we also expect others to help us protect the environment as well.

Another electricity source with enormous potential is solar power. Today, Americans use small amounts of solar power, mainly to heat water or to power small consumer products like outdoor lights. After spending some time with you all here, I'm going over to Michigan to go to a company that manufactures thin film, photovoltaic cells.

That's kind of a fancy word for cells that can generate electricity directly from sunlight.

The technology—solar technology has the potential to change the way we live and work, if you really think about it. For example, roof makers will one day be able to create a solar roof that protects you from the elements and, at the same time, powers your house. And that's what these folks are working on.

The vision is this: That you will have—that the technology will become so efficient that you'll become a little power generator in your home and that if you don't use the energy you generate, you'll be able to feed it back into the electricity grid. The whole purpose of spending money on solar power—and we intend to spend \$150 million next year in funding for both Government and private research—is to bring to market as quickly as possible this important and impressive technology. It's really going to help change the way we live—we think—and we want solar power to become competitive by 2015.

Another promising renewable is wind. You're getting—as Laura says, “When you speak too long, you're a little windy.” [Laughter] I'm not saying I'm wind power—[laughter]—but I am telling you I recognize the importance of wind power. More than \$3 billion worth of equipment to generate electricity from wind was installed in America last year. In other words, it's a new industry; it's beginning to grow; \$3 billion is a good investment, good amount of investment. Obviously, people think there's potential when it comes to wind energy.

About 6 percent of the continental U.S. has been identified as highly suitable for construction of wind turbines. Some have estimated that this area alone has the potential to supply up to 20 percent of our Nation's electricity. In other words, they've identified 6 percent of the country's landmass as a good place for wind turbines that, if installed with the right technology,

could have a major effect on the electricity that we all use. So we're proposing additional money for research and development.

I think you're beginning to get the drift of what I'm talking about. We're on the edge of some amazing breakthroughs—breakthroughs all aimed at enhancing our national security and our economic security and the quality of life for the folks who live here in the United States. And so, therefore, now is the time for Congress to join me in spending this money. I think it's a good use of your money, to help us achieve major breakthroughs in how we live and how we can reduce our dependency on oil. This is an issue that Republicans and Democrats can and must come together on. It's an issue that—[applause].

Think about how your children or your grandchildren may be able to spend a President's Day in the future. If you're planning a trip to visit relatives, you can plug in your hybrid car the night before and drive the first 40 miles on your lithium ion battery. If you've got more distance to go, you can fill up at your local ethanol station. If you're in Wisconsin, you'll be filling it up with corn product. In Crawford, it may just be switchgrass. [Laughter] You may decide to travel in a hydrogen-powered minivan and refuel at a station with hydrogen generated by a local nuclear powerplant. When you finally make it to where you're going, you can sit at a house that is lit by clean coal or wind energy or solar-powered roof over your head.

We're close. We're close to having this vision realized in America. And by the way, this can all be done—the whole trip can be done without consuming a single drop of oil. It's within our reach. There was a lot of time when most Americans would never have imagined that we'd be traveling long distance in our automobile instead of a buggy or sending e-mails instead of letters. In the life of this Nation, we have seen incredible and rapid advances in technology—in the history of this country.

I believe the greatest advances are yet to come, and I want to thank the good folks here at Johnson for helping them come. Thanks for your time. God bless.

NOTE: The President spoke at 11:43 a.m. at Johnson Controls Building Efficiency Business. In his remarks, he referred to John M.

Barth, chief executive officer, president, and director, Johnson Controls, Inc.; John G. Gard, speaker, Wisconsin State Assembly; Mayor Thomas M. Barrett of Milwaukee, WI; and Scott Walker, county executive, and Sheriff David A. Clarke, Jr., of Milwaukee County, WI.

## Remarks Following a Tour of United Solar Ovonic in Auburn Hills, Michigan *February 20, 2006*

I just had a interesting tour of United Solar here in the State of Michigan. I also had the honor of meeting the inventor of a lot of the technology and the machines here. A couple of things struck me. One, solar technology is commercial and—particularly because they've figured out ways to make long rolls of this photovoltaic technology. That's important to help us achieve a major goal, which is to become less dependent on foreign sources of oil.

I spent the day earlier in Wisconsin, where I was able to see some amazing technologies that will help us change the way we drive our automobiles. This technology right here is going to help us change the way we live in our homes. The ultimate goal is to have solar technology on your home, and that home will become a little power-generating unit unto itself, and that if you have extra electricity, that you could put it back in your grid, so you become a power producer, but you're using renewable sources of energy to power your homes and to fire up your refrigerators. And this is real. I really am thankful that the folks of this company gave me a chance to come and visit about it.

The role of the Government at this point is to continue to spend research dollars to

help push technologies forward, is to get these technologies to be even more competitive in the marketplace. And I'm calling on Congress to join us on this most important energy initiative. As most folks know, there's a lot of needless politics in Washington, DC. There's a lot of finger pointing and a lot of zero-sum attitude amongst the people up there. And of all the issues, becoming less dependent on foreign sources of energy is an issue that we ought to be able to unite and show the American people we can work together to help advance the technologies that will change the world in which we live.

I am very excited about what I've seen here. I'm excited about the future, because we've got great inventors and great entrepreneurs here in our own country preparing for ways to enable the American people to get rid of our addiction to oil. And that will not only enhance our economic security but enhance our national security as well.

Thank you very much.

NOTE: The President spoke at 4:18 p.m. In his remarks, he referred to Subhendu Guha, president and chief operating officer, United Solar Ovonic.

## Remarks in a Discussion on Energy Conservation and Efficiency in Golden, Colorado

February 21, 2006

*The President.* Thank you all. Please be seated. Thanks for having me. I am honored to be at the National Renewable Energy Lab, which will be henceforth called NREL. [Laughter] I have come today to discuss unbelievable opportunities for our country to achieve a great national goal, and that is to end our addiction on oil.

I know it sounds odd for a Texan to say that. [Laughter] But I have spent a lot of time worrying about the national security implications of being addicted to oil, particularly from parts of the world where people may not agree with our policy or our way of life, and the economic security implications of being hooked on oil, particularly since the demand for oil is rising faster than the supply of oil. And any time that happens, it creates the conditions for what could be—price disruption and price spikes at home are like hidden taxes on the working people of our country.

And so we're here to discuss ways to achieve this really important national goal. And there's no better place to come than NREL, and I want to thank you all for hosting me. I appreciate—I really appreciate the scientists and dreamers and, more importantly, doers who work here to help achieve this important goal.

I recognize that there has been some interesting—let me say—mixed signals when it comes to funding. The issue, of course, is whether or not good intentions are met with actual dollars spent. Part of the issue we face, unfortunately, is that there are sometimes decisions made, but as a result of the appropriations process, the money may not end up where it was supposed to have gone. I was talking to Dan about our mutual desire to clear up any discrepancies in funding, and I think we've cleaned up those discrepancies. My message to those who work here is: We

want you to know how important your work is; we appreciate what you're doing; and we expect you to keep doing it; and we want to help you keep doing it.

I want to thank Dan. He's going to be saying some stuff here in a minute, so we're not going to—I'm just going to thank him. I want to thank your staff for hosting us. It's a pain to host the President. [Laughter] But anyway, you've done a fine job. And I want to thank the Governor of the State of Colorado, Bill Owens, for joining us. The United States Senator Ken Salazar—thanks for coming, Ken. I appreciate it. The Congressman from this district, Bob Beauprez—I appreciate you being here. The Congressman from the adjoining district, Mark Udall—Mark, there you go. Thanks for coming.

We got all kinds of people—we got the mayor—appreciate you coming, Mayor Baroch. Thanks for coming, mayor. Just fill the potholes. [Laughter] You got a great city; thanks for having us. I appreciate the statehouse folks, Senator Andy McElhany and Joe Stengel, from this district. I think that's right. Appreciate you coming. Thank you, Andy. Good to see you. I want to thank the directors—thank everybody. [Laughter]

So the challenge is, what do we do to achieve objectives? In other words, we set goals—so what do we need to do? What do we need to do as a nation to meet the goal? How can we fulfill our responsibilities that really say we understand the problems we face? So here's what we need to do.

First, we need to make sure we're the leader of technology in the world. I don't mean just relative to previous times in American history. I think this country needs to lead the world and continue to lead the world. And so, how do you do that? First,

there's a Federal commitment to spending research dollars. In my State of the Union, I called on Congress to double the research in basic sciences at the Federal level. This will help places like NREL. It will continue this grand tradition of the Federal Government working with the private sector to spend valuable research money in order to make sure we develop technologies that keep us as the leader.

In order for us to achieve this national goal of becoming less dependent on foreign sources of oil, we've got to spend money. And the best place to do that is through research labs such as NREL. Now, we also got to recognize that two-thirds of the money spent on research in the United States comes from the private sector. See? So it's one thing for the Federal Government to make a commitment of doubling the funding over a 10-year period, but we've got to recognize that most of the money is done through corporate America, through the private sector.

And one thing that seems like a smart thing to do, for me, is to make the tax rules clear. The research and development tax credit expires on an annual basis. It doesn't make any sense to say to corporate America or the private sector, "Plan for the long run, but we're not going to tell you whether or not the Tax Code is going to be the same from year to year." And so, in order to encourage that two-thirds of the investment in the private sector—necessary to help us achieve national goals and objectives, one of which is to stay on the leading edge of innovation—is to have the research and development tax credit a permanent part of our Tax Code.

Now, in order to get us less addicted to oil, we got to figure out where we use oil, and that's pretty easy, when you think about it. We use a lot of oil for our transportation needs. And so if we can change the way we drive our cars and our trucks, we can change our addiction to oil. And laboratories such as this are doing unbelievably interesting work on helping us change

the way we drive our automobiles. And you're going to hear some interesting discussion with people who are on the frontlines of these technological changes.

Just—I want to tell the American people three ways that we can change the way we drive our automobiles. One is through the use of hybrid vehicles. And Congress wisely increased the tax credit available to those who purchase hybrid vehicles. In other words, we're trying to increase demand for hybrid vehicles. You can get up to a \$3,400 tax credit now if you buy a hybrid vehicle. Hybrid vehicles are vehicles that use a gasoline engine to help charge a battery, and when the battery is charged, the battery kicks in, and if the battery gets low, the gasoline engine kicks back in to charge the battery. It's a hybrid—in other words, two sources of power for the engine.

The new technological breakthrough, however, is going to be when we develop batteries that are able to enable an automobile to drive, say, the first 40 miles on electricity alone. Those are what we call plug-in hybrid vehicles. And yesterday I was at Johnson Controls, which is one of the private-sector companies that are developing the new technologies to enable cars to be able to not need the gasoline engine to charge the battery. Now, that saves a lot of—you can begin to think about how this new technology is going to enable us to save on gasoline use, which makes us less dependent on crude oil, since crude oil is the feedstock for gasoline.

The idea is to have an automobile, say, that can drive 40 miles on the battery, as I mentioned. But if you're living in a big city, that's probably all you're going to need for that day's driving. And then you can get home and plug your car right into the outlet in your house. This is coming. I mean, we're close to this. It's going to require more research dollars. The budget I submitted to the Congress does have money in it for this type of research for

new types of batteries. But I want the people to know we're close. The hybrid vehicles you're buying today are an important part of making sure you save money when it comes to driving. But they're going to change with the right research and development. Technology will make it so that the hybrid vehicles are even better in getting us less addicted on oil and making it good for the consumer's pocketbook.

Secondly, there is a fantastic technology brewing—I say brewing; it's kind of a catch on words here—[laughter]—called ethanol. I mean, it's—there's a lot of folks in the Midwest driving—using what's called E-85 gasoline. It means 85 percent of the fuel they're putting in their car is derived from corn. This is exciting news for those of us worried about addiction to oil. I mean, you grow a lot of corn; you're less dependent on foreign sources of energy. Using corn for fuel helps our farmers and helps our foreign policy at the same time. It's a good deal.

The problem is, we need more sources of ethanol. We need more—need to use different products than just corn. Got to save some corn to eat, of course. [Laughter] Corn flakes without corn is kind of—[laughter]. And so one of the interesting things happening in this laboratory and around the country is what's called the development of cellulosic ethanol. That's a fancy word for using switchgrass, corn—or wood products, stuff that you generally allow to decompose, to become a source of energy.

And as our fellow citizens begin to think to whether or not it makes sense to spend research, imagine—dollars on this technology, imagine people in the desert being able to grow switchgrasses that they can then convert into energy for ethanol for the cars that they're driving there in Arizona. I mean, all of a sudden, the whole equation about energy production begins to shift dramatically. And we're going to hear a lot about cellulosic ethanol.

Finally, hydrogen fuel cells—it's not a short-term solution or an intermediate-term solution, but it's definitely a long-term solution. It will help us achieve grand objectives: less dependence on oil and the production of automobiles that have zero emissions that could harm our air. And we'll talk a lot about hydrogen fuel cells.

Finally, I do want to talk about technologies that will enable us to change the way we power our homes and businesses, which is the second part of the strategy, the Advanced Energy Initiative strategy.

First of all, there's huge pressure on natural gas; people in Colorado know what I'm talking about. We've been using a lot of natural gas for the generation of electricity. And we got to change that. Natural gas is important for manufacturing. It's important for fertilizers. But to use it for electricity is causing enormous pressure, because we're not getting enough natural gas produced.

One way to alleviate [alleviate]\* the pressure on price is to expand the use of liquefied natural gas through new terminals. And I want to thank the Congress for passing new siting rights in the energy bill that will enable us to have more terminals for us to be able to receive liquefied natural gas from parts of the world that can produce it cheaply—liquefy it, and then ship it to the United States.

But the other way to take the price off of gas is to better use coal, nuclear power, solar and wind energy. Now, when you hear people say coal, it causes people to shudder, because coal—it's hard to burn it. But we have got—we're spending about \$2 billion over a 10-year period to develop clean coal technologies. If technology can help the way we live, technology can certainly help change the way we utilize coal. And it's important that we spend money on new technologies so we can burn coal cleanly, because we got 250 years worth of coal reserves.

---

\* White House correction.

One way to take the pressure off natural gas is to use coal more efficiently. We believe by 2015, we'll have developed the first zero-emission coal-fire electricity plant. We're making progress. We're spending money; research is good. The American taxpayers have got to know that by spending money on this vital research, that we're going to be able to use our abundant sources of coal in an environmentally friendly way and help with your electricity bills.

Secondly, we've got to use nuclear power more effectively and more efficiently. We haven't built a plant since the 1970s. You're seeing now, France has built a lot of plants since the 1970s. They get about 85 percent of their electricity from nuclear power. And technology has changed dramatically, and I believe we can build plants in a safe way and, at the same time, generate cost-effective electricity that does not—that the process of which won't pollute.

And so we've begun to, in the energy bill, begun to provide incentives for the nuclear power industry to start siting plants. It just doesn't make any sense to me that we don't use this technology if we're interested in becoming less dependent on foreign sources of energy and we want to protect our environment.

And finally, solar and wind technologies—we're also going to talk about that. NREL is doing a lot of important work on solar and wind technology. The vision for solar is, one day, each home becomes a little power unit unto itself, that photovoltaic processes will enable you to become a little power generator, and that if you generate more power than you use, you can feed it back into the grid.

I was, yesterday, in Michigan, and went to United Solar, and they've got some fantastic technologies. Dan was quick to remind me, others have fantastic technologies as well. [Laughter] I just hadn't seen them firsthand. But the American people need to know, with additional research dollars, which we're proposing to Congress, we're

close to some important breakthroughs—to be able to use this technology to help folks power their homes by the Sun.

And finally, wind—we don't have a lot of turbines in Washington, but there's a lot of wind there, I can assure you of that. [Laughter] But there are parts of the country where there are turbines. They say to me that there's about 6 percent of the country that's perfectly suited for wind energy, and that if the technology is developed further, that it's possible we could generate up to 20 percent of our electricity needs through wind and turbine.

What I'm talking about is a comprehensive strategy. In other words, we're not relying upon one aspect of renewable energy to help this country become less dependent; we're talking about a variety of fronts. And we're willing to work with both the public sector and private sector to make sure that we achieve breakthroughs. And I'm fired up about it and so should the American people be. I mean, we're close to changing the way we live in an incredibly positive way. And therefore, I want to thank the folks at NREL for being a part of this exciting movement. It's got to be pretty interesting to be one of these guys working on how to make switchgrass go to fuel. I mean, it's got to make you feel good about your work, because you're doing the country a great service.

And so with that in mind, I've asked Dan Arvizu to join us. He's the director of the NREL. That means he's—that means you're the boss? [Laughter]

*Dan Arvizu.* Only part of the time.

*The President.* Only part of the time.

*Mr. Arvizu.* Until I get home. [Laughter]

*The President.* Why don't you tell the folks—that's a smart man. [Laughter] Why don't you tell the folks what you do here so people can understand.

[At this point, Mr. Arvizu, director, National Renewable Energy Laboratory, made brief remarks.]

*The President.* I think what he's saying is, one of these days, we're going to take wood chips—[laughter]—put them through the factory, and it's going to be fuel you can put in your car. Is that right?

*Mr. Arvizu.* That's absolutely true. [Laughter]

*The President.* Stuff that would normally—[applause]. That's the difference between a Ph.D. and the C student. [Laughter]

*Mr. Arvizu.* I didn't want to say that.

*The President.* Yes, right. [Laughter] Anyway, keep going. [Laughter]

*Mr. Arvizu.* One of the other areas that we're tremendously excited by is photovoltaics. You mentioned the photovoltaics.

*The President.* Explain what photovoltaics are. I threw it out there as kind of, you know, showing off, but tell people what it means.

*Mr. Arvizu.* Photovoltaics is actually the direct conversion of sunlight to electricity through a semiconductor material, and it's essentially what we use in computers for chips that power those things. And to a large degree, it's a technology that's been around a long time, but it has become much closer to commercialization. Now, in high-value markets, it is commercial today.

[*Mr. Arvizu continued his remarks.*]

*The President.* See, what's changed is, the global supply for fossil fuels is outstripping the—the global demand is outstripping the global supply. And so you're seeing a price of the feedstock of normal energy going up, and technology driving the price of alternatives down. And that's why this is a really interesting moment that we're going to see. It's changed a lot of thinking. The price of natural gas and the price of crude oil has absolutely made these competitive alternative sources of energy real. And the question is, do we have the technological breakthroughs to make it such that it can get to your gas tanks?

[*Mr. Arvizu made further remarks.*]

*The President.* Thank you, sir. Larry Burns, why don't you explain to folks what you do for a living.

*Lawrence D. Burns.* Well, I'm responsible for research and development and strategic planning for General Motors. And I've been doing that, working for General Motors, for 37 years, actually.

*The President.* Thirty-seven years?

*Mr. Burns.* Yes. I started out in kindergarten.

*The President.* Yes, I was going to say. [Laughter] You're obviously not in politics because your hair is not gray. [Laughter]

You know, it's interesting—I bet you people don't know this—a lot of people don't know—there are 4.5 million automobiles on the road today that can either burn gasoline or ethanol—called flex-fuel vehicles. Isn't that interesting? And people don't know that. In other words, the technology is available.

Pick it up from there. I'm trying to give you—[laughter].

[*Mr. Burns, vice president of research and development and strategic planning, General Motors, made brief remarks.*]

*The President.* Tell people what a flex-fuel vehicle is. What is it? Tell them what it is.

*Mr. Burns.* What it is, it's a vehicle that can burn both gasoline and E-85 ethanol. As you explained, it's 85 percent ethanol and 15 percent gasoline. So any mixture between gasoline and E-85, the vehicle can burn. And in fact, E-85 burns cleaner and yields higher horsepower than gasoline. It's renewable, and it can be homegrown. So we think it's an ideal fuel.

*The President.* Does it cost much—

*Mr. Burns.* Well, from a cost standpoint—

*The President.* —to make the engine—

*Mr. Burns.* No, no, actually not. It's a pretty straightforward thing for us to do. The fuel injectors in your engine have to be changed, but this is one of the reasons

we can do it in high volume and give our customers the choice for—

*The President.* In other words, this isn't something that's going to be real expensive to the consumer, if somebody wants a flex-fuel vehicle?

*Mr. Burns.* No, not in terms of the vehicle.

[*Mr. Burns continued his remarks.*]

*The President.* Yes, just one quick point—sorry to interrupt. But people are sitting there saying, “Well, okay, maybe you've manufactured the fuel from different sources, but do you have the automobiles to use it?” And the point is, the technology is already advanced. I mean, they're out there, people on the road using it. So the question is, now, can we get the fuel manufactured close to where people are driving flex-fuel vehicles, or vice versa, so that we can get this technology expanded throughout the country? Go ahead.

[*Mr. Burns made further remarks.*]

*The President.* That's great. We're spending \$1.2 billion over a 5-year period on—or 10-year period for hydrogen research. I would warn folks that I think the hybrid battery and the ethanol technologies will precede hydrogen. Hydrogen is a longer-term opportunity. It's going to take awhile for hydrogen automobiles to develop, plus the infrastructure necessary to make sure people can actually have convenience when it comes to filling up your car with hydrogen. But nevertheless, I'm pleased to hear that GM is like—joining the Federal Government on the leading edge of technological change.

*Mr. Burns.* The important part about that battery, too, is it's a stepping stone to the fuel-cell vehicle. We'll imagine our fuel-cell vehicles will have some form of storing energy, because as your car slows down, you want to capture that energy and store it. So it's not like we're making one investment here that doesn't help another one. They all come together—the ethanol,

the batteries, and the fuel cells are really one in the same roadmap to get to the future that offers a lot of alternatives for our Nation.

*The President.* Great. Thanks for joining us.

*Mr. Burns.* Thank you.

*The President.* Patty Stulp.

*Patty Stulp.* Hi. Good morning, Mr. President.

*The President.* You've got an interesting business.

*Ms. Stulp.* I do, thank you. I blend ethanol for gasoline refiner.

*The President.* You blend ethanol for a gasoline refinery.

*Ms. Stulp.* Would you like me to tell you about it?

*The President.* I wish you would. [*Laughter*] Please don't ask me to tell you about it. [*Laughter*]

*Ms. Stulp.* I've been involved in the ethanol industry for over 20 years. I grew up on a farm in Yuma County. I need to point out that Yuma County is the number one corn-producing county in the Nation most years. I'm a fourth generation—

*The President.* Number one corn-producing county in the country.

*Ms. Stulp.* It's in Colorado.

*The President.* Really?

*Ms. Stulp.* We grow a lot of corn, about—

*The President.* That's not what they told me in Iowa, but that's all right. [*Laughter*] I believe you.

[*Ms. Stulp, president, Ethanol Management Co., made brief remarks.*]

*The President.* Well said. Our economy—a strong economy is one that needs a good farm economy. And the more markets there are for our farmers, the stronger the economy is going to be. And ethanol is just another market.

*Ms. Stulp.* Mr. President, we really appreciate your support of this program.

*The President.* Well, listen, it makes sense. Anybody who doesn't support it

doesn't quite understand the problems we face. But thanks. Good job. You're a pioneer yourself.

*Ms. Stulp.* Thank you.

*The President.* Colorado is famous for pioneers. [Laughter]

Bill Frey, straight out of Delaware, is that right?

*William Frey.* Straight out of Delaware, yes.

*The President.* Welcome.

*Mr. Frey.* Thank you.

*The President.* Tell people what you do.

[*Mr. Frey, global business director, DuPont Biobased Materials, made brief remarks.*]

*The President.* Are you dedicating a lot of dollars to research and development? I know you are in general, but how about to alternative sources of energy?

*Mr. Frey.* Absolutely. Absolutely. And we're doing it in two regards. Most of the discussion so far has been around the issue of fuels as an output. We do a lot of work in terms of using cellulose-based or using corn-based raw materials to make materials as well.

[*Mr. Frey continued his remarks.*]

*The President.* Good. Let's see what I can ask you here. [Laughter] What is your relationship—what is the nature of the relationship with NREL? When you say you work with NREL, tell people how the private sector and government entities interface.

*Mr. Frey.* So everyone—people have mentioned biorefinery—I think probably everyone so far has mentioned biorefinery—and we're working very closely with NREL. NREL, of course, has had a number of years of being in the space looking at renewable energy, doing a lot of the foundation work that allows us to now look at how we're going to commercialize cellulose. So we're doing a lot of work in the area of biorefinery with NREL, looking at how we can take a process which, today, has challenges associated with the

economics of doing it, so it's an issue of economic. It's not a technology issue; the technology works. It's the economics of that technology. So we're spending a lot of time on trying to solve those problems.

*The President.* Do you have people here from your company coming—

*Mr. Frey.* Actually, there are people meeting today offsite, because of this particular event. [Laughter]

*The President.* I said I was a pain. Look, I said it up front. [Laughter]

[*Mr. Frey made further remarks.*]

*The President.* Part of it's the process of converting the switchgrass to fuel, and part of it's to make sure the manufacturing process yields a cost-effective product. And that's a lot of what you're discussing, which is important.

*Mr. Frey.* And it's important, I think, also, for a lot of the constituents to know that there isn't an either/or situation as it relates to the type of work that we're doing with cellulose. There's some confusion at times, as to is cellulosic going to take the place of corn-based ethanol, and of course, it's not going to at all.

*The President.* The answer is, no. We have plenty of demand. I mean, there's going to be a lot of cars. We've only got 4.5 million cars—what are there, 220 million cars in America? And by the way, just to make sure everybody's expectations are set, our fleet is not going to change overnight. It takes awhile. When you get new technologies available for people to buy—hybrid vehicles or flex-fuel vehicles—it takes awhile to change a 220-million car fleet to a modern fleet.

And so what we're talking about is an evolution, so people don't have the expectations that overnight, there's going to be millions of people driving hybrid vehicles or—we want them to be. It's just going to—from a practical perspective, it takes awhile. Thanks.

[*Mr. Frey made further remarks.*]

*The President.* I think the Nation—part of this deal today is to help develop national will. Most Americans understand the problems. And so good, thanks for joining. You did a fine job. Tell them back—hello there in Delaware.

*Mr. Frey.* All right. I'm sure they're watching so—

*The President.* They're watching. Well, give them a wave.

*Mr. Frey.* Okay. [Laughter]

*The President.* Lori Vaclavik.

*Lori Vaclavik.* Vaclavik.

*The President.* Vaclavik. It's a very—you're an interesting addition to the panel. Besides being a fine person, tell people what you do. I think people will find this interesting.

[*Ms. Vaclavik, executive director, Habitat for Humanity of Metro Denver, made brief remarks.*]

*The President.* Great, thanks—well-spoken. If anybody in the Denver area wants to contribute to help somebody's life be better life, join Habitat for Humanity. I mean, it's—if you want to—the truth of the matter is, I was just thinking about—we're talking about power and power sources and everything; the true power of the country is the hearts and souls of citizens who volunteer to help change people's lives. So, thanks. Beautiful statement—using some technology to help somebody. But you're right; the great source of inspiration is the fact that we got a new homeowner. Yes, that's neat.

Welcome. Dale, step forth. [Laughter]

*Dale Gardner.* I'm here, sir.

*The President.* Good. Reporting for duty. Are you gainfully employed?

*Mr. Gardner.* I am. [Laughter] As long as you're kind to my boss, Mr. President. [Laughter]

*The President.* As long as Congress quits earmarking, anyway.

*Mr. Gardner.* Well, we could talk about that too. [Laughter] I am here at NREL,

but I directly support the hydrogen program back at the Department of Energy.

*The President.* Great.

[*Mr. Gardner, associate lab director for systems integration, National Renewable Energy Laboratory, made brief remarks.*]

*The President.* So, like if you got a 2-year-old child, when the person gets to be 12, maybe thinking about driving a car, all of a sudden, the technology becomes more real—pretty close. For a guy 59, 10 years is a lot. [Laughter] If you're 2, it's not all that much. [Laughter] It's conceivable that a 2-year-old today could be taking a driver's test in a hydrogen-powered automobile.

Keep going.

*Mr. Gardner.* So here's what we're doing. The major technological challenges—I can boil them up into three areas. There are many, but here is a good way to think about it. The first is production of hydrogen. Hydrogen, even though it's the most common element in the universe, here on Earth, it's not found freely. It's bound up into these larger molecules, and therefore, it takes us energy and dollars to break it free. So that's the main thing.

*The President.* One reason why we need to expand nuclear power is to be able to help manufacture ample quantities of hydrogen to help change the way we live.

*Mr. Gardner.* That's exactly right. We can take that electricity from a nuclear powerplant, electrolyze water, which just means break the hydrogen free from the oxygen, and then have it for a fuel source. So production is one of our big goals. And the goal there, of course, is to make the cost of the hydrogen competitive with gasoline today; otherwise, you and I won't want to buy it at the filling station.

*The President.* Correct.

*Mr. Gardner.* The second area is storage. This is really an interesting one. Because hydrogen is the simplest element, it has the complexity that affects us in terms of using hydrogen in vehicles. We have to go

put hydrogen in a tank, just as we do gasoline. Well, because it's so light and its density is so low, it's really hard to pack enough of it into a tank that's not the size of your whole trunk, such that we can get 300 miles down the road. And for Larry to sell a car to one of us, we want to go at least 300 miles more, especially when you're driving in Texas—a long way between filling stations. [Laughter]

*The President.* Yes. And we want more than one seat in the automobile. [Laughter]

[Mr. Gardner made further remarks.]

*The President.* So you've been looking at this for 3 years. Is this like science fiction, or are we talking about something that you think will come to fruition?

*Mr. Gardner.* This is going to happen.

*The President.* Pretty exciting, isn't it?

*Mr. Gardner.* It's going to be out in the middle of the century. It's not going to be something that's going to happen in the next 15 or 20 years, but it's going to be the way our kids and our grandkids view the energy structure of our country. It's very exciting work.

*The President.* In 1981, I don't think anybody ever thought there would be such a thing as e-mail. Matter of fact, we were still writing letters longhand, if I recall. Typewriters were kind of the—now it's computer. It's amazing what research and development can do to the way we live; pay phones to cell phones in 20 years. I think what we're hearing is change of lifestyle in incredibly important ways in the research that's taking place.

You can't have—we live in an instant gratification world, so we got to be wise about how we make investments. Part of the strategy is intermediate term, part of the strategy is long term. And thanks for explaining an important long-term strategy. You did a fine job, kind of boiled it down, simplified it—point one, two, three. [Laughter]

*Mr. Gardner.* I heard what you said today on—

*The President.* That's good, yes. Thank you for joining us. Thanks for your work on that.

Finally, Pat Vincent, the president and CEO of—

*Patricia K. Vincent.* Public Service Company of Colorado.

*The President.* Great. Thanks for joining us.

*Ms. Vincent.* Thank you.

*The President.* You have a vested interest in all this.

[Ms. Vincent, president and chief executive officer, Public Service Co. of Colorado, made brief remarks.]

*The President.* First let me—before you—what is the main source of your power today?

*Ms. Vincent.* It's a mix between coal and natural gas.

*The President.* Coal—right, right—50–50?

*Ms. Vincent.* We have some nuclear in Minnesota, depends on the State. Here in Colorado, it's predominantly natural gas.

*The President.* And what States do you cover?

*Ms. Vincent.* We cover 10 States. We cover the panhandle of Texas.

*The President.* Do you?

*Ms. Vincent.* We do. Oklahoma—

*The President.* People paying their bills down there? [Laughter]

*Ms. Vincent.* They are; they are.

*The President.* That's good. A fine part of the country, I want to you know. Well, you don't need to name them all, a 10-State area.

*Ms. Vincent.* Yes, 10 States.

*The President.* And you're based where?

*Ms. Vincent.* I'm based here in Denver, and this is our largest utility company here—is in Colorado. And we have a wind source program that's been around since 1998.

[Ms. Vincent continued her remarks.]

*The President.* So, like, when you analyze the wind turbine technology, is it advancing rapidly? Is there more advances being made—or am I getting you out of your lane here?

*Ms. Vincent.* No, it's advancing rapidly. And what we're finding is like Dan talked about, the demand for solar—is that the demand for the turbines is starting to outstrip the supply. And a lot of it's going overseas. The production tax credit really helps us here because it kind of goes in boom and bust cycles, so that has really helped us levelize the demand and make them commercially feasible. And people like GE are making big strides in wind technology.

*The President.* Good.

*Ms. Vincent.* Second programs we have are with NREL, and we have two. And the first one is a wind to hydrogen program. And I don't know about your experience with wind, but it does blow intermittently here in Colorado and—

*The President.* It does in Washington too. [Laughter]

*Ms. Vincent.* I wasn't sure if it was all the time or just intermittently.

*The President.* Lately, all the time. [Laughter]

[*Ms. Vincent made further remarks.*]

*The President.* By the way, this may interest you if you are—these people manufacturing photovoltaic products can't make enough. I mean, the demand for these things is huge. And there's just not enough capacity. The plant we were at yesterday is going to double in size. They're making neat roofing materials, by the way. I'm not their marketing guy—[laughter]—just happens to be on my mind. What's interesting about the discussion is the utility industry needs alternative sources of energy in order

for them to be able to do their job. I think that's what you're saying.

*Ms. Vincent.* Yes, and it's good for our customers. It's good for the communities; it's good for us—

*The President.* Absolutely.

*Ms. Vincent.* —our shareholders.

*The President.* It's good for your customers; it's good for you.

*Ms. Vincent.* Yes.

*The President.* And I know you feel that way. Managing peak electricity loads with alternative sources of energy makes a lot of sense.

*Ms. Vincent.* Yes, it does.

*The President.* Good. You did a fine job.

*Ms. Vincent.* Thank you.

*The President.* So that's why we're here, to talk about a variety of options to achieve a great national goal. And there's no doubt in my mind we're going to achieve it. And it's exciting. It's exciting times to be involved with all aspects of this strategy. And you heard some of our fellow citizens describe to you what they're doing to be a part of this giant effort to change the way we live, so that future generations of Americans will look back at this period and say, "Thank goodness there was yet another generation of pioneers and entrepreneurs willing to think differently on behalf of the country."

Thanks for coming. God bless. Good job.

NOTE: The President spoke at 9:19 a.m. at the National Renewable Energy Laboratory. In his remarks, he referred to Mayor Charles J. Baroch of Golden, CO; Colorado State Senator Andy McElhany; and Joe Stengel, minority leader, Colorado State House of Representatives. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Interview With Reporters Aboard Air Force One February 21, 2006

*The President.* Thank you all for coming. A couple of points I want to make to you. First, I'm excited about the energy initiative. American people are beginning to see that we've made good progress on research and development. We've got more to do. We're close to some breakthroughs that will achieve an economic and national security objective.

And I've enjoyed traveling around and talking to these scientists and engineers that are really excited about how close we are to some technological breakthroughs. Today, talking to the two scientists involved with the cellulosic ethanol projects was exciting. These guys are pretty fired up about it all, and they realize we've got a chance to change our driving habits.

I do want to talk about this port issue. A foreign company manages some of our ports. They've entered into a transaction with another foreign company to manage our ports. This is a process that has been extensively reviewed, particularly from the point of view as to whether or not I can say to the American people, "This project will not jeopardize our security." It's been looked at by those who have been charged with the security of our country. And I believe the deal should go forward. This company operates all around the world. I have the list somewhere. We can get you the list. They're in Germany and elsewhere—Australia.

They—in working with our folks, they've agreed to make sure that their coordination with our security folks is good and solid. I really don't understand why it's okay for a British company to operate our ports but not a company from the Middle East, when our experts are convinced that port security is not an issue; that having worked with this company, they're convinced that these—they'll work with those who are in charge of the U.S. Government's responsi-

bility for securing the ports—they'll work hand in glove. I want to remind people that when we first put out the Container Security Initiative, the CSI, which was a new way to secure our ports, UAE was one of the first countries to sign up.

In other words, we're receiving goods from ports out of the UAE as well as where this company operates. And so I, after careful review of our Government, I believe the Government ought to go forward. And I want those who are questioning it to step up and explain why all of a sudden a Middle Eastern company is held to a different standard than a Great—British company. I'm trying to conduct foreign policy now by saying to people of the world, "We'll treat you fairly." And after careful scrutiny, we believe this deal is a legitimate deal that will not jeopardize the security of the country and, at the same time, send that signal that we're willing to treat people fairly.

Thirdly, I'm looking forward to my speech tomorrow about my trip to India and Pakistan. It's going to be an important trip, one where we'll work on a variety of issues with both countries—security, prosperity, and trade—working with India, of course, on energy security. It will be an important trip.

I'll answer some questions, and then we're getting ready to land.

### *Dubai Ports World/Homeland Security*

*Q.* Mr. President, leaders in Congress, including Senator Frist, have said that they'll take action to stop the port control shift if you don't reverse course on it. You've expressed your thoughts here, but what do you say to those in Congress who plan to take legislative action?

*The President.* They ought to listen to what I have to say about this. They ought to look at the facts and understand the

consequences of what they're going to do. But if they pass a law, I'll deal with it, with a veto.

*Crude Oil Supply/Middle East*

Q. Mr. President, on energy and foreign policy, some Saudi officials have said they're unhappy with being targeted about Middle Eastern oil, saying that you wanted to reduce dependence on Middle East oil. You've got a close relationship with King Abdullah.

*The President.* I do.

Q. He's been to see you. Have you heard something directly, yourself, from the Saudis?

*The President.* No, I haven't talked to His Majesty, but if I did, I would say, I hope you can understand that the relationship between supply and demand is so tight that any disruption on the supply side of energy causes our prices to go up, and spiking prices hurts our economy. And secondly, there are parts of the world where people would—that don't agree with our policy, namely Iran, for example. And that it's not in our interest to be dependent, when it comes to our economic security, and for that matter, national security, in a market that is volatile. And so hopefully, he'll understand.

Q. So you don't think they should take offense at the comments about Middle Eastern oil?

*The President.* I would think that he would be understanding that new technologies will enable us to diversify away from our reliance upon crude oil. As a matter of fact, it's not only a message for the United States; that's also a message for India and China. In order for these growing economies to be able to be competitive, they're going to have to learn how to use technologies that will enable them to meet the needs of their people, but also the international demands of the world for good environment, for example. The Nuclear Energy Initiative I'll be talking to the Indians about is an important initiative.

*Dubai Ports World/Homeland Security*

Q. The understatement today, and one of the concerns of lawmakers, seems to be that they want more of a briefing, and they want more details about the things that you know that have given you confidence that there aren't any national security implications with the port deal. Are you willing to either have your staff or to give any kind of briefing to leaders of Congress—

*The President.* Look at the company's record, Jim [Jim VandeHei, Washington Post], and it's clear for everybody to see. We've looked at the ports in which they've operated. There is a standard process mandated by Congress that we go through called the CFIUS process. I'm not exactly sure if there's any national security concerns in briefing Congress. I just don't know. I can't answer your question.

Q. It seems like—you've already heard from different administration officials, saying, not in as strong terms as you have today, that there aren't problems with this deal, that the deal should go forward. But they seem to want more of a briefing. Would you be willing to give any additional briefings, either—

*The President.* We'll be glad to send—

Q. —either in a classified basis or—

*The President.* I don't see why not. Again, you're asking—I need to make sure I understand exactly what they're asking for.

Yes. Oh, you're not the press.

*Counselor to the President Dan Bartlett.* I could ask a question. You showed some strong leadership today—[laughter].

Q. Why is it so important to you, sir, that you take on this issue as a political fight? Clearly, there's bipartisan—

*The President.* I don't view it as a political fight. So do you want to start your question over? I view it as a good policy.

Q. Why is it—clearly—

*The President.* Are you talking about the energy issue?

Q. No, I'm sorry, the ports issue.

*The President.* It's not a political issue.

*Q.* But there clearly are members of your own party who will go to the mat against you on this.

*The President.* It's not a political issue.

*Q.* Why are you—to make this, to have this fight?

*The President.* I don't view it as a fight. I view it as me saying to people what I think is right, the right policy.

*Q.* What's the larger message that you're conveying by sticking to this UAE contract, by saying that you're not going to budge on this or you don't want to change policy?

*The President.* There is a process in place where we analyze—where the Government analyzes many, many business transactions to make sure they meet national security concerns. And I'm sure if you—careful review, this process yielded a result that said, yes, a deal should go forward.

One of my concerns, however, is mixed messages. And the message is, "It's okay for a British company, but a Middle Eastern company—maybe we ought not to deal the same way." It's a mixed message. You put interesting words in your question, but I just view—my job is to do what I think is right for the country. I don't intend to have a fight. If there's a fight, there is one but—nor do I view this as a political issue.

*Q.* I say it because you said you'd be willing to use the veto on it.

*The President.* I would. That's one of the tools the President has to indicate to the legislative branch his intentions. A veto doesn't mean fight or politics; it's just one of the tools I've got. I say veto, by the way, quite frequently in messages to Congress.

#### *Palestinian Government/Hamas*

*Q.* Mr. President, Israel is halting payments to the Palestinians—the tax monies. What do you think about that, and what is the next step?

*The President.* I'll just give you our Government's position, and that is, we have

said that—well, first of all, the U.S. Government doesn't give direct grants to Palestine. We go through the Palestinian Authority. We go through—we give grants through NGOs from our USAID to help people. But my statement still stands, that so long as Hamas does not recognize Israel's right to exist, my view is, we don't have a partner in peace and, therefore, shouldn't fund a government that is not a partner in peace. I thought the elections were important. I was one voice that said the elections should go forward on time.

But I recognized that, one, elections are the first step in many cases in evolution of a true democracy; and secondly, that elections show—give everybody a true look at how—what people are thinking on the street; and thirdly, though, that because the Palestinians spoke, doesn't necessarily mean we have to agree with the nature of—the party elected. And the party elected has said, "We're for the destruction of Israel." And our policy is, two states living side by side in peace. And therefore, it's hard to have a state living side by side in peace when your stated objective is the destruction of one of the states. So my policy still stands, what I said day one after the Hamas elections.

#### *Medicare Reform*

*Q.* Can I ask you about a domestic issue, the prescription drug benefit plan? A lot of Democrats are on recess, and they want to make a big campaign issue out of this this year. What makes you think that the problems that this program being rolled out has had are something other than just the glitches that you've described?

*The President.* I'm glad that they're making this an issue. This is—the reforms that we passed in the Medicare law were necessary and are going to change people's lives in a positive way. And I look forward to talking about this issue next fall, if that's one of the issues they want to talk about, because I understand the impact that this

law is going to have on seniors. And millions have signed up, and millions are realizing the benefit of this program. And so it's—we have done the right thing in passing this law. Seniors are given different options. Seniors are going to get an extraordinarily good drug benefit. We have helped modernize Medicare. And looking forward to talking about it.

Good.

*Press Secretary Scott McClellan.* Thank you all.

## Remarks on Dubai Ports World *February 21, 2006*

I've just come back from a really good trip to the Midwest and the West talking about our need to change how we use energy—very encouraged by the technology that I saw and inspired by the scientists and engineers that are working on these new technologies.

And I also want to address another issue I just talked to the press about on Air Force One, and that is this issue of a company out of the UAE purchasing the right to manage some ports in the United States from a British company. First of all, this is a private transaction. But it—according to law, the Government is required to make sure this transaction does not, in any way, jeopardize the security of the country. And so people responsible in our Government have reviewed this transaction.

The transaction should go forward, in my judgment. If there was any chance that this transaction would jeopardize the security of the United States, it would not go forward. The company has been cooperative with the United States Government. The company will not manage port security. The security of our ports will be—continue to be managed by the Coast Guard and Customs. The company is from a country that has been cooperative in the war on terror,

*The President.* Pleasant experience working with you all.

NOTE: The interview began at 2:42 p.m. en route from Golden, CO, to Andrews Air Force Base, MD. In his remarks, the President referred to King Abdallah bin Abd al-Aziz Al Saud of Saudi Arabia. A tape was not available for verification of the content of this interview.

been an ally in the war on terror. The company operates ports in different countries around the world, ports from which cargo has been sent to the United States on a regular basis.

I think it sends a terrible signal to friends around the world that it's okay for a company from one country to manage the port but not a country that plays by the rules and has got a good track record from another part of the world, can't manage the port.

And so, look, I can understand why some in Congress have raised questions about whether or not our country will be less secure as a result of this transaction. But they need to know that our Government has looked at this issue and looked at it carefully. Again, I repeat, if there was any question as to whether or not this country would be less safe as a result of the transaction, it wouldn't go forward. But I also want to repeat something again, and that is, this is a company that has played by the rules, that has been cooperative with the United States, a country that's an ally in the war on terror, and it would send a terrible signal to friends and allies not to let this transaction go through.

I want to thank you for your interest in the subject.

NOTE: The President spoke at 3:50 p.m. on the South Lawn at the White House.

## Remarks to the Asia Society February 22, 2006

Thank you all. Madam President—it's got a nice ring to it. [*Laughter*] Thank you for your kind introduction; thank you for inviting me here. I'm honored to be here with the members of the Asia Society as you celebrate your 50th anniversary.

I came here today to talk about America's relationship with two key nations in Asia: India and Pakistan. These nations are undergoing great changes, and those changes are being felt all across the world. More than five centuries ago, Christopher Columbus set out for India and proved the world was round. Now some look at India's growing economy and say that that proves that the world is flat. [*Laughter*] No matter how you look at the world, our relationship with these countries are important. They're important for our economic security, and they're important for our national security.

I look forward to meeting with Prime Minister Singh in India and President Musharraf in Pakistan. We will discuss ways that our nations can work together to make our world safer and more prosperous by fighting terrorism, advancing democracy, expanding free and fair trade, and meeting our common energy needs in a responsible way.

I appreciate Ambassador Holbrooke. I appreciate your service to our country. Thanks for being the chairman of the Asia Society. Leo Daly is the chairman of the Asia Society of Washington. Leo, thank you. It's good to see you.

I appreciate the members of the diplomatic corps that have joined us today, in particular, Ambassador Sen from India and Ambassador Karamat from Pakistan. Thanks

for taking time out of your busy schedules to come and hear the President give a talk.

Fifty years ago, many Asian nations were still colonies; today, Asians are in charge of their own destinies. Fifty years ago, there were only a handful of democracies in Asia; today, there are nearly a dozen. Fifty years ago, most of Asia was mired in hopeless poverty; today, its economies are engines of prosperity. These changes have been dramatic, and as the Asian continent grows in freedom and opportunity, it will be a source of peace and stability and prosperity for all the world.

The transformation of Asia is beginning to improve the lives of citizens in India and Pakistan, and the United States welcomes this development. The United States has not always enjoyed close relations with Pakistan and India. In the past, the cold war and regional tensions kept us apart, but today, our interests and values are bringing us closer together. We share a common interest in promoting open economies that creates jobs and opportunities for our people. We have acted on common values to deliver compassionate assistance to people who have been devastated by natural disasters. And we face a common threat in Islamic extremism. Today I'm going to discuss America's long-term interests and goals in this important part of the world and how the United States can work together with India and Pakistan to achieve them.

The first stop on my trip will be India. India is the world's largest democracy. It is home to more than a billion people—that's more than three times the population of the United States. Like our own country,

India has many different ethnic groups and religious traditions. India has a Hindu majority and about 150 million Muslims in that country. That's more than in any other country except Indonesia and Pakistan. India's Government reflects its diversity. India has a Muslim President and a Sikh Prime Minister. I look forward to meeting with both of them. India is a good example of how freedom can help different people live together in peace. And this commitment to secular government and religious pluralism makes India a natural partner for the United States.

In my meetings with Prime Minister Singh, we'll discuss ways to advance the strategic partnership that we announced last July. Through this partnership, the United States and India are cooperating in five broad areas.

First, the United States and India are working together to defeat the threat of terrorism. Like the American people, the people of India have suffered directly from terrorist attacks on their home soil. To defeat the terrorists, our intelligence and law enforcement agencies are cooperating on a regular basis to make air travel more secure, increase the security of cyberspace, and prevent bioterrorist attacks. Our two governments are sharing vital information on suspected terrorists and potential threats, and these cooperative efforts will make the Indian Government more effective as a partner in the global war on terror and will make the people in both our countries more secure.

Secondly, the United States and India are working together to support democracy around the world. Like America, India overcame colonialism to establish a free and independent nation. President Franklin Roosevelt supported India in its quest for democracy, and now our two nations are helping other nations realize the same dream.

Last year we launched the Global Democracy Initiative, which is a joint venture between India and the United States to

promote democracy and development across the world. Under this initiative, India and the United States have taken leadership roles in advancing the United Nations Democracy Fund. The fund will provide grants to governments and civil institutions and international organizations to help them administer elections, fight corruption, and build the rule of law in emergency democracy—in emerging democracies. We're also encouraging India to work directly with other nations that will benefit from India's experience of building a multi-ethnic democracy that respects the rights of religious minorities.

India's work in Afghanistan is a good example of India's commitment to emerging democracies. India has pledged \$565 million to help the Afghan people repair the infrastructure and get back on their feet. And recently, India announced it would provide an additional \$50 million to help the Afghans complete their National Assembly building. India has trained National Assembly staff, and it's developing a similar program for the Assembly's elected leaders. The people of America and India understand that a key part of defeating the terrorists is to replace their ideology of hatred with an ideology of hope. And so we will continue to work together to advance the cause of liberty.

Third, the United States and India are working together to promote global prosperity through free and fair trade. America's economic relationship with India is strong, and it's getting better. Last year, our exports to India grew by more than 30 percent. We had a trade surplus of \$1.8 billion in services. India is now one of the fastest-growing markets for American exports, and the growing economic ties between our two nations are making American companies more competitive in the global marketplace. And that's helping companies create good jobs here in America.

The growing affluence of India is a positive development for our country. America

accounts for 5 percent of the world's population. That means 95 percent of our potential customers live outside our borders. More than a billion of them live in India. We welcome the growing prosperity of the Indian people and the potential market it offers for America's goods and services.

When trade is free and fair, it benefits all sides. At the end of World War II, the United States chose to help Germany and Japan recover. America understood then that as other nations prosper, their growing wealth brings greater stability to their regions and more opportunities for products Americans manufacture and grow. The same is true today with developing nations such as India. As India's economy expands, it means a better life for the Indian people and greater stability for the region. It means a bigger market for America's businesses and workers and farmers.

The area of America's relationship with India that seems to receive the most attention is outsourcing. It's true that a number of Americans have lost jobs because companies have shifted operations to India. And losing a job is traumatic. It's difficult. It puts a strain on our families. But rather than respond with protectionist policies, I believe it makes sense to respond with educational policies to make sure that our workers are skilled for the jobs of the 21st century.

We must also recognize that India's growth is creating new opportunities for our businesses and farmers and workers. India's middle class is now estimated at 300 million people. Think about that. That's greater than the entire population of the United States. India's middle class is buying air-conditioners, kitchen appliances, and washing machines, and a lot of them from American companies like GE and Whirlpool and Westinghouse. And that means their job base is growing here in the United States of America. Younger Indians are acquiring a taste for pizzas from Domino's—*[laughter]*—Pizza Hut. And Air India ordered 68 planes valued at more than \$11

billion from Boeing, the single largest commercial airplane order in India's civilian aviation history. Today, India's consumers associate American brands with quality and value, and this trade is creating opportunity here at home.

Americans also benefit when U.S. companies establish research centers to tap into India's educated workforce. This investment makes American companies more competitive globally. It lowers the cost for American consumers. Texas Instruments is a good example. Today, Texas Instruments employs 16,000 workers in America. It gets more than 80 percent of its revenues from sales overseas. More than 20 years ago, Texas Instruments opened a center in Bangalore, which is India's Silicon Valley. They did so to assist in analog chip design and digital chip design and related software development. The company says that their research centers in countries like India allow them to run their design efforts around the clock. They bring additional brainpower to help solve problems and provide executives in the United States with critical information about the needs of their consumers and customers overseas.

These research centers help Texas Instruments to get their products to market faster. It helps Texas Instruments become more competitive in a competitive world. It makes sense. The research centers are good for India, and they're good for workers here in the United States.

In the past decade, India has made dramatic progress in opening its markets to foreign trade and investment, but there's more work to be done. India needs to continue to lift its caps on foreign investment, to make its rules and regulations more transparent, and to continue to lower its tariffs and open its markets to American agricultural products, industrial goods, and services. We'll continue to work for agreements on these economic and regulatory reforms to ensure that America's goods and services are treated fairly. My attitude is this: If the rules are fair, I believe our

companies and our farmers and our entrepreneurs can compete with anybody, anytime, anywhere.

India is an important—is a market for our products. India is also important as a partner in opening up world markets. As a new nation, India emphasized self-sufficiency and adopted strong protectionist policies. During this period, its economy stagnated and poverty grew. India now recognizes that a brighter future for its people depends on a free and fair global trading order. Today, the Doha round of trade talks at the World Trade Organization provides the greatest opportunity to lift hundreds of millions of people out of poverty and to boost economic growth across the world. The WTO members' aim is to complete the Doha round by the end of this year. India has played an important leadership role in the Doha talks, and we look to India to continue to lead as we work together for an ambitious agreement on services and manufacturing and agriculture.

Fourth, the United States and India are working together to improve human health and the environment and address the issue of climate change. So we've joined together to create the Asia-Pacific Partnership on Clean Development and Climate. Together with Australia and China and Japan and South Korea, we will focus on practical ways to make the best practices and latest energy technologies available to all—things like—technologies like zero-emission, coal-fired plants. As nations across the region adopt these practices and technologies, they will make their factories and powerplants cleaner and more efficient. We look forward to being an active partner in this partnership.

Fifth, the United States and India will work together to help India meet its energy needs in a practical and responsible way. That means addressing three key issues: oil, electricity, and the need to bring India's nuclear power program under international norms and safeguards.

India now imports more than two-thirds of its oil. As the economy—as its economy grows, which we're confident it will, it will need even more oil. The increased demand from developing nations like India is one of the reasons the global demand for oil has been rising faster than global supply. Rising demand relative to global supply leads to price increases for all of us.

To meet the challenge here in America, I have proposed what's called an Advanced Energy Initiative to make this company [country]\* less reliant upon oil. As I said in the State of the Union, "We've got a problem; we're hooked on oil." And we need to do something about it.

And so we're spending money on research and development to develop cleaner and more reliable alternatives to oil, alternatives that will work, alternatives such as hybrid vehicles that will require much less gasoline, alternatives such as new fuels to substitute for gasoline, and alternatives such as using hydrogen to power automobiles. We will share these promising energy technologies with countries like India. And as we do so, it will help reduce stress on global oil markets and move our world toward cleaner and more efficient uses of energy.

India's rising economy is also creating greater demand for electricity. Nuclear power is a clean and reliable way to help meet this need. Nuclear power now accounts for nearly 3 percent of India's electricity needs, and India plans to increase the figure by—to 25 percent by 2050. And America wants to help.

My administration has announced a new proposal called the Global Nuclear Energy Partnership. Under this partnership, America will work with nations that have advanced civilian nuclear energy programs—such as Great Britain, France, Japan, and Russia—to share nuclear fuel with nations like India that are developing civilian nuclear energy programs. The supplier nations

---

\* White House correction.

will collect the spent nuclear fuel, and the supplier nations will invest in new methods to reprocess the spent nuclear fuel so that it can be used for advanced new reactors. The strategy will allow countries like India to produce more electricity from nuclear power; it will enable countries like India to rely less on fossil fuels; it will decrease the amount of nuclear waste that needs to be stored and reduce the risk of nuclear proliferation.

To benefit from this initiative, India first needs to bring its civilian energy programs under the same international safeguards that govern nuclear power programs in other countries. And India and the United States took a bold step forward last summer when we agreed to a civil nuclear initiative that will provide India access to civilian nuclear technology and bring its civilian programs under the safeguards of the International Atomic Energy Agency.

This is not an easy decision for India, nor is it an easy decision for the United States, and implementing this agreement will take time, and it will take patience from both our countries. I'll continue to encourage India to produce a credible, transparent, and defensible plan to separate its civilian and military nuclear programs. By following through on our commitments, we'll bring India's civilian—civil nuclear program into international mainstream and strengthen the bonds of trust between our two great nations.

We have an ambitious agenda with India. Our agenda is also practical. It builds on a relationship that has never been better. India is a global leader as well as a good friend, and I look forward to working with Prime Minister Singh to address other difficult problems such as HIV/AIDS, pandemic flu, and the challenge posed by Iran's nuclear ambitions. My trip will remind everybody about the strengthening of a important strategic partnership. We'll work together in practical ways to promote a hopeful future for citizens in both our nations.

The second stop of my trip will be to Pakistan. Pakistan is a key ally in the war on terror. Pakistan is a nation of 162 million people. It has come a long way in a short period of time. Five years ago, Pakistan was one of only three nations that recognized the Taliban regime in Afghanistan. That all changed after September the 11th. President Musharraf understood that he had to make a fundamental choice for his people. He could turn a blind eye and leave his people hostage to terrorists, or he could join the free world in fighting the terrorists. President Musharraf made the right choice, and the United States of America is grateful for his leadership.

Within 2 days of the attack, the Pakistani Government committed itself to stop Al Qaida operatives at its border, share intelligence on terrorist activities and movements, and break off all ties with the Taliban Government in Kabul if it refused to hand over bin Laden and the Al Qaida leadership. President Musharraf's decision to fight the terrorists was made at great personal risk. He leads a country that the terrorists seek to use as a base of operations, and they take advantage of every opportunity to create chaos and destabilize the country. The terrorists have tried to assassinate President Musharraf on a number of occasions, because they know he stands in the way of their hateful vision for his country. He is a man of courage, and I appreciate his friendship and his leadership.

Pakistan now has the opportunity to write a new chapter in its history, and the United States wants to build a broad and lasting strategic partnership with the people of Pakistan. And in my meetings with President Musharraf, we'll be discussing areas that are critical to the American-Pakistan relationship.

First, the United States and Pakistan will continue our close cooperation in confronting and defeating the terrorists in the war on terror. Second, the United States and Pakistan understand that in the long

run, the only way to defeat the terrorists is through democracy.

Pakistan still has a distance to travel on the road to democracy, yet it has some fundamental institutions that a democracy requires. Pakistan has a lively and generally free press. I'm confident I will hear from them on my trip to Pakistan. *[Laughter]* Occasionally, there's interference by security forces, but it's a strong press. Pakistanis are free to criticize their Government, and they exercise that right vigorously. There are a number of political parties and movements that regularly challenge the Government. President Musharraf remains committed to a moderate state that respects the role of Islam in Pakistani society while providing an alternative to Islamic radicalism. The United States will continue to work with Pakistan to strengthen the institutions that help guarantee civil liberties and help lay the foundations for a democratic future for the Pakistani people.

The United States and Pakistan both want the elections scheduled for next year to be successful. This will be an important test of Pakistan's commitment to democratic reform, and the Government in Islamabad must ensure that these elections are open and free and fair. The Pakistanis are taking this step toward democracy at a difficult time in their history. There are determined enemies of freedom attacking from within. We understand this struggle; we understand the pressure. And the United States will walk with them on their path to freedom and democracy.

The United States and Pakistan both want to expand opportunity for the Pakistani people. Opportunity starts with economic growth, and that is why President Musharraf has made economic reform a priority for his administration. These reforms have helped Pakistan's economy grow rapidly last year. There is strong economic vitality in that country, and we will help Pakistan build on that momentum.

We're taking several steps to open up markets and expand trade. And these in-

clude efforts to conclude a bilateral investment treaty that would establish clear and transparent rules to provide greater certainty and encourage foreign direct investment. By fostering economic development and opportunity, we will reduce the appeal of radical Islam and demonstrate that America is a steadfast friend and partner of the Pakistani people.

The United States and Pakistan are working together to improve educational opportunities for the Pakistani people. Young men in Pakistan need a real education that provides the skills required in the 21st century workplace. Pakistan needs to improve literacy for its women and help more Pakistani girls have the opportunity to go to school.

Last year, the United States provided \$66 million to help improve Pakistani education, especially in the least developed regions of the country. This is money well spent. We're glad to partner with the Pakistan Government to help train primary school teachers and administrators and build new schools and adapt existing ones so that young girls can attend school. These funds also support the largest Fulbright program in the world—an educational exchange that brings Pakistani scholars to America and American scholars to Pakistan. By helping Pakistan increase the educational opportunities for its people, we'll help them raise their standard of living and help them marginalize the terrorists and the extremists.

The Pakistani people saw America's commitment to their future when we responded in their hour of need. When a devastating earthquake hit a remote area in the mountains of north Pakistan, it claimed more than 73,000 lives and displaced more than 2.8 million people from their homes. American relief workers were on the ground within 48 hours. Since then, we've pledged more than a half a billion dollars for relief and reconstruction, including \$100 million in private donations from our citizens. These funds have helped to

build 228 tent schools, improve shelter for over half a million people, and feed over a million folks. Our compassion is making a difference in the lives of the Pakistanis, and it's making a difference in how they view America.

The terrorists have said that America is the Great Satan. Today, in the mountains of Pakistan, they call our Chinook helicopters "angels of mercy." Across their country, the Pakistani people see the generous heart of America. Our response has shown them that our commitments to Pakistan are real and lasting. We care about the people in that important country. When they suffer, we want to help.

The great changes that are taking place inside India and Pakistan are also helping to transform the relationship between these two countries. One encouraging sign came after the earthquake, when India offered assistance to Pakistan, and President Musharraf accepted. India sent tents and blankets and food and medicine, and the plane that delivered the first load of supplies was the first Indian cargo aircraft to land in Islamabad since the 1971 war. India and Pakistan must take advantage of this opening to move beyond conflict and come together on other issues where they share common interests.

Good relations with America can help both nations in their quest for peace. Not long ago, there was so much distrust between India and Pakistan that when America had good relations with one, it made the other one nervous. Changing that perception has been one of our administration's top priorities, and we're making good progress. Pakistan now understands that it benefits when America has good relations with India. India understands that it benefits when America has good relations with Pakistan. And we're pleased that India and Pakistan are beginning to work together to resolve their differences directly.

India and Pakistan are increasing the direct links between their countries, including a rail line that has been closed for four

decades. Trade between India and Pakistan grew to more than \$800 million from July of 2004 to July of 2005—nearly double the previous year.

The Governments of India and Pakistan are now engaged in dialog about the difficult question of Kashmir. For too long, Kashmir has been a source of violence and distrust between these two countries. But I believe that India and Pakistan now have an historic opportunity to work toward lasting peace. Prime Minister Singh and President Musharraf have shown themselves to be leaders of courage and vision. On my visit, I will encourage them to address this important issue. America supports a resolution in Kashmir that is acceptable to both sides.

This is a sensitive time in South Asia. In Pakistan and other countries, images broadcast around the world have inflamed passions, and these passions have been cynically manipulated to incite violence. America believes that people have the right to express themselves in a free press. America also believes that others have the right to disagree with what's printed in the free press and to respond by organizing protests, so long as they protest peacefully. And when protests turn violent, governments have an obligation to restore the rule of law, protect lives and property, and ensure that diplomats who are serving their nations overseas are not harmed. We understand that striking the right balance is difficult, but we must not allow mobs to dictate the future of South Asia.

In this vital region, the stakes are high and the opportunities are unprecedented. With the end of the cold war and the fall of the Taliban, more and more people are looking forward to a future of freedom. As freedom spreads, it's bringing hope to hundreds of millions who know nothing but despair. And as freedom spreads, it's sweeping away old grievances and allowing people in central Asia and South Asia and beyond to take their rightful place in the community of nations.

This vision will take years to achieve, but we can proceed with confidence because we know the power of freedom to transform lives and cultures and overcome tyranny and terror. We can proceed with confidence because we have two partners—two strong partners—in India and Pakistan.

Some people have said the 21st century will be the Asian century. I believe the 21st century will be freedom's century. And together, free Asians and free Americans will seize the opportunities this new century offers and lay the foundation of peace and prosperity for generations to come.

May God bless India and Pakistan. May God continue to bless the United States.

NOTE: The President spoke at 10:47 a.m. at the Mandarin Oriental Hotel. In his remarks, he referred to Vishakha N. Desai, president, and Richard C. Holbrooke, executive committee chairman, Asia Society; Prime Minister Manmohan Singh, Ambassador to the U.S. Ronen Sen, and President A.P.J. Abdul Kalam of India; President Pervez Musharraf and Ambassador to the U.S. Jehangir Karamat of Pakistan; and Usama bin Laden, leader of the Al Qaida terrorist organization.

## Interview With Pakistani Journalists February 22, 2006

*The President.* Thanks for coming. I'm looking forward to going to Pakistan. I appreciate the courage of your President—I'm looking forward to my visit with President Musharraf. I'm trying to think of the number of times I have met with President Musharraf since I've been the President. I would say five or six, seven times. I remember our visit to Camp David.

*Q.* I was there.

*The President.* He is—were you there?

*Q.* Yes.

*The President.* I appreciate his courage. I appreciate the difficult job he has. I appreciate his commitment to joining the world in dealing with Islamic radicals who will murder innocent people to achieve an objective. I appreciate the fact that he has stood strong in the face of several attempts on his life. I also appreciate our relationship with Pakistan and his vision for a democracy in Pakistan. And so I'm looking forward to the trip. The Prime Minister was here several weeks ago. We had a very good talk. And he was laying the groundwork for what I think will be a constructive visit. Be glad to answer some questions.

## *Reaction to Prophet Muhammad Depictions*

*Q.* Mr. President, I'll start with the cartoon controversy. You and your allies work very hard on bridging the gap between the Islamic and the Western world, but the publication of a few cartoons in a remote newspaper seems to have undone everything. Why?

*The President.* First of all, I think it's very important for people around the world to know that a free press is important for a democratic state; a free press—for peaceful states as well. Free press holds people to account. Free press makes sure that there is a check and a balance on people in power. Free press also must be a responsible press.

Secondly, I fully understand people taking—not liking the cartoons. On the other hand, I do not believe that people should use that as a pretext for violence, nor do I appreciate the fact that some are using—manipulating the anger over the cartoons to achieve political ends. And therefore, it's very important for governments to not allow policy to be set by those who are cynically manipulating the anger that some have felt over these cartoons.

### *Nuclear Energy in Developing Nations*

Q. Mr. President, you have announced this global nuclear energy initiative, and this is the one that you have offered to India also. And you have spoken about the countries—countries like India can also get a benefit of this initiative. Do you have Pakistan in mind—Pakistan already saying that this offer to India is India-specific? Is it India-specific, or Pakistan can also be included in this initiative?

*The President.* Well, we are starting with India, and one of the primary reasons why is that India is in need of a diversification away from fossil fuels. India is consuming a lot of fossil fuel. That is driving up the price of—a part of the reasons why the price is rising. America uses a lot of fossil fuels. China is using more fossil fuels. India is using more fossil fuels, and it's affecting the price of energy in the United States and in India and in Pakistan. And so therefore, to the extent to which we can get these fast-growing, developing nations to use something other than fossil fuels, it's in the world's interest, and it's in Pakistan's interest as well.

Now—and so I would not view—some say, “Well, this is a zero-sum attitude by the United States,” quite the contrary. It's the beginning of a policy that says, there will be a suppliers group of people who are capable of providing fuel stocks for a civilian nuclear power industry, countries that will then collect the spent fuel, reprocess it to be able to burn it in new types of reactors.

The purpose of this whole initiative, and beginning with countries like India, is to recognize that alternative sources of energy are going to be important for the development of a clean world and a world that becomes substantially less reliant on non-renewable sources of energy.

Q. But Pakistan can't be included in that?

*The President.* Well, as I said, this is just the beginning of a very long process.

### *Kashmir*

Q. Mr. President, in your speech, you talked about Kashmir dispute, and you said that you would like India and Pakistan to take bilateral steps to resolve the dispute. Pakistan has made certain proposals, but they are not reciprocated by India. And it seems that this bilateral is not going anywhere; there's need for a third-party mediation or some sort of help. Do you have any specific proposals for that?

*The President.* First, I'd like to make sure I clarify my statement for all to read. America supports a solution that is acceptable to all sides—since you're probably the only person in the room that paid attention to my speech—the speech, as you know, I said, “to both sides.” The language should be “all sides,” because it recognizes that a solution must be acceptable to India, Pakistan, and those living within Kashmir.

Our position is one that says a dispute that has been so long in a nation's history can best be resolved when two nations make the determination to sit down and come up with a solution that is acceptable to all sides. Of course, during my discussions, I will encourage that dialog to go forward. I'm convinced that history changes, and as history changes, attitudes can change, circumstances change, and that we have a possibility to see this issue resolved by strong and courageous leaders.

I'm pleased to see the amount of trade that's taking place between India and Pakistan. It's a substantial increase from July of '04 to July of '05. I thought that the—the new transportation routes between India and Pakistan are hopeful signs.

And so the role of the United States, in our judgment, is one that will help lead to a settlement that is acceptable to all sides.

### *Democracy in Pakistan*

Q. Mr. President, you also spoke about democracy in Pakistan; some distance has to be covered. And the Commonwealth has recently asked Mr. Musharraf—President

Musharraf that he must decide by 2007 whether he wants to continue as the Chief of Army Staff or as the President, one decision. Is the United States comfortable with a leader who is also the Chief of Army Staff in a democracy? Does it bother you that he—his contribution as the Chief of Army Staff?

*The President.* I've had discussions with the President quite frequently about his vision for a democratic Pakistan. And I am—I believe that he is headed for a—continue to head for—on the road of reform. And he understands the pressures being put on him. As you said, the Commonwealth spoke, and I believe that he's committed to having a reform process come to fruition, and I believe he's committed to free and open elections.

#### Iran

Q. Mr. President, there is another issue that is particularly sensitive for both India and Pakistan, which is that Iran—India-Iran-Pakistan gas pipeline. As we said, India—need alternative sources of energy. So is it possible that—decision, allow the construction of the pipeline?

*The President.* What's important is that India, Pakistan, and the United States work together to send a firm message to the Iranians that a development of a nuclear weapon is unacceptable. You know, we—energy supplies are important for India, and they're important for Pakistan. I fully understand that. But a country which has been unwilling to adhere to treaties that it's agreed to, a country the President of which has said the destruction of Israel is in—part of foreign policy, a country which has not told the truth when it comes to whether or not they're enriching uranium or not, is a country that free nations need to deal with in a diplomatic way. And the best thing that the Iranians can hear is a unified message from all of us.

Q. Does it mean that at some date you could decide to take military action against Iran? Would you—

*The President.* Diplomacy is our first option.

#### War on Terror

Q. Mr. President, the recent incident in which U.S. military made a strike in the Pakistani tribal area in the Bajaur area. This has happened before also, and there was some outrage in Pakistan that there was no remorse from the U.S. Government on the action. These actions, when they are taken, is it because—the unilateral action that the folks on the other side do not trust their colleagues on the side of the border, or it's the timing, is it intelligence, or the lack of operational capabilities on the side—on the Pakistani side, that such actions are taken?

*The President.* We are—we're partners in the war against terrorists, some of whom tried to kill your President. We coordinate. We're allies, and we coordinate—nor do we talk about sensitive antiterror operations. Of course, the United States mourns the loss of innocent life.

#### Pakistan-U.S. Trade Relations/Earthquake in Pakistan

Q. Mr. President, in your speech, you also—you spoke about importance of prosperity, and you talked about offering business—industry in Pakistan. Do you have anything specific in mind, such as Pakistan has been trying for some time to get an FTA?

*The President.* First step is a BIT, and we will discuss that—we will continue to discuss that. We discussed that during the Prime Minister's trip, and we will continue to pursue this avenue toward opening up additional opportunities, commercial opportunities between our respective countries.

First things first, however—there have been some preliminary discussions, as well, about perhaps some trading arrangements in the Western Provinces of Pakistan. These are preliminary discussions. We think it makes sense to have a discussion. Such

an agreement, if—a commercial arrangement, investment arrangement would be beneficial not only to Pakistan but to Afghanistan as well. And so there's a variety of discussions we're having to continue to open up ways to encourage investment and commerce.

I must—I applaud the President's economic reform package. It's yielded some strong results. Pakistan's economy is growing, and that's positive. You know, one of the key things is that people see the benefits of democracy—the tangible benefits of democracy, besides being able to express themselves. Today I also referred to the Pakistan press, you might recall. I think I referred to you as lively, meaning that—at least the Pakistan press I've been exposed to has never been afraid to ask any questions, or never been intimidated, particularly with the open press conference. And I suspect it might be the same when I go next week.

So I want to talk about reconstruction aid right quick before you finish. It's very important for the people of Pakistan to—and this is where trade matters as well, and commerce matters as well, that they see that the United States is interested in the lives of the citizens. You know, sometimes in the way things get reported, our policies get disconnected from people's lives improving. And we want that to happen, because a prosperous Pakistan is—will be a great example, a country that believes in markets and educating people to fill the jobs of the 21st century, and a country that continues to deal with rules and regulations that make investment difficult at times, will show what's possible. And that's important.

When the disaster struck, it took our Government no time to move. And we moved a lot of equipment and a lot of manpower and a lot of aid, because we cared about the people that were suffering. I remember President Musharraf calling me on the phone at one point to thank me. And it was a genuine thanks, because

we were—as you know, we transferred a lot of choppers, which were necessary to be able to move manpower and aid into remote regions of your country.

He also asked, would we make sure that beyond the recovery effort, that there was a commitment to help rebuild. And my answer was, yes. And the reason—it's important for your readers to understand, I said, yes, because this country cares about the families whose lives were turned upside down by this disaster. When we heard 73,000 people lost their life, it touched our hearts and our conscience. When we realized over 2 million people lost their homes, we cared about those who had been displaced.

And so our commitment is to the people of Pakistan, and it's a genuine, real, tangible commitment that the people of the country can see. I understand there's politics, and there's—there's people expressing their opinions. But one thing they can't argue with—those who want to be critical of the United States can't argue with a genuine, heartfelt commitment to the improvement of the lives of those folks in Pakistan who suffered a—suffered mightily as a result of the natural disaster.

Final question, Kamran. Kamran.

Q. Yes, Kamran.

*The President.* Kamran.

#### *War on Terror/U.S. Visa Policy*

Q. Mr. President, being an ally, there are some expectations. We captured the top lot of the Al Qaida, and 300 Pakistani soldiers died. There is a lot of expectation in Pakistan—you spoke about bilateral investment treaty and stuff, access to the market—more on access to the market. Are we moving towards free trade?

And secondly, Pakistani students, sir, having terrible problems getting visas to the U.S. And that's very important—folks not getting to the U.S. for education, and can you help us?

*The President.* A couple of points—one, there's no question that the Musharraf

Government is committed to working to get Al Qaida brought to justice. It was Al Qaida that tried to kill him more than one time. And he also recognizes Al Qaida's presence is destabilizing. Al Qaida doesn't care about the people of Pakistan. They don't care about helping people get a good education, realize the vast potential of Pakistan. They're there to create chaos and murder. And so I appreciate that, and I appreciate his firm resolve.

Secondly, we have been—there is a tangible benefit for the Government and the security of Pakistan in dealing with—using—sharing with, providing equipment. We resolved a long-simmering issue in the F-16s. I recognize it has been put on hold, but the Government's commitment is a real commitment. It changed policy, as you recall. It reversed something that took place in the past.

The BIT is a beginning of—it's a step toward what you talked about, advancing—additional trading.

I agree with you on the issue of education. First of all, there are a lot of Pakistani citizens here, and a lot of Pakistani Americans that are making vital contributions to our country, proud United States citizens who honor their heritage.

I agree with you that there ought to be more student exchanges. But this is not an issue just for Pakistani students; this is an issue for students from other parts of the world as well. We had a very restrictive visa policy right after 9/11. It was a—our visa policy was a natural reaction to a terrible event that took place. But by—it didn't take me long to realize that we were missing a great opportunity to have students from Pakistan see the real America. And there's no better place, no better way in many ways to see America than to come as a student, study at our institutions, but more importantly, interface with people the same age and realize that ours is an accepting culture.

Q. Absolutely.

*The President.* And we welcome Muslims. And we welcome people that may be different, and that there's no better ambassador for the American way of life and the attitudes—the true attitudes of the American citizens than to have somebody here who has seen firsthand what America is like and then go back home. Word of mouth is a pretty significant antidote to some of the propaganda that is being played out for others to hear. And so I agree with you, and we're—Condi Rice is very much involved with constantly revisiting the visa issue—student visa issue, in particular, and not only encouraging students to come here, but once they're here, not making it difficult for them to complete their education. In other words, there are some restrictions even after the students got here.

Finally, we are also—along these lines announced a very strong language initiative so that more people are capable of—will be capable of conversing with people in parts of the world where, frankly, we haven't had that much conversation in their native language—all aimed at creating a hospitable world. And this trip will help send a message to the people of Pakistan: One, we're proud of the Pakistani Americans who live here; two, we want this relation to continue on. It's a vital relationship. And as I say, I am pleased with my personal relationship with President Musharraf. I try to put myself in his shoes. He is—he's got a tough assignment. On the one hand, he's got people trying to kill him, and on the other hand, he's taking this country toward—further down the road of democracy, and in so doing, is dealing with—as we speak, dealing with people who are taking advantage of a free press.

And as I mentioned to you, I understand why people are reacting to that. It's very important, however, that they react in a way that does honor to the process and not resort to violence and destruction and, in some countries, to death.

And so looking forward to it. See you all there, I hope.

*President's Upcoming Visit to Pakistan*

Q. Mr. President, one last——

*The President.* Yes.

Q. About the visit, can you state if you ever think of canceling the visit——

*The President.* No, I'm not going to—— never thought about canceling it.

Q. No?

*The President.* Of course not.

Q. Because——

*The President.* No, zero, zero chance.

*U.S. Visa Policy*

Q. So we are a good word for the students, they may get visas?

*The President.* Well, I think we're working it very hard to make sure. Obviously, Ambassador Crocker and the Embassy there is the conscience. I will pass this on to Condi when I talk to her just to make sure that she's—she's constantly calibrating and looking at the issue. We hear—believe

we've had a lot of—there are a lot of folks here that—in America, and a lot of Embassies around the world hear from respective governments when there's backlogs and slowness. These voices that are concerned about whether or not there's access to our universities are heard loud and clear. Believe me, it's——

Q. Mr. President, best antidote is exposing people to American people.

*The President.* There you go.

Q. That's the best antidote you have.

*The President.* Well, thank you.

Q. Don't restrict that.

*The President.* Don't worry. Glad you're here. Good job.

NOTE: The interview was taped at 2:11 p.m. in the Roosevelt Room at the White House. In his remarks, the President referred to President Pervez Musharraf and Prime Minister Shaukat Aziz of Pakistan; and President Mahmud Ahmadi-nejad of Iran. A tape was not available for verification of the content of this interview.

Remarks at a Celebration of African American History Month  
*February 22, 2006*

*The President.* Welcome. Please be seated. Thanks for coming. Welcome to the White House. So glad you could join us for the 80th—80th—celebration of America—African American History Month. We're here today to mark the achievements of African Americans in our country's history and to honor the contributions so many African Americans are making to our land today.

I appreciate the Vice President joining us. I want to thank the Secretary of Health and Human Services—[laughter]—he's constantly trying to promote himself—the Secretary of HUD, Alphonso Jackson. Looking sharp today. [Laughter] Keeping good company too, by the way. I want to thank the

other members of my administration who have joined us.

I particularly want to pay my respects to Dr. Dorothy Height, president emeritus and founder—[applause]. I couldn't help but noticing A.C. Green. [Laughter] Thanks, A.C., for setting such a good example and using your position to help others. It's an honor you're here; really appreciate you coming.

This month, we gather to honor the generations of heroes who called on our Nation to live up to its founding promise of equality—people like Dorothy Height. The past year, we lost two of these heroes, women whose grace and determination helped

change the path of American history, Rosa Parks and Coretta Scott King.

Mrs. Parks helped set in motion a national movement for equality and freedom when she refused a bus driver's order to give her seat to a white man. Mrs. King spent her life advancing the cause of civil rights for all Americans. The courage and the dignity of these women helped rouse the conscience of a complacent nation, and we will continue to work to make the America these women fought for uphold the promise to all.

The reason to honor these women is to pay homage to their character and their strength and to remember the ideal of active citizenship. In the 1960s, many active citizens struggled hard to convince Congress to pass civil rights legislation that ensured the rights of all—including the right to vote. That victory was a milestone in the history of civil rights. Congress must act to renew the Voting Rights Act of 1965.

When African American History Month began eight decades ago, it was based on the belief that if African Americans were to take their rightful place in American society, Americans of all races should learn about black contributions to our history. That conviction is every bit as true today as it was in 1926. Generations of African Americans have added to the unique character of our society. Our Nation is stronger and more hopeful as a result of those contributions.

America is a better place because of African American writers like Langston Hughes, Zora Neale Hurston, and W.E.B. DuBois. Our culture is richer, thanks to the talents of musicians like Nat King Cole, Lena Horne, and Dizzy Gillespie. We've been inspired by the achievements of African American scientists like George Washington Carver and baseball stars like Jackie Robinson. Our Nation is stronger because of the distinguished leadership of those like Supreme Court Justice Thurgood Marshall and our two most recent Secretaries of State, Colin Powell and Condoleezza Rice.

Thanks to the contributions of these leaders and many others, our Nation has made great progress toward racial equality, yet we've got to remember there is still more work to be done.

As we honor the achievements of black Americans across our land, we will keep striving to build an America where the dignity of every person is respected, where people are judged by the content of their character, and where the hope of the American Dream reaches every neighborhood and every citizen.

To ensure the promise of America reaches all our citizens, we have got to make sure that every child receives a quality education. The reason I worked so hard for the No Child Left Behind Act is because I believe that every child can learn, and I refuse to accept a school system that doesn't teach every child. And so we've raised the standards, and we measure. You cannot solve a problem unless you measure, and when we detect problems, we solve them early, before it's too late.

The No Child Left Behind Act is challenging the soft bigotry of low expectations, and it's having a positive result. Because we measure, because we hold people to account, we know this: that the most recent results of our Nation's Report Card show African American children are closing an achievement gap. And it's an achievement gap we must close if the promise of this country is going to reach every neighborhood.

Last year, African American 9-year-olds set records in reading and math. The gap between white and African American 9-year-olds in reading is the narrowest it's been in the history of the accountability system. Thirteen-year-old African American students achieved their highest math scores ever. We're making progress, and we're not going to stop until every single child has a quality education.

One way to ensure the promise of America reaches all of our citizens is to encourage ownership. We want people owning

something. One way to help people realize their dreams is to encourage African Americans to own their own businesses. Last year, the Small Business Administration increased the number of loans to African American businesses by 42 percent. We're going to continue encouraging entrepreneurship throughout our country. Minority businesses are getting a better chance to compete for Federal contracts. More African Americans than ever before own their own businesses, and that's a hopeful statistic and an important signal that the American Dream is reaching beyond certain segments of our society.

Part of ownership is for people to own their own homes. I love the idea when somebody opens up the door of their house and says, "Welcome to my home; welcome to my piece of property." In 2002, Alphonso and I set a goal of having 5.5 [million]<sup>\*</sup> new minority homeowners by the end of the decade. Since we set that goal, the number of minority homeowners has increased by 2.6 million. We're on track to reach our goal. Minority homeownership in the United States of America is at an alltime high.

As we celebrate African American History Month, we remember and thank the many African Americans who are defending our ideals as members of the United States Armed Forces, some of whom are with us here today. I thank these courageous men and women who are risking lives to protect us, to preserve our liberty. By bringing the promise of freedom to millions across the world, they are laying the foundation of peace for generations to come. God bless.

Service is a value that we all share, and today I am proud to recognize five citizens who are setting an example for all our fellow citizens. The President's Volunteer Service Award is the highest level of commendation a President can give in recogni-

tion of those who have contributed their time and their talent and their energy to helping others.

Today we honor five such souls who are working to improve their communities and help their fellow citizens. Each of them has heard a call to serve something greater than themselves. By answering that call, you are inspiring others to do the same.

The volunteers we recognize today are Carl Anderson from Washington; Karl'Nequa and Katie Ball from Jackson, Mississippi; Steve Ellis from the great State of Texas—[*laughter*—]and Joan Thomas from Smyrna, Georgia. Their efforts are helping to provide role models and mentors to inner-city girls, to encouraging youth volunteers to work with people with disabilities, to provide computer skills training in local schools and community centers, and providing college scholarships to underprivileged children.

Today we honor your service. We appreciate what you have done to lift the spirit of the country. We thank you for loving a neighbor just like you would like to be loved yourself. And I join all Americans in congratulating you and wishing you continued success.

And now, Commanders, if you all would read the citations.

[*At this point, Lt. Col. Christian Cabaniss, USMC, Marine Corps Military Aide to the President, read the citations, and the President presented the medals.*]

That's it. Thanks for coming. God bless. Appreciate you all.

NOTE: The President spoke at 3:13 p.m. in the East Room at the White House. In his remarks, he referred to civil rights leader Dorothy I. Height; and A.C. Green, Jr., former National Basketball Association forward.

Statement on the Bombing of the Golden Mosque in Samarra, Iraq  
*February 22, 2006*

On behalf of the American people, I extend my deepest condolences to the people of Iraq for the brutal bombing of the Golden Mosque in Samarra, one of the holiest sites in Shi'a Islam. The terrorists in Iraq have again proven that they are enemies of all faiths and of all humanity. The world must stand united against them and steadfast behind the people of Iraq. This senseless crime is an affront to people of faith throughout the world. The United States condemns this cowardly act in the strongest possible terms.

I ask all Iraqis to exercise restraint in the wake of this tragedy and to pursue justice in accordance with the laws and Constitution of Iraq. Violence will only contribute to what the terrorists sought to achieve by this act.

The United States stands ready to do all in its power to assist the Government of Iraq to identify and bring to justice those responsible for this terrible act. And the American people pledge to work with the people of Iraq to rebuild and restore the Golden Mosque of Samarra to its former glory.

Letter to Congressional Leaders on Extending Generalized System of Preferences Benefits to Liberia  
*February 22, 2006*

*Dear Mr. Speaker: (Dear Mr. President:)*

I am writing to inform you of my intent to add Liberia to the list of beneficiary developing countries and to the list of least-developed beneficiary developing countries under the Generalized System of Preferences (GSP). I have carefully considered the criteria identified in sections 501 and 502 of the Trade Act of 1974, as amended. In light of these criteria, I have determined that it is appropriate to end the suspension of Liberia as a GSP beneficiary developing country and to extend least-developed ben-

eficiary developing country benefits to Liberia.

This notice is submitted in accordance with section 502(f) of the Trade Act of 1974.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate. The related proclamation of February 22 is listed in Appendix D at the end of this volume.

## Letter to Congressional Leaders Transmitting a Report Relating to the Interdiction of Aircraft Engaged in Illicit Drug Trafficking February 22, 2006

*Dear Mr. Speaker: (Dear Mr. President:)*

Consistent with the authorities relating to official immunity in the interdiction of aircraft engaged in illicit drug trafficking (Public Law 107–108, 22 U.S.C. 2291–4), and in order to keep the Congress fully informed, I am providing a report prepared by my Administration. This report address-

es the matter of assistance for interdiction of aircraft engaged in illicit drug trafficking.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to J. Dennis Hastert, Speaker of the House of Representatives, and Richard B. Cheney, President of the Senate.

## Interview With Indian Journalists February 22, 2006

*The President.* Quick statement—I'll be glad to answer questions. I am really looking forward to my trip. It's the first trip to India for me and my wife. We had a great dinner here with the Prime Minister. I found him to be a very decent, honorable person with whom we established warm relations. And he—I just can't tell you how—what a kind person he was and, at the same time, represented his great country's interests very well.

I do want to make something clear in the speech I gave today. I said that—as to the Kashmir interest—issue, America supports a solution that is acceptable to all sides. As you might recall, in my remarks, I said, “to both sides.” I would like the record to be so that the world hears me say, “all sides.” I fully understand that the deal has to be acceptable to the Indians, Paks, as well as the citizens of Kashmir.

Okay?

### *India-U.S. Relations*

*Q.* Yes. Mr. President, how and why has India come front and center to U.S. stra-

tegic thinking now after being on the margins for so many years?

*The President.* Well, as you know, there was a history, particularly during the cold war, that made it difficult for our countries to establish a close relationship. However, things change in the world. And as the post-cold war thaw developed, as—attitudes began to shift.

Secondly, the Indian economy, as a result of more transparency and openness and trade, began to change. And as the Indian economy changed, it changed the commercial relationship between the United States and India.

Thirdly, there are some common threats that make it in our interests to work together—namely terrorism. As I said in my speech today, the United States has been attacked, but India certainly understands what it means to have suffering as a result of terrorist activities. And so there's common interests that have helped to change the relationship. And I intend to seize those interests, as does the Prime Minister, in order to foster what we've called a strategic relationship.

And in my speech today, I made it clear to the American people that this relationship is in our interests, and I described the various ways it was in our interests. I think the evolution of the relationship goes to show that the world is—changes, and it's never static. And so thank you for the question.

#### *United Nations Security Council Membership*

*Q.* Mr. President, if India's credentials are so good, why isn't the U.S. backing its candidacy for the U.N. Security Council?

*The President.* Well, let me make one other point, if you don't mind, that I should have made in my speech today, and that is that there are a lot of Indian Americans who made a tremendous contribution to our country as well. And there are a lot of—over the last—as the high-tech boom helped transform our society, a lot of the brain power behind that boom have been Indian Americans, as well as Indians educated here in America. And so the American people, as well, have begun to get kind of a different perspective on the great contributions that India can not only make to our own country but can make to the world.

Our position on the United Nations Security Council has been very clear. First, we support a U.N. Security Council reform, but we think it ought to happen after other institutions within the United Nations become reformed. What I was always worried about is that we would focus on the U.N. Security Council and nothing else would happen. And so we have—we have said to all parties concerned—I fully understand the Indian position just like other nations—that “we will take your case under consideration, but first things first.”

And a classic case of the reform I'm talking about is the Human Rights Commission. It needed to be reformed. And what I was, again, worried about is that we'd

miss opportunity while focusing on the U.N. Security Council.

#### *Civilian Nuclear Power Program in India*

*Q.* Mr. President, when do you intend to take the U.S.-India nuclear deal before the Congress and before the Nuclear Supplies Group, which is part of the U.S. obligation?

*The President.* Yes, it is. As we speak, Nick Burns of the State Department is discussing this vital issue with Indian counterparts. We are working through what has been—as I said in the speech, a difficult issue for the Indian Government as well for the American Government. To change the past, the ways of the past, can be difficult at times.

I appreciate the Prime Minister's courage last July of laying out a way forward, which I support. And so first things first is to go to India and, hopefully, reach an agreement on separation and then bring that agreement back and start selling it to the Congress. It's—but we can't bring anything back until we've agreed to the agreement. And that's what's happening now. There's a spirit of good will and cooperation.

It's in our country's interest, by the way, to encourage India and aid India in its development of a civilian nuclear power program. The American people are beginning to see high prices of energy, but so are the Indian people. And the reason why is, is that there's growing economies—ours, India's, China's—which is adding to global demand for energy. And demand is outstripping supply, and then what happens, you see price.

And one way to help deal with price here at home and/or with India is to develop alternative ways to power homes and businesses as well as automobiles. I was sincere in my speech today when I said that we're dedicated to research and development to come up with alternative ways to use automobiles and want to share that technologies with other nations, particularly

a nation like India, which has got huge potential and vast room for growth.

And it's in our mutual interests—I also made it clear that it's in our interests that the Indian economy prosper. And it's a very simple reason why. One, a prosperous country is one that is—particularly one that has shown its capacity to deal with a multi-ethnic and multireligious society—it will give India more opportunity to lead, particularly in parts of the world where people need to see how democracy can work and function in a proper way.

And secondly, the American people have got to understand a prosperous India is advantageous to our own industries. I mean, we want people buying American products. Indians want Americans buying Indian products. And that exchange of trade in a free and fair way is beneficial for workers and consumers.

And I said an amazing statistic today—at least I thought it was—300 million middle-class citizens in India. That's larger than the population of the United States. And so we shouldn't fear relations with India—matter of fact, we ought to welcome them and work on ways to strengthen them. That's really what the purpose of the trip is.

*Q.* Do you consider India to be a responsible nuclear nation?

*The President.* I do, particularly when they signed the IAEA safeguards, and they have a separation between their military and their civilian nuclear parts of their Government.

*Iran*

*Q.* Mr. President, would the United States have a problem if India continued to source oil and gas from Iran?

*The President.* I think people are going to have to buy their energy where they can get it. On the other hand, I do want to make it clear to the Indian people and the Indian Government that an Iran with a nuclear weapon will destabilize the world and that those of us who are for peace

and stability must work in concert. So there's a difference between energy supply and working closely to achieve a very important objective.

And we will discuss this issue carefully with the Prime Minister. There is a consensus in the world, and that consensus is that an Iranian Government that has declared its—has said that Israel shouldn't exist, for example, and if it were to have a nuclear weapon, would be a danger to all of us. And I will continue to make that point with the Prime Minister.

*A.Q. Khan*

*Q.* Why has the U.S. not questioned A.Q. Khan, whose activities intersect proliferation and terrorism?

*The President.* Well, we were the nation that exposed the conspiracy to deal with—more than the conspiracy, the activities; let me rephrase that—we were the nation that exposed the activities of sharing technologies, sensitive technologies, nuclear weapons-related technologies. And we, of course, want to know as much about the A.Q. Khan network as possible. But had it not been for U.S. intelligence, coupled with British intelligence, this network never would have been exposed. And the light of day helps understand proliferation.

*Civilian Nuclear Power Program in India*

*Q.* Mr. President, why does India have to jump through the hoops to get a civilian nuclear agreement when its energy requirements are similar to China, another big, growing economy?

*The President.* There are the nuclear supplier group and the IAEA—in other words, the world has signed on to this. We think it's in India's interest to do so, as it pertains to its civilian nuclear power industry. It will give confidence to people. It will make it easier for the United States to work with India. This will be a confidence-building measure that we don't believe is an unrealistic request. And we do realize there will be separation between the

military side and the civilian side. What we're working on is the civilian side.

### *Spread of Democracy*

Q. Is the U.S. more comfortable dealing with dictators and monarchs?

*The President.* Do what now? Do I feel comfortable doing what?

Q. Dealing with dictators and monarchs?

*The President.* Do I feel comfortable dealing with them?

Q. No, the U.S.

*The President.* The U.S. feel comfortable with dealing with dictators?

Q. And monarchs.

*The President.* And monarchs? Well, I mean, I've got a great relationship with Her Majesty Queen Elizabeth of Great Britain. [Laughter] She's a lovely lady and a great figure in a country that's an important ally. And of course, that monarchy is very supportive of a free and open and democratic system.

You must take the words that I said in my second Inaugural Address very seriously, in that we must end tyranny in the 21st century. It's a goal that all of us can work on. India has got a unique role to play. I mean, when you really think about troubled spots, these are countries many times that are having difficulty dealing with what it means to honor minority rights and welcoming different religions within, kind of, a social and civil fabric.

And India has done a magnificent job of showing the world how democracy can work. And it's—India is—I'm confident the country will play a constructive role and can do so in a much better way—many times—than the United States can. I mean, after all, there are 150 [million]\* Muslims living within the Indian democracy. We got a lot of Muslims in the United States, as well, which shows the world that it's—you're capable of honoring—worshiping God as you see fit, and you can do so

in a free way and, at the same time, be a productive citizen of a state.

And India can help a lot. I was very impressed by its contribution to a new democracy in the neighborhood, and that's Afghanistan. India has provided \$565 million of cash, recently pledged an additional \$50 million to build the Afghan National Assembly building. And that's responsible—a responsible nation does that. And it's a—it goes to show—at least says to me that India understands that a democracy in our neighborhood will help yield peace, because if you study the history of the world, regions that had been in turmoil are now peaceful as a result of the evolution of democracy.

And one of the points I made in my address to the Asia Society is that there are—there's more democracies now in the region, which will make it easier for a current Prime Minister, future Prime Minister of India to help achieve the vision that we all want, which is a peaceful world.

### *India-U.S. Relations*

Q. Mr. President, in this era of free-flow capital, why would—why are there so many restrictions about inflow of talent—human capital to the United States, who probably add wealth and knowledge—

*The President.* I appreciate that question. I am—you're talking about visa restrictions for highly educated citizens. I am for lifting those. I think we ought to raise the level of those who are either educated here and stay here and/or come meeting high—with high skill levels. It's in our interest. I've always been a proponent of that.

And likewise, I would hope that India would lift its investment caps. In other words—and part of the trip is to kind of work on ways to continue to develop this strategic relationship in a constructive way. It's a—you know, I said something interesting—at least I thought it was interesting—in the speech. I said, for a period of time, if you're a friend of Pakistan, you couldn't deal with India, and if you're a

---

\* White House correction.

friend of India, you couldn't deal with Pakistan. And we have tried to change the relationships so that people recognize it's in their interest that the United States is a friend of Pakistan's, and people in Pakistan recognize it's in their interest that the United States is a friend of India's to help, if need be, reduce tensions.

Right now the level of tensions are, relatively speaking, down. I can remember when I first came into office. You might remember, there was a series of incidents that got everybody quite nervous, and we had shuttle diplomacy—Colin Powell. And it seems to me that there is a renewed commitment to resolving problems. I thought it was very interesting that trade between the two countries has doubled, that there's, you know, new transportation hubs. That's all very positive in terms of resolving issues.

You asked me about the relationship, how it's evolved, and I mentioned to you that as time passes sometimes and circumstances change, relationships are able to develop a new dynamic. I would hope that time and circumstantial change is enabling India and Pakistan to develop a new dynamic. It appears to be that way.

Final question.

#### *President's Upcoming Visit to India*

Q. Between a cricket match and a Bollywood movie, what would a—

*The President.* Cricket match and a—

Q. You like watching?

*The President.* What was the second?

Q. It's between a Bollywood movie and a cricket match.

*The President.* I'm a cricket match person. [Laughter] I appreciate it. As I understand it, I may have a little chance to learn something about cricket. It's a great pastime. [Laughter]

Q. But, Mr. President, you're going to India, but you're not visiting the Taj Mahal.

*The President.* I know. It means I'm going to have to—

Q. Have you broken a promise to the First Lady?

*The President.* No, it means I'm going to have to come back. It's a—I am disappointed with that. People who have seen the Taj Mahal say that it's—pictures don't do it justice. It's one of the great magnificent sites of the world. And look, if I were the scheduler, perhaps I'd be doing things differently. But you want me doing one thing. I'll be the President; we've got the scheduler being the scheduler. I'm going to miss a lot of the really interesting parts of your great country; I know that. I would hope that I would be invited back sometime after this trip.

Q. You could be in trouble with the "Desperate Housewife."

*The President.* Yes. Well, she's certainly the star of the family. She's really looking forward to going with me.

#### *India*

Q. Mr. President, what is your earliest memory of India?

*Press Secretary Scott McClellan.* We've got to go to the next one.

Q. What is your earliest memory of India and Indians?

*The President.* My best memory?

Q. Earliest.

*The President.* At least memory?

*Press Secretary McClellan.* Earliest.

*The President.* Earliest. [Laughter]

Q. Earliest.

*The President.* Gandhi. It's my first memory, as I think about India—you know, a person who was so spiritual that he captured the imagination of the entire world. He's proof positive that—throughout history there have been individuals that have had the capacity to shape thought and to influence and—beyond border. And he did that.

Q. You watched the movie?

*The President.* I watched that too. But that's—but my memory was earlier than that.

Thank you.

Q. Thank you very much.  
*The President.* Enjoyed it.

NOTE: The interview was taped at 1:49 p.m. in the Roosevelt Room at the White House. In his remarks, the President referred to Prime Minister Manmohan Singh of India;

A.Q. Khan, former head of Pakistan's nuclear weapons program; and former Secretary of State Colin L. Powell. The transcript was released by the Office of the Press Secretary on February 23. A tape was not available for verification of the content of this interview.

## Remarks Following a Cabinet Meeting and an Exchange With Reporters *February 23, 2006*

*The President.* Thank you all for coming. My Cabinet just met to get a report from Fran Townsend about the lessons learned from Hurricane Katrina. On September the 6th, I asked Fran to conduct a thorough review of the Federal response to Katrina and to make recommendations about how we can better respond in the future. I wasn't satisfied with the Federal response. Fran and her team produced a lessons-learned document, and she just briefed the Cabinet about lessons learned.

I reminded our Cabinet that hurricane season begins in June and that we will be tracking the implementations of the recommendations in this report. I want to thank her for her report. It's a good work. We will learn from the lessons of the past to better protect the American people.

We have made a strong commitment to people in the gulf coast, and we will honor that commitment as well. The report helps us anticipate how to better respond to future disasters. In the meantime, our commitment to rebuild and help rebuild Mississippi and Louisiana is ongoing and robust.

I'll be glad to answer some questions. Terry [Terence Hunt, Associated Press]. Two questions. You're the first questioner.

### *Bombing of the Golden Mosque in Samarra*

Q. Mr. President, dozens of Sunni mosques have been attacked and scores of people have been killed after the bombing

of the Golden Mosque. How serious is the danger of a civil war in Iraq?

*The President.* First of all, the people of the United States strongly condemn the destruction of the Golden Mosque. We believe in freedom to worship. And I understand the consternation and concern of Iraqi Shi'as when they see this most holy site wantonly destroyed.

I appreciate very much the leaders from all aspects of Iraqi society that have stood up and urged for there to be calm. They recognize two things—one, the Iraqi people want to live in a democracy. After all, 11 million people voted in the last election. In other words, given a choice of whether or not they want democracy or a different form of government, millions of people showed up to vote, making a clear statement to the Iraqi authorities as well as to the people of the world—they want democracy.

Secondly, the voices of reason from all aspects of Iraqi life understand that this bombing is intended to create civil strife, that the act was a evil act. The destruction of a holy site is a political act intending to create strife. And so I'm pleased with the voices of reason that have spoken out. And we will continue to work with those voices of reason to enable Iraq to continue on the path of a democracy that unites people and doesn't divide them.

Finally, I do want to assure the Iraqi people that the U.S. Government is serious

in our commitment in helping to rebuild that holy site. We understand its importance to Iraqi society, and we want to stand side by side with the Government in making sure that beautiful dome is restored.

Caren [Caren Bohan, Reuters].

#### *Dubai Ports World/Homeland Security*

Q. Sir, do you wish you had known earlier about the Dubai Ports deal, and were you surprised by the controversy over it?

The President. The more people learn about the transaction that has been scrutinized and approved by my Government, the more they'll be comforted that our ports will be secure. Port security in the United States will be run by Customs—U.S. Customs—and the United States Coast Guard. The management of some ports, which heretofore has been managed by a foreign company, will be managed by another company from a foreign land. And so people don't need to worry about security. This deal wouldn't go forward if we were concerned about the security for the United States of America.

What I find interesting is that it's okay for a British company to manage some ports but not okay for a company from

a country that is also a valuable ally in the war on terror. The UAE has been a valuable partner in fighting the war on terror. A lot of goods are shipped from ports to the United States—managed by this company.

And again, I repeat to the American people, this wouldn't be going forward if we weren't certain that our ports would be secure. But I also want to remind folks that it's really important we not send mixed messages to friends and allies around the world as we combine—put together a coalition to fight this war on terror.

And so we'll continue to talk to people in Congress and explain clearly why the decision was made. Many of those doing the explanations are around this table, and I want to thank them for bringing a sense of calm to this issue, as people understand the logic of the decision.

Thank you all.

NOTE: The President spoke at 9:16 a.m. in the Cabinet Room at the White House. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

### Remarks at a Reception for Congressional Candidate Chris Chocola in Mishawaka, Indiana *February 23, 2006*

Thank you all very much. Please be seated. Thanks for the warm welcome. I have grown to admire Chris Chocola a lot because he is a person who does in office what he said he would do during campaigns. He is a honest, decent, down-to-earth, practical man who deserves to be reelected to the United States Congress.

Chris is a rising star in the House of Representatives. And when you find a rising star, it makes a lot of sense to keep him serving you. So I want to thank you

all for recognizing talent when you see it. Thank you for backing this good man for his reelection. Thank you for coming today to give me a chance to say loud and clear, Chris is the right person for the Second Congressional District of Indiana.

And like me, he married well. [Laughter] It's great to see Sarah—and Caroline and Colin. You know, being in politics is hard on your family. But it sure does help when you, in my case, marry a good wife, and in Chris's case, marry a good wife too. And

there's nothing better, by the way, in the political arena than going back home after a day when maybe some sharp elbows were flying, to a family that loves you more than anything. I think it's important to have somebody in the United States Congress who places his faith and his family as a priority in his life. And that's certainly what your Congressman Chris Chocola does. And I can't thank you enough for backing him.

I want to thank Bethel College for letting us come by; I want to thank your president, Steve Cramer. And I want to thank the students. I know there's some students listening to this speech—one, I'll try to keep it short so you can get back to class. [Laughter] And two, please take politics seriously. In our society, all of us have a duty to participate. And one way you participate is when elections come around, you go to the polls and do your civic duty by voting. Now, I hear too often, "My vote doesn't count." Your vote counts. And by the way, when you go into the booth, vote for him.

I want to thank all the organizers of this event. It's not easy to organize an event that has been this successful of this size. And so, for all of you who have worked so hard, thanks for taking time to support Chris. I want to thank Jack Hiler, former Member of the United States Congress, who is the chairman of Chris's campaign. I want to thank Murray Clark, the chairman of our Republican Party of the State of Indiana. The attorney general, Steve Carter, is with us. General Carter, thank you for coming. Appreciate you taking time out. Most of all, thank you for being here.

Before I get to my speech, I do want to thank the mayor, Jeff Rea. Jeff, thanks for coming. He gave me the key to the city. [Laughter] My only advice, Mr. Mayor, is pave the roads. [Laughter] And I know you will. [Laughter] I asked him, I said, "Do you like being mayor?" He said, "I love serving the people." And I don't see how you can be in public office if you don't love serving the people.

Chris loves serving the people of this district. Every time I'm with him, he's talking about the people of the Second Congressional District. He says, "I'm concerned about things; I'm worried about the small-business owner," or, "I want you to understand, Mr. President, how important Humvee is." I said, "I understand the importance of Humvee; you don't have to tell me that." [Laughter] He's talking about—all the time, talking about people who live here. And the reason why is because he cares about people. It's one thing to be espoused in policy; it's another thing to have, deep in your heart, the desire to help people help themselves.

One of the things about why I like working with Chris and people in Congress is that we're there for a reason. Some people in Washington just want to say, "Well, I held the office." But that's not why Chris ran. He didn't need to run. He is a successful small-business owner. Pleased to report he and I are not lawyers. For all your lawyers out there, that's all right. We need them. But we got plenty of them in Washington, DC. [Laughter] Seems like it makes sense to have somebody that knows how to run a business representing this important congressional district.

We're living during historic times. I wish I could report to you that the war on terror was over, but it's not. It's—these are serious times that require serious thought and serious purpose in order to do our most important duty, which is to protect the American people.

You know, my buddies in Texas, they come up to the White House quite frequently. And after they get over their initial shock that I'm there—[laughter]—they then ask me, "What's it like to be President of the United States?" And the best way to give a job description is it's—I make a lot of decisions. I'm a decisionmaker. And some of the decisions that—you'll see them; they're visible; they're big decisions. And some of them you'll never see. And I want to share with you the rationale as

to why I made some of the decisions I've made, decisions that Chris has been strong to support for the good of the country.

My thinking about the world changed on September the 11th, 2001. You just got to know that, so that when you see me talking about why we're doing things we're doing for the country, just keep in mind that on that day, I vowed that I would use everything in my power to protect the American people; that I recognized the nature of the war we were in, and I recognized the nature of the enemy.

Let me talk about the enemy right quick. These are people who have no conscience, but they do have a philosophy. These aren't isolated cases of people that are acting out their anger. These are folks who have espoused an ideology that is the exact opposite of the United States of America. Perhaps the best way to describe their thinking is to remind you what life was like under the Taliban for people in Afghanistan. Life under the—in Afghanistan said that if you were a young girl you had no chance, no hope. As a matter of fact, you would never get educated. Life under the Taliban in Afghanistan said if you don't ascribe to the way we think about religion, you're subject to penalty—harsh penalty often, sometimes execution. In other words, there's no sense of freedom, no sense of individualism. It's all this kind of darkness prescribed by a few. It's totalitarianism at its worst.

They've made it clear their intentions. When the enemy speaks, you better have people in Congress and in the White House who takes their word seriously. See, some in Washington would like to look at the world the way they want it to be; our job is to look at the world the way it is and try to work to make it better.

And so the enemy has said, "Don't worry, America is soft and weak, and all we've got to do is use the one weapon we have, which is the capacity and willingness to kill innocent life, and they will lose their nerve." And the reason they want us to retreat from the world is because they

want to find safe haven again from which they can plot and plan and attack and kill.

I told you September the 11th changed my frame of reference, changed my thinking. I am never going to give any quarter whatsoever to the enemy. We will stay on the hunt. We will be on the offense. And we will protect the American people by defeating them overseas so we do not have to face them here at home.

That's why it's important to have Members of Congress who understand that when we put any person in harm's way, he or she deserves the best training, the best equipment, the best support possible. Chris Chocola has been a strong backer of the men and women who wear the uniform of the United States of America.

I also recognize that if the enemy were able to find safe haven, that would make this country less secure. And so I put out a doctrine early on in this war, the first war of the 21st century—by the way, I wish I wasn't talking about war. No President ever says, "Gosh, I hope there's war." For those of you who are young here, I want you to know what I'm leading to is how to keep the peace and do my job that you expect me to do, which is to prevent the enemy from attacking again.

See, when I grew up, oceans would protect us. At least that's what we thought. You might remember the fifties and sixties. We'd see a threat overseas, and we were teenage kids and just didn't need to worry about it, did we, because oceans were there to protect us. That all changed on September the 11th. And so I've talked—two things to the American people—one, we've got to deny the terrorists safe haven; and secondly, we've got to deal with threats before they fully materialize.

In the old days, a threat could be there, and we could pick and choose, decide whether or not we needed to deal with it or not. That's no longer the case in the 21st century. And so I said to the people of Afghanistan, "You give up bin Laden;

give up Al Qaida,” because they were providing safe haven. I said, “If you harbor a terrorist, you’re equally as guilty as the terrorists.” And when the President speaks, he better mean what he says. And I meant what I said, and they didn’t give up Al Qaida, and we routed the Taliban, and 25 million people now live in freedom.

We saw a threat with Saddam Hussein. I wasn’t the only person who saw the threat. The United States Congress saw the threat; Republicans and Democrats saw the same threat. The United Nations Security Council saw the same threat. The entire world saw that Saddam Hussein was a threat. He’d attacked his neighbors; he attacked U.S.—was attacking U.S. airplanes; he had used weapons of mass destruction; he had destroyed thousands of his own citizens. There are mass graves in Iraq because of his brutality. He was a threat. It was his choice to make: Disclose, disarm, or face serious consequences. He made the wrong choice. The world is better off without Saddam Hussein in power.

And I want to thank Chris for his strong support in this war on terror. It’s important to have people who are clear-eyed in this battle. It’s important never to send mixed signals to our troops in combat. It’s important not to play politics with the issue of war and peace. And I appreciate his strong stand. That’s not easy, by the way. I understand that. Nobody wants to go around bragging about being strong in a war. But he is. And you just got to know, it’s vital to have this kind of strength in the Halls of Congress as we implement a plan for victory.

We have one option, and that is to achieve our victory. And we have such a plan, and it starts with making sure that we deny a safe haven to the terrorists in Iraq. We got a plan that, on the one hand, says that democracy can help heal old wounds. And the Iraqi people have stood up three times in the past 13 months and made it clear to the whole world that they want to live in democracy. Over 11 million

people voted in the face of terror. Their voices loud and clear, “We reject terrorism; we reject the dark view of the Al Qaida that want to use them as a safe haven.”

And if you want to know how tough Al Qaida is, just look at—we don’t know exactly who made the bombing of this incredibly important holy shrine in Iraq, but whoever did it is trying to stop the advance of freedom, because their ideology of darkness cannot stand the light that freedom brings to people around the world. The United States of America strongly condemns the destruction of a holy site. I firmly believe that whoever did this is not a religious person but an evil person. And I praise the leaders in Iraq who have urged for calm and who continue to make sure that Iraq stays on the road to democracy.

The second part of our strategy is to train the Iraqis so they can take the fight to the enemy. One of the interesting things early on in this war in Iraq, they started bombing these recruiting stations. So the first question I asked our commanders on the ground was, are you having any problem finding recruits? And the answer was, absolutely not. The people of Iraq want to be free, and we’re training people to help them secure their freedom. And as the Iraqis stand up, we will stand down. Troop decisions will not be made by politicians in Washington, DC, but by commanders on the ground. And we’ve got a plan for victory, a victory we will achieve.

In the long run, the way to lay the foundation of peace for our children and grandchildren and defend the United States of America is the spread of liberty. I know some have questioned whether or not it made sense, in my second Inaugural Address, to put a goal for the 21st century to be the eradication of tyranny. I can’t imagine anybody questioning whether or not we should work to eradicate tyranny. Part of my decisionmaking process is based upon this principle and belief: I believe there’s an Almighty; I believe that freedom

is a gift from the Almighty; I believe everybody, deep in their soul, desires to be free. And therefore, you should not be surprised—I wasn't—when eleven million Iraqis said, "I want to be free." Freedom is the best way to achieve peace in the long run.

If you look at our history, we had—a lot of your relatives have died in wars on the continent of Europe. And yet, because democracy spread in Europe, Europe is now whole, free, and at peace. My dad fought the Japanese. I'm sure some of your relatives did as well. They were the enemy of the United States of America in a brutal war. And yet today, I sit down at the table with Prime Minister Koizumi of Japan talking about how to keep the peace.

And what's the lesson to be learned? The lesson is this: That when a country adopts a democracy in their own style, reflecting their own history and their own traditions, they become a peaceful nation. Democracies do not war; democracies yield the peace. And someday, a duly elected leader from Iraq is going to be sitting down with an American President talking about how to keep the peace, and our children and grandchildren are going to be better off.

I want to talk about another decision I made that you've been reading about in the newspapers. Right after September the 11th, 2001, I called in people who have the responsibility of helping to protect this country. We've got some really fine people, by the way. Really good people on the frontlines of fighting off these terrorists. See, if you don't believe we're not at war, then I can understand why people were concerned about my decision with the NSA. But we are at war; there's an enemy that still lurks.

I spend every morning thinking about—at least every morning thinking about how to protect you. That's what you asked me to do; that's my job. It's really important for people in this country to know that the Government is working as hard as they can to protect the American people so you

can go about your business. It's hard to be a risk-taker if all you think about is war. See, you've hired a lot of us to think on your behalf.

And so I called in those on the frontline. I said, can we do anything more to protect the American people? What can we do? General Mike Hayden of the NSA is one fine public servant—came back, he said, "Mr. President, I think we can do a better job of picking up communications from an enemy before they attack so we can possibly respond." Mindful of that recommendation and mindful of the fact that I took the oath of office that said I will defend the Constitution and the laws of the United States—I called in the lawyers. I got a lot of them. [Laughter] I said, is what General Hayden recommended legal? Do I have the legal authority as the President of the United States to put this in practice—because it made a lot of sense, his recommendation. He said, "Mr. President, we have the capacity to listen to Al Qaida or suspected Al Qaida and their affiliates in making phone calls from outside the United States, inside the United States and vice versa."

It seemed to make sense to me that if somebody associated with the enemy is making a call inside the country, that it would be helpful to know why, in order to protect the American people. Lawyers came back and said, "You got the authority, Mr. President."

I then went and said, well, gosh, if we do go forward, I know there's going to be some consternation in the Halls of the United States Congress. So we briefed people responsible for intelligence and the leadership in both bodies, in both political parties. Just like my buddy in Texas said, "If you're trying to pull one over on them, why are you briefing the Congress?" [Laughter] "If you're doing something illegal, why did you call the Congress in and lay it for them to fully understand what we're doing to protect the American people?"

I wanted to share that with you. I think it's important for you to know why I make decisions. I'm confident what I'm doing—the decision I made is the right decision. If Al Qaida is calling in the United States, we want to know why.

We're also making decisions about how to keep this economy growing. One thing the people of this district ought to do is judge whether or not Chris's votes on creating an environment for capital to flourish is working or not. He said, look—he and I agree the role of government is not to create wealth but an environment in which small businesses can flourish, in which people can realize their dreams, in which capital moves more freely, so that people can find work.

And our plan is working. This economy of ours has been through a recession, an attack, a war, and corporate scandals, major storms last year, and high energy prices, and we grew at 3.5 percent. The national unemployment rate is 4.7 percent. We've added 4.7 million new jobs over the past 24 months—or a little longer than—2½ years. Productivity is at an alltime high. More people own a home today than ever before in our Nation's history. More minorities own a home today than ever before in our Nation's history.

Our progrowth economic policies are working, and it starts with keeping your taxes low. Cutting taxes was the right thing to do. And if we don't permanently keep these tax cuts in place, you're going to have a tax increase. And raising taxes is the wrong way to cause this economy to continue to grow.

I'm proud to have somebody like Chris who understands that when you have more money in your pockets to spend and save and invest, the economy grows. I've heard it—I'm sure you've heard all the talk in Washington. They said, "Look, we need to balance the budget, and therefore, let's raise the taxes." That's not how Washington works. They're going to raise your taxes, and they're going to figure out new ways

to spend your money. That's how Washington works. The best way to balance the budget is keep taxes low, grow the economy, and be wise about how we spend your money.

And I appreciate Chris's support of fiscal austerity, and he does a good job. Every program sounds like a brilliant program in Washington, but you got to set priorities with the people's money, and that's what we're doing. We're on a plan to cut the deficit in half by 2009, but the toughest deficit of all is the unfunded liabilities inherent in Medicare and Social Security.

And I recognize some of them in Washington don't want to touch that issue. By the way, it's a problem for both Republicans and Democrats. Sometimes if the issue looks too tough, the easiest thing to do is head for the hills. That's not the way Chris thinks. On Air Force One today, he said, "Mr. President, are you serious about continuing to discuss how to fix Social Security and Medicare?" And I said, "Absolutely, Chris." He understands what I know. Our job is to confront problems and not pass them on to future Presidents and future Congresses. And I intend to continue working with Chris on Social Security and Medicare reform.

You know, there's always a series of choices in Washington, DC, and I understand there's still uncertainty in the economy. And I understand why. There's a lot of changeover with new jobs, and you got some folks here in this district that lost work. And this troubles our fellow citizens, and it troubles me, and it troubles Chris. And we have a choice to make during this period of uncertainty, and that is whether or not we become protectionists and isolationists, or whether or not we're confident about the capacity of the United States to continue to lead the world's economy. And I'm proud to have a partner who ascribes to the latter philosophy.

Our view is this: We shouldn't fear the future because we intend to shape the future. And you shape the future with good

tax policy and good spending policy. You shape the future with good legal policy. We got too many junk lawsuits making it hard for people to invest capital. We need legal reform in the United States of America if we intend to lead the world economy.

We intend to shape the future by encouraging research and development so this country remains the leading exporter and developer of new technologies. We're going to shape the future by changing our energy habits. I understand when an oil guy—I'm a guy from Texas—stands up and says, "We're addicted to oil," it caused people to take a second look. But I'm going to tell you something: Being addicted to oil puts us in an economic bind as well as a national security bind. And I intend to do something about it.

I'm glad to have a partner with Chris. We're going to spend money wisely—your money wisely on research and development so we can develop advanced new batteries, so you can plug in your car at night and be able to drive 40 miles on electricity, not using a drop of gasoline. We're going to continue to expand the use of ethanol. It makes sense, by the way, to use research and development—your dollars for research and development to figure out ways to burn—better ways to burn corn and wood chips and saw grass. I want it so the American agriculture sector is providing energy for United States automobiles, not unstable parts of the world providing energy for U.S. automobiles.

We've got an aggressive agenda. We believe in things. We're optimistic people. We believe in our philosophy, and we know you've sent us to Washington to produce results. And one of the really important areas, I know, for people in this part of the world is to make sure health care is available and affordable, particularly if you're a small-business owner. Everywhere I go small-business owners say, "It's tough for me to stay in business because I'm having trouble with my health care costs." And that's dangerous for the United States.

Two-thirds of all new jobs in the United States are produced by small-business owners, and so we got to do something about it.

I want to warn you, however, that there is a philosophical debate in Washington, and I would very—listen very carefully to the rhetoric during a political campaign. The debate is this, whether or not we should encourage market forces to help set price, or whether or not the Federal Government ought to be setting price. I strongly do not believe the Federal Government ought to be running our health care system, and neither does Chris Chocola. We believe that we ought to strengthen the doctor-patient relationship, bring transparency to pricing and medicine, encourage the development of information technology so medicine is modern.

In order to make sure health care is available and affordable, we've got to do something about these lawsuits—not necessarily in Indiana—but around the country that are running good docs out of business and running up the cost of medicine for the taxpayers.

We have passed what's called health savings accounts. It's a great new vehicle to add market pricing into medicine and to put doctors and patients in charge of medicine. I strongly urge people who have run the small businesses to take a look at health savings accounts. And I look forward to working with Chris to make health savings account more acceptable and more available as an important antidote to those who want to federalize health care.

I do want to talk about one aspect of health care that is a Federal responsibility, and that's Medicare. When I got to Washington, DC, I decided to do something about a health care system that had become stagnant and old as a result of Federal bureaucracies making decisions. I'll give you an example. The Government would pay your taxpayers' money—your money to help a person with an ulcer surgery. It may cost 50 grand; I don't know what ulcer surgeries

cost. Fortunately, I haven't had one. But it costs a lot. But wouldn't pay a dime for the prescription drugs to prevent the ulcer surgery from happening in the first place. That seemed like the system was a little old to me and stale.

If you make a commitment to somebody, you got to make the commitment of excellence. And so I worked with Congress, Congressmen like Chris, to modernize Medicare, to provide a prescription drug benefit for our seniors. The Medicare modernization bill not only introduced HSAs but it gave seniors different options from which to choose. It's amazing what happens when you interject a sense of competition into a system. Do you realize that when we first analyzed the prescription drug benefit for seniors, they thought it was going to cost about \$35 a month for the seniors? Because of competition, it's down to less than \$28 a month. Competition works. Trusting people to make decisions works. Modernizing Medicare is an important, vital thing to have done. The Medicare bill I signed, that Chris supported, is going to make medicine for our seniors modern, and it's been necessary to do.

Good public policy is more than just talking about economic issues or cultural issues which matter to the United States as well. I'm proud to have a partner in promoting a culture of life in the United States of America. Banning partial-birth abortion was an important bill I signed and sends a signal that the United States of America should value all life in all forms.

The true strength of the United States of America is not our military strength or our economic strength, but it's the—the strength lies in the hearts and souls of our citizens. I am always astounded at the social entrepreneurship that takes place all around our country. I'm impressed by the thousands who have joined the armies of compassion to help bring hope where there's hopelessness and love where there's a lack of love.

Chris and I understand that the role of government is limited, and it's a fact that governments don't love. Governments can dispense law and justice but not love. And therefore, one of the most important initiatives of my tenure as your President has been to promote the Faith-Based and Community-Based Initiative, which recognizes governments should welcome people of faith in helping to solve the intractable problems of our society. We should not fear faith in America. We ought to say to those who want to love their neighbor just like they'd like to be loved themselves, "You should have equal access to Federal money, so long as you're helping to meet a Federal need." And we have a lot of need when it comes to saying to a brother or sister who's lost, "I love you. What can I do to help you?"

I've probably been going on a little too long. I hope the food's not getting cold. [Laughter] But I do tell you I'm proud to be here. I'm honored to stand by this good man. He's a fine, fine person and a great Member of the United States Congress who ran for a reason. And today I hope I can share some of the reasons why both he and I are proud to serve our country. I hope you can get a sense of philosophy behind why. We're not making up our minds based upon polls or focus groups. We're making up our mind based upon a philosophy and what we think is right for all the people of this country.

Please send him back to the United States Congress. He's necessary. He's important, and he's doing a fantastic job for the people of the Second Congressional District.

NOTE: The President spoke at 12:30 p.m. at Bethel College Indiana. In his remarks, he referred Sarah Chocola, wife of Representative Chris Chocola, and their children, Caroline and Colin; Indiana State Attorney General Steve Carter; Mayor Jeffrey L. Rea of Mishawaka, IN; Usama bin Laden, leader of

the Al Qaida terrorist organization; and former President Saddam Hussein of Iraq.

## Remarks to the American Legion February 24, 2006

Thank you all. Please be seated. Thanks for the warm welcome. Mr. Commander, thank you for letting me come by and visit with you about the subject of how to keep the peace and protect the United States of America. I'm proud to be with my fellow Legionnaires. Always a pleasure to be in the midst of veterans who served our country. I see some people who are not quite veterans yet that are with us, members who are serving all branches of Government, and I thank you all for coming. I appreciate your interest in the direction this country must continue to lead in order to protect ourselves and promote the peace.

I want to thank Carol Van Kirk, who's the national president of the American Legion Auxiliary. Old Tom Bock is wise enough to always include the Auxiliary. He knows something about leadership. I want to thank Paul Hasz. I want to thank John Sommer, executive director. He spends quality time in the Oval Office, along with the commander. He's never shy to express his opinion, but that's what you pay him for. [*Laughter*]

I want to thank the chairman of the Senate Arms Services Committee, Senator John Warner. Senator, it means a lot to me and it means a lot to the folks here that you take time to come here to be with them. And I'm honored you're here. Thanks for coming.

The American Legion is one of America's great organizations. From your founding after World War I to today's war on terror, Legionnaires have fought for our freedom, and you fought for the brave veterans who defended our freedom as well. You served our country in uniform, and you serve our

country in civilian life. The Legion was founded, in the words of your constitution, "to build a sense of individual obligation to the community, state, and nation." And when Hurricane Katrina struck our Nation's gulf coast, Legion posts all across America swung into action to help neighbors in need.

Take, for example, Post 338 in Bradner, Ohio. These good folks helped arrange medical transportation to reunite a sick child with his family after the family was forced apart because of the storm. Or Post 27 in DeRidder, Louisiana, which turned its bingo hall into an emergency shelter for 41 kidney dialysis patients and their caregivers and their loved ones.

I think it's very interesting what the post commander, Retired Navy Master Chief Bill Loftin, said—by the way, he said it when he was cooking hot meals and helped care for disabled evacuees. He put it this way: "This is for human life. That's what the Legion is all about." In times of crisis, our citizens know Legionnaires always come through, and I appreciate you.

Members of the American Legion are showing the heart of the Legion every single day, not just when catastrophe hits. Across America, Legionnaires and members of the Ladies Auxiliary volunteer in veterans hospitals, sponsor Scout troops and youth baseball, collect scholarship money for deserving students, including a special fund that the Legion established for the children of troops who've been killed in the war on terror. And I thank you for that as well.

Our Nation is grateful for your service on and off the battlefield. As you serve

your fellow Americans in need, you're also strongly supporting the American flag. It was a Legion that helped draft our Nation's first flag code back in 1923. And Legionnaires have been working ever since to ensure the flag is cherished and protected. I appreciate your leadership of the Citizens Flag Alliance, and like you, I support a constitutional amendment to protect the American flag.

As veterans, you have placed the Nation's security before your own lives, and that sacrifice creates a debt that our country can never fully repay. Yet there are things Government can do, such as strongly support our veterans, and that's precisely what my administration is doing. The time when we're holding down discretionary spending, my 2007 budget—with my 2007 budget, my administration will have increased funding for our veterans by \$35 billion since I took office, which is an increase of 75 percent.

We have made health care a top priority for my administration. With my 2007 budget, we'll increase VA's medical care budget by 69 percent since 2001. Our increased funding has given almost a million more veterans access to the VA medical care system. Since January 2002, disability claims are being processed 63 days faster than they were when I took office.

In the last 4 years, we've committed almost \$3 billion to modernize and expanding VA facilities so that more veterans can get care closer to home. We're working to ensure that veterans with the greatest needs—those with service disabilities and lower incomes and special needs—are given priority. We're making sure that our men and women returning from combat are the first in line for treatment.

We're also getting results for veterans beyond the health care system. For more than a century, Federal law prohibited disabled veterans from receiving both their military retired pay and their VA disability compensation. Combat-injured and severely disabled veterans deserve better. I'm the first

President in more than 100 years to sign concurrent receipt legislation. And I thank the Legion for working on these issues.

Our Nation's debt extends not just to the veterans who served but also to the families who stood by them in war. I signed into law the Veterans Benefits Act, authorizing \$1 billion in new and expanded benefits for disabled veterans, surviving spouses, and their children. The families of our veterans have served our country; our Nation will honor their service by standing with them in their time of need.

As veterans you know what it means to leave your family, put on the uniform, and head off to war. And today in Afghanistan and Iraq and other fronts in this war on terror, a new generation of service men and women is carrying on your legacy of selfless sacrifice and courage under fire. As they fight dangerous enemies in distant lands, I know that you share America's pride in them, and I thank all of you for your strong support of our troops in harm's way. Their service is needed in these dangerous times.

We remain a nation at war. The war reached our shores on September the 11th, 2001, when our Nation awoke to a sudden attack. Like generations before us, we have accepted new responsibilities, and we will confront these dangers with firm resolve.

Our most important duty is to defend the American people, and so we're taking the fight to those who attacked us. We're taking the fight to those who share their murderous vision for future attacks. We will take this fight to the enemy without wavering, and we will prevail.

The enemy we face is brutal and determined. The terrorists have an ideology; they share a hateful vision that rejects tolerance and crushes all dissent. They seek a world where women are oppressed, where children are indoctrinated, and those who reject their ideology of violence and extremism are threatened and often murdered.

The terrorists have aims. They seek to impose their heartless ideology of totalitarian control throughout the Middle East. They seek to arm themselves with weapons of mass murder. Their stated goal is to overthrow moderate governments, take control of countries, and then use them as safe havens to launch attacks against Americans and other free nations. To achieve their aims, the terrorists have turned to the weapon of fear. They don't have the military strength to beat us. They can't beat us on the battlefield. They just cannot defeat the United States military. And so they're trying to break our will with stunning acts of violence. The terrorists do not understand America. They're not going to shake our will. We will stay in the hunt. We will never give in, and we will prevail.

After the attacks of September the 11th, we have set forth a new strategy to do our duty to protect the American people. First, we're on the offensive, and we'll stay on the offensive, recognizing that we must defeat the terrorists abroad so we do not have to face them here at home.

Secondly, I've set a clear doctrine: America makes no distinction between the terrorists and the countries that harbor them. If you harbor a terrorist, you're just as guilty as the terrorists, and you're an enemy of the United States of America.

Thirdly, one of the clear lessons of September the 11th is that the United States of America must confront threats before they fully materialize. After September the 11th, I looked at the world and saw a clear threat in Saddam Hussein. Saddam Hussein was an enemy of the United States. He was firing at American military pilots patrolling the no-fly zones. He was a state sponsor of terror. He was in open defiance of more than a dozen United Nations resolutions. He had invaded his neighbors. He had brutalized his people. He had a history of using and producing weapons of mass destruction. Saddam defied the will of the world. And because we acted to remove this threat, Saddam Hussein is in prison,

he's on trial for his crimes, and the world is better for it.

Fourthly, we're advancing our security at home by advancing the cause of freedom across the world because, in the long run, the only way to defeat the terrorists is to defeat their dark vision of hatred and fear by offering the hopeful alternative of human freedom. That's what I want to talk to you about today—our forward strategy for freedom. I'll discuss why the advance of freedom is vital to our security and the peace of the world and how our efforts to spread liberty and democracy throughout the broader Middle East are progressing. I'm going to discuss with you our work to help the world's newest democracies build institutions of liberty that are the foundations for lasting peace. Our freedom agenda is based on a clear premise: The security of our Nation depends on the advance of liberty in other nations.

On September the 11th, 2001, we saw that problems originating in an oppressive state 7,000 miles away could bring murder and destruction to our country. We saw that dictatorships shelter terrorists and feed resentment and radicalism and threaten the security of free nations. We know throughout history that democracies can replace resentment with hope and respect the rights of their citizens and our neighbors and join together to fight in this global war against terror.

History has shown that free nations are peaceful nations. Think about all the bloodshed on the continent of Europe the past 100 years. In World War I and in World War II, there were bloody battles. Thousands of Americans went to Europe to fight in those wars and never came home. Democracy took hold in Europe, and today, Europe is whole, free, and at peace.

Think about the example of the Far East. You know, my dad, like many of your relatives, went off to fight the Japanese as an 18-year-old fighter pilot; 60 years later, his son is working with the Prime Minister of Japan to keep the peace. And what took

place between war and friendship was the development of a Japanese-style democracy. As we march into the future, America must be confident in the capacity of democracies to yield the peace we all want.

We're committed to an historic long-term goal: To secure the peace of the world, we seek the end of tyranny in our world. Far from being a hopeless dream, the advance of freedom is the great story of our time. Just 25 years ago, at the start of the 1980s, there were only 45 democracies on the face of the Earth. Today, there are 122. And in the past 4 years alone, more than 110 million human beings have joined the ranks of the free.

In our time, we've witnessed revolutions of Rose and Orange and Purple and Tulip and Cedar, and these are just only the beginnings. Across the world, freedom is on the march, and we will not rest until the promise of freedom reaches people everywhere across the globe. It's in our national interest. It's important that we understand the capacity of freedom to yield the peace.

In the march of freedom, some of the most important progress is taking place in a region that has known—has not known the blessings of liberty, and that's the broader Middle East. Since September the 11th, 2001, the nation of Afghanistan has gone from the terror of the Taliban to a democratic Constitution, to successful Presidential elections, to the seating of a democratically elected Parliament.

In less than 3 years, the nation of Iraq has gone from living under the boot of a brutal tyrant to liberation, to sovereignty, to free elections, to a constitutional referendum, and to elections for a fully constitutional government.

By any standard or precedent of history, these two countries have made incredible progress on the road to a free society. America is inspired by Afghan and Iraqi determination to live in freedom.

Freedom's progress in Afghanistan and Iraq is inspiring millions around the world to demand their liberty as well. In Leb-

anon, in Kyrgyzstan, voters have gone to the polls to choose their leaders in free elections. In other nations across the broader Middle East, hope is stirring at the prospect of change, and change is going to come. In that region that has known decades of tyranny and oppression, we're seeing the rise of a new generation whose hearts burn for freedom, and they will have freedom.

As freedom spreads to new parts of the world, we're seeing something else as well, the uncertainty that often follows democratic change. Free elections are exhilarating events. Yet history teaches us that the path to a free society is long and not always smooth. I've seen that in our own history. In the years following the American Revolution, there were riots and uprisings and even a planned coup. In 1783, Congress was chased from Philadelphia by angry veterans demanding back pay, and Congress stayed on the run for 6 months. [Laughter] It was then that Congress learned, don't mess with America's veterans.

It's important to remember that our first effort at a governing charter, the Articles of Confederation, failed, and it took over a decade after independence before we adopted our Constitution and inaugurated George Washington as our first President. Other countries have had similar experiences. After the collapse of communism in Eastern and Central Europe, nations like Slovakia and Romania and Ukraine struggled for many years to overcome the legacy of oppression before freedom finally took root.

No nation in history has made the transition to a free society without setbacks and false starts. Free elections are an important step on the road to a free society, but they're the first step. What separates nations that succeed from those that falter is their progress in establishing a civil society based on free institutions. So, as we work for democratic change across the broader Middle East, we're also working

to help new democracies establish the institutions that are the foundations of lasting free societies.

Our efforts in the broader Middle East have been guided by a clear principle. Democracy takes different forms in different cultures. Yet all cultures, in order to be successful, have certain common truths, universal truths—rule of law, freedom of speech, freedom of assembly, a free economy, freedom of women, and the freedom to worship. Societies that lay these foundations not only survive, but they thrive. Societies that don't lay these foundations risk backsliding into tyranny.

This principle has guided our efforts in Iraq. When our coalition arrived in Iraq, we found a nation where almost none of these basic foundations existed. Decades of brutal rule by Saddam Hussein had destroyed the fabric of Iraqi civil society. Under Saddam, Iraq was a country where dissent was crushed, a centralized economy enriched a dictator instead of the people, secret courts meted out repression instead of justice, and Iraqis were brutally oppressed by Saddam's security forces. And when Saddam Hussein's regime fled Baghdad, they left behind a country with few civic institutions in place to hold Iraqi society together.

So our coalition has worked to help the Iraqi people rebuild its civil society and the free institutions that sustain a democracy. And it has been very difficult work. Today, Iraq, though, does have a thriving free press, with hundreds of independent newspapers and magazines and talk radio shows where Iraqis openly debate the future course of their country. In spite of the difficulties, Iraq does have an emerging free market with an independent central bank and thousands of small businesses operating across the country.

Iraq is building an independent judiciary that is replacing the rule of a tyrant with the rule of law, and which is now holding Iraq's former dictator to account for his crimes against the Iraqi people. Iraqis have

adopted one of the most progressive democratic constitutions in the Arab world with protections for minority rights and women's rights. Iraqis now enjoy freedom of association, as we saw in the December elections, when parties and coalitions openly campaigned for the vote of the Iraqi people.

We're carrying out our clear strategy of victory in Iraq. On the political side, we're helping Iraqis build a strong democracy so old resentments will be eased and the insurgency marginalized. On the economic side, we're continuing reconstruction efforts and helping Iraqis build a modern economy so all Iraqi citizens can experience the benefits of freedom.

And on the security side, we're striking terrorist targets and, at the same time, training Iraqis which are becoming increasingly capable of carrying the fight to the enemy. Our strategy in Iraq is, as the Iraqis stand up, we'll stand down. Troop levels on the ground will be decided by commanders on the ground, not by politicians in Washington, DC.

In all aspects of our strategy, we've learned from experiences. We've learned from the good advice of people like Chairman Warner. We're fixing what hadn't worked. We'll continue to make changes as necessary to complete the mission, to meet the objective, and that is a country which can sustain itself, defend itself, protect itself, and serve as a strong ally in the war on terror.

For every terrorist working to stop freedom in Iraq, there are many more Iraqis and Americans and troops from around the world working to defeat them. There's still a lot of work to be done. The enemies of a free Iraq are working to stop Iraq's democratic progress. Democracy scares them. They understand a democratic Iraq will be a major defeat in their totalitarian aims.

They're going to continue their campaign of violence and destruction. We saw their brutality again this week when terrorists bombed the Golden Mosque in Samarra.

That mosque is one of the holiest sites in Shi'a Islam. This senseless attack is an affront to people of faith throughout the world. The United States strongly condemns this cowardly act of terror and the subsequent attacks on other mosques and holy sites in Iraq. We'll do everything in our power to help the Iraqi Government identify and bring to justice those responsible for the terrorist acts.

This is a moment of choosing for the Iraqi people. This morning I talked to our Ambassador in Iraq, Zai Khalilzad, and General Casey. Zai is actively engaged with leaders of all political factions to ensure a common message of restraint and unity. He reports to me that the leaders are committed to stopping civil strife. The Government is taking concrete steps to determine how the attack happened and the necessary actions to help move the political process forward. The Ambassador reports many religious leaders are committed to a unified Iraq, a peaceful Iraq. The response by the Grand Ayatollah Sistani and many other leaders has been constructive and very important, and we appreciate their leadership. It's also been a test for the Iraqi security forces. General Casey reports that they're doing a fine job of enforcing curfew and working to restore order and calm.

We can expect the days—coming days will be intense. Iraq remains a serious situation. But I'm optimistic, because the Iraqi people have spoken, and the Iraqi people made their intentions clear. In December, more than 11 million Iraqis sent a clear message to the world and to the terrorists: They want their freedom. They want their country to be a democracy. Each of these elections that took place last year saw larger and broader participation than the one that came before. And with the results from the December elections in, the Iraqi leaders are now working to form a new Government under a new Constitution with different factions competing for position and jockeying for power.

Listen, the way ahead is going to require some patience as this process unfolds. The Iraqi Constitution requires two-thirds of the Parliament to form a government, which makes it harder to get agreement, but it helps ensure that all groups have a say in who governs them. The days ahead in Iraq are going to be difficult and exhausting. We're likely to see a lot of political bargaining. That doesn't happen under dictatorships. They seem orderly, particularly when one man makes all the decisions, and there is no need for negotiation or compromise.

In democracies, different party advance competing agendas, and they seek their share of power. And yet they reach accommodation and respond to the will of the people. And Iraqis are doing all this for the first time in the midst of violence and terrorist attacks. Yet out of negotiations now taking place in Iraq, a free government will emerge that will represent the will of the Iraqi people, instead of that of a cruel dictator, and that will help us keep the peace.

We're encouraging Iraqi leaders to reach out across political, religious, and sectarian lines and form a government that gives a voice to all Iraqis. And when a new Iraqi Government assumes office, Iraq's new leaders will face tough decisions on issues such as security and reconstruction and economic reform. This Government will need to provide effective leadership and earn the confidence of the Iraqi people by showing it can protect them. The Government will also need to put a stop to human rights abuses by security officers. By building free institutions and an inclusive society that provides minority rights, Iraqi leaders will bring the nation together, and this will help to defeat the terrorists and the Saddamists who are fighting Iraq's democratic progress.

Some critics have pointed out that the free elections in the Middle East have put political power in the hands of Islamics and extremists, in the case of the Palestinian

elections, a notorious—notorious terrorist organization. Critics argue that our policies of promoting democracy are backfiring and destabilizing the region. I strongly disagree. First, their argument rests on the false assumption that the Middle East was a bastion of stability before the United States came in and disturbed the status quo by promoting democracy.

It was the status quo of the Middle East that led to the bombing of our Embassies in Kenya and Tanzania. It was the status quo in the Middle East that led to the attack of the USS *Cole* that killed 17 American sailors. It was the status quo in the Middle East that produced 19 hijackers and took planes and crashed them into the Pentagon and the World Trade Towers and killed nearly 3,000 innocent people on September the 11th, 2001. The status quo in the Middle East was dangerous and unacceptable, and our security demanded that we change it.

Secondly, the idea that lasting stability can be achieved by denying people a voice in the future control of their destiny is wrong. It is, in large part, because people in the Middle East have been denied legitimate means to express dissent that radical extremism has flourished. And it's only by giving people in the Middle East the freedom to express their opinions and choose their leaders that we will be able to defeat radical extremism. As liberty spreads in the broader Middle East, freedom will replace despair and hope. And over time, the terrorist's temptation will fall away.

Third, free societies do not take root overnight, especially in countries that have suffered from decades of tyranny and repression. It should come as no surprise that after 60 years of Western nations excusing and accommodating the lack of freedom in the Middle East, civil society in that region is not strong and those with the most extreme views are the most organized.

It will take time for the people of this region to build political parties and movements that are moderate in their views and

capable of competing in a free democratic system. Yet free elections cannot wait for perfect conditions. Free elections are instruments of change. By giving people an opportunity to organize, express their views, and change the existing order, elections strengthen the forces of freedom and encourage citizens to take control of their own destiny.

Finally, as democracy takes root, the responsibilities of governing will have a moderating influence on those who assume power in free elections. It's easier to be a martyr than a mayor or a cabinet minister. When you're responsible for building roads and bridges and power stations and educating people and providing help, you're less likely to blow up health clinics and schools and bridges.

In democracies, elected leaders must deliver real change in people's lives, or the voters will boot them out at the next election time. This is a lesson that the leaders of Hamas will now have to learn, as they take power after their election victory in the Palestinian Territories. Hamas campaigned on a platform of fighting corruption and improving social services, and that is how a Hamas Government will be judged by the Palestinian people. The leaders of Hamas have a choice to make. If they want the help of America and the international community to build a prosperous, independent Palestinian state, they must recognize Israel, disarm, reject terrorism, and work for lasting peace. The international community must continue to make clear to Hamas that democratically elected leaders cannot have one foot in the camp of democracy and one foot in the camp of terror. The world is waiting to see what choice Hamas makes.

The international community is also speaking with one voice to the radical regime in Tehran. Iran is a nation held hostage by a small clerical elite that is isolating and repressing its people and denying them

basic liberties and human rights. The Iranian regime sponsors terrorists and is actively working to expand its influence in the region. The Iranian regime has advocated the destruction of our ally Israel. And the Iranian regime is defying the world with its ambitions for nuclear weapons.

America will continue to rally the world to confront these threats, and Iran's aggressive behavior and pursuit of nuclear weapons is increasing its international isolation. When Iran's case was brought before the IAEA earlier this month, 27 nations voted against Iran, including Russia and China and India and Brazil and Sri Lanka and Egypt and Yemen. The only nations to support Iran were Syria, Cuba, and Venezuela. Now Iran's case will be taken up to the U.N. Security Council. The free world is sending the regime in Tehran a clear message: We're not going to allow Iran to have nuclear weapons.

The world's free nations are also worried because the Iranian regime is not transparent. You see, a nontransparent society that is the world's premier state sponsor of terror cannot be allowed to possess the world's most dangerous weapons. So, as we confront Iran's nuclear weapons ambitions, we're also reaching out to the Iranian people to support their desire to be free, to build a free, democratic, and transparent society.

To support the Iranian people's efforts to win their own freedom, my administration is requesting \$75 million in emergency funds to support democracy in Iran. This is more than a fourfold increase over current levels of funding. These new funds will allow us to expand radio and television broadcasts into Iran. They will support reformers and dissidents and human rights activists and civil society organizers in Iran, so Iranians can organize and challenge the repressive policies of the clerical regime. They will support student exchanges, so we can build bridges of understanding between our people and expose more Iranians to life in a free society.

By supporting democratic change in Iran, we will hasten the day when the people of Iran can determine their own future and be free to choose their own leaders. Freedom in the Middle East requires freedom for the Iranian people, and America looks forward to the day when our Nation can be the closest of friends with a free and democratic Iran.

Freedom is on the march in the broader Middle East. The hope of liberty now reaches from Kabul to Baghdad to Beirut and beyond. Slowly but surely, we're helping to transform the broader Middle East from an arc of instability into an arc of freedom. And as freedom reaches more people in this vital region, we'll have new allies in the war on terror and new partners in the cause of moderation in the Muslim world and in the cause of peace.

Bringing greater freedom to nations in the Middle East is the work of generations, and the advance of liberty still faces determined enemies. The terrorists know the stakes in the struggle. They know that as more people in the region embrace freedom, they will lose their safe havens, lose their recruits, and lose the sources of funding they need to advance their hateful ideology. And so they'll continue to fight freedom's progress with all the murderous hatred they can muster. They will continue to create images of violence and suffering for the cameras. The terrorists know that the only way they can defeat us is to break our will and force our retreat. And that's not going to happen so long as I'm the President of the United States.

We will stay on the offense. We will continue to hunt down the terrorists wherever they hide. We'll continue to stand with the people of the Middle East as they step forward to claim their freedom. We can be confident in our cause because we have seen freedom conquer tyranny and secure the peace before. We've seen freedom arrive on waves of unstoppable progress to nations in Latin America and Asia and Africa and Eastern Europe. And now the hope

of freedom is stirring in the Middle East, and no one should bet against it.

We can also have confidence in our cause—we have the greatest force for freedom in the history of the world on our side, the men and women of the United States Armed Forces. They are serving with courage and distinction on many fronts in the war on terror. And I know America's veterans feel a special bond with them as they defend freedom in foreign lands.

In this war, we've lost some really good men and women who left our shores to defend liberty and did not live to make the journey home. Others have returned from war with wounds the best medicine cannot heal. As veterans, you've lost friends and comrades in the field of battle, and you understand the sadness that has come to some of our Nation's military families. We pray for the families of the fallen, and we honor the memory of all who have given their lives in freedom's cause. And we will honor that memory by defeating the terrorists and spreading liberty and laying the foundation of peace for generations to come.

I appreciate the Legion's support for our troops in the fight. I appreciate the example you have set for those who wear the uniform today.

Before Veterans Day a few years ago, a group of soldiers serving in Iraq sent a letter to the American Legion Headquarters here in Washington. They wrote,

"Veterans of past wars will forever be in our hearts as American heroes. Their sacrifices give us courage, and their devotion reminds us of what we are fighting for." Our men and women on the frontlines are taking inspiration from the valor and courage that you've shown on the field of battle. When they face dark moments in the thick of the fight, they remember that you faced enemies as brutal and determined as those who threaten America today, and they remember how you prevailed. And now they're picking up your mantle and carrying on your fight. And like our veterans, they're bringing security to our citizens and freedom to the world.

Thank you for your idealism. I thank you for your dedication to God and country. May God bless our veterans. May God bless our troops in uniform. And may God continue to bless our country.

NOTE: The President spoke at 10 a.m. at the Capital Hilton Hotel. In his remarks, he referred to Tom Bock, national commander, and John Sommer, executive director, American Legion; Paul Hasz, commander, American Legion, District of Columbia; Prime Minister Junichiro Koizumi of Japan; and Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Interview With Doordarshan of India February 24, 2006

### *India-U.S. Relations*

Q. Well, Mr. President, how is your strategy partnership with India is going to shape up during the forthcoming visit?

*The President.* Well, first of all, our strategic partnership had a great start, or a great impetus, when your Prime Minister

came to visit here in Washington. We had a wonderful visit. And one of the important things about diplomacy is to get to know your counterpart. And I got to know the Prime Minister and admire him as really a decent fellow who is smart and capable.

And this visit will help foster not only the personal relationship, though, but a strategic partnership that is growing all the time. And it's one that is very important for the American people and, I think, the people of India. This relationship between the United States and India can produce good results for our people but also will enable us to achieve some international objectives as well.

#### *Civilian Nuclear Power Program in India*

*Q.* Well, in the context of excellent bilateral relations, which you have just mentioned, I think, what's your take on the civilian nuclear program?

*The President.* Well, it's a tough issue. It's a tough issue for the Prime Minister; I understand that, and it's a tough issue for me. I knew it was going to be a hard issue, because we have to convince—both of us have to convince our respective people it's in the interest to have a civilian nuclear program supported by the United States and India, as well as a civilian nuclear program that's separate from a military program in India.

And I understood the politics was going to be difficult, and there's still work to be done. We've just got to continue to come up with an agreement that both of us can live with. But the relationship is broader than just the civilian nuclear issue. I've told the American people, we want India to develop a civilian nuclear power program. We're all, kind of, connected globally, particularly when it comes to the price of energy. And the more nuclear power used by great emerging democracies and economies like India, the better off we'll all be.

*Q.* Well, there's an impression, as reflected in the U.S. media, that you are surrendering your interests while proposing to supply civilian nuclear technology to India. What do you tell them?

*The President.* Well, I tell them it's in the interests of the world that India have a nuclear power industry. On the other hand, it's also very important for India to

understand our concerns about making sure that there's a—that a civilian program is separate from the military, and there's the IAEA safeguards. And again, we're breaking some new ground. I'm not surprised that it's difficult to reach a consensus. And we'll keep trying and working at it.

The key thing is, though, that the people of India understand that our relationship is a vital relationship. And it's vital on a variety of fronts. It's vital when it comes to commerce and trade and prosperity; it's vital on fighting the war on terror. I mean, the people of India know what terror is all about; you've been hit before. And it's vital on working together to achieve a more peaceful world. And so I'm really looking forward to this trip. It's going to be exciting for us.

#### *War on Terror*

*Q.* I think the—terrorism is one area—a joint working group has been working excellently, even before the unfortunate incident of 9/11, between India and U.S. But the terrorist training camps and training infrastructure in Pakistan-occupied Kashmir has not been totally dismantled. How about a—and from the Pak-Afghan border, sir, also, troops are being—your troops are being targeted. So how—

*The President.* Well, listen, I understand the war on terror is universal, and it's very important for all of us to work together to stop the advance and the goals of these terrorists. And you bring up Pakistan; it's an interesting moment in our relationships with each other. It used to be that if America were close to Pakistan, then the Indian Government—

*Q.* Yes, that zero-sum game, that is over.

*The President.* It was zero-sum. And now I think President Musharraf understands that it's important for me to have a good relationship with India and vice versa. Prime Minister Singh understands. And we do have a good relationship with both. But on my trip to Pakistan, I will of course talk about the terrorist activities, the need

to dismantle terrorist training camps and to protect innocent life, because one of the real dangers of the terrorist movement is that they'll kill innocent people to achieve an objective. And India and President Musharraf, as well as our country, cares deeply about innocent life. We respect human life.

### *Trade With India*

Q. Now about trade and commerce, which we are mentioning. Well, in your Asia Society speech—I attended; I heard it, was a spectacular speech you made.

*The President.* Thank you.

Q. So you talked about this Indian middle class, the 300 million, which is bigger than U.S.

*The President.* It is.

Q. Growing, emerging market and all that. But still, India right now contributes only 1.3 percent of your global export.

*The President.* Right.

Q. So what's the roadmap?

*The President.* Well, the roadmap is to continue to work for openness, opening markets on both sides. Listen, trade, again, this is an issue that takes time to develop. Our relationship is a growing relationship, and we're constantly addressing needs to make sure that markets are open. We are going to have a business CEO forum with India CEOs and American CEOs that will brief us on what more we can do together.

And we're democracies. I mean, India is a great democracy. And democracies, there's constant pressure against certain advances. People have their opinion, and people are allowed to express their opinion. And opening markets is difficult. It's difficult for a lot of countries, and it's not easy for America, either. But the purpose of the trip is to continue to work to open up markets because opening markets and free trade that's fair trade will benefit workers and families on both sides of the trading equation.

### *India-U.S. Relations*

Q. Well, military-to-military relationship is again another success story, new heights. It is—every day it is reaching new heights.

*The President.* Yes.

Q. Marrying of technologies and understanding each other—and what about the same kind of cooperation in the field of defense industry?

*The President.* In what now?

Q. In defense industry, joint production with India, America, technology transfer.

*The President.* Well, as you know, there's a lot of technology transfer. And I quoted the example of Texas Instruments having a plant in India's silicon valley, a research center, and that's a classic case of technological transfer. Knowledge is technology, is the advancement of technology. And listen, this country has greatly benefited by Indian Americans, and Indians that have—with advanced degrees and degrees that have—unbelievably smart—engineering and different aspects of science and technology. And we welcome the presence of Indian students here in America, as well as the great contribution of our Indian Americans.

But technology transfers oftentimes require knowledge transfers, and one of the things about the relationship that has emerged is the fact there's a lot of knowledge transfer between private sectors and through research institutions, and that's positive.

### *President's Upcoming Visit to India*

Q. Well, the last question—this is your first visit to India.

*The President.* It is.

Q. While preparing to visit India and political negotiations, have you discussed with Mrs. Bush how to negotiate hot Indian curry? [*Laughter*]

*The President.* Well, I'm going to have to—I'll have to try that on. I'll tell you afterwards. My one regret is that I'm not going to go see the Taj Mahal. And that's not the fault of the Indian Government; that's the fault of the George W. Bush

schedulers. And obviously, it goes to show sometimes the President doesn't get all his wishes.

But I am really looking forward to going to the country. I am looking forward to meeting members of the Government. I'm looking forward to having private time with the Prime Minister. And I know Laura joins me in telling the Indian people, thanks for friendship, and we can't wait to come to your country.

*Q.* Thank you very much. And welcome to India, you and Mrs. Bush. And I think

there will be many more visits after this.

*The President.* I hope so. Thank you, sir.

NOTE: The interview was taped at 11:18 a.m. in the Map Room at the White House for later broadcast, and it was embargoed by the Office of the Press Secretary until 9 p.m. In his remarks, the President referred to Prime Minister Manmohan Singh of India; and President Pervez Musharraf of Pakistan. A tape was not available for verification of the content of this interview.

## Interview With Pakistan Television *February 24, 2006*

### *Pakistan-U.S. Relations*

*Q.* Mr. President, you are paying a visit to Pakistan at a very crucial juncture, at a time when changes are being experienced in the region. And people of Pakistan are pinning a lot of hope on your visit because they think many problems are there and your visit will play a very vital role in it. So what is your vision for making this trip more meaningful and productive?

*The President.* The first thing that's really important for people to understand is that relations between our countries oftentimes depend on the relations between the leaders. In other words, President Musharraf and I can set a tone for the relationship because of our capacity to talk to each other. And it's important to be with each other and to share concerns and to talk about ideas. And so one object of the trip is to continue what is a good relationship. A good relationship between me and the President tends to permeate throughout our Government.

Secondly, I—and one reason we've got a good relationship is we speak frankly with each other. Listen, I understand he has got a difficult job—made really difficult by the

fact that people have tried to kill him, as you know. Extremists have decided that he is a obstacle to their vision and, therefore, have tried to kill him. And so he's not only a man who's shown great courage in the face of adversity, but he does have a vision of how to work together to achieve common objectives.

Secondly, I want the people of Pakistan to know that the American people care about them, that ours is a relationship that's much bigger than just the war on terror; that when our Chinooks flew supplies into the rural part of Pakistan, it wasn't out of a sense of just, kind of, pure diplomacy, it was out of a sense of care and concern about the individuals. And I understand sometimes people may have—wonder about our motives, wonder about America's true concerns. And this will give me a chance to speak to the people of Pakistan and say, "Look, we care for you," and remind people that in our country, there's great Pakistani Americans. We're a rich society because we've got people from around the world, including people who were born and raised in Pakistan and have now chosen

America as a home. And so it's a trip that's of good will and importance.

*Q.* Mr. President, there is a common perception that the relations between the United States and Pakistan have fluctuated in the past. So what measures would you suggest to make it more durable and sustainable for the days to come and the long-time perspective?

*The President.* Yes, that's a really good question, because, again, we want people to understand this relationship is a vital relationship that will exist throughout the years. One way we can do that is increase trade opportunities between our countries—between our countries. And we'll be talking about a bilateral investment treaty.

Secondly, student exchanges—and I understand there's been some issues with visas, and we've got to work through those, because I believe the more Pakistani youngsters who come to America to study will get to really see what America is all about. And as more Americans that go there to study—will see what Pakistan is all about.

And so there's ways for us, beyond the war on terror—and by the way, the war on terror is a critical aspect of our relationship; don't get me wrong. But the other thing that's interesting and I think important for the people of Pakistan to know is that President Musharraf, in his democracy initiative, can show the whole Muslim world, and the world itself, that it's possible to have a religious—that is not extreme and a state that listens to people and responds to the needs of people. And that's a really important message that Pakistan can show the world. And I will, of course, continue to talk to my buddy and my friend about his goals for a democratic Pakistan.

#### *Kashmir*

*Q.* Mr. President, an early solution to the whole issue of Kashmir, about which you have also mentioned in your speech at the Asia Society—that is vital for the region. So, in your view, being a close

friend of both Pakistan and India, what role the United States can play in resolving this issue?

*The President.* Well, I started to play a role in my speech, and I spoke out on the issue and encouraged the President and the Prime Minister of India to continue down the road of solving the issue with a solution that's acceptable to all sides.

And that's very important. There's a temptation sometimes for countries to try to jump in the middle of dialog. I believe a lasting solution can be achieved. I've seen the progress that's been made in the relationship from when I first became President. You might remember an early time in my Presidency, there was real tension. And now, all of a sudden, there's some very encouraging signs—transportation exchanges—not transportation exchanges—new transportation opportunities, trade. In just my discussions with both the President and the Prime Minister, there appears to be a different attitude. And part of it has to do with trust, but there's got to be tangible progress; I recognize that. And so I will use my trip to urge the leadership to continue solving this issue, with the idea that it can be solved.

#### *Pakistani Economy*

*Q.* Mr. President, what economic incentive would you offer to Pakistan during the forthcoming visit?

*The President.* Well, trade is very important. And one of the steps on a robust trading relationship is what's called the Bilateral Investment Treaty, and that's an important part of the process. And believe me, every time the President talks to me, he's talking about markets, and I understand that. But he also understands that there's some steps needed before this robust trade.

I must applaud the President's vision for the Pakistan economy. And in our world, politics, there's a lot of talk and a lot of, kind of, big noise. But the truth of the

matter is, what matters is results. And Pakistan's economy is strong, and that's good news. That's really good news for the people of Pakistan. First and foremost, because, obviously, if people can make a living and do well, they can see the benefits of democracy—tangible benefits of living in a system where people are free to express themselves, but where the marketplace is the economic determinant.

### *War on Terror*

*Q.* Coming to another subject, what strategy the United States has adopted for conquering terrorism in Pakistan, in a very holistic manner?

*The President.* First of all, freedom defeats an ideology of hatred. And the enemy—I say “the enemy” because they'll kill—they—innocent Pakistanis; they kill innocent Americans. We need—more Muslims have died at the hands of Al Qaida and these extremists than anybody else. These—I don't view these people as religious people. I view them as people who have taken a great religion and kind of twisted it to meet their means.

And so they have a vision. And it's not a vision—it's a vision that doesn't recognize the freedom of people to worship. It's a vision that doesn't understand the—that recognize the importance of women in soci-

ety or free speech. And so the way to defeat that vision is with a better vision, more hopeful, and democracy provides that vision.

We are in close coordination, of course, with the Government of Pakistan. We share a mutual interest. Nobody should want foreign fighters in their soil wreaking havoc. And it's hard for a part of a country to develop if there are people in that part of the country that are willing to kill innocent life to achieve an objective. And so we share short-term objectives with the Pakistani Government. We also share the long-term objective, and that is—that's freedom.

*Q.* Thank you very much, Mr. President.

*The President.* I'm looking forward to the trip. And I really appreciate you coming.

*Q.* Thank you very much. I'm grateful and honored.

*The President.* Thank you, sir.

NOTE: The interview was taped at approximately 11:20 a.m. in the Map Room at the White House for later broadcast, and it was embargoed by the Office of the Press Secretary until 9 p.m. In his remarks, the President referred to President Pervez Musharraf of Pakistan; and Prime Minister Manmohan Singh of India. A tape was not available for verification of the content of this interview.

## The President's Radio Address *February 25, 2006*

Good morning. On Sunday and Monday, I will meet with America's Governors during their annual gathering in Washington, DC. As a former Governor, I appreciate the work of these fine public servants. I look forward to talking with them about the challenges and opportunities facing their States and our Nation and discussing how leaders of both parties can work together to solve problems for our citizens.

One of the most important issues we will discuss is how to improve health care for the American people, and we have a good example in the Medicare system that provides health care coverage for our seniors. When I took office, I found a Medicare system that would pay tens of thousands of dollars for a surgery but not the money for the prescription drugs that could have prevented the surgery in the first place.

So working with Congress, we passed critical legislation that modernizes Medicare, provides seniors with more choices, and gives them better access to prescription drugs.

More than 25 million people with Medicare now have prescription drug coverage, and hundreds of thousands more are enrolling each week. This new coverage is saving seniors money on their drug premiums. The typical senior will end up spending about half of what they used to spend on prescription drugs each year.

Another issue I will discuss with Governors is how to keep America the most innovative and competitive nation in the world. In my State of the Union Address, I announced the American Competitiveness Initiative. Under this initiative, we will double the Federal commitment to the most critical basic research in the physical sciences over the next decade. We will also make the research and development tax credit permanent to encourage businesses and entrepreneurs to increase their investments in innovation. These investments will lead to new technologies that will offer a better life for our citizens and keep our economy strong.

My Competitiveness Initiative will also give American children a firm grounding in math and science to prepare them for the jobs of the 21st century. I propose that we train 70,000 additional high school teachers over the next 5 years to lead Advanced Placement courses in math and science and bring in 30,000 math and science professionals to teach in classrooms and give extra help to students who struggle with math. By ensuring that our children are prepared to succeed in life, we will ensure that America's economy succeeds in the world.

When I meet the Governors, I will also talk about our energy strategy. I propose an Advanced Energy Initiative to take advantage of new technologies. Under this initiative, we will change how we power our homes and offices by investing in clean

coal technology, solar and wind power, and clean, safe nuclear energy. And we will change how we power our cars and trucks by investing in hybrid vehicles, pollution-free cars that run on hydrogen, and alternative fuels like ethanol and biodiesel. By applying the talent and innovative spirit of our citizens, we will move beyond a petroleum-based economy, protect our environment, and make America less dependent on foreign sources of energy.

I'll also discuss with Governors our progress in the war on terror. The States are playing a vital role in the war effort through the contributions of their National Guard units. During the past 2 years, many Governors have traveled to Iraq or Afghanistan to visit with the men and women from their States who are serving in freedom's cause. These Governors have seen firsthand the courage of our troops and their dedication to the mission. Last month, Arkansas Governor Mike Huckabee visited Iraq and Afghanistan with three of his fellow Governors. He said, "People back home need to realize just how proud they should be of our men and women here. It is obvious these troops remain upbeat and focused on ridding the world of terrorists."

To improve health care, keep America competitive, achieve greater energy independence, and protect our Nation, we must put aside politics and focus on what is best for the future of our country. America's Governors are good allies in this effort, and I look forward to working with them in the year ahead.

Thank you for listening.

NOTE: The address was recorded at 7:50 a.m. on February 24 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on February 25. The transcript was made available by the Office of the Press Secretary on February 24 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks at a Dinner for the Nation's Governors February 26, 2006

Good evening. Welcome to the White House. Laura and I are glad you're here. We really look forward to this evening. It's good to see some old friends, and I want to welcome two new Governors: Governor Corzine and Governor Tim Kaine. It happens to be his birthday. The first lady said he was tired of getting birthday songs, so we'll skip it. [Laughter]

We've also got some Governors here who will be here for the last time, some by choice, some by law. We thank you for your service. One of them happens to be Brother. Come on back, you know. But all of you who won't be back here, thank you for serving your States and our country.

I like being around Governors. Governors know how to set agendas; Governors know how to rally people to convince the legislature to get results; Governors are results-oriented people. So I picked a few for my Cabinet, including two Mikes: Mike Leavitt and Mike Johanns. They're doing great jobs. I appreciate the rest of my Cabinet being here, even though you aren't Governors. [Laughter] You're welcome to have a meal. [Laughter]

Look forward to working with you to help shape the future of the country. You know, I told the people, we don't need to fear the future because we intend to shape the future. And Governors play a big role in that. You got a big role in help-

ing to protect our country, and I want to thank you for understanding we're still at war and that we need your solid support in defending our country. Our most important duty is to protect the American people.

Our economy is strong, and I mean to keep it that way, with good tax policy, both at the Federal and State level. We've got to make sure we're less dependent on foreign sources of oil to keep our economy strong. We've got to make sure that our education system—make sure every child is educated, and with special emphasis on math and science. This country is a great country, and we've led the world, and we'll continue to lead the world. And I look forward to working with you on such an agenda.

This is historic times, and I know you know that. And so I want to thank you for your service to our great Nation. I want to thank you for bringing dignity and honor to the offices you hold. And so now I'd like to offer a toast to the Governors of the United States.

NOTE: The President spoke at 8:03 p.m. in the State Dining Room at the White House. In his remarks, he referred to Gov. Jon S. Corzine of New Jersey; Gov. Timothy M. Kaine of Virginia and his wife, Anne Holton; and Gov. Jeb Bush of Florida.

## Remarks to the National Governors Association Conference February 27, 2006

Good morning. Thanks for coming. I enjoyed it last night; I hope you did too. It was a lot of fun. And thank you all for giving me a chance to come by. What I

thought I'd do is say a few things and then answer some questions, if you have any.

We have got a chance to achieve some big things for the country, to lay the stage for peace and to keep America in the lead.

And these are goals that both Republicans and Democrats should share. You know, there's a lot of politics here in Washington, so it's—when you say, “Well, you know, it's a Republican goal to make America competitive,” I just don't agree with that. It should be a national goal. It's a national goal to protect our people. And therefore, it requires a lot of collaboration throughout all aspects of government. And no better collaborators to implement good policy than our Governors. So thanks for giving me a chance to come and share some insights with you.

First, one question that ought to be confronting everybody is, how do we keep this economy of ours strong? A couple of notable exceptions, like our friends in Michigan and Ohio in particular, maybe Washington State, the overall economy is in great shape. People are working; productivity is up; people own their homes; small businesses are flourishing. And the fundamental question is, what can we do together to keep it that way? Part of it is to be wise with taxpayers' money.

I congratulate the States that have done a good job of increasing their surpluses; it's a good thing. I can remember a couple of years ago when we were a little worried about deficits at the State level. That's changed. Surplus and tax policy—wise with people's money—all go hand in hand in terms of making sure America remains competitive. I believe if you take money out of people's pockets, it hurts economic vitality and growth.

I know full well that in order for us to be competitive, two other things have to happen. One is, we've got to be less dependent on foreign sources of oil. Told the people, shocked them pretty much when I was standing up there as the guy from Texas saying, our dependency upon oil creates a problem. But I meant it. Dependency upon oil has created an economic problem for us. It challenges our economic security, because when demand for oil goes up relative to supply worldwide, it causes

the price at the pump to go up. It's like a hidden tax on our people when gasoline prices go up. Dependence on foreign sources of oil creates a national security problem. You hear parts of the world where there is disruption in oil supply as a result of local politics, for example; it affects the United States of America.

I spend a lot of time worrying about disruption of energy because of politics or civil strife in other countries or because tyrants control the spigots. And it's in our national interest that we become less dependent on oil. And so we've laid out a strong initiative to encourage Congress to continue to spend research and development money to enable us to power our automobiles through additional uses of ethanol, to expand E-85 beyond just the current regional—the region where it's being—where the corn is being grown, to be able to use other types of biomass to fuel our cars. We think we're very close to that kind of breakthrough. Hybrid batteries are going to make an enormous difference in our capacity to drive the first 40 miles in urban centers without the use of any gasoline. Hydrogen automobiles eventually are going to make a huge difference in enabling us to become less dependent on foreign sources of oil.

We've got to expand solar power. I went to a facility there in Michigan to see a fantastic company called United Solar. I don't mean to be pushing them, but nevertheless, they're making a great product. I remember going out to Colorado to the facility out there, the research facility on alternative uses of energy. We've got fantastic chances to advance this really important agenda, and we look forward to working with you to do so. It's one of these issues where when we continue to make these technological breakthroughs, we'll leave behind a better tomorrow for our children and grandchildren.

The other issue that I know we can work together and must work together is to make sure our children are not only educated

in reading and writing but also in math and science. America must be competitive in the out years. We've got to have our—we've got to be educating the future physicists and engineers. And we look forward to working with you to help make math and science in our classrooms more of a reality.

As well, we're planning on doubling the amount of Federal research dollars for basic sciences. And recognizing that most of the research in the United States is done at the corporate level, to make the research and development tax credit a permanent part of the Tax Code. It's really hard to get our companies to invest in research and development if there's uncertainty in the Tax Code and Congress allows the R&D tax credit to lapse, and when it lapses, planners say, "Well, I'm not sure it's going to be around, so why do we want to make investment?" So making the R&D tax code [credit] a permanent part of our Tax Code will help spur continued research and technology. Technology is going to help us stay competitive; it'll help us be the most productive society in the world, which means our people's standard of living is going to go up.

So here are some things we can work on to get rid of all of the, kind of, needless politics that tends to be dominating the landscape these days and focus on things that will help this country remain the leader in the world when it comes to the economy.

I also want to thank those of you who have set up faith-based offices. I'm sincere about working with State and local governments to rally the great armies of compassion. And I know that some 32 States have set up faith-based offices, and I appreciate you doing that. It's really an important part of making sure our social agenda is comprehensive and complete.

I wish I could report to you that the war on terror is over. It's not. An enemy

still lurks. They're dangerous people, and it requires a comprehensive strategy to defeat, and part of it, of course, is making sure our homeland is secure. If you have any questions on the NSA decision, I'll be glad to give it to you—be glad to answer them.

The other part of the offense—of the strategy is to stay on the offense, is to keep them on the run. And to this end, I want to thank you for supporting our Guard troops. Many of you have been overseas and have seen our Guard troops in action. And I can't thank you enough for not only supporting the troops in harm's way but providing great comfort to their families as well.

Ultimately, the defeat of the terrorists is not only defeat them overseas so we don't have to face them here at home, but, as well, it's to spread liberty and freedom. And the freedom agenda is a powerful part of our country's desire to lay the foundation for peace. And it's making a difference. It's making a difference. I know one of the debates about the freedom agenda is, "Well, elections cause certain things to happen that you may not want to happen." No, elections are only the beginning of the process; they're not the end. Elections, plus a focused foreign policy effort that helps build the institutions of democracy, is what is going to be necessary to ultimately defeat the hateful ideology of those who would do our country harm.

It's an interesting debate that's going to take place here in Washington, or is taking place in Washington: Do elections cause radicalism or empower radicals? My answer is, the status quo empowered radicals. This notion that somehow the Middle East was a safe place for the last 30 years, because we didn't see, kind of, the turmoil that happens with elections, meant we were safe, I just totally disagree with that, kind of the—beneath the surface that appeared placid, the policymakers, was resentment and hatred and planning and plotting, all

---

\* White House correction.

of which came home on September the 11th.

And I believe this country has got to be aggressive in our pursuit of democracy and liberty, based upon our firm belief that there are such things as the natural rights of men and women. After all, that's what caused our founding, that there is universality to liberty. And we shouldn't be surprised when 11 million Iraqis go to the polls and demand freedom in the face of unbelievable terrorist attacks. That

shouldn't surprise America. We ought to say, we recognize that spirit. And it is that spirit that's ultimately going to be able to say, we've kept the peace for our children and grandchildren.

And so we can work together on these important issues, and I thank you for giving me a chance for me to come by and visit with you about them. Thank you.

NOTE: The President spoke at 11:05 a.m. in the State Dining Room at the White House.

## Remarks at a Republican Governors Association Reception February 27, 2006

*The President.* Thanks for the warm welcome. Be seated, unless you don't have a seat. [Laughter]

Mitt, thank you for that wonderful introduction. That columnist is pretty much alone in your State of Massachusetts—[laughter]—but I appreciate it. Appreciate your leadership of the RGA. I want to thank Sonny. I call him “Big Buddy Perdue.” [Laughter] He is a big buddy. And I want to thank Matt Blunt as well and Melanie and Ann Romney. Thank you all very much for taking a strong leadership role.

One of the things you find out about successful Governors is they marry well. Same thing happens for Presidents. [Laughter] And I am married really well.

I want to thank you all for supporting people who know how to get things done. You know, in our line of work, there's a lot of talkers, sometimes there's not many doers; a lot of people who have got opinions, but oftentimes people can't roll up their sleeves and achieve agendas. And the folks you're supporting here today are people who know how to set agendas, make decisions based upon principle, and get things done on behalf of our country by running their State. Thank you for sup-

porting them, and thank the Governors for being such strong leaders.

I enjoy working with the Governors. I know how these folks think. And they know what I know, that we are a nation at war. They are the commanders in chief of their respective National Guard units, many of which have been deployed overseas. And I want to thank our Governors and the first ladies for understanding the task ahead for our country, for supporting those who wear the uniform, and for reaching out to the families who worry about their loved ones. Our Governors, these Governors are on the frontline in the war against terror, and I thank you for your steadfast support.

They, like me, will never forget the lessons of September the 11th. Our Nation must never forget the lessons of September the 11th, for the greatest duty of our respective governments—Federal Government and State government—is to protect the American people. The security of our citizens is of paramount importance to my administration, to many in the Congress, as well as our Governors.

The way to win the war on terror is to stay on the offense, is to defeat the killers overseas so we do not have to face them here in America, is to be relentless

in our pursuit, never give in, never give up, and keep the enemy on the run, which is precisely what we're doing.

In order to win the war on terror, it is really important for the President to speak clearly, and when he says something, means what he says. And so when I said to the world, if you harbor a terrorist, you're equally as guilty as the terrorist, I meant what I said, and the Taliban found out exactly that the United States of America keeps its word. And today, because we upheld that doctrine, America is a safer place. Al Qaida no longer has a safe haven in which to plan and plot an attack, and 25 million people are enjoying the fruits of liberty.

A lesson of September the 11th is that when we see a threat, we must take the threat seriously. When a lot of us were growing up, oceans—we felt oceans could protect us from harm; that if we saw a threat overseas, we could deal with it if we wanted to or not, because we were safe. September the 11th changed that forever. September the 11th taught us that when we see threats brewing or materializing, we must take them seriously. I saw a threat, the world saw a threat, people of both political parties in the United States Congress saw a threat, and that was Saddam Hussein. The world is better off without Saddam Hussein in power.

Many of our Governors have been to Iraq, and I thank them for supporting our troops in harm's way. We've got a strategy for victory in Iraq. Our strategy—our goal is to make sure that Iraq can govern itself and sustain itself and defend itself, will become an ally in the war on terror and not be a safe haven for Al Qaida, which wants to plan and plot and use the oil wealth to strike America again.

Our strategy is threefold. One, we'll help rebuild that country so people see the fruits of democracy. Two, we'll encourage a political system that will take into account the voices of the people. You saw what I saw; 11 million Iraqis made their voices abun-

dantly clear: "We want to be free"—in the face of terror. They decided to vote in overwhelming numbers.

The leaders of Iraq rejected this notion that a suicider and a thug and a terrorist can create civil war. They're interested in a unified government that will allow the people to express their will, a unified government that will give young mothers and fathers the hope that their children can grow up in a peaceful society.

The third part of our strategy is to train the Iraqis so they can take the fight to the enemy, and that's exactly what's happening. The Iraqis are standing up, and as they do, we will stand down. I know many of you are concerned about the troop levels. I know our Governors are worried about the troop levels in Iraq. Here's my response: I will determine the troop levels in Iraq, one, necessary to achieve victory, based upon the recommendations of our commanders, not based upon politics in Washington, DC.

Ours is an enemy that has no conscience, but they do have a philosophy. They're totalitarian in nature. They're fascist in their tactics. They will spare no life in order to achieve their objective. Their aims are clear. They believe the United States is weak and flaccid; it's only a matter of time before we withdraw and create vacuums into which their awful ideology can flow and in which they can achieve their objectives. They do not understand the United States of America. We will not flinch in the face of their terror. We will not let thugs and assassins determine the foreign policy of the United States. We will stay in the fight, and we will the fight for the security of the United States of America.

In the long run, the way to defeat an ideology of darkness is with an ideology of hope and light. And that ideology is based upon liberty, the fundamental rights of men and women to live in a free society. I believe—I believe that deep within everybody's soul is the desire to be free.

So I wasn't surprised when 11 million people voted. I wasn't surprised when the Afghans fought off the terrorists. I'm not surprised when people take to streets in Lebanon demanding their freedom. Freedom is on the march. And by having freedom on the march, we're laying the foundation of peace for generations to come.

It's not easy work. It's hard work. But this nation has done that kind of work before. I want to remind you that after World War II, America didn't abandon the world; we helped our enemies rebuild to become democracies. World War II and World War I cost our country dearly in the number of lives lost. But today, because we stuck with the principle that liberty is universal and democracies yield the peace, Europe is whole, free, and at peace.

And in Japan—you know, my dad went; many of your relatives have fought the Japanese. They were the sworn enemy of the United States of America. And yet today, some 60 years after World War II ended, I can sit down at the table with one of my close friends in the international arena, the Prime Minister of Japan, talking about keeping the peace. And what happened? Japan took on a Japanese-style democracy, and democracies and liberty convert enemies into allies. In order to lay the foundation of peace for generations to come, this country of ours must never forget the lessons of history and be confident in the universal values that can change the world to be a peaceful world.

And my fellow Governors understand that, and I appreciate your courage, and I appreciate your strong support. And I appreciate your steadfast will in the face of the enemy.

And here at home, we've got a strong agenda as well. Mitt was right; this economy of ours has overcome a lot. It's overcome recession and war and terrorist attacks and corporate scandals and hurricanes and high energy prices. Yet we're strong, and we're getting stronger. And one of the reasons why is, we understand that when

you let people keep more of their own money, they will save and spend and invest and cause this economy to get going. Our economy grew at 3½ percent last year. Unemployment is 4.7 percent. We've added 4.7 million new jobs since August of 2003. Productivity is on the rise. Homeownership is at an alltime high. More minorities own a home today than ever before in our Nation's history.

And yet these are times of uncertainty. There's competition in the global economy. People are changing jobs quite often. There's kind of an unsettling feeling here in the United States of America. And the fundamental question is, what do we do as we head into the future? Some say, let us retreat; let's isolate ourselves from the world—or let's protect ourselves with artificial walls. That's not the attitude of me or our Governors. We're confident about the future because we intend to shape the future and keep the United States of America as the leading economy in the world.

To keep this economy growing, we've got to keep progrowth economic policies in place, not only at the Federal level but at the State level. You know, there's a lot of talk here in Washington about the deficit. I'm concerned about the deficit too. But don't fall prey to those who say, all you've got to do is raise the taxes and balance the budget—that's not how Washington works. Here's the way Washington works: They're going to run up your taxes, and they're going to figure out new ways to spend the money. The best way to deal with the deficit is keep taxes low. Congress needs to make the tax relief permanent.

On the one hand, you have progrowth economic policies that create economic wealth and generate new revenues for the Treasury. On the other hand, we've got to be wise about how we spend your money. I'm looking forward to working with Congress on yet another lean budget that focuses on priority, a budget that doesn't try to be all things to all people, a budget that recognizes we can cut our deficit in

half by 2009 if we're fiscally sound with your money. And the Governors understand fiscal sanity. And I appreciate the surpluses you have. Don't be calling on us for any more money. [Laughter]

To keep this economy strong, we've got to make sure we have a flexible economy. And to make this economy stay the most competitive economy in the world, we've got to be smart about legal policy. We've got too many lawsuits in the United States of America, junk lawsuits that are driving capital away from job creation. We strongly believe in legal reform in order to make sure this economy remains the best economy in the world. I thank our Governors for tort reform.

We've got a problem: We're hooked on oil. I know that might surprise some of you to hear a Texan say that, but if we want to be the leading economy in the world, we have got to spend money on research and development to get us off of oil. Oil creates an economic problem for us. Because of rising demand in places like China and India relative to the supply of oil, we're finding it causes your price of gasoline to go up at the pump. That hurts our economy. Dependency upon oil also creates a national security issue.

Let me put it bluntly: Sometimes we rely upon oil from people that don't like us. And therefore, in order to make sure we're not only competitive but to make sure we're nationally secure, we have got to figure out new ways to power our automobiles, ways like ethanol and plug-in hybrid battery vehicles. And to make sure that we're less dependent on oil, we've got to have clean coal technology, nuclear power, as well as solar and wind power. This administration looks forward to working with the Governors to get us unhooked from foreign sources of energy.

Man, I've got a lot to say tonight, except Laura said, "Keep it short." [Laughter] I'm a wise man; I always listen to my wife. [Laughter]

But I do want to share another concern of mine, and that is, unless our children have got—are well-grounded in math and science, the jobs of the 21st century are going to go elsewhere. And our Governors understand that. Our Governors also understand that it's important for the Federal Government, as well as private companies, to invest in research and development so that we're always on the leading edge of technological change. And so I'm proposing to Congress that we double the Federal funding for basic research in the physical sciences. And I'm saying to Congress as clearly as I can, let's make the research and development tax credit a permanent part of the Tax Code so our corporations can accurately plan for investment that is necessary to make sure America is the most competitive nation in the world.

Finally, I look forward to working with our Governors to make sure the No Child Left Behind Act is fully implemented. The No Child Left Behind Act says, first of all, these guys know what to do when it comes to running the schools. We believe in local control of schools. But it does say, in return for Federal money, we expect there to be high standards and measurement to make sure every child learns how to read and write and add and subtract. And if we find a child who cannot read and write early on, we'll correct those problems early, before it's too late. We strongly believe every child in America should learn, and we expect every single school to teach.

And I look forward to working with our Governors to apply that same rigor of accountability, particularly in our junior high grades, for math and science. Because we believe and we know that not only can every child learn, but that when we ground our students in the skills necessary to be good engineers and good physicists and good chemists and good scientists, the United States of America will continue to be the preeminent economy in the world in the 21st century.

So ours is an agenda that is optimistic and hopeful. We believe in America. We believe in the ingenuity of the American people. We understand the power of this country lies in our people, not in our halls of Government. And we also understand the true strength of America lies in the hearts and souls of our citizens. And so I want to thank our Governors for setting up faith-based and community-based offices to help rally the vast numbers in the armies of compassion that help heal broken hearts, that surround people with love who are lonely.

See, we recognize that Government is not an agent of love; Government is law and justice. Government can hand out money, but it cannot put hope in a person's heart or sense of purpose in a person's life. That's done when a kind, decent soul who has heard the universal call to love a neighbor just like you'd like to be loved yourself opens his or her arms and helps mentor a child, helps somebody to read, helps somebody find food if they're hungry

and shelter if they're homeless. Our Governors are on the forefront of a conservative and compassionate agenda, and I'm proud to stand with you.

So I've come to thank our Governors. And I've come to thank you all for helping our Governors. These are good, decent, honorable men and women who deserve your support, and you've given it. So thanks for doing it. I'm looking forward to working with our Governors to make this country to continue to be the greatest land on the face of the Earth. I love my job. They love their jobs. And collectively, we love representing the people of the United States of America. Thanks for coming, and God bless.

NOTE: The President spoke at 6:48 p.m. at the National Building Museum. In his remarks, he referred to Gov. Mitt Romney of Massachusetts and his wife, Ann; Gov. Sonny Perdue of Georgia; Gov. Matt Blunt of Missouri and his wife, Melanie; and Prime Minister Junichiro Koizumi of Japan.

## Message to the Congress on Continuation of the National Emergency With Respect to Zimbabwe

February 27, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent to the *Federal Register* for publication the enclosed notice stating that the national emergency blocking the property of persons undermining democratic processes or institutions in Zimbabwe is to continue in effect beyond

March 6, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on March 4, 2005 (70 *FR* 10859).

The crisis constituted by the actions and policies of certain members of the Government of Zimbabwe and other persons to undermine Zimbabwe's democratic processes or institutions has not been resolved. These actions and policies pose a continuing unusual and extraordinary threat to the foreign policy of the United States. For these reasons, I have determined that it

is necessary to continue this national emergency and to maintain in force the sanctions to respond to this threat.

GEORGE W. BUSH

The White House,

February 27, 2006.

NOTE: This message was released by the Office of the Press Secretary on February 28. The notice is listed in Appendix D at the end of this volume.

## Remarks Following Discussions With Prime Minister Silvio Berlusconi of Italy and an Exchange With Reporters February 28, 2006

*President Bush.* We'll have some opening statements. I will answer two questions from the U.S. side. The Prime Minister will answer two questions from the Italian side.

I welcome my friend to the Oval Office. Every time I meet with the Prime Minister my spirits are raised because he is such a positive, optimistic person. The Prime Minister is a strong leader. He's a man of his word. He has brought stability to the Italian Government. Obviously, it's important for an American President to be able to work with somebody in a consistent manner, and I appreciate the stability that the Prime Minister has brought to our close ally and friend.

We had a lot of discussion on important issues. We discussed the war on terror, and I thanked the Prime Minister for his strong leadership. We discussed the NATO role in Afghanistan. We discussed Iraq and the need for strong allies to continue to support the democracy movement there. I sought the Prime Minister's opinions on Iran. It was a very constructive dialog.

And finally, I want to thank the people of Italy for hosting the winter Olympics. You did a wonderful job. I know firsthand how good a job you did because my wife reported back. She loved her experience. And so congratulations to the Government and the people of Italy for hosting these magnificent games. And welcome.

*Prime Minister Berlusconi.* Thank you very much, Mr. President, for your words of appreciation which gave me a lot of satisfaction. On my behalf, I have to say that coming here and meeting the leader of a friendly country is the reason for me to go along the path that we decided to follow. It makes me firm in that.

The consensus and agreements which we always have stems from the fact that we share the same values. We both believe the problem affecting the world—is to spread democracy, because only through democracy there can be freedom, and only through freedom can human beings give the best of themselves.

Therefore, I think we can say that we're lucky because the biggest democracy of the world has such a leader who sees problems affecting the world so clearly and proceeds and follows so firmly in this direction. President Bush and the American people have found a firm and sound ally in my Government.

After 9/11, we both decided to carry out military operations in Afghanistan. And I think we both gave strong support in the reconstruction of Iraq and in the construction of democracy in that country. And we express our appreciation, and we're very close to the American people because of the many—I want to reassure President Bush and his people that when an American soldier dies for the cause of democracy and freedom in that country, we feel that

and consider that as a loss for ourselves. But we will continue along this path because we are convinced, as President Bush has said, that only if all democratic states join together we can bring democracy and peace all over the world.

*President Bush.* Welcome. Tom [Tom Raum, Associated Press].

### *Iraq*

*Q.* Mr. President, there was some more sectarian violence today in Iraq. There have been hundreds, maybe thousands, killed since the bombing of the mosque. Do you fear an all-out civil war? And will the events of Iraq of the last few days affect prospects for a U.S. drawdown?

And to the Prime Minister, do you still want to withdraw Italian troops by the end of the year?

*President Bush.* The United States strongly condemns the bombing of holy sites. We believe people should be allowed to worship freely. Obviously, there are some who are trying to sow the seeds of sectarian violence. They destroy in order to create chaos, and now the people of Iraq and their leaders must make a choice. The choice is chaos or unity. The choice is a free society or a society dictated by the—by evil people who will kill innocents.

This weekend, I spoke to seven of the Iraqi leaders. They understood the seriousness of the moment. They have made their choice, which is to work toward a unity government. The Iraqi people made their choice. Last December, 11 million people, in defiance of the terrorists and the killers, went to the polls and said, we want to be free.

*Prime Minister Berlusconi.* We have announced a plan to progressively withdraw our troops, which should be completed—we have to be completed by the end of this year. And this plan has been agreed upon also together with our allies and with the Iraqi Government. Because this what is going to be possible—why this will be possible.

*President Bush.* Yes.

*Prime Minister Berlusconi.* Why is this going to be possible? Because we have, all together with our allies, trained the Iraqi troops and the Iraqi soldiers and the law enforcement so that the Iraqi Government itself will be able to guarantee the security of its people through their own forces.

So as far as the Province which is under our control is concerned, we have 3,000 soldiers there, troops which will be withdrawn by the end of this year. But we have trained 10,000 law enforcement people who can guarantee the respect of peace.

Questions, Italian.

### *Italy-U.S. Relations*

[At this point, the reporter spoke in Italian, and the question was translated by an interpreter as follows.]

*Q.* The first question is to President Bush. Should the center left win in Italy, since they have different views from President Berlusconi, will the relations between the United States and Italy continue to be as they are? Will they be proved worse?

And then with a question to Prime Minister Berlusconi—Prodi has just declared that President Bush has just organized for President—for Prime Minister Berlusconi a farewell party?

*Prime Minister Berlusconi.* You have a possibility to answer, no comment.

*President Bush.* That's right, yes. [Laughter] No, look, it's—obviously, there's an election. There must be an election, so the question is about pure politics. I have—my relationship is not a political relationship with this man; it's a strategic relationship. And this strategic relationship is important for both our peoples, and it's important to help lay the foundations for peace. Okay? [Laughter]

Caren [Caren Bohan, Reuters].

### *Dubai Ports World/Homeland Security*

*Q.* Mr. President, since you're the final arbiter of the Dubai Ports deal, are you

still inclined to approve it? And do you stand by your veto threat?

*President Bush.* My position hasn't changed to my message to the Congress. And I appreciate the fact that the companies concerned have asked the Congress for a review of all the security implications.

Let me just make something clear to the American people: If there was any doubt in my mind or people in my administration's mind that our ports would be less secure and the American people endangered, this deal wouldn't go forward. And I can understand people's consternation, because the first thing they heard was that a foreign company would be in charge of our port security, when in fact, the Coast Guard and Customs are in charge of our port security. Our duty is to protect America, and we will protect America.

On the other hand, this company is buying a British company that manages the ports. And by the way, there are a lot of foreign companies managing U.S. ports. And so my question to the Members of Congress as they review this matter is, one, please look at the facts, and two, what kind of signal does it send throughout the world if it's okay for a British company to manage the ports, but not a company that has been secure—been cleared for security purposes, from the Arab world? So I look forward to a good, consistent review. You don't need to interpret. That's a U.S. question.

One at a time.

#### *Italy-U.S. Relations*

[*The reporter spoke in Italian, and the question was translated by an interpreter as follows.*]

Q. Just a few minutes ago, President Bush praised stability. I would like to know from both of you what role did stability

play in your personal relationship and in the relationship between the two countries?

*President Bush.* Well, first of all, a personal relationship is based upon mutual trust. And I have found Silvio to be a person of his word. Look, sometimes we don't agree, but at least you know where he stands. He is—and that matters, by the way, for a person to keep his word. In politics, people always try to look the easy—find the easy path. I like somebody who makes up his mind based upon principle.

And obviously, there's a practical reason why it's important to have stability. Because if a government is changing every year, it requires a person in my position to constantly have to reacquaint yourself. And that's what I meant by stability. It's much easier to make common policy when you're dealing with a person from one year to the next.

*Prime Minister Berlusconi.* As far as I'm concerned, I can only add that we brought into politics the values which pertain to the world of work and business, and the world of sport. Because in politics, people changing frequently their minds and positions are considered to be professional. [*Laughter*] While on the contrary in the world of business or the world of sports, a person who changes constantly his position and never keeps his promises is cornered or even set outside.

*President Bush.* Thank you. Thank you.

NOTE: The President spoke at 10:43 a.m. in the Oval Office at the White House. A reporter referred to Romano Prodi, candidate for Prime Minister of Italy. Prime Minister Berlusconi spoke partly in Italian, and those portions of his remarks were translated by an interpreter.

## Remarks Following a Meeting With President Hamid Karzai of Afghanistan and an Exchange With Reporters in Kabul, Afghanistan

March 1, 2006

*President Karzai.* Well, such a wonderful moment for us in Afghanistan today to have our great friend, our great supporter, a man that helped us liberate, a man that helped us rebuild, a man that helped us move toward the future, President Bush, today with us in Afghanistan.

I conveyed upon President Bush's arrival to him that when the Afghan people come to know that you are here today—but when they see on the television that we did not provide you the kind of hospitality perhaps we want to provide you, I'll be in serious trouble. [Laughter] But I'll have a lot of explaining to do to the Afghan people.

Mr. President, welcome to Afghanistan. We owe a great, great deal in this country's rebuilding—peace, democracy, the strong steps toward the future—to your support, to your leadership, to the American people, and to the way you have given your hand to the Afghan people.

I'm not going to go into the details of all that you've done for us—it's from the defeat of terrorism, to peace in Afghanistan, to democracy, to reconstruction, to the success of the whole process. Thank you very much, Mr. President, and welcome to Afghanistan.

*President Bush.* Thank you, Mr. President. Thank you for having me. Laura and I are honored to be here. It's such a thrill to come to a country which is dedicating itself to the dignity of every person that lives here.

First of all, I want to thank you for the fantastic lunch we just had. I did get a taste of Afghanistan hospitality, and it's good. I appreciate you introducing me to many of the leaders of your Government. I'm impressed by their dedication to making sure the experience that you're going through, experience of growing a democ-

racy that honors and respects all, is successful.

One of the messages I want to say to the people of Afghanistan is, it's our country's pleasure and honor to be involved with the future of this country. We like stories of young girls going to school for the first time so they can realize their potential. We appreciate a free press. We are enthralled when we see an entrepreneurial class grow up where people are able to work and realize their dreams. We understand the importance of having a well-trained military dedicated to the sovereignty of the country and to the peace of the people. And we're impressed by the progress that your country is making, Mr. President. A lot of it has to do with your leadership.

Today I not only had a good, long visit with my friend, the President, but we had a good visit with a lot of the folks who make this Government work. From here, I'll go to cut a ribbon at our new Embassy. The Embassy should be a clear statement to the people of Afghanistan that we're dedicated to helping. And then I'm going to go out to the base and thank some of our troops who are here to protect our country and, at the same time, help the people of Afghanistan protect themselves.

One of the things I told Mr. President, told the members of your team and your Cabinet and the Government, is that people all over the world are watching the experience here in Afghanistan. I hope the people of Afghanistan understand that as democracy takes hold, you're inspiring others. And that inspiration will cause others to demand their freedom. And as the world becomes more free, the world will become more peaceful. And so I come as a friend, an ally, and a person like you, dedicated to peace. Thank you for having me.

*President Karzai.* Well, I guess we take some questions, Mr. President?

*President Bush.* Why don't we take a couple.

*President Karzai.* Two on each side?

*President Bush.* Sure.

*President Karzai.* All right.

*President Bush.* We'll start with the Afghans. Terry [Terence Hunt, Associated Press], please——

*President Karzai.* He's a guest. He's a guest.

*President Bush.* Guests first? You don't know who he is.

*President Karzai.* Please, go ahead.

*President Bush.* He's Terry by the way, AP. You might have seen him before.

*President Karzai.* Yes, we've seen him before.

*President Bush.* He asked you a very difficult question last time.

*President Karzai.* He did? Well——

*President Bush.* Hopefully, he'll tone it down some.

#### *Usama bin Laden*

*Q.* I'd like to ask you, Mr. President, there was a time when you talked about getting Usama bin Laden dead or alive. Why is he still on the loose 5 years later? And are you still confident that you'll get him?

*President Bush.* I am confident he will be brought to justice. What's happening is, is that we got U.S. forces on the hunt for not only bin Laden but anybody who plots and plans with bin Laden. There are Afghan forces on the hunt for not only bin Laden but those who plot and plan with him. We've got Pakistan forces on the hunt. And part of my message to President Musharraf is, is that it's important that we bring these people to justice. He understands that. After all, they've tried to kill him four times. So we've got a common alliance, all aimed at routing out people who are evildoers, people who have hijacked a great religion and kill innocent people in the name of that religion.

We're making progress of dismantling Al Qaida. Slowly but surely we're bringing the people to justice, and the world is better for it, as a result of our steady progress.

You want to ask somebody?

*President Karzai.* Yes. I'll ask Reuters.

*Q.* Yes, please. Thank you, sir——

*President Bush.* Oh, no, no——

*President Karzai.* There's international Reuters; there's Afghan Reuters.

*President Bush.* He didn't mean to. Sorry.

*Q.* Mr. President, allow me to welcome you to Afghanistan first.

*President Bush.* Thank you.

*Q.* And I would like to ask you a couple of questions, if I may.

*President Bush.* Sure.

#### *Afghanistan/Iran*

*Q.* Regarding the worsening situation in Afghanistan, the Afghan Government says that most of the violence emanates from Pakistan. Will you be discussing in any way the issue of violence in Afghanistan with Pakistani authorities?

*President Bush.* Absolutely.

*Q.* And my second question is regarding Iran's nuclear program——

*President Bush.* Yes.

*Q.* Iran states that its nuclear program is for peaceful purposes, but you seem to doubt them. There seems to be some sort of standoff. Do you not think that the standoff will affect the security of the region, and do you think there is a way out of this standoff?

*President Bush.* Great. First, yes, I absolutely will bring up the cross-border infiltrations with President Musharraf. These infiltrations are causing harm to friends, allies, and cause harm to U.S. troops. And that will be a topic of conversation. It's an ongoing topic of conversation.

Secondly, Iran must not have a nuclear weapon. The most destabilizing thing that can happen in this region and in the world is for Iran to have a——develop a nuclear weapon. And so the world is speaking with

one voice to the Iranians that it's okay for you to have a civilian power—nuclear power operation, but you shall not have the means, the knowledge, to develop a nuclear weapon.

And so we've joined with Russia as part of a diplomatic effort to solve this problem that says, Russia will provide enriched uranium to its civilian nuclear powerplant and will collect the uranium after it's been used in the plant.

I'll repeat to you: The most destabilizing thing that can happen is for Iran to have a nuclear weapon. And we will work with friends and allies to convince them not to.

Steven [Steve Holland, Reuters].

#### India

Q. Sir, you're going on to India from here. How close are you to sealing a nuclear agreement with India? And what does it mean for the trip if you don't get one?

*President Bush.* Our relationship with India is broader than our discussions about energy. Ours is a strategic relationship. It is a relationship that's got strong ties because of economics and our military, our desire to help democracies such as Afghanistan. Our people are talking to the Indians today on the plane, and we'll be doing so when we land in New Delhi about trying to come to an agreement on a civilian nuclear power agreement.

But as I said in my speech in Washington, this is a difficult issue. It's a difficult issue for the Indian Government; it's a difficult issue for the American Government. And so we'll continue to dialog and work, and hopefully, we can reach an agreement. If not, we'll continue to work on it until we do. It's in our interests and the interests of the United States. It's in the interests of countries around the world that India develop a nuclear power industry because that will help alleviate demand for fossil fuels. And by alleviating demand for fossil fuels, it takes the price off of gasoline at the pump. And so the faster the Indian economy grows, the more fuel they de-

mand; the more fuel they demand, it affects our gas prices; it affects your gas prices.

So what we're trying to do is have an international consortium that will enable countries to develop nuclear power industries in safe ways, ways that will prevent proliferation, and ways that will enable nations to meet their energy needs without excessive consumption of fossil fuels.

*President Karzai.* I will give a chance to the Afghan Television, for once.

#### Afghanistan-U.S. Cooperation

[The reporter spoke in Dari, and the remarks were translated by an interpreter.]

Q. Your Excellency President Bush, most welcome to Afghanistan and wish you a pleasant stay. The question is by a reporter from Afghanistan National Radio and Television. It has been 4 years since the presence of the international forces in Afghanistan. However, the security situation is increasingly deteriorating. What will be your long-term security policy to Afghanistan? And the second part of the question is, how will the U.S. policy be affected in regards to Afghanistan if Usama and Mullah Omar are captured?

*President Bush.* It's not a matter of if they're captured or brought to justice; it's when they're brought to justice. The United States is here at the request of an Afghan Government elected by the people. We signed an agreement in the Oval Office in Washington, DC, with the duly elected President of your country, President Karzai. It's an agreement that sets out a strategic relationship. It's an important relationship for our country. It's an important relationship for Afghanistan.

But it's important for the people of Afghanistan to recognize that we're here by mutual consent. We want to be here. We want to be here to help Afghanistan grow its democracy and to defeat those who will—can't stand the thought of freedom.

The President has talked to me a lot about this issue, assures me that the Government is sincere in its request that the United States and coalition help Afghanistan grow its democracy. Our commitment is firm. Our desire is to see this country flourish and set a great example not only in the neighborhood but around the world.

See, I hope people of Afghanistan understand the people of America have great—got great regard for human life and human dignity, that we care about the plight of people. We—when we saw the devastation in Pakistan, we were quick to respond with help because we care about people. When we heard 73,000 people lost their lives and 2.5 million people were displaced from their homes, it broke our hearts. When we see HIV/AIDS ravishing an entire continent of Africa, we care.

I'm going to repeat what I said before: We like stories, and expect stories, of young girls going to school in Afghanistan. It means a lot to the American people to hear the President say that. It means a lot for people to realize that there is an entrepreneurial class that's beginning to grow. We believe in hope, which is the exact opposite of the ideology of the bin Ladens of the world and the Taliban.

In our country, you can worship freely. You're equally American if you're a Christian, Muslim, Hindu, or Jew. You're equally American if you don't believe in an Almighty. Under the Taliban and Usama bin Laden, there is no religious freedom. You have no chance to express yourself in the public square without being punished. There is no capacity to realize your full potential. And so we're committed; we're committed to universal values. We believe—we believe everybody desires to be free. And we know that history has taught us that free societies yield peace. And that's what we want. We want peace for our children, and we want peace for the Afghan children as well.

*President Karzai.* Good. Wonderful. Great. Thank you very much.

*President Bush.* Thank you.

NOTE: The President spoke at 2:52 p.m. at the Presidential Palace. In his remarks, he referred to Usama bin Laden, leader of the Al Qaida terrorist organization; and President Pervez Musharraf of Pakistan. A reporter referred to Mullah Omar, head of the deposed Taliban regime in Afghanistan.

## Remarks at a Dedication Ceremony for the United States Embassy in Kabul

*March 1, 2006*

Thank you for the warm welcome. I thought I'd just drop in to cut a ribbon. [*Laughter*] Ambassador, Laura and I are honored to join you. And Mr. President, thank you for joining us.

The President just hosted a great Afghan lunch. The hospitality of the Afghan people is well-known, and I enjoyed that hospitality, Mr. President. Thank you.

I appreciate the Secretary of State joining me. I'm proud to call Condi Rice

friend; America is proud to call her Secretary of State.

I appreciate Ron Neumann's service. There's nothing wrong with a son following in his father's footsteps. [*Laughter*] When we rolled by the old Embassy, he told me that it was his dad that cut the ribbon as the Ambassador from the United States to Afghanistan. And here we are about to open a brand new Embassy with a proud

son and a great representative of our country, Ambassador Ron Neumann, cutting the ribbon.

History sometimes spins an interesting tale, doesn't it? And such a tale is being spun today of public service. I want to thank all of my fellow citizens for working so far away from home on an incredibly important mission. I want to thank the Embassy personnel, as well as our United States military personnel, for being on the frontline of freedom's march. I know it's a hard job, away from your families—a long way from your families, having just flown 17 hours to get here. But it's a vital mission. It's historic in its nature. This is the kind of mission that someday, the Secretary of State will be speaking to Foreign Service officers and relaying the stories and the tales and the toils of those who served in Afghanistan in 2006. And so I congratulate you on your hard work, and I thank you on behalf of a grateful nation.

I also want to thank the Foreign Service nationals who are here as well, those citizens of Afghanistan who are helping our folks to accomplish a big mission. I am struck by the story that our Embassy was kept open and guarded during the days of the Taliban. And when Afghanistan was liberated, there were Afghan nationals here to turn over the keys to the Embassy. For those of you who are guarding our Embassy, thank you. For those of you who carry on their legacy, I thank you as well. We welcome your help; we're honored with your presence today.

I've been honored to welcome Afghan citizens to Washington on a fairly regular basis. Laura and I have hosted brave men and women, who are dedicated to democracy and freedom, in Washington. One thing they always ask me—they ask me with their words, and they ask me with their stares, as they look into my eyes—is the United States firmly committed to the future of Afghanistan? That's what they want to know. My answer is, "Absolutely." It's in our Nation's interest that Afghanistan develop into a democracy. It's in the interests of the United States of America for there to be examples around the world of what is possible, that it's possible to replace tyrants with a free society in which men and women are respected, in which young girls can go to school to realize their full potential, in which people are able to realize their dreams.

And so my message to the people of Afghanistan is, take a look at this building. It's a big, solid, permanent structure, which should represent the commitment of the United States of America to your liberty. I firmly believe the work that we're doing together is laying the foundation of peace for generations to come. And I want to thank you for sharing that mission.

May God bless America and you and your families, and may God's blessings rain on the good people of Afghanistan.

NOTE: The President spoke at 3:31 p.m. In his remarks, he referred to President Hamid Karzai of Afghanistan.

## Remarks to United States and Coalition Troops at Bagram Air Base, Afghanistan *March 1, 2006*

Thanks for having us. Laura and I are honored to be here in Afghanistan with you. It's a real pleasure to be with our country's finest citizens. I want to thank

General Eikenberry and General Freakley and all those who are taking responsibility to make sure we complete our mission.

I particularly want to thank the members of the United States Army and Marines and Air Force and Navy who are here. Laura and I thank the civilian contractors who are here. I—really pleased to be with the 10th Mountain Division—“Climb to Glory.”

I know it's not easy to be away from home, but I want you to understand that you're on the frontier of freedom, that you're involved with doing two important things. One is finding an enemy and bringing them to justice so they don't hurt our fellow citizens again. That mission requires steadfast determination. The enemy cannot defeat us militarily. The only thing they can do is to kill innocent lives and try to shake our will. But they don't understand the United States of America. We will never be intimidated by thugs and assassins. We will defeat the enemy and win the war on terror.

And the other thing you're doing is to help this new democracy not only survive but to flourish. Laura and myself and Secretary Condi Rice, who is with us here—step on over here. We just met with President Karzai. And my message to the people of Afghanistan is—was the following: One, it takes courage to get rid of a tyrant or tyrannical governments and to recognize that the future belongs to democracy. That's not easy work. It's hard to recognize that people ought to be allowed to worship freely and speak their minds freely after living under the grips of a tyrant.

Our other message was, is that the United States doesn't cut and run. When we make a commitment, we keep our commitments. It's in our national interest that the work you're doing here, the work of helping the Afghans develop a democracy—it's in the interests of your children and your grandchildren. Because, you see, democracies yield the peace we all want. History has taught us democracies don't war. You don't run for office in a democracy and say, “Please vote for me; I promise you war.” [*Laughter*] You run for office

in democracies and say, “Vote for me; I'll represent your interests. Vote for me; I'll help your young girls go to school or the health care you get improved.”

Democracies yield peace, and that's what we want. What's going to happen in Afghanistan is, a neighborhood that has been desperate for light instead of darkness is going to see what's possible when freedom arrives. What's going to happen in Afghanistan, it's going to send a signal, not only in the neighborhood but around the world, that freedom is the potential. The United States of America believes that freedom is universal. Freedom is not our gift to the world; freedom is the gift from an Almighty to every single person in this world.

I'm proud of our United States military. Many of you volunteered for service after September the 11th, 2001. You saw that our Nation was attacked, and when the country called upon you, you said, “Let me serve. Let me join in the fight to defeat the terrorists so attacks like that will never occur on our soil again.” And that's what you're doing here in Afghanistan. You're helping to change this part of the world—and change the world with your courage and your sacrifice. I assure you that this Government of yours will not blink; we will not yield. We're on the right course, and the world is going to be a better place because of your service.

So we're here to thank you. I want you to e-mail and call your friends and, more important, your families, and tell them the old Commander in Chief showed up for a little bit, with a message of appreciation not only for you but for your loved ones as well. I ask for God's blessings on you and your mission, God's blessings on our country. Thank you for letting us come by.

NOTE: The President spoke at 4:37 p.m. at the Clam Shell. In his remarks, he referred to Lt. Gen. Karl W. Eikenberry, USA, commander, Combined Forces Command Afghanistan; Maj. Gen. Benjamin C. Freakley, USA, commander, 10th Mountain Division

and Combined Joint Task Force 76; and President Hamid Karzai of Afghanistan.

## Remarks Following a Meeting With American and Indian Business Leaders in New Delhi, India

March 2, 2006

*Prime Minister Manmohan Singh of India.* Mr. President, distinguished journalists, ladies and gentlemen, I've already welcomed President George Bush and Mrs. Laura Bush on this, their first visit to India. I would now like to welcome the U.S. CEOs who have traveled to India for this historic meeting.

The President and I have just concluded our official discussions, and I'm sure he shares my pleasure—[*inaudible*—]—executive officers. The establishment of this group last year was an important initiative stated by the President—[*inaudible*—]—in which the private sectors of our two countries could interact and build a roadmap for promoting cooperation. I would like to thank the two cochairs, Mr. William Harrison and Mr. Ratan Tata, and their colleagues for the excellent work done in preparing the report which they will now present.

I have been briefed on the main recommendations, and I am very happy to say that some of the recommendations are already reflected in the decisions which the President and I have issued today. I will have more to say on other recommendations a little later.

I now invite President Bush to share his thoughts and initiate the discussion. You have the floor, sir.

*President Bush.* Well, thank you, Mr. Prime Minister. I want to thank the CEOs for joining us from both India and the United States. Thank you all for coming.

The Prime Minister and I have had some really constructive dialog, starting in Washington, DC, and then here in New Delhi.

I would characterize our relationship as warm and results-oriented. Warm because he's a humble man who cares deeply about the people of India, and he's a good thinker. He can see beyond the horizon, which is necessary.

I say "results-oriented" because it's one thing to shake hands and smile for the cameras; it's another thing to actually deliver results on behalf of our people. I am a firm believer that relations with India are important to the United States. It's important for the people of the United States; it's important for people who want to work in the United States. And to the extent that we are able to achieve mutually beneficial goals, to eliminate barriers, and to hear from people who are actually on the frontlines creating jobs, I think is useful for those of us in government.

So I'm looking forward to this moment. One of the action steps that we agreed to take last July was to set up this forum. And, Mr. Prime Minister, it's good to see things happening. It's good to see results. And this is a result of an historic meeting, set of meetings.

And so I want to thank you for your hospitality. Thank you all for coming. I'm looking forward to hearing what folks have to say. And once you say it, once we figure out the roadblocks for further development, you have my commitment that we will work to remove those roadblocks.

Thanks for having me.

NOTE: The President spoke at 11:38 a.m. in the Hyderabad House. Prime Minister Singh

referred to William B. Harrison, Jr., chairman of the board, JP Morgan Chase & Co.; and Ratan N. Tata, chairman, Tata Group.

## Remarks Following Discussions With Prime Minister Manmohan Singh of India and an Exchange With Reporters in New Delhi March 2, 2006

*Prime Minister Singh.* Shall I start?

*President Bush.* Please.

*Prime Minister Singh.* Mr. President, ladies and gentlemen of the press: President Bush and I have completed very cordial and productive discussions this morning. We reviewed the status of our cooperation, including the agenda that was set on July 18, 2005. The joint statement that will be shared with all of you today contains a number of announcements and initiatives that underline the significant progress in our relationship.

Many of the areas that our cooperation now covers are essential to India's national development. They include energy, agriculture, science and technology, trade and investment, high technology, health, and a clean environment. This is a highly ambitious agenda, one that is befitting our growing strategic partnership. When implemented, they will make a real difference to the lives of our people.

The President and I had an opportunity to review the global situation in our talks. As you're all aware, India and the United States are working together increasingly on global issues. This is not just good for our two countries but also benefits the international community, as we can complement each others' capabilities and share responsibilities. President Bush is admired for his strong position on terrorism. And I was particularly pleased that we agreed on the need to root out terrorism, of which India has been a major victim.

I'm particularly pleased that we have reached an understanding on the imple-

mentation of our agreement on civil nuclear cooperation of July 18, 2005. I have conveyed to the President that India has finalized the identification of civilian facilities to which we had committed. I was also happy to hear from the President that he now intended to approach the U.S. Congress to amend U.S. laws and the Nuclear Supplier Group to adjust its guideline. We will discuss with the International Atomic Energy Agency in regard to fashioning an appropriate India-specific safeguards agreement. You will appreciate I cannot say more now, while our Parliament is in session.

Before concluding, I would like to express my warm appreciation for the personal interest shown and the leadership role that President Bush has played in the transformation of our ties. I have met the President a number of times, and on each occasion, I have admired his vision, his resolve, and his commitment to strengthening our bilateral relations. Our discussion today make me confident that there are no limits to the Indo-U.S. partnerships.

May I invite you, Mr. President, now to make your remarks.

*President Bush.* Mr. Prime Minister, thank you very much. It's a joy to be here. Laura and I are really thankful for your hospitality, and I appreciate the lengthy and constructive dialog we just had on a wide range of issues. I particularly thank the CEOs from both the United States and India who have worked hard to help develop a way forward to make sure our relationship is constructive and long-lasting.

India and America have built a strategic partnership based upon common values. Our two democracies respect religious pluralism and the rule of law. We seek to foster economic development through trade and advancing the entrepreneurial spirit in both countries.

We're working as partners to make the world safer. India and America both suffered from terrorist attacks on our home soil. Terrorists attacked New Delhi. We're sharing information to protect each other. We have a common desire to enhance the security of our peoples. We're cooperating on the military front. We worked as partners in responding to the tsunami. I was struck, and so were the American people, that the Indian Air Force delivered Hurricane Katrina aid to an Air Force base in Little Rock, Arkansas. And for that, Mr. Prime Minister, thank you.

We are committed to promoting democracy worldwide. We are leaders in the United Nations Democracy Fund, which provides grants to help young democracies develop civil institutions in a free society. I particularly want to thank the Indian people and the Indian Government for supporting the new democracy in the neighborhood, and that being the democracy in Afghanistan, where you've pledged 565 million in reconstruction aid, plus 50 million for the new National Assembly building.

On Burma, we agree on the deplorable state of human rights in Burma, and all nations to seek the release of Aung San Suu Kyi. In Nepal, we agreed that the Maoists should abandon violence and that the King should reach out to the political parties to restore democratic institutions. In other words, our discussions are more than just friendly handshakes. We discuss important international relations. We're partners in peace. And that's in the interests of our own people, as well as the interests of people around the world.

On trade and investment, ties are growing. We're partners in expanding global trade. The United States is India's largest

trading partner, and India is one of the United States fastest growing export markets. That's one of the reasons we met with the CEOs today, is to how to further trade and how to further commerce and how to further opportunities.

And, oh, by the way, Mr. Prime Minister, the United States is looking forward to eating Indian mangos. Part of liberalizing trade is to open up markets. And as a result of your leadership and our hard work, we are opening up markets. Our Agricultural Knowledge Initiative is an important initiative for both countries, where we'll fund joint agricultural research projects.

Prime Minister Singh and I established a trade policy forum to address bilateral trade issues. One of the areas we discussed today is how we can work together to make sure that the Doha negotiations end on a positive note. Trade is important. Trade is important for our peoples. Trade is important to help nations develop ways forward, help nations overcome poverty. And I appreciate your understanding of that, Mr. Prime Minister. I'm looking forward to working with you.

As the Prime Minister mentioned, we concluded an historic agreement today on nuclear power. It's not an easy job for the Prime Minister to achieve this agreement, I understand. It's not easy for the American President to achieve this agreement. But it's a necessary agreement. It's one that will help both our peoples.

Again, I applaud you for your courage and your leadership. I'm looking forward to working with our United States Congress to change decades of law that will enable us to move forward in this important initiative.

Also, we talked about the Advanced Energy Initiative that I'm proposing in my own country. Listen, the whole purpose of the Advanced Energy Initiative is to end our dependence on oil, and as we develop technologies that will enable us to do so, we look forward to working with India so

we can achieve the same objectives. Dependency upon fossil fuels causes—particularly during times of shortage—causes prices to rise in both our countries. And it's in our interests that we share technologies to move away from the era of fossil fuels.

India and Pakistan have an historic opportunity to work toward lasting peace. Prime Minister Singh and President Musharraf have shown themselves to be leaders of courage and vision. And I encourage them to continue making progress on all issues, including Kashmir.

India and America are partners in addressing other global issues like HIV/AIDS and pandemic flu. In other words, this partnership of ours is substantive, and it's important, and it's strategic. And I thank the Prime Minister for working with me to advance this relationship in such a way that we can define our previous meetings and today's meeting as historic in nature. I'm confident that the relationship between India and the United States is good for the United States of America. I hope it's good for the people of India, and I know it's going to be good for laying the foundations of peace in this world of ours.

So, Mr. Prime Minister, thank you very much for having me.

*Prime Minister Singh.* It's a great honor, Mr. President, to have you.

*Civilian Nuclear Power Program in India/  
United Nations Security Council  
Membership*

Q. Thank you, Mr. Prime Minister. Thank you, Mr. President. Sir, since you have said that India-U.S. nuclear cooperation agreement is on, what we would like to know from you that how are you going to ensure that India's concerns and Indian scientific community's concerns regarding nonstop supply of fuel and also protecting India's three-phased nuclear research program?

And excuse me, sir, Mr. President, I have a question for you too, sir. Sir, you know,

everybody is saying that India and the United States are natural allies. And you have also said many times that our strategic partnership is based on common values, shared values. Sir, then why the largest democracy of the world is reluctant or not forthcoming to support—the oldest democracy of the world is not supporting the largest democracy of the world to have a permanent membership of the United Nations Security Council? This is an issue India would like to hear from you more, sir. Thank you. Thank you, Prime Minister.

*Prime Minister Singh.* You have asked me about the nuclear agreement. As I mentioned, we have reached a mutually satisfactory understanding with regard to carrying forward the process that was outlined in the July 18 statement which I and President Bush signed.

An important step forward is the preparation of a separation plan, a separation plan which separates the civilian nuclear program from the military program. That phase has been successfully completed. Now it is for the United States to go to the Congress for necessary amendments in U.S. laws. Also, the U.S. will approach the members of the Nuclear Supplier Groups, and thereafter we'll also have to go to the International Atomic Energy Agency for India-specific safeguards.

So we have made very satisfactory progress. And I thank the President for his initiative. But for his leadership, this day would probably have not come so soon.

*President Bush.* Thank you for your question on the U.N. Security Council. I'm not surprised you asked it. As a matter of fact, I gave an interview to a person from the India media in Washington, DC, prior to my trip, and that was one of the questions asked.

My answer hasn't changed, by the way, which is this: One, we support United Nations Security Council reform, and we're interested in different ways to reform the United Nations Security Council. My concern all along, however, is that if we only

stick to the United Nations Security Council reform, we miss an opportunity to reform the United Nations overall. And so our position is, let's make sure reform overall moves forward as we think about the best way to reform the Security Council.

The United Nations is a very important international body. It's one that does, however, require better accountability and—accountability on how we spend money and accountability on getting results. One such area, for example, is the Human Rights Commission. The Human Rights Commission needs to be reformed in a way that actually is able to achieve significant results on behalf of the world.

And so we're openminded, and we're listening. But what we don't want to do is have a Security Council reform measure that causes the other reforms not to go forward.

Suzanne [Suzanne Malveaux, Cable News Network]. You probably need a microphone, unless you want to belt it out.

*President's Upcoming Visit to Pakistan/War on Terror*

Q. I'll try. Thank you, Mr. President. There are reports of multiple bombings out of Karachi, Pakistan, outside of the U.S. consulate, as well as the Marriott Hotel. What can you tell us about this? Will this impact your trip, your visit to that country? And how does this speak to Pakistan or even Musharraf's ability to contain terrorists?

*President Bush.* First of all, I've been briefed on the bombings. We have lost at least one U.S. citizen in a bombing, a Foreign Service officer, and I send our country's deepest condolences to that person's loved one and family. We also send the condolences to the people from Pakistan who lost their lives.

Terrorists and killers are not going to prevent me from going to Pakistan. My trip to Pakistan is an important trip. It's important to talk with President Musharraf about continuing our fight against terrorists. After

all, he has had a direct stake in this fight—four times the terrorists have tried to kill him.

The Prime Minister and I talked about the need to continue working together to fight the scourge of terrorism. People—these terrorists will kill innocent life just like that. They have no conscience. You can't negotiate with them; you can't reason with them. They must be brought to justice. The bombing that took place prior to my trip is an indication that there are—that the war on terror goes on and that free nations must come together to fight terrorism.

The way to defeat terrorism in the short run is to share intelligence and to take action. The way to defeat terrorism in the long run is to defeat the ideology of hate with an ideology of hope. And that's democracy. The great thing about being here in India is, it's a perfect opportunity to remind the world that it is possible for people of different religions to live peacefully together. That's precisely what this grand democracy has shown the world.

And my resolve has never been stronger about protecting our own people by working with other nations to answer the call to history. And the call to history now is to stand strong in the face of these terrorist attacks, and we will.

*War on Terror/India-U.S. Relations*

Q. President Bush, two questions for you. First—

*President Bush.* Only two? That's good.

Q. First, on the nuclear deal, how do you plan to sell the agreement to a very powerful nonproliferation lobby in Washington which has opposed the deal?

And second, on the issue of terrorism, in the context of today's bomb blasts in Karachi, how do you propose to work with India on terrorism, considering India considers that the epicenter of terrorism is in Pakistan?

*President Bush.* Well, one way we work together on terrorism is to make sure our

intelligence services share information. The way you defeat terrorists is you—in the short term—is you anticipate and react to their motives and their actions through good intelligence.

We're involved in a different kind of war. This is a war where people hide and plot and plan and then, all of a sudden, emerge and kill. And so it requires a different response. And part of the response is to commit our intelligence services to sharing information. We spent some time talking about that issue today.

As well, I will send—bring the same message to President Musharraf, that we will continue to work with the President to share information to bring terrorists to justice. Terrorism is not prevalent only in this part of the world. It's prevalent in the Middle East as well. In the long run, terrorism will be defeated by giving people hope and opportunity as opposed to systems of government which breed resentment and provide—and as a result of that resentment, provide opportunity for these killers to recruit.

In terms of convincing the Congress, the first thing I will say to our Congress is that our relationship is changing to the better. You know, sometimes it's hard to get rid of history, and short-term history shows that the United States and India were divided. We didn't have much of a relationship. And as a result, there are laws on the books that reflect that. Now the relationship is changing dramatically. People in the United States have got to understand that trade with India is in our interests, that diplomatic relations with India is in our interests, that cultural exchanges with India are in our interest.

One of the things that helps make that case, of course, is the—there's a lot of Indian Americans making important contributions to our country. And we welcome those contributions. I think there needs to be more student exchanges between our countries. I think we ought to expand H1B

visas for Indian scientists and engineers and physicists and people in our country.

In other words, what I'm trying to explain to you is that it's a changing relationship, and part of that change is going to be how to deal with the nuclear issue. Now, proliferation is certainly a concern and a part of our discussions, and we've got a good faith gesture by the Indian Government that I'll be able to take to the Congress. But the other thing that our Congress has got to understand, that it's in our economic interests that India have a civilian nuclear power industry to help take the pressure off of the global demand for energy.

Obviously, nuclear power is a renewable source of energy, and the less demand there is for nonrenewable sources of energy like fossil fuels, the better off it is for the American people. Increasing demand for oil from America, from India and China, relative to a supply that's not keeping up with demand, causes our fuel prices to go up. And so to the extent that we can reduce demand for fossil fuels, it will help the American consumer.

And so there are several ways for me to make the case, which I'm kind of laying out for you now, so that—but this is what I'll be telling our Congress.

Axelrod [Jim Axelrod, CBS News].

#### *Civilian Nuclear Power Program in India*

Q. Mr. President, Mr. Prime Minister, following up on this just a touch, what kind of message, sir, does it send to the world that India, which has been testing as late as 1998, nuclear testing, and is not—has not signed the Nuclear Nonproliferation Treaty—is this a reward for bad behavior, as some critics suggest? And what kind of message does it send to other countries that are in the process of developing nuclear technology? Why should they sign the NPT if India is getting a deal without doing so, sir?

*President Bush.* What this agreement says is, things change, times change, that leadership can make a difference, and telling the world—sending the world a different message from that which is—what used to exist in people’s minds.

I—listen, I’ve always said this was going to be a difficult deal for the Prime Minister to sell to his Parliament, but he showed great courage and leadership. And it’s difficult for the American President to sell to our Congress, because some people just don’t want to change and change with the times. I understand that. But this agreement is in our interests, and therefore, Jim, I’m confident we can sell this to our Congress as in the interest of the United States and, at the same time, make it clear that there’s a way forward for other nations to participate in a—in civilian nuclear power in such a way as to address nonproliferation concerns.

India has charted a way forward. You heard the Prime Minister talk about going to the IAEA. That group exists to help safeguard the world from proliferation.

Listen, I proposed reprocessing agreements. That stands in stark contrast to current nuclear theology that we shouldn’t reprocess for proliferation concerns. I don’t see how you can advocate nuclear power in order to take the pressure off of our own economy, for example, without advo-

cating technological development of reprocessing, because reprocessing will not only—reprocessing is going to help with the environmental concerns with nuclear power. It will make there—to put it bluntly, there will be less material to dispose.

And so I’m trying to think differently, not to stay stuck in the past, and recognize that by thinking differently, particularly on nuclear power, we can achieve some important objectives, one of which is less reliance on fossil fuels; second is to work with our partners to help both our economies grow; and thirdly is to be strong on dealing with the proliferation issues.

Well, Mr. Prime Minister, it’s been a joy.

*Prime Minister Singh.* Thank you very much, Mr. President. We have made history today, and I thank you.

*President Bush.* Thank you, sir. Thank you.

NOTE: The President spoke at 12:26 p.m. in the Mughal Garden at the Hyderabad House. In his remarks, he referred to Aung San Suu Kyi, leader of the National League for Democracy of Burma; King Gyanendra Bir Bikram Shah Dev of Nepal; President Pervez Musharraf of Pakistan; and David Foy, a U.S. State Department official who was killed in a terrorist attack in Karachi, Pakistan, on March 2.

## Remarks at a Luncheon Hosted by Prime Minister Manmohan Singh of India in New Delhi March 2, 2006

Mr. Prime Minister and Mrs. Kaur, thank you for your hospitality. Mr. Prime Minister, I’m sorry you brought up the Taj Mahal. I’ve been hearing about it from Laura ever since I told her that we weren’t going. But we pledged if you invite us back to come back, we’d love to see the magnifi-

cent part of your country that we will be unable to see this trip.

This is an historic trip. It’s a chance to continue to build on the progress we made in Washington, DC, progress being a relationship that is—that lasts beyond our time in office. It’s a relationship that is based upon our common values, that every person

matters, every person belongs, and everybody should be able to worship as freely as they want to, the common values of recognizing the right to people to express themselves in a peaceful way.

Our relationship is one that's important for peace and prosperity in this world. It's important that we continue to work together to battle the terrorists, to give them no quarter, and to never yield. Terrorism has no place in democracy, and terrorism must be defeated for our children and grandchildren to be able to live in a peaceful world.

Our relationship is one based upon our belief that free and fair trade is in the interests of our people; that when trade moves freely and fairly, that people in our respective countries will be able to find good work and good jobs and improve their standard of living. I believe India has got a really important role to play in showing parts of the world what is possible when

it comes to having people live side by side in peace. India is such a wonderful example of pluralism, of religious freedom, of human rights. This relationship of ours is a vital relationship; it's a strategic partnership.

And so Mr. Prime Minister, thank you very much for our dialogs and our work together. Thank you for your hospitality. I want to thank the leaders who are here with us today for taking time out of your busy schedules to welcome Laura and me and our delegation.

And so I too would like to propose a toast, a toast to the Prime Minister, his wife, and to the people of India.

NOTE: The President spoke at 1:39 p.m. in the Taj Palace. In his remarks, he referred to Kaur Gursharan, wife of Prime Minister Singh. The transcript released by the Office of the Press Secretary also included the remarks of Prime Minister Singh.

## Remarks Following a Meeting With Religious Leaders in New Delhi March 2, 2006

*The President.* We have just had a very important discussion about the role of religion, not only in India but the role that religion can play in helping the world become a more peaceful place. I want to thank the leaders here around the table. Leaders from different faiths have joined us to share with—their thoughts with me.

You know, one of the things that struck me during the conversation is, in India, is—it's a country that recognizes the importance of religion and welcomes interfaith dialog, understands the importance of faith and understands the importance of people of faith discussing thoughts and views that are deep in their hearts.

And we've had a—just a—you know, India is an amazing country. Just look around the table, and you'll see different

religions represented. But everybody around the table also was so proud to be an Indian. In other words, their nationalism was equally important to them, as their religion.

We thank the—

*Acharya Srivatsa Goswami.* [*Inaudible*]—here to the world.

*The President.* Well, that's right. That's right. Thank you. Anyway, I just appreciate you all coming. Thank you for your kind words. And like you, I hope for peace, and like you, I'm proud to be here in India. It's a fantastic country.

Thank you.

NOTE: The President spoke at 4:23 p.m. at the Maurya Sheraton and Towers. Participating in the meeting was Acharya Srivatsa

Goswami, head of the Sri Caitanya Prema Samsthana.

## Joint Statement Between the United States of America and India *March 2, 2006*

President George W. Bush and Prime Minister Manmohan Singh today expressed satisfaction with the great progress the United States and India have made in advancing our strategic partnership to meet the global challenges of the 21st century. Both our countries are linked by a deep commitment to freedom and democracy; a celebration of national diversity, human creativity and innovation; a quest to expand prosperity and economic opportunity worldwide; and a desire to increase mutual security against the common threats posed by intolerance, terrorism, and the spread of weapons of mass destruction. The successful transformation of the U.S.-India relationship will have a decisive and positive influence on the future international system as it evolves in this new century.

Reviewing the progress made in deepening the global partnership between the United States and India since their Joint Statement of July 18, 2005, the President and the Prime Minister reaffirm their commitment to expand even further the growing ties between their two countries. Consistent with this objective, the two leaders wish to highlight efforts the United States and India are making together in the following areas, where they have:

### *For Economic Prosperity and Trade*

(1) Agreed to intensify efforts to develop a bilateral business climate supportive of trade and investment by:

1. Welcoming the report of the U.S.-India CEO Forum, agreeing to consider its recommendations aimed at substantially broadening our bilateral economic relations, and directing the

Chairs of the Indo-U.S. Economic Dialogue to follow up expeditiously with the CEO Forum;

2. Endorsing the efforts of the U.S.-India Trade Policy Forum to reduce barriers to trade and investment with the goal of doubling bilateral trade in three years;
3. Agreeing to advance mutually beneficial bilateral trade and investment flows by holding a high-level public-private investment summit in 2006, continuing efforts to facilitate and promote foreign direct investment and eliminate impediments to it, and enhancing bilateral consultations on various issues including tariff and non-tariff barriers to trade in goods and services, and preventing the illicit use of the financial system.
  - (2) Sought to expand cooperation in agriculture by:
    1. Launching the Knowledge Initiative on Agriculture with a three-year financial commitment to link our universities, technical institutions, and businesses to support agriculture education, joint research, and capacity building projects including in the area of biotechnology.
    2. Endorsing an agreed workplan to promote bilateral trade in agriculture through agreements that: lay out a path to open the U.S. market to Indian mangoes, recognize India as having the authority to certify that shipments of Indian products to the United States meet USDA organic standards, and provide for discussions on current regulations affecting trade

in fresh fruits and vegetables, poultry and dairy, and almonds.

(3) Reaffirmed their shared commitment to completing the WTO Doha Development Agenda (DDA) before the end of 2006, and agreed to work together to help achieve this outcome.

#### *For Energy Security and a Clean Environment*

(1) Welcomed the successful completion of discussions on India's separation plan and looked forward to the full implementation of the commitments in the July 18, 2005 Joint Statement on nuclear cooperation. This historic accomplishment will permit our countries to move forward towards our common objective of full civil nuclear energy cooperation between India and the United States and between India and the international community as a whole.

(2) Welcomed the participation of India in the ITER initiative on fusion energy as an important further step towards the common goal of full nuclear energy cooperation.

(3) Agreed on India's participation in FutureGen, an international public-private partnership to develop new, commercially viable technology for a clean coal near-zero emission power project. India will contribute funding to the project and participate in the Government Steering Committee of this initiative.

(4) Welcomed the creation of the Asia Pacific Partnership on Clean Development and Climate, which will enable India and the U.S. to work together with other countries in the region to pursue sustainable development and meet increased energy needs while addressing concerns of energy security and climate change. The Partnership will collaborate to promote the development, diffusion, deployment and transfer of cleaner, cost-effective and more efficient technologies and practices.

(5) Welcomed India's interest in the Integrated Ocean Drilling Program, an international marine research endeavor that will

contribute to long-term energy solutions such as gas hydrates.

(6) Noting the positive cooperation under the Indo-U.S. Energy Dialogue, highlighted plans to hold joint conferences on topics such as energy efficiency and natural gas, to conduct study missions on renewable energy, to establish a clearing house in India for coal-bed methane/coal-mine methane, and to exchange energy market information.

#### *For Innovation and the Knowledge Economy*

(1) Emphasizing the importance of knowledge partnerships, announced the establishment of a Bi-National Science and Technology Commission which the U.S. and India will co-fund. It will generate collaborative partnerships in science and technology and promote industrial research and development.

(2) Agreed that the United States and India would work together to promote innovation, creativity and technological advancement by providing a vibrant intellectual property rights regime, and to cooperate in the field of intellectual property rights to include capacity building activities, human resource development and public awareness programs.

(3) Agreed to continue exploring further cooperation in civil space, including areas such as space exploration, satellite navigation, and earth science. The United States and India committed to move forward with agreements that will permit the launch of U.S. satellites and satellites containing U.S. components by Indian space launch vehicles, opening up new opportunities for commercial space cooperation between the two countries.

(4) Welcomed the inclusion of two U.S. instruments in the Indian lunar mission Chandrayaan-1. They noted that memoranda of understanding to be signed by ISRO and NASA would be significant steps forward in this area.

(5) Welcomed the U.S. Department of Commerce's plan to create a license exception for items that would otherwise require an export license to end-users in India engaged solely in civilian activities.

*For Global Safety and Security*

(1) Noted the enhanced counter-terrorism cooperation between the two countries and stressed that terrorism is a global scourge that must be fought and rooted out in every part of the world.

(2) Welcomed the increased cooperation between the United States and India in the defense area, since the New Framework for the U.S.-India Defence Relationship was signed on June 28, 2005, as evidenced by successful joint exercises, expanded defence cooperation and information sharing, and greater opportunities to jointly develop technologies and address security and humanitarian issues.

(3) Reaffirmed their commitment to the protection of the free flow of commerce and to the safety of navigation, and agreed to the conclusion of a Maritime Cooperation Framework to enhance security in the maritime domain, to prevent piracy and other transnational crimes at sea, carry out search and rescue operations, combat marine pollution, respond to natural disasters, address emergent threats and enhance cooperative capabilities, including through logistics support. Both sides are working to finalize a Logistics Support Agreement at the earliest.

(4) Welcomed India's intention to join the Container Security Initiative aimed at making global maritime trade and infrastructure more secure and reducing the risk of shipping containers being used to conceal weapons of mass destruction.

(5) Reiterated their commitment to international efforts to prevent the proliferation of weapons of mass destruction.

(6) Building on the July 2005 Disaster Relief Initiative, noted the important disaster management cooperation and their

improved capabilities to respond to disaster situations.

(7) Recognized the importance of capacity building in cyber security and greater cooperation to secure their growing electronic interdependencies, including to protect electronic transactions and critical infrastructure from cybercrime, terrorism and other malicious threats.

*Deepening Democracy and Meeting International Challenges*

(1) Recalled their joint launch of the UN Democracy Fund in September 2005 and offered the experience and expertise of both Governments for capacity building, training and exchanges to third countries that request such assistance to strengthen democratic institutions.

(2) Welcomed the decision of India and the United States to designate a representative to the Government Advisory Board of the International Centre for Democratic Transition (ICDT) located in Budapest to facilitate cooperative activities with ICDT.

(3) Agreed that the Virtual Coordination and Information Centres set up in September 2005 should be further strengthened and a bilateral meeting aimed at developing a practical programme for utilization of its services be held soon.

(4) Expressed satisfaction at the expedited USFDA drug approval processes that strengthen the combat against HIV/AIDS at the global level and encourage greater corporate participation to meet this challenge, including the establishment of the Indo-U.S. Corporate Fund for HIV/AIDS..

(5) Agreed to expand bilateral efforts and continue cooperation in the area of medical research and strengthen technical capacity in food and drug regulation in India as well as address the concern on avian influenza, including agreement to reach out to the private sector, develop regional communications strategies, and plan an in-region containment and response exercise. The President welcomed India's offer to host

the International Partnership on Avian and Pandemic Influenza meeting in 2007.

(6) Welcomed India's membership in the Coalition Against Wildlife Trafficking, a partnership through which we will collaborate in the fight against illegal trade in wildlife and wildlife parts; we also welcome the opportunity to strengthen longstanding work together on the conservation of wild-

life through cooperation on park management and ecotourism.

President Bush thanked Prime Minister Singh and the people of India for the warmth of their reception and the generosity of their hospitality.

NOTE: An original was not available for verification of the content of this joint statement.

### **Joint Statement Between the United States of America and India on Trade March 2, 2006**

India and the United States agree that trade is essential to promoting global economic growth, development, freedom and prosperity.

We fully share the goal of completing the WTO Doha Development Agenda (DDA) before the end of 2006, and agree to work in partnership to help achieve this outcome.

During our discussions, we agreed to meet the task with ambition, determination and a readiness to contribute, consistent with our roles in global trade, and to keep the development dimension in focus. The system of trading rules to which our two great democracies have contributed immensely must be strengthened. Towards this global cause, we recommit ourselves and invite all key participants to demonstrate their leadership.

We agree that a successful Round depends upon progress in all areas of the negotiations if we are to meet our goal of promoting development through trade. We are committed to a DDA result consistent with the mandates already agreed that realize a substantial outcome in all three pillars of the agriculture negotiations (domestic support, export competition and market access); significant improvements in market opportunities in manufacturing and

services; and appropriate disciplines, including transparency of regulatory practices in services. We also believe we should strengthen the rules that facilitate trade, where we have jointly made proposals. Work in all these areas must go hand in hand.

We agree to pursue an ambitious agenda for the first half of 2006, consistent with the important milestones that were set at the Hong Kong Ministerial for agriculture, manufacturing, services and other issues, and continuing to press for the goal of concluding the negotiations by the end of 2006.

We will continue to work to promote reform, respond to the concerns of developing countries, and create opportunities for growth for all. We are building the trading system of the future, where progressive liberalization and reform result in improvement in standards of living for all, in particular for the millions of poor across the developing world.

While working for a successful Doha Round, we also reaffirm our commitment to strengthen and deepen bilateral trading ties. We note with satisfaction the successful implementation of our initiative to create the U.S.-India Trade Policy Forum and

the CEO Forum to this end, and in particular the achievements in the areas of agricultural trade, investment, trade in services, the reduction of tariff and non-tariff barriers to trade, and spurring innovation and creativity. We agree to promote innovation, creativity and technological advancement by providing a vibrant intellectual property rights regime. As two dynamic economies with many complementary inter-

ests, the U.S. and India will seek to enhance bilateral trade and investment ties by expanding private sector contacts, dismantling barriers to trade, building trade capacities and strengthening trade-promoting institutions.

### Statement on Senate Passage of PATRIOT Act Reauthorization Legislation *March 2, 2006*

I applaud the Senate for voting to renew the PATRIOT Act and overcoming the partisan attempts to block its passage. The terrorists have not lost the will or the ability to attack us. The PATRIOT Act is vital to the war on terror and defending our citizens against a ruthless enemy. This bill

will allow our law enforcement officials to continue to use the same tools against terrorists that are already used against drug dealers and other criminals, while safeguarding the civil liberties of the American people.

### Remarks at a State Dinner Hosted by President Abdul Kalam of India in New Delhi *March 2, 2006*

Mr. President, Prime Minister, and distinguished guests, Laura and I thank you for such a warm welcome. Thank you for this wonderful dinner tonight. We're grateful for your hospitality, and we appreciate the opportunity to visit your beautiful country.

India is home to a proud civilization. Thousands of years ago, the people of this region built great cities, established trading routes with distant lands, and created wonders of art and architecture. Its reputation for wealth and wisdom attracted many brave explorers, one of them never did complete his journey, and he ended up in America.

Like India, America respects faith and family and is rich in diversity. Americans are proud that our Nation is home to more than 2 million individuals of Indian descent. Both our nations can take pride in their achievements. People from India serve with distinction in American businesses, in the sciences, and the arts. The contributions of our Indian American community have made America a better nation, and they've helped strengthen our ties with India.

The relationship between our two nations is strong, and it rests on a firm foundation. We share common interests rooted in common belief that freedom can change lives

and transform nations. Today, our two democracies have formed a strategic partnership to bring the benefits of liberty to others, to expand global prosperity through free and fair trade, and to confront the challenges of our time. As great nations, we now have an opportunity to lead, and America values the leadership of the great nation of India.

Mr. President, again, Laura and I express our deepest heartfelt thanks. It's my honor now to toast to you, sir, and to the great nation of India.

NOTE: The President spoke at 8:45 p.m. at the Rashtrapati Bhavan. In his remarks, he referred to Prime Minister Manmohan Singh of India.

## Remarks in a Discussion With Business Students in Hyderabad, India *March 3, 2006*

*The President.* Thank you for the warm welcome. You know, as a Harvard Business School graduate, this isn't exactly how I went to class when I was there, but I am honored to be here at ISB.

Yesterday I had the honor of standing on the stage with your Prime Minister, talking about a new relationship between the United States and India. I am excited about our strategic partnership. I'm equally excited about the future of India. It is in the interest of the United States to be friends with India; it's in the interest of the United States to work for free and fair trade with India; it's in the interest of the United States that an entrepreneurial class grow in this great country. It's in the interest of India that an entrepreneurial class grow in this great country so that people can realize dreams and find good jobs.

You know, I said something really interesting—I thought interesting, otherwise, I wouldn't have said it—the other day in a speech I gave in Washington. There are—the middle class of India is 300 million people large. That's larger than the entire United States. And when America looks at India, America ought to look at India as a strategic partner in keeping the peace, a great democracy which is capable of having people from different religions live side by side in peace and harmony, and a wonderful opportunity to—with whom to trade.

One of the things that you can judge a country by is the vitality of the youth, and one of the reasons I really wanted to come to ISB was because I understand it's the center of excellence in education. It's a new school that is using innovative techniques to give people the tools necessary to succeed.

Yesterday I met with some Indian CEOs and American CEOs—kind of the old folks. Today I'm meeting with the CEOs of tomorrow, the people that are going to help drive this great engine of economic prosperity for India—for the good of the world, is how I view it.

And so thanks for letting me and the Ambassador come. Ambassador, thanks for setting this up. I want to thank Chairman Gupta, a fellow Harvard Business School graduate, who helped form this school. I want to thank the dean of this school, as well as the professors and faculty for being here as well, and the rest of the students—thanks for letting me come by to say hello. I think it would be interesting for you to tell me what's on your mind or ask me questions, the whole purpose of which is to help, kind of, foster this partnership that is developing on the political level so that people in my own country can see that there's folks just like themselves here in India working to realize dreams and create opportunities.

So whoever would like to begin, we can start. And if not, I'm just going to call on somebody—like you. [Laughter]

*Globalization/Trade With India*

Q. I guess I'll do the honors. Thank you for being here. I didn't graduate from ISB, but it seems like a great place. I graduated from Carnegie Mellon in Pittsburgh.

*The President.* That's also a good place. [Laughter] I will tell you something: She's really smart—to go there. [Laughter] You don't go there unless you're smart. [Laughter]

Q. Anyways, so I'm from the IT industry, so let me ask a question relating to that—not just IT, I guess generally outsourcing. So India and China have experienced a lot of growth because of globalization and outsourcing, in general—IT outsourcing, in particular. And I live in the U.S., so I know that there is a lot of resistance in the media and also in the industry about outsourcing. But as entrepreneurs and as people who believe in capitalism, we feel that there's no other way to go but capitalism and globalization and outsourcing, et cetera. So does the government or—does it have a political strategy on how to manage, do a balancing act?

*The President.* I appreciate it. First of all, what do you do?

Q. I have a IT consulting company.

*The President.* Okay. One of the—the future of any country is to make sure women have got opportunity, and so I congratulate you for being a CEO.

Q. Thank you.

*The President.* By the way, I've got a strong woman who travels with me in the Secretary of State. [Laughter] I'm not trying to avoid your question, by the way. [Laughter]

People do lose jobs as a result of globalization, and it's painful for those who lose jobs. But the fundamental question is, how does a government or society react to that? And it's basically one of two ways. One is to say, "Losing jobs is painful; there-

fore, let's throw up protectionist walls." And the other is to say, "Losing jobs is painful, so let's make sure people are educated so they can find—fill the jobs of the 21st century." And let's make sure that there's progrowth economic policies in place. Now, what does that mean? That means low taxes; it means less regulation; it means fewer lawsuits; it means wise energy policy.

So I've taken the position—I've taken it as recently as my State of the Union, where I said, the United States of America will reject protectionism. We won't fear competition; we welcome competition. But we won't fear the future, either, because we intend to shape it through good policies.

And that's how you deal with in a global economy. You don't retrench and pull back. You welcome competition, and you understand globalization provides great opportunities. And the classic opportunity for our American farmers and entrepreneurs and small businesses to understand, there's a 300-million-person market of middle-class citizens here in India, and that if we can make a product they want, then it becomes—at a reasonable price—and then all of a sudden, people will be able to have a market here. And so—and people in America should, I hope, maintain their confidence about the future.

Thanks for the question. Good luck to you.

Yes, ma'am.

*India-U.S. Relations/Investment*

Q. I actually went to Wellesley College, and I'm actually a student at the ISB.

*The President.* Let me say something before you ask the question. One of the most important things for America is to make sure our universities and colleges are accessible to Indian students, because I find it really interesting the first two questioners have gone to school in the United States. There can be, sometimes, perceptions about our country that simply aren't the truth but, nevertheless, become stuck in

people's minds. And one way to defeat those perceptions is to welcome people to the United States so you can see firsthand our good side and our bad side, and you can draw your own conclusions without being told what to think.

Sorry to interrupt.

Q. No problem. This is actually related to the point you just made about the market with the 300 million people. I actually run the non-profit club and social enterprise club here at the ISB, with a lot of help from the faculty from the Center of Entrepreneurship and the student body. And we're a fairly active group who are very—who believe in what we call compassionate capitalism, through providing for venture capital funding for the small businesses and social entrepreneurs so that they can innovate and actually self-sustain themselves by providing affordable goods and using a market-based model, rather than the traditional aid-based model.

So my question to you, Mr. President, is what do you feel and how do you feel that your Government will support India in this sort of bilateral partnership, whereby your investors can get a financial return, as well as create social impact in a developing country such as India?

*The President.* Well, there's two types of investments. One is private capital, which goes to places where people think they can get a reasonable return relative to risk. And Government can help assuage some concerns about risk by having transparency in policy, consistent law. One of the things you don't want to do is invest in a country, and then all of a sudden, laws change—or transparency into why people make decisions, or less bureaucratic hurdles in order to invest.

People look around at places to invest. In my country, for example, there's competition between the States. And if they see there's a lot of bureaucratic hurdles you have to get over in order to invest in one State versus another, people tend

to mitigate risk in order to maximize return.

There's also public investment, and through USAID and other aspects of our State Department, we do provide micro-financing—small loans to entrepreneurs.

Today I went over to the Agricultural Center and saw some of the benefits of not only good agricultural research but the concept of microloans to encourage entrepreneurship, particularly amongst women in rural India. And it's an effective program. And microloans have worked around the world.

And so one of the things we do through our State Department—ably led by Secretary Rice, I want you to know—is to encourage microloan financing.

Yes, sir.

#### *Civilian Nuclear Power Program in India*

Q. Yes, Mr. President. My company is based in the U.S., and we deal mostly with electronic components, exports to India. My question is, after this nuclear deal, do you think the same thing will come in electronics field? Like there are a lot of sanctions, export restrictions on shipping components to India. That same product they can buy at—they pay more, but they get it from Europe where there's no export restrictions.

*The President.* We're constantly reviewing what's called the Export Control List. And I thank you for bringing that up. And obviously, as this relationship changes, as a strategic partner, the folks involved with the Export Control List will be taking that into account.

Yesterday's energy agreement was an important agreement. It's important for the United States, and it's important for India. It's important for the United States because—in that we live in a global energy market when a fast-growing country like India consumes more fossil fuels, it causes the price of fossil fuels to go up not only in India but around the world, including

the United States. And therefore, the extent to which we can help nations develop civilian nuclear power is in the nation's interest.

Secondly, India has been an excellent partner in nonproliferation over the past decades, and therefore, I can tell the American people that this is an important agreement to help deal with the proliferation issue.

For India, it makes sense because it will enable India to be able to meet electricity needs in a way that doesn't pollute the air. The United States and India and China must use technologies to do our duty to not only make sure our economies expand but also to be good stewards of the environment. And nuclear energy is a renewable source of energy in which there is zero greenhouse gases.

Yesterday was a—as I mentioned to you in our private meeting, yesterday was a way to put the cold war behind us and to move forward as strategic partners. And I want to congratulate your Prime Minister and the Indian Government for it—for working with me and our Government to show the world what's possible when people can come together and think strategically.

Yes, sir.

#### *India-U.S. Relations*

Q. Mr. President, I did my MBA in hospitality from Johnson and Wales, Rhode Island, and I loved every bit of it. I saw

your speech on the Asia Society, and I thought it was very spectacular.

*The President.* Thank you. You can leave it right there. [*Laughter*] No, go ahead.

Q. My question is, India was never this important. Why has it become so important now?

*The President.* That's a really good question. I think India has always been an important country, but the problem is, international politics made it very difficult for previous Presidents and previous Prime Ministers to reach common agreement. As I said, we're getting rid of the cold war, and the truth of the matter is, the cold war caused the world to become pretty well divided. And if you're on one side of the divide, it was politically difficult to work with people on the other side of the divide.

That began to change, of course. And so I wouldn't say that India was not an important country up to now, because it was.

[*At this point, the public portion of the event concluded.*]

NOTE: The President spoke at 12:38 p.m. at the Indian School of Business. In his remarks, he referred to Prime Minister Manmohan Singh of India; U.S. Ambassador to India David C. Mulford; Rajat Gupta, chairman, and M. Rammohan Rao, dean, Indian School of Business. A portion of these remarks could not be verified because the tape was incomplete.

## Remarks in New Delhi March 3, 2006

Thank you. Thank you. Please be seated. Distinguished guests, *namaste*. Laura and I have been looking forward to this visit for a long time, and we're delighted to be in India.

Over the past 2 days, we've been grateful for your kind reception, touched by your

warm hospitality, and dazzled by this vibrant and exciting land. I appreciate the opportunity to speak to the Indian people. I'm honored to bring the good wishes and the respect of the world's oldest democracy to the world's largest democracy.

Tonight we stand on the ruins of an ancient city that was the capital of an Indian kingdom thousands of years ago. Today, it is part of a modern Asian city that is the capital of one of the world's great nations. At the heart of a civilization that helped give the world mathematics, cutting-edge businesses now give us the technology of tomorrow. In the birthplace of great religions, a billion souls of varied faiths now live side by side in freedom and peace. When you come to India in the 21st century, you're inspired by the past, and you can see the future.

India in the 21st century is a natural partner of the United States because we are brothers in the cause of human liberty. Yesterday I visited a memorial to Mahatma Gandhi and read the peaceful words of a fearless man. His words are familiar in my country because they helped move a generation of Americans to overcome the injustice of racial segregation. When Martin Luther King arrived in Delhi in 1959, he said to other countries, "I may go as a tourist, but to India, I come as a pilgrim." I come to India as a friend.

For many years, the United States and India were kept apart by the rivalries that divided the world. That's changed. Our two great democracies are now united by opportunities that can lift our people and by threats that can bring down all our progress. The United States and India, separated by half the globe, are closer than ever before, and the partnership between our free nations has the power to transform the world.

The partnership between the United States and India has deep and sturdy roots in the values we share. Both our nations were founded on the conviction that all people are created equal and are endowed with certain fundamental rights, including freedom of speech, freedom of assembly, and freedom of religion. Those freedoms are enshrined in law through our written constitutions, and they are upheld daily by institutions common to both our democ-

racies: an elected legislature, an independent judiciary, a loyal political opposition, and as I know well here in India, a lively free press.

In both our countries, democracy is more than a form of government; it is the central promise of our national character. We believe that every citizen deserves equal liberty and justice, because we believe that every life has equal dignity and value. We believe all societies should welcome people of every culture, ethnicity, and religion. And because of this enduring commitment, the United States and India have overcome trials in our own history. We're proud to stand together among the world's great democracies.

The partnership between the United States and India begins with democracy, and it does not end there. Our people share a devotion to family, a passion for learning, a love of the arts, and much more. The United States is the proud home of more than 2 million Americans of Indian descent, a figure that has more than tripled over the last 20 years. America is honored to welcome 500,000 Indian tourists and businesspeople to our country each year. And we benefit from 80,000 Indian students at our universities, more than we have from any other nation. Indian Americans have made tremendous contributions to my country in technology and medicine and business and countless other fields.

When I meet with the United States Congress, I talked to a brilliant Indian American who represents the State of Louisiana. I've returned the salute of Indian Americans who defend my nation in battle as members of the United States Armed Forces. And on a sad morning 3 years ago, we learned that a brave astronaut born in India had been lost aboard the space shuttle *Columbia*. I know that India will always be proud of Dr. Kalpana Chawla, and so will the United States of America.

Americans are spending more time in India as well, and it's easy to see why.

India is rich in history, culture, and activities—from the mountains of Delhi to the holy sites of Varanasi to the studios of Bollywood. Today I met with a fascinating group of students and farmers and entrepreneurs in Hyderabad—plus it was exciting to be in the hometown of Sania Mirza. To encourage more travel and more contact between our people, the United States intends to open a new consulate in Hyderabad. We'll also build a new, state-of-the-art American Center here in Delhi. By taking these steps, we'll continue to strengthen the ties between our two countries, our two democracies.

At the start of this young century, the United States of America and the Republic of India are working together to achieve two great purposes: to expand the circle of prosperity and development across the world and to defeat our common enemies by advancing the just and noble cause of human freedom.

Our first great purpose is to spread prosperity and opportunity to people in our own land, to millions who have not known it. The freedom that sustains India's democracy is now bringing dramatic changes to India's economy. Thanks to your country's wise economic reforms and advances in technology, unprecedented opportunities are coming to India, and you are seizing those opportunities.

India's innovative people have begun to look outward and connect to the global economy as never before. Today, India has more cell phones than land-line phones. And all that separates a business in Bangalore from a business in Boston is an e-mail, a text message, or video conference. Indian entrepreneurs have used these new connections to meet the demands of consumers and businesses all across the globe. As a result, your economy has more than doubled in size since you opened up your markets in 1991. And you've dramatically raised the living standards of your citizens. India's middle class now numbers 300 mil-

lion people, more than the entire population of the United States.

America welcomes India's economic rise, because we understand that as other nations prosper, it creates more opportunity for us all. In a free economy, every citizen has something to contribute. That is why trade is such a powerful engine of prosperity and upward mobility. When markets are opened and the poor are given a chance to develop their talents and abilities, they can create a better life for their families, they add to the wealth of the world, and they can begin to afford goods and services from other nations. Free and fair trade is good for India, it's good for America, and it is good for the world.

In my countries, some focus only on one aspect of our trade relationship with India, outsourcing. It's true that some Americans have lost jobs when their companies moved operations overseas. It's also important to remember that when someone loses a job, it's an incredibly difficult period for the worker and their families. Some people believe the answer to this problem is to wall off our economy from the world through protectionist policies. I strongly disagree. My Government is helping Americans who have lost their jobs get new skills for new careers. And we're helping to create millions of new jobs in both our countries by embracing the opportunities of a global economy.

We see those opportunities here in India. Americans who come to this country will see Indian consumers buying McCurry meals from McDonald's, home appliances from Whirlpool. They will see Indian businesses buying American products, like the 68 planes that Air India recently ordered from Boeing. They will also see American businesses like General Electric and Microsoft and Intel, who are in India to learn about the needs of local customers and do vital research that makes their products more competitive in world markets. The United States will not give into the protectionists and lose these opportunities. For

the sake of workers in both our countries, America will trade with confidence.

India has responsibilities as well. India needs to continue to lift its caps on foreign investment, to make its rules and regulations more transparent, and to continue to lower its tariffs and open its markets to American agricultural products, industrial goods and services. We also hope India will continue to work to ensure that its own people are treated fairly by enforcing laws that protect children and workers from trafficking and exploitation and abuse. By enforcing its laws and educating its people and continuing to open up its economy, India can assure that prosperity and opportunity of a growing economy reaches all segments of India's population.

The world also needs India's leadership to open up global markets. The Doha round of trade talks at the World Trade Organization provides the greatest opportunity to lift hundreds of millions of people out of poverty and boost economic growth in both our countries. The United States has been pushing for an ambitious agreement on services and manufacturing and agriculture. Prime Minister Singh and I share the goal of completing the Doha round by the end of this year, and we'll work together to achieve this goal. By completing Doha, we will help build a world that lives in liberty and trades in freedom and grows in prosperity, and America and India will lead the way.

By leading together, America and India can meet other global challenges. And one of the biggest is energy. Like America, India's growing economy requires growing amounts of electricity. And the cleanest and most reliable way to meet that need is through civilian nuclear power.

Last summer in Washington, America and India reached an agreement to share civilian nuclear technology and to bring India's civilian nuclear programs under the safeguards of the International Atomic Energy Agency. In our meetings this week, Prime Minister Singh and I agreed on a

plan to implement this historic initiative. Our agreement will strengthen the security and the economy of both our nations.

By applying the most advanced technology and international standards to India's civilian nuclear program, we will increase safety and reduce the risk of proliferation. And by helping India meet its energy needs, we will take the pressure off the price of fossil fuels for consumers in India and America and around the world. We'll help India be good stewards of our environment, and we will strengthen the bonds of trust between our two great nations.

America and India are also cooperating closely in agriculture. The United States worked with India to help meet its food needs in the 1960s, when pioneering American scientists like Norman Borlaug shared agricultural technology with Indian farmers. Thanks to your hard work, you have nearly tripled your food production over the past half-century. To build on this progress, Prime Minister Singh and I are launching a new Agricultural Knowledge Initiative. This initiative will invest \$100 million to encourage exchanges between American and Indian scientists and promote joint research to improve farming technology. By working together, the United States and India will develop better ways to grow crops and get them to market and lead a second Green Revolution.

America and India are pursuing an historic agenda for cooperation in many other areas. We're working together to improve education and conservation and natural disaster response. We're cooperating closely in science and technology. And to promote the ties between American and Indian scientists, we're establishing a new \$30 million science and technology commission that will fund joint research in promising areas like biotechnology.

We're working to improve health by confronting the threat of avian flu, reducing the spread of malaria and tuberculosis, and eliminating polio in India. Our nations also

share the global challenge of HIV/AIDS. India must confront this challenge directly, openly, and at all levels of society. And as you do, America will be your partner in turning the tide against this terrible disease.

The United States and India have ambitious goals for our partnership. We have unprecedented opportunities in this world. We can look to the future with confidence because our relationship has never been better. America and India are global leaders, and we are good friends. And when we work together, there is no limit to what we can achieve.

The second great purpose is to confront the threats of our time by fighting terror and advancing freedom across the globe. Both our nations have known the pain of terror on our home soil. On September the 11th, 2001, nearly 3,000 innocent people were murdered in my country, including more than 30 who were born in India. Just over 3 months ago, terrorists struck the Parliament House here in Delhi, an attack on the heart of Indian democracy.

In both our countries, people have struggled to understand the reason for terrorist assaults on free societies. We've begun to learn some of the answers. The terrorists are followers of a violent ideology that calls for the murder of Christians and Hindus and Sikhs and Jews and vast numbers of Muslims who do not share their radical views.

The terrorists' goal is to impose a hateful vision that denies all political and religious freedom. Those terrorists lack the military strength to challenge great nations directly, so they use the weapon of fear. When terrorists murder innocent office workers in New York or kill shoppers at a market in Delhi or blow up commuters in London, they hope these horrors will break our will. They target democracies because they think we are weak, and they think we can be frightened into retreat. The terrorists have misunderstood our countries. America and

India love our freedom, and we will fight to keep it.

When your Prime Minister addressed the United States Congress, he said this: "We must fight terrorism wherever it exists, because terrorism anywhere threatens democracy everywhere." He is right. And so America and India are allies in the war against terror.

After the attacks of September the 11th, the Indian Navy provided vital support to Operation Enduring Freedom by relieving American ships securing the Strait of Malacca, and we thank the Indian Navy. Today, our nations are cooperating closely on critical areas like bioterrorism and airport security and cyber security. Our military cooperation is stronger than ever before. America and India are in this war together, and we will win this war together.

In the long run, the United States and India understand that winning the war on terror requires changing the conditions that give rise to terror. History shows us the way. From the East to West, we've seen that only one force is powerful enough to replace hatred with hope, and that is the force of human freedom. Free societies do not harbor terrorists or breed resentment. Free societies respect the rights of their citizens and their neighbors. Free societies are peaceful societies.

As your first Prime Minister, Prime Minister Nehru, once said: "Evil flourishes far more in the shadows than in the light of day." Together, America and India will bring the light of freedom to the darkest corners of our Earth.

Nearly 60 years have passed since India mounted a courageous fight for a free country of your own. The American people stood with you in the struggle for freedom. President Franklin Roosevelt was one of the first world leaders to support India's independence. Through the decades, India has built a strong democracy in which people from different faiths live together in freedom and peace.

India has a Hindu majority and one of the world's largest Muslim populations. India is also home to millions of Sikhs and Christians and other religious groups. All worship freely in temples and mosques and churches all across this great land. Indians of diverse backgrounds attend school together and work together and govern your nation together. As a multiethnic, multireligious democracy, India is showing the world that the best way to ensure fairness and tolerance is to establish the rule of law. The best way to counter resentment is to allow peaceful expression. The best way to honor human dignity is to protect human rights. For every nation divided by race, religion, or culture, India offers a hopeful path. If justice is the goal, then democracy is the way.

The world has benefited from the example of India's democracy. And now the world needs India's leadership in freedom's cause. As a global power, India has an historic duty to support democracy around the world. In Afghanistan, which I just visited on Wednesday, the world is beginning to see what India's leadership can accomplish. Since the Taliban was removed from power, India has pledged \$565 million to help the Afghan people to get back on their feet. Your country has trained National Assembly staff, developing a similar program for the Assembly's elected leaders. You recently announced that you'll provide an additional \$50 million to help the Afghans complete their National Assembly building. After so many years of suffering, the Afghan people are reclaiming a future of hope and freedom, and they will always remember that in their hour of need, India stood with them.

India is also showing its leadership in the cause of democracy by cofounding the Global Democracy Initiative. Prime Minister Singh and I were proud to be the first two contributors to this initiative to promote democracy and development across the world. Now India can build on this commitment by working directly with

nations where democracy is just beginning to emerge. As the world's young democracies take shape, India offers a compelling example of how to preserve a country's unique culture and history while guaranteeing the universal freedoms that are the foundation of genuine democracies.

India's leadership is needed in a world that is hungry for freedom. Men and women from North Korea to Burma to Syria to Zimbabwe to Cuba yearn for their liberty. In Iran, a proud people is held hostage by a small clerical elite that denies basic liberties, sponsors terrorism, and pursues nuclear weapons. Our nations must not pretend that the people of these countries prefer their own enslavement. We must stand with reformers and dissidents and civil society organizations and hasten the day when the people of these nations can determine their own future and choose their own leaders. These people may not gain their liberty overnight, but history is on their side.

Tonight I will leave India to travel to Pakistan, another important partner and friend of the United States. There was a time when America's good relations with Pakistan would have been a source of concern here in India. That day's passed. India is better off because America has a close relationship with Pakistan, and Pakistan is better off because America has a close relation with India. On my trip to Islamabad, I will meet with President Musharraf to discuss Pakistan's vital cooperation in the war on terror and our efforts to foster economic and political development so we can reduce the appeal of radical Islam. I believe that a prosperous, democratic Pakistan will be a steadfast partner for America, a peaceful neighbor for India, and a force for freedom and moderation in the Arab world.

The advance for freedom is the great story of our time. In 1945, just 2 years before India achieved independence, there were fewer than two dozen democracies on Earth. Today, there are more than 100,

and democracies are developing and thriving from Asia to Africa to Eastern Europe to Latin America. The whole world can see that freedom is not an American value or an Indian value; freedom is a universal value, and that is because the source of freedom is a power greater than our own. As Mahatma Ghandi said, "Freedom is the gift of God and the right of every nation." Let us remember those words as we head into the 21st century.

In a few days, I'll return to America, and I will never forget my time here in India. America is proud to call your democ-

racy a friend. We're optimistic about your future. The great Indian poet Tagore once wrote, "There's only one history—the history of man." The United States and India go forward with faith in those words. There's only one history of man—and it leads to freedom.

May God bless India.

NOTE: The President spoke at 6:42 p.m. at the Purana Qila. In his remarks, he referred to Prime Minister Manmohan Singh of India; professional tennis player Sania Mirza; and President Pervez Musharraf of Pakistan.

## Remarks Following Discussions With President Pervez Musharraf of Pakistan and an Exchange With Reporters in Islamabad, Pakistan March 4, 2006

*President Musharraf.* With your permission, Mr. President—ladies and gentlemen, it's indeed a great day. It's our honor, it's a proud privilege for Pakistan to receive President Bush, Mrs. Laura Bush, the First Lady, and such a large delegation from the United States. We are extremely glad that this has happened and the President is in our midst.

In our discussions, first of all, I expressed Pakistan's deepest regrets on the very sad incident of the killing of a United States diplomat in Karachi. We know that it has been timed very viciously to vitiate the atmosphere during the President's visit, but I'm very glad and I'm extremely grateful to the President for showing understanding and showing also the resolve not to let such terrorist acts interfere in the normal process of our strategic cooperation.

I also expressed Pakistan's gratitude to the President for the assistance that we got in the relief operations and the reconstruction activity of the earthquake in our hour of need. I don't think without the assistance of the Chinooks of United States and the medical teams, the hospitals, that we could

have met the challenges of the relief operation in the earthquake. And we look forward to increased involvement—or sustained involvement of United States in assisting us in the reconstruction activity. So, our extreme gratitude to United States.

Ladies and gentlemen, Pakistan and United States have always had a strategic partnership, a strategic relationships all along. Today with my interaction with the President, we have revived and maybe further strengthened this relationship. We have laid the foundations of a very strong, sustainable, broad-based, and a long-term relationship between Pakistan and United States. And this relationship includes, first of all, commencing our United States-Pakistan strategic dialog in an institutional manner, creating an institutional methodology of doing that, and talking of—within this, talking of trade and investment, talking of defense relationships, cooperation in education, and above all, cooperation in our fight against terrorism and extremism.

I did express my gratitude to the President also for his efforts towards resolution of disputes in the region, to bring peace

into the region, and a special reference to the resolution of the Kashmir dispute. I did request the President to remain involved in facilitating a resolution of all disputes including, obviously, the Kashmir dispute.

Last of all, I did touch on the very thorny issue of the act, blasphemous act against our Prophet, peace be upon him. I did express the concerns of the Muslim world, in general, who condemn such acts and who reject the issue of justifying these acts in the name of freedom of press. May I say that the President did show concern, and I'm extremely grateful to him for showing concern toward the sentiments of the Muslim world.

In the end, I would like to say that, again, that I look forward to an era of cooperation, of strategic relationships with you, with the United States. And may I add on a personal note, I look forward to sustaining this great friendship that I have developed with you, personally, Mr. President. Thank you very much again for coming to Pakistan and doing us this honor of hosting. Thank you very much.

*President Bush.* Mr. President, thank you. Laura and I are really glad to be here, and we want to thank you and Ms. Musharraf for your hospitality. We do have a good friendship. It was displayed last night when I got off Air Force One and your daughter was there to greet us. And that was a really kind gesture, and I thank you very much for that. I particularly thank your daughter for coming out.

We've had a—we're going to have a full day. We've just had a lengthy one-on-one discussion about common interests. Then we invited members of our Government in to continue our discussion. I'll talk a little bit about the earthquake relief—I mean, the—yes, the earthquake relief in a minute. But I am looking forward to the meeting with a cross-section of Pakistani society, which will take place later on today, and I'm particularly interested in cricket. I understand you've lined up a little cricket

exhibition for us, and maybe I'll take the bat, I don't know. We'll see. [Laughter] I'm kind of getting old these days.

Mr. President and I reaffirmed our shared commitment to a broad and lasting strategic partnership. And that partnership begins with close cooperation in the war on terror. President Musharraf made a bold decision for his people and for peace, after September the 11th, when Pakistan chose to fight the terrorists. The American people appreciate your leadership, Mr. President, and so do I.

Pakistan has captured or killed hundreds of Al Qaida terrorists. Pakistan has lost brave citizens in this fight. We're grateful to all who have given their lives in this vital cause. We honor the Pakistanis who continue to risk their lives to confront the terrorists. This week's bombing in Karachi shows again the war on terror goes on. America mourns the loss of all killed in the attack. We send our condolences to the family of David Foy, and we send our condolences, as well, to the families of the Pakistanis who lost their lives. We're not going to back down in the face of these killers. We'll fight this war, and we will win this war together.

Pakistan is an important partner in fighting proliferation. Pakistan agreed to join the Container Security Initiative, an international effort to stop the spread of dangerous material shipments. And I thank you for that, Mr. President. We'll continue to work together to ensure that the world's most dangerous weapons do not end up in the hands of the terrorists.

We support democracy in Pakistan. President Musharraf understands that in the long run, the way to defeat terrorists is to replace an ideology of hatred with an ideology of hope. And I thank you for your extensive briefing today on your plans to spread freedom throughout your country. President Musharraf envisions a modern state that provides an alternative to radicalism.

The elections scheduled for 2007 are a great opportunity for Pakistan. The President understands these elections need to be open and honest. America will continue to working with Pakistan to lay the foundations of democracy. And I appreciate your commitment.

Pakistan and India now have an historic opportunity to work toward lasting peace. President Musharraf and Prime Minister Singh have shown themselves to be leaders of courage and vision. I was reflecting with the President how much the atmosphere has changed since I first became inaugurated as President. You think back to 2001 and 2002, there was a lot of tension, a lot of concern. And yet the President has stood up and led the process toward better understanding, better exchanges with India. I encourage all sides to continue to make progress on important issues, including Kashmir.

We're proud to help our Pakistani friends recover from the devastation of the earthquake. We just saw a film of the earthquake. It is staggering what the people of this country have been through. It is unbelievable how many people lost their lives, how many people have lost their homes. And we're proud to help. We're proud to help a great Pakistan military take the lead. We're proud to stand with the NGOs and those who deliver compassion as this country rebuilds. We stand by our commitment, our pledge of one-half billion dollars for recovery and reconstruction.

We're cooperating to strengthen our economies. I congratulate the Government on its strong economic growth. We are in the process of working on a bilateral investment treaty that will encourage foreign investment and more opportunity for the people of Pakistan. We strongly support the President's vision of a reconstruction opportunity zone in remote areas of Pakistan and Afghanistan. This vision means that products manufactured in those zones would be eligible for duty-free entry into the United

States. And so we're working to create such zones.

Our idea is to continue to work with our strong friend and ally, work to keep the peace, to win the war on terror, to help the spread of democracy and freedom, and to encourage vital economic development.

Finally, we look forward to continuing to work with the President on his vision to make sure that education is spread throughout this country, particularly for young girls. President Musharraf briefed us on his education plans today, and they're farsighted, and they're visionary. The United States looks forward to helping you, sir, implement that vision.

All in all, it's an honor to be here. Thanks for your hospitality. I'm looking forward to taking some questions.

#### *Kashmir/Pakistan-U.S. Relations*

Q. Thank you, President Musharraf.

President Bush, in your address to the Asia Society, you talked about a strategic partnership with Pakistan, as did President Musharraf just now. And, of course, you just mentioned the bilateral investment treaty. Could you list some possible tangible milestones in forging this relationship and taking it forward? And also, on Kashmir, what are your perceptions on how this can be resolved, given that you've met both the leaders of Pakistan and India now? Thank you.

*President Bush.* The best way for Kashmir to be resolved is for leaders of both countries to step up and lead. And that's exactly what President Musharraf has done, and that's what Prime Minister Singh has assured me he wants to do, and that is to resolve this situation.

Obviously, there needs to be some confidence in order for the countries to go forward, and therefore, the confidence-building measures that the governments have taken is beginning to bear fruits, in my judgment—increased trade, increased transportation. I thought it was interesting

that the Indians sent supplies immediately upon the devastating natural disaster. In other words, things are—the atmosphere is changing.

However, in order for a deal to get done, it requires commitment at the leadership level. And in my perspective, I've seen the commitment, and the role of the United States is to continue to encourage the parties to come together.

The first part of the question was tangible evidence. Well, part of the tangible evidence of our relationship is a half-a-billion-dollars commitment to help this country rebuild; it's the \$66 million last year to help implement the President's education initiative. It is the idea of developing reconstruction zones—I mean, trade zones in remote areas so that goods manufactured in those zones can get duty-free access to the United States, on the theory that economic vitality and economic prosperity for people in the remote regions of Pakistan will help defeat the terrorists and their hateful ideology.

Sam Bodman is coming, our Secretary of Energy, to work with Pakistan on Pakistan's energy needs. There's a variety of things we can continue to cooperate on. Perhaps the most important one of all is to defeat these terrorists, some of whom are lodged here in Pakistan, some of whom have tried to kill your President. And close cooperation is needed to defeat them.

Terry Hunt [Terence Hunt, Associated Press].

#### *War on Terror*

Q. Thank you, Mr. President. Mr. President, what would you like to see President Musharraf do in the war on terrorism that he's not doing now? Is the United States getting the access and the help that it needs to go after Al Qaida and Usama bin Laden?

*President Bush.* There's a lot of work to be done in defeating Al Qaida. The President and I know that. We've spent a good while this morning talking about

the work that needs to be done. The best way to defeat Al Qaida is to find—is to share good intelligence to locate them and then to be prepared to bring them to justice. So, one, the first question that I always ask is whether or not our intelligence sharing is good enough, and we're working on it to make sure it's good enough. Intelligence is gathered by—in a lot of different ways, but the key thing is that, one, it be actionable, and two, it be shared on a real-time basis.

Secondly, in order for Pakistan to defend herself from Al Qaida, she must have equipment necessary to move quickly, without tipping off the enemy. The President is training up special forces teams to do just that. And so while we do have a lot of work to be done, it's important that we stay on the hunt. Part of my mission today was to determine whether or not the President is as committed as he has been in the past to bringing these terrorists to justice, and he is. He understands the stakes; he understands the responsibility; and he understands the need to make sure our strategy is able to defeat the enemy.

Do you want to say something to that?

*President Musharraf.* May I add to this, with your permission—the first element that one needs to be very clear is the intentions. I think it's very clear that the intentions of Pakistan and my intentions are absolutely clear that we are a very strong—we have a strong partnership on the issue of fighting terrorism. So the intentions should be very clear.

Then we need to strategize. We have strategized. We have strategized how to deal with terrorism, and then strategized also on how to deal with extremism, which is very different from terrorism. So we have strategized both. Then we need to come forward to the implementation part. Now, the implementation has to be strong also, with all the resolve. We are doing that also. So if at all there are slippages, it is possible in the implementation part. But as long as the intention is clear, the resolve is

there, and the strategy is clear, we are moving forward toward to delivering, and we will succeed. That is what I think. Yes.

#### *Energy/Pakistan-U.S. Relations*

*Q.* My question is to President Bush. President Bush, you've talked about a strategic relationship with Pakistan. You've also talked about helping Pakistan economically, and you just mentioned that the Energy Secretary is going to be visiting Pakistan. So Pakistan has some general energy needs, and in that respect, the Iran-Pakistan-India gas pipeline seems to have hit some problems because of the opposition from the United States. So what are some specific options that you have to address Pakistan's energy concerns? And are you working on offering Pakistan a civilian nuclear deal? Thank you.

*President Bush.* As I mentioned, Secretary of Energy Sam Bodman will be here to work with the Pakistan Government. Our beef with Iran is not the pipeline; our beef with Iran is the fact that they want to develop a nuclear weapon. And I believe a nuclear weapon in the hands of the Iranians would be very dangerous for all of us. It would endanger world peace. So we're working very hard to convince the Iranians to get rid of their nuclear ambitions.

As to the civilian nuclear program, first of all, I understand—the President brought this issue up with me—that Pakistan has got energy needs because of a growing economy. And he explained to me the natural gas situation here in the country. We understand you need to get natural gas in the region, and that's fine.

Secondly, we discussed a civilian nuclear program, and I explained that Pakistan and India are different countries with different needs and different histories. So, as we proceed forward, our strategy will take in effect those well-known differences.

Toby [Tabassum Zakaria, Reuters].

#### *Democracy in Pakistan*

*Q.* Mr. President—

*President Bush.* Which one?

*Q.* Both of you can address this. Some critics—

*President Bush.* Trying to get you a question. [Laughter]

*Q.* Some critics say that Pakistan is not moving quickly enough on democratic reforms. And moves towards democracy has been one of the hallmarks of your administration. How do you respond to critics who say you are holding back on pressing President Musharraf on moves toward democracy because of its help in the war on terrorism? And I would also ask—

*President Bush.* Well, we discussed—we spent a lot of time talking about democracy in Pakistan, and I believe democracy is Pakistan's future. And we share a strong commitment to democracy. I just mentioned in my opening address the idea of making sure the elections go forward in 2007, and I discussed that with the President. President Musharraf has made clear that he intends to hold elections—I'll let him speak for himself on this issue, but democracy has been definitely a part of our agenda here, as it should be.

Secondly, one of the things that the President is constantly talking about is the ways to defeat extremism. We're talking about making sure that we work closely to bring the terrorists to justice, but in the long run, he understands that extremism can be defeated by freedom and democracy and prosperity and better education. And we spent a lot of time strategizing on that subject today.

I'll let you speak for yourself on the subject, though, Mr. President.

*President Musharraf.* Unfortunately, we are accused a lot on not moving forward on democracy. But as I understand democracy, we are a—may I venture to tell you what we've done in line with democracy to introduce sustainable democracy in Pakistan. The first ingredient of democracy, I

believe, is the empowerment of the people. We have empowered the people of Pakistan now—they were never empowered before—by introducing a local government system where we have given the destiny of their areas for development, for welfare, for progress in their own hands through financial, political, and administrative involvement.

It also—democracy also means empowerment of women. It is the first time that we have empowered the women of Pakistan, by giving them a say in the political milieu of Pakistan. Today, there are over 30,000 women in the political hierarchy of Pakistan. We have empowered the minorities of Pakistan for the first time. They have got a joint election system, where previously they had a separate election system. Therefore, they have been mainstreamed in that every person standing for elections has to go to the minorities to ask for their votes now. Therefore, they feel more a part of the Pakistani culture and Pakistan society.

Then we have empowered also—we have liberated the media and the press. If you see this press today sitting around here, and the media, previously there was only one Pakistan television. Today, there are dozens of channels. All these people sitting around are the result of my democratization of Pakistan, opening the Pakistan society of the media—the print media and the electronic media, both. And they're totally liberated.

And then, finally—obviously, this is to do with freedom of speech and freedom of expression. And then, finally, is the issue of their having the right to vote and elect their own people. And that is what we do. Today, the Senate, the National Assembly, the Provincial assemblies and the—of the

local government is there. And they've been voted through absolute—franchise in a free and fair manner.

So, therefore, may I say that we have introduced the essence of democracy now in Pakistan. It has been done now. It never—all these things never existed before. What maybe you are talking of is merely the label, which probably you are inferring on to my uniform. Indeed, and without saying that you are inferring to it, yes, indeed, that is an issue which needs to be addressed. And I will follow constitutional norms. Even now I am following constitutional norms where I have been allowed to wear this uniform until 2007—being in uniform as the President of Pakistan. Beyond 2007, yes, indeed, this is an issue which has to be addressed, and it has to be addressed according to the Constitution of Pakistan. And I will never violate the Constitution of Pakistan.

So let me assure you that democracy will prevail. Sustainable democracy has been introduced in Pakistan and will prevail in Pakistan, especially beyond 2007. Long answer.

*President Bush.* Yes. Good job—important answer.

*President Musharraf.* Thank you very much.

*President Bush.* Very good job. Thank you again, sir.

NOTE: The President spoke at 12:45 p.m. at the Aiwan-e-Sadr. In his remarks, he referred to Sehba Musharraf, wife, and Ayla Raza, daughter, of President Musharraf; David Foy, a U.S. State Department official who was killed in a terrorist attack in Karachi, Pakistan, on March 2; and Prime Minister Manmohan Singh of India.

## Remarks Prior to Discussions With Members of the Community in Islamabad

March 4, 2006

Secretary Rice and Ambassador Crocker and I want to thank members from the civil society and Members of Parliament for joining us. My trip to Pakistan is a really important trip. Pakistan is a strategic partner and a friend of the United States.

I want to thank those of you who have come to share with me and the Secretary and the Ambassador your thoughts about how the United States can better work with the people of Pakistan.

One of the signs of a modern society is the empowerment of women. And I want to thank the women who have joined us here today to share your thoughts. And

we've got the head of a bank; we've got a Member of Parliament; we've got educators, heads of NGOs, businesspeople, that are all here to help us better understand the Pakistan society and how we can better interrelate.

Part of becoming closer friends is to listen, listen to concerns and to share our thoughts on common values. So we really want to thank you for being here. And thank you for your gracious hospitality to your country.

NOTE: The President spoke at 3:25 p.m. at the U.S. Embassy.

## Joint Statement by President George W. Bush and President Pervez Musharraf of Pakistan: United States-Pakistan Strategic Partnership

March 4, 2006

President Bush and President Musharraf have affirmed the long-term, strategic partnership between their two countries. In 2004, the United States acknowledged its aspirations for closer bilateral ties with Pakistan by designating Pakistan as a Major Non-NATO Ally. The U.S.-Pakistan strategic partnership is based on the shared interests of the United States and Pakistan in building stable and sustainable democracy and in promoting peace and security, stability, prosperity, and democracy in South Asia and across the globe.

The two leaders are determined to strengthen the foundation for a strong, stable, and enduring relationship. This will require a significant expansion of U.S.-Pakistan bilateral economic ties, including mutual trade and investment. As a key step in this direction the United States and Pakistan are making meaningful progress to-

ward concluding a Bilateral Investment Treaty.

Both leaders commit to working together with Afghanistan to make Pakistan and Afghanistan a land bridge linking the economic potentials of South Asia and Central Asia.

The American people feel profound sympathy for the victims of the tragic earthquake that struck on October 8, 2005. President Bush reaffirmed the United States' determination to stand by the Pakistani people as they recover and rebuild.

President Bush and President Musharraf reaffirm their condemnation of terrorism in all its forms and manifestations. Following the September 11 attacks, the United States and Pakistan joined international efforts to fight the scourge of terrorism. President Bush is grateful for President Musharraf's strong and vital support in the

war on terror. The two leaders underscored the need for a comprehensive strategy for addressing the threat of terrorism and extremism. President Bush and President Musharraf will continue to work together to address political injustice, poverty, corruption, ignorance, and hopelessness. They resolve to maintain their close counterterrorism cooperation and to increase their efforts to reduce the threat of terrorism regionally and internationally.

The two leaders recognize the need to promote tolerance, respect and mutual understanding, and inter-faith harmony to strengthen appreciation of the values and norms common to the world's religions and cultures. The two leaders acknowledge with appreciation the various international initiatives in this regard including President Musharraf's concept of Enlightened Moderation. The two leaders agreed that acts that disturb inter-faith harmony should be avoided.

President Bush and President Musharraf support the peace process and composite dialogue between Pakistan and India for improvement of relations and resolution of disputes and building a better future in South Asia.

Both leaders share concern about the threat to global stability posed by the proliferation of Weapons of Mass Destruction (WMD) and the threat of terrorist groups acquiring such weapons. President Bush and President Musharraf commit to play leading roles in international efforts to prevent the proliferation of WMD, their delivery systems, and related technology and expertise.

### *Strategic Dialogue*

President Bush and President Musharraf are launching a Strategic Dialogue under the Strategic Partnership. The Dialogue will be co-chaired by the U.S. Under Secretary of State for Political Affairs and Pakistan's Foreign Secretary. They will meet regularly to review issues of mutual interest.

In implementation of the strategic partnership, President Bush and President Musharraf commit both countries to undertake the following steps in the areas of economic growth and prosperity, energy, peace and security, social sector development, science and technology, democracy, and non-proliferation:

### *Economic Growth and Prosperity*

- Establish and implement strong financial sector controls that can defend against illicit finance.
- Facilitate Pakistan's economic growth through increased trade and investment links with the United States and within the region and the global economy, including through an enhanced economic dialogue encompassing bilateral cooperation for Pakistan's economic development, regional economic cooperation, and the global economy.
- The United States will provide financial support for the establishment of a Center for Entrepreneurship in Pakistan under the Broader Middle East and North Africa (BMENA) Initiative. The Center will promote entrepreneurial training and skills development to young women and men to launch business initiatives that would generate employment opportunities.

### *Energy Cooperation*

- Hold a High-Level Energy Meeting to inaugurate an energy working group, which will explore ways to meet Pakistan's growing energy needs and strengthen its energy security.
- Work together to develop public and private collaboration on a broad range of energy sources.

### *Peace and Security*

- Build a robust defense relationship that advances shared security goals, promotes regional stability, and contributes to international security.

- Continue robust U.S. security assistance to meet Pakistan's legitimate defense needs and bolster its capabilities in the war on terror.
- Deepen bilateral collaboration in the fields of defense training, joint exercises, defense procurement, technology transfers, and international peace-keeping.
- Decide to increase the frequency of defense policy discussions to strengthen collaboration in the identified sectors.
- Work together to ensure the maintenance of peace, security, and stability in the South Asia region and beyond.
- Cooperate closely in international institutions, including bodies of the United Nations, on matters of mutual concern.

#### *Social Sector Development*

- Continue U.S. support in the health sector through collaborative projects and programs.
- Reinforce Pakistan's efforts to reform and expand access to its public education through continuing U.S. cooperation.
- Encourage educational programs and greater interaction and linkages between the research and academic institutions of the two countries.
- Promote exchange of students and scholars, fellowship programs, and strengthened research collaboration, including through institutional support for higher education and training.
- Establish a wide-ranging High Level Dialogue on Education to enhance and strengthen cooperation in the education sector.

#### *Science and Technology*

- Build capacity in Pakistan and work toward increased cooperation in science, technology, and engineering.
- Improve the quality, relevance, or capacity of education and research at

Pakistan's institutions of higher education in the field of science and technology.

- Establish Pakistan-U.S. Joint Committee on Science and Technology to develop collaborative activities and relationships between the scientific and technological communities and institutions of both countries.
- Enhance institutional capacity of Pakistan in the area of environment through exchange of experts and developing linkages and collaborative projects with relevant U.S. institutions.

#### *Democracy*

- Support Pakistan as it develops strong and transparent democratic institutions and conducts free and fair elections to ensure sustainable democracy.

#### *Non-proliferation*

- Support Pakistan's non-proliferation efforts and strengthen its capabilities, by:
  - Supporting Pakistan's measures for implementation of its new export control law, including adoption of enforcement regulations and establishment of a new export licensing body; and
  - Providing U.S. assistance through the Department of Energy's Second Line of Defense Program (Megaports) and the Department of Homeland Security's Container Security Initiative.

#### *Presidential Visit*

- President Bush thanked President Musharraf and the people of Pakistan for the generous reception and warm hospitality accorded to him, Mrs. Laura Bush, and members of the Presidential delegation during their stay in Pakistan.

NOTE: An original was not available for verification of the content of this joint statement.

## The President's Radio Address *March 4, 2006*

Good morning. I have been traveling this past week in South Asia on a trip to Afghanistan, India, and Pakistan.

My first stop was Afghanistan, and I was thrilled to see firsthand the incredible transformation that has taken place there. Before September the 11th, 2001, Afghanistan was ruled by a cruel regime that oppressed its people, brutalized women, and gave safe haven to the terrorists who attacked America.

Today, the terror camps have been shut down, women are working, boys and girls are back in school, and 25 million people have now tasted freedom. The Afghan people are building a vibrant, young democracy that is an ally in the war on terror, and America is proud to have such a determined partner in the cause of freedom.

I was pleased to visit with President Karzai and members of his Cabinet and Government. I told them America will stand with the Afghan people as they build a free society and fight our common enemies, and we will see the mission through without wavering.

I was honored to visit our troops at Bagram Air Base who are serving on the frontlines of the war on terror. It was a privilege to thank them in person for their courage and for the sacrifice of their families back home. These fine Americans are standing watch for liberty halfway across the world, and I told them that all Americans were proud of them.

The next stop on my trip was India. Like America, India has endured terrorist attacks on its own soil. Like America, India is a democracy that understands the best way to ensure peace is to advance freedom. And like America, India is working to help nations like Afghanistan build the institutions of a free and democratic society.

Relations between the United States and India have never been better. One impor-

tant aspect of this partnership is working together to meet the energy needs of our growing economies, especially through the use of clean and safe nuclear power. On my trip, the United States and India reached an historic agreement to share civilian nuclear technology as India brings its civilian nuclear programs under the safeguards of the International Atomic Energy Agency. This agreement is good for American security because it will bring India's civilian nuclear program into the international nonproliferation mainstream.

The agreement also is good for the American economy. The agreement will help meet India's surging energy needs, and that will lessen India's growing demand for other energy supplies and help restrain energy prices for American consumers.

Another important aspect of this partnership is the growing trade between our two countries. In the past 10 years, India has passed economic reforms that have opened its door to trade and helped raised the living standards for millions of its people. In my meetings with Prime Minister Singh, I made clear that trade between our countries must be free and fair. I know that America's workers can compete with anyone, anytime, anywhere, so long as the rules are fair.

Ultimately, the best way to create jobs for Americans is to expand markets for American products. Today, India is one of the fastest-growing export markets for goods, services, and crops. India has now a growing middle class that is estimated at 300 million people—more than the entire population of the United States. Middle class Indians are buying home appliances from American companies like Whirlpool. Younger Indians are enjoying McCurry meals from McDonald's. And Air India has recently ordered 68 planes from Boeing. Last year, our exports to India grew by

more than 30 percent. And all this trade is creating jobs and opportunity in America. So we will continue to work to level the playing field for our workers, farmers, and businesses—and deliver a better life for all Americans.

The final stop on my trip was Pakistan, another important ally in the war on terror. After September the 11th, 2001, President Musharraf understood that he had to make a fundamental choice. He could turn a blind eye and leave his people hostage to the terrorists, or he could join the free world in fighting the terrorists.

President Musharraf made the right choice for his people, and America appreciates his leadership. Since he joined the fight against terror, President Musharraf has faced several attempts on his life, yet President Musharraf has not faltered. He understands that the terrorists are a threat to the peace and security of the Pakistani people and the world.

Our relations with Afghanistan, India, and Pakistan will enhance the security of our country. By working with these leaders and the people of these three nations, we're seizing the opportunities this new century offers and helping to lay the foundations of peace and prosperity for generations to come.

NOTE: The address was recorded at 9:05 a.m. on March 3 in the Muarya Sheraton Hotel and Towers in New Delhi, India, for broadcast at 10:06 a.m., e.s.t., on March 4. The transcript was made available by the Office of the Press Secretary on March 3 but was embargoed for release until the broadcast. Due to the 5-hour time difference, the radio address was broadcast after the President's midday remarks in Islamabad, Pakistan. In his address, the President referred to Prime Minister Manmohan Singh of India; and President Pervez Musharraf of Pakistan. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks at a State Dinner Hosted by President Pervez Musharraf of Pakistan in Islamabad

March 4, 2006

Mr. President and Mrs. Musharraf and distinguished guests, Laura and I thank you for the warm and gracious welcome. It's such a pleasure to be here in Pakistan. We've had a fantastic day. I was fooled by a googly. [*Laughter*] Otherwise, I'd have been a better batsman. But it's been a full day, Mr. President, and your hospitality has overwhelmed us, and thank you.

I bring greetings from my fellow citizens, in particular the thousands of Pakistani Americans who call my land home, folks who have really made a tremendous contribution to the United States of America.

Our nations are strong allies, Mr. President. We're allies in the war on terror, and we're allies in laying the foundation

of lasting peace. In the struggle in the war on terror, Pakistan and America has lost many good citizens. And we ask for God's blessings on their families. Pakistan's efforts to enhance peace and security have earned the respect and the admiration of the American people. When the terrorists are defeated and when the peace is won, our two nations will share the peace together.

The American people care deeply about the people of Pakistan. We watched with horror and great sorrow as last year's earthquake devastated this ancient land. Americans have experienced the trauma of natural disasters in our own country, and we've witnessed the power of friendship to rebuild lives and to restore hope. I'm proud

of the U.S. relief efforts. I want to thank those officials who are here to help the people of Pakistan.

I'm pleased that our helicopters earned the name "angels of mercy" from those who were anxious for help in the mountains. I'm proud that our Government and businesses and private organizations and individual families also saw your need and gave their time and treasures to help rebuild this vital nation. Our donations reflect the compassion of our country, the respect we have for Pakistan. And we will make good on our donations, Mr. President.

America and Pakistan have confronted great challenges together, and we will continue to do so. Americans will support the Pakistani people as they take further steps toward democracy, expand educational opportunities for boys and girls, and create

prosperity through innovation and global trade. Pakistan has a bright future because of its proud people and because of the hard work of a strong leader. President Musharraf, you've proved yourself to be a man of courage and vision. I appreciate the honor of being your partner in working for peace and security.

And so, Mr. President, with gratitude for what we've accomplished and with optimism for what we will yet accomplish, I offer my respect to you, to your gracious wife, and to the people of Pakistan.

NOTE: The President spoke at 8:10 p.m. at the Aiwan-e-Sadr. In his remarks, he referred to Sehba Musharraf, wife of President Musharraf. The transcript released by the Office of the Press Secretary also included the remarks of President Musharraf.

## Remarks at a Swearing-In Ceremony for Edward P. Lazear as Chairman of the Council of Economic Advisers March 6, 2006

*The President.* Welcome. I'm here to swear in Ed Lazear as the Chairman of the Council of Economic Advisers. Thank you all for coming. Eddie has brought a lot of his family here. For the family members who are here, welcome; thanks for supporting the old boy. [Laughter] I particularly want to thank Vicki and Julie, as well as his mother, Rose, for being here. I'm really glad you all are here. Does he still listen to you, Rose? [Laughter]

*Rose Lazear.* Oh, yes. He's a good boy.

*The President.* That's a good boy. Well, I hope my mother is saying the same thing about me. [Laughter]

Eddie is an award-winning economist from Stanford University. He's been a part of the Hoover Institute. He's taught and lectured in Asia and the Middle East and Europe. He's advised Governments in the former Soviet Union and Eastern Europe

on economic reform. He's conducted path-breaking research in the field of labor economics. He's applied his theories to real-world problems like education and immigration and compensation and productivity. He's well-rounded, and he's plenty smart.

He also understands how to get his message across. After all, he was voted teacher of the year at Stanford's Graduate School of Business. That's not an easy accomplishment. He's a founding editor of the Journal of Labor Economics. He's a good man, who has served with distinction before in Government. He served on my Advisory Panel on Federal Tax Reform. And he's going to be an outstanding Chairman of my Council of Economic Advisers.

He succeeds another outstanding economist who still bears the title of Chairman, and that's Ben Bernanke. He just wears his title over at another place here in

Washington. Eddie and Ben are part of a long line of talented economists who have served my administration as CEA Chairman, including Harvey Rosen, Greg Mankiw, and Glenn Hubbard. I want to thank Eddie for agreeing to serve our country. I appreciate his understanding of the important role he will play in my administration.

I appreciate those who are here from my administration. I see Carlos Gutierrez, the Secretary of Commerce. Carlos, welcome—Josh Bolten, a member of the Cabinet, the Office of Management and Budget. Senator Bob Bennett—thank you for coming, Senator. I really appreciate you taking time to be here. Congressman Jim Ryun and Anne are with us as well. Eddie told me he's a runner. Don't run with Ryun, Eddie.

Eddie leads my Council of Economic Advisers at an exciting time. It's a time of opportunity and a time of challenge. Today, the American economy is the envy of the world. Last year, our economy grew at a healthy 3.5 percent, faster than any other major industrialized nation. We've added more than 4.7 million new jobs during the last 2½ years. That's more than Japan and the European Union combined. Our unemployment rate is down to 4.7 percent. That's the lowest level since July of 2001. That's lower than the average of the 1970s, the 1980s, and the 1990s.

More Americans now own their homes than at any time in our history. More minority families own homes than any time in our Nation's history. This administration believes in ownership. We love the fact that somebody opens the door to their own piece of property, says, "Welcome to my piece of my property; welcome to my home."

Real after-tax income is up more than 8 percent per person since the beginning of 2001. New orders for durable goods, like machinery, have risen sharply. We've had 33 straight months of growth in our manufacturing sector. Productivity has grown

strongly over the last 5 years. Our small-business sector is thriving. America is productive; America is innovative; America is entrepreneurial. And I'm counting on Eddie's good advice to keep it that way.

We understand it's important to continue to promote progrowth economic policies and sound initiatives with one goal in mind, to keep America the economic leader in the world so our people can find jobs and realize their dreams.

Our economy grows when Americans have more of their own money to spend, save, and invest. In the last 5 years, we passed tax relief that left \$880 billion in the hands of American workers and small businesses and families. And the American people have used that money to help produce more than 4 years of uninterrupted economic growth.

The tax relief that we passed is set to expire in the next few years. If we do nothing, American families will face a massive tax increase they do not expect and will not welcome. Because America needs more than a temporary expansion, we need more than temporary tax relief. So in my State of the Union, I called upon the United States Congress to make the tax relief we passed permanent.

I also outlined several other steps to keep this economy strong and growing. We need to address our dependence on foreign sources of oil. You might remember, I stood up in front of the country and said, "We have a real problem; we're addicted to oil." I meant what I said. I call upon Congress to join with this administration to pass the Advanced Energy Initiative that will fund research in cleaner, more reliable technologies like hydrogen and ethanol, so we become less dependent. For the sake of our national security and economic security, we must not be dependent on foreign sources of oil.

We need to ensure that Americans get the health care they need. And so we're working to make health coverage more affordable and available and portable through

measures like health savings accounts and association health plans.

To maintain our edge in innovation and creativity, I proposed the American Competitiveness Initiative to promote cutting-edge research and to ensure that American children get math and science skills they need for the jobs of the 21st century.

One of the most important steps we need to take to keep this economy strong is to restrain Federal spending in Washington. That's hard to do. Everybody thinks their spending idea is a great idea. They all—all these spending ideas sound wonderful on paper. Here's our view: It's important for the Congress to set priorities. We are a nation at war, and one of the top priorities of this Government will continue to be to make sure our troops have the equipment they need to defend the United States and our citizens have what it takes to defend the homeland.

That means we must be careful about how we spend the taxpayers' money in other areas. In other words, we can't be all things to all people when it comes to spending the taxpayers' money. And we're making some good progress. Last year of the previous administration, nonsecurity discretionary spending rose by 15 percent. Every year of my Presidency, we've reduced the growth of this spending, and last year, at my request, Congress passed legislation that actually cut this spending. I thank them for their hard work.

Now I look forward to working on my—having them work on my 2007 budget that Josh Bolten is taking up to the Congress. This budget will save the taxpayers money, will cut—will continue to cut nonsecurity discretionary spending, and keep us on track to cut the deficit in half by 2009.

In the long run, the biggest challenge to our Nation's fiscal health is entitlement spending. I recently signed a bill to save nearly \$40 billion over 5 years in entitlement spending. The 2000 [2006]\* budget

we submitted proposes to save another \$65 billion over 5 years. We don't need to cut this mandatory spending; we need to slow its growth. In other words, we don't need to put our cars into reverse; we just need to slow it to meet the speed limit.

As well, I'm deadly earnest in calling members of both parties together to work to pass—to propose something we can pass out of Congress that will modernize Social Security and Medicare. It's time for Congress to set aside needless partisan politics and focus on the future of our country with real, substantive entitlement reform.

We also need to do more to reform the way Washington spends people's money. Under the current system, Congress can slip spending provisions into large bills where they never get debated and never get discussed. Those are called earmarks. As a result, too many bills passed by Congress include unnecessary spending. These earmarks reflect special interests instead of the people's interest. I'm pleased that Congress is working on earmark reform, and I encourage Members of Congress to pass meaningful and real earmark reform.

Here's another idea for them: They need to give the President the line-item veto. Congress gave the President a line-item veto in 1996, but because with problems the way the law was written, the Supreme Court struck it down. That should not be the end of the story. So in my State of the Union, I called for new legislation creating a line-item veto that will meet Supreme Court standards. Today I'm sending Congress legislation that will meet standards and give me the authority to strip special interest spending and earmarks out of a bill and then send them back to Congress for an up-or-down vote. By passing this version of the line-item veto, the administration will work with the Congress to reduce wasteful spending, reduce the budget deficit, and ensure that taxpayer dollars are spent wisely.

Congress is on record, by the way, that the President should have the line-item

---

\* White House correction.

veto authority. It has been approved previously. Forty-three Governors have this line-item veto in their States. Now it's time to bring this important tool for fiscal discipline to Washington, DC.

I'm really optimistic about the future of this country. I don't think there's any problem we can't tackle. It's really important as we put progrowth policies in place, to understand that the engine of growth is the ingenuity of the American people. I like to remind people: Government doesn't create wealth. Government creates an environment in which the entrepreneurial spirit can flourish, in which people can realize their dreams, in which small businesses can grow to be big businesses, in which the

newly arrived can have a chance to realize the great promise of our country.

Eddie understands that, and that's why I'm proud to have him by my side. And again, Eddie, thank you for agreeing to serve our great Nation. And now Andy Card will administer the oath of office.

NOTE: The President spoke at 10 a.m. in Room 450 of the Dwight D. Eisenhower Executive Office Building. In his remarks, he referred to Victoria Lazear, wife of Edward P. Lazear, and their daughter, Julie; Ben S. Bernanke, Chairman, Federal Reserve System; and Anne Ryun, wife of Representative Jim Ryun. The transcript released by the Office of the Press Secretary also included the remarks of Chairman Lazear.

## Statement on Representative William M. Thomas's Decision Not To Seek Reelection

March 6, 2006

Congressman Bill Thomas is a friend and a man of great accomplishment who has been a very effective leader in the House of Representatives. As chairman of the House Ways and Means Committee, he helped pass legislation that has brought about strong job creation and economic growth, improved health care for people of all ages, and ensured that America continues to benefit from free and fair trade.

For the last 28 years, he has worked tirelessly for the people of the Bakersfield area in California and represented them with honor and distinction. I appreciate Bill's commitment and dedication to public service, and I look forward to working with him for the remainder of the session. I wish Sharon, Bill, and the entire Thomas family all the best in the future.

## Message to the Congress Transmitting a Legislative Proposal To Give the President a Line-Item Veto

March 6, 2006

*To the Congress of the United States:*

In my State of the Union Address, I asked the Congress to give the President a line item veto. Today, I am sending the Congress a legislative proposal to give the

President line item authority to reduce wasteful spending. This legislation will help to limit spending and ensure accountability and transparency in the expenditure of taxpayer funds.

Although the Congress achieved significant spending restraint this past year, appropriations and other bills that are sent to my desk still contain spending that is not fully justified, is a low priority, or is earmarked to avoid the discipline of competitive or merit-based reviews. When this legislation is presented to me, I now have no ability to line out unnecessary spending. In 1996, the Congress gave the President a line item veto—an important tool to limit wasteful spending—but the Supreme Court struck down that version of the law in 1998.

My proposed legislation, the “Legislative Line Item Veto Act of 2006,” would provide a fast-track procedure to require the Congress to vote up-or-down on rescissions proposed by the President. There has been broad bipartisan support for similar proposals in the past. Under this proposal, the President could propose legislation to re-

scind wasteful spending, and the Congress would be obligated to vote quickly on that package of rescissions, without amendment. The same procedure would apply to new mandatory spending and to special interest tax breaks given to small numbers of individuals.

Forty-three Governors have a line item veto to reduce spending. The President needs similar authority to help control unjustified and wasteful spending in the Federal budget. I urge you to promptly consider and send me this legislation for enactment to reduce unnecessary spending and help achieve my goal of cutting the deficit in half by 2009.

GEORGE W. BUSH

The White House,  
March 6, 2006.

## Remarks at a Celebration of Women’s History Month and International Women’s Day March 7, 2006

Thank you all. Thank you, Laura. Welcome to the White House. We like to call this the people’s house. I want to remind people from around the world that we’re only temporary occupants here, but we’re trying to make the most of our time here.

I want to welcome you all as we celebrate Women’s History Month and International Women’s Day. Thanks for coming. We recognize the many contributions women have made to our country. We also honor those who have helped bring equality and freedom to women around the world.

A lot of strong women have influenced my life—[laughter]—beginning with my mother. [Laughter] She told me to say that, by the way. [Laughter] I am blessed to have a strong wife. And we are raising two young women to become independent, ca-

pable risk takers—[laughter]—so that they can realize their dreams.

I have been blessed to have strong women in my Government. My administration is better off to have really capable women who feel comfortable marching in the Oval Office and giving the President their frank advice. [Laughter]

I want to thank Secretary of Labor Elaine Chao, who is with us; Secretary of Education Margaret Spellings—she’s been giving me frank advice ever since I was the Governor of Texas. [Laughter] I want to thank Karen Hughes—Ambassador Karen Hughes, the Under Secretary for Public Diplomacy and Public Affairs. She’s been really giving me a lot of advice. [Laughter] Paula Dobriansky, the Under Secretary for Democracy and Global Affairs; Harriet Miers, my attorney—by the

way, for those of you who aren't familiar with America, it's always good to have a good attorney. [*Laughter*] Harriet Miers is my attorney. She gives me legal advice.

Fran Townsend is in charge of our—part of the National Security Council in charge of homeland security. Protecting our homeland is a vital part of America, and I rely upon a very capable, strong woman to give me good advice.

I want to thank my friend Pat Brister, who is the U.S. Representative to the United Nations Commission on the Status of Women, for joining us. Pat is—there she is—from Louisiana, where Laura and I will be tomorrow, by the way.

I want to thank Congresswoman Judy Biggert from the State of Illinois. She's with us. For those of you who are unfamiliar with our Congress, we have a lot of very capable women who are running for office and have become elected—and making a big difference in the Halls of Congress. I appreciate the members of the diplomatic corps who have joined us. Thank you all for coming. It's good to see so many ambassadors and ambassadresses here today. [*Laughter*]

I want to thank the members of the United States-Afghan Women's Council who are here. You all are making a significant difference in the lives of people who are beginning to feel the freshness of the light of democracy. And as Laura mentioned, we were in Afghanistan with President Karzai. And there's nothing better than being in a country that's beginning to realize the benefits of freedom; particularly, women who have been completely suppressed under the Taliban are now beginning to see the beautiful—breathe that beautiful air of a free society. And so I want to thank the members of the United States-Afghan Women's Council for being so diligent and caring and staying with this important issue—that issue being the freedom of women in Afghanistan.

I want to thank the members of the International Republican Institute and the

National Endowment for Democracy. Thank you for hosting our international delegates. Thank you for helping them in their training exercises and sharing expertise and compassion. I want to thank the delegations from Afghanistan and Iraq and around the world for joining us today. You're welcome in the United States of America; I hope you feel that way.

The struggle for women's rights is a story of strong women willing to take the lead. That's particularly true in the United States of America, where women like Susan B. Anthony and Alice Stone Blackwell and Elizabeth Cady Stanton and Rosa Parks changed the course of our Nation's history. Our history was altered because strong women stood up and led. These women broke down barriers to equality. We weren't always an equal society in America, and it required strong leadership to help make America a more equal place. And we're a better place because of the leadership of women throughout our history.

Women today are shaping the future of America as scientists and entrepreneurs and teachers and astronauts. They serve our Nation with honor and distinction in our Armed Forces. The distinguished leadership of women like Secretary of State Condi Rice—where is she—she had an excused absence—[*laughter*]—and Justice Sandra Day O'Connor has helped open doors for women for future generations.

Across the world, the increasing participation of women in civic and political life has strengthened democracies. A democracy is strong when women participate in the society. The nation of Liberia recently elected its first woman President, and Laura and Secretary Rice were there to witness her swearing-in. I look forward to welcoming her to America, by the way.

Women lead Governments in Germany, in Chile, and the Philippines. In Rwanda, nearly half of the members of Parliament are women. And women are now holding more parliamentary seats in nations like Morocco and Jordan and Tunisia.

In the last 4 years, we have also seen women make great strides in Afghanistan and Iraq—countries where just a few years ago, women were denied basic rights and were brutalized by tyrants. Today in Afghanistan, girls are attending school. That speaks well for Afghanistan's future. Women hold about 20 percent of the seats in the National Assembly. Nobody could have dreamed that was possible 5 years ago. In last fall's elections, about 40 percent of the voters were women. In Iraq, women are voting in large numbers, and when the new Iraqi Parliament takes office, women will hold about one-quarter of the seats.

The United States is working to increase opportunities for women in these two emerging democracies. Through the Iraqi Women's Democracy Initiative, we're providing funds for Iraqi women to receive training in political leadership and learn about the legislative process, the judicial system, and how to defend and promote human rights.

In Afghanistan, we're helping women find ways to join the political process at the local level and to acquire the skills they need for advocacy and communication. We're working with the private sector in America to help Afghan women travel abroad to learn more about the political process and to be able to exchange ideas with fellow women, just like which is taking place here in America today.

Our work to help build vibrant and functioning democracies in Afghanistan and Iraq is part of a larger effort to encourage progress across the broader Middle East. We refuse to accept the status quo in the United States of America, particularly when we find women repressed. As women become a part of the democratic process, they help spread freedom and justice and, most importantly of all, hope for a future.

One important program is the Women's Democracy Network, which is holding its inaugural meeting this week in Washington. This conference provides an opportunity for women leaders around the world to con-

nect with each other and serve as mentors for women in developing democracies so they can help shape the future of their nations.

As we work to advance the equality of women in the world's newest democracies, we must remember that many women in other countries around the world are still struggling for basic rights in places like Iran and North Korea and Burma. America will help women stand up for their freedom, no matter where they live.

Recently I welcomed two women from Belarus who were concerned about the repressive nature of their Government. We stand with the women in Belarus who advocate human rights in a runup to this month's election. America will continue to support courageous reformers around the world, women like Burmese dissident Aung San Suu Kyi, who has spent years under house arrest for her efforts to bring democracy to her nation.

We will continue to fight the threats to women across the world. We'll continue working with nations around the world to end the sexual exploitation and the trafficking of women and young girls. It breaks our hearts, our collective hearts, to realize many young girls are sold into sex slavery, and we will use our prestige to stop that evil process.

We will continue working to fight the transmission of HIV/AIDS. America is proud to lead the world in the struggle to defeat this pandemic. We understand that by defeating the pandemic of HIV/AIDS, we will help children and women, who have been disproportionately affected by this horrible pandemic.

We live in extraordinary times. These are exciting times. They are times that require a firm conviction in our beliefs that all people are created equal. We've seen the fall of brutal tyrants and the rise of democracy. We're also seeing women take their rightful place in societies that were once closed and

oppressive. And the United States welcomes the arrival of women into these oppressive societies. There's no doubt in my mind, empowering women in new democracies will make those democracies better countries and help lay the foundation of peace for generations to come.

So Laura and I welcome you to the White House. We're really glad you're here. We're so glad you're here, we're about to throw a reception on your behalf. [Laughter] And we wish you to enjoy it.

May God bless everybody here. May God bless your families, and may God bless our respective nations. Thank you for coming.

NOTE: The President spoke at 10:44 a.m. in the East Room at the White House. In his

remarks, he referred to President Hamid Karzai of Afghanistan; former Supreme Court Associate Justice Sandra Day O'Connor; President Ellen Johnson Sirleaf of Liberia; Chancellor Angela Merkel of Germany; President-elect Michelle Bachelet Jeria of Chile; President Gloria Macapagal-Arroyo of the Philippines; Irina Krasovskaya and Svyatlana Zavadskaya, widows of prodemocracy advocates who disappeared in Belarus; and Aung San Suu Kyi, leader of the National League for Democracy in Burma. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady, who introduced the President. The Women's History Month proclamation of February 27 is listed in Appendix D at the end of this volume.

## Remarks on Election Day in Crawford, Texas

March 7, 2006

*The President.* Thank you all.

*Q.* Was it worth coming?

*The President.* Yes, you bet. It's always good to come home to vote. And I urge all people to vote when given a chance. It's also good to be home in Texas—get a little rest here in my homestead and then

heading over to New Orleans tomorrow and Mississippi.

Thank you all.

NOTE: The President spoke at 4:43 p.m. at the Crawford Fire Department. A tape was not available for verification of the content of these remarks.

## Remarks Following a Tour of Recovery Efforts in the Areas Damaged by Hurricanes Katrina and Rita in New Orleans, Louisiana

March 8, 2006

I want to thank you all for coming. I want to thank Colonel Setliff for the tour that he just gave the Governor and the mayor and myself, along with Laura and part of our party. I want to thank Colonel Wagenaar for the aerial tour. We just flew over affected parts of Orleans Parish and Jefferson Parish and St. Bernard Parish,

and getting a view of the progress that is being made.

I particularly want to thank my friend Don Powell for his hard work in coordinating Federal efforts with the Governor and the mayor. Governor Blanco and Mayor Nagin have been by my side when

I've come down here, and I really appreciate them being a part of the recovery efforts. I want to thank Walter Isaacson and David Voelker, the members of the Louisiana Recovery Authority. They were on Air Force One today to make sure I fully understood—understand the strategies that the local folks are putting in place to help the good people of this part of the world recover from the devastating storm.

You know, we just came from a neighborhood where people are fixing to—are in the process of cleaning up debris. We went there because the mayor and the Governor thought it was important for me to see firsthand the devastation of the storm in certain neighborhoods and the progress that is being made for cleaning up the debris. There's still a lot of work to be done, no question about it. And obviously, as the plan gets laid out and as the housing plan I'm fixing to discuss comes to fruition, people will feel more comfortable in granting the local authorities the right to remove debris from their homes to be cleaned up.

But I want to share a story about a fellow, Romallice Harris, I met. He was there—was part of the construction crew. I asked him, I said, "Where were you during the storm?" He said he felt like he could ride it out. He heard the evacuation orders but thought it would be all right to ride out the storm. He lived on the third floor of an apartment complex. And he described to me and the Governor and the mayor what it was like to see the water start to rise up to the second floor of the building. He and his three children and his wife and another relative were finally rescued by a boat.

I said, "What happened to you?" He said, "Well, I went to Salt Lake City, Utah." In other words, his is an example of what happened to the good folks in this part of the world. He watched the rising waters, and then he just had to abandon the part of the world he loves.

From there, the Federal Government helped fly him to Chicago, where he had some relatives—or a relative. He now has come back to work in the city he loves, New Orleans, with the hopes of rebuilding his life. His wife and children are still in Chicago; they're going to school there. But as he told us, he says he looks forward to bringing them home, bringing them back to Louisiana, to have his children educated right here. And I'm convinced he'll succeed. And our job at all levels of government is to provide the confidence and the help necessary so that people like Romallice Harris come home.

I appreciate the determination by the folks down here to rebuild. I fully understand, and I hope our country understands, the pain and agony that the people of New Orleans and Louisiana and the parishes surrounding New Orleans went through. But I think people would be impressed by the desire of the people in this part of the country to pick up and move on and rebuild. And that's why I'm so pleased that the Governor and the mayor have joined me, so we can discuss the importance of implementing a strategy that will help this part of the world rise again.

The first part of the strategy is to make sure these levees are strong. And we fully understand that if the people don't have confidence in the levee system, they're not going to want to come back. People aren't going to want to spend money or invest. I just got a briefing from the Army Corps of Engineers that said we're on schedule to repair the damage by the June 1st deadline. They're identifying and correcting design and construction deficiencies; so as we go into the start of the hurricane season, the levees will be equal or better than what they were before Katrina.

The corps is identifying areas that weren't damaged but that need additional attention. Over here you can see the—or one of the walls that are being built. I mean, there's a lot of concrete and a lot of steel being put in the ground to protect

the levee system. By September of next year, additional improvements will be completed, bringing the entire levee system up to the full authorized design height, making it better and stronger than before.

Congress heard our message about improving the levees, but they shortchanged the process by about \$1.5 billion. And so in order to help fulfill our promise on the levees, Congress needs to restore the \$1.5 billion, to make this a real commitment, to inspire the good folks down here that they have a levee system that will encourage development and reconstruction.

As I mentioned, we went by the Ninth Ward to see the debris removal that was taking place. The vast majority of debris on public property has been removed. About 80 percent of the debris not related to demolition has been cleared. Most of the remaining debris is on private property, in yards or inside houses that need to be gutted or demolished. To get the debris, the residents need to give permission, in most cases, to the local authorities. And so they need to get back to their houses so they can decide what to keep and what to remove.

The problem is, obviously, many homeowners are still displaced. And that's why we're working at all levels of government to encourage evacuees to inspect their properties and to salvage what they can and to make decisions about the future.

Of course, the decisionmaking for the individual homeowners is going to be made easier when Congress funds the \$4.2 billion that I asked them to fund for the State of Louisiana for housing purposes. Now, this \$4.2 billion is in conjunction with the \$6.2 billion of CDBG money for housing grants. The \$4.2 billion request was done in a coordinated effort with State and local authorities.

The reason I thought this number made sense is because the number fits into a well-thought-out plan that has been put together by the local folks. The housing plan has been coordinated by State authorities

with local authorities as well as with HUD authorities. In other words, we've all been working together to figure out how to come up with a housing plan that will restore the confidence of the people of this important part of our country. And in order to make sure that housing plan meets its goals, Congress should make sure that the \$4.2 billion I requested goes to the State of Louisiana.

I'm also confident that this plan is solid right now. It's well-thought-out, and when it's submitted to HUD, because there's been close coordination, it should be approved on a timely basis.

And so again, I want to thank you all for inviting me to come back. I've always had a soft spot in my heart for Louisiana. Some of you might recall, I grew up across the line, over there in Texas, and really enjoyed my stay here when I came. I was pleased to see that the Mardi Gras parades went well, Mr. Mayor. As the mayor and the Governor described to me, it was as much of a homecoming as anything else. A lot of folks came back, came home. And that's what we want. We want people coming home. And the Federal Government will do our part, in conjunction with our State and local partners.

I ask for God's blessings on the people of this part of the world and thank the hard-working folks here for working around the clock to get this part of the country up and running again. Thank you.

Now, Laura is traveling with me. She's got a very important announcement she'd like to make as well.

NOTE: The President spoke at 10:33 a.m. at the Industrial Levee Canal. In his remarks, he referred to Col. Lewis F. Setliff III, USA, St. Louis district engineer, U.S. Army Corps of Engineers; Gov. Kathleen Babineaux Blanco of Louisiana; Mayor C. Ray Nagin of New Orleans, LA; Col. Richard P. Wagenaar, USA, New Orleans district engineer, U.S. Army Corps of Engineers; and Walter Isaacson, vice chairman of the board, and

David Voelker, board member, Louisiana Recovery Authority. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady. The

Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Remarks on Recovery Efforts in the Areas Damaged by Hurricanes Katrina and Rita in Gautier, Mississippi

March 8, 2006

Thank you all for coming. Laura and I are really honored to be back in Mississippi with the Governor and the first lady. And most of all, we're pleased to be with those who are helping to educate the young here on the gulf coast.

We, of course, want to thank those who are helping this important part of the country rebuild. Part of rebuilding the community is to make sure that the schools are able to function well and teach children how to read and write and add and subtract. Laura and I are committed to making sure no child is left behind anywhere in the United States of America.

Particularly want to thank the superintendent, the principal, and the teachers

for helping this important part of the country recover from devastating storm.

And now it's my honor to introduce the First Lady, who is going to make an announcement.

NOTE: The President spoke at 12:22 p.m. at College Park Elementary School. In his remarks, he referred to Gov. Haley Barbour of Mississippi and his wife, Marsha; Wayne V. Rodolfich, superintendent, Pascagoula School District; and Suzanne Ros, principal, College Park Elementary School. The transcript released by the Office of the Press Secretary also included the remarks of the First Lady.

## Remarks on New Home Construction in Gautier

March 8, 2006

*The President.* It's good to hear people hammering, isn't it?

*Governor Haley Barbour.* It really is. It's great for us in Mississippi.

*The President.* It is. People are building their lives back. And one of the reasons I've come down here is to remind people that there's still a lot of people hurting. And I talk to the Governor all the time about what we can do to make sure this part of the world rebuilds. It's great to see rebuilding.

Haley has been real good about talking

to us about a variety of issues. I want to thank you for your leadership.

*Gov. Barbour.* Mr. President, thank you. Let me just say publicly, thank you. In the last day, President Bush and the Bush administration has made the fifth extension of the deadline for the Government to cover 100 percent of debris removal and other emergency measures. And this extension is to June 30th, when we ought to be through.

And first, I want to say thank you for that. You know, it's been a huge issue for

these little communities, that they don't have any tax base, so thank you for that. That was made public yesterday. I'm glad to announce today that last night HUD approved our plan for our homeowner grant program. We intend to make \$4 billion of community development block grant money from the Federal Government available to Mississippians, like Jerry and Elaine, so that they can rebuild their homes or build new homes, to get themselves out of the flood plain.

Tomorrow we have been allowed by HUD to post our plan. You can see it on our web site, [mshomehelp—m-s-h-o-m-e-h-e-l-p—gov](http://mshomehelp-m-s-h-o-m-e-h-e-l-p.gov), and we'll have to have a 2-week comment period, at the end of which we'll start taking applications. But somebody can go onto the web site now, Mr. President, or at noon tomorrow, and find out all the information they need to get, what all the rules are. And I'm pleased to say that the Akins qualify.

*The President.* That's good.

*Gov. Barbour.* They built this house up above the new flood plain, 25 feet above sea level, which is one of the requirements so that we reduce risks. And thank you for doing that.

*The President.* I always felt that it was really important to say to the Governor and to local folks, "Come to Washington with a plan to help people rebuild." I really didn't want the plan to be designed by Washington people; I wanted it to be designed by local folks. And Haley has put together a Mississippi plan. He not only put the plan together; he also came to Washington, DC, and helped get the plan funded—with the help of two fine United States Senators—

*Gov. Barbour.* The best pair of United States Senators in the country.

*The President.* —and Members of the House. And so I want to congratulate you

and your team for putting together a good plan. Our job and our purpose is to help people like the Akins rebuild. And we want this part of the country rising up from the devastation. You know, people really didn't lose their spirit down here. But our job is to make sure that that spirit is able to, kind of, recapture the hope and optimism of the people and let that spirit flourish.

And I want to thank you for being a good leader. I appreciate you all having us. Listen, thanks. After all that work I've done, I'm thirsty. [*Laughter*]

*Jerry Akins.* Yes, sir. We have some lemonade, and we have some refreshments.

*The President.* You do? That's good. The other thing that's interesting is that we've got the Allens here from the Allen Brothers Construction Company. These are local folks—

*Gov. Barbour.* The Martins. [*Laughter*]

*The President.* The Martins. As I said, the Martins. You probably thought I said, the Allens. [*Laughter*] I said, the Martins. [*Laughter*]

You know, one of the interesting things is that there is going to be a lot of work, and here are the entrepreneurs with their sons helping to build this man's house. It's neat to be with them. Small businesses, if they seize the opportunity, are going to flourish. And that's what we want. These small construction companies are going to have work to do.

The other thing about the Martins, one of the boys won the Purple Heart in Iraq. There he is right there. It's my honor to congratulate him for serving the country. Thank you. At any rate—

*The First Lady.* Now we're going to present Jerry and Elaine a flag for your new house.

NOTE: The President spoke at 1:10 p.m. at a new home construction site.

## Statement on the Proposed United States-Malaysia Free Trade Agreement *March 8, 2006*

The United States and Malaysia share strong trade and investment ties and a commitment to generating prosperity through openness, democracy, and freedom. Today we seek to further strengthen the ties between our two countries by launching negotiations on a comprehensive U.S.-Malaysia Free Trade Agreement.

Once completed, a free trade agreement with Malaysia will generate significant commercial, economic, political, and strategic

benefits to both countries. It will improve our ties with the Southeast Asia region and strengthen our engagement in Asia. Malaysia is our tenth-largest trading partner, and the United States is Malaysia's second-largest source of imports. A U.S.-Malaysia Free Trade Agreement will advance our commitment to opening markets around the world and expanding opportunities for America's farmers, ranchers, workers, and businesses.

## Remarks Following a Meeting on Faith-Based and Community Initiatives *March 9, 2006*

We just had a very interesting dialog here. I want to thank members of the faith community, the community-based action community, the corporate community, the foundation community for joining in a dialog about how we can continue to foster the good works of millions of our fellow citizens who deeply care about the future of our country and the plight of their fellow citizen.

One of the things that always strengthens my belief in our future is my understanding of how many acts of kindness take place on a daily basis in the United States, and it doesn't require any government edict or

government law. People really care about the future of our country; millions of our citizens weep when they know somebody hurts. But nevertheless, there still needs to be focused efforts on encouraging more giving of money and time.

So I want to thank you all very much for joining us. Appreciate your being social entrepreneurs. I thank you for really strengthening the heart of the United States of America. Thank you.

NOTE: The President spoke at 11:49 a.m. at the Washington Hilton Hotel.

## Remarks at the White House National Conference on Faith-Based and Community Initiatives *March 9, 2006*

Thanks for coming. Appreciate you being here. Thanks for the warm welcome. This is the second White House National Conference on Faith-Based and Community Initiatives, and I appreciate your attend-

ance. I take this conference very seriously, and I'm glad you do as well.

The last conference was in June of 2004. Some of you were probably wondering whether I'd be back for this conference.

[*Laughter*] For those of you who did think I was going to be back, it was just as matter of faith. [*Laughter*] I appreciate you being here. It's good to see some old faces—on some young people—and some new faces.

I want to thank my Secretary of Commerce, Carlos Gutierrez, for introducing me. I appreciate Secretary Elaine Chao, the Department of Labor; Secretary Jim Nicholson. It's a good sign when Cabinet members come. It shows a commitment beyond just the President.

I appreciate my friend Jim Towey. I don't know if you know Towey. There he is. His job has been to make sure that the Faith-Based and Community-Based Initiative becomes an integral part of the Government and that the White House effectively reaches out to people to assure them that if they participate in the faith-based initiative, they won't have to lose their faith. It's hard to be a faith-based program if you can't practice your faith, no matter what your faith may be. And I'm proud of the work that Towey has done.

Every time I talk about Towey, I always bring up the same old, tired line about him, but I might as well try it one more time. So he was Mother Teresa's lawyer. And I always wonder about a society where Mother Teresa actually needed a lawyer, you know? [*Laughter*] But she—they picked a good one in Towey.

I want to thank Acting Administrator Fred Schieck of the USAID. He's here because USAID must continue to reach out to faith-based programs in order to make sure that we fulfill missions around the world in a compassionate way. Stephen Goldsmith, who is the Chairman of the Corporation for National and Community Service, is with us. Steve, thanks for being here.

Congressman Tom Osborne—where is the Congressman? He's somewhere here. Anyway, I appreciate you coming, Congressman. Dr. Jim Billington, who is the head of the Library of Congress—Dr.

Billington, thank you for coming. Leaders in the armies of compassion—those would be your sergeants, your lieutenants, and a few generals—thank you all for joining. And I appreciate members of the corporate community who have joined us and foundation America that has joined us as well. This is an important conference.

We meet at a time of great hope for the country. In my State of the Union—I stated this, and I believe it firmly—that America is witnessing a quiet transformation, a revolution of conscience, in which a rising generation is finding that a life of personal responsibility is a life of fulfillment. Part of being personally responsible in America is to love a neighbor like you'd like to be loved yourself. And for those of you who are finding those who have heard the call to help interface with those in need, I thank you from the bottom of my heart. You represent the true strength of the United States of America.

Statistics matter, and you'll hear me talk about some of the results of the faith-based initiative. It's hard to be a results-oriented society unless you actually focus on results. I'd like to share some results with you to boost my belief that there is a quiet transformation taking place. Violent crime rates have fallen to their lowest level since the 1970s. Welfare cases have dropped by more than half. Drug use amongst youth is down 19 percent since 2001. There are fewer abortions in America than at any point in the last three decades. The number of children born to teenage mothers has fallen for a dozen years in a row. I attribute the success of these statistics to the fact that there are millions of our fellow citizens all working to help people who hurt, working toward a better tomorrow.

There's a lot of work to be done, obviously. We still have pockets of poverty where people wonder whether or not the American experience belongs to them. We have place where there is hopelessness and despair. We've got people that are homeless. We've got addicts trapped into a, what

appears to them, I'm certain, kind of a never-ending cycle of despondency.

In answering the challenges, staying focused on helping change America one person at a time is a vital part of government, corporate America, philanthropic America, and the faith and community-based programs. It's got to be our continued focus. Even though statistics are improving, so long as we find anybody who hurts, we all should recognize that we hurt. It's the collective conscience of America that really helps define the nature of our country, and it gives me great optimism for the future of our country.

You know, it's interesting, as I—one of my jobs is to constantly herald our strengths. I think when people recognize if you deal with problems from your position of strength, it's more likely you'll be able to solve problems. And what's interesting about the conscience of our country is that it was first recognized by de Tocqueville. I often speak about Alexis de Tocqueville and his observations about what made America unique and different in the 1830s. He talked about voluntary associations of people all coming together to achieve a common good.

That's what you've done. You're representing voluntary associations of people all aiming to achieve the common good. And the common good is achieved in America when we help people who hurt, when we provide mentors for people who need love, when we provide food for those who are hungry, and we provide shelter for those who need shelter.

Our job is to make sure that the spirit that de Tocqueville saw is not only relevant today but stays alive and well throughout the 21st century. There's forever going to be a need of compassionate help in our society. And for those of you who are on the frontlines of social entrepreneurship, thank you for setting such a good example.

Part of this conference is to make sure that you receive encouragement. The other part is to make sure you've got the tools

necessary to succeed. Part of the tools necessary to succeed is to help philanthropic America understand it's okay to support faith-based institutions.

We've got fantastic corporate foundations in America who recognize that we all ought to focus on results, not process, that the question government and private philanthropy ought to ask is, does the program get the results that we all want, as opposed to, what is the nature of the people trying to get results? When you focus on results, all of a sudden it becomes crystal-clear how best to spend resource dollars to achieve certain objectives.

And today I met with some folks earlier that talked about their foundations and how their foundations recognize the importance of achieving results—funding results-oriented programs, regardless of whether or not they're faith-based or not.

And for those of you who have set the example, I want to thank you very much, but the truth of the matter is that a recent survey of our Office of Faith-Based and Community Initiatives—headed by Towey—of 20 large corporate foundations found that only about 6 percent of their grants went to faith-based groups. I believe the results are better than that. I am confident that the faith community is achieving unbelievable successes in—throughout our country.

And therefore, I would urge our corporate foundations to reach beyond the norm, to look for those social entrepreneurs who have been—haven't been recognized heretofore, to continue to find people that are running programs that are making a significant difference in people's lives.

When we studied 50 large foundations, we found that one in five prohibited faith organizations from receiving funding for social service programs. In other words, there's a prohibition against funding faith programs from certain foundations in the country. I would hope they would revisit their charters. I would hope they'd take a look at achieving social objectives—make

the priority the achievement of certain social objectives before they would make the decision to exclude some who are achieving incredible progress on behalf of our country.

I believe all of us, no matter what level of government we're in—Federal, State, and local—and I believe all of us, no matter if we're private or public, ought to allow religious organizations to compete for funding on an equal basis, not for the sake of faith, but for the sake of results.

The Tax Code can be—can encourage contributions. We had an interesting discussion from a person earlier that said that the level of giving in America is substantial, but it can be more. We all can do our part, individually, but the Tax Code can help as well. I've got some interesting ideas to help philanthropy here in America. One of them is to allow corporate America to deduct—take larger tax deductions for food donations.

If one of the issues—[*applause*]—it's kind of a specialized request, I admit it. But if one of the issues is to get food to the hungry, it makes sense to provide incentives for people who have got the wherewithal to be able to provide the resources to get the food headed toward the hungry in the first place. I think it will help those of you who are worried about getting food to people to know that providers of resources will be given an economic incentive to do that. That, hopefully, will make it easier for you to get the product to distribute.

Secondly, seniors now have to pay taxes on a portion of their individual retirement account savings, and so why not allow them to take part of that money and send it to charitable organizations, as opposed to paying tax on it. So let me give you some practical ways that the Government—[*applause*]. I hope the Senate and the House takes these initiatives seriously so that they recognize the Tax Code has got an important part of helping make sure that there's

more than just talk behind the Faith-Based and Community-Based Initiative.

Government has got a role to play. As you know, this has been quite a controversial subject here in the United States Congress. We believe in separation of church and state—the church shouldn't be the state, and the state shouldn't be the church. No question that's a vital part of the country, and that's a vital part of our heritage, and we intend to keep it that way. But when it comes to social service funding, the use of taxpayers' money, I think we're able to meet the admonition of separation of church and state and, at the same time, recognize that faith programs provide an important model of success. They help us achieve certain objectives in our country.

It used to be that groups were prohibited from receiving any Federal funding whatsoever because they had a cross or a star or a crescent on the wall. And that's changed, for the better. It's changed for the better for those who hurt in our society. And so now, when the government is making social service grants, money is rewarded to groups—awarded to groups that get the best results, regardless of whether they're a faith-based program or not. That's all people want. They want access to grant money on an equal basis, on a competitive basis, so there's no discrimination one way or the other.

I repeat to you, and I'm going to say this about five times, I'm sure: Our job in government is to set goals and to focus on results. If you're addicted to alcohol, if a faith program is able to get you off alcohol, we ought to say, "Hallelujah and thanks," at the Federal level.

One of the things I asked old Jim Towey to do was to let me know if we're making any progress. You know, a lot of people around the country say, "Politicians are good at talking, but sometimes they don't really follow through." It's kind of like, the check is in the mail. So I said, why don't you give us a score card, and I want to share with you some of the results that

has taken place over the last year. The Federal Government awarded more than \$2.1 billion in competitive social service grants to faith-based organizations last year. That's an increase of 7 percent over the previous year, and that is 11 percent of all Federal competitive social service grants. We're making progress about creating a level playing field for people to be comfortable in, one, applying for grants, and two, when receiving a grant—and then actually getting the money out the door to social service organizations.

For example, \$780 million in grants was distributed through the Department of Health and Human Services. USAID gave \$591 million worth of grants. These are the faith-based organizations—521 million through HUD. And so going from ground zero to today, we're making progress. I can tell you why; it's because we're measuring.

A lot of people were nervous about applying for grants. I can understand that, you know. They said, "Why in the world would I want to interface with the Federal Government?" [Laughter] They may try to run my business. They may want to try to tell me how to conduct—how to run my program." We've done a good job, I think, through these different faith-based offices and throughout our Government of assuring people in the Government, don't—look, don't tell people how to run their business; accept the way they are, and focus on results. And part of the reason we had these conventions and these outreaches, regional outreaches, is to assure people that the role of the government is to fund, not to micromanage how you run your programs. I repeat to you: You can't be a faith-based program if you don't practice your faith.

We've launched some other initiatives which some of you are involved with—programs to help those who are addicted find treatment. We've talked about mentors for children of prisoners. And for those of you involved in the mentoring program for children of prisoners, I want to thank you on

behalf of a grateful nation. You are providing a fantastic service to help make sure the future is bright.

Can you imagine what it would be like growing up with your mom or dad in prison? Maybe some of you have. It's got to be a heartbreaking experience. And a lot of these kids just cry for love. And to help find a loving soul who is willing to embrace a child and to stay with that child is a wonderful contribution to the country, and it makes sense for the Federal Government to provide funding for such programs.

We are helping prisoners transition back into society. We want to help small service organizations gain capabilities. One of the things that some of you who have been involved with the faith-based community understand, that, you know, the big guys get rolling and kind of get a nice head of steam up, and there doesn't seem to be much focus on smaller organizations, some of which are just getting started. Our job is to make sure that the Compassion Fund helps startups. I don't want to sound like a business guy, but there are some people just getting started. They need tutoring; they need help. But they can provide a vital service.

One reason faith programs exist is because some good soul sees there's a demand. And they may not be the well-established organization, and it seems like to me, it's a proper use of resource to help startups, new social entrepreneurs, small social entrepreneurs get their feet on the ground to provide compassionate help, alongside the big ones. [Applause] There you go.

There's other targeted programs, as well as social service competitive grant money. And I'm sure you're being briefed on—I hope you're being briefed on all this during this conference. You ought to feel comfortable about making sure that your program has a chance to participate in a myriad of opportunities. We want you to do that. We welcome your participation. We want involvement.

The other thing is, we're trying to work hard is—to change the culture here in Washington. The faith-based program is relatively new, and it takes a while for cultures to change, and we want people throughout the bureaucracies to not fear the involvement of faith programs and community-based programs in the compassionate delivery of help. And one of the real challenges we have is at the State and local governmental level. We've made good progress, by the way, here at the Federal level on competitive grant money.

See, a lot of money that comes out of Washington is formula-driven. It just kind of flows out. And so sometimes that money goes to the States, and the States are the decisionmakers as to whether or not a faith program can be involved in the—in receiving that money to help meet social objectives. We are constantly working with Governors and mayors to convince them that having a faith-based office in their respective centers of responsibility will really help improve their State, as well as the—as well as their cities.

And there's progress being made there. I think there's something like 30 Governors have now got faith-based offices, and over 100 mayors have got faith-based offices. And to the extent that you can influence your mayor or your Governor, convince them to open up an office and make sure that some of the Federal money that flows to the States is open for competitive bidding for faith-based programs.

By the way, we just set up a new faith-based and community office in the Department of Homeland Security. Last month, I signed a bill extending what's called charitable choice. It's a mechanism by which these programs can go forward. And it's—one of the most important things about the legislation I signed, it allows faith-based groups to receive Federal funding without changing their hiring practices. This is going to stay around for another 5 years. In other words, the bill extended the life

of the charitable choice provision in the welfare reform law by another 5 years.

I would hope Congress would recognize the importance of charitable choice and extend it forever. I mean, if it makes sense today, it makes sense forever.

You know, one of the things that really inspires me is when I get to meet folks who are on the frontline of changing America one soul at a time. And today I had the privilege of meeting a woman named Dana Ingram. She's with us. She is the founder of a faith-based housing and financial service organization in Hinesville, Georgia, called JC Vision. This is an organization that provides financial counseling and assistance in receiving credit and securing a home loan.

See, one of the things that I know is important for the future of the country is to promote ownership. I really like the idea when somebody opens the door of the place they're living and says, "Welcome to my home. Welcome to my piece of property." And this lady—and Dana is involved with counseling. Look, face it; when you look at a mortgage deal, all that fine print makes some people nervous. It makes me nervous. [*Laughter*] Of course, I'm in temporary housing. [*Laughter*]

When she first—a few years ago, her program served 500 people on a budget of less than \$100,000. She applied for Federal funding. She said, "Yes, I'm a faith-based program, but I do believe that we can benefit from competitive grant money." And so she applied, and she was awarded a grant. Her budget is now \$400,000. Now she's serving 10,000 people. The idea is to promote successful programs, to focus on whether or not these programs are successful, and if they are, encourage them. One way to encourage somebody is to have a little grant money available on a competitive basis—nothing more encouraging than to get some grant money. And so Dana is encouraged, and she's expanding her program.

One of the really successful programs in America is a program called Teen Challenge. I don't know if you're aware of Teen Challenge. So Pastor Arthur Stafford is with us. Arthur works at Teen Challenge New Haven. Notice I didn't say, "Mister." I said, "Pastor." Teen Challenge is a faith-based program.

And he is a—his program is aimed, like many of the Teen Challenge programs, at helping young folks overcome addiction to drugs, which oftentimes lead to crime and other problems. Not long ago, funding constraints limited how many people Teen Challenge in New Haven could host. And they spent—Arthur and his buddies spent a lot of time raising money for the program. For those of you who are on limited budgets who have got grand ambitions to save lives, you know how much time you can spend away from the task at hand toward finding money to sustain your programs. And so Arthur and Team Challenge competed for and earned a Federal grant through the Access to Recovery drug treatment program. For those of you involved in drug treatment, the Access to Recovery drug treatment program provides a good source of money for you. I recommend you applying for grants from that program.

And so what Arthur has said is that—when he got the money—"It's been a blessing to our ministry." I find that interesting, don't you—"It's been a blessing to our ministry. We're not worried about how to raise money all the time; we can focus on transforming lives."

And so today Matt Enriquez is with us. So Matt comes in to meet the President. I said, "How you doing, Matt?" He didn't speak—he looked a little nervous. [*Laughter*] Matt was addicted to drugs. He had spent time because of robbery. He was lost, and then he was found by people at Teen Challenge. He is now going to college.

Where are you, Matt? There he is. Where's Arthur? Pastor, stand up. [*Applause*] Yes, there you go. Get your Pastor, Matt. There he is. Thank you.

So Matt now goes to the Connecticut Culinary Institute. If you're looking for a cook, he's your man. [*Laughter*] Here's what he said: "The best thing about"—speaking about Teen Challenge—"is the love that's in the program. I had no idea what I wanted to do at all. This let me know what I wanted to do for the rest of my life."

See, government can pass law, and it can hand out money, but it cannot love. And so I want to thank—[*applause*]. I appreciate the examples—letting me use you as examples. America can change one heart at a time. Matt is living proof. America changes not only when a soul like Matt gets saved but the person who is involved with helping Matt also becomes a stronger and better citizen as well.

And now Matt goes on. See, Matt himself serves as a way to help change lives. Maybe Matt—maybe somebody is listening here. I don't know if this deal is on C-SPAN or not, but if it is, maybe somebody is out there, like Matt, who needs help and can find help at a Teen Challenge or another program, all aimed at helping somebody save lives.

Matt, I know when you get your deal going and making a good living as a cook, you yourself will turn and help find—somebody else find help too. So I appreciate you.

Our job is—for the next 3 years, is to continue to work with Congress to make sure that money is opened up to faith-based programs. Competitive grant money should not be earmarked. It should be open for competitive-based grants so that—[*applause*].

We'll continue to work with local and State officials to open up their programs to faith and community-based programs. I'm going to continue to work on individual choice programs. I like the idea of providing help for individuals by empowering them to be the decisionmaker. In other words, it makes a lot of sense to me to say to somebody who is trying to recover

from a drug addiction, “Here’s the money to help you; you go pick the program that suits your needs so you can solve your problem.”

And so we got a lot of work to do to continue to encourage you to do the work you’re doing. I am inspired by the love and compassion that I find as I travel the country. For those of you, by the way, who are involved with helping the Katrina folks, I want to thank you from the bottom of our Nation’s heart for welcoming those who I’m sure felt lost and then felt welcomed when a total stranger embraced them in a typically American compassionate way. I assure you that as long as I’m the President, I will always recognize where the strength of this country lies, the true strength, and that’s in the hearts and souls of our fellow citizens.

My hope is that the vision that de Tocqueville saw in 1830 is a vision that some observer will find still strong in America in the year 2030 and 2060 and beyond. Because so long as America is able to unleash the compassion of our country, will it be able to bring hope into dark corners of our country, places where there is no light, places where there’s despair, places where people can realize their potential if given a chance.

And so I want to—for those of you who are a part of giving people a chance, for those of you who have heard the universal call, I thank you for your work and ask for God’s blessings on your lives and on your work.

Thanks for coming. God bless.

NOTE: The President spoke at 11:58 a.m. at the Washington Hilton Hotel.

## Remarks on Signing the USA PATRIOT Improvement and Reauthorization Act of 2005

March 9, 2006

Welcome. Thanks for the applause. Glad you’re here in the people’s house.

I’m going to sign—in a few moments I’ll be signing the USA PATRIOT Improvement and Reauthorization Act. This is a really important piece of legislation. It is a piece of legislation that’s vital to win the war on terror and to protect the American people.

The law allows our intelligence and law enforcement officials to continue to share information. It allows them to continue to use tools against terrorists that they used against—that they use against drug dealers and other criminals. It will improve our Nation’s security, while we safeguard the civil liberties of our people. The legislation strengthens the Justice Department so it can better detect and disrupt terrorist threats. And the bill gives law enforcement

new tools to combat threats to our citizens from international terrorists to local drug dealers.

It is an important piece of legislation, and I thank those here who helped get it passed. I particularly want to thank the Attorney General, Al Gonzales. It’s good to see former Attorney Generals here as well. I appreciate Secretary Mike Chertoff, Secretary John Snow, Ambassador Negroponte, Bob Mueller. Thank you all for coming. John Walters, appreciate you being here.

I particularly want to thank the Members of the Congress who are up here, starting with the Speaker of the House, Denny Hastert. Mr. Speaker, thanks for your leadership on this important piece of legislation. I do want to pay special tribute to Senator

Arlen Specter and Congressman Jim Sensenbrenner. These are the chairmen of the Judiciary Committees that got this legislation to this desk. Thank you all for your hard work. I appreciate you being here.

I want to thank Pat Roberts, who's with us; John Boehner, who's majority leader; Roy Blunt, the majority whip. I want to thank all the other Members of the Congress who have joined us, particularly Peter King, who is the chairman of the House Homeland Security Committee.

I want to thank all the State and local officials who are here. Chief Ramsey, it's good to see you. Appreciate you coming. Always be good to the local police chief. [Laughter]

America remains a nation at war. The war reached our shores on September the 11th, 2001. On that morning, we saw clearly the violence and hatred of a new enemy. We saw the terrorists' destructive vision for us when they killed nearly 3,000 men, women, and children.

In the face of this ruthless threat, our Nation has made a clear choice: We will confront this mortal danger; we will stay on the offensive; and we're not going to wait to be attacked again. Since September the 11th, 2001, we have taken the fight to the enemy. We've hunted terrorists in the mountains of Afghanistan, cities of Iraq, in the islands of Southeast Asia, and everywhere else they plot, plan, and train. Our men and women in uniform have brought down two regimes that supported terrorism. We liberated 50 million people. We've gained new allies in the war on terror.

As we wage the war on terror overseas, we're also going after the terrorists here at home, and one of the most important tools we have used to protect the American people is the PATRIOT Act. The PATRIOT Act closed dangerous gaps in America's law enforcement and intelligence capabilities, gaps the terrorists exploited when they attacked us on September the 11th.

The PATRIOT Act was passed with overwhelming bipartisan support. It strength-

ened our national security in two important ways. First, it authorized law enforcement and intelligence officers to share vital information. Before the PATRIOT Act, criminal investigators were often separated from intelligence officers by a legal and bureaucratic wall. The PATRIOT Act tore down the wall. And as a result, law enforcement and intelligence officers are sharing information, working together, and bringing terrorists to justice.

Secondly, the PATRIOT Act has allowed agents to pursue terrorists with the same tools they use against other criminals. Before the PATRIOT Act, it was easier to track the phone contacts of a drug dealer than the phone contacts of an enemy operative. Before the PATRIOT Act, it was easier to get the credit card receipts of a tax cheater than trace the financial support of an Al Qaida fundraiser. The PATRIOT Act corrected these double standards, and the United States is safer as a result.

Over the past 4 years, America's law enforcement and intelligence personnel have proved that the PATRIOT Act works. Federal, State, and local law enforcement have used the PATRIOT Act to break up terror cells in Ohio, New York, Oregon, and Virginia. We've prosecuted terrorist operatives and supporters in California and Texas, New Jersey, Illinois, Washington, and North Carolina.

The PATRIOT Act has accomplished exactly what it was designed to do. It has helped us detect terror cells, disrupt terrorist plots, and save American lives. The bill I sign today extends these vital provisions. It also gives our Nation new protections and added defenses.

This legislation creates a new position of Assistant Attorney General for National Security. This will allow the Justice Department to bring together its national security, counterterrorism, counterintelligence, and foreign intelligence surveillance operations under a single authority. This reorganization fulfills one of the critical recommendations of the WMD Commission. It will help

our brave men and women in law enforcement connect the dots before the terrorists strike.

This bill also will help protect Americans from the growing threat of methamphetamine. Meth is easy to make. It is highly addictive. It is ruining too many lives across our country. The bill introduces common-sense safeguards that would make many of the ingredients used in manufacturing meth harder to obtain in bulk and easier for law enforcement to track.

For example, the bill places limits on large-scale purchases of over-the-counter drugs that are used to manufacture meth. It requires stores to keep these ingredients behind the counter or in locked display cases. The bill also increases penalties for smuggling and selling of meth. Our Nation is committed to protecting our citizens and our young people from the scourge of methamphetamine.

The PATRIOT Act has served America well, yet we cannot let the fact that Amer-

ica has not been attacked since September the 11th lull us into the illusion that the terrorist threat has disappeared. We still face dangerous enemies. The terrorists haven't lost the will or the ability to kill innocent folks. Our military, law enforcement, homeland security, and intelligence professionals are working day and night to protect us from this threat. We're safer for their efforts, and we'll continue to give them the tools to get the job done.

And now it's my honor to sign the USA PATRIOT Improvement and Reauthorization Act of 2005.

NOTE: The President spoke at 2:46 p.m. in the East Room at the White House. In his remarks, he referred to Charles H. Ramsey, chief, Metropolitan Police Department of Washington, DC. H.R. 3199, approved March 9, was assigned Public Law No. 109-177. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Statement on Signing the USA PATRIOT Improvement and Reauthorization Act of 2005

*March 9, 2006*

Today, I have signed into law H.R. 3199, the "USA PATRIOT Improvement and Reauthorization Act of 2005," and then S. 2271, the "USA PATRIOT Act Additional Reauthorizing Amendments Act of 2006." The bills will help us continue to fight terrorism effectively and to combat the use of the illegal drug methamphetamine that is ruining too many lives.

The executive branch shall construe the provisions of H.R. 3199 that call for furnishing information to entities outside the executive branch, such as sections 106A and 119, in a manner consistent with the President's constitutional authority to supervise the unitary executive branch and to withhold information the disclosure of which

could impair foreign relations, national security, the deliberative processes of the Executive, or the performance of the Executive's constitutional duties.

The executive branch shall construe section 756(e)(2) of H.R. 3199, which calls for an executive branch official to submit to the Congress recommendations for legislative action, in a manner consistent with the President's constitutional authority to supervise the unitary executive branch and to recommend for the consideration of the Congress such measures as he judges necessary and expedient.

GEORGE W. BUSH

The White House,

March 9, 2006.

Remarks at the Georgia Republican Party's President's Day Dinner in  
College Park, Georgia

March 9, 2006

Thank you all. I appreciate you coming. Please be seated. Thanks for being here. I appreciate the warm reception. Thanks for letting me come back to Georgia. I'm proud to be here to help support the Republican Party of Georgia, which is changing this State for the better.

And I'm proud to be introduced by Sonny Perdue, who is doing a heck of a good job as the Governor of this State. So here's the thing I like about Sonny: One, he married well. [*Laughter*] Where's Mary? Oh, there she is. Hi, Mary, good to see you. Thanks for being here. Secondly, he said his favorite title in life is not "Governor" but "Big Buddy." [*Laughter*] You know who calls him "Big Buddy"? His grandkids. Sonny has got his priorities straight. I'm proud to call him friend, and I know you're proud to call him Governor.

By the way, Mary, Laura sends her very best and her love. Laura is a remarkable person. She is patient, especially to be married to me. [*Laughter*] One of the things that I love about being the President is, well, I've got a 45-second commute—[*laughter*—and when I get home, there's a person there who is a wonderful partner in serving our country. She understands what I know: It's a huge honor to be the First Couple of the United States. And she is making an enormous difference in the lives of people in west Texas-type ways. And so she sends her love and sends her best.

I want to thank the—first of all, let me say something about your two United States Senators. They had votes, and that's good that they stayed there to do the job that you send them to do. I was incredibly

proud to watch them help shepherd through two Supreme Court Justices I named. When I campaigned in Georgia, I said, "If you elect me to be President, I will name people to the bench who will strictly interpret the Constitution and not try to write laws from the bench." I did so with Chief Justice Roberts, Judge Alito. And Senator Saxby Chambliss and Johnny Isakson were strong supporters for those nominees.

I want to thank the Members of the United States Congress who have joined us here today: Nathan Deal from north Georgia; John Linder; Phil Gingrey; Lynn Westmoreland; and Tom Price. Thank you all for joining us. We spent some quality time on Air Force One flying down here. These are smart people. They never pass up a free flight when they're offered one. [*Laughter*] But I enjoy them. They're good folks—good, down-to-earth, decent folks serving the State of the Georgia in the United States Congress, and I'm proud to call them friends.

I want to thank Glenn Richardson, who is the speaker of the house. I want to thank Eric Johnson, the president pro tem of the State senate. I want to thank all those who are serving in the statehouse. It's a—it is an important job.

You know things are changing in Georgia when you say welcome to the speaker—[*laughter*—and welcome to the leader of the senate. The Republican Party here has done a good job of establishing a grassroots political base that is not only helping people like me, but it's changing the statehouse for the better in the State of Georgia.

I want to thank Alec Poitevint, the mighty chairman and national committee-man of the great State of Georgia. Alec, good to see you, and Doreen is here. Alec has got his priorities straight. I've known him for a long period of time. We're quite familiar with each other. He said, "How many turkeys you got on your ranch?" I said, "I haven't been counting them lately." He says, "Well, I've been counting them on mine." The man's got his priorities straight. [Laughter]

I want to thank people who are running for office. I appreciate you willing to put your name on the line. I want to thank you for your willingness to get out and shake hands and tell people what you believe and speak from the heart. Two candidates running for the Lieutenant Governor with us, Casey Cagle and Ralph Reed, and I appreciate them both being here tonight.

Finally, I want to say something about two Mac—well, one Mac, one Max. [Laughter] One of the reasons I've come down here is to thank you for supporting two good folks who are running for the United States Congress, Mac Collins and Max Burns. I know them well. I know Mac's wife, Julie, and I know Max's wife, Lora. I've served with them before. I have seen what kind of people they are up close. They're principled gentlemen. They understand the risks to the world in which we live. They're smart with the people's money. I urge the people of Georgia to send Mac Collins and Max Burns back to the United States Congress. [Applause] I knew they were there somewhere.

And finally, I want to say something about Sonny. I think the people of this State need to judge your Governor based upon performance. He is a fellow who has performed. He's delivered results. He said he was going to do some things when he ran for the Governor of your State, and he did. I don't know if you remember, but when he took office, Georgia wasn't doing that well in the economy. Matter of fact,

you were losing jobs. I don't know if people remember in this great State, but when Sonny first came into office, he had a State deficit of \$620 million. Today, Georgia's economy is on the march. You're increasing jobs; people are working; and you've got a surplus in the State treasury.

Now, Sonny knows how to get things done. And one of the main reasons I have come down here is to thank the good people of your State for electing such a good man to be the Governor of an important State. Sonny Perdue deserves to be re-elected as the Governor of the State of Georgia.

We're living in historic times. We are a country still at war. I wish I could report—give you a different report. My job is to see the world the way it really is, not to see the world the way some would hope it would be. My job is—my thinking is, really—was defined on September the 11th—you've just got to know that.

Some of my buddies from Texas come over there to the White House, and they say, "What's it like to be the President?" First of all, I'm a person who is so honored to be sustained by the prayers of millions of people. It is—one of the truly great blessings of the Presidency is to be uplifted in prayer by people I never get to thank personally.

Secondly, I make a lot of decisions. It's a decisionmaking experience. Sonny will tell you, as the Governor of a State, you make decisions. That's what a chief executive officer does. In order to make decisions, you've got to make decisions based upon principle. And if not exactly sure what information you need, you've got to rely upon good people to give you information so you can make good decisions. A lot of my decision-making has come about as a result of the attack on our country. See, after that day, I vowed that I would do everything in my power to protect the United States of America from further attack.

That's why I'm proud to stand with Members of the United States Congress

and candidates for Congress who understand our biggest job, our most important responsibility in Washington, is to protect the American people and never forget the lessons of September the 11th, 2001. I knew one of the challenges for our country would be, the farther we got away from that date, that day, that people would want to forget the trauma of the day and might be willing to forget the lessons learned on that day. I can assure you, these Members of Congress won't forget the lessons of that day, and neither will I.

And today I had the honor in the White House of signing an extension of the PATRIOT Act. We've asked brave souls to be on the frontline of fighting terrorists. They deserve every possible tool, while we safeguard the civil liberties of the United States of America. Thank you all for supporting the PATRIOT Act. We did the right thing in Washington.

After the attacks on the country, I did what you would expect me to do, and asked people who are on the frontlines of defending you whether or not there was—there's more we could be doing. What can we do more to protect the American people? I vowed on September the 11th I would do everything I can to protect the American people. I would rally the assets and resources and brain power of our country to protect you.

And so I called people in, and I said, "Is there anything else we could have done to prevent the attacks from September the 11th?" And a general named Mike Hayden said, "I believe there is, Mr. President. I believe we can design a system that will enable us to listen to a call from outside the country in, from a known Al Qaida affiliate or a suspected Al Qaida affiliate." I said, that makes sense, doesn't it? If the people inside the country that planned the attacks on the United States were making phone calls out, we'd want to know that prior to any attack.

And so I said, "Mike, show me how the system would work." I then called in law-

yers—and we've got a lot of them in Washington. [Laughter] By the way, two of my favorite lawyers are here today, Dan Coats and Connie Mack, former United States Senators who have been close to the White House on a variety of matters. So I'm not denigrating you two guys; I like lawyers. [Laughter] But we've got a lot of them—[laughter]—and some smart ones.

And I said, "Is the program that the NSA is recommending legal?" That's what you'd expect the President to do. You'd expect the President to ask, is there more we could do, and if the suggestion—if someone made a suggestion, the first question is, is it legal to do so? And they came back and said, "Mr. President, you have the authority to do this program"—in other words, it's legal.

Before I implemented the program, a program, by the way, which is limited in nature—phone calls coming from inside the country out and outside in, with one of the numbers being known Al Qaida, suspected Al Qaida, and affiliates—I then recognized that the United States Congress would be interested in this subject. So we briefed leaders from both parties, both chambers, on a program to protect the American people. We've kept them abreast more than one time, in a series of briefings, about a program that is necessary to protect the American people. As my buddy in Texas said, "If you're trying to do something illegal, why did you brief the Congress?" [Laughter]

What we're doing is the right thing. My thinking process, my decisionmaking, is based upon my understanding of the job of the President and the Federal Government—is to protect our people so we never have to go through what we went again. It is right; it is necessary to listen to Al Qaida. If Al Qaida is making a phone call into the United States of America or vice versa, we want to know why, in order to protect this country.

In order to protect this country, we must remember the lessons of September the

11th. And lesson number one is, we have got to stay on the offense against the terrorist network that would like to do harm to the United States of America, and we are. We are on the hunt. We've got some fantastic men and women who wear our Nation's uniform doing everything they can to find the terrorists before they can hurt us again. It's hard to plan and plot and destroy America if you're on the run. And we're bringing a lot of the killers to justice. And I will continue to insist that we pursue the killers to keep America safe.

The second lesson, since this is a different kind of war, is that if you harbor a terrorist, you're equally as guilty as the terrorist. We're dealing with a shadowy network. We're not fighting nation-states. We're fighting a group of coldblooded killers who adopted an ideology that's the exact opposite of America, that tries to find safe haven. And therefore, part of the strategy is to deny the enemy safe haven. And when the President says something, he better mean what he says, and I meant what I said when I said to the Taliban, "Give up Al Qaida." And when they refused, the United States of America removed a barbaric regime for our own security, and in so doing, however, we liberated 25 million people from the clutches of these barbaric people.

Another lesson of September the 11th is that we must deal with threats before they come to hurt us. You see, prior to September the 11th, 2001, a lot of folks assumed that we were safe in America. In other words, we could see a threat somewhere overseas, but we were fine. Oceans protected us; perhaps our might protected us. But that all changed for me on September the 11th, 2001. Whenever we see a threat, the United States of America must take them seriously. We cannot take threats for granted. I saw a threat; the world saw a threat; people in the United Nations Security Council saw a threat; Republicans on Capitol Hill saw a threat; Democrats

on Capitol Hill saw a threat in Saddam Hussein.

And the reason they saw a threat—this is a man who at least had the capacity to manufacture weapons; he had used weapons of mass destruction; he was on the terrorist list of the United States of America; he killed thousands of his own citizens; he was firing at U.S. jets; and he invaded his neighbor. He was a threat, and getting rid of Saddam Hussein has made America safer and the world a better place.

And I'm proud to be on stage with people who understood the stakes and stand strong, particularly when we put men and women in harm's way. I'm proud to have people up here who understand that any time we put an American volunteer into harm's way, he or she deserves the best pay, the best training, and the best possible equipment.

We've got a strategy for victory in Iraq. Now, you got to understand, we're facing an enemy that can't beat us militarily, and they certainly can't beat us ideologically. And they've got one weapon, and their weapon is the willingness to kill innocent people and to have the horror on the TV screens, understanding full well that the American people are decent and compassionate people. That's the only weapon they have.

Their goal, their stated goal, is to drive the United States of America and allies out of the Middle East so they can spread their totalitarian vision. That's what they've said, and when the enemy says something, we got to take them seriously. They believe we're weak. They believe their tactics will cause us to run. The United States of America will not run in the face of thugs and assassins, and we're going to stand strong in support of people who expressed themselves last year at the ballot box in the face of incredible threats. Eleven million Iraqis said loud and clear to the world, "We reject civil war. We want our freedom, and we want our democracy." And America is proud to stand with them.

We have a political strategy, and that is to encourage the votes which took place last year under—and they ratified a Constitution, which is a modern constitution. A government should be a unified government that recognizes minority rights so that the people—when the people speak, government responds.

And secondly, we have a security strategy that says loud and clear that we want the Iraqis to take the fight to the enemy. As the Iraqis stand up, our troops will stand down. But I want to assure you, what I said in the State of the Union is what I mean. Troop levels in Iraq will be decided not by Washington, DC, politics but by the commanders on the ground. I will be making the military decisions necessary to win this war not based upon focus groups or opinion polls but based upon the solid, sound advice of a group of really fine military commanders.

Our objective is a country that can defend itself and sustain itself, a country that will not be a safe haven for Al Qaida and its terrorist network, a country which will be an ally in the war on terror, and a country which will—which will serve as a powerful example for others in a part of the world that is desperate for freedom.

And so the ultimate way to achieve our objectives, which is to lay the foundation of peace for generations to come, is to help people live in liberty and help spread democracy. The people of the Middle East must understand that when I say democracy, I don't mean American-style democracy. I mean a democracy which reflects the values and the history and the tradition of the country in which democracy is spreading.

But I do believe in the universality of liberty. I personally believe there is an Almighty God, and I believe a gift from the Almighty God to every man and woman on the face of the Earth is freedom. Our country was formed based upon the natural rights of men and women, and we believe those natural rights extend to men and

women all across the globe. The United States of America believes people desire to be free. And by freeing people, we are laying the foundation of peace for generations to come.

I've trotted this story out a lot, or my beliefs out a lot, about the effects of freedom. But let me try to explain for—particularly the youngsters here—about what I mean for laying the foundation for peace to come.

One of my best buddies in the international arena is Prime Minister Koizumi of Japan. What's interesting about that is 60 years ago, my dad, as an 18-year-old fighter pilot, Navy fighter pilot—and I'm sure many relatives of folks here fought the Japanese, because they were the sworn enemy. And this is one of the bloodiest of all wars. A lot of people lost their lives on both sides of this conflict. And yet today, the American President can speak to an audience in Atlanta, Georgia, and say, "I sit down at the table with Prime Minister Koizumi to keep the peace, to deal with some of the tough issues around the world. He's a partner in peace."

And so what happened? Something had to have happened between 18-year-old fighter pilot George H.W. Bush and George W. standing here as the President. And what happened was, Japan adopted a Japanese-style democracy. You see, democracies yield the peace, and someday, someday, if we do not lose our nerve and our will, an American President will be talking to a duly elected leader from Iraq, working together to keep the peace, and our children and grandchildren will be better off.

Now that you're stuck here, I'm going to tell you something else. *[Laughter]* Our economy has been through a lot in a relatively quick period of time. We've been through a recession; we've been through corporate scandals; we've been through a devastating attack on our country; we have dealt with war; we have dealt with high energy prices; and we have dealt with natural disasters, large natural disasters. Last

year, our economy grew at 3.5 percent. The national unemployment rate is 4.7 percent. That's lower than the average rate of the 1970s, 1980s, and 1990s. We added 4.7 million new jobs over 2½ years. After-tax real income is up 8 percent. Productivity is at an alltime high. More people own a home than ever before in our Nation's history; more minority families own a home than ever before in our Nation's history. We're doing something right in Washington, DC, and you know what it is? We've unleashed the entrepreneurial spirit of the United States because of real, meaningful tax cuts. Republicans believe that the more money you have in the pocket, the more you save, invest, and spend, the better off this economy is.

The tax relief we passed and these Members voted for, these candidates voted for, is set to expire. And if it does, the American people are going to get a tax increase they don't expect and they don't want. In order to make sure this economy continues to grow, in order to make sure the entrepreneurial spirit continues to remain strong, in order to make sure the small-business sector of our economy is as strong as it is today, we need to make the tax relief permanent.

Now, I know what they're going to say. They're going to say, "How can you balance the budget if you cut the taxes?" People will say, "Well, we need to raise your taxes in order to balance the budget." That's not the way Washington works. What will happen is they will raise your taxes and figure out new ways to spend your money. The best way to balance the budget is to keep pro-growth economic policies in place and be wise about how we spend your money. We're on our way to cutting that deficit in half by 2009, and I want to thank the Members up here for making the tough choices when it comes to our budget.

We got a choice to make in this country: Do we become a protectionist, isolated nation, or do we continue to lead? I made my choice. I believe America is better off

when America takes a leadership role in this world. I believe we should not fear our economic future, because we should shape it. Part of shaping the future is to keep taxes low. Part of shaping our future is to get rid of these junk and frivolous lawsuits that are running good capital out of America.

Part of shaping our future is to make sure we're not hooked on oil. I know that sounds odd for a Texan to say. [Laughter] But if you see the world from my perspective, I think you would agree with me. Being addicted to oil is a problem. When demand for hydrocarbons or fossil fuels goes up in developing parts of the world, it causes the price of gasoline to go up here at home. When parts of the world that don't like the United States of America threaten to withhold supplies of oil from the market, it creates a national security problem. And so I'm looking forward to working with Congress to diversify away from oil, to spend money on research and development so we can have plug-in hybrid automobiles that can drive the first 40 miles on electricity, to spend money to make sure that our technologies are able to help us develop ethanol. Look, we want our farmers in Georgia growing crops that can run our automobiles. We need to become less dependent on foreign sources of oil in order to be a competitive nation.

We need nuclear power and solar power and wind power. In order for this country to be competitive in the out years, in order for us to be confident about our national security, we have got to be less addicted to Middle Eastern oil, and I intend to lead that country this direction.

I want to talk to you about a couple of other things, about a competitiveness agenda. How do you stay competitive in a global economy? The key to making sure that America remains the leader in the world is to make sure our children are educated. You see, if our kids don't have the skills for the jobs of the 21st century, they're going to go somewhere else. That's

just a fact of life. And so therefore, I told the United States Congress we need to work together to make sure that we're not only the leader in research and development, in technological development, but to make sure our children have got math and science skills so that we are educating the engineers of the future and the physicists of the future and the chemists of the future.

I want to congratulate Sonny Perdue for implementing the No Child Left Behind Act. I've heard all the debates about it; I'm sure you have as well: "How dare the Government measure?" Look, my attitude is, we're spending money. The taxpayer wants to know whether the money is well-spent. If you're spending money to teach a child to read and write, doesn't it make sense to measure, to determine whether or not the child is reading or writing? Doesn't it make sense to believe every child can read and demand that the school system teach every child to read? And how do you know? You measure. And if you find a child not reading early, I think it makes sense to provide additional help, additional money for each child, like we're doing through No Child Left Behind Act, so no child is left behind. No, Republicans should stand for high standards and the belief that every child can learn, and we ought to demand change where we find children trapped in schools that will not teach and will not change.

And we're getting results. We're getting results nationwide. There's an achievement gap in America that's not right. We've got too many of our African American kids and young Latino kids who can't read at grade level. But that's changing. See, we're measuring, we're correcting problems early, before it's too late. And that achievement gap is narrowing, and America is better off for it.

And we've got a problem when it comes to math. See, our fourth graders are testing fine in math but then falling off in the eighth grade. So what I want to do is apply

the same rigor we've done for reading in the early grades to math in the middle grades to make sure that America is competitive, to make sure that our children have the skills necessary to fill the jobs of the 21st century. This country of ours should not fear the future. We ought to welcome the future and shape the future. And the United States of America must put policies in place to make sure that we're the leading economy in the world, for the sake of our people and the sake of people who want to find work. And that's exactly what I intend to do for this country.

And finally—you'll probably be happy to hear the word, "finally"—I'm going to continue to work with people on this stage to promote a culture of life in the United States of America. We believe every person matters, every person counts. We believe that—we believe in medicine and sound science, but we don't believe in taking life to promote science. We believe in upholding values that are important. We believe in the faith-based initiatives. We understand there are people in this part of the world and people all over our country who hurt.

We also understand the limitation of government. Government can hand out money, but it cannot put hope in a person's heart or a sense of purpose in a person's life. That's done when a loving individual finds a stranger in need or a child who needs to learn to read or a person addicted, says, "I love you, brother," or, "I love you, sister. What can I do to help you?" The greatest strength of the United States of America is not our military, and it's not the size of our wallet. The greatest strength of the United States of America lies in the hearts and souls of millions of our citizens who've heard the universal call to love a neighbor just like you'd like to be loved themselves and are doing that on a daily basis.

We've got millions of our citizens who are helping change America one heart, one soul, and one conscience at a time. And

it's important for the Federal Government and the State government not to fear the armies of compassion but to support the armies of compassion as they help make this country a hopeful, optimistic place for every citizen who is honored to call themselves an American.

Listen, I love being your President. I love being back in Georgia. Thanks for giving me a chance to come back. Thanks for joining this great festival that celebrates

the Republican Party of the great State of Georgia. And God bless.

NOTE: The President spoke at 6:22 p.m. at the Georgia International Convention Center. In his remarks, he referred to Gov. Sonny Perdue of Georgia, and his wife, Mary; and Alec Poitevint, State chairman and national committeeman, Georgia Republican Party, and his wife, Doreen.

## Interview With Diana Moukalled of Future Television of Lebanon March 9, 2006

### *Lebanese Freedom*

*Ms. Moukalled.* Mr. President, thank you for receiving Future Television. As you know, head of U.N. inquiry, Serge Brammertz, will present his report to the Security Council in a few days. How should the international community respond if the report concluded that Syria did not fully cooperate with the inquiry, as previous efforts did?

*The President.* Our position is, is that we want to know the truth, and we expect all parties to be forthcoming with the truth. The truth is really important to help Lebanon meet a goal that we want for Lebanon, which is free of foreign interference, democratic and peaceful, so that people can realize dreams and so the great country of Lebanon can grow and prosper like I'm confident it can.

So the United States will constantly remind all parties that we seek the truth, and we expect parties, when asked about the truth, to be forthcoming with the truth. I'm worried about people who stall and hope that the world turns a blind eye to a terrible death. And we're not going to turn a blind eye. We will keep focused on this important issue, because we believe in the future of Lebanon.

### *Syrian Withdrawal From Lebanon*

*Ms. Moukalled.* From what you say, many in Lebanon fear that there might be a deal between Washington and Damascus. In other words, if Damascus complied with Washington demands regarding Iraq, regarding Hizballah and Hamas, would you let the inquiry not reach its ultimate?

*The President.* Part of our desires for Damascus is, of course, to shut down terrorist bases in their country, and is, of course, to stop cross-border infiltration into Iraq, is, of course, to stop allowing people to find safe haven to plot and plan attacks in the neighborhood. But part of our demands was to—was 1559, which is, completely out of Lebanon. And so there are no deals. We are people who believe that when we say something, we've got to keep our word. And again, I repeat to you: I think that the light of truth is very important toward establishing a peace that we all want in the region.

I really do want young boys and girls in Lebanon to be able to grow up in a world free of violence. Lebanon is a fabulous country; Beirut is one of the great international cities of all time. And it's in the world's interest that this democracy survive, and not only survive but flourish and

thrive. And so we don't—we really aren't going to deal away Lebanon's future.

*U.S. Support for Lebanese Freedom*

*Ms. Moukalled.* Regarding U.N. Resolution 1559, the Lebanese Government says that it wants to reach a true result with the issue through a national dialog—

*The President.* Yes.

*Ms. Moukalled.* —and you have demanded repeatedly that Lebanon should implement this resolution. Will you give the Lebanese Government a chance to resolve this issue through national dialog, or you will exercise more pressure?

*The President.* I think it's very important that the national dialog process succeed. The truth of the matter is that peace in Lebanon is going to be achieved by Lebanese leaders, people in Lebanon who are dedicated to the future. The United States can—we can work; we can help; we can pressure Syria; or we can do things. But what we can't do is to force people to be courageous in the name of peace. That's up to Lebanon's people themselves—the people of Lebanon themselves. The Lebanese must stand up and say, "We demand a open and free and transparent society so we can live in peace."

We'll help, but courage comes from within people's souls. And we have been encouraged by courage being shown by those who believe in Lebanon's future.

*Ms. Moukalled.* Are you following the national dialog that's happening now in Lebanon?

*The President.* I am.

*Ms. Moukalled.* Many believe that without international efforts, this dialog will not succeed, where other parties think that the American pressure is keeping Lebanese from reaching an agreement.

*The President.* No, I hope—I believe that an agreement can be reached. I understand the talks have been suspended for a week, but they will be ongoing, and I think it's a very important part of the Lebanese folks putting aside past—the past and focusing

on a bright future. And we will help, and we will encourage, but ultimately the decisions have to be made by the Lebanese citizens, that they want something better than violence and war and division.

*Hizballah*

*Ms. Moukalled.* The two controversial items are the ousting of President Emile Lahud and the disarming of Hizballah.

*The President.* Yes.

*Ms. Moukalled.* What's your comment? What—

*The President.* Our position is clear: 1559, which we strongly support, says that armed militias should be disarmed. And secondly, we believe that the President ought to be independent, ought to be someone who will strongly represent the interests of the Lebanese people.

*Ms. Moukalled.* The Lebanese Government considers Hizballah a resistance. What's your comment?

*The President.* My comment is, is that armed militias should disarm. And I think it's very important to understand that democracy—you can't have a democracy if political parties have their own armed force. Our position is that the Lebanese forces ought to be in control of the security of Lebanon, for the good of the people.

*Lebanese Freedom*

*Ms. Moukalled.* What's your position regarding ousting President Emile Lahud?

*The President.* Again, I repeat to you: I think the characteristics for the President ought to be somebody who is independent-minded, somebody who focuses on his—the future of the country, somebody who understands that foreign influences inside of a country can be very negative.

*Spread of Democracy*

*Ms. Moukalled.* Mr. President, as you know, the situation in Iraq is really deteriorating; the country is on the edge of a civil war. The support for U.S. policies among Arab public opinion is—it's minimal.

Many believe that you are focusing on Lebanon to divert attention from what's going on in Iraq, or it's a part of a whole scenario to control the region. Why did Lebanon get so much of your attention in the past year, whereas Syria controlled Lebanon for 30 years?

*The President.* Because I believe in democracy. I believe democracy yields peace. That's a historical—it's been proven throughout history that democracies yield the peace we all want. And I repeat to you: I want young boys and girls in Lebanon to grow up in peace. It's what I want.

I am—I want the same thing for Iraq. I want Iraq to be a democracy—not a U.S. democracy but a democracy that takes into the—the traditions, the Iraqi traditions and the history of Iraq, just like the Lebanese democracy will reflect the history of Lebanon and the traditions of Lebanon.

I believe there are such things as universal values, and I believe everybody desires to be free. And it's difficult in Iraq, no question about it. But I want—I want you to remember that the Iraqi people expressed their opinion last December about civil war. Eleven million people went to vote in difficult conditions saying, "We want freedom, and we want democracy. Give us a chance." And I'm convinced, ultimately, the people's will will win out and defeat those who want to try to create a civil war. Our position in the Middle East and throughout the Muslim world is that we want to be a partner in peace; we want to help people realize their potential.

And I hear the—I hear the language about the United States, that United States is anti-Islam. It's just not true. We view Islam as a religion of peace—or that the United States has got this design. But we'll protect ourselves. But the best way to protect ourselves ultimately is to encourage good relations amongst Muslim people and to encourage democracy. That's what we want. We want people to be able to be free. We want there to be minority rights and human rights; we want there to be

women's rights. We believe in societies where women have got a chance to realize their dreams. We want there to be good education and good health care, and to the extent that people want our help, we're willing to help.

*Ms. Moukalled.* But so far, you're not winning the hearts and minds of Arab people. Why not?

*The President.* Well, it's—there's a lot of negative news on TV. There's a—the enemy to democracy has got one tool, and that is the capacity and willingness to kill innocent people. And that shocks people. People of good conscience grieve when they see innocent life being taken by car bombs or when they read about beheadings.

And it's really important for those of us who believe in peace and the civilized world—it's not civilized to kill innocent people, nor do I think it's religious. It's very important for us to be steadfast and strong and have faith in the capacity of freedom to help answer people's desires and change society for the better.

My dream is for there to be a Palestinian state at peace with Israel. My dream is for Lebanon's democracy to flourish. My hope is that Iraq's democracy will serve as an example for others, and so people can realize their potential. And I believe this is going to happen. But there are people who want to stop that progress, and I know that. But I'm a firm believer in the future, and we'll continue to work in a way that tries to share our deepest desires to help people, that will try to combat some of the ugly news people see on the TV with positive policies that uplift lives, give people a chance.

*Ms. Moukalled.* Thank you, Mr. President. Unfortunately, we ran out of time.

*The President.* Well, thank you for coming.

*Ms. Moukalled.* Thank you.

*The President.* I'm honored you would come all the way from Beirut to interview me.

NOTE: The interview was taped at 10:40 a.m. in the Map Room at the White House for later broadcast. Ms. Moukalled referred to Serge Brammertz, commissioner, United Nations International Independent Investigation Commission into the assassination of

former Prime Minister Rafiq Hariri of Lebanon; and President Emile Lahud of Lebanon. The transcript was released by the Office of the Press Secretary on March 10. A tape was not available for verification of the content of this interview.

## Remarks at the National Newspaper Association Government Affairs Conference and a Question-and-Answer Session March 10, 2006

*The President.* Thank you very much. Jerry likes to give a short introduction. [Laughter] I appreciate you letting me come by to visit with you some, and I look forward to answering some questions you might have. You can't come to a newspaper deal without answering questions. [Laughter]

First, I want to thank you all for being part of the backbone of democracy. You know, you can't have a democracy unless there is a free and vibrant press corps. I sometimes remind people I may not like what you print, but what you print is necessary to maintain a vibrant public forum where people feel comfortable about expressing themselves. And so thanks for what you do. I appreciate it very much.

I also recognize that not all the press is located in the big cities in America. I remember running for the United States Congress in 1978. I came in second in a two-man race, by the way. [Laughter] And I remember people telling me, "Whatever you do, you make sure you go knock on the door of the rural newspaper." If you're interested in finding out what's going on in the community, you not only go take questions, but you listen to what the people are saying. And I've never forgotten that lesson that good politics means paying attention to the people not only in the big cities but outside the big cities. It's one of the reasons I was grateful to accept your

invitation. I'm looking forward to being here.

A couple of thoughts on my mind—first, obviously, your businesses thrive when the economy is good. And part of our job here in Washington is to make sure the environment for entrepreneurship and small businesses and the farmers and ranchers of this country is a strong environment. And this economy of ours has overcome a lot. We've overcome a recession and an attack, a national emergency, corporate scandals, a war, natural disasters. And we've overcome it, and the reason I say that is because the statistics say it—not just the politicians—but statistics: 3½ percent growth last year. The national unemployment rate as of today is 4.8 percent. That's lower than the average rate of the 1970s, 1980s, 1990s. Today we just learned that we've added 243,000 new jobs last month. That's about 5 million jobs over the past 2½ years. American workers are defying the pessimists. Our economy is strong. Productivity is up. Homeownership is up.

The fundamental question facing folks here in Washington and at the State governments is, what do you do to make sure that the economy remains strong? My philosophy can be summed up this way: The role of government is to create an environment in which the entrepreneurial spirit flourishes.

I believe one of the reasons we're having the economic success we're having is because we cut the taxes on the people. I believe that when somebody has more money in their pocket to save, invest, or spend, the economy benefits. The tax relief we passed is working. Parts of it are set to expire. I'm reminding the American people that if the Congress doesn't act, you're about to get hit with a tax increase you don't expect and most people don't want. So for the sake of economic vitality, to make sure this economy continues to grow and to make sure America is competitive in a global economy, Congress needs to make the tax relief permanent.

Now, some will say, "Well, we've got to raise taxes in order to balance the budget." That's not the way Washington works. Washington will raise your taxes and figure out new ways to spend your money; that's how it works.

The best way to balance the budget is to keep pro-growth economic policies in place. In other words, keep the taxes low so the economy grows, which generates more revenues for the Treasury, and set priorities on the people's money. I've submitted a budget to the Congress which keeps us on track to cut the deficit in half by 2009.

Setting priorities is a difficult task for some in Washington. Every program sounds worthwhile. Everybody's spending request is necessary. But Congress needs to set priorities, needs to be wise about the people's money. And if they need some help, they ought to give me the line-item veto, and that way we can bring budget discipline, help keep budget discipline in Washington.

The long-term budget challenge is—it really has to do with mandatory spending, what's called mandatory spending. That's code word for Social Security and Medicare. Baby boomers like me are getting ready to retire. My retirement age happens in 2008, by the way, which is aligned perfectly. [Laughter] I talked about the issue last year. I'm going to keep talking about

the issue. The job of a President is to confront problems—that's why you put me up here—is to deal with problems, not to pass them on or hope somebody else takes care of it.

And we have a problem with Social Security and Medicare. We've got a lot of people retiring and not enough people paying into the system. We've been promised a lot of benefits, our generation, better benefits than the previous generation. And so Congress needs to join me in setting aside all the needless politics in Washington, DC, to come together and to present a solution to the American people so we can say we've done our job. I'm looking forward to working with Congress.

I said it in the State of the Union: I want people at the table. I meant it. I want Republicans and Democrats to come to the table, to come up with a solution. Part of the solution is going to be—the best way to describe it is like an automobile; if you're speeding, you slow your car down to get to the speed limit. You don't put it in reverse. We can fix the problem. We can come together and show the American people we're capable of dealing in a bipartisan way.

We also need bipartisanship when it comes to energy. I surprised some of you, and I'm sure some of my Texas friends here were somewhat surprised to hear me say, "We're addicted to oil, and that's a problem." [Laughter] And it is a problem. It's an economic problem—economic/security problem. When demand for fossil fuels goes up in India or China or elsewhere, it affects the price of gasoline in Granbury, Texas, Jerry.

When I'm sitting around the Oval Office talking about national security matters and somebody says, "Did you see what the Iranians said about consequences?"—really what they're talking about, I guess, is energy. So for national security purposes, we have got to become not addicted to oil.

And there are ways to do this—really interesting ways, exciting new technologies.

And Congress and the administration needs to work together to fund those new technologies. For example, it's possible to develop energy from saw grass. We know we can develop energy from sugar and corn; we're doing it in the Midwest. Those of you in the Midwest have seen the advent of the 85 pumps. Well, we need to be able to get ethanol out of other forms of biomass. And it's coming; we're close to some breakthroughs. We want people driving cars from fuels grown in America; that's what we want.

There's going to be hybrid batteries being developed that will enable you to plug in your car or your truck, and you'll be able to drive the first 40 miles on electricity. That's coming. It's called plug-in hybrid vehicles. That's going to be a part of making sure we're not addicted to oil.

Same on the electricity front. We can use wind power and electricity. These are all coming to the market because of research. They're becoming competitive forms of energy. We need nuclear power, in my judgment. It's a renewable source of energy that doesn't create greenhouse gases. We're spending a lot of money, by the way, on clean coal technology. We've got 250 years of coal here in the United States of America, and we can—we're developing technology so that we can burn the coal cleanly. In other words, we've got a comprehensive strategy to get us off oil, and looking forward to working with both Republicans and Democrats to get this passed.

One other issue, then I want to talk about the war on terror right quick; then I'll answer questions. Probably wondering whether I'm going to filibuster you. *[Laughter]*

We've got to make sure our children have the skills necessary to fill the jobs of the 21st century. If you're interested in talking about No Child Left Behind, you can ask me about it. I'm a firm believer. I believe it's changing public education for the better because we're measuring. And

we've got to use the same high standards that we've applied for reading in the early grades for math in the middle years, junior high. That's what we need to do.

And we need to spend research and development money at the Federal level so that we're always on the leading edge of technological change, that the United States is the leader of the world, and that we've got to make sure the research and development tax credit is a permanent part of the Tax Code, recognizing two-thirds of research dollars comes from the private sector.

One of the things—I guess what I'm telling you is, is that I don't fear the future for the United States because we intend to shape the future with good policies that keeps our economy flexible, entrepreneurial, that recognizes that small business is the backbone of job creation, that honors the contribution of our ranchers and farmers. I'm very optimistic about the economic future of the United States, and I'm looking forward to working with Congress to make sure the environment continues to encourage job growth.

We're at war. I wish I could report to you we weren't at war; we are. There's an enemy that still lurks, that would like to do serious harm to the United States. Much of my thinking, the decisions I have made, all revolve around that fateful moment when we got attacked. As concerned citizens, I'm going to share with you a little bit about why I have made decisions I have made. I'll be glad to answer any question you have along those decisions.

But I vowed after September—on September the 11th and after I would use all assets at our disposal to protect you. That is, by far, the most important job of the President, is to secure this homeland. There are lessons to have been learned after September the 11th. One of them is that we cannot take our security for granted. Listen, I understand that this is a different kind of war, and there are some in our country that may not believe there

is a global war on terror. They may believe this is an isolated incident; I don't. I know we're at war with a jihadist movement that has got strategies and tactics to back up those strategies.

So we cannot take our security for granted. And we must remain on the offense, and we are. We're dismantling Al Qaida. It takes time. But whoever is the President of the United States after me must always keep the pressure on Al Qaida.

Secondly, we cannot let terrorists find safe haven. They found safe haven in Afghanistan, where they could plot and plan and attack. And therefore, it's very important for the United States to deny safe haven.

Thirdly, when we see a threat, we've got to take it seriously and never allow it to materialize. The first choice of any President ought to be to deal with issues diplomatically. And we dealt with the issue of Iraq diplomatically—Security Council resolution after Security Council resolution, until 1441, when the world spoke with a united voice that said to Iraq: “Disarm, disclose, or face serious consequences.” Saddam Hussein chose otherwise. He was removed from power. And there's no doubt in my mind that the United States is more secure, and the world is better off without Saddam Hussein in power.

And now we must achieve a victory in Iraq by helping this country defend itself, secure itself, and become an ally in the war on terror. The enemy we face has got a powerful weapon. They can't defeat us militarily. They do not have an ideology that is appealing to people. But they do have the capacity to kill innocent life, and they're willing to do so, all attempting to shake our will and cause us to leave the Middle East, so they can find safe haven from which to launch attacks. That is what they have said. And as your President, it is important for me to see the world the way it is, the realities of the world, not the way some would hope it would be.

We've got a three-part strategy in Iraq, that on the one hand says there is a—that politics can help achieve our objective. And the Iraqi people have said loud and clear—not in one election, but three elections during the past year—they want freedom. Eleven million people went to the polls in the face of terror and threats. There are some who are trying to, obviously, sow the seeds of sectarian strife. They fear the advancement of a democracy. They blow up shrines in order to cause this Iraqi democracy that is emerging to go backwards, to not emerge. That's what you're seeing on your TV screens. You're seeing the use of violence to try to create strife. And there's no question, this is a period of tension in Iraq.

The Iraqi forces responded well, however, which is the second part of our strategy, and that is to let the Iraqis take the fight to the enemy. It's up to Iraq to make the decision. They made the political decision, and now it's up to them to make the decision to defend their own security against those who would stop the march of democracy. And after the shrine bombing, while there was no question about it, there was attacks; nevertheless, the Iraqi forces moved. In 16 of the 18 Provinces, there was relative calm. And they performed, by and large, in good fashion.

I know people in your parts of the world wonder how long the troops are going to be there. They're going to be there so long as the commanders on the ground say they're necessary to achieve victory. But they're coming home as the Iraqis are more likely to be able to take the fight to the enemy.

And the third aspect is economic development. That includes wise reconstruction efforts, creation of a central bank, a sound currency, small businesses. And if we don't lose our nerve, I'm confident we'll achieve our objectives, and a democracy in the heart of the Middle East is going to help lay peace.

Part of winning this war on terror requires alliances. America has got a lot of friends in the war on terror. People understand the stakes. They understand that the bombings around the world were an indication of the plans that terrorists have for those of us who embrace freedom.

Obviously, you've been reading about the UAE issue. And I want to make a comment on that, the port issue. I'm sure that the decision by DP World was a difficult decision, to hand over port operations that they had purchased from another company. My administration was satisfied that port security would not have been undermined by the agreement. Nevertheless, Congress was still very much opposed to it. My administration will continue to work with the Congress to provide a greater understanding of how these transactions are approved, in other words, the process, and how we can improve that process in the future.

I'm concerned about a broader message this issue could send to our friends and allies around the world, particularly in the Middle East. In order to win the war on terror, we have got to strengthen our relationships and friendships with moderate Arab countries in the Middle East. UAE is a committed ally in the war on terror. They are a key partner for our military in a critical region.

And outside of our own country, Dubai services more of our military ships than any country in the world. They're sharing intelligence so we can hunt down the terrorists. They've helped us shut down a worldwide nuclear proliferation network run by A.Q. Khan. UAE is a valued and strategic partner. I'm committed to strengthening our relationship with the UAE and explaining why it's important to Congress and the American people.

Thank you for letting me come by. Be glad to answer some questions.

Yes, sir.

#### *South Dakota Abortion Legislation*

*Q.* Governor Mike Rounds signed a bill this week banning almost all abortions in South Dakota, sort of a frontal assault on the Constitution—[inaudible]. I wonder if you agree with this process that the State has taken.

*The President.* As a former Governor, I fully recognize that State legislatures will vote on matters that they think expresses the will of the local folks. Obviously, this bill he signed will work its way through the court system, and maybe someday be given a fair hearing in the Supreme Court. I don't know. I can't predict to you the course these legal challenges will take. I can assure you, however, if it does make it to the Supreme Court, the two people I nominated and who were approved were not picked because of any litmus test. They will interpret laws based upon the Constitution, is what they'll do. And so I followed this in the newspapers. I haven't talked to the Governor about it.

#### *Health Care/Association Health Plans*

*Q.* Mr. President—

*The President.* Yes, I meant to call on you first. I'm sorry. [Laughter] Don't hold it against the man from South Dakota.

*Q.* After that long introduction I gave you, I figured you owed me something.

*The President.* I do owe you one. [Laughter]

*Q.* This organization and its members are vitally interested in the passage of association health plans. And we wonder what the possibilities are for that.

*The President.* I appreciate that.

*Q.* And then as the next questions come around, we'll just hand this microphone around. So thank you.

*The President.* Look what you did. Fine with me. No, don't worry about it. I don't care. [Laughter] I don't have to deal with the guy. I'm fixing to leave. [Laughter] I'm going to go meet with President Toledo of Peru here after this.

The question is association health plans. First of all, I fully understand the pressures being put on small businesses because of rising health care costs. And therefore, good policy needs to address the rising cost of health care. I've got some ideas for you. I'll get to AHPs in a minute.

I think it's very important that there be more transparency in pricing in health care. It's really the only industry, when you think about it, where somebody else decides whether the price is worthwhile. The consumer isn't directly involved in health care decisions; a third-party payer is. And so there's really no interaction between the provider and the customer when it comes to health care.

I'm a big believer in what's called health savings accounts because it puts consumers in charge of health care decisions. And we strongly urge small businesses to look at this vehicle.

Secondly, the health care is an inefficient industry—when you really think about what information technology has done to your business, providing better productivity increases, as well as interesting challenges, by the way. The same productivity increases haven't happened in health care. I mean, you've got a guy writing down prescriptions by hand and/or files being written by hand, and doctors don't write so good anyway, which leads to medical error and inefficiencies.

So information technology, which we're now advancing here at the Federal level in conjunction with providers throughout the country to develop a common vocabulary so that eventually there will be electronic medical records with ample privacy protections available, will help wring out some of the costs of health care.

Health care costs are driven by frivolous lawsuits. Doctors practice defensive medicine in order to be able to withstand a court challenge. And a lot of times that practice of defensive medicine isn't necessary, except for legal reasons.

Secondly, lawsuits cause premiums to go up, which causes price to go up. And therefore, I'm a believer in medical liability reform at the Federal level. I wasn't when I first arrived in Washington; I thought States should handle it okay. But the problem is, is that it's estimated that these lawsuits and defensive practice of medicine and the rising premiums cause us to spend about \$28 billion a year in additional Federal money through Medicaid and Medicare and veterans' benefits. And so I'm for medical liability at the Federal level.

Finally, AHPs makes a lot of sense. I am a strong backer. I believe small businesses ought to be able to pool risk across jurisdictional boundaries so they can get the same benefits from larger risk pools that big companies get. So I'm a believer in AHPs. I think we've got a pretty good chance this year—I hope so—to get it out of the—I know we got it out of the House; we've got to get it out of the Senate. So part of a comprehensive strategy for dealing with health care costs is to have AHPs as a part of a health care vision.

Yes, sir.

#### *Postal Reform*

*Q.* Mr. President, I've got a followup question about the small business—keeping small business healthy, that you referred to. Postal delivery rates are very important to community newspapers, much as you might know, I believe, Bonnie Mullens, of the McGregor Mirror and Crawford Sun down in your area. And we are—

*The President.* She didn't call you to go after a subscriber, did she? [*Laughter*]

*Q.* No, we just did a little research.

*The President.* Okay, good. Smart man. That's called due diligence. [*Laughter*]

*Q.* Postal reform, which has been going on in Congress for about 10 years, was really pushed forward by a commission that you appointed, and it was passed overwhelmingly by both Houses. And we have this bill going to conference in April or

May. There's some concern that the administration may want to oppose this bill or veto it if it's so-called not favorable to the Federal budget. But there are things in that bill that are very important to the newspaper industry. And part of that is the funding that keeps rates fair—because of some overpayment of military pensions—that we don't think should be put on the taxpayers, the rate payers. So we'd ask your support on behalf of us and Bonnie Mullens—

*The President.* Thank you.

Q. —to support that bill as it's in the Congress if it comes to your desk, sir.

*The President.* As you know, we do support postal reform. And as you accurately noted, we've got the process started, and we look forward to working with Congress on an acceptable bill.

Frankly, this issue hasn't made it to my desk prior to me arriving at this meeting. And I'm mindful of the bill. I need to know more about the particulars before I make you a commitment one way or the other.

Yes, sir.

### *Iraq/Spread of Democracy*

Q. Mr. President, what are our plans if civil war breaks out in Iraq?

*The President.* Yes. Step one is to make sure—do everything we can that there not be one. Secondly, I believe the Iraqi people have made a choice. It wasn't all that long ago that 11 million people went to the polls. It may seem like an eternity, but that was last December that people defied assassins, car bombers, threats, and said, "We want a democracy."

Secondly, the first real test for an interim government occurred when the Shias' shrine was blown up, the holy site. And while there's—as I said earlier, there was—no question there was violence and killing, the society took a step back from the abyss, and people took a sober reflection about what a civil war would mean.

I just got off of a teleconference with Ambassador Zal Khalilzad, as well as General Casey. They're obviously concerned about sectarian violence and the violence you see. They understand people are trying to create this tension, this ethnic tension. But they were also pleased with the response of the security forces. It wasn't perfect across the board. But nevertheless, in 16 of the 18 Provinces, I've mentioned that there was relative calm. Most of the violence was in the Baghdad area. It's the violence you're seeing on your TV screens.

And so the purpose is to make sure that we continue to remind the interim government that the people want democracy. One of the keys is going to be to get a unity government up and running, a government that reflects the diversity of the country. We talked about that today. We want the Iraqis to make that selection, of course. They are the ones who got elected by the people. They're the ones who must form the government.

But we are going to continue to remind them that the sooner they can get a unity government up and running, the more confidence the people will have in their future. So it's to take advantage of the desire of the Iraqis to live in a peaceful world and encourage government to continue to respond to fight off the desires of few people, fight off those who are trying to sow the seeds, and get a democracy going.

It's very important for the people in the Muslim world to understand that we understand there's a—we're dealing with a—that we want them to have a democracy that reflects their histories and their traditions. Iraqi democracy doesn't have to look like the United States, nor should it. But it's also important for people around the world to recognize that there are such things as the natural rights of men and women.

That's what we're founded on here in America. We believe in the universality of freedom. We believe people desire to be free, not just Americans, but universally. And that faith—at least my faith in the

natural rights of men and women and the desire for people to be free was expressed at the ballot box. And it's that powerful statement that I believe will enable Iraq to develop a democracy.

A democracy in Iraq is important. It's important to deny safe haven to Al Qaida. Zawahiri made it clear—he's the number-two man in Al Qaida—that it's just a matter of time for America leaving. That's what he said. And the reason why that was important for him to say because they wanted to use Iraq as a place to plot/plan, as well as to spread their jihadist, their Islamist—radical Islamic view. They're totalitarians. That's what they are. And we've got to recognize them as such.

And so it's kind of a long-winded answer to my belief that we will succeed, and we must succeed. And the reason I say we will is because the Iraqis want us to succeed. They want to succeed.

There's a lot of talk about Iran. A free Iraq will inspire reformers in Iran. I believe the more women are empowered in the Middle East, like it's going to happen in Iraq, the more that will inspire others in the Middle East to demand their freedom.

Now, if you don't believe freedom is universal, then I can understand skepticism about what I just said. But I reject that notion that freedom is only available to some of us. I believe liberty is universally desired. And I know it's in our interest to help democracy spread.

I like to remind people about this historical parallel, and I've used it a lot. You've probably have heard it, so I beg your pardon for bringing it up again. But it's important for me to connect the idea of laying the foundation for peace with reality, and that reality is what we see in Europe today. There were two major world wars in Europe in the 1990s—I mean, the 1900s. And today, Europe is free and whole and at peace. And a lot of that has to do with the fact that the nations of Europe are democracies. Democracies don't war.

One of my best buddies in the international arena is Prime Minister Koizumi of Japan. What's interesting about that is my dad fought the Japanese—as did, I'm sure, your relatives, some of your relatives. And yet today I can tell the newspaper owners that I work with Koizumi to keep the peace. Democracy has the capacity to turn enemies into allies and cause, kind of, warring factions to come together. And it's hard work to help a democracy get hold, particularly if you had just left—lived under the thumb of a brutal tyrant, somebody who'd kill you in a moment—or get you killed in a moment's notice.

Remember, we discovered mass graves of a lot of people in Iraq. This guy—Saddam Hussein was brutal for the people of Iraq. And there's a lot of tension and a lot of rivalry. One of the big issues we're going to have to deal with is to make sure that people don't take revenge outside the rule of law. Militias that are, kind of, seeking revenge. And at any rate, I'm just trying to share with you some of my—the philosophical tenets of the decisions I have made and my optimism about the future and my hopefully realistic assessment about the necessity for us to achieve our objectives.

Remember, this is a global war on terror. We've got a strong ally in Pakistan fighting off Al Qaida. And Saudi Arabia and the Kingdom of Saudi has committed itself to fighting Al Qaida. Lebanon is now becoming a freer democracy, although we've still got work there to make sure foreign influence is—allow the Lebanese democracy to grow. Libya made a decision to get rid of its weapons programs. And there's—positive things are happening, and they need to happen on a global basis because this is a global war on terror.

Yes, ma'am.

#### *Trade*

Q. Thank you, Mr. President. Many of the things that you've mentioned today are

affecting the State. We have a high unemployment rate. And of course, much of our economy is dependent upon the automobile industry.

*The President.* Right.

*Q.* General Motors is having problems with their health care plans, their pension plans, and of course, the issue of gas is definitely one—energy conservation. I know the auto industry has asked the administration for advice and for help in this problem. What role do you see the Federal Government playing in terms of some of the industries in the country that are partially problem-makers for your policies, as well for the people of our State?

*The President.* People have asked whether or not private companies that have made pension promises should be relieved of their responsibility. And my answer is, if you make a promise, you've got to keep it—that if you said, “I—company X, Y, Z—promise you this,” it's up to the company to make good on the promise. I think that's a very important principle to state loud and clear.

One of the real issues that affects Michigan and people in Michigan is trade. They're concerned about trade. They're worried that trade has only benefited our friends but not our country. Let me take a step back and tell you I'm a free trader. I believe it's very important for this country to be opening markets. I'm confident that if the playing field is level, that we can compete with anybody. And therefore, one of the things I've tried to assure the people of Michigan is that not only am I free trader, I believe the rules ought to be fair. In other words, I would hope that American people say, “Just treat us fairly, and we've got the confidence to compete.”

I know our farmers can compete. And for those of you who remember the price of soybean a couple of years ago, part of that is because we opened up markets. If you've got cattle men and women in your area, buying your newspapers, one of the things they constantly talk to me about is,

“Get those markets open; work with the Japanese to get that market open again.” If you've got chicken growers—I remember one of the first discussions I had with Vladimir Putin in Russia was, “You made some promises on our chickens; open up your markets like you said you would do.”

My point is, is that opening markets is good, so long as we're treated fairly. So I've constantly reminded the Chinese leadership that intellectual property rights needs to be protected; your currency needs to be floated; treat our people fairly. That's all we want. Our manufacturers need to have a level playing field.

And so I fully understand Michiganders' concerns about the trade arena. And I would think it would be a mistake if we become a protectionist nation. I thought so strongly about it that I put it in my State of the Union Address. I am worried about isolation and protectionism. To me, it's a lack of confidence in our ability to shape the future, and I think it would be wrong economic policy. And so I will continue to work to open up markets. But I fully am aware of the issues in Michigan.

Yes, sir.

#### *Gulf Coast Reconstruction*

*Q.* Mr. President, I publish in the southern and eastern suburbs of Baton Rouge, Louisiana.

*The President.* There you go.

*Q.* I know you've heard a lot of complaints from Louisiana and seen a lot of hands out. I would like to thank you for your personal interest and also for all the money. [*Laughter*]

My Congressman, Richard Baker, came up with the idea of employing a Federal entity to buy out property in New Orleans and sell it back into commerce selectively. It seemed to have a political consensus in Louisiana from both parties. It got to your office and was rejected.

*The President.* Correct.

*Q.* Can you talk a little bit about the problems that you see with Richard's plan?

And also, you're still about to send billions more down to us. How would you like to see that money handled, since you've been to us 10 times?

*The President.* Well, thank you. First of all, I want to thank the people of Baton Rouge for being so generous to the evacuees. I want to thank my fellow Texans for being generous to evacuees, and I'm sure people throughout—I'll bet you most of you are involved with communities that said, "Welcome." And that was a fantastic gesture of kindness by the American people, by the way.

I felt like there was a better approach to the housing issue. He's talking about a good fellow, a really good guy named Richard Baker, came up with a plan that basically had the Government buying the property, getting developers to develop the property, and to the extent that money was not recovered, the Government would basically be the banker.

Working with the folks—let me step back. Right off the bat, I knew it was important for Louisiana to develop its own plan, not have the Federal Government say, this is the—impose a plan, but to have the folks in Louisiana come up and develop a plan. We, obviously, have interfaced with them, because as you recognize, in kind of a cavalier way, "Thanks for all the money." [*Laughter*] Well, not "cavalier." You made sure you mentioned it, let me put it to you that way. [*Laughter*]

And Louisiana had the Baker plan but also was developing another plan, as well, and one that we agreed to. Governor Blanco has put together a citizens group of distinguished people—good, honorable people—who are working closely with the group that Mayor Nagin put together, to develop a plan that will take CDBG money, and money I've requested in the supplemental, to basically have money that goes directly to the homeowner. I like that idea better than the Government moving in and becoming the bank, as opposed to the Gov-

ernment providing money for individual homeowners to make decisions.

And the rules and the zoning laws attributable to that money are now being developed. But it's a very good concept, in my judgment. It's very important for Congress to make sure that the \$4.2 billion, I think it was, request in the supplemental go to Louisiana, as I said down in New Orleans the other day.

Step one in the recovery in New Orleans has got to be to make sure that the levees are strong enough—equal to or better than pre-Katrina—in order for there to be confidence for the market, confidence for the homeowner to be able to rebuild in certain parts of New Orleans.

Secondly, it's important that as the levees are rebuilt and people gain confidence, that there be a rational development plan in place. I think a lot of taxpayers really don't want to pay money for people to rebuild in an area that's likely to be flooded again. And the people of New Orleans understand that, and the people of Louisiana understand that. That issue is being addressed.

Thirdly, it's very important that the Federal Government rebuild the infrastructure that we're obligated to rebuild in a timely fashion. Incredibly enough, the Slidell bridge, as I understand it, because of proper incentives, was built in record time, under budget. That may be a contradiction in terms when you hear a Federal official saying, "under budget, on time," but nevertheless, I believe that's what the Governor told me.

And so there is a comprehensive strategy in place that I'm comfortable with. Details need to be worked out, more details about dealing with the flood plain issue and how high the houses have to be rebuilt if people choose to rebuild there. I like the idea of funding people, of letting them make the decision.

By the way, Mississippi—and I don't know if we've got any folks from Mississippi here—but if you've ever been to the gulf coast of Mississippi since the storm, you'll

know what I'm saying—it looked like a bomb blast. It just leveled, absolutely wiped out a lot of homes and property and some lives along there. And they developed a plan too—their own plan.

Louisiana is different from Mississippi. They came up with a Mississippi plan that has been funded. And they are now in the process of saying to homeowners, “We’re helping you rebuild your lives.” I went to a home where the guy building—rebuilding it on the beach. I forgot how high he’s got it up, but it’s high enough to meet new standards, new building standards.

Debris removal in both locations is—you just can’t imagine how much debris was there. As you know, I’m not too poetic to begin with, so I’ll probably not be able to describe it properly. Let me just say, it’s a lot. [Laughter] I mean, a whole lot. And Mississippi has moved a lot of it off private and public land—I’m probably telling you more than you want to know.

I’ll just give you an interesting public policy dilemma. When we first got down there, the Government will remove debris off public property but not private—will pay to remove debris off public property but not private property. The simplest way to explain why not is, you start moving debris off private property, and the guy shows up and says, “Where’s my million-dollar necklace?” And so therefore, there needs to be a kind of a held-harmless statute, or a held-harmless agreement with local authorities. And so we’ve devised a perfectly legal way of saying that if you declare a health and safety hazard for particular blocks, then Government money will pay to clean up the land. A lot of Mississippi has been cleaned up because a lot of the local folks decided to take that tack.

Now, the problem in Louisiana, as far as debris cleanup, is that—like in the lower Ninth, a lot of people haven’t come back to their homes yet to see the devastation. They’ve been displaced around the country. And until people are able to come home and until people are clear about what the

rules will be and the funding mechanism will be, it’s going to be—the debris removal will be slow. We’ve done a pretty effective job of cleaning debris off the public right-of-ways, public lands but not off the private lands. And so that’s yet another deterrent to economic development.

So all this is coming together. My point—the funding is coming together; the levees are coming together; the rules about reconstruction are coming—or rebuilding are coming together; and the debris removal, albeit slow at this point in time, waiting for people to inspect their houses, will probably accelerate when people realize there’s a way forward—long answer to a complicated problem.

We’ve got \$100 billion that has been allocated for the region, which is going to create some interesting opportunities and further problems. One is going to be labor. People are going to be rebuilding down there a long time. If you’re interested in making a living, go down there, and there will be a job. And we want the first people hired, of course, to be Mississippi people and Louisiana people. It’s a great opportunity, by the way, for small business development. And I’m a believer—as you can tell, I’m an optimistic person. I believe that out of this terrible harm and grief is going to come a vibrant part—a vibrant economy.

You know, sales taxes receipts are, I think, almost equal to what they were last year in Mississippi. It’s amazing, isn’t it? There’s great resiliency to the American people.

Anyway, thanks for asking. Yes, sir.

#### *Democracy/Free Speech*

Q. Aurora, Colorado—and in our town a teacher was suspended for remarks critical of your State of the Union message, made the talk shows, et cetera—compared you to Hitler and—actually, I’ve heard the tape and he didn’t; he said, “Hitler-esque,” but it’s not the—

*The President.* He’s not the only one. [Laughter]

Q. And it's not the content that my question is about. My question is about your sense of the free speech right in the classroom or in public to criticize you without being considered unpatriotic.

*The President.* Yes, I think people should be allowed to criticize me all they want, and they do. [*Laughter*] Now, what are you all laughing at over there? [*Laughter*] Don't cheer him on. [*Laughter*]

Look, there are some certain basic freedoms that we've got to protect. The freedom of people to express themselves must be protected. The freedom of people to be able to worship freely—that freedom is valuable. I tell people all the time, you're equally American if you're a Christian, Jew, or Muslim. You're equally American if you believe in an Almighty or don't believe in an Almighty; that's a sacred freedom.

The right for people to express themselves in the public square is a freedom. Obviously, there's limitations—if, for example, someone is inciting violence, or the destruction of property, or public—causing somebody harm. But the idea of being able to express yourself is a sacred part of our society. And that's what distinguishes us from the Taliban, and that's important for Americans to understand.

We're in an ideological struggle. And one way for people to connect the ideological struggle with reality is to think about what life was like for people under the rule of the Taliban. If you didn't agree with their view of religion, you were punished. If you tried to send your little girl to school, you were punished. These people have a backward view. I don't believe—I believe religion is peaceful. I believe people who have religion in their heart are peaceful people. And I believe these people have subverted a great religion to accomplish a political end.

And so thank you for bringing that up; I appreciate it. People say to me, my buddies in Texas, "How do you handle all this stuff?" After a while, you get used to it. [*Laughter*] But you have to believe in what

you're doing, see. You have to believe in certain principles and beliefs. And you can't let the public opinion polls and focus groups, one, cause you to abandon what you believe and become the reason for making decisions.

My job is a job where I make a lot of decisions. And I decide big things and little things. And there are certain principles to decisionmaking. You make decisions—you know, you have to make a lot of decisions. And you don't put your finger in the air to figure out how to make a decision, and neither should the President of the United States. And you have to know what you believe.

Good decisionmaking rests on certain basic principles. I believe in the universality of freedom. I believe democracies lead to peace. I believe people ought to worship freely. I do believe there's an Almighty God that has spread freedom—making freedom available for everybody. I believe in private enterprise. I believe in free enterprise. I believe in high standards in education. These are basic beliefs that I'm not going to change.

And I know some would like me to change, but you can't be a good decision-maker if you're trying to please people. You've got to stand on what you believe. That's what you've got to do if you're going to make decisions that are solid and sound. And I understand some of the things I've done are unpopular, but that's what comes with the territory.

If you're afraid to make decisions and you only worry about whether or not people in the classroom are going to say nice things about you, you're not leading. And I think we've got to lead. We've got to lead to spread the peace; we've got to lead to protect this country; and we've got to lead to make sure we're the preeminent economic power, so our people can benefit.

Yes, sir.

*War on Terror/Iran/North Korea*

Q. Who do you think the biggest threat is: Iran, North Korea, or China?

*The President.* Interesting question. The biggest threat to American security: Iran, North Korea, or China. Why did I call on you? [*Laughter*] No. It would be an Oklahoma guy, you know? [*Laughter*]

The biggest threat to American security, short-term, is Al Qaida. They would like to attack us again. I think about Al Qaida and their potential to attack all the time—all the time. That's what you want your President doing. My job is to basically insulate people from some concerns. You don't risk capital if you're worried about an attack coming tomorrow. You don't go confidently about your business if an attack is right around the corner. I understand that. But I think about it a lot. So step one—I'm changing your question: Would you please order the threats?—Al Qaida.

I said in an early speech there was an axis of evil, and it included Iran and North Korea. I said that, I think, help me out here, April—2002 perhaps? Yes, State of the Union. If it's not 2002, it's April's [April Ryan, American Urban Radio Networks] fault, because she nodded her head. [*Laughter*] Relatively early in my Presidency.

I did that because I'm concerned about totalitarian governments that are not transparent, that have stated their intentions to develop nuclear weapons. One of the real dangerous threats, of course, is the nexus of terrorist groups, nonstate groups that get a weapon of mass destruction, which is their stated objective. And so I'm concerned about that.

I'm concerned about—I would say they're equal, Iran and North Korea, as for a security threat, because any time there's a nontransparent regime without a free press to hold people to account, it creates an unpredictability in the world. The Iranian President has stated his desire to destroy our ally, Israel. So when you

start listening to what he has said, to their desire to develop a nuclear weapon, then you begin to see an issue of grave national security concern.

And therefore, it's very important for the United States to continue to work with others to solve these issues diplomatically—in other words, to deal with these threats today, and we are. We've got the EU-3—which is Great Britain, France, and Germany—diplomatic lingo, sorry—are basically taking the position for the free world to the Iranians, that said, “No nuclear weapon and no knowledge about how to make a nuclear weapon.”

I talked to Vladimir Putin this week—or the Foreign Minister from Russia this week, about making sure that we're—Russia says the same thing. In other words, we want the Iranians to hear loud and clear that the world is speaking with one voice when it comes to their capacity to develop a nuclear weapon. Remember now, the reason we are where we are is because they had agreed to international norms and then were caught not adhering to the international norms. In other words, they basically tried to pull one over on the world. And to me, that's a warning signal we've got to take seriously.

Korea—the issue is one in which we tried to alter the relationship with the Koreans to be more than just the voice of the United States saying to the Koreans the same thing. And so we've now got China, South Korea, Russia, Japan, and the United States involved in what's called the six-party talks.

Ultimately, I think it's very important for the people in those countries to be able to live in a free society. If you believe liberty is universal, then you would hope liberty would spread to those countries as well.

The Chinese—you know, our relationship is a very interesting relationship with the Chinese. It's an amazing country, in many ways. It's a country that has got—it's got to create 25 million new jobs a year to

stay even. Think about that. It's a country that has chosen the path, by and large, of markets and enterprise. They are an economic issue for us, and that's why we've got a huge deficit with them. And therefore, it's very important for the Government to, on the one hand, reject protectionism, but on the other hand, insist that their market is open and it be traded freely and fairly, like I answered the lady from Michigan. I don't view—China is a more—China is a strategic partner when it comes to trade, for example. And I can't say that about the other two countries. And so the relationship is different; it's a different relationship.

He's giving me the hook, because I've got to go see President Toledo. But anyway—yes, ma'am.

#### *No Child Left Behind Act*

Q. I represent the Tullahoma News, from Tullahoma, Tennessee. I have the very best job there. I'm the wife of the publisher.

*The President.* Yes. I don't know if Laura would say the same thing. [Laughter]

Q. But I wanted to know what you understand the complaints to be about your No Child Left Behind policy, and if you acknowledge those complaints as any weaknesses to the policy? How effective do you think that it is in spite of that?

*The President.* No, good question. I'm glad you brought up No Child Left Behind. The complaint is that, "How dare the Government cause us to measure"—one of the complaints—"Too much testing," you know. I heard that when I was the Governor of Texas. Jerry didn't editorialize there, I'm sure. [Laughter] Maybe you did.

You know, "How dare you test people who don't speak English as a first language." My answer to those concerns is that, how do you know if you don't test? How can you possibly tell whether a child is learning to read and write if you don't measure? When I was the Governor of our State, I was deeply concerned about a sys-

tem where people would come to me and say, "You know what? We're getting kids in college that are not very literate." This kind of, just—social promotion was the culture and the norm.

If I were a newspaper owner, I'd want to make sure people could read. And one way to make sure people read is to measure early whether or not people can pass a test. I've heard people say, "All we're doing is teaching the test; you're causing people to teach the test." And my answer to that is, teaching a child to be literate will enable that child to pass the test. There's something fundamental about literacy.

Secondly, people said, "We believe in local control of schools, and the No Child Left Behind Act is not local control of schools." I strongly disagree. I believe in local control of schools. The No Child Left Behind Act said, "We're spending a lot of Federal money, particularly on Title I students; show us whether or not the money is being well spent."

We didn't say, "Here's the curriculum you must use; here are the class sizes you'll have." We didn't say, "We're going to design the test on your behalf." I fought off a national test, because I believed a national test would undermine local control of schools. All we said was, "Measure, and post your scores for everybody to see, and that you've got to be meeting a higher standard." In other words, we're holding people to standards. So I believe the No Child Left Behind Act honors local control of schools.

One of the classic debates that takes place at the local level is what curriculum to use. I'm sure some of you have been through the classic reading curriculum debates. They raged hot and heavy in the State of Texas for a while. And you'd have, this side would be yelling at that side. One way to make sure that your curriculum works is to measure. If a child is passing reading by using this curriculum, and another child is not passing reading when they use another curriculum, it provides a

useful tool for the local newspaper, for example, to say, "We told you so; the curriculum is not working," or, "We told you so; the curriculum is working."

There's got to be accountability in the public school system. If you do not diagnose a problem, you can never solve the problem. And one of the things about No Child Left Behind which is important is that when we diagnose a reading problem early, there is supplemental service money to help that child be brought up to speed. That's why it's called No Child Left Behind. We believe every child can learn—every child. And therefore, this is a program that says we want accountability for the taxpayers' money. We'll provide extra help early on when we find a child who needs extra help. And it's working. That's the other thing that I would tell people. How do I know? Because we measure.

There's an achievement gap in America that is not right. When you measure at the fourth grade, Anglo kids did fine; African American and Latino kids didn't. And that's not fair, and it's not right. And so we've essentially ended social promotion in the early grades and said, we're going to correct problems. And it's working because that gap is narrowing. And the reason I can say that is because we measure.

Interestingly enough, when you, kind of, compare measurements internationally in math and science or math, we're doing fine in the fourth grade. We're falling off in the eighth grade. And so what I want to do is to apply the same rigor for reading that we did in the early grades to math in junior high. So in the eighth grades we get those scores and, kind of, lay that foundation for the sciences and the engineering—the physicists, so we can compete.

I'm a strong believer in No Child Left Behind. My Secretary of Education, my

good buddy, Margaret Spellings, who helped me put a similar program in place in the State of Texas, is now the Secretary of Education. She's obviously listening to complaints about certain aspects of AYP. But we're not going to undermine the basic tenet that says we believe in high standards; we believe every child can learn; and we're going to measure. And when we see the status quo is unacceptable, we'll challenge the status quo. That's what you need to, and I'm sure you are doing that. It ought to be unacceptable to opinion makers when you find illiteracy. And you ought to demand change, not only for your own self interest but for the sake of this country. And so thanks for asking the question.

I've got to go. Listen, I'll be a diplomatic problem if I don't get over there on time. [Laughter] I'm honored you'd have me. Thanks for letting me come by and visit with you. God bless.

NOTE: The President spoke at 9:45 a.m. at the Wyndham Washington Hotel. In his remarks, he referred to Jerry Reppert, president, and Jerry Tidwell, vice president, National Newspaper Association; former President Saddam Hussein of Iraq; A.Q. Khan, former head of Pakistan's nuclear weapons program; U.S. Ambassador to Iraq Zalmay Khalilzad; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; Ayman al-Zawahiri, founder of the Egyptian Islamic Jihad and senior Al Qaida associate; President Vladimir V. Putin and Minister of Foreign Affairs Sergey V. Lavrov of Russia; Gov. Kathleen Babineaux Blanco of Louisiana; Mayor C. Ray Nagin of New Orleans, LA; President Mahmud Ahmadi-nejad of Iran; and President Alejandro Toledo of Peru.

## Remarks Following Discussions With President Alejandro Toledo of Peru March 10, 2006

*President Bush.* I am very pleased to welcome *mi amigo* back to the Oval Office. I have grown to admire President Toledo for his strength of character, his clear vision, his willingness to make difficult decisions, even sometimes when the popularity polls suggest he do something differently. Leadership requires strength of character, the willingness to make tough choices.

I admire my friend's record. Peru is on the verge of elections, and he'll be passing on to a successor a stable economy and stable political process. And that is a wonderful legacy—the first President in 50 years to be able to say, "I'm passing on a stable economy and a stable political process."

I admire the growth rate, the economic growth rate of Peru. It's the strongest growth rate in South America. I always admire this about my friend—he is—he says that one of his biggest goals was to reduce poverty, and he recognizes that while progress is being made—a lot of progress—that more needs to be done. He cares deeply about the people of Peru. He's a man of—he's got a *corazon gigante*.

I have enjoyed working with him. We accomplished some important missions, one of which was a free trade agreement between Peru and the United States was the result of his leadership and his vision.

And so it's with mixed emotions that I meet my friend. I'm pleased to be in the presence of an accomplished person, somebody who's led, and I'm going to miss working with him, because he's been a partner in peace.

And so, Mr. President, welcome to the Oval Office. It's an honor to have you back, and it's a joy to be with you. Welcome.

*President Toledo.* Thank you very much. You're very generous.

Let me say very briefly, Peru and Latin America are partners with the United

States in more than just a free trade agreement. It's very important, the free trade agreement, because it generates jobs and enables to continue the sustained rates of economic growth, to reduce poverty. But we are also partners in spreading the democratic values in the region. We're also partners in the fight against narco trafficking and terrorism. We are partners in the search of peace in the world. We are partners in trying to inculcate in the region that democracy is the imperfect way, but it's the best way that we have. We are partners in trying to convey the idea that being elected democratically is good, but it's insufficient; we need to govern democratically.

And I'm sure that after I finish and pass away the power to the next President, the Peruvians and Latin Americans do not want to go through this cycle that creates instability, that does not attract capital investment to continue growth, to generate jobs, to invest more in health, nutrition, and education, and to reduce poverty.

Mr. President, partnership means to focus seriously and deliver results in what we believe, but also means to have the degrees of tolerance to entertain our differences. And that's democracy, as practiced over here.

It has been a very productive relationship. I also have mixed feelings. And I would say publicly, you are my friend now, you will be my friend after I'm not President, and you will be my friend when you are no longer President. [Laughter]

The United States is a market of 290 million people, with an average income of \$37,000 a year. It's a market that I will leave for the next President, and that means jobs, because that has to do with poverty. I don't believe in giving away fish, just a decent job and a quality education and health.

Mr. President, I hope that we soon will sign the free trade agreement and will continue working for the approval of that free trade agreement in our respective Congress.

I went through a tough time, but I'm stubborn. I'm a believer, a strong believer in my convictions. And I'm sure that the wisdom of Peruvians will, on April 9th—or May—will elect someone that believes in democracy, that believes in the stability to continue on, to build on our accomplishment, but correct our mistakes; that we cannot go back and forth, because the poor people cannot afford to wait so much.

Thank you very, very much for receiving us today. It has been a very productive

meeting. I want to thank my collaborators. I'm not going away yet; I still have 5 more months. [*Laughter*] And we will continue working. We have done a good job, I think, of exchanging productive ideas in the meetings of APEC. APEC represents around 57 percent of the world economy, 46 percent of the world trade. And so in 2008, the next Peruvian President, he or she will receive you in Peru as a President of the APEC.

Thank you very, very much.

*President Bush. Mi amigo, gracias.* Thank you all.

NOTE: The President spoke at 11:53 a.m. in the Oval Office at the White House.

## Statement on the Resignation of Gale Norton as Secretary of the Interior *March 10, 2006*

Gale Norton has been a strong advocate for the wise use and protection of our Nation's natural resources and a valuable member of my administration for more than 5 years. As the first woman Secretary of the Interior, she served the Nation well with her vision for cooperative conservation, protection and improvement of our national parks and public lands, and environmentally responsible energy development on public lands and waters. She was instrumental in establishing my Healthy Forests Initiative that has helped make communities safer from catastrophic fire, while improving wildlife habitat. Gale played an influential role in shaping the

Nation's offshore and onshore energy policies to help enhance America's domestic production. When Hurricane Katrina devastated the gulf coast region, she played a leading role in my administration's efforts to restore badly needed offshore energy production to avoid further supply disruption and higher energy costs for consumers. Because of her leadership and thoughtful attention to management, repairs, and maintenance issues, Americans will be able to better enjoy our great national parks and wildlife refuges for generations to come. I appreciate Gale's dedicated service to our country, and I wish Gale and John all the best.

Remarks Following a Briefing by the Joint Improvised Explosive Device  
Defeat Organization and an Exchange With Reporters  
March 11, 2006

*The President.* Good morning. I want to thank General Meigs for being here to brief me about tactics on the ground in Iraq. One of the things that the Secretary and General Pace are constantly doing is briefing the Commander in Chief as to the nature of the enemy, what the enemy is trying to do to shake our will, and how we're adjusting, how we're constantly adapting our tactics on the ground to achieve a victory.

We face an enemy that will use explosive devices in order to shake our will, in order to foment violence in Iraq, in order to try to convince the American people that we can't win in Iraq. That's what they're trying to do. And the general has spent a lot of time thinking about the enemy's tactics and techniques and how our military can adjust to them.

So the briefing today was a series of briefing I get from our commanders on the ground, as well as our experts hired by the Pentagon, to let me know what we're doing, so I can let the American people know that we recognize the nature of this enemy. We're adjusting our tactics to defeat this enemy for the sake of peace, for the sake of the security of the United States of America, and for the sake of peace in the world.

And so, General, thank you for being here. I appreciate your time. I'll answer a couple of questions. Deb [Deb Riechmann, Associated Press].

*Former Assistant to the President for Domestic Policy Claude Allen*

Q. Mr. President, can you tell us your reaction to the arrest of your former Domestic Policy Adviser, Claude Allen?

*The President.* If the allegations are true, Claude Allen did not tell my Chief of Staff and legal counsel the truth, and that's

deeply disappointing. If the allegations are true, something went wrong in Claude Allen's life, and that is really sad. When I heard the story last night, I was shocked. And my first reaction was one of disappointment, deep disappointment that—if it's true—that we were not fully informed. But it was also one—shortly thereafter, I felt really sad for the Allen family.

Caren [Caren Bohan, Reuters].

*Republican Party/Dubai Ports World*

Q. Sir, are you concerned about the rift that the Dubai Ports deal has opened within your own party?

*The President.* The Republican Party is united in our efforts to win the war on terror. The Republican Party is united in our efforts to keep this economy strong by keeping taxes low. The Republican Party is united in making us less dependent on foreign sources of oil.

I've read all the stories about this rift or that rift. That's typical Washington, it seems like to me. I am looking forward to continuing to work with the leadership in the United States Congress to pass an agenda that will keep America the economic leader of the world and will keep this country secure. And next fall, I'm looking forward to campaigning with our candidates. I'm convinced ours is the party that has got an agenda for the future, and ours is the party that has performed.

Stretch [Richard Keil, Bloomberg News].

*Progress in Iraq*

Q. Mr. President, are you concerned, with reference to the IEDs, are you concerned that the sophisticated weaponry our troops are facing now might be coming from foreign, neighboring countries? And if so, what are our courses going about—

*The President.* We're constantly gathering intelligence. We're monitoring influence. We are adjusting our tactics. We are—obviously, if there's any kind of influence from a foreign country that is disruptive, any kind of influence—if the Iranians are trying to influence the outcome of the political process or the outcome of the security situation there, we're letting them know our displeasure.

Our call is for those in the neighborhood to allow Iran—Iraq to develop a democracy. And that includes our call to Iran as well as to Syria. We have made our concerns known, and we will continue to make our concerns known. It's in the interests of the neighborhood that Iraq develop to be a peaceful democracy. It's important for countries to have stable, peaceful, prosperous countries on their border. Prosperity in one nation will help prosperity in other nations. It's important for our friends in the rest of the Middle East to help this new democracy.

And so, yes, we're interested in negative influence; we're also interested in positive influence. And we call on people to be a positive influence, to help this new democracy emerge. And I'm optimistic that the Iraqi people will overcome the challenges they face.

And my optimism is based upon reality on the ground. One, there were some people trying to, obviously, foment sectarian

violence. Some have called it a civil war. But it didn't work. Secondly, I'm optimistic because the Iraqi security forces performed, in most cases, really well to provide security. All but two of the Provinces of Iraq, after the blowing up of the mosque, were settled. I'm positive and optimistic about the development that the Iraqi security forces are achieving.

I know we've got to do more work in the police forces; we have said that very clearly. General Casey has called the year 2006 "the year of police training," and we'll continue to work to train the police. I'm optimistic that the leadership recognizes that a sectarian violence will undermine the capacity for them to self govern. I believe we'll have a unity government in place that will help move the process forward. I fully recognize that the nature of the enemy is such that they want to convince the world that we cannot succeed in Iraq. I know we're going to succeed if we don't lose our will.

Thank you all.

NOTE: The President spoke at 8:46 a.m. in the Roosevelt Room at the White House. In his remarks, he referred to Gen. Montgomery Meigs, USA (Ret.), director, Joint Improvised Explosive Device Defeat Organization; and Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq.

## The President's Radio Address

*March 11, 2006*

Good morning. This month will mark the 3-year anniversary of the start of Operation Iraqi Freedom, which liberated Iraq from the tyranny of Saddam Hussein. As this milestone approaches, I will be giving a series of speeches to update the American people on our strategy for victory in Iraq. I will discuss the progress we are making,

the lessons we've learned from our experiences, and how we're fixing what has not worked.

On Monday I will give the first of these speeches, focusing on the security element of our strategy, the task of defeating the terrorists and training Iraqi security forces

so they can take the lead in the fight and defend their own democracy.

The Iraqi security forces have made great strides in the past year, and they performed well after the recent bombing of the Golden Mosque of Samarra. This mosque is one of Shi'a Islam's holiest sites, and after it was bombed, bands of armed militia began exacting revenge with reprisal attacks on Sunni mosques and random violence that took the lives of hundreds of innocent Iraqis.

Immediately after the attack, Iraq's leaders came together and acted to restore calm and end the violence. They deployed Iraqi security forces to Baghdad and other areas threatened by violence. These forces moved rapidly and effectively to protect religious sites, enforce a curfew, and reestablish civil order where necessary. We commend them for their good work.

The situation in Iraq is still tense. Reports of kidnappings and executions are being taken very seriously. The Iraqi Government has made clear that such violent attacks cannot be tolerated. The vast majority of Iraqis have shown they want a future of freedom and peace.

By their response over the past 2 weeks and their participation in three successful elections last year, the Iraqi people have made clear they will not let a violent minority take that future away by tearing the country apart. And the Iraqi security forces have shown that they are capable of rising above sectarian divisions to protect the unity of a free Iraq.

The effective performance of the Iraqi security forces during this crisis showed that our hard work to build up and train these forces is paying off. In the coming months, we will help prepare more Iraqi battalions to take the lead in battle, and Iraqi forces will assume responsibility over more territory. Our goal is to have the Iraqis control more territory than the coalition forces by the end of this year. And as Iraqis assume responsibility over more territory, this frees American and coalition

forces to concentrate on hunting down high-value targets like the terrorist Zarqawi and his associates.

As we take the fight to the terrorists, they realize they cannot defeat us directly in battle, so they have resorted to brutal attacks against innocent Iraqis and American forces using improvised explosive devices, or IEDs. IEDs are homemade bombs that can be hidden in cars or by the side of a road and detonated remotely, using everyday devices like garage door openers and cordless phones.

These weapons are now the principal threat to our troops and to the future of a free Iraq. And to defeat this threat, my administration has established a new, high-level command at the Department of Defense, led by retired four-star General Montgomery Meigs. This weekend General Meigs is briefing me at the White House on our plan to defeat the threat of IEDs. We're harnessing every available resource, the ingenuity of our best scientists and engineers, and the determination of our military to defeat this threat. And we're not going to rest until this danger to our troops has been removed.

In the coming days, there will be considerable reflection on the removal of Saddam Hussein from power and our remaining mission in Iraq. The last 3 years have tested our resolve. The fighting has been tough. The enemy we face has proved to be brutal and relentless. We have changed our approach in many areas to reflect the hard realities on the ground. And the sacrifice being made by our young men and women who wear the uniform has been heartening and inspiring.

Amid the daily news of car bombs and kidnappings and brutal killings, I can understand why many of our fellow citizens are now wondering if the entire mission was worth it. I strongly believe our country is better off with Saddam Hussein out of power. Under Saddam Hussein, Iraq was an enemy of America who shot at our airplanes, had a history of pursuing and using

weapons of mass destruction, threatened and invaded his neighbors, ordered the death of thousands of his citizens, and supported terrorism.

After the liberation of the Iraqi people, Al Qaida and their affiliates have made Iraq the central front on the war on terror. By helping the Iraqi people build a free and representative government, we will deny the terrorists a safe haven to plan attacks against America. The security of our country is directly linked to the liberty of the Iraqi people. This will require more difficult days of fighting and sacrifice, yet I am confident that our strategy will result in victory, and then our troops can come home with the honor they have earned.

Thank you for listening.

NOTE: The address was recorded at 7 a.m. on March 10 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on March 11. The transcript was made available by the Office of the Press Secretary on March 10 but was embargoed for release until the broadcast. In his address, the President referred to former President Saddam Hussein of Iraq; senior Al Qaida associate Abu Musab Al Zarqawi; and Gen. Montgomery Meigs, USA (Ret.), director, Joint Improvised Explosive Device Defeat Organization. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks Following Discussions With Prime Minister Mikulas Dzurinda of Slovakia

*March 13, 2006*

*President Bush.* Mr. Prime Minister, welcome. Thank you for coming. I always enjoy being with you because you're an optimistic, upbeat believer in the people of your country and the possibilities to work together to achieve peace. And so thanks for coming.

I admire the job you have done, and I admire the record that you have produced. A lot of times in politics, people are pretty good talkers, but they don't follow through. You have followed through.

We discussed a lot of issues. I thank the Prime Minister for his contributions to helping young democracies succeed, democracies in Afghanistan and Iraq. And I want to thank you for that.

We discussed the importance for transatlantic ties between the United States and not only Slovakia but also between the United States and Europe. And I assured him that those transatlantic ties are an important part of our policies here.

We talked about two issues that I found—that I know are important. One, of course, is the visa issue. The Prime Minister made it very clear that he expects there to be some progress on the visa issue, that he's—he represents the good people of Slovakia when he says to me that there needs to be a constant renewal of the process to make sure that it is fair. And I appreciate—I listened very carefully to my friend and can assure the people of Slovakia that we are working together to make the visa policy work better.

Secondly, he talked about the knowledge-based economy that he envisioned for his country. And I thought, first of all, it's very wise to—he recognizes the world and the challenges of the world and knows full well that as people gain knowledge, a country is going to end up being more competitive in the 21st century.

And so I—we strategized about ways to help Slovakia and the United States benefit

from exchanges, and particularly student exchanges, so that knowledge becomes a paramount part of our future.

And so, Mr. Prime Minister, thanks for your vision. And I also feel sorry for the fact that you broke your leg. This guy's a good runner. And so now I feel comfortable challenging you to a race. [*Laughter*] Had you been healthy, I wouldn't even had gotten on the same track with you. But I wish you a speedy recovery, and thanks again for coming to the United States.

*Prime Minister Dzurinda.* Thank you, Mr. President. My leg is broken, but my heart is happy. [*Laughter*] My heart is happy because we are friends and strong allies, America and Slovakia, America and the European Union. I am happy being here because we are good friends. President Bush visited us a year ago; he visited President of Russia, Mr. Putin, in Bratislava, and we remember this fantastic stay of President Bush in Slovakia.

We are good friends, and we share the responsibility for development in the world. I highly appreciate the leadership of President Bush in solving of global issues, the most hot and most complicated issues in the world. And I talked to President Bush

that transatlantic cooperation is and must stay the basis of our security. This is something like axis of stability, prosperity, and the future of both countries, but also the future of the democratic world.

As President Bush has already mentioned, we have some bilateral issues. I appreciate especially his State of Union, during which he announced a new program how to educate people, young generation. We want to do the same. We want to find a new way, thanks to which it would be possible to cooperate with the United States also in the area of science research and development, innovation, education. And I believe that we will discover these new ways.

Of course we spoke many issues of foreign policy, as usually. And I can only tell that our view is the same, and we will continue in this cooperation to advance freedom and democracy in the world.

Mr. President, thank you very, very much for being such a good leader.

*President Bush.* Thank you, sir.

NOTE: The President spoke at 10:35 a.m. in the Oval Office at the White House. Prime Minister Dzurinda referred to President Vladimir V. Putin of Russia.

## Remarks to the Foundation for the Defense of Democracies March 13, 2006

Thanks for the warm welcome. Cliff, thanks for the introduction. It's a pleasure to be with the Foundation for the Defense of Democracies. This organization was formed in the wake of the September the 11th attacks to fight the ideologies that drive terrorism. You recognized immediately that the war on terror is a struggle between freedom and tyranny and that the path to lasting security is to defeat the hateful vision the terrorists are spreading with the hope of freedom and democracy.

The foundation is making a difference across the world, and I appreciate the difference you're making. You have trained Iraqi women and Iranian students in the principles and practice of democracy. You've translated "democracy readers" into Arabic for distribution across the broader Middle East. You've helped activists across the region organize effective political movements so they can help bring about democratic change and ensure the survival of liberty in new democracies. By promoting

democratic ideals and training a new generation of democratic leaders in the Middle East, you are helping us to bring victory in the war on terror, and I thank you for your hard work in freedom's cause.

I also want to thank the members of the Board of the Foundation for the Defense of the Democracies. I want to thank Steve Trachtenberg, the president of George Washington University, and his wife, Fran, for joining us today. Thanks for letting me come to your campus. I'm honored to be here. He informed me that my dad will be giving the graduation speech this year—[laughter]—and Mother is getting an honorary degree. [Laughter] Smart man.

Mr. Secretary, thanks for joining us. I'm proud that Secretary Rumsfeld is with us. I want to thank Senator Dick Lugar for being with us today. Mr. Chairman, proud you're here. Thanks for coming. I want to thank the Members of the United States Congress who have joined us: Congressman Lungren, Adam Schiff, Joe Wilson, Tom Cole, and Dan Boren. I appreciate you all taking time to be here today; it means a lot.

I want to thank the ambassadors who have joined us. I see two for certain, one from Jordan and one from Israel. Proud you both are here. If there's any other ambassadors here, I apologize for not introducing you, and you don't have as good a seat as these two guys. [Laughter]

The mission of this foundation is to defeat terror by promoting democracy, and that is the mission of my administration. Our strategy to protect America is based on a clear premise: The security of our Nation depends on the advance of liberty in other nations. On September the 11th, 2001, we saw that problems originating in a failed and oppressive state 7,000 miles away could bring murder and destruction to our country. We saw that dictatorships shelter terrorists, feed resentment and radicalism, and threaten the security of free nations. Democracies replace resentment

with hope; democracies respect the rights of their citizens and their neighbors; democracies join the fight against terror. And so America is committed to an historic, long-term goal: To secure the peace of the world, we seek the end of tyranny in our world.

We are making progress in the march of freedom, and some of the most important progress has taken place in a region that has not known the blessings of liberty, the broader Middle East. Two weeks ago, I got a chance to visit Afghanistan and to see firsthand the transformation that has taken place in that country. Before September the 11th, 2001, Afghanistan was ruled by a cruel regime that oppressed its people, brutalized women, and gave safe haven to the terrorists who attacked America.

Today, the terror camps have been shut down; women are working; boys and girls are going to school; Afghans have voted in free elections—25 million people have had the taste of freedom. Taliban and Al Qaida remnants continue to fight Afghanistan's democratic progress. In recent weeks, they have launched new attacks that have killed Afghan citizens and coalition forces. The United States and our allies will stay in the fight against the terrorists, and we'll train Afghan soldiers and police so they can defend their country. The Afghan people are building a vibrant young democracy that is an ally in the war on terror, and America is proud to have such a determined partner in the cause of freedom.

Next week, we will mark the 3-year anniversary of the start of Operation Iraqi Freedom. In less than 3 years, the Iraqi people have gone from living under the boot of a brutal tyrant, to liberation, to sovereignty, to free elections, to a constitutional referendum, and last December, to elections for a fully constitutional government. In those December elections, over 11 million Iraqis—more than 75 percent of the Iraqi voting-age population—defied the terrorists to cast their ballots.

Americans were inspired by the images of Iraqis bringing elderly relatives to the polls, holding up purple ink-stained fingers, dancing in the streets, and celebrating their freedom. By their courage, the Iraqi people have spoken and made their intentions clear: They want to live in democracy, and they are determined to shape their own destiny.

The past few weeks, the world has seen very different images from Iraq, images of violence and anger and despair. We have seen a great house of worship, the Golden Mosque of Samarra, in ruins after a brutal terrorist attack. We've seen mass protests in response to provocation. We've seen reprisal attacks by armed militias on Sunni mosques and random violence that has taken the lives of hundreds of Iraqi citizens.

The terrorists attacked the Golden Mosque for a reason: They know that they lack the military strength to challenge Iraqi and coalition forces directly, so their only hope is to try and provoke a civil war. So they attacked one of Shi'a Islam's holiest sites, hoping to incite violence that would drive Iraqis apart and stop their progress on the path to a free society.

Immediately after the attack, I said that Iraq faced a moment of choosing. And in the days that followed, the Iraqi people made their choice. They looked into the abyss and did not like what they saw. After the bombing, most Iraqis saw what the perpetrators of this attack were trying to do. The enemy had failed to stop the January 2005 elections; they failed to stop the constitutional referendum; they failed to stop the December elections. And now they're trying to stop the formation of a unity government. By their response over the past 2 weeks, Iraqis have shown the world they want a future of freedom and peace, and they will oppose a violent minority that seeks to take that future away from them by tearing their country apart.

The situation in Iraq is still tense, and we're still seeing acts of sectarian violence and reprisal. Yet out of this crisis, we've

also seen signs of a hopeful future. We saw the restraint of the Iraqi people in the face of massive provocation. Most Iraqis did not turn to violence, and many chose to show their solidarity by coming together in joint Sunni and Shi'a prayer services. We saw the leadership of Sunni and Shi'a clerics who joined together to denounce the bombing and call for restraint. Ayatollah Sistani issued a strong statement denouncing what he called sectarian sedition, and he urged all Iraqis—in his words—"not to be dragged into committing acts that would only please the enemies." We saw the capability of the Iraqi security forces, who deployed to protect religious sites, enforce a curfew, and restore civil order. We saw the determination of many of Iraq's leaders, who rose to the moment, came together, and acted decisively to diffuse the crisis.

Iraq's leaders know that this is not the last time they will be called to stand together in the face of an outrageous terrorist attack. Iraq's leaders know that they must put aside their differences, reach out across political, religious, and sectarian lines, and form a unity government that will earn the trust and the confidence of all Iraqis. Iraqis now have a chance to show the world that they have learned the lesson of Samarra: A country that divides into factions and dwells on old grievances risks sliding back into tyranny. The only path to a future of peace is the path of unity.

Soon the new Parliament will be seated in Baghdad, and this will begin the process of forming a government. Forming a new government will demand negotiation and compromise by the Iraqis; it will require patience by America and our coalition allies.

In the weeks ahead, Americans will likely see a good deal of political maneuvering in Iraq, as different factions and leaders advance competing agendas and seek their share of political power. Out of this process, a free government will emerge that represents the will of the Iraqi people, instead of the will of one cruel dictator.

The work ahead in Iraq is hard, and there will be more difficult moments. The Samarra attack was a clear attempt to ignite a civil war. And we can expect the enemy will try again, and they will continue to sow violence and destruction designed to stop the emergence of a free and democratic Iraq.

The enemies of a free Iraq are determined, yet so are the Iraqi people, and so are America and coalition partners. We will not lose our nerve. We will help the Iraqi people succeed. Our goal in Iraq is victory, and victory will be achieved when the terrorists and Saddamists can no longer threaten Iraq's democracy, when the Iraqi security forces can provide for the safety of their own citizens, and when Iraq is not a safe haven for terrorists to plot new attacks against our Nation.

We have a comprehensive strategy for victory in Iraq, a strategy I laid out in a series of speeches last year. Our strategy has three elements. On the political side, we are helping Iraqis build a strong democracy so that old resentments will be eased and the insurgency marginalized. On the economic side, we are continuing reconstruction efforts and helping Iraqis build a modern economy that will give all its citizens a stake in a free and peaceful Iraq. And on the security side, we are striking terrorist targets and training the Iraqi security forces, which are taking responsibility for more Iraqi territory and becoming increasingly capable of defeating the enemy. In the coming weeks, I will update the American people on our strategy, the progress we are making, the lessons we have learned from our experiences, and how we are fixing what hasn't worked.

Today I will discuss the third element of our strategy, the progress of our efforts to defeat the terrorists and train the Iraqi security forces so they can take the lead in defending their own democracy.

At the end of last year, I described in detail many of the changes we have made to improve the training of Iraqi security

forces, and we saw the fruits of those changes in recent days in Iraq. After the Samarra bombings, it was the Iraqi security forces—not coalition forces—that restored order. In the hours after the attack, Iraqi leaders put the Iraqi security forces on alert, canceling all leaves and heightening security around mosques and critical sites. Using security plans developed for the December elections, they deployed Iraqi forces in Baghdad and to other troubled spots.

Iraqi police manned checkpoints, increased patrols, and ensured that peaceful demonstrators were protected, while those who turned to violence were arrested. Public order brigades deployed as rapid reaction forces to areas where violence was reported. The 9th Mechanized Division of the Iraqi Army, which was in the midst of a major training event, regrouped and entered the Baghdad city gates, taking up assigned positions throughout the city with T-72 tanks and armored infantry vehicles. During the past 2 weeks, Iraqi security forces conducted more than 200 independent operations—each of them Iraqi-planned, Iraqi-conducted, and Iraqi-led.

Having Iraqi forces in the lead has been critical to preventing violence from spinning out of control. For example, on the day of the Samarra bombing, the Iraqi national police responded to an armed demonstration in an area immediately adjacent to Sadr City where an angry Shi'a crowd had surrounded the Sunni Al-Quds Mosque. The Iraqi brigade commander placed his troops—who were largely Shi'a—between the crowd and the mosque and talked to the crowd using megaphones and—calling for calm and urging them to disperse. After a 2-hour standoff, the crowd eventually left without incident, and the National Police remained in position overnight to guard the mosque until the threat was over. The fact that Iraqis were in the

lead and negotiating with their own countrymen helped diffuse a potential confrontation and prevented an escalation of violence.

In another Baghdad neighborhood, a similar situation unfolded. A group of armed militia members had gone in and occupied the Al-Nida Mosque. An Iraqi Army brigade quickly arrived on the scene, and the brigade commander negotiated with the group and secured their peaceful departure. Once again, because Iraqi forces spoke their language and understood their culture, they were able to convince the Iraqi militia to leave peacefully.

Not all Iraqi units performed as well as others, and there were some reports of Iraqi units in Eastern Baghdad allowing militia members to pass through checkpoints. But American commanders are closely watching the situation, and they report these incidents appear to be the exception, not the rule. In the weeks since the bombing, the Iraqi security forces turned in a strong performance. From the outset, Iraqi forces understood that if they failed to stand for national unity, the country would slip into anarchy. And so they have stood their ground and defended their democracy and brought their nation through one of its most difficult moments since liberation.

General Marty Dempsey, our top commander responsible for training the Iraqi security forces, says this about their performance: "They were deliberate, poised, even-handed, and professional. They engaged local tribal, political, and religious leaders. They patiently but deliberately confronted armed groups to let them know that they had control of the situation." He went on to say, "I'm sure we will find instances where they could have performed better, but in the face of immense pressure, they performed very, very well." As a result of their performance, the Iraqi security forces are gaining the confidence of the Iraqi people. And as the Iraqi security forces make progress against the enemy, their morale continues to increase.

When I reported on the progress of the Iraqi security forces last year, I said that there were over 120 Iraqi and police combat battalions in the fight against the enemy, and 40 of those were taking the lead in the fight. Today, the number of battalions in the fight has increased to more than 130, with more than 60 taking the lead. As more Iraqi battalions come on line, these Iraqi forces are assuming responsibility for more territory. Today, Iraqi units have primary responsibility for more than 30,000 square miles of Iraq, an increase of roughly 20,000 square miles since the beginning of the year. And Iraqi forces are now conducting more independent operations throughout the country than do coalition forces.

This is real progress, but there is more work to be done this year. Our commanders tell me that the Iraqi police still lag behind the army in training and capabilities, so one of our major goals in 2006 is to accelerate the training of the Iraqi police. One problem is that some national police units have been disproportionately Shi'a, and there have been some reports of infiltration of the National Police by militias. And so we're taking a number of steps to correct this problem.

First, we have begun implementing a program that has been effective with the Iraqi Army—partnering U.S. battalions with the Iraqi National Police battalions. These U.S. forces are working with their Iraqi counterparts, giving them tactical training so they can defeat the enemy. And they are also teaching them about the role of a professional police force in a democratic system, so they can serve all Iraqis without discrimination.

Second, we are working with the Iraqi leaders to find and remove any leaders in the National Police who show evidence of loyalties to militia. For example, last year, there were reports that the Second Public Order Brigade contained members of an illegal militia who were committing abuses. So last December, the Interior Ministry

leadership removed the Second Brigade commander and replaced him with a new commander, who then dismissed more than 100 men with suspected militia ties. Today, this Iraqi police brigade has been transformed into a capable, professional unit, and during the recent crisis after the Samarra bombing, they performed with courage and distinction.

Finally, we are working with Iraqis to diversify the ranks of the National Police by recruiting more Sunni Arabs. For example, the basic training class for the National Police public order forces that graduated last October was less than one percent Sunni. The class graduating in April will include many, many more Sunnis. By ensuring the public order forces reflect the general population, Iraqis are making the National Police a truly national institution, one that is able to serve, protect, and defend all the Iraqi people.

As more capable Iraqi police and soldiers come on line, they will assume responsibility for more territory, with the goal of having the Iraqis control more territory than the coalition by the end of 2006. And as Iraqis take over more territory, this frees American and coalition forces to concentrate on training and on hunting down high-value targets like the terrorist Zarqawi and his associates. As Iraqis stand up, America and our coalition will stand down. And my decisions on troop levels will be made based upon the conditions on the ground and on the recommendations of our military commanders, not artificial timetables set by politicians here in Washington, DC.

These terrorists know they cannot defeat us militarily, so they have turned to the weapon of fear. And one of the most brutal weapons at their disposal are improvised explosive devices, or IEDs. IEDs are bombs made from artillery shells, explosives, and other munitions that can be hidden and detonated remotely. After the terrorists were defeated in battles in Fallujah and Tall 'Afar, they saw that they could

not confront Iraqi or American forces in pitched battles and survive. And so they turned to IEDs, a weapon that allows them to attack from a safe distance, without having to face our forces in battle.

The principal victims of IED attacks are innocent Iraqis. The terrorists and insurgents have used IEDs to kill Iraqi children playing in the streets, shoppers at Iraqi malls, and Iraqis lining up at police and army recruiting stations. They use IEDs to strike terror in the hearts of Iraqis in an attempt to break their confidence in the free future of their country.

The enemy is also using IEDs in their campaign against U.S. and coalition forces in Iraq, and we are harnessing every available resource to deal with this threat. My administration has established a new, high-level organization at the Department of Defense, led by retired four-star General Montgomery Meigs. On Saturday, General Meigs along with the Secretary of Defense briefed me at the White House on our plan to defeat the threat of IEDs. Our plan has three elements: targeting, training, and technology.

The first part of our plan is targeting and eliminating the terrorists and bombmakers. Across Iraq, we are on the hunt for the enemy—capturing and killing the terrorists before they strike, uncovering and disarming their weapons before they go off, and rooting out and destroying bomb-making cells so they can't produce more weapons.

Because the Iraqi people are the targets—primarily the targets of the bombers, Iraqis are increasingly providing critical intelligence to help us find the bombmakers and stop new attacks. The number of tips from Iraqis has grown from 400 last March to over 4,000 in December. For example, just 3 weeks ago, acting on tips provided by local citizens, coalition forces uncovered a massive IED arsenal hidden in a location northwest of Baghdad. They found and confiscated more than 3,000 pieces of munitions in one of the largest weapons caches

discovered in that region to date. Just 2 weeks ago, acting on intelligence from Iraqis, coalition forces uncovered a bomb-making facility northeast of Fallujah. They captured 61 terrorists at the facility and confiscated large numbers of weapons.

In all, during the past 6 months, Iraqi and coalition forces have found and cleared nearly 4,000 IEDs, uncovered more than 1,800 weapons caches and bomb-making plants, and killed or detained hundreds of terrorists and bombmakers. We're on the hunt for the enemy, and we're not going to rest until they've been defeated.

The second part of our plan is to give our forces specialized training to identify and clear IEDs before they explode. Before arriving in Iraq and Afghanistan, our combat units get training on how to counter the threat of IEDs. And to improve our training, last month, we established a new IED Joint Center of Excellence headquartered at Fort Irwin, California, where we're taking lessons learned from the IED fight in Iraq and sharing them with our troops in the field and those preparing to deploy. This new initiative will ensure that every Army and Marine combat unit headed for Afghanistan and Iraq is prepared for the challenges that IEDs bring to the battlefield.

Before deploying, our troops will train with the equipment they will use in the IED fight. They'll study enemy tactics and experience live-fire training that closely mirrors what they will see when they arrive in the zone of combat. Our goal with this training is to ensure that when our forces encounter the enemy, that they're ready.

The third part of our plan is to develop new technologies to defend against IEDs. We are putting the best minds in America to work on this effort. The Department of Defense recently gathered some—gathered 600 leaders from industry and academia, the national laboratories, the National Academy of Sciences, all branches of the military, and every relevant Government Agency to discuss technology solu-

tions to the IED threat. We now have nearly 100 projects underway. For security reasons, I'm not going to share the details of the technologies we're developing. The simple reason is, the enemy can use even the smallest details to overcome our defenses.

Earlier this year, a newspaper published details of a new anti-IED technology that was being developed. Within 5 days of the publication—using details from that article—the enemy had posted instructions for defeating this new technology on the Internet. We cannot let the enemy know how we're working to defeat him. But I can assure the American people that my administration is working to put the best technology in the hands of our men and women on the frontlines, and we are mobilizing resources against the IED threat.

I assured General Meigs that he will have the funding and personnel he needs to succeed. In 2004, the administration spent \$150 million to fight the IED threat. This year, we're providing \$3.3 billion to support our efforts to defeat IEDs. These investments are making a difference. Today, nearly half of the IEDs in Iraq are found and disabled before they can be detonated. In the past 18 months, we've cut the casualty rate per IED attack in half. More work needs to be done. Yet by targeting the bombmakers and training our forces and deploying new technologies, we will stay ahead of the enemy, and that will save Iraqi and American lives.

Some of the most powerful IEDs we're seeing in Iraq today includes components that came from Iran. Our Director of National Intelligence, John Negroponte, told the Congress, "Tehran has been responsible for at least some of the increasing lethality of anticoalition attacks by providing Shi'a militia with the capability to build improvised explosive devices" in Iraq. Coalition forces have seized IEDs and components that were clearly produced in Iran. Such actions—along with Iran's support for terrorism and its pursuit of nuclear weapons—

are increasingly isolating Iran, and America will continue to rally the world to confront these threats.

We still have difficult work ahead in Iraq. I wish I could tell you that the violence is waning and that the road ahead will be smooth. It will not. There will be more tough fighting and more days of struggle, and we will see more images of chaos and carnage in the days and months to come. The terrorists are losing on the field of battle, so they are fighting this war through the pictures we see on television and in the newspapers every day. They're hoping to shake our resolve and force us to retreat. They are not going to succeed.

The battle lines in Iraq are clearly drawn for the world to see, and there is no middle ground. The enemy will emerge from Iraq one of two ways, emboldened or defeated. The stakes in Iraq are high. By helping Iraqis build a democracy, we will deny the terrorists a safe haven to plan attacks against America. By helping Iraqis build a democracy, we will gain an ally in the war on terror. By helping Iraqis build a democracy, we will inspire reformers across the Middle East. And by helping Iraqis build a democracy, we'll bring hope to a troubled region, and this will make America more secure in the long term.

Since the morning of September the 11th, we have known that the war on terror would require great sacrifice, and in this war, we have said farewell to some very good men and women. One of those courageous Americans was Sergeant William Scott Kinzer, Jr., who was killed last year by the terrorists while securing polling sites for the Iraqi elections. His mom, Debbie, wrote me a letter. She said: "These words are straight from a shattered but healing mother's heart. My son made the decision to join the Army. He believed that what he was involved in would eventually change Iraq and that those changes would be re-

corded in history books for years to come. On his last visit home, I asked him what I would ever do if something happened to him in Iraq. He smiled at me with—his blue eyes sparkled, as he said, 'Mom, I love my job. If I should die, I would die happy. Does life get any better than this?'" His mom went on: "Please do not let the voices we hear the loudest change what you and Scott started in Iraq. Please do not let his dying be in vain. Don't let my son have given his all for an unfinished job. Please complete the mission."

I make this promise to Debbie and all the families of the fallen heroes: We will not let your loved ones dying be in vain. We will finish what we started in Iraq. We will complete the mission. We will leave behind a democracy that can govern itself, sustain itself, and defend itself. And a free Iraq in the heart of the Middle East will make the American people more secure for generations to come.

May God bless the families of the fallen. May God bless our troops in the fight. And may God continue to bless the United States of America.

NOTE: The President spoke at 1:16 p.m. in the Dorothy Betts Marvin Theatre at The George Washington University. In his remarks, he referred to Clifford D. May, president, Foundation for the Defense of Democracies; Jordan's Ambassador to the U.S. Karim Kawar; Israel's Ambassador to the U.S. Daniel Ayalon; former President Saddam Hussein of Iraq; Grand Ayatollah Ali al-Sistani, Iraqi Shiite leader; Lt. Gen. Martin E. Dempsey, USA, commander, Multi-National Security Transition Command—Iraq; senior Al Qaida associate Abu Musab Al Zarqawi; and Gen. Montgomery Meigs, USA (Ret.), director, Joint Improvised Explosive Device Defeat Organization. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Message to the Congress on Continuation of the National Emergency With Respect to Iran March 13, 2006

*To the Congress of the United States:*

Section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)) provides for the automatic termination of a national emergency unless, prior to the anniversary date of its declaration, the President publishes in the *Federal Register* and transmits to the Congress a notice stating that the emergency is to continue in effect beyond the anniversary date. In accordance with this provision, I have sent the enclosed notice to the *Federal Register* for publication, stating that the Iran emergency declared on March 15, 1995, is to continue in effect beyond March 15, 2006. The most recent notice continuing this emergency was published in the *Federal Register* on March 14, 2005 (70 FR 12581).

The crisis between the United States and Iran constituted by the actions and policies of the Government of Iran that led to the

declaration of a national emergency on March 15, 1995, has not been resolved. The actions and policies of the Government of Iran are contrary to the interests of the United States in the region and pose a continuing unusual and extraordinary threat to the national security, foreign policy, and economy of the United States. For these reasons, I have determined that it is necessary to continue the national emergency declared with respect to Iran and maintain in force comprehensive sanctions against Iran to respond to this threat.

GEORGE W. BUSH

The White House,  
March 13, 2006.

NOTE: The notice is listed in Appendix D at the end of this volume.

## Remarks Following a Meeting With Jason McElwain and an Exchange With Reporters in Rochester, New York March 14, 2006

*The President.* First of all, it's great to be here in upstate New York. As you can see, a special person has greeted me at the airport.

Jason, mind if I call you J-Mac?

*Jason McElwain.* Yeah. [*Laughter*]

*The President.* I call him J-Mac. You call me George W. [*Laughter*]

But our country was captivated by an amazing story on the basketball court. I think it's a story of Coach Johnson's willingness to give a person a chance. It's a story of Dave and Debbie's deep love for their son, and it's a story of a young man who found his touch on the basketball court,

which in turn, touched the hearts of citizens all across the country.

So I want to thank you for being here. You probably didn't realize the impact you were going to have on people all across America and around the world when you made those six 3s in a row. I've kind of gotten off the courts these days because I'm getting old, but if I got back on the courts, I'd need a lesson—[*laughter*]—on how to rotate that ball. But let me have that there, Coach.

*James Johnson.* Okay. There you go, sir. [*At this point, the President held a sign with Jason's picture.*]

*The President.* Thank you. There you go. Kind of looks like you.

Anyway, thank you all for coming. God bless. I appreciate the wonderful story that's come out of your family.

*Q.* Mr. President, how did you hear about the story, and what's your reaction?

*The President.* Saw it on TV. Saw it on TV, and I wept, just like a lot of other people. It's just one of those stories that touched a lot of people's heart.

*Q.* Did somebody play it for you, or did you just see it?

*The President.* I can't remember exactly how it happened. Probably somebody played it for me, you know, being the President and all. But it's a wonderful tale. God bless.

NOTE: The President spoke at 10:50 a.m. at the Greater Rochester International Airport. In his remarks, he referred to Jason McElwain, an autistic student at Greece Athena High School who scored 20 points in his first varsity basketball game; and James Johnson, coach, Greece Athena High School boys basketball team.

## Remarks in a Discussion on Medicare Prescription Drug Benefits in Canandaigua, New York March 14, 2006

*The President.* Thank you all. Be seated. Thank you all very much. Thanks for coming. Thanks for the warm welcome. Thanks for giving me a chance to come and talk to you about an important issue for our seniors.

Before I get started, though, I do want to thank the folks here at Canandaigua Academy for letting me come by to say hello. The assistant principal, John LaFave, kindly greeted me behind stage here. As I understand, some of the students are here in the room, and some are watching. I'm glad to provide you a convenient excuse to get out of class. [*Laughter*] I want to thank the superintendent, Steve Uebbing, for greeting me as well.

For all the teachers who are here and are paying attention to this, thanks for being a teacher. It's a noble profession. It's an important—it's really important. And speaking about teachers, I married one. [*Laughter*] She sends her love. Laura W. Bush is a unique woman who is obviously a patient woman. [*Laughter*] When I married her, she was a public school librarian who wasn't that much interested in politics.

Now she's the First Lady of the United States. And I'm proud to call her First Lady, and I love to call her wife. And she sends her love too.

I want to thank Randy Kuhl; he served with distinction in the United States Congress. He said, "Look, you've been in my district before; come back up here if you want to be with some just good, down-to-earth people that care about the future of the country." And one of the reasons I'm here is because of Randy's invitation.

I also want to thank Congressman Sherry Boehlert, right next door. I appreciate you being here. Mighty New York Yankee fan, I want you to know—[*laughter*]—fierce baseball—advocate for baseball. Plus, he's a good Congressman.

I want to thank Antonia Novello. Dr. Novello, where are you? She's here—oh, there you are. Good to see you. Appreciate you coming. She's the commissioner of health for the State of New York. I'm honored you're here. I'll tell old 41 I saw you. That's the number for my dad. See, he's the 41st President; I'm the 43d President, so—I'll tell him I saw you.

I want to thank the mayor, who is here—Madam Mayor, where are you? Thanks for coming. Yes, I appreciate you coming. Thanks for your hospitality. It's great to be in your city. I want to thank all the other folks who are State government and local government.

Most of all, I want to thank our panelists. There are different ways to describe an issue that's of concern to the American people. And so one way to describe the issue is to have others help describe it for you, and that's what we're doing. This is a opportunity for me and others to share thoughts about Medicare.

The role of government is to provide good health care for our seniors. We made that commitment, interestingly enough, when Lyndon Baines Johnson was the President. When I got to Washington, I took a look at the Medicare system to determine whether or not Medicare was providing excellent health coverage. If you're going to provide health coverage for somebody, you want to make sure it works. I found a system that was old and stale. It really wasn't a modern health care system. Medicine had changed; Medicare had not changed.

For example, the Government would pay \$28,000 for an ulcer surgery for a senior on Medicare but not a dime for the prescription drugs to prevent the ulcer surgery from being needed in the first place. There was a lot of times the cures for disease would lag behind the Government saying it's okay to provide that as a benefit. In other words, it was an old system.

So I worked with the Congress, and we've modernized Medicare. And for the first time, seniors can now get a prescription drug benefit under Medicare. And that's what we're here to talk about—the benefits of such a program; the need for people to, at the very minimum, take a look to see whether or not that program makes sense, and if it does make sense, to sign up on it. You'll hear me make the case: It's a good deal. Now, don't take my

word for it. I would hope people would seek advice, seniors seek advice as to whether or not it's a good deal. Twenty-six million seniors so far have taken a look and said, "I think it's worthwhile to sign up."

And so part of the—the main reason I'm here is to talk about the Medicare reform plan, the prescription drug benefit, all aiming to convince people to the very minimum to take a look. I think you're going to like what you see.

One of the things that was necessary in Medicare to make it work better was to have—was to start exercising preventative medicine, to analyze and diagnose disease early, before they become acute. Interestingly enough, in the new Medicare reform law that I signed, for the first time, we're beginning to screen—offer screenings and a free physical for seniors when they sign up for the program. And that's important. Part of making sure health care is modern is to recognize that if you catch disease early, it makes it much easier to cure the problem.

And so not only are we talking about a prescription drug benefit that's important to make sure Medicare and medicine is modern, but we've now got screenings and preventative care—annual screenings and a "Welcome to Medicare" physical. So if you're thinking about signing up, think about having an additional benefit of having a screening or a physical. And that's an important part of making sure that our systems are modern and Government is fulfilling its responsibility to provide good, quality health care for our seniors.

The benefit is really important because it makes sure that seniors have choices as well. See, I've always believed that the consumer has got more options from which to choose, it provides higher quality. I'm one of these people that we ought to—that says, "We ought to trust people; we ought to trust their judgment." So one of the things about the reform plan that went

forward is, not only does it provide a prescription drug benefit, but it says seniors ought to have a menu of opportunity, different options from which to choose to meet their needs.

And that created some confusion initially. And I knew it would, as a matter of fact. I knew some seniors on Medicare really didn't want to be confronted with any choice, and that the myriad of options would create a little confusion to begin with. But when people have taken time to look at the options and have sought help—whether it be a son or a daughter, or a community-based organization, or a faith-based organization, or 1-800-MEDICARE—they begin to realize that maybe the system is geared toward them. The more options a senior has to choose from, the more likely it is that the benefit is going to be tailored to his or her needs. And that's important for people to understand.

If you're a low-income senior, the Government is going to pay over 95 percent of your costs. Low-income seniors must take a look at this deal. I'm telling you, it's a good opportunity for you. You know, there was a period of time when seniors had to choose between rent and prescription drugs, and that wasn't right in our country. And this bill I signed is taking care of that problem, so people don't have to make the zero-sum choice. Prescription drugs has become an integral part of health care for a lot of folks, as you know.

The competition is good for consumers; it happens to be good for our taxpayers too. One of the interesting things that has happened is, is that because there are people saying, "I can do a better job for you," if you're a senior, the anticipated premiums for the drug benefit has dropped from \$36—\$37 a month to \$25 a month in a 6-month period of time. In other words, people looked at the bill, and they said, "Well, this is what we think it's going to cost a senior for drug benefits, 37 bucks

a month—not low-income seniors but seniors." And instead, the cost is \$25 a month.

The anticipated—in Washington, you know, we spend a lot of time guessing what something is going to cost. And the anticipated cost to the taxpayers for this drug benefit is 20 percent lower in the first year than anticipated. In other words, it matters when people have choice. It matters not only for quality but for price. The average senior on Medicare will get a—will see their prescription drug bills cut in half. If you're a low-income senior, the Government is going to pick up a significant portion of your tab. If you're an average senior—average senior, you're going to see your drug bills cut in half. If you're a taxpayer, the anticipated costs are significantly lower than we thought. It's working. It makes a lot of sense.

Part of my mission here, as I said earlier, was to convince people to find out about the program. If you haven't looked at the new prescription drug benefit, do so. Call 1-800-MEDICARE, or go to [medicare.gov](http://medicare.gov) on the Internet. We're beginning to see some surveys from people who are actually using the program, and what's interesting is a lot of the seniors are getting information from the Internet. There's—and you'll see it's user-friendly. It's been designed to make it easy for the senior to take advantage of this new program.

If you're interested in the program, get your son or daughter to help you. And if you're a son or daughter and your mom or dad is eligible for Medicare, make sure you at least take time to give your parent the benefit of finding out what's available. If you're an average-income senior, you're going to get one-half of your prescription drugs cut. If you're a poor senior, this Government is going to pay over 95 percent of the cost of your prescription drugs. It makes a lot of sense.

I called upon a fellow named Dr. Mark McClellan to join me in this effort. He's here. That's him right there. He is a—

he's a Ph.D., see. I'm a C student. [Laughter] Look who's the President and who's the adviser. [Laughter]

Dr. Mark is in charge of what's called CMS. He'll tell you what that means. We use a lot of initials in Washington. The way I like to describe it to you is, he is in charge of making sure the Medicare reform plan is explained, rolled out, and administered properly.

And so, Mark, thanks for coming. Welcome.

Mark B. McClellan. Mr. President, it's great to be here. CMS is—

The President. Ph.D. in what?

Dr. McClellan. In economics, and I'm a physician as well.

The President. See, he spent a lot of time in the classroom. [Laughter]

Dr. McClellan. It's great to be part of the team, sir.

The President. We're glad you're here. Tell people what CMS stands for, and tell them what your job description is.

Dr. McClellan. CMS is the Center for Medicare and Medicaid Services. It's the Agency that oversees the Medicare program and also Medicaid. Overall, we're providing health insurance for more than 90 million people. And this is a very important year for us, as the President said. We're making some major improvements in the Medicare program so that seniors will not just think of us as the program that's going to pay the bills when they get sick but the program that's going to help them stay well and live a longer and healthier life. And we're working with States like New York to improve the Medicaid program for people with limited incomes as well.

The President. So we just cranked up. Anytime Washington passes a new law, sometimes the transition period can be interesting. And so we had some early challenges.

Dr. McClellan. That's right. In fact, I was just talking with Diane about this beforehand. Diane is a pharmacist. You're going to hear from her in a minute.

The President. No, I'm the emcee. [Laughter] You're the explainer. [Laughter] You know how these Ph.D.s are. You know, they kind of—[laughter].

[At this point, Dr. McClellan made further remarks.]

The President. How about the phone lines? People have—

Dr. McClellan. The phone lines are much better wait times. If you call 1-800-MEDICARE, that 24/7 help line that we make available so seniors can find out exactly what this program means for them, your wait time now is an average of two minutes or less. So you can get through very quickly and find out what this program means for you.

The President. So would you recommend people—a loaded question—kind of leading the witness, and I'm not even a lawyer. [Laughter] Why would—why should people sign up for this?

Dr. McClellan. Well, now is a really good time to find out about it. We've got hundreds of thousands of people enrolling each week now, and we're ahead of what I think is going to be a rush towards the end of April and the first part of May as we approach the enrollment deadline. It's a 6-month period that people have to make a decision about the new coverage.

People are finding that they can save typically 50 percent on their prescriptions—or more—compared to not having coverage. And Consumer Reports pointed out recently that if you're willing to look at generic drugs, or other drugs that work in a very similar way to the ones you're taking now, you can save 70 or 80 percent. And if you call 1-800-MEDICARE, go to medicare.gov, or go to one of the many events happening all over the country, including right here in Canandaigua, there are places to go to get face-to-face help right here to find out about what this means for you. You can save literally thousands of dollars

on your drug costs, and you can be protected for the rest of your life against high prescription drug costs in the future.

*The President.* Yes, describe that—the catastrophic care component of Medicare.

*Dr. McClellan.* Well, the drug benefit will, in most cases, start paying right off the bat. Most seniors who have signed up are already saying they're saving money with the program just 2 months into the benefit. There is what's called catastrophic protection as well. So if you have very high drug expenses, your coverage is never going to run out. For people who have higher—relatively high incomes, if they spend \$3,600, Medicare will then pick up as much as 95 percent of all their subsequent drug costs. So no matter what your drug needs are for the rest of your life, you're going to be protected against very high expenses.

And, Mr. President, as you said, for people with limited means, about one in three seniors is living just on a fixed income—they get extra help, so they pay, typically, just a few dollars for each prescription. It's very important help.

*The President.* People need to take a look. I get out of Washington, people say, "Well, I'm not so sure we can trust the Government all that much." Take a look. One of the reasons I have come is to ask people who are eligible for Medicare just to explore the options. It's a good deal.

For the taxpayers who are here as well, we're doing an—we're providing an important service for our seniors. I repeat to you: The Federal Government has made the commitment to our seniors for good, modern health care. I happen to believe if that's the commitment, we ought to keep it. And the bill that I had the honor of signing keeps that commitment.

And so, Mark, thanks for coming. Stay on it. I'm a results-oriented guy. When I heard that it took a while for people to get on that—call that number and somebody wouldn't answer, I started asking, why? And they're solving it. We're making sure this opportunity for our seniors is done

in a cost-effective, efficient way. We want it to be user-friendly for our seniors.

Again, I repeat: I fully understand some people are perfectly content with life the way it is, and they're not interested in looking at forms and opportunities and choices. I would urge you to get somebody to help you take a look at the opportunities available for you.

Somebody who is helping people understand the opportunities is Susan Wilber. Susan, what do you do? *[Laughter]*

*Susan Wilber.* Well, I'm an A student, always was, so I became a health care professional. *[Laughter]*

*The President.* Look, you don't need to rub it in, you know.

*[Ms. Wilber, director, The Brighter Day, made brief remarks.]*

*The President.* That's good. If you're a church or community-based group or a synagogue, talk to your folks who go to your facility and encourage them to contact 1-800-MEDICARE, medicare.gov, Susan. I mean, there's all kinds of people like Susan.

What have you found to be the response initially, today? Give us a sense for—

*Ms. Wilber.* Initially, there was a lot of panic and confusion, a lot of new information coming from all directions—the newspaper, the television, the mailings. I think that we're a strong health care system in this community and that we're all well-connected as a health care network, so people were very willing to bring their concerns to us and to ask for help. And that's certainly a confidence that we've instilled in people. And I'm very grateful for that opportunity.

But we've set up individual meetings; we've set up situations where we meet with family members; we've done conference calls with families out of State to help their loved one here. So it's really been quite a collaborative effort to get people signed up.

*The President.* Thanks. Thirty—26 million people have signed up. That requires

a lot of community effort around the country. And I want to thank Susan and others who just make sure the opportunity is at least presented in a way that people can make a choice. And the amazing thing about our country is we've got a lot of really decent souls, like Susan, at the community level who are very concerned about somebody else, that they want to help somebody. And one way to help somebody is to let seniors know about the opportunities available in this Medicare reform.

And you're signing up quite a few people, I understand.

*Ms. Wilber.* We've had quite a few people sign up initially.

*The President.* Good. How's it going?

*Ms. Wilber.* It's going well. There was a little bit of confusion at first, but—

*The President.* But, I mean, you don't want to recommend somebody to sign up and they say, "Why did you get me to sign up for this?"

*Ms. Wilber.* For the most part, it's worked very well. We've gotten some excellent feedback from our customers.

*The President.* Good. Thanks for being here.

*Ms. Wilber.* Thanks for having me.

*The President.* My call is, please help. I really hope a son or a daughter takes time on behalf of their mother or father and get on the Internet, medicare.gov, and take a look. You ought to do it. I think it happens to be a duty. If your mother or father is not that interested in getting on the Internet, get on with them. Walk through the steps and take a look at what's available.

We've got with us Diane Lawatsch. Welcome.

*Diane Lawatsch.* Thank you, Mr. President. I'm happy to be here.

*The President.* You're gainfully employed?

*Ms. Lawatsch.* I am gainfully employed.

*The President.* How? [Laughter]

*Ms. Lawatsch.* Uh-oh. [Laughter] I am a pharmacy operations manager for

Wegmans Food Markets. I've been a registered pharmacist for almost 18 years. And a pharmacy operations manager helps to oversee the operations in pharmacy. And I have four stores in this region, and the Canandaigua store is one of them.

*The President.* Good. So give us a feel for how you view the Medicare bill, how it came to be, your reaction. Obviously, you're very much involved in prescription drugs.

[*Ms. Lawatsch made brief remarks.*]

*The President.* Obviously, pharmacists have got a stake in this. I mean, people show up at the counter, and there's a lot of pharmacists around the country who are saying, "Can we help you?" It's, frankly, in the interest of the pharmacist to give people the opportunity to get a very generous prescription drug benefit from the Government. I don't know if you've seen attitudinal changes yet amongst the people using the program.

*Ms. Lawatsch.* Well, absolutely. We definitely see customers come in that say, "Gee, I've never had coverage before," and now they have the coverage. One of the things, too, that we did at Wegmans was we started over a year ago preparing and investing in our people and putting our pharmacists and our technicians through training programs. We had four different online training courses so that they were prepared come January, and that helped a great deal.

*The President.* Good. Thanks. You're on the frontline.

*Ms. Lawatsch.* Yes, we are.

*The President.* So we've got Bob and Eleanor with us. Isn't that right?

*Bob Wisnieff.* Yes, we're here.

*The President.* So, in my family, the wife starts speaking first. [Laughter]

*Eleanor Wisnieff.* Okay, I'll go first.

[*Mrs. Wisnieff, retiree, made brief remarks.*]

*The President.* I like the idea of somebody saying, "Here are three choices from

which to choose.” See, if you give people an opportunity to choose, it means they’re more likely to be able to find something that meets their needs. It’s a different approach, isn’t it? The older—one approach is, “We’ll tell you what you need; the Government probably knows a little better than you do, anyway; we’ll think on your behalf.” What this bill says is, is that let’s have some options available so people get to tailor the options to meet their needs. And what ends up happening is, is that there’s choice. When we trust seniors with judgment, it helps on price and it helps on quality.

Do you have anything to offer, Bob?

*Mr. Wisnieff.* Well, I think Eleanor has pretty much got the punch line of my whole thing, so I’ll have to be a bit of a Paul Harvey and say “the rest of the story.” [Laughter]

*The President.* Pretty good. How long have you all been married?

*Mr. Wisnieff.* Fifty-two years.

*The President.* Fifty-two years?

*Mr. Wisnieff.* Fifty-two happy years. I hope you have the same.

*The President.* He said 52 happy years, by the way. Thanks for setting a good example.

[*Bob Wisnieff, retiree, made brief remarks.*]

*The President.* The key is saving a little money in retirement. They’re on a fixed income. They’ve got now a prescription drug benefit. They don’t have to make the awful choice between food, electricity, and prescription drugs. And they’re actually putting a little extra money in their pocket. If that’s true—is that true?

*Mr. Wisnieff.* That’s true.

*The President.* Okay. If it’s true, you ought to look at it. Senior citizens not only here in upstate New York but all across the country ought to look at this plan, ought to look at the opportunities. If you like it, sign up. It’s a good deal. If you need help, ask for help. If you want to find out more about it, call 1-800-MEDI-

CARE or get on the Internet, medicare.gov.

For the students listening here, one of my jobs is to help explain things to the American people, explain why we make the decisions we make. Today I’ve tried to explain to you why the Medicare system needed to be changed and some of the principles inherent in the change that benefits our seniors. Part of explaining something is to have people who are actually involved with the program, people that are helping to educate, people that know something about the pharmaceutical industry, people who are benefiting from the plan, to come and share their experience as well. And so I want to thank you all for giving me a chance to come.

One thing I didn’t say—I do want to conclude by saying, Dr. Steve Uebbing, who is the superintendent of schools—when I came through the line, he told me about his son Daniel’s service in the United States military. I meant to thank a good, proud dad, but more importantly, I want to thank his son for volunteering to serve his country, for volunteering to serve.

And for the students listening, I urge you to find out a way to serve your community. Mentor somebody; help feed the hungry; provide shelter for the homeless. If you’re interested in volunteering for the military, that’s one way to serve. Peace Corps is a fantastic opportunity to serve your country. Being a teacher is a fantastic way to serve your country. The strength of the United States of America is not the size of our military or the size of our wallets; the strength of the United States of America is found in the hearts and souls of decent, honorable, compassionate people who have heard a call to serve something greater than themselves.

Thank you all for giving me a chance to come by. I ask for God’s blessings on you all and on the United States of America. Thank you.

NOTE: The President spoke at 11:45 a.m. in the Canandaigua Academy Theatre. In his remarks, he referred to Stephen J. Uebbing,

superintendent, Canandaigua City School District; and Mayor Ellen Polimeni of Canandaigua, NY.

## Remarks Following a Visit to Ferris Hills at West Lake Senior Center in Canandaigua

March 14, 2006

The reason I have come is I'm trying to explain to people the benefits of a new Medicare program. Congressman Randy Kuhl asked me to come, and so I did. It shows how influential he is.

I thought the system needed to be changed because it didn't provide a modern form of medicine. A lot of it was good, but some of it was stuck in the past. And so I worked with Congress to get a prescription drug benefit added on to Medicare. The problem is, is that when something changes, people get a little concerned. You know, they say, "Well, I'm not so sure I want to see a change; I'm not so sure change is something that I'm interested in." And I knew that was going to be the case.

But I also knew that if we could convince people who pay attention to take a look and see what options were available, that people would begin to make rational choices, particularly if they had some help. And so I want to thank the Thompson Health Care Group for helping. And as I said at the high school over there, I said,

"If your mom or dad could use a little Medicare, you owe them the opportunity to explain different options and show what's available." But the pharmacists are helping a lot to say, "Look, you ought to take a look at the program."

So we're in your community to urge people to, you know, kind of step back, see what's available, design a program that meets your needs, if that's your interest, and it's going to save some money. That's the key, because this—the benefit is costing less than anticipated, as a result of competition and choice. It's really worthwhile looking at.

I've spent a lot of time, as my administration spends a lot of time, talking about how to get people—information into people's hands. And so that's why we're here. Thank you for giving us a chance to come by and visit with you. It looks like you've got a beautiful facility.

Okay, well, thanks to the press for coming.

NOTE: The President spoke at 1:09 p.m.

## Remarks on Medicare Prescription Drug Benefits and a Question-and-Answer Session in Silver Spring, Maryland

March 15, 2006

*The President.* Listen, thank you all for coming. First of all, I'm proud to be traveling with a Cabinet Secretary. He runs Health and Human Services. His job is to

make sure that the Medicare plan works the way it was designed to work.

We've come to answer some questions, if you have any—about any subject.

[*Laughter*] But before I begin, I do want to share some thoughts with you.

First, speaking about Cabinet Secretaries, I know Mary Hill is here. Where's Mary? Oh, hi, Mary. The reason I bring her up is that her daughter is married to one of my Cabinet Secretaries, and she is a fine woman—so is the Cabinet Secretary—[*laughter*]*—*Norm Mineta, Norm and Deni Mineta.

I want to thank the folks who run this fine facility. Thanks for letting us come by and talk about good health; that's what we're here to talk about. By the way, Laura sends her best. You might remember her; she's the most patient woman in America. I don't know why she didn't come; I should have asked her. I'll ask her. You wanted her to come? Well, listen, that happens to me a lot—[*laughter*]*—*“You stay home; let Laura come.”

But I'm here to talk about Medicare. First of all, when I got to Washington, I took a look at the Medicare system and thought it needed to be improved. When the Government makes a commitment, it ought to make good on its commitment, and it ought to do—make sure we deliver excellence when we say we're going to do something. Lyndon Johnson—nice Texan—signed the Medicare bill, and it was a commitment by the Federal Government to provide health care for our seniors. And my attitude is, if we're going to provide health care for the seniors, let's provide a good system, a modern system.

And so I took a look at it and said that Medicare is doing a lot of good stuff, you know; it really is. It's an important system. But I asked the question, couldn't we do it better? And for example, just to give you an idea, you know, Medicare would pay \$28,000 for the surgery for ulcers but wouldn't pay a dime for the medicine to prevent the surgery from being needed in the first place. That didn't sound like a very good system to me. In other words, what had happened was, medicine started to change. You all know what I'm talking

about. Pharmaceuticals became a really important part of the delivery of good health care. But Medicare did not change with medicine.

And so one of the things that we did, we worked with Republicans and worked with Democrats and said, “Let's provide a prescription drug benefit for our seniors to make sure that Medicare is a modern system.” Now, I understood that when we began to change Medicare, modernize Medicare, it could create some confusion with people. You know, some people just don't want to change. Some people thought things were just fine and that giving different options or giving people an opportunity to make different decisions could create some confusion.

Now, I understood that. But I also felt it was worth the risk of creating confusion to give people different options from which to choose. And so the Medicare bill—the new Medicare bill does something different. It says there is a prescription drug benefit available for all Americans, special help for the lower income Americans, that seniors have also got the opportunity to make a choice, to design a health care plan that best suits their needs.

And so we started the program. Congress passed the bill. It did provide really good help for low-income seniors. It did provide choices. It did provide a medical examination for people who enroll in Medicare. It does provide for annual screenings. That makes sense, doesn't it? Why don't you—if we screen for disease, it might make it easier for us to solve problems before they become acute.

And so we started saying to the people, “This bill has passed; take a look at it.” And so people got on the computers and saw a lot of different options, and said, “Whoa, this may be a little more than I bargained for.” And so recognizing that people might need some explanations, we rallied people. We got the churches and the synagogues, and we got the community groups; we got the AARP—we got people

all around the country—facilities just like this, as a matter of fact—to start explaining options available to our seniors, so seniors can make the right choice for them.

Since the program got going, 26 million seniors have signed up. That's a lot. Pretty quick period of time—26 million people take a look and signed up for the program. They're signing up by the thousands every week. And so one of the reasons I've come is to encourage people who have not signed up to take a look at Medicare, the new Medicare, take a look at what's available. If you like what you see, sign up. If it doesn't meet your needs, that's fine. But I think you're going to like what you see. Drug bills have been cut in half for the average—for the typical senior. I'm not making it up. I'm just telling you what people who've signed up—realize what the plans available—what it has meant to them.

Drug costs have been cut in half. That's positive news if you're a senior. I was with some folks yesterday in upstate New York, and old Bob got up at a deal like this, and he said in the microphone, he said, "I thought it was too good to be true. It was one of these typical government deals, you know, where they kind of say something is going to happen, and it doesn't." He said, "My drug bills have been cut in half." I think if you—if people pay attention to this program and take a look at it, you'll find that there are some significant cost savings for you.

The other thing that's happened, the taxpayers have got to know, is that it's anticipated—the cost of this is 20 percent lower than anticipated in the first year. In other words, it turns out when people have choices, they get better quality and they get better price. And that's what you're seeing in the Medicare bill.

If you haven't signed up—by the way, I'm not only speaking to you, I'm speaking to the cameras too, by the way—[laughter]—because I want people to hear this; it's important. If you haven't signed up, call 1-800-MEDICARE. If you're a—if

you've got—if you're a son or a daughter of a citizen on Medicare, do your parent a favor and get on the Internet and take a look at what's available and help your mom or dad take a look at this new Medicare benefit structure. There are some choices to choose from, no doubt about it. But with more choices to choose from, you can better design a program that meets your needs.

People are signing up by the thousands. There's a May 15th deadline. And so what Mike and I are going to do is travel around the country and hold seminars like this and continue to remind people there's a good opportunity. And I really urge you to take a look. It's a program that does modernize the system. It's a program that says, we trust seniors to make the right choice. It's a program that I think you're going to like a lot.

And that's what I've come to do. Part of my job is to educate the American people about what's available. It's called the educator in chief. [Laughter] This is a new program, and it requires a lot of work.

Yesterday I met with a group of concerned citizens from different walks of life—you know, the NAACP and the—some Latino groups, business groups, pharmaceutical groups. I said, look—and they're there for a reason; they wanted to hear my commitment to the program and my encouraging them to go out and find people and encourage them to take a look and sign up.

And so that's what I'm doing here today, and I want to thank you all for giving me a chance to come by and visit with you. If you've got any questions for me, I'll answer them. If they're too hard, I'll turn them over to the Secretary and let him answer them. [Laughter] But I'll be glad to answer any questions you've got on any subject on your mind. If you've got something you want to ask about Medicare, you can—any other subject that you care about.

Yes, ma'am.

### Private Sector Health Insurance

Q. [*Inaudible*]*—subject.* First, welcome to the blue State of Maryland.

*The President.* Thank you. It's good to be here.

Q. Secondly, I am a member of Medicare, of course. I'm also a member of Kaiser Permanente. My medical bills are absolute nothing—90 days or \$8. Why does Kaiser have more of a means of putting forth these medications than does the Government of the United States?

*The President.* See, she is a part of a private program that has provided a benefit that you like, and you don't want to change, and you don't have to change. And that's what we're trying to do. We're trying to give people different options, like the option you have got.

In the old system, they didn't have those options. Matter of fact, they didn't have a prescription drug benefit in the old Medicare system. Now the Medicare system has invited a series of providers—I think there's 34 different providers here in the State of Maryland, if I'm not mistaken—that say, now, I want to give you a chance to be able to come up and have the same satisfaction with the program that you do.

Look, if you're happy with where you are—and it sounds like you're pretty happy about it—don't change.

Q. I'm not going to.

*The President.* You shouldn't. [*Laughter*] And I don't blame you; I wouldn't either. But if you're—but you ought to take a look. See, people ought to take a look and see. That's all I'm saying. Nobody is making you do anything. I'm just traveling around saying to people, take a look at what's available for you. There's people on this staff here at this facility that will help you. That's all—believe me, it's worth taking a look. It's free.

Yes, ma'am.

### Medicare Prescription Drug Benefits

Q. First off, as a resident, I wish to tell you how pleased we are that you took time

out to come to Riderwood, because Riderwood beside has a wonderful—you look around at these vibrant, elderly people; you know we have very good health care. And we're looking for good health care.

Now, we have the Advantage—Erickson Advantage is here, which covers Medicare and Part D, which is what you're sponsoring. So we're glad that you're here to explain, even though this is Erickson's health plan. But that doesn't eliminate your Part D.

*The President.* No, that's right. Yes, I mean, in other words, Erickson is a part of the menu of opportunity.

Q. Right.

*The President.* Well, I appreciate you bringing it up. You sound like you know a lot on the subject. You ought to be up here speaking. [*Laughter*] No, I appreciate that. Thanks.

Part D—when they hear Part D, that's talking about the prescription drug benefit that's now available. It was not available in Medicare. I signed the bill; it is now available.

Q. Right.

*The President.* And again, I repeat: If you're a low-income senior, there's a lot of help for you. The Government pays over 95 percent of anything coming your way. And that's important. So you ought to look. That's all we're saying.

Yes, sir. Thanks for wearing the Texas shirt. [*Laughter*]

### Health Care for Veterans

Q. I have a grandson here from Houston. He brought it. He gave it to me last Christmas, and I had to wear it today.

*The President.* I'm honored. Thanks. Yes, kind of reminds me of home. [*Laughter*]

Q. Mr. President, I'm happy to be here at Riderwood. I'm retired military, retired from the Veterans Administration also, and I can get treatment from VA. What is the best thing for a man like me to do? There

are many retired military people here who are in the same situation.

*The President.* Well, I think the Veterans Affairs benefits are a very good package. And Veterans Affairs, one of their major responsibilities is to honor the commitment they've made to you, sir. And they intend to honor it. Again, I don't know all the details of your Veterans Affairs benefit package, but you ought to take a look at all options. It's just a free look. Get your son to get on the Internet with you, and just see whether or not it makes any sense. But I'll bet you'll find the Veterans' benefits are pretty good.

Yes, sir. Thanks for serving, by the way. Appreciate the example you've set.

Yes, sir.

#### *Electronic Medical Records*

*Q.* The people who live here are fortunate to have their health records in a computer—in electronic medical records. Could you talk a little bit about that?

*The President.* Thank you, sir. [*Laughter*] Yes, well, it's a very good question because part of the issue we face in America is the cost of health care, the rising cost of health care is the result of a really important industry not being a part of the 21st century technology. He asked about medical records, electronic medical records. That means that everybody will have their medical records on a—digitized in a way that can be used over the Internet, for example.

You might remember the old days—and a lot of hospitals are still that way, by the way, or most doctors' offices are that way, when they actually write your prescription or write your procedure on a piece of paper. That's pretty inefficient. One reason is doctors can't write to begin with. [*Laughter*] Are you a doc? Sorry. [*Laughter*]

But carrying your files from one office to the next is not an efficient way to run a system. Files can get lost; people cannot necessarily read what is written; prescriptions can sometimes not be written prop-

erly because the handwriting isn't legible. You might—you know, a person transfers from one jurisdiction to the next, and the files may get lost, or the doctor may not exactly understand what the other doctor had talked about in the handwritten files. And that leads to medical errors and a costly health care system.

And so what the good doc is asking is, are we in the process of trying to have medical records like you have here at this facility so that your health care is better delivered and there aren't mistakes? And the answer is, absolutely. I've tasked the Secretary of Health and Human Services to start working on a variety of fronts when it comes to information technology in health care, starting with a common language. The data of medicine is complicated. You can describe different ailments and different diseases in different ways. And so what Mike is doing through his department is coming up with a common language.

And the idea is—I'll give you a practical example of why this is—having medical records is important. When Hurricane Katrina hit, a lot of veterans were displaced. Now, the Veterans Administration has got medical records for people that they're serving. And so you have a person go from New Orleans to Houston, and fortunately, the electronic medical record could go with that person, which then meant the doc in Houston would see a new patient, but the medical records would lay out exactly what needed to be done to take care of the patient.

And that's precisely the kind of vision that we're talking about so that, ultimately, America is using information technology to lower the cost of medicine, but to provide higher quality of medicine for people through medical records. And Mike is in charge of that, and his department is making good progress. Thanks for bringing it up.

The other thing that's really important about medical records, and something my administration is going to be a stickler for,

is to make sure that the records are private. We don't want people looking at your medical record if you don't want them looking at your medical record. In other words, it's your record, and there's got to be a certain amount of privacy to that record. And so just because I talk about having electronic medical records, you've just got to understand that there's going to be an important privacy component to making sure that others can't look at your record if you don't want them to.

Good question.

Yes, ma'am.

#### *Medicare Prescription Drug Benefits*

Q. Mr. President, I told my mother last night that I was going to be covering the President of the United States on the health—[inaudible].

*The President.* Okay, here you go. She started off saying she talked to her mom last night.

Q. Yes. And you may have some experience with instructions from a forceful mother, sir. [Laughter] I got some from mine. [Laughter]

*The President.* Well-spoken.

Q. My mom is 75; she is sick; she's back in New Jersey alone. She didn't know anything about the Part D drug plan until I told her in February, with all the publicity and everything. I'm trying to walk her through it, but she doesn't know what to tell me. I don't know how to help her. I've punched her stuff into medicare.gov. I've got the basics, but it's still too much for her to afford. And I don't know where to tell her to go and get help. She wants to know if you guys will roll back the May 15th deadline.

*The President.* No. And the reason why is, there's got to be a fixed time for people to sign up. And we want people to realize there is—now is the time. And I'm not exactly sure about your mom's situation. I do want to thank you for helping her. Daughters ought to help their mothers realize what's available.

Now, again, there is a—I'm not sure what the plan—the structure looks like in New Jersey, but rolling back deadlines is not going to help your mom make a good decision. You're going to have to help her make the decision. And a lot of people like your mom were in the same situation—they took a look, said it looks confusing. But there's a lot of help. That's what—one of the reasons I'm here to talk about—

Q. The thing I'm trying to find out is—this is a great system where you have a group like Riderwood—it's a great system in Riderwood, where people can come together, or the church groups. But what do you do with the people who are just sick enough, they can't go out, they don't have help, you know? Do we have a system to knock on doors, to walk—

*The President.* Absolutely. And that's exactly what our—

Q. Where can I send her?

*The President.* Well, first of all, I happen to think—and I don't want—look, I'm not going to tell you your business, but I think it's your responsibility to help your mom. And I think a lot of parents—a lot of children should help their moms. And I think you really ought to take a look at the different options for her. I mean, the best grassroots outreach is child to parent. There's other outreach; you're right. The church is outreaching. Again, I don't know the particulars in the neighborhood. I can—if you can get us the area in which she lives, we can find a group that's very much involved in helping people like your mom. I appreciate it.

But that's the whole—her—she's got a great point. In order to—we've got to explain this to as many people as we can. And I fully understand that it's confusing. That's why I started off the talk, "It can be confusing to people." But when you work through the different options and look at the steps and have somebody explain it to you, in the end, it is a really good deal.

Now, if she doesn't choose to be a part of Part D, that's a choice that you and she and others will make. But it is—it has proven to be a cost-effective decision for our seniors. The typical senior has their drug bill cut in half. That's across America. If your mom qualifies, she will get more than 95 percent of her drug bills paid by the Government.

And so thanks for bringing it up.

### *Health Care Reform*

Q. Back here.

*The President.* Oh, yes.

Q. We still have millions of underinsured or uninsured citizens in the United States, and what are you going to do about that?

*The President.* Right. No, there's no question that's an issue. And one of the reasons why is because health care costs are going up, and there are ways to address health care costs. One of them is information technology. Another one is legal reform. A lot of doctors are getting sued, and when they get sued, they practice defensive medicine in order to protect them in the courts. And by practicing defensive medicine, it causes costs to go up. Transparency in pricing is another way to make sure consumers have got the capacity to make rational decisions for themselves.

Some of the people who are not insured are younger Americans who choose not to be insured. It's like, I kind of remember that period of time. I thought I was never going to get sick, and so I thought I'd save some money.

A lot of people who are insured—or uninsured—are working uninsured, and they tend to work for small businesses. And small businesses have trouble being able to purchase insurance—so they get the insurance. And one idea to help small businesses is to allow them to pool risk across jurisdictional boundaries. In other words, let the restaurateur in Texas and the restaurateur in Maryland join in a risk pool so as to make insurance more affordable for small businesses. Health savings

accounts are a way to help small businesses be able to afford insurance.

Now, if you're poor, you're going to get help through Medicaid. There is an insurance plan. If you're a—if you're somebody in this country who needs primary care, we've got community health centers all across America, places where people can get good health care, not in the emergency rooms of our hospitals.

So there is a variety of ways to deal with a very difficult issue. And you're right; it's an issue that the country must address. Thanks for bringing it up.

Yes, sir.

### *Medicare Prescription Drug Benefits*

Q. No one's quite said this, this way, I don't think, sir. Speaking as one resident here, among a very diverse group, that it is an honor and a privilege to be visited by the President of all 300 million of us and the leader of the free world.

*The President.* Thank you, sir.

Q. Welcome.

*The President.* Thank you.

Q. I do have a question. When this law was passed with your encouragement—almost immediately after the bill was enacted by Congress, the chief auditor at Medicare came out and spoke on TV and said that he had compiled a projected cost significantly higher than what Congress had been told. And he was threatened with immediate dismissal if he allowed that information to come out. Is that—did that man speak the truth? And if so, why would you not want facts like that to come out to the American people?

*The President.* Actually, what's happened, sir, is that the estimated cost is 20 percent lower than bodies that tried to estimate the cost. And the reason why is, is because the program has worked better than anticipated, and it has been better than anticipated. And I think you'll be reflected in our budgets.

Well, they estimated, for example, the average premium was going to cost \$37

a month, and it's down to \$25 a month. In other words, it's working. And I think that's important for people to understand. And there's been a lot of estimates about the cost of the program, but what really matters is the actual costs. And it looks like the dollars are going to be lower than we thought, which is good news—good news—and more importantly, lower to the seniors than we thought. And that's the most important news of all. The most important news to you is, this is a good deal for you, the consumer, the person we're trying to help. And we think it is. And people ought to look at it. I don't know if you've looked at, but you ought to, if you haven't. Thank you.

Yes, ma'am.

#### *Electronic Medical Records*

Q. Yes, you mentioned a little while ago about chips—I mean about medical records. Today in *The Post*, they were talking about people getting chips implanted with their medical records. And it sounded good to me. My dog has one. [*Laughter*] And I bet your dogs have them.

*The President.* Now, I don't know if our dogs—I don't think—we're not quite that sophisticated yet. Barney might not like it. [*Laughter*]

Q. I guess my question is, in the future, if we want people to have this, would it be possible, or thinking that far ahead, that when a child is born, a chip is implanted and you keep feeding information into it through—

*The President.* I don't know. That's an interesting question. I, frankly, haven't heard of that. Do you have any—maybe the Secretary—maybe it's time for the Secretary to step in. [*Laughter*]

I think the point is this—I think the point is, is that there is the capacity to carry in a very small object a lot of data that can be downloaded in other medical facilities in order to facilitate a flow of information that enables people to get good health care in a cost-effective way. I don't

know about implantations or not. But nevertheless, I do think that the idea of having a medical chip that is on a card, or it can be anywhere—you got one, doc? No, I thought you were searching for—[*laughter*].

Q. We have one at Erickson.

*The President.* Yes, sir.

#### *India/Nuclear Energy*

Q. Mr. President, I just want to take the opportunity to thank you for your far-sighted policy in India, of assisting them in their civilian nuclear program.

*The President.* Oh, thank you, sir.

Q. I was at Tarapur 40 years ago, when General Electric inaugurated the first nuclear plant in India. And I think it's going to go a long way towards keeping our friendship with that important country in Asia. Thank you very much.

*The President.* Well, thanks for bringing that up. He's referring to a trip I just took to India and Pakistan and Afghanistan. And we were working on an agreement with India to encourage India and help India develop its civilian nuclear power industry. And one—a couple of reasons why one would do that: One, when India's demand for fossil fuels goes up, it causes the price of our fossil fuels to go up. And so, therefore, to encourage them to use a renewable source of energy that doesn't create greenhouse gas, this makes a lot of sense.

Secondly, India has been a—is a nonproliferator, has proven to be a nonproliferator for the past 30 years. In other words, they've got a record that, in my judgment, should cause the Congress to pass old law to treat them as a new partner. Thirdly, India wants to be a part of international agreements that will help deal with proliferation.

And so I thank you for your comments. I appreciate you saying that.

Yes, sir.

*Pakistan/India*

Q. It was particularly courageous, in view of the fact that Pakistan is one of our allies in the war on terrorism, and of course, it's going to affect their attitude to some extent.

*The President.* Well, I appreciate you saying that. The good news is that, as I said in the speech there in India, we now—I think Indians understand it's good for the United States to be friendly with Pakistan, and the Pakistanis understand it's good for the United States to be friendly with India—which is, as you know, a change of, kind of, the relationship of the United States with those two countries.

I had a good visit with President Musharraf, who is dedicated to routing out Al Qaida if they hide in his country, and we really appreciate his dedication. And at the same time, he's dedicated toward advancing democracy. So it was a great visit. Thanks for bringing it up.

Yes, ma'am—oop, you again. [*Laughter*]

*Electronic Medical Records*

Q. You mentioned about privacy, Mr. President.

*The President.* Yes.

Q. It's very well to say privacy on our electronics. You know there's no such a thing as real privacy. Something leaks out all the time somewhere.

*The President.* I'd say that. [*Laughter*]

Q. Did you ever think, or think in your bill some way that the insurance companies cannot use it against us? Because that's the fear—that's the fear, that an insurance company will say, "Uh-oh, we won't touch you," and you know—

*The President.* Preexisting conditions—

Q. That's right—or something that you developed along the way.

*The President.* I think there's laws that protect you on that. It's a different issue from them looking at your records. One is to say, "Well, you've got a preexisting condition; therefore, we won't insure you."

That's different from them taking a look at your records.

Q. Because you get these conditions later on as you go along in life.

*The President.* Right. I understand. The good news about the current Medicare program is that they'll take care of you as you are.

Q. Here's an electronic card.

*The President.* Let's see that card. I don't see very well. [*Laughter*]

Q. [*Inaudible*]

*The President.* They did? Great. Thanks. That's what—the card, yes.

Yes, sir. The mike disappeared on you. Sorry.

*Energy/Environment*

Q. Thank you. Since we're talking about health care, I wonder if we couldn't address the health care of the world—in particular, the issue of greenhouse gases.

*The President.* Sure.

Q. The entire—well, I'm one of the scientists who believes that—and many of us do—that the greenhouse gases have been caused by us, and that it's about time that the United States took serious actions on the prevention of further greenhouse gases.

*The President.* I exactly agree with you, sir, and that's exactly what we're doing. I think you're right. I thought the prescription to the Kyoto plan was the wrong way to go. On the other hand, I do know we can use technologies to achieve exactly that objective.

For example, second-generation nuclear power. It's a renewable resource. It doesn't emit, as you know, greenhouse gases. It's one of the reasons why I work with India and trying to help China, as well, to be able to develop a civilian nuclear power industry without—with guarantees against proliferation, in order to protect the environment.

The other day, in the State of the Union Address, I said, we're too addicted to oil,

and we need to get off oil. There are alternative ways to do that. Plug-in hybrid batteries is a new technology that's coming, and I think will help deal with emissions. The use of ethanol—ethanol made from sugar, of course, is a technology that works. But hopefully, we'll be able to have some breakthroughs to be able to use saw grass or wood chips to manufacture ethanol in order to be able to not only make us less dependent on foreign sources of energy but also to be good stewards of the environment.

Ultimately, hydrogen-powered automobiles will help make a huge difference. We're spending about a billion—\$200 million or so to research that. Solar technology is another area where there's some great potential breakthroughs. I went to a plant in Michigan the other day and saw these new roofing materials that got photovoltaic cells, a part of them.

And so I agree with you. I think it's very important for us to use technology to help protect the environment and, at the same time, achieve an important economic and national security objective, which is no dependence on oil.

It's a—all right. Yes, sir.

#### *Transparency of Health Costs*

Q. Mr. President.

*The President.* Thank you, sir.

Q. Glad to have you here.

*The President.* Thanks.

Q. Thank you very much. I have two questions. The first question deals with a resident that's here—was unable to be here, but she's having—the resident is having a problem trying to get enrolled in Medicare B. And all of the time that she's had problems, the person has had a problem getting on the computer, getting anything resolved, and so on and so forth.

*The President.* Okay.

Q. And that's—

*Secretary of Health and Human Services Michael O. Leavitt.* I'll get the name, and we'll take care of it.

Q. Okay. The second question—

*The President.* That's easy. [*Laughter*]

Q. The second question deals with what are we doing at the Federal level to get some uniformity in terms of the billing in hospitals so that we don't have the wide dispersion between hospital billing as a result of someone having insurance and someone who does not have insurance and the whole bit. And that's been going on for years, because I was in a hospital, ran a part of it, and I know that there's a great dispersion in that.

*The President.* No, I appreciate that. Do you want to take that on, Mike?

*Secretary Leavitt.* Sure. Last night I was in a hotel, and on the back of the hotel door, there was a price: \$449 a night. Now, you'll be pleased to know, Mr. President, that I didn't pay that—[*laughter*]—and we didn't pay that because the Government had created a Government rate. It was only \$130 a night, and they slid the bill under the door.

A lot of insurance companies do the same thing and create special prices for the people that are insured with them. What the President has recently done is, he's told every insurance company, every employer, and every provider in the country, "You ought to tell people what you're charging." People deserve, people have a right to know what they're being charged and the kind of quality they're getting. And that's an initiative of the President. And very shortly, I believe you'll start to see that kind of disclosure.

Q. Thank you.

*The President.* This guy has got a great question because really what he's talking about is transparency in pricing. When you go buy a car, you know exactly what they're going to charge you. [*Laughter*] Well, sometimes you don't know. [*Laughter*] Well, you negotiate with them. [*Laughter*] Well, they put something on the window that says price. [*Laughter*] His point is, is that the more you know about price, the

better you can make better decisions, and I appreciate that.

Listen, you're paying me a lot of money to work, and so I think I'm going to have to head back home. But I'm honored. Got any more questions, I'll be glad to answer them.

#### *Electronic Medical Records*

*Q.* I have one.

*The President.* Okay, yes, please. Thank you.

*Q.* I'd like to ask you about the medical records. They're not infallible, and we like to have paper backup. Recently had an experience here in Riderwood; went for a blood check. Records were down because the power was down, and they couldn't connect to the computer. They need—most places have paper backup, and I think if you don't have a complete record, it's not going to work as greatly as it does.

*The President.* No, that's really a kind of redundancy in the process to make sure that if there's a power outage, that there's not an emergency caused by that. No, that's a really good point. Thanks.

*Q.* Thank you.

*The President.* I guess, is there a—  
*Secretary Leavitt.* Working on it. [*Laughter*]

*The President.* Working on it. [*Laughter*]  
Yes, sir. Working on it. [*Laughter*]

#### *India/Nuclear Technology*

*Q.* Mr. President, there are some—and I guess I would include myself—who have different views about the Indian agreement, because they're concerned about the effect that the agreement will have on the capacity of India to stimulate its own production of nuclear weapons—

*The President.* No, I understand.

*Q.* —by helping them. But I would go beyond that and ask you, while you're still President, to consider one aspect of this whole nuclear question. I guess I'm one of the three standing—left standing Americans who helped—who did the nego-

tiation of the nonproliferation treaty. And the basic bargain there was that other countries would give up their nuclear weapons if we, the nuclear powers, would engage in a program of nuclear disarmament.

Now, I'm aware of all of the agreements that have taken place. I'm aware of the negotiations that you had with Mr. Putin. The point is that we cannot expect that agreement, that basic agreement to hold if the United States, particularly, goes on acting as—and has the position that we might initiate a nuclear war if it is necessary.

And I would ask you just to think about the time—while you're still President, taking the one position that only one American President has taken, and that is President Johnson, to consider a “no first-use” policy to help the prospect of nuclear proliferation in the long run.

*The President.* Well, thank you. Thank you very much. Thanks for your contribution, by the way. I appreciate it.

Part of the Indian deal is to actually get them to formally join some of the institutions that you helped—your work created. And you're right. I did do an agreement with President Putin—thanks for noticing—where we're—both of us are reducing nuclear stockpiles. But I'll take your words to heart and think about it. Thank you. No commitment standing right here, of course. [*Laughter*]

Well, I'm thrilled to be here. Thank you all for your time. I would hope that people would take a look—just take a look. And if you need help, there are people here who will help you. And if you're watching on TV, ask your son or daughter or ask your neighbor or ask a person that has signed up whether or not it's worthwhile. And I think you'll find this is a program that's—it's a good program.

I appreciate you letting me have a chance to come by and visit with you. Thanks for the town hall meeting. Thanks for the good questions. God bless you all.

NOTE: The President spoke at 1:50 p.m. at Riderwood retirement community. In his remarks, he referred to Richard S. Foster, Chief Actuary, Centers for Medicare & Med-

icaid Services; President Pervez Musharraf of Pakistan; and President Vladimir V. Putin of Russia.

## Remarks at a Celebration of Hungarian Contributions to Democracy March 15, 2006

Thank you all. Please be seated. Mr. Speaker, thank you for having me here in this beautiful Capitol to celebrate the 50th anniversary of the Hungarian Revolution.

I appreciate being here with the mayor of our city, Mayor Williams. Good to see you, Mr. Mayor. I appreciate Chairman Hyde. Mr. Chairman, it's good to see you. I thank the members of the diplomatic corps, most particularly, Ambassador Walker. I've heard of him before. [*Laughter*] Ambassador Simonyi—thank you all. Members of Congress, most particularly a beacon for—a steadfast beacon for liberty is how I'd like to define my friend Tom Lantos.

I've come today to—not only to thank our strong ally, the Government of Hungary and the people of Hungary, but I've come to thank my friend Tom Lantos, and his wife, Annette, for never letting anybody forget that freedom is precious and necessary in our world.

The Hungarian example is an example of patience and an example of the fact that freedom exists in everybody's soul. It's an example that tyranny can never stamp out the desire to be free. It's an example that—of a country that once becomes free, joins with other freedom-loving countries to keep the peace.

I've come to remind the people of Hungary, they've got a great friend in America. I want to thank, by the way, the Hungarian Americans who are here with us today. You've made a significant contribution to our country.

You know, it's an interesting world in which we live. There's an argument about—in some places—about whether or not freedom is universal, whether or not freedom is okay for some parts of the world but not others. I believe freedom is universal. I believe the example of Hungary proves that freedom is universal. I believe everybody desires to live in freedom. I believe there's an Almighty, and I believe the Almighty God's gift to each person in this world is liberty. And I believe the United States, and I believe Hungary, and I believe other free nations have the responsibility to help other people realize their freedom as well.

You know, one of the interesting examples of Europe that I try to explain to our people is that for 100 years, there were war, where a lot of people lost their lives and a lot of Americans lost their life. But today, Europe is at peace. Europe is whole, free, and at peace. And I believe the reason why is because democracy has taken hold on that continent. And one of the leading lights of democracy has been Hungary.

We thank the Hungarian people for their example. We thank them for their contribution in helping the newly free in Afghanistan and Iraq realize the blessings of liberty. We thank them for being allies in keeping the peace.

Mr. Speaker, thanks for letting me come by and pay my respects to a strong ally and a good friend but also pay my respects to Congressman Tom Lantos, a person who

understands the difference between freedom and tyranny, and a person who is willing to speak his mind all times, all places, everywhere.

God bless you all.

NOTE: The President spoke at 5:45 p.m. in Statutory Hall at the U.S. Capitol. In his remarks, he referred to Mayor Anthony A. Williams of Washington, DC; U.S. Ambassador to Hungary George H. Walker III; and Hungary's Ambassador to the U.S. Andras Simonyi.

## Remarks Following a Meeting With Members of Congress *March 16, 2006*

It's been my pleasure to host Republicans and Democrats from both the House and the Senate here to talk about budget reform. We're talking about the way to—for the executive branch and the legislative branch to work in a cooperative fashion to help make sure that the appropriations bills we pass are—meet priorities, that they are—that the process is transparent, that we're able to say to the American people, "We care about how we spend your money."

Part of the budget reform process is a line-item veto. I want to thank the Members here who have come, who have offered not only constructive advice but practical applications of the line-item veto so that it becomes law. And I listened carefully to some constructive suggestions from both Republicans and Democrats as to how

to get a piece of legislation passed. The American people expect all of us from both parties to work diligently as to how we spend their money. And one way that we can earn the confidence of the people is to pass a line-item veto.

And again, I want to thank the Members for being here. It means a lot that people from both parties are here. I particularly want to thank my opponent in the 2004 campaign, Senator Kerry, for being here. I can remember on the campaign trail, he said that he supported a line-item veto, and he is following through on his word by being here at the table. I'm proud you're here, Senator.

Thank you all for coming.

NOTE: The President spoke at 10 a.m. in the Cabinet Room at the White House.

## Remarks on Signing the Stop Counterfeiting in Manufactured Goods Act *March 16, 2006*

Thank you. Welcome. Thanks for coming. In a few moments, I will sign a bill that protects the hard work of American innovators, strengthens the rule of law, and helps keep our families and consumers safe. The Stop Counterfeiting in Manufactured Goods Act has earned broad support, and I want to thank all those who helped get this bill passed for being here today. I want

to thank the lawmakers from both political parties for getting this piece of legislation to this desk. I want to thank the consumer protection groups who have joined us as well. Thanks for your hard work on this important piece of legislation.

I want to thank the Attorney General, Al Gonzales, who has joined us; the Secretary of Commerce, Carlos Gutierrez; my

Secretary of Labor, Elaine Chao. Thank you all for being here. I appreciate the chairman of the Judiciary—House Judiciary, Jim Sensenbrenner, for joining us today. I also want to thank the bill's sponsor, Joe Knollenberg from Michigan, as well as Bobby Scott from Virginia. Thank you three Members for being here. The Senators claim they're voting on important legislation; otherwise, they would have been here too. [*Laughter*]

This economy of ours is strong; it's getting stronger. We grew at 3.5 percent last year. The national unemployment rate is 4.8 percent. People are buying homes. The small-business sector is strong. Productivity is up. Our country is productive; it's innovative; it's entrepreneurial. And we've got to keep it that way.

One of the problems we have is that people feel comfortable, at times, in trying to take a shortcut to success in the business world. They feel like they can copy existing products instead of designing their own. In order to keep this economy innovative and entrepreneurial, it's important for us to enforce law, and if the laws are weak, pass new laws to make sure that the problem of counterfeiting, which has been growing rapidly, is arrested, is held in check.

Counterfeiting costs our country hundreds of billion dollars a year. It has got a lot of harmful effects in our economy. Counterfeiting hurts businesses. They lose the right to profit from their innovation. Counterfeiting hurts workers because counterfeiting undercuts honest competition, rewards illegal competitors. Counterfeiting hurts our—counterfeiting hurts consumers because fake products expose our people to serious health and safety risks. Counterfeiting hurts the Government. We lose out on tax revenue. We have to use our resources for law—of law enforcement to stop counterfeiting. Counterfeiting hurts national security because terrorist networks use counterfeit sales to, sometimes, finance their operations.

This administration and Congress have worked together to confront the illegal threat—the real threat of illegal activity such as counterfeiting. And the bill I'm signing today is an important step forward.

The bill helps us defeat counterfeiting in two key ways. First, the bill strengthens our laws against trading counterfeit labels and packaging. In the past, the law prohibited the manufacturing, shipping, and—or selling of counterfeit goods, but it did not make it a crime to ship falsified labels or packaging, which counterfeiters could then attach to fake products.

This loophole helped counterfeiters cheat consumers by passing off poorly-made items as brandname goods. By closing the loophole, we're going to keep honest Americans from losing business to scam artists.

Secondly, the bill strengthens penalties for counterfeiters and gives prosecutors new tools to stop those who defraud American consumers. The bill requires courts to order the destruction of all counterfeit products seized as a part of a criminal investigation. The bill requires convicted counterfeiters to turn over their profits as well as any equipment used in their operations, so it can't be used to cheat our people again. The bill requires those convicted of counterfeiting to reimburse the legitimate businesses they exploited. These commonsense reforms will help law enforcement to crack down on this serious crime. We've got to get the counterfeiters and their products off the streets.

The tools in the bill I sign today will become a part of our broad effort to protect the creativity and innovation of our entrepreneurs. This administration is leading an initiative called STOP—Strategy Targeting Organized Piracy. Nine Federal agencies are coming together in this initiative, including the Department of Justice, which has launched the most aggressive effort in American history to prevent intellectual property violations. We've expanded computer hacking and intellectual property units in U.S. Attorney's offices all across

the country. We're posting specially trained prosecutors and FBI agents at American Embassies in Asia and Eastern Europe. We're working with other nations and the World Trade Organization to promote strong intellectual property laws around the globe. We're cooperating with the private sector to raise awareness of counterfeiting so we can help stop fraud before it starts.

These efforts are getting some results. Last year, we dismantled a piracy ring in Massachusetts that was planning to sell more than 30,000 counterfeit hand bags and shoes and necklaces and other items. With partners overseas, we broke up a prescription drug counterfeiting network and seized more than \$4 million in phony medicine. With the help of 16 countries on 5 continents, we removed more than a \$100 million worth of illegal online software, games, movies, and music. This is a really

important effort, and as we call upon folks to send a message to the counterfeiters, "We're not going to tolerate your way of life," that we need to give them all the tools necessary to do their jobs. And this bill I'm going to sign here in 30 seconds does just that.

Again, I want to thank you all for being here to help honor these legislators that crossed the partisan divide to help protect this country from those who feel like they can sell illegal products and counterfeit and steal our—steal intellectual property. Good work. Thanks for coming. Now let's sign the bill.

NOTE: The President spoke at 3:07 p.m. in Room 350 of the Dwight D. Eisenhower Executive Office Building. H.R. 32, approved March 16, was assigned Public Law No. 109-181.

## Remarks on the Nomination of Dirk Kempthorne To Be Secretary of the Interior

March 16, 2006

*The President.* Good afternoon. I'm pleased to announce my nomination of Governor Dirk Kempthorne to be the Secretary of the Interior. The Department of Interior is responsible for managing our national parks and public lands, conserving our natural resources, and pursuing environmentally responsible energy development on Federal lands and waters.

I've nominated Dirk to succeed an outstanding public servant, Gale Norton. As the Secretary of the Interior for the past 5 years, she was instrumental in establishing the Healthy Forests Initiative to protect communities from catastrophic wildfire and to improve the habitat. When Hurricane Katrina devastated the gulf coast region, she helped lead the efforts to restore offshore energy production so that

Americans would not suffer further supply disruptions and price increases.

Future generations of Americans will be able to enjoy our great national parks and wildlife refuges because of Gale's untiring work. Gale was one of the original members of my Cabinet and the first woman in American history to hold the post of Secretary of the Interior. I appreciate her dedicated service, and Laura and I wish Gale and John all the best.

Dirk Kempthorne is the right man to build on this progress. As Governor of Idaho, he worked closely with Gale on a variety of important initiatives. They worked together to resolve a longstanding water rights issue, to return responsibility to Idaho for managing the local wolf population, and to make the Healthy Forests Initiative a reality in Idaho.

As Governor, Dirk has been a responsible steward of Idaho's 30 State parks and recreational trailways that serve millions of visitors each year. He has launched the statewide Experience Idaho Initiative, which will fund needed improvements within Idaho's State parks to preserve public spaces and expand recreational opportunities for visitors. Last August, I had a chance to enjoy those recreational opportunities firsthand when Dirk and I biked some of Idaho's trails together.

As Secretary of the Interior, Dirk will continue my administration's efforts to conserve our land, water, and air resources; reduce the maintenance backlog of our national parks; support historic and cultural sites through our Preserve America Initiative; and develop the energy potential of Federal lands and waters in environmentally sensitive ways.

Dirk brings wide experience to these important tasks. He has served at every level of government: as mayor of Boise, as Governor of Idaho, and as a United States Senator. While in the Senate, he chaired the Subcommittee on Drinking Water, Fisheries, and Wildlife, and he chaired the Armed Services Personnel Subcommittee.

He built bipartisan support to enact comprehensive reforms to the Safe Drinking

Water Act. Dirk understands that those who live closest to the land know how to manage it best, and he will work closely with State and local leaders to ensure wise stewardship of our resources.

Dirk has had a long and abiding love for nature. When he and his wife, Patricia, were married, they chose to hold the ceremony atop Idaho's Moscow Mountain at sunrise. Dirk said, "I don't think there's a more beautiful cathedral than the outdoors."

I appreciate his willingness to take on this important post, and I ask the Senate to confirm him promptly as the 49th Secretary of the Interior.

Thanks for agreeing to serve.

[*Secretary-designate Kempthorne made brief remarks.*]

*The President.* Thank you all.

NOTE: The President spoke at 5:29 p.m. in the Oval Office at the White House. In his remarks, he referred to John Hughes, husband of Secretary of the Interior Gale A. Norton. The transcript released by the Office of the Press Secretary also included the remarks of Secretary-designate Kempthorne.

## Statement on House of Representatives Passage of Supplemental Funding Legislation

*March 16, 2006*

I applaud the House for its quick passage of legislation to provide vital resources for two of our Nation's top priorities. This bill will give our troops in Iraq and Afghanistan tools they need to prevail in the war on terror. The legislation also provides for ad-

ditional resources for the people of the gulf coast as they continue the work of rebuilding their lives and communities. I urge the Senate to act promptly to pass legislation providing for these critical funds.

## Letter to Congressional Leaders Transmitting a Report on Activities in Belarus

March 16, 2006

Dear \_\_\_\_\_ :

Consistent with the Belarus Democracy Act of 2004 (Public Law 108–347), I hereby transmit a report prepared by my Administration on the Belarusian sale or delivery of weapons and weapons-related technologies and on the personal assets and wealth of the senior Belarusian leadership.

Sincerely,

GEORGE W. BUSH

NOTE: Identical letters were sent to Henry J. Hyde, chairman, and Tom Lantos, ranking member, House Committee on International Relations; and Richard G. Lugar, chairman, and Joseph R. Biden, Jr., ranking member, Senate Committee on Foreign Relations.

## Message to the Congress Transmitting a Report on the National Security Strategy of the United States

March 16, 2006

To the Congress of the United States:

Consistent with section 108 of the National Security Act of 1947, as amended (50 U.S.C. 404a), I am transmitting a report prepared by my Administration on the Na-

tional Security Strategy of the United States.

GEORGE W. BUSH

The White House,  
March 16, 2006.

## Remarks at a National Republican Congressional Committee Dinner

March 16, 2006

Thank you all. Please be seated. Thank you all for coming. Thank you for the warm welcome. Mr. Speaker, I can't tell you what a joy it is to work with you. America is very fortunate to have Denny Hastert as the Speaker of the House of Representatives. And I want to thank you all for coming tonight to make sure that he remains the Speaker of the House of Representatives.

We're here to not only thank you but to remind you and our fellow citizens, we've got a lot of work to do to lay the foundations for peace, and we've got a lot

of work to do to make sure this country remains a prosperous country so that every single citizen can realize the great promise of America.

I bring greetings from the First Lady—that would be Laura. She sends her best regards to the Speaker and the leadership of the House of Representatives. She sends her best regards to you. I'm a lucky guy that she said yes when I asked her to marry me. She is a fabulous woman, a great mom, and she's doing a wonderful job as our Nation's First Lady.

I also bring greetings from the Vice President of the United States, Dick Cheney. You know, mine is an interesting job. I get to make a lot of decisions, and I have to rely on people to give me good, sound, steady advice. And Vice President Dick Cheney gives me good, sound, steady advice. The country is lucky to have him as the Vice President of the United States.

I want to thank my friend Tom Reynolds, Congressman Tom Reynolds from New York, for being the chairman of the NRCC. I thank Buck—and Patricia—for being such a fine chairman and supporting person for this event. This takes a lot of time and a lot of effort to put together a significant event like this. And, Buck, I know you worked hard, and I want to thank you and the entire team of people for making this such a successful event.

I welcome the House majority leader, John Boehner from Ohio. Thank you, John. The House Majority Whip, Roy Blunt from Missouri—I appreciate you being here, Roy. I thank all the leadership team for the House of Representatives who are here tonight. I want to thank all the Members of Congress. Thanks for coming. But most importantly, I thank our distinguished guests.

We've got a lot of work to do. This Nation is a nation at war, and I'm proud to work with Members of the United States Congress who understand that. After September the 11th, I vowed to our country that we would remain firm in defeating an enemy that would try to hurt us again. And I appreciate the strong allies in the House of Representatives who understand the stakes in the world in which we live.

Ours is a nation which is committed to making sure we defeat the terrorists overseas so we do not have to face them here at home. We understand that if somebody harbors a terrorist, feeds a terrorist, houses a terrorist, they're equally as guilty as the terrorist, and they will be held to account. You know, a President, when he says something, he better mean it, and when I told

the Taliban, "Cough up Al Qaida, or we will hold you—we will bring you to justice," I meant what I said. Thanks to the United States military, Afghanistan is now free, and America is better off for it.

I know the Members here share the great joy I have in knowing that we liberated 25 million people from the clutches of one of the most barbaric regimes in the history of man. Thanks to defending our Nation, thanks to upholding the doctrine that says if you harbor a terrorist—today, young girls go to school in Afghanistan, women have a chance to succeed. Afghanistan is free, and the world is better off for it.

I appreciate working with Members of the United States Congress who understand that one of the lessons of September the 11th is when this Nation sees a threat, we must take it seriously, before it materializes. I saw a threat in Saddam Hussein. Members of the United States Congress, both Republicans and Democrats, saw a threat. Members of the United Nations Security Council saw a threat. By removing Saddam Hussein from power, America is safer and the world is better off.

We have a strategy for victory in Iraq. Part of that victory means that we will stand by the Iraqi people as a democracy unfolds. I hope you felt the joy in your heart that I felt when millions of Iraqis—75 percent of voting-age population—defied the terrorists, defied the car bombers, surprised the world, and said loud and clear, "We want to be free."

We've got a comprehensive strategy to help that country rebuild its economy, and we've got a strategy to train Iraqis so they can defend their freedom. We fight a terrorist—an enemy that has got only one weapon. They can't beat us on the battlefield, but they have the capacity and the willingness to kill innocent life. They know full well that our TV screens are full of images of the innocent dying, and they know full well it breaks our heart. The only way the enemy can defeat us, the only way

that Iraq will not become a democracy if we lose our nerve. I will not lose my nerve in the face of assassins and killers.

I thank the Members of the United States Congress understanding that in order to achieve a victory in Iraq, that we will rely upon the wisdom of our commanders on the ground. As Iraqis stand up, we will stand down. And the troop levels in Iraq will not be decided by artificial timetables set in Washington, DC, but by our commanders on the ground.

The work is hard in Iraq, but it's necessary. It's necessary for our security; it's necessary to lay the foundations of peace in a troubled part of the world. We believe that democracy is the right of every man and woman on this world. And we understand that history says loud and clear that democracies do not war.

I want to read a letter from—to you, if you don't mind, from a mother of a courageous American named Sergeant William Scott Kinzer, Jr. I read this letter the other day, and I thought you might like to hear one mother's point of view of what we're doing. William Scott Kinzer was killed last year while securing election sites in Iraq. His mom, Debbie, wrote me. She said: "These words are straight from a shattered but healing mother's heart. My son made a decision to join the Army. He believed that what he was involved in would eventually change Iraq, and those changes would be recorded in history books in years to come. On his last visit home, I asked him what I would ever do if something happened to him in Iraq. He smiled at me, and his blue eyes sparkled as he said, 'Mom, I love my job. If I should die, I would die happy. Does life get any better than that?'"

His mom went on to say: "Please do not let the voices we hear the loudest change what you and Scott started in Iraq. Please do not let his dying be in vain. Do not let my son have given his all for an unfinished job. Please complete the mission." My message to Debbie and the mes-

sage from people here from the United States Congress is the same: We will complete the mission; we will secure this country; we will spread freedom for the sake of peace for our children and our grandchildren.

I thank the Speaker and the leaders of the United States Congress who understand that when we ask our law enforcement officials and intelligence officials to protect us, they must have all the tools necessary to do their job. So we passed the PATRIOT Act right after September the 11th. It's an important act. It's an act that protected the civil liberties of the United States while giving law enforcement the tools necessary to protect us. Parts of the PATRIOT Act expired last year. It came up for reauthorization.

I want to remind the people what the Democrat leader from Nevada said in the United States Senate. He boasted, the "Democrats killed the PATRIOT Act." They didn't kill it for long. Thanks to the leadership of the people up here on this dais, the PATRIOT Act passed, and the homeland is more secure.

The Speaker and I were sitting back there talking about some of the challenges we've faced over the past years. This economy of ours faced some serious challenges. We had a recession, a stock market collapse. There was terrorist attacks, corporate scandals, major natural disasters, rising energy prices. But we acted. We had a plan, an economic recovery plan. And by working together, we passed that plan. And the heart of that plan was this: We believe that when Americans have more money to save and spend or invest, the economy is better off. So we cut the taxes. We cut the taxes on working families; we cut the taxes on family with children; we cut the taxes on small businesses; we cut the taxes on dividends; we cut the taxes on capital gains.

I remember clearly in 2003 when a Democrat leader attacked our economic growth plan and said of the tax relief, it

is “reckless and irresponsible;” it’s a “reckless and irresponsible tax plan that will undermine opportunity in our country.” Today, the United States economy is strong, and it’s getting stronger. We grew last year at 3.5 percent, faster than any major industrialized nation. We added 243,000 jobs in February, almost 5 million jobs in the last 2½ years. The unemployment rate across the United States is 4.8 percent—that’s lower than the average rate of the 1970s, 1980s, 1990s. Real after-tax income is up for working people. Productivity is high in America. Homeownership are at alltime levels; more minorities own a home today in America than ever before in our Nation’s history. The economic recovery plan that we passed works.

Today, many Democrats want the tax relief we passed to expire in a few years. Some even want to repeal it now. If the tax relief is not made permanent, the American people will get a mighty tax increase they do not want and they do not deserve. In order to make sure this economy of ours remains strong, we need to make the tax relief permanent.

We have a plan to cut the deficit in half by 2009. Oh, you’ll hear some in Washington say, “Well, let’s raise your taxes in order to balance the budget.” Folks, that’s not the way Washington works. Here’s how Washington works: They’ll raise your taxes, and they’ll figure out new ways to spend your money. The best way to cut the deficit is to keep our progrowth economic policies in place and be wise about how we spend your money. We set priorities in Washington, DC—[*applause*]. By the way, every single spending program sounds great. They’ve all got wonderful titles. We believe that it’s important to set priorities. So long as we’ve got any troops in harm’s way, they’ll have all the equipment, all the support, the best pay, the best housing possible. And I want to thank the Members of the United States Congress who are here for supporting the troops of the United States military.

I thank the Speaker, and I thank the leaders here who’ve helped us put austere budgets in place, budgets that have cut the rate of growth of nonsecurity discretionary spending every year since 2001. I put out another tight budget for 2007, and I look forward to working with Congress to be wise about how we spend your money, to make sure that the deficit is cut in half by 2009.

I appreciate very much the work on the line-item veto. I look forward to working with the United States Congress, to join with them to make sure that when we spend money, it’s money well-spent. Today I met with members of both political parties and both chambers of the United States Congress to strategize about how we can get a line-item veto passed, to my desk, so we can assure the American people their money is going to be spent in a way they want their money spent.

We believe we should not fear the future, but we should shape the future. We believe we ought to put policies in place to make sure that America remains the economic leader of the world. And one way to do that is to make sure we have an economy which is flexible, where regulations are low, as are taxes. And one way to make sure this economy of ours remains strong and vibrant is to continue to work for meaningful, real tort reform.

I know it shocks some of you to hear a Texan say that we’re addicted to oil—[*laughter*]—and we are, and that’s a problem. In order to make sure this Nation remains competitive, in order to make sure we’re the leader of the world, I look forward to working with the Members of the United States Congress here to pass the Advanced Energy Initiative.

Last year, thanks to the leadership of the Speaker, I was able to sign a comprehensive energy bill. There is more work to be done. We’re going to harness technology to make sure the automobiles you drive consume less oil. We believe in plug-in hybrid batteries. It’s the wave of the

future. We believe in the use of ethanol. I love the fact that when our farmers are growing crops, it makes us less dependent on oil from the Middle East.

Ours is a party that knows you got to challenge the status quo when it comes to energy. In order to make sure this country is less dependent on fossil fuels, we must promote safe and sound nuclear power. We must promote solar energy and clean coal technology and wind energy. Ours is the party that can see into the future. We don't fear it; we welcome it because we intend to continue to lead.

We believe in a health care system that's run by doctors and patients, not by people in Washington, DC. Recently, working with the United States Congress, Members up here on the dias, we have kept a firm commitment to the Nation's elderly. Our Government said, "We're going to take care of the elderly with good health care." And the Medicare system became stagnant and old. It wasn't meeting the requirements of our seniors. So we came together and did something that no Congress had been able to do for years, and that is modernize Medicare. But as we did so, we not only provided prescription drugs for our seniors, but we had a uniquely Republican idea as a part of that bill, and it said that we ought to give our seniors choices. We believe that people ought to be given choices in the marketplace. We believe that Government shouldn't tell people the nature of their health care. We believe that Government ought to say, "Here's some choices from which to choose."

So far, 25 million seniors have signed up for this program. Interestingly enough, because we've injected competition into Medicare, the projected costs for Medicare this year are going to be 20 percent less than projected. Competition works. Trusting people to make the decisions in their lives is the right thing to do. The Medicare modernization plan we passed is good for our seniors, and I'm proud that we're able to get the job done.

We believe in health savings accounts, which puts consumers in charge of their health decisions. We believe in association health plans that enable small businesses to pool risk across jurisdictional boundaries so they can buy insurance at the same rates and same discounts that big companies are able to do. We believe in information technology to help control the cost. And we believe we've got to do something about these frivolous and junk lawsuits that are running good doctors out of practice and running up the cost of medicine for our consumers.

We don't fear the future; we welcome it. And we understand that to make sure this country remains competitive, we've got to stay on the leading edge of technological change. And so therefore, I look forward to working with Congress to double the Federal commitment to the most critical basic research in the physical sciences over the next 10 years. I look forward to working with the United States Congress to make sure the research and development tax credit is a permanent part of our Tax Code. And I look forward to working with the United States Congress to make sure our children have got the skills necessary to become the scientists and engineers and chemists and physicists to keep the jobs of the 21st century right here in the United States of America.

I can stand up here and tell you that we have delivered results for the American people, and we've got an agenda to continue to do so. One of the interesting things about working with these good folks is that they've got a proper perspective of the role of government in our life as well. The way I like to put it is this: Government can hand out money, but it cannot put hope in a person's heart or a sense of purpose in a person's life. We understand that the great strength of America is not in the size of our military force or in the size of our wallets. The great strength of the United States of America lies in the hearts and souls of our citizens who all want to serve

something greater than themselves. Ours is a compassionate nation; ours is a loving nation. And we understand the role of government is not to crowd out our faith-based and community-based institutions but to welcome them in the providing of care and love and compassion for our fellow citizens who hurt.

We believe in ushering in the responsibility era, when our citizens understand they are responsible for the decisions they make in life. If you are a mother or a father, you're responsible for loving your child with all your heart. If you're a corporate citizen, you're responsible for being a—for putting something back into our culture, and you're responsible for telling the truth to your shareholders.

If you're a citizen who wants to help change America one heart and one soul at a time, you're responsible for mentoring a child, for feeding the hungry, for providing shelter to the homeless. The great

strength of America is the compassion of America. And I look forward to continue to call people to service, to rally that strength so that every single citizen of our country realizes the great promise and the great hope of the blessed land we call home.

It's an honor to be here. I'm proud to be your President. I'm proud to be working with these Members of the United States Congress. I want to thank you for keeping them in power in Washington. The Nation is better off with Denny Hastert as the Speaker and these leaders running the Congress.

God bless, and God bless America.

NOTE: The President spoke at 7:12 p.m. at the Washington Hilton Hotel. In his remarks, he referred to Patricia McKeon, wife of Representative Howard P. "Buck" McKeon; and former President Saddam Hussein of Iraq.

## Remarks at a Saint Patrick's Day Shamrock Presentation Ceremony With Prime Minister Bertie Ahern of Ireland March 17, 2006

*President Bush.* Taoiseach, thank you very much. Welcome back.

*Prime Minister Ahern.* Thank you.

*President Bush.* Laura and I are delighted to welcome you here to the White House. I'm proud to accept the bowl of shamrocks as a symbol of our friendship.

The friendship between Ireland and the United States has deep roots. Few people fought as hard for American independence as the sons of Erin. At the end of the Revolutionary War, Lord Mountjoy told the House of Commons that, "We've lost America through the Irish." The Irish played a key role in Washington's army. And in the two centuries since, the ties between Ireland and America have only strengthened.

The ties between Ireland and America are reflected in this great house. This house was designed by an Irish architect, and he used as his model the grandest building he knew, Leinster House in Ireland. The affinities between the two buildings are more than just architectural; the White House, built by James Hoban, has been home to every American President since John Q. Adams' father, John. The Dublin building that inspired him now serves as a free parliament in a free and independent Ireland.

The ties between Ireland and America are also reflected in our people. Ireland has one of the fastest growing economies in Europe, and its growth is attracting immigrants. For more than a century, that

was a different story. Millions of Irish came to our shores because of war and poverty and famine. Often they arrived with nothing but the faith of their fathers and a willingness to work. These men and women who built our cities were also the soldiers who defended our freedom in every one of our wars. They're the priests and they're the nuns who built a system of parochial schools that provided a decent education for millions of poor immigrants. And they're now doing the same thing for a new generation of African Americans and Latino Americans in our inner cities.

Like Saint Patrick, the Irish in America began their life in their new land as exiles, but came to love it as home. Finally, the ties between Ireland and America are reflected in our common commitment to bring the blessings of liberty to every man and woman and child on this Earth.

In the 20th century, Ireland won its independence and raised up a democracy that offered its people a just and better life. In the 21st century, Ireland is now helping other nations who share the same aspirations for peace and prosperity by fighting hunger and the spread of HIV/AIDS in Africa, by supporting relief efforts

for victims of the tsunami in Asia, and by helping the Afghan people rebuild their lives and their country. Ireland is independent when it comes to foreign policy, but Ireland is not neutral when it comes to the global challenges like hunger and disease and human rights.

*Taoiseach*, you're making a big contribution to our world, and we appreciate it. The United States appreciates all of Ireland's efforts for peace and freedom. Americans are grateful to our Irish friends, and we are proud of our Irish heritage.

The Census Bureau tells us there are more than 34 million Americans that claim Irish ancestry. On Saint Patrick's Day, I suspect that number jumps a little bit. [Laughter] On this special day, we honor the saint who brought the gospel of peace to the Green Isle, and we count ourselves blessed by the warm friendship between his adopted land and our own.

Thanks for coming. Appreciate it.

NOTE: The President spoke at 10:31 a.m. in the Roosevelt Room at the White House. The transcript released by the Office of the Press Secretary also included the remarks of Prime Minister Ahern.

## The President's Radio Address March 18, 2006

Good morning. In recent weeks, Americans have seen horrific images from Iraq: the bombing of a great house of worship in Samarra, sectarian reprisals between Sunnis and Shi'as, and car bombings and kidnappings. Amid continued reports about the tense situation in parts of that country, it may seem difficult at times to understand how we can say that progress is being made. But the reaction to the recent violence by Iraq's leaders is a clear sign of Iraq's commitment to democracy.

I'm encouraged to see that Iraqi political leaders are making good progress toward forming a unity government, despite the recent violence. Our Ambassador to Iraq, Zal Khalilzad, reports that the violence has created a new sense of urgency among these leaders to form a national unity government as quickly as possible. I urge them to continue their work to put aside their differences, to reach out across political, religious, and sectarian lines, and to form

a government that can confront the terrorist threat and earn the trust and confidence of all Iraqis.

I also remain optimistic because, slowly but surely, our strategy is getting results. This month, I'm giving a series of speeches to update the American people on that strategy. I'm discussing the progress we are making, the lessons we have learned from our experience, and how we are fixing what has not worked. This past week, I discussed the security element of our strategy. I spoke about our increasingly successful efforts to train Iraqi security forces to take the lead in the fight against the terrorists. And I described our strengthened efforts to defeat the threat of improvised explosive devices, or IEDs.

On Monday, I will give a speech discussing how we are working with all elements of Iraqi society to remove the terrorists and restore order in Iraqi cities, to rebuild homes and communities, and to achieve the stability that can come only from freedom. I will also share some concrete examples of how this approach is succeeding—evidence of real progress that is too often lost amid the more dramatic reports of violence.

Sunday marks the third anniversary of the beginning of Operation Iraqi Freedom. The decision by the United States and our coalition partners to remove Saddam Hussein from power was a difficult decision, and it was the right decision. America and the world are safer today without Saddam Hussein in power. He is no longer oppressing the Iraqi people, sponsoring terror, and threatening the world. He is now being tried for his crimes, and over 25 million Iraqis now live in freedom. This is an achievement America and our allies can be proud of.

These past 3 years have tested our resolve. We've seen hard days and setbacks. After the fall of Saddam Hussein, the terrorists made Iraq the central front in the war on terror, in an attempt to turn that country into a safe haven where they can

plan more attacks against America. The fighting has been tough. The enemy has proved brutal and relentless. We have changed our approach in many areas to reflect the hard realities on the ground. And our troops have shown magnificent courage and made tremendous sacrifices.

These sacrifices by our coalition forces—and the sacrifices of Iraqis—have given Iraq this historic opportunity to form a democratic government and rebuild itself after decades of tyranny. In the past 3 years, Iraqis have gone from living under a brutal tyrant to liberation, sovereignty, free elections, a constitutional referendum, and last December, elections for a fully constitutional government. By their courage, the Iraqi people have spoken and made their intentions clear: They want to live in a democracy and shape their own destiny.

In this fight, the American and Iraqi people share the same enemies because we stand for freedom. The security of our country is directly linked to the liberty of the Iraqi people, and we will settle for nothing less than complete victory. Victory will come when the terrorists and Saddamists can no longer threaten Iraq's democracy, when the Iraqi security forces can provide for the safety of their own citizens, and when Iraq is not a safe haven for the terrorists to plot new attacks against our Nation.

More fighting and sacrifice will be required to achieve this victory, and for some, the temptation to retreat and abandon our commitments is strong. Yet there is no peace, there's no honor, and there's no security in retreat. So America will not abandon Iraq to the terrorists who want to attack us again. We will finish the mission. By defeating the terrorists in Iraq, we will bring greater security to our own country. And when victory is achieved, our troops will return home with the honor they have earned.

Thank you for listening.

NOTE: The address was recorded at 7:38 a.m. on March 17 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on March 18. The transcript was made available by the Office of the Press Secretary on

March 17 but was embargoed for release until the broadcast. The Office of the Press Secretary also released a Spanish language transcript of this address.

## Remarks on Arrival From Camp David, Maryland March 19, 2006

### *Progress in Iraq*

This morning I had a phone call with our Ambassador to Iraq, and the Ambassador informed me of the progress that the Iraqis are making toward forming a unity government. I encouraged the Iraqi leaders to continue to work hard to get this Government up and running. The Iraqi people voted for democracy last December; 75 percent of the eligible citizens went to the polls to vote. And now the Iraqi leaders are working together to enact a government that reflects the will of the people. And so I'm encouraged by the progress; the Ambassador was encouraged by it.

Today, as well, marks the third anniversary of the beginning of the liberation of Iraq, and it's a time to reflect. And this morning my reflections were upon the sacrifices of the men and women who wear

our uniform. Ours is an amazing nation where thousands have volunteered to serve our country. They volunteered to—many volunteered after 9/11, knowing full well that their time in the military could put them in harm's way. So on this third anniversary of the beginning of the liberation of Iraq, I think all Americans should offer thanks to the men and women who wear the uniform and their families who support them.

We are implementing a strategy that will lead to victory in Iraq. And a victory in Iraq will make this country more secure and will help lay the foundation of peace for generations to come.

May God continue to bless our troops in harm's way. Thank you.

NOTE: The President spoke at 12:56 p.m. on the South Lawn at the White House.

## Remarks Following Discussions With Secretary General Jakob Gijssbert “Jaap” de Hoop Scheffer of the North Atlantic Treaty Organization March 20, 2006

*President Bush.* Fine-looking crowd we've attracted here, fine-looking crowd.

Mr. Secretary General, thanks for coming. We've just had a wide-ranging discussion on a variety of issues, which is what you'd expect when allies and friends come together. We discussed Iraq, and I want to thank NATO for its involvement in help-

ing train Iraqi security forces so they can end up protecting the Iraqi people from the—from those who want to kill innocent life in order to affect the outcome of that democracy.

I want to thank you very much for your strong involvement in Afghanistan. A

NATO presence in Afghanistan is really important. I learned that firsthand when I went to Afghanistan and talked to the—President Karzai and his Government. They were very supportive of the mission and thankful for the mission. NATO is effective, and that's one of the things that's really important for our citizens to understand, that our relationship with NATO is an important part of helping us to win the war on terror.

We also talked about Darfur in the Sudan. I'd called the Secretary General earlier this year. I talked to him about a strategy that would enable NATO to take the lead in Darfur. However, some things have to happen prior to that happening. And the first thing is that the African Union must request from the United Nations a U.N. mission to convert the AU mission to a U.N. mission, at which point if that's done, the—NATO can move in with United States help—inside of NATO—to make it clear to the Sudanese Government that we're intent upon providing security for the people there and intent upon helping work toward a lasting peace agreement.

And so I appreciate your understanding of that. The first time I made the phone call to the Secretary General, he fully understood the challenge, fully understood the need, and it was great to work with a friend in peace to devise a strategy on how to move forward.

So thanks for coming. Looking forward to the meeting later on this year, big NATO summit. And I'm convinced that, like the last summit we had, you'll lead that meeting with the efficiency and professionalism that you're known for.

*Secretary General de Hoop Scheffer.* Thank you very much, Mr. President. Let me echo what the President has been saying about NATO delivering, about NATO

making the difference. In Afghanistan, the fight against terror is an extremely important element there. NATO indeed assists in the African Union in Darfur, and I'm quite sure, as I've told the President, that when the U.N. comes, the NATO allies will be ready to do more in enabling the United Nations force in Darfur.

NATO assisted after Hurricane Katrina. NATO had a major humanitarian operation in Pakistan. NATO is in the Balkans. All 26 NATO allies participate in one way or the other in the training mission in Iraq. Now I want to see NATO-trained Iraqi officers taking their responsibility in fighting the terrorists in their own country.

In other words, NATO is delivering. And in the runup to the NATO summit in Riga at the end of the year, as the President mentioned, we'll make sure—and NATO will make sure that this will be an important event.

In NATO's outreach, let me mention the Middle East, North Africa, Israel, Jordan, the nations of the gulf—NATO's contacts with other nations who share our values—we have Australia, Japan, South Korea—in other words, we'll see to it that the military agenda of NATO and the political agenda of NATO will be very seriously addressed in Riga. And I'm very glad for the support, the permanent support, and the friendship of our most important ally, the United States, and its leader, President Bush.

Thank you very much.

*President Bush.* Thank you. Yes, good. Thank you.

NOTE: The President spoke at 10:16 a.m. in the Oval Office at the White House. In his remarks, he referred to President Hamid Karzai of Afghanistan.

## Remarks to the City Club of Cleveland and a Question-and-Answer Session in Cleveland, Ohio

March 20, 2006

*The President.* Thank you all. Please be seated. Sanjiv, thanks for the introduction. He called me on the phone and said, "Listen, we believe in free speech, so you're going to come and give us a speech for free." [Laughter] Thanks for the invitation; thanks for the warm welcome. It's good to be here at the City Club of Cleveland.

For almost a century, you have provided an important forum for debate and discussion on the issues of the day. And I have come to discuss a vital issue of the day, which is the safety and security of every American and our need to achieve victory in the war on terror.

I want to thank the mayor for joining us. Mr. Mayor, appreciate you being here. It must make you feel pretty good to get the "Most Livable City" award. [Laughter] I want to thank all the members of the City Club for graciously inviting me to come. I want to thank the students who are here. Thanks for your interest in your government. I look forward to giving you a speech and then answering questions, if you have any.

The central front on the war on terror is Iraq, and in the past few weeks, we've seen horrific images coming out of that country. We've seen a great house of worship, the Golden Mosque of Samarra, in ruins after a brutal terrorist attack. We have seen reprisal attacks by armed militia on Sunni mosques. We have seen car bombs take the lives of shoppers in a crowded market in Sadr City. We've seen the bodies of scores of Iraqi men brutally executed or beaten to death.

The enemies of a free Iraq attacked the Golden Mosque for a reason: They know they lack the military strength to challenge Iraqi and coalition forces in a direct battle, so they're trying to provoke a civil war. By attacking one of Shi'a Islam's holiest

sites, they hoped to incite violence that would drive Iraqis apart and stop their progress on the path to a free society.

The timing of the attack in Samarra is no accident. It comes at a moment when Iraq's elected leaders are working to form a unity government. Last December, 4 short months ago, more than 11 million people expressed their opinion. They said loud and clear at the ballot box that they desire a future of freedom and unity. And now it is time for the leaders to put aside their differences; reach out across political, religious, and sectarian lines; and form a unity government that will earn the trust and the confidence of all Iraqis. My administration, led by Ambassador Zal Khalilzad, is helping and will continue to help the Iraqis achieve this goal.

The situation on the ground remains tense. And in the face of continued reports about killings and reprisals, I understand how some Americans have had their confidence shaken. Others look at the violence they see each night on their television screens and they wonder how I can remain so optimistic about the prospects of success in Iraq. They wonder what I see that they don't. So today I'd like to share a concrete example of progress in Iraq that most Americans do not see every day in their newspapers and on their television screens. I'm going to tell you the story of a northern Iraqi city called Tall 'Afar, which was once a key base of operations for Al Qaida and is today a free city that gives reason for hope for a free Iraq.

Tall 'Afar is a city of more than 200,000 residents, roughly the population of Akron, Ohio. In many ways, Tall 'Afar is a microcosm of Iraq. It has dozens of tribes of different ethnicity and religion. Most of the city residents are Sunnis of Turkmen origin. Tall 'Afar sits just 35 miles from the Syrian

border. It was a strategic location for Al Qaida and their leader, Zarqawi.

Now, it's important to remember what Al Qaida has told us, their stated objectives. Their goal is to drive us out of Iraq so they can take the country over. Their goal is to overthrow moderate Muslim governments throughout the region. Their goal is to use Iraq as a base from which to launch attacks against America. To achieve this goal, they're recruiting terrorists from the Middle East to come into Iraq to infiltrate its cities and to sow violence and destruction so that no legitimate government can exercise control. And Tall 'Afar was a key way station for their operations in Iraq.

After we removed Saddam Hussein in April 2003, the terrorists began moving into the city. They sought to divide Tall 'Afar's many ethnic and religious groups and forged an alliance of convenience with those who benefited from Saddam's regime and others with their own grievances. They skillfully used propaganda to foment hostility toward the coalition and the new Iraqi Government. They exploited a weak economy to recruit young men to their cause. And by September 2004, the terrorists and insurgents had basically seized control of Tall 'Afar.

We recognized the situation was unacceptable, so we launched a military operation against them. After 3 days of heavy fighting, the terrorists and the insurgents fled the city. Our strategy at the time was to stay after the terrorists and keep them on the run. So coalition forces kept moving, kept pursuing the enemy and routing out the terrorists in other parts of Iraq.

Unfortunately, in 2004, the local security forces there in Tall 'Afar weren't able to maintain order, and so the terrorists and the insurgents eventually moved back into the town. Because the terrorists threatened to murder the families of Tall 'Afar's police, its members rarely ventured out from the headquarters in an old Ottoman fortress. The terrorists also took over local mosques,

forcing local imams out and insisting that the terrorist message of hatred and intolerance and violence be spread from the mosques. The same happened in Tall 'Afar's schools, where the terrorists eliminated real education and instead indoctrinated young men in their hateful ideology. By November of 2004, 2 months after our operation to clear the city, the terrorists had returned to continue their brutal campaign of intimidation.

The return of Al Qaida meant the innocent civilians in Tall 'Afar were in a difficult position. Just put yourself in the shoes of the citizens of Tall 'Afar as all this was happening. On the one side, you hear the coalition and Iraqi forces saying they're coming to protect you, but they'd already come in once and they had not stopped the terrorists from coming back. You worry that when the coalition goes after the terrorists, you or your family may be caught in the crossfire and your city might be destroyed. You don't trust the police. You badly want to believe the coalition forces really can help you out, but three decades of Saddam's brutal rule have taught you a lesson: Don't stick your neck out for anybody.

On the other side, you see the terrorists and the insurgents. You know they mean business. They control the only hospital in town. You see that the mayor and other political figures are collaborating with the terrorists. You see how the people who worked as interpreters for the coalition forces are beheaded. You see a popular city councilman gunned down in front of his horrified wife and children. You see a respected Sheikh and an Imam kidnaped and murdered. You see the terrorists deliberately firing mortars into playgrounds and soccer fields filled with children. You see communities becoming armed enclaves. If you are in a part of Tall 'Afar that was not considered friendly, you see that the terrorists cut off your basic services like electricity and water. You and your family feel besieged, and you see no way out.

The savagery of the terrorists and insurgents who controlled Tall 'Afar is really hard for Americans to imagine. They enforced their rule through fear and intimidation—and women and children were not spared. In one grim incident, the terrorists kidnaped a young boy from the hospital and killed him, and then they boobytrapped his body and placed him along a road where his family would see him. And when the boy's father came to retrieve his son's body, he was blown up. These weren't random acts of violence; these were deliberate and highly organized attempts to maintain control through intimidation. In Tall 'Afar, the terrorists had schools for kidnaping and beheading and laying IEDs. And they sent a clear message to the citizens of the city: Anyone who dares oppose their reign of terror will be murdered.

As they enforced their rule by targeting civilians, they also preyed upon adolescents craving affirmation. Our troops found one Iraqi teenager who was taken from his family by the terrorists. The terrorists routinely abused him and violated his dignity. The terrorists offered him a chance to prove his manhood by holding the legs of captives as they were beheaded. When our forces interviewed this boy, he told them that his greatest aspiration was to be promoted to the killer who would behead the bound captives. Al Qaida's idea of manhood may be fanatical and perverse, but it served two clear purposes: It helped provide recruits willing to commit any atrocity, and it enforced the rule of fear.

The result of this barbarity was a city where normal life had virtually ceased. Colonel H.R. McMaster of the 3d Armored Cavalry Regiment described it this way: "When you come into a place in the grip of Al Qaida, you see a ghost town. There are no children playing in the streets. Shops are closed and boarded. All construction is stopped. People stay inside, prisoners in their own homes." This is the brutal reality that Al Qaida wishes to impose on all the people of Iraq.

The ability of Al Qaida and its associates to retake Tall 'Afar was an example of something we saw elsewhere in Iraq. We recognized the problem, and we changed our strategy. Instead of coming in and removing the terrorists and then moving on, the Iraqi Government and the coalition adopted a new approach called clear, hold, and build. This new approach was made possible because of the significant gains made in training large numbers of highly capable Iraqi security forces. Under this new approach, Iraq and coalition—Iraqi and coalition forces would clear a city of the terrorists, leave well-trained Iraqi units behind to hold the city, and work with local leaders to build the economic and political infrastructure Iraqis need to live in freedom.

One of the first tests of this new approach was Tall 'Afar. In May 2005, Colonel McMaster's unit was given responsibility for the western part of Nineveh Province where Tall 'Afar is located, and 2 months later, Iraq's national Government announced that a major offensive to clear the city of the terrorists and insurgents would soon be launched. Iraqi and coalition forces first met with tribal leaders and local residents to listen to their grievances. One of the biggest complaints was the police force, which rarely ventured out of its headquarters. When it did venture, it was mostly to carry out sectarian reprisals. And so the national Government sent out new leaders to head the force. The new leaders set about getting rid of the bad elements and building a professional police force that all sides could have confidence in. We recognized it was important to listen to the representatives of Tall 'Afar's many ethnic and religious groups. It's an important part of helping to remove one of the leading sources of mistrust.

Next, Iraqi and Army coalition forces spent weeks preparing for what they knew would be a tough military offensive. They built an 8-foot high, 12-mile long dirt wall that ringed the city. This wall was designed

to cut off any escape for terrorists trying to evade security checkpoints. Iraqi and coalition forces also built temporary housing outside the city so that Tall 'Afar's people would have places to go when the fighting started. Before the assault on the city, Iraqi and coalition forces initiated a series of operations in surrounding towns to eliminate safe havens and make it harder for fleeing terrorists to hide. These steps took time, but as life returned to the outlying towns, these operations helped persuade the population of Tall 'Afar that Iraqi and coalition forces were on their side against a common enemy, the extremists who had taken control of their city and their lives.

Only after all these steps did Iraqi and coalition authorities launch Operation Restoring Rights to clear the city of the terrorists. Iraqi forces took the lead. The primary force was 10 Iraqi battalions, backed by 3 coalition battalions. Many Iraqi units conducted their own antiterrorist operations and controlled their own battle space, hunting for the enemy fighters and securing neighborhoods block by block. Throughout the operation, Iraqi and coalition forces were careful to hold their fire to let civilians pass safely out of the city. By focusing on securing the safety of Tall 'Afar's population, the Iraqi and coalition forces begin to win the trust of the city's residents, which is critical to defeating the terrorists who were hiding among them.

After about 2 weeks of intense activity, coalition and Iraqi forces had killed about 150 terrorists and captured 850 more. The operation uncovered weapons caches loaded with small arms ammunition and ski masks, RPG rockets, grenade and machine gun ammunition, and fuses and batteries for making IEDs. In one cache, we found an ax inscribed with the names of the victims the terrorists had beheaded. And the operation accomplished all this while protecting innocent civilians and inflicting minimal damage on the city.

After the main combat operations were over, Iraqi forces moved in to hold the

city. Iraqis' Government deployed more than 1,000 Iraqi Army soldiers and emergency police to keep order, and they were supported by a newly restored police force that would eventually grow to about 1,700 officers. As part of the new strategy, we embedded coalition forces with the Iraqi police and with the army units patrolling Tall 'Afar to work with their Iraqi counterparts and to help them become more capable and more professional. In the weeks and months that followed, the Iraqi police built stations throughout Tall 'Afar, and city residents began stepping forward to offer testimony against captured terrorists and inform soldiers about where the remaining terrorists were hiding.

Inside the old Ottoman fortress, a joint coordination center manned by Iraqi Army and Iraqi police and coalition forces answers the many phone calls that now come into a new tip line. As a result of the tips, when someone tries to plant an IED in Tall 'Afar, it's often reported and disabled before it can do any harm. The Iraqi forces patrolling the cities are effective because they know the people, they know the language, and they know the culture. And by turning control of these cities over to capable Iraqi troops and police, we give Iraqis confidence that they can determine their own destiny, and that frees up coalition forces to hunt the high-value targets like Zarqawi.

The recent elections show us how Iraqis respond when they know they're safe. Tall 'Afar is the largest city in western Nineveh Province. In the elections held in January 2005, of about 190,000 registered voters, only 32,000 people went to the polls. Only Fallujah had a lower participation rate. By the time of the October referendum on the Constitution and the December elections, Iraqi and coalition forces had secured Tall 'Afar and surrounding areas. The number of registered voters rose to about 204,000, and more than 175,000 turned out to vote in each election, more than 85 percent of the eligible voters in western

Nineveh Province. These citizens turned out because they were determined to have a say in their nation's future, and they cast their ballots at polling stations that were guarded and secured by fellow Iraqis.

One young teacher described the change this way: "What you see here is hope—the hope that Iraq will become safer and fairer. I feel very confident when I see so many people voting."

The confidence that has been restored to the people of Tall 'Afar is crucial to their efforts to rebuild their city. Immediately following the military operations, we helped the Iraqis set up humanitarian relief for the civilian population. We also set up a fund to reimburse innocent Iraqi families for damage done to their homes and businesses in the fight against the terrorists. The Iraqi Government pledged \$50 million to help reconstruct Tall 'Afar by paving roads and rebuilding hospitals and schools and by improving infrastructure from the electric grid to sewer and water systems. With their city now more secure, the people of Tall 'Afar are beginning to rebuild a better future for themselves and their children.

See, if you're a resident of Tall 'Afar today, this is what you're going to see: You see that the terrorist who once exercised brutal control over every aspect of your city has been killed or captured or driven out or put on the run. You see your children going to school and playing safely in the streets. You see the electricity and water service restored throughout the city. You see a police force that better reflects the ethnic and religious diversity of the communities they patrol. You see markets opening, and you hear the sound of construction equipment as buildings go up and homes are remade. In short, you see a city that is coming back to life.

The success of Tall 'Afar also shows how the three elements of our strategy in Iraq—political, security, and economic—depend on and reinforce one another. By working with local leaders to address community

grievances, Iraqi and coalition forces helped build the political support needed to make the military operation a success. The military success against the terrorists helped give the citizens of Tall 'Afar security, and this allowed them to vote in the elections and begin to rebuild their city. And the economic rebuilding that is beginning to take place is giving Tall 'Afar residents a real stake in the success of a free Iraq. And as all this happens, the terrorists, those who offer nothing but destruction and death, are becoming marginalized.

The strategy that worked so well in Tall 'Afar did not emerge overnight; it came only after much trial and error. It took time to understand and adjust to the brutality of the enemy in Iraq. Yet the strategy is working. And we know it's working because the people of Tall 'Afar are showing their gratitude for the good work that Americans have given on their behalf. A recent television report followed a guy named Captain Jesse Sellars on patrol and described him as a "pied piper," with crowds of Iraqi children happily chanting his name as he greets locals with the words "*Salaam alaikum*," which means "Peace be with you."

When the newswoman asks the local merchant what would have happened a few months earlier if he'd been seen talking with an American, his answer was clear: "They'd have cut off my head. They would have beheaded me." Like thousands of others in Tall 'Afar, this man knows the true meaning of liberation.

Recently, Senator Joe Biden said that America cannot want peace for Iraqis more than they want it for themselves. I agree with that. And the story of Tall 'Afar shows that when Iraqis can count on a basic level of safety and security, they can live together peacefully. We saw this in Tall 'Afar after the bombing of the Golden Mosque in Samarra. Unlike other parts of Iraq, in Tall 'Afar, the reaction was subdued, with few reports of sectarian violence. Actually, on the Friday after the attack, more than

1,000 demonstrators gathered in Tall 'Afar to protest the attack peacefully.

The terrorists have not given up in Tall 'Afar, and they may yet succeed in exploding bombs or provoking acts of sectarian violence. The people of the city still have many challenges to overcome, including old-age resentments that still create suspicion, an economy that needs to create jobs and opportunity for its young, and determined enemies who will continue trying to foment a civil war to move back in. But the people of Tall 'Afar have shown why spreading liberty and democracy is at the heart of our strategy to defeat the terrorists. The people of Tall 'Afar have shown that Iraqis do want peace and freedom, and no one should underestimate them.

I wish I could tell you that the progress made in Tall 'Afar is the same in every single part of Iraq. It's not. Though most of the country has remained relatively peaceful, in some parts of Iraq, the enemy is carrying out savage acts of violence, particularly in Baghdad and the surrounding areas of Baghdad. But the progress made in bringing more Iraqi security forces on line is helping to bring peace and stability to Iraqi cities. The example of Tall 'Afar gives me confidence in our strategy, because in this city, we see the outlines of the Iraq that we and the Iraqi people have been fighting for: a free and secure people who are getting back on their feet, who are participating in government and civic life, and who have become allies in the fight against the terrorists.

I believe that as Iraqis continue to see the benefits of liberty, they will gain confidence in their future, and they will work to ensure that common purpose trumps narrow sectarianism. And by standing with them in their hour of need, we're going to help the Iraqis build a strong democracy that will be an inspiration throughout the Middle East, a democracy that will be a partner in the global war against the terrorists.

The kind of progress that we and the Iraqi people are making in places like Tall 'Afar is not easy to capture in a short clip on the evening news. Footage of children playing or shops opening and people resuming their normal lives will never be as dramatic as the footage of an IED explosion or the destruction of a mosque or soldiers and civilians being killed or injured. The enemy understands this, and it explains their continued acts of violence in Iraq. Yet the progress we and the Iraqi people are making is also real. And those in a position to know best are the Iraqis themselves.

One of the most eloquent is the mayor of Tall 'Afar, a courageous Iraqi man named Najim. Mayor Najim arrived in the city in the midst of the Al Qaida occupation, and he knows exactly what our troops have helped accomplish. He calls our men and women in uniform "lionhearts." And in a letter to the troopers of the 3d Armored Cavalry Regiment, he spoke of a friendship sealed in blood and sacrifice, as Mayor Najim had this to say to the families of our fallen: "To the families of those who have given their holy blood for our land, we all bow to you in reverence and to the souls of your loved ones. Their sacrifice was not in vain. They are not dead but alive, and their souls are hovering around us every second of every minute. They will not be forgotten for giving their precious lives. They have sacrificed that which is most valuable. We see them in the smile of every child and in every flower growing in this land. Let America, their families, and the world be proud of their sacrifice for humanity and life." America is proud of that sacrifice, and we're proud to have allies like Mayor Najim on our side in the fight for freedom.

Yesterday we marked the third anniversary of the start of Operation Iraqi Freedom. At the time, there is much to—this time, there's much discussion in our country about the removal of Saddam Hussein from power and our remaining mission in

Iraq. The decision to remove Saddam Hussein was a difficult decision. The decision to remove Saddam Hussein was the right decision.

Before we acted, his regime was defying U.N. resolutions calling for it to disarm; it was violating cease-fire agreements, was firing on British and American pilots which were enforcing no-fly zones. Saddam Hussein was a leader who brutalized his people, had pursued and used weapons of mass destruction, and sponsored terrorism. Today, Saddam Hussein is no longer oppressing his people or threatening the world. He's being tried for his crimes by the free citizens of a free Iraq, and America and our allies are safer for it.

The last 3 years have tested our resolve. The fighting has been tough. The enemy we face has proved to be brutal and relentless. We're adapting our approach to reflect the hard realities on the ground. And the sacrifice being made by our young men and women who wear our uniform has been heartening and inspiring.

The terrorists who are setting off bombs in mosques and markets in Iraq share the same hateful ideology as the terrorists who attacked us on September the 11th, 2001, those who blew up the commuters in London and Madrid, and those who murdered tourists in Bali or workers in Riyadh or guests at a wedding in Amman, Jordan. In the war on terror, we face a global enemy, and if we were not fighting this enemy in Iraq, they would not be idle. They would be plotting and trying to kill Americans across the world and within our own borders. Against this enemy, there can be no compromise. So we will fight them in Iraq, we'll fight them across the world, and we will stay in the fight until the fight is won.

In the long run, the best way to defeat this enemy and to ensure the security of our own citizens is to spread the hope of freedom across the broader Middle East. We've seen freedom conquer evil and secure the peace before. In World War II, free nations came together to fight the ide-

ology of fascism, and freedom prevailed. And today, Germany and Japan are democracies, and they are allies in securing the peace. In the cold war, freedom defeated the ideology of communism and led to a democratic movement that freed the nations of Central and Eastern Europe from Soviet domination. And today, these nations are strong allies in the war on terror.

In the Middle East, freedom is once again contending with an ideology that seeks to sow anger and hatred and despair. And like fascism and communism before, the hateful ideologies that use terror will be defeated. Freedom will prevail in Iraq; freedom will prevail in the Middle East. And as the hope of freedom spreads to nations that have not known it, these countries will become allies in the cause of peace.

The security of our country is directly linked to the liberty of the Iraqi people, and we will settle for nothing less than victory. Victory will come when the terrorists and Saddamists can no longer threaten Iraq's democracy, when the Iraqi security forces can provide for the safety of their citizens on their own, and when Iraq is not a safe haven for terrorists to plot new attacks against our Nation. There will be more days of sacrifice and tough fighting before the victory is achieved. Yet by helping the Iraqis defeat the terrorists in their land, we bring greater security to our own.

As we make progress toward victory, Iraqis will continue to take more responsibility for their own security and fewer U.S. forces will be needed to complete the mission. But it's important for the Iraqis to hear this: The United States will not abandon Iraq. We will not leave that country to the terrorists who attacked America and want to attack us again. We will leave Iraq, but when we do, it will be from a position of strength, not weakness. Americans have never retreated in the face of thugs and assassins, and we will not begin now.

Thanks for listening. And I'll be glad to answer some questions, if you have any.

Yes, ma'am.

*War on Terror*

Q. Thank you for coming to Cleveland, Mr. President, and to the City Club. My question is that author and former Nixon administration official Kevin Phillips, in his latest book, "American Theocracy," discusses what has been called radical Christianity and its growing involvement into government and politics. He makes the point that members of your administration have reached out to prophetic Christians who see the war in Iraq and the rise of terrorism as signs of the apocalypse. Do you believe this, that the war in Iraq and the rise of terrorism are signs of the apocalypse? And if not, why not?

*The President.* The answer is—I haven't really thought of it that way. [*Laughter*] Here's how I think of it. First I've heard of that, by the way. I guess I'm more of a practical fellow. I vowed after September the 11th that I would do everything I could to protect the American people. And my attitude, of course, was affected by the attacks. I knew we were at a war. I knew that the enemy, obviously, had to be sophisticated and lethal to fly hijacked airplanes into facilities that would be killing thousands of people, innocent people doing nothing, just sitting there going to work.

I also knew this about this war on terror, that the farther we got away from September the 11th, the more likely it is people would seek comfort and not think about this global war on terror as a global war on terror. And that's good, by the way. It's hard to take risk if you're a small-business owner, for example, if you're worried that the next attack is going to come tomorrow. I understand that. But I also understand my most important job, the most important job of any President today—and I predict down the road—is to protect America.

And so I told the American people that we would find the terrorists and bring them to justice, and that we needed to defeat

them overseas so we didn't have to face them here at home. I also understood that the war on terror requires some clear doctrine. And one of the doctrines that I laid out was, "If you harbor a terrorist, you're equally as guilty as the terrorist." And the first time that doctrine was really challenged was in Afghanistan. I guess the Taliban didn't believe us—or me. And so we acted. Twenty-five million people are now free, and Afghanistan is no longer a safe haven for the terrorists.

And the other doctrine that's really important, and it's a change of attitude—it's going to require a change of attitude for a while—is that when you see a threat, you got to deal with it before it hurts you. Foreign policy used to be dictated by the fact we had two oceans protecting us. If we saw a threat, you could deal with it if you needed to, you think—or not. But we'd be safe.

My most important job is to protect you, is to protect the American people. Therefore, when we see threats, given the lesson of September the 11th, we got to deal with them. That does not mean militarily, necessarily. Obviously, the first option for a President has got to be the full use of diplomacy. That's what you're watching in Iran right now. I see a threat in Iran. I see it there—I'm kind of getting off subject here, not because I don't want to answer your question, but kind of—I guess that's what happens in Washington; we get a little long-winded. [*Laughter*]

But now that I'm on Iran, the threat to Iran, of course—[*laughter*—the threat from Iran is, of course, their stated objective to destroy our strong ally, Israel. That's a threat, a serious threat. It's a threat to world peace; it's a threat, in essence, to a strong alliance. I made it clear, and I'll be making it clear again, that we will use military might to protect our ally, Israel, and—[*applause*].

At any rate, our objective is to solve this issue diplomatically. And so our message must be a united message, a message from

not only the United States but also Great Britain and France and Germany as well as Russia, hopefully, and China, in order to say, loud and clear, to the Iranians, “This is unacceptable behavior. Your desire to have a nuclear weapon is unacceptable.”

And so to answer your question, I take a practical view of doing the job you want me to do—which is, how do we defeat an enemy that still wants to hurt us, and how do we deal with threats before they fully materialize; what do we do to protect us from harm? That’s my job. And that job came home on September the 11th, for me—loud and clear. And I think about my job of protecting you every day. Every single day of the Presidency, I’m concerned about the safety of the American people.

Yes, sir.

#### *Intelligence/War on Terror*

Q. Mr. President, at the beginning of your talk today, you mentioned that you understand why Americans have had their confidence shaken by the events in Iraq. And I’d like to ask you about events that occurred 3 years ago that might also explain why confidence has been shaken. Before we went to war in Iraq, we said there were three main reasons for going to war in Iraq: weapons of mass destruction, the claim that Iraq was sponsoring terrorists who had attacked us on 9/11, and that Iraq had purchased nuclear materials from Niger. All three of those turned out to be false. My question is, how do we restore confidence that Americans may have in their leaders and to be sure that the information they are getting now is correct?

*The President.* That’s a great question. First, just—if I might correct a misperception, I don’t think we ever said—at least I know I didn’t say that there was a direct connection between September the 11th and Saddam Hussein. We did say that he was a state sponsor of terror—by the way, not declared a state sponsor of terror by me but declared by other administrations. We also did say that Zarqawi, the

man who is now wreaking havoc and killing innocent life, was in Iraq. And so the “state sponsor of terror” was a declaration by a previous administration. But I don’t want to be argumentative, but I was very careful never to say that Saddam Hussein ordered the attacks on America.

Like you, I asked that very same question: Where did we go wrong on intelligence? The truth of the matter is, the whole world thought that Saddam Hussein had weapons of mass destruction. It wasn’t just my administration; it was the previous administration. It wasn’t just the previous administration. You might remember, sir, there was a Security Council vote of 15 to nothing that said to Saddam Hussein, “Disclose, disarm, or face serious consequences.” The basic premise was, “You’ve got weapons.” That’s what we thought.

When he didn’t disclose and when he didn’t disarm and when he deceived inspectors, it sent a very disconcerting message to me, whose job it is to protect the American people and to take threats before they fully materialize. My view is, he was given the choice of whether or not he would face reprisal. It was his decision to make. And so he chose to not disclose, not disarm, as far as everybody was concerned.

Your question, however, the part that’s really important, is, how do we regain credibility when it comes to intelligence? Obviously, the Iranian issue is a classic case, where we’ve got to make sure that when we speak, there’s credibility. And so, in other words, when the United States rallies a coalition, or any other country that had felt that Saddam Hussein had weapons of mass destruction is trying to rally a coalition in dealing with one of these nontransparent societies, what do we need to do to regain the trust of not only the American people but the world community?

And so what I did was I called together the Silberman-Robb Commission—Laurence Silberman and former Senator Chuck Robb—to take a full look at what went

right and what went wrong on the intelligence, and how do we structure an intelligence network that makes sure there's full debate among the analysts? How do we make sure that there's a full compilation of data points that can help decisionmakers like myself feel comfortable in the decision we make?

The war on terror requires the collection and analysis of good intelligence. This is a different kind of war. We're dealing with an enemy which hides in caves and plots and plans, an enemy which doesn't move in flotillas or battalions. And so therefore, the intelligence gathering is not only important to make a diplomatic case; it's really important to be able to find an enemy before they hurt us.

And so there was a reform process they went through, a full analysis of what—of how the operations worked, and out of that came the NDI, John Negroponte and Mike Hayden. And their job is to better collate and make sure that the intelligence gathering is seamless across a variety of gatherers and people that analyze. But the credibility of our country is essential—agree with you.

Yes, sure.

#### *Spread of Democracy/U.S. Armed Forces*

Q. Thank you, Mr. President. Welcome to Cleveland. It's an honor to have you here. I represent the Cleveland Hungarian Revolution 50th anniversary—[inaudible].

*The President.* That's good. I was there, by the way.

Q. Thank you all. [Laughter]

*The President.* At least for the celebration in Capitol with Tom Lantos. But go ahead.

Q. Mr. President, in the interest of free speech, if you'll indulge me, I have to give you a little context of my question. On this third anniversary of your—I consider—courageous initiative to bring freedom and basic human dignity to the Iraqi people, the image of the statue of the tyrant Saddam falling in Baghdad was very reminis-

cent of another statue, another tyrant, Josef Stalin, who fell in Budapest 50 years ago at the hands of many young Hungarian freedom fighters who were seeking to overthrow the tyranny of Soviet communism. Mr. President, just like our brave fighting men and women today and many Iraqi people, those young Hungarian patriots paid a very heavy price for a few days of freedom. But they lit the torch that eventually set the captive nations on the path to achieving liberty. And so, Mr. President, our Cleveland Hungarian community is planning a major event in Cleveland in October—[laughter].

*The President.* The guy seized the moment, you know. He's a—

Q. Right.

*The President.* I'm not sure what I'm doing in October. Put me down as a maybe. [Laughter] Sorry to interrupt.

Q. Just like you came for the Children's Games in 2004, we hope to have you here for that as well. Mr. President, just want to let you know, to win the war on terror, we feel that what was started in 1776 and continued in 1956 must be remembered in 2006.

*The President.* Thank you. How much more you got?

Q. I'm at the question now. Thanks for your indulgence.

*The President.* Okay, good. [Laughter]

Q. My basic question is, how can we help you, from the grassroots level, how can we help you promote the cause of freedom and liberty for all peoples throughout the world?

*The President.* I appreciate that. My main job is to make sure I make the case as plainly as I can why it's worth it. And I fully understand—I understand people being disheartened when they turn on their TV screen and see the loss of innocent life. We're compassionate people. Nobody likes beheadings and it—nobody—when innocent children get car bombed. So it's my job, sir, to make it clear about the connection between Iraq and the war on terror.

It's my job to remind people that progress is being made, in spite of the violence they see. It's my job to make it clear to the people the stakes.

I've spent time talking about what happens if we were to lose our nerve and Iraq would fall to Al Qaida. And the stakes are high. Look, I understand some don't view that we're in a war against the terrorists. I know that. And therefore, there's a sense that this—9/11 might have been an isolated incident. I just don't agree. And here's what I—here's the basis from which I make decisions. You heard one—is that 9/11 affected the way I think. I know these are like totalitarian fascists. They have an ideology; they have a desire to spread that ideology; and they're willing to use tactics to achieve their strategy.

And one of the tactics—I said early on in the speech the stated objectives of Al Qaida. This isn't my imagination of their strategy; this is what they have told us. And I presume you want the Commander in Chief to take the words of the enemy seriously. And they have told us they believe that we're soft and that with time, we'll leave, and they'll fill the vacuum. And they want to plan and plot and hurt Americans. That's what they have said. And I think it's really important we take their words very seriously.

And so I will continue making the case, sir, but the best way you can help is to support our troops. You find a family who's got a child in the United States military; tell them you appreciate them. Ask them if you can help them. You see somebody wearing a uniform, you walk up and say, "Thanks for serving the country."

Ours is a remarkable country where hundreds—[applause]—where we've got thousands of people signing up, volunteering for the United States military, many of them after September the 11th, knowing full well what they were signing up for. And what's amazing about our military is that retention rates are high; people are

still signing up. They want to defend the country. And for that, I am grateful.

But my job, sir, is to lay out the strategy and to connect the notion of liberty with peace. And that's hard for some. Sometimes there's a little bit of a—kind of a point of view that says, "Well, maybe certain people can't be free; maybe certain people can't self-govern." I strongly believe that liberty is universal. I believe in the natural rights of men and women. That was part of our founding. And if you believe in that, if you believe in the universality of freedom, then I believe those of us who are free have an obligation to help others become free.

Yes, ma'am. I'm tied up in October, but you know—[laughter].

#### *Iraq/Spread of Democracy*

Q. I'm a Marine mom.

*The President.* Okay, good. Thank you. Tell your—[applause].

Q. My son signed up after 9/11, and I didn't raise a terrorist. But let's face it; there's a continuum and a lack of clarity about who's violent and who's a terrorist. And we really do want to use the word "enemy" in a meaningful way. I think your speech has been very brave and very important and very clarifying. And in the interest of clarifying the purpose of our country to fight preventive war, which we know does involve violence, it's very important for us to understand what you're saying about your model community in Iraq. And my question is that you are killing the bad guys, and that's very important—that's the entire story of the battle. And we want to know who the bad guys are. Do you feel that Iraq is like a honeycomb, and that we can draw the Al Qaida there so we can stand and fight them there? I'm really asking for clarification.

*The President.* Sure. I think in Iraq there are three types of folks that are trying to stop democracy. First of all, I think it's very important for people to understand, one reason they're so violent and desperate

is because they're trying to stop a society based upon liberty. And you got to ask why. And the reason why is because it's the exact opposite of what they believe.

There are three types. One is Al Qaida, and Al Qaida is headed into there. Al Qaida understands the danger of democracy spreading. And so Zarqawi, this fellow named Zarqawi, is in charge of Al Qaida inside of Iraq, which recruits foreign fighters. And they headed into Iraq because they wanted to fight us. They wanted to stop democracy.

Secondly, there are Saddamists. These were the folks that really enjoyed a life of privilege. These are people that were top of the heap. They were—they represented a minority in the country, but they got all the deal—they got all the goods. And they don't like it—when Saddam was removed. And so they are trying to regroup.

And the third group are rejectionists. These are essentially Sunnis, as well, who really weren't sure as—about whether or not it meant—what it meant to have minority rights, whether or not they'd be protected. You can understand. They didn't—during Saddam, there was no such thing as minority rights. And so as a new society emerged, they were doubtful. And it is those folks that I believe will become marginalized as democracy advances. We're seeing the Sunnis change their mind about things. They barely voted in the first January 2005 elections; they participated overwhelmingly in the December 2005 elections. In just an 11-month period of time, there was a change of attitude to participate in the democratic process.

And the fundamental question that I know people ask is whether or not democracy, one, can take hold in Iraq, and two, will it change people's attitude about the future? And I believe it will. History has proven that democracies can change societies. The classic case I like to cite is Japan. Prime Minister Koizumi is one of my best buddies in the international arena, and when we sit down, we talk the peace. I

find it interesting that he is a peacemaker with me on a variety of issues, and yet my dad fought the Japanese. And I'm sure many of your relatives did as well.

Sixty years ago, Japan was the sworn enemy of the United States. Today, they're an ally in peace. And what took place? Well, what took place was a Japanese-style democracy. I can't say I promise you this, but I suspect that if somebody were standing up at the City Club of Cleveland talking about, "Don't worry; someday, Japan is going to be peaceful with the United States, and the 43d President is going to be designing how keep the peace"—they'd say, "Get him off the stage." [Laughter] "What's he thinking? They're the sworn enemy." And now they're our ally. So I have faith in the capacity of democracies to help change societies.

And again, I repeat to you, the debate—one of the debates is whether or not certain folks can self-govern. There's kind of a—"Maybe there are some in the world that aren't capable," say the skeptics. I strongly disagree with that. I believe there's—hold on a second—I believe there's a great desire for people to be free. I believe that. And history has proven that democracies don't war with each other. Again, I kind of glossed over this, but particularly for the students here, look at what happened in Europe over a 100-year period, from the early 1900s to today. Europe was at war twice, that cost Americans thousands of lives. Today, they don't war, because the systems of government changed. Democracies are at peace. Europe is whole, free, and at peace.

And that's an important history lesson for those of us—what I'm saying to you, ma'am, is that there is a battle for Iraq now, but it's just a part of the war on terror. It's a theater in the war on terror. Afghanistan was a theater. And we're in a global battle which requires strong alliances, good cooperation, and a constant reminder of the nature of this war. So today I met with the Secretary General of NATO.

And the first subject that came up was the war on terror and how much I appreciated NATO's contribution to helping Afghanistan succeed. But it is—the enemy in this case is disgruntled folks inside of Iraq coupled with an Al Qaida presence there that wants to harm Americans again.

I don't know—is your son still in the military?

Q. Yes, sir.

*The President.* Thanks. You tell him the Commander in Chief is proud of him. You tell him to listen to his mother too.

Yes. First, and then second; sir, you're next.

#### *National Economy/Education*

Q. On behalf of the students here from various high school student leadership programs, we thank you for speaking with us here at the City Club of Cleveland.

*The President.* Thanks—I hope it's a convenient excuse to skip school, but—[laughter].

Q. Mr. President, with the war in Iraq costing \$19,600 per U.S. household, how do you expect a generation of young people such as ourselves to afford college at a time like this, when we're paying for a war in Iraq?

*The President.* Yes. [Applause] Well—hold on for a minute. Hold on. We can do more than one thing at one time. And when you grow your economy, like we're growing our economy, there is an opportunity to not only protect ourselves but also to provide more Pell grants than any administration in our Nation's history and increase the student loan program. So if you take a look, I think you'll find that we're robust in helping—at the Federal level, helping people go to college. And it's essential you go to college. It's essential that there be a group of youngsters coming up that are well-educated so that we can maintain our economic leadership position in the world. We've got a robust program to do just that.

But it's also essential that we keep policies in place that keep the economy growing. This economy of ours is strong, and it's—it is, in my judgment, growing stronger. But it is possible to put policy in place that would weaken it, such as raising taxes. I think we got to keep taxes low to keep the economy moving. It's possible to put policy—[applause]—it's possible to put policy in place that would hurt this economy, like protectionist policy. It's possible to— if we keep suing our people trying to risk capital, it's conceivable we won't be the leader. That's why we need good tort reform. We got to make sure that—[applause].

My point to you is, economic growth enables us to do more than one thing. And that's what we'll continue to do.

Yes, sir. Right. No, no, hold on for a minute. Hold on for a minute.

#### *India/Pakistan*

Q. Thank you, Mr. President.

*The President.* Yes, sir.

Q. Every chief needs Indian on their side. [Laughter]

*The President.* How long were you working on that for? [Laughter]

Q. I applaud your vision and foresight to sign a long-term treaty with India. But, sir, I am confused that, on one side, you're helping democratic countries to flourish and establish democracy in the world market, whereas how do we deal with country who has known to harbor terrorism, like Pakistan?

*The President.* I thought you might be heading there. [Laughter] I, obviously, had a trip recently to India and Pakistan and Afghanistan and was able to say in India and in Pakistan both, "It is a positive development for America to be a friend of Pakistan. It's a positive development for India for America to be a friend of Pakistan, and it's a positive development for Pakistan for America to be a friend of India. It's an important accomplishment in order to help keep the peace."

I don't view our relationships with Pakistan and India as a zero-sum relationship. As a matter of fact, I view our relationships with both countries as different sets of issues and the need to nurture both relationships to achieve common objectives. And we're in a position to be able to do so now.

President Musharraf is a friend to the United States. President Musharraf understands that he must help rout out Al Qaida, which is hiding in parts of his country. President Musharraf was reminded of that the four times Al Qaida tried to kill him. He is a—and so I was able to have a very good discussion with the President about our mutual concerns in the war on terror. And it's important that that dialog go on. It's a very important part of our—me doing my most important job, which is to protect you.

He also said in a press conference that he understands that democracy is important. So one of the conversations that I had with him in private—I feel comfortable saying this in public because he himself brought it up—was the need for democracy to advance in Pakistan. History has showed us that democracies don't war.

What's interesting about the relationship between Pakistan and India—and I'll get to India in a minute. I want to say something on India, so thanks for bringing it up—is that when we first—when I first got into office, I remember asking Colin Powell to go get in between India and Pakistan. There was a lot of noise—you might remember, I think it was '01 or '02, where there was deep concerns about—I think '01—deep concerns about a potential nuclear conflict. And so there was shuttle diplomacy, back and forth between India and Pakistan, including not only our—Colin but also Jack Straw, the Foreign Minister of Great Britain. And you never know how dangerous one of these situations can become until it's too late, but nevertheless, we took it very seriously.

And today, you don't see the need for the United States shuffling or Britain shuffling diplomats back and forth, to walk back—walk the two countries back from a potential conflict which would be incredibly damaging for the world. That's positive. In other words, it's—and I give Prime Minister—President Musharraf credit, and I give the Indian Prime Ministers—both Vajpayee and the current Prime Minister—credit for—Prime Minister Singh—for envisioning what is possible, how is it possible to develop a relationship that's a peaceful relationship with our neighbor.

And, sir, I think it's very important for the United States to stay engaged with Pakistan and encourage them. We're trying to negotiate an investment treaty with them, with the hopes of being able to eventually develop more trade with Pakistan, in the belief that trade helps nations develop stability and prosperity is achieved through trade.

India—the visit there was a very important visit. And I want to describe to you right quick, so be careful on the questions. You're going to have to—you'll leave your hand up for a while. I agreed with the Indian Government that India ought to be encouraged to develop a nuclear power industry. And that's a controversial decision on my part, because it basically flies in the face of old cold war attitudes as well as arm control thinking.

Let me just share the logic with you. First of all, in that we live in a global economy, there is a demand for fossil fuels—an increase in the demand for fossil fuels in one part of the world affects the price of gasoline in our world. We're connected. Whether people like it or not, there is an interconnectedness today that affects our economy. Somebody's decision overseas affects whether or not people are going to be able to work here in America. So I think it makes sense for the United States, as we ourselves become less addicted to oil and fossil fuels, which I'm serious about, encourage others to do so

as well. And one good way to do so and to protect the environment at the same time is to encourage the use of safe nuclear power. It's in our interests, our economic interests that we work an agreement with India to encourage their expansion of civilian nuclear power.

Secondly, unlike Iran, for example, India is willing to join the IAEA. They want to be a part of the global agreements around nuclear power. Thirdly, India has got a record of nonproliferation. They've had 30 years of not proliferating. Fourthly, India is a democracy and a transparent society. You find out a lot about India because there's a free press. There is openness. People run for office and are held to account. There's committee hearings. It's an open process.

I feel very comfortable recommending to the United States Congress that it's—that they ought to agree with the agreement that Prime Minister Singh and I have reached. It's important—it's important—it's also an important relationship. For too long, America and India were not partners in peace. We didn't deal with each other because of the cold war. And now is the time to set the cold war behind us. It's over, folks. It no longer is. And let's think about the next 30 years.

And so my hope is someday, somebody will be asking a question, "Aren't you glad old George W. thought about entering into a strategic relationship with India?" And I believe it's in our country's interest that we have such a relationship and, at the same time, maintain close relations with Pakistan. And it's possible to do so. And we are doing so.

Yes, sir.

How long do you usually ask questions here for? [*Laughter*]

### *Terrorist Surveillance Program*

Q. Mr. President—

*The President.* The guy is supposed to smile over there. Yes.

Q. Another theater in the war on terror is domestic. And there's a controversy around warrantless wiretaps domestically.

*The President.* Yes.

Q. Could you explain why living within the legislation that allowed your administration to get a warrant from a secret court within 72 hours after putting in a wiretap wouldn't be just as effective?

*The President.* No, I appreciate the question. He's talking about the terrorist surveillance program that was—created quite a kerfuffle in the press, and I owe an explanation to you. Because our people—first of all, after September the 11th, I spoke to a variety of folks on the frontline of protecting us, and I said, "Is there anything more we could be doing, given the current laws?" And General Mike Hayden of the NSA said, "There is." The FISA law—he's referring to the FISA law, I believe—is—was designed for a previous period and is slow and cumbersome in being able to do what Mike Hayden thinks is necessarily—called hot pursuit.

And so he designed a program that will enable us to listen from a known Al Qaida or suspected Al Qaida person and/or affiliate, from making any phone call outside the United States in, or inside the United States out—with the idea of being able to pick up, quickly, information for which to be able to respond in this environment that we're in. I was concerned about the legality of the program, and so I asked lawyers—which you got plenty of them in Washington—[*laughter*]—to determine whether or not I could do this legally. And they came back and said yes. That's part of the debate which you're beginning to see.

I fully understood that Congress needed to be briefed. And so I had Hayden and others brief Members of the Congress, both Republicans and Democrats, House Members and Senators, about the program. The program is under constant review. I sign a reauthorization every—I'm not exactly sure—45 days, say. It's something like that.

In other words, it's constantly being reviewed. There's an IG that is very active at the NSA to make sure that the program stays within the bounds that it was designed.

I fully understand people's concerns about it, but ours is a town, by the way, in Washington, where when you don't connect the dots, you're held up to Congress, and when you do connect the dots, you're held up to Congress. I believe what I'm doing is constitutional, and I know it's necessary. And so we're going to keep doing it.

### *Domestic Policy*

Q. Thank you, Mr. President. Your comments today about Iraq have been, for me, very enlightening. And I greatly appreciate the level of clarity that you've provided. But my question is about domestic policy. Today, in our neighborhoods, there are terrorists. Children cannot play in some of our neighborhoods. Today, we've got—when you see post-Katrina, our country was startled at some of the images around poverty in some of our cities. Can you be as clear about your domestic policy, to address those kinds of things?

*The President.* Absolutely. Thanks. Let me start with education, which I view as a vital part of providing hope and eradicating poverty. I was disturbed, when I was the Governor of Texas, disturbed about a system that just moved kids through. There was kind of a process-oriented world, that said, "Okay, if you're 10, you're supposed to be here; you're 12, you're supposed to be here," and on through. It was like—without any sense of accountability. If you believe education is one of the cornerstones to a hopeful world, then it seems like to me, it makes sense that we've got to have a system that measures so we know whether or not people are getting educated.

So when I got to Washington, I proposed what's called No Child Left Behind, which passed with both Republican and Democrat votes. And the whole spirit of No Child

Left Behind is this: It says in return for increased Federal money, for particularly Title I students, we expect you to measure grades three through eight. We want to see strong accountability because we believe every child can learn, and we expect every school to teach. That's the whole spirit of the No Child Left Behind Act.

If you—it turns out that if you can solve problems early, if you can find out whether or not a curriculum is working or not early on in a child's career, we can correct the problems. And so part of the No Child Left Behind Act is, when you measure and find somebody not up to—measuring to par, not meeting standards, there's extra money called special service money available in the No Child Left Behind Act to make sure that there's early tutoring, to make sure that children are not just simply shuffled through, to make sure an accountability system is used properly—which is to diagnose and solve problems.

The No Child Left Behind Act is beginning to work. You know why? Because we measure. There was an achievement gap in America; that's bad for the country. It's an achievement gap between the difference between some Anglo children and some African American children, particularly inner city. That's beginning to close.

We need to apply the same rigor of No Child Left Behind, particularly in middle [school]\* age, for math and science to make sure that we're able to compete for the jobs of the 21st century.

And so step one, in my judgment, to address exactly what you described as true—kind of this enlightenment that, uh-oh, there are parts of our society in which people are, in fact, being completely left behind—is to make sure the education system is rigorously based upon accountability. And when we find the status quo is unacceptable, have the political courage to change, demand high standards and change.

---

\* White House correction.

And the cornerstone of demanding change in a system that tends to protect itself is measurement. And I realize there are people in my party who want to undo No Child Left Behind. And I'm sure there are in the other party. But my judgment is, you can't achieve educational excellence unless you measure and correct problems.

Now, there's another aspect to providing a hopeful society, and that is to encourage ownership. One of the interesting things about Katrina, as you well know, is many of the people displaced did not own their own homes, that they were renters. One of the goals that I set for my administration through a variety of pretty simple programs—like helping with downpayment and education programs, recognizing that interest rates drive most of the housing purchases—was to encourage minority homeownership. It's now at an alltime high.

I believe that the idea of empowering our faith-based institutions—government can help, but government sometimes can't find—well, it just doesn't pass—it's just not a loving organization. And so I believe strongly—I believe strongly in empowering faith-based and community-based programs all throughout America to help achieve certain objectives. Mentoring, for example, mentoring of children in prisoners—whose mother or dad may be in prison is an initiative I started. Drug rehabilitation, giving those who are eligible for drug money a voucher, money themselves, a scrip so they can redeem it at a program that they choose, not that the government assigns them to—in other words, there's a variety of social service programs aimed at lifting people up.

And so I—look, many Americans kind of were—didn't really realize what's taking place in parts of the country that you've described. And Katrina was a wake-up call for many Americans. And now there's an opportunity, in my judgment, to take—well, for people to take notice and put in policy—put policies in place that help those who need help, like community health cen-

ters, or—for health care—or expand educational opportunities through rigorous accountability systems, and, I repeat, demanding change where change is due—needed, and promoting ownership.

Thanks. Good question.

#### *Support for the President*

*Q.* —is no shrinking violet. First of all, I want to commend you on your presentation today. And I tell you I'm 100 percent behind your fight against terrorism. Also—

*The President.* Why don't you just leave it at that?

*Q.* Oh, no. Oh, no. [*Laughter*]

I tell you, one of the reasons I'm qualified to say that; you probably heard of Ernie Shavers, the boxer. I trained Ernie Shavers. He fought Muhammad Ali, and Muhammad Ali say he hit him so hard, he woke up his ancestors in Africa. [*Laughter*] So I know a little bit about boxing and things. But I know in boxing—and I taught over 3,300 children over 13 years. Two of them fought for world championships, including Ernie Shavers. I taught them that the best defense is a good offense. That's what you're doing over there now. And I commend you.

My mom and daddy had moved from Alabama to Ohio in the mid-forties. They were the parents of five sons. We all served in the military. I served 8 years, and we all served honorably. So I am a marine. I've also been a Boy Scout and a firefighter. To lead in, the young person spoke about domestic policy. This Wednesday coming, I'll be making my sixth trip to the New Orleans/Mississippi area as a contractor. I'm president of the Ohio Minority Contracting Association. I want to publicly thank Senator Voinovich right now for directing me to Senator Trent Lott, who has directed me to Haley Barbour, the Governor down there, who opened up opportunities.

We got people doing debris removal, putting on roofs. And I got a \$600,000 proposal to feed 22,000 workers down there

who have been underfed. You've been down there. I have too. People are working 14 and 16 hours a day. And I've never been so proud to be an American, to see the outpouring of people out there helping one another, particularly the faith-based community. So I thank you, appreciate you, and look forward to putting this proposal in your hand. Thank you.

*The President.* Well, let's see, I got an invitation and a proposal. [Laughter]

Yes, sir. Anybody work here in this town? [Laughter]

Q. Sorry about that. Mr. President, I just finished Ambassador Paul Bremer's book, and one of the things I just wanted to say to you and to Ambassador Bremer is, thank you for protecting us.

*The President.* Thanks.

You're next.

### *Immigration Reform*

Q. Okay, my question is—

*The President.* We have dueling microphones here. Keep firing away.

Q. Okay. My question is, since 9/11, one of the key things that we need is immigration reform, including comprehensive immigration reform that is right now in front of Senator Specter's committee in the Judiciary. There are two principles I'm hoping that you would support: One, the good people, the engineers, the Ph.D.s, the doctors, the nurses, the people in the system who have followed the rules, will go to the head of the line in any form of immigration reform. That's title IV of the bill.

Secondly, the illegals who have not followed the rules—I understand the debate, I appreciate your statements about immigration reform, but isn't it better that we know who they are, have them finger-printed and photographed, and allow some form of 245(i) to come back so—

*The President.* Tell people what that is. Tell people what 245(i) is.

Q. Okay—245(i) is a partial amnesty program that expired back in 2001, in fact, was going to be voted on on 9/11, unfortu-

nately. But those—it was a small segment of the illegal population where they would pay the \$1,000 fine and, for example, coming in illegally, then marrying an American citizen, could somehow legalize their status.

*The President.* Okay. Let me give you some broad principles on immigration reform as I see them. First of all, we do need to know who's coming into our country and whether they're coming in illegally or not legally—legally or not legally, and whether they're coming in or going out. And part of reforms after September the 11th was a better system of finding out who's coming here.

Secondly, we have a big border between Texas and Mexico that's really hard to enforce. We got to do everything we can to enforce the border, particularly in the South. I mean, it's the place where people are pouring across in order to find work. We have a situation in our own neighborhood where there are ways—disparities are huge, and there are jobs in America that people won't do. That's just a fact. I met an onion grower today at the airport when I arrived, and he said, "You got to help me find people that will pull onions," or pluck them or whatever you do with them, you know. [Laughter] There are jobs that just simply aren't getting done because Americans won't do them. And yet if you're making 50 cents an hour in Mexico, and you can make a lot more in America, and you got mouths to feed, you're going to come and try to find the work. It's a big border, of which—across which people are coming to provide a living for their families.

Step one of any immigration policy is to enforce our border in practical ways. We are spending additional resources to be able to use different detection devices, unmanned UAVs, to help—and expand Border Patrol, by the way, expand the number of agents on the border, to make sure we're getting them the tools necessary to stop people from coming across in the first place.

Secondly, part of the issue we've had in the past is, we've had—for lack of a better word, catch-and-release. The Border Patrol would find people sneaking in; they would then hold them for a period of time; they'd say, "Come back and check in with us 45 days later," and then they wouldn't check in 45 days later. And they would disappear in society to do the work that some Americans will not do.

And so we're changing catch-and-release. We're particularly focusing on those from Central America who are coming across Mexico's southern border, ending up in our own—it's a long answer, because it's an important question: How do we protect our borders and, at the same time, be a humane society?

Anyway, step one, focus on enforcing border; when we find people, send them home, so that the work of our Border Patrol is productive work.

Secondly, it seems like to me that part of having a border security program is to say to people who are hiring people here illegally, we're going to hold you to account. The problem is, our employers don't know whether they're hiring people illegally because there's a whole forgery industry around people being smuggled into the United States. There's a smuggling industry and a forging industry. And it's hard to ask our employers, the onion guy out there, whether or not he's got—whether or not the documents that he's being shown which look real are real.

And so here's a better proposal than what we're doing today, which is to say, if you're going to come to do a job that an American won't do, you ought to be given a fool-proof card that says you can come for a limited period of time and do work in a job an American won't do. That's border security, because it means that people will be willing to come in legally with a card to do work on a limited basis and then go home. And so the agents won't be chasing people being smuggled in 18-wheelers or across the Arizona desert.

They'll be able to focus on drugs and terrorists and guns.

The fundamental question that he is referring to is, what do we do about—there's two questions—one, should we have amnesty? And the answer, in my judgment, is, no, we shouldn't have amnesty. In my judgment, granting amnesty, automatic citizenship—that's what amnesty means—would cause another 11 million people, or however many are here, to come in the hopes of becoming a United States citizen. We shouldn't have amnesty. We ought to have a program that says, you get in line like everybody else gets in line; and that if the Congress feels like there needs to be higher quotas on certain nationalities, raise the quotas. But don't let people get in front of the line for somebody who has been playing by the rules.

And so—anyway, that's my ideas on good immigration policy. Obviously, there's going to be some questions we have to answer: What about the person who's been here since 1987—'86 was the last attempt at coming up with immigration reform—been here for a long period of time? They've raised a family here. And my only advice for the Congress and for people in the debate is, understand what made America. We're a land of immigrants. This guy is from Hungary, you know. And we got to treat people fairly. We've got to have a system of law that is respectful for people.

I mean, the idea of having a program that causes people to get stuck in the back of 18-wheelers, to risk their lives to sneak into America to do work that some people won't do, is just not American, in my judgment. And so I would hope the debate would be civil and uphold the honor of this country. And remember, we've been through these periods before, where the immigration debate can get harsh. And it should not be harsh. And I hope—my call for people is to be rational about the debate and thoughtful about what words can mean during this debate.

Final question, sir. You're paying me a lot of money, and I got to go back to work. [Laughter]

Iran

Q. My name is Jose Feliciano.

The President. No.

Q. Yes, it is. [Laughter]

The President. Yes—it's like the time I called a guy and said, "Hey, this is George Bush calling." He said, "Come on, quit kidding me, man." [Laughter] Que, Jose? Que quiere decir?

Q. [Inaudible] [Laughter]

The President. That's right.

Q. And, actually, I'm chairman of the Hispanic Roundtable—I was going to ask you that same question. However, I'm going to ask you a simple one now, and this relates to preemptive self-defense. How is it, Mr. President, that Iran today is really different from what Iraq was 3 years ago?

The President. Well, first of all, there were 16 Security Council resolutions. The world had spoken with a clear voice, not one time; I think 16—is that right, Stretch [Richard Keil, Bloomberg News], 16? I'm asking a member of the press corps. I like to, like, reverse roles sometimes. [Laughter]. Really checking to see if they're paying attention, you know. [Laughter] Halfway through, they kind of start dozing off. [Laughter]

But the world had spoken by a lot against Saddam Hussein. There was a diplomatic process. You might remember that the Congress, I think in '98, voted a resolution that there should be regime change. My predecessor looked at the same intelligence I looked at and saw a threat. But the difference—one difference was that in Iraq, there was a series of unanimous resolutions that basically held the Iraqi Government to account, which Saddam Hussein ignored. It was, like, resolution after resolution after resolution.

The Iranian issue is just beginning to play out. And my hope, of course, is, as I said earlier, that we're able to solve this

issue diplomatically. It's very important that the United States work with our allies—in this case, the lead group of negotiators has been Germany, France, and Great Britain—so that the Iranians hear a unified voice.

Now, the voice sometimes—I mean, if you're one—you're negotiators, probably got some lawyers here who are good negotiators—it's easier to negotiate one person versus six. I'm not suggesting you're a lawyer, you know, but I kind of had the feeling you might have been. [Laughter]

And so it's very important for us to continue to make sure that they hear one voice. Nontransparent societies have got an advantage over those of us who are transparent, where every move is in the press, every opinion is aired out. And so it's very important for us to work to make sure that they hear the one voice. Now, you might have read in the newspapers where our Ambassador in Iraq, Zal, has reached out to the Iranians to make it clear to them about our concerns about involvement in Iraq—Iranian involvement in Iraq. It's very important, however for the Iranians to understand that the discussion is limited to Iraq. We feel like they need to know our position.

Ultimately, Iraq-Iranian relations will be negotiated between the Iraqi Government and the Iranian Government. Ours is just—we're using this as an opportunity to make it clear about our concerns of interference within a process that is—a democratic process that is evolving. Our position is still very clearly that the Iraqis—Iranians should not have a program to build a nuclear weapon, and/or the capacity, the knowledge necessary to build something which could lead to a nuclear weapon. And we're working closely with our allies and friends to continue to make that clear to them.

So the issues are different. The issues are different stages of diplomacy.

Listen, I've enjoyed this. I hope you have as well. God bless.

NOTE: The President spoke at 12:25 p.m. at the Renaissance Cleveland Hotel. In his remarks, he referred to Sanjiv K. Kapur, president, City Club of Cleveland; Mayor Frank G. Jackson of Cleveland, OH; senior Al Qaida associate Abu Musab Al Zarqawi; former President Saddam Hussein of Iraq; Prime Minister Junichiro Koizumi of Japan; Secretary General Jakob Gijsbert “Jaap” de

Hoop Scheffer of the North Atlantic Treaty Organization; President Pervez Musharraf of Pakistan; former Secretary of State Colin L. Powell; and former Prime Minister Atal Bihari Vajpayee and Prime Minister Manmohan Singh of India. The Office of the Press Secretary also released a Spanish language transcript of these remarks.

## Message on the Observance of Nowruz *March 20, 2006*

I send greetings to those celebrating Nowruz.

Nowruz is an ancient celebration marking the arrival of the New Year. For millions of people around the world who trace their heritage to Iran, Iraq, Afghanistan, Turkey, Pakistan, India, and Central Asia, Nowruz is a celebration of life and an opportunity to express joy and happiness through visiting family and friends, exchanging gifts, and enjoying the beauty of nature.

Our Nation is blessed by the traditions and contributions of Americans of many different backgrounds. Our diversity has made us stronger and better, and Laura and I send warm regards to all Americans celebrating Nowruz.

Best wishes for peace and prosperity in the New Year.

NOTE: An original was not available for verification of the content of this message.

## The President’s News Conference *March 21, 2006*

*The President.* Good morning. Yesterday I delivered a—the second in a series of speeches on the situation in Iraq. I spoke about the violence that the Iraqi people had faced since last month’s bombing of the Golden Mosque in Samarra. I also said that for every act of violence there is encouraging progress in Iraq that’s hard to capture on the evening news.

Yesterday I spoke about an important example of the gains we and the Iraqis have made, and that is in the northern city of Tall ‘Afar. The city was once under Al Qaida control, and thanks to coalition and Iraqi forces, the terrorists have now been driven out of that city. Iraqi security forces

are maintaining law and order. We see the outlines of a free and secure Iraq that we and the Iraqi people have been fighting for. As we mark the third anniversary of the launch of Operation Iraqi Freedom, the success we’re seeing in Tall ‘Afar gives me confidence in the future of Iraq.

Terrorists haven’t given up; they’re tough-minded; they like to kill. There’s going to be more tough fighting ahead. No question that sectarian violence must be confronted by the Iraqi Government and a better trained police force. Yet we’re making progress, and that’s important for the American people to understand.

We're making progress because of—we've got a strategy for victory, and we're making progress because the men and women of the United States military are showing magnificent courage, and they're making important sacrifices that have brought Iraq to an historic moment—the opportunity to build a democracy that reflects its country's diversity, that serves its people, and is an active partner in the fight against the terrorists.

Now Iraq's leaders must take advantage of the opportunity. I was encouraged by the announcement Sunday the Iraqi leaders—that the Iraqi leaders made—are making progress toward a council that gives each of the country's main political factions a voice in making security and economic policies. It's an indicator that Iraq's leaders understand the importance of a government of national unity. Our Ambassador to Iraq, Zal Khalilzad, is very much involved in the process and will encourage the Iraqi leaders to put aside their differences, reach out across sectarian lines, and form a unity government.

Here at home, I'm also encouraged by the strength of our economy. Last year, our economy grew at a healthy 3.5 percent. Over the past 2½ years, the economy has added nearly 5 million new jobs; that's more than Japan and the 25 nations of the European Union combined. The national unemployment rate is 4.8 percent; that's lower than the average rate of the 1970s, the 1980s, and the 1990s. Productivity is strong; inflation is contained. Household net worth is at an alltime high. Real after-tax income is up more than 8 percent per person since the beginning of 2001. The growing economy is a result of the hard work of the American people and good policies here in Washington.

I believe America prospers when people are allowed to keep more of what they earn so they can make their own decisions about how to spend, save, and invest. So I'm going to continue to work with Congress to make the tax relief permanent,

continue to work with Congress to restrain Federal spending, continue to work with Congress to achieve the goal of cutting the deficit in half by 2009.

We cannot take our growing economy for granted, and so I look forward to working with the Congress to make sure we invest in basic research and promote math and science education. I'm going to work with Congress to reduce our dependence on foreign oil. I know it came as a surprise to some of you that I would stand up in front of the Congress and say, "We got a problem; we're addicted to oil." But it is a problem. And I look forward to working with both Republicans and Democrats to advance an agenda that will make us less dependent on foreign oil, an agenda that includes hybrid cars, advanced ethanol fuels, and hydrogen cells. I'm going to look forward to working with Congress to make sure health care is affordable and available.

We're going to work with Congress to make sure we meet our commitments to our fellow citizens who are affected by Katrina. I appreciate the step that the House of Representatives took last week on passing a supplemental appropriations bill that funds gulf coast reconstruction and, of course, supports our men and women in uniform. I look forward to working with the Senate to get that supplemental bill passed and to my desk.

Now I'll be glad to take any questions you have, starting with AP person [Terence Hunt, Associated Press]. *[Laughter]*

#### *Progress in Iraq*

*Q.* Thank you, Mr. President.

*The President.* That would be you, Terry.

*Q.* Iraq's Interim Prime Minister said Sunday that violence is killing an average of 50 to 60 people a day and that "if this is not civil war, then God knows what civil war is." Do you agree with Mr. Allawi that Iraq has fallen into civil war?

*The President.* I do not. There are other voices coming out of Iraq, by the way, other than Mr. Allawi—who I know, by

the way, and like; he's a good fellow. President Talabani has spoken. General Casey, the other day, was quite eloquent on the subject—Zal Khalilzad, who I talk to quite frequently. Listen, we all recognize that there is violence, that there's sectarian violence. But the way I look at the situation is that the Iraqis took a look and decided not to go to civil war.

A couple of indicators are that the army didn't bust up into sectarian divisions. The army stayed united. And as General Casey pointed out, they did, arguably, a good job in helping to make sure the country stayed united.

Secondly, I was pleased to see religious leaders stand up. Ayatollah Sistani, for example, was very clear in his denunciation of violence and the need for the country to remain united. The political leaders who represent different factions of the Iraqi society have committed themselves to moving forward on a unity government.

No question that the enemy has tried to spread sectarian violence; they use violence as a tool to do that. They're willing to kill innocent people. The reports of bound Sunnis that were executed are horrific. And it's obviously something we're going to have to deal with. And more importantly, the Iraqis are going to have to deal with it.

But I see progress. I've heard people say, "Oh, he's just kind of optimistic for the sake of optimism." Well, look, I believe we're going to succeed. And I understand how tough it is—don't get me wrong—I mean, you make it abundantly clear how tough it is. I hear it from our troops; I read the reports every night. But I believe the Iraqis—this is a moment where the Iraqis had a chance to fall apart, and they didn't. And that's a positive development.

Steve [Steve Holland, Reuters].

### Iran

Q. Thank you. You describe Iran as a threat, yet, you're close to opening talks with them about Iraq. What would be the

objective in these talks if they are not negotiations? And is there a risk of getting drawn into the nuclear issue?

*The President.* Thanks for asking that question. A couple of months ago, I gave Zal, our Ambassador in Iraq, permission to explain to the Iraqi—Iranians what we didn't like about their involvement in Iraq. I thought it was important for them to hear firsthand, other than through press accounts. He asked whether or not it made sense for him to be able to talk to a representative in Baghdad. I said, "Absolutely. You make it clear to them that attempts to spread sectarian violence, or to maybe move parts that could be used for IEDs is unacceptable to the United States."

It is very important for the Iranians to understand that any relationship between Iraq and Iran will be negotiated between those two countries. Iraq is a sovereign government. They have a foreign policy. And when they get their unity government stepped up, they will be in charge of negotiating with the Iranians their foreign policy arrangement. And so this is a way for us to make it clear to them that—about what's right or wrong in their activities inside of Iraq.

Secondly, our negotiations with Iran on the nuclear weapons will be led by the EU-3. And that's important because the Iranians must hear there's a unified voice about—that says that they shall not have a capacity to make a nuclear weapon and/or the knowledge as to how to make a nuclear weapon, for the sake of security of the world.

It's important for our citizens to understand that we have got to deal with this issue diplomatically now. And the reason why is because if the Iranians were to have a nuclear weapon, they could blackmail the world. If the Iranians were to have a nuclear weapon, they could proliferate. This is a country that's walking away from international accords; they're not heading toward the international accords; they're not welcoming the international inspections—

or safeguards—safeguard measures that they had agreed to.

And so our policy for the Iranians, in terms of the nuclear program, is to continue to work with the EU-3, as well as Russia and China. Later on this week, there's going to be a P-5—that's a diplomatic sloganeering for the permanent members of the Security Council plus Germany—and working together to make sure that the message remains unified and concerted.

If you're a nontransparent society, you've got a negotiating advantage over six parties, because all you have to do is kind of try to find a—the weakest link in the negotiating team. And so our job is to make sure that this international will remain strong and united, so that we can solve this issue diplomatically.

Helen [Helen Thomas, Hearst Newspapers]. After that brilliant performance at the Gridiron, I am—

#### War on Terror

*Q.* You're going to be sorry. [Laughter]

*The President.* Well, then, let me take it back. [Laughter]

*Q.* I'd like to ask you, Mr. President, your decision to invade Iraq has caused the deaths of thousands of Americans and Iraqis, wounds of Americans and Iraqis for a lifetime. Every reason given, publicly at least, has turned out not to be true. My question is, why did you really want to go to war? From the moment you stepped into the White House, from your Cabinet officers, intelligence people, and so forth—what was your real reason? You have said it wasn't oil, quest for oil—it hasn't been Israel, or anything else. What was it?

*The President.* I think your premise—in all due respect to your question and to you as a lifelong journalist—is that—I didn't want war. To assume I wanted war is just flat wrong. Helen, in all due respect—

*Q.* Everything—

*The President.* Hold on for a second, please.

*Q.* —everything I've heard—

*The President.* Excuse me, excuse me. No President wants war. Everything you may have heard is that, but it's just simply not true. My attitude about the defense of this country changed on September the 11th. We—when we got attacked, I vowed then and there to use every asset at my disposal to protect the American people.

Our foreign policy changed on that day, Helen. You know, we used to think we were secure because of oceans and previous diplomacy. But we realized on September the 11th, 2001, that killers could destroy innocent life. And I'm never going to forget it. And I'm never going to forget the vow I made to the American people that we will do everything in our power to protect our people.

Part of that meant to make sure that we didn't allow people to provide safe haven to an enemy. And that's why I went into Iraq—hold on for a second—

*Q.* They didn't do anything to you or to our country.

*The President.* Look—excuse me for a second, please. Excuse me for a second. They did. The Taliban provided safe haven for Al Qaida. That's where Al Qaida trained—

*Q.* I'm talking about Iraq—

*The President.* Helen, excuse me. That's where—Afghanistan provided safe haven for Al Qaida. That's where they trained. That's where they plotted. That's where they planned the attacks that killed thousands of innocent Americans.

I also saw a threat in Iraq. I was hoping to solve this problem diplomatically. That's why I went to the Security Council; that's why it was important to pass 1441, which was unanimously passed. And the world said, "Disarm, disclose, or face serious consequences"—

*Q.* —go to war—

*The President.* —and therefore, we worked with the world, we worked to make

sure that Saddam Hussein heard the message of the world. And when he chose to deny inspectors, when he chose not to disclose, then I had the difficult decision to make to remove him. And we did, and the world is safer for it.

Q. Thank you, sir. Secretary Rumsfeld—

Q. Thank you. [*Laughter*].

*The President.* You're welcome. [*Laughter*] I didn't really regret it. I kind of semi-regretted it. [*Laughter*]

Q. —have a debate.

*The President.* That's right. Anyway, your performance at the Gridiron was just brilliant—unlike Holland's, was a little weak, but—[*laughter*].

Sorry.

#### *Progress in Iraq*

Q. Secretary Rumsfeld has said that if civil war should break out in Iraq, he's hopeful that Iraqi forces can handle it. If they can't, sir, are you willing to sacrifice American lives to keep Iraqis from killing one another?

*The President.* I think the first step is to make sure a civil war doesn't break out. And that's why we're working with the leaders there in Baghdad to form a unity government. Obviously, if there is difficulty on the streets, the first line of defense for that difficulty will be the Iraqi forces, which have proved themselves in the face of potential sectarian violence—right after the bombing of the mosque in Samarra. The forces are—part of our strategy for victory is to get the forces the skills and the tools and the training necessary to defend their own country, whether it be against Zarqawi and the killers, or whether it be those who are trying to spread sectarian violence. And they have proven themselves.

And so our position is, one, get a unity government formed, and secondly, prepare the Iraqi troops, and support Iraqi troops, if need be, to prevent sectarian violence from breaking out.

Yes, sir.

#### *War on Terror*

Q. Mr. President, I'd like to ask you for your reaction on the latest insurgent attack in Baghdad, 17 police officers killed and a bunch of insurgents freed. I spent a fair amount of time in front of that hotel in Cleveland yesterday, talking to people about the war and saying you were there to talk optimistically. And one woman who said she voted for you, said, "You know what, he's losing me. We've been there too long; he's losing me." What do you say to her?

*The President.* I say that I'm talking realistically to people. We have a plan for victory, and it's important we achieve that plan. Democracy—first of all, this is a global war on terror, and Iraq is a part of the war on terror. Mr. Zarqawi and Al Qaida, the very same people that attacked the United States, have made it clear that they want to drive us out of Iraq so they can plan, plot, and attack America again. That's what they have said; that's their objective. I think it is very important to have a President who is realistic and listens to what the enemy says.

Secondly, I am confident, or I believe—I'm optimistic we'll succeed. If not, I'd pull our troops out. If I didn't believe we had a plan for victory, I wouldn't leave our people in harm's way. And that's important for the woman to understand.

Thirdly, in spite of the bad news on television—and there is bad news. You brought it up; you said, how do I react to a bombing that took place yesterday—is precisely what the enemy understands is possible to do. I'm not suggesting you shouldn't talk about it. I'm certainly not being—please don't take that as criticism. But it also is a realistic assessment of the enemy's capability to affect the debate, and they know that. They're capable of blowing up innocent life so it ends up on your TV show. And therefore, it affects the woman in Cleveland you were talking to. And I can

understand how Americans are worried about whether or not we can win.

I think most Americans understand we need to win, but they're concerned about whether or not we can win. So one of the reasons I go around the country, to Cleveland, is to explain why I think we can win. And so I would say, yes, I'm optimistic about being able to achieve a victory, but I'm also realistic. I fully understand the consequences of this war. I understand people's lives are being lost. But I also understand the consequences of not achieving our objective by leaving too early. Iraq would become a place of instability, a place from which the enemy can plot, plan, and attack.

I believe that they want to hurt us again. And therefore, I know we need to stay on the offense against this enemy. They've declared Iraq to be the central front, and therefore, we've got to make sure we win that. And I believe we will.

Please.

#### *White House Staff*

*Q.* Good morning, sir. Mindful of the frustrations that many Americans are expressing to you, do you believe you need to make any adjustments in how you run the White House? Many of your senior staffers have been with you from the beginning. There are some in Washington who say—

*The President.* Wait a minute. Is this a personal attack launching over here? [Laughter]

*Q.* Some say they are tired and even tone-deaf, even within your party who say that maybe you need some changes. Would you benefit from any changes to your staff?

*The President.* I've got a staff of people that have, first of all, placed their country above their self-interests. These are good, hard-working, decent people. And we've dealt with a lot; we've dealt with a lot. We've dealt with war; we've dealt with recession; we've dealt with scandal; we've dealt with Katrina. I mean, they had a lot

on their plate. And I appreciate their performance and their hard work, and they've got my confidence.

And I understand—Washington is a great town for advice. I get a lot of it—sometimes in private, from my friends, and sometimes in public. There are those who like to stand up and say to the President, "Here's what you ought to be doing." And I understand that. This isn't the first time during these 5½ years that people have felt comfortable about standing up, telling me what to do. And that's okay. I take it all in and appreciate the spirit in which it's delivered, most of the time. But—no, look, I'm satisfied with the people I've surrounded myself with. We've been a remarkably stable administration. And I think that's good for the country.

Obviously, there's some times when government bureaucracies haven't responded the way we wanted them to. And like citizens, I don't like that at all. I mean, I think, for example, of the trailers sitting down in Arkansas. Like many citizens, they're wondering why they're down there. How come we got 11,000? So I've asked Chertoff to find out, what are you going to do with them? The taxpayers aren't interested in 11,000 trailers just sitting there; do something with them.

And so I share that sense of frustration when a big government is unable to—sends wrong signals to taxpayers. But our people are good, hard-working people.

Elisabeth [Elisabeth Bumiller, New York Times].

#### *Second-Term Agenda*

*Q.* Can I just follow up on that?

*The President.* Sure.

*Q.* But aside from staff, Mr. President, are you listening to suggestions you bring somebody else into the White House, a wise man, a graybeard, some old-time Washington hand who can steady Congress if they're upset about things, Republicans in Congress?

*The President.* I'm listening to all suggestions. I really am. I mean, I'm listening to Congress. We're bringing Congress down here all the time. And it's interesting to hear their observations. They—they're, obviously, expressing concerns. It's an election year, after all. And it seems like history tends to repeat itself when you're in the White House. I can remember '02 before the elections; there was a certain nervousness. There was a lot of people in Congress who weren't sure I was going to make it in '04, and whether or not I'd drag the ticket down. So there's a certain unease as you head into an election year; I understand that.

My message to them is, please continue to give me advice and suggestions. And I take their advice seriously. But also remember we've got a positive agenda. We've got something to do. It's important for Congress to have confidence in our ability to get things done. We're supporting our troops over the last 12 months. We've got two Supreme Court judges confirmed. We've got the PATRIOT Act reauthorized over the objections of the Democrat leadership in the Senate. We got some tort reform passed. We passed a budget that cut nonsecurity discretionary spending. There's a series of—we got an energy bill passed. We worked to get a lot of positive things done. And now we've got an agenda—continue to keep this economy growing and keep this Nation competitive.

I meant what I said in my speech: We shouldn't fear this future. In other words, we shouldn't allow isolationism and protectionism to overwhelm us. We ought to be confident about our ability to shape the future.

And that's why this Competitiveness Initiative is important. That's why this energy plan that gets us less addicted to oil is important. We got some interesting ideas on health care that we need to continue to press to make sure consumers are actually a part of the decisionmaking process when it comes to health care decisions.

We've got an aggressive agenda that, by working together, will get passed. But I do, I listen.

Yes, Jim [Jim Gerstenzang, Los Angeles Times].

#### *War on Terror/Polls*

*Q.* —new guy? No new guy?

*The President.* Well, I'm not going to announce it right now. Look, they've got some ideas that I like and some I don't like. Put it that way.

*Q.* You've said during your Presidency that you don't pay that much attention to the polls, but—

*The President.* Correct.

*Q.* —there is a handful that have come back, and they all say the exact same thing: A growing number of Americans are questioning the trustworthiness of you and this White House. Does that concern you?

*The President.* I believe that my job is to go out and explain to people what's on my mind. That's why I'm having this press conference, see. I'm telling you what's on my mind. And what's on my mind is winning the war on terror. And I understand war creates concerns, Jim. Nobody likes war. It creates a sense of uncertainty in the country. The person you talked to in Cleveland is uncertain about our ability to go forward. She's uncertain about whether or not we can succeed, and I understand that. War creates trauma, particularly when you're fighting an enemy that doesn't fight soldier to soldier. They fight by using IEDs to kill innocent people. That's what they use. That's the tool they use. And it creates a sense of concern amongst our people, and that makes sense, and I know that.

And one of the reasons why it's important for me to continue to speak out and explain why we have a strategy for victory, why we can succeed—and I'm going to say it again—if I didn't believe we could succeed, I wouldn't be there. I wouldn't put those kids there. I meet with too many families who's lost a loved one to not be able to look them in the eye and say, we're

doing the right thing. And we are doing the right thing. A democracy in Iraq is going to affect the neighborhood. A democracy in Iraq is going to inspire reformers in a part of the world that is desperate for reformation.

Our foreign policy up to now was to kind of tolerate what appeared to be calm. And underneath the surface was this swelling sense of anxiety and resentment, out of which came this totalitarian movement that is willing to spread its propaganda through death and destruction, to spread its philosophy. Now, some in this country don't—I can understand—don't view the enemy that way. I guess they kind of view it as an isolated group of people that occasionally kill. I just don't see it that way. I see them bound by a philosophy with plans and tactics to impose their will on other countries.

The enemy has said that it's just a matter of time before the United States loses its nerve and withdraws from Iraq. That's what they have said. And their objective for driving us out of Iraq is to have a place from which to launch their campaign to overthrow modern governments—moderate governments—in the Middle East, as well as to continue attacking places like the United States. Now, maybe some discount those words as kind of meaningless propaganda. I don't, Jim. I take them really seriously. And I think everybody in government should take them seriously and respond accordingly. And so it's—I've got to continue to speak as clearly as I possibly can about the consequences of success and the consequences of failure and why I believe we can succeed.

*Defense Secretary Rumsfeld/Progress in Iraq*

Q. Mr. President, Kathleen Koch, CNN.  
*The President.* Yes.

Q. You said you listen to Members of Congress, and there have been growing calls from some of those Members for the resignation of Defense Secretary Donald

Rumsfeld; also from his own former subordinates like U.S. Army Major General Paul Eaton, who described him in a recent editorial as “incompetent and tactically inept.” Do you feel that personally you've ever gotten bad advice in the conduct of the war in Iraq? And do you believe Rumsfeld should resign?

*The President.* No, I don't believe he should resign. I think he's done a fine job of not only conducting two battles, Afghanistan and Iraq, but also transforming our military, which has been a very difficult job inside the Pentagon.

Listen, every war plan looks good on paper until you meet the enemy—not just the war plan we executed in Iraq but the war plans that have been executed throughout the history of warfare. In other words, the enemy changes tactics, and we've got to change tactics too.

And no question that we've had to adjust our tactics on the ground. And perhaps the clearest example is in the training of Iraqi security forces. When we got into Iraq, we felt like we needed to train a security force that was capable for defending the country from an outside threat. And then it became apparent that the insurgents and Zarqawi were able to spread their poison and their violence in a ruthless way, and therefore, we had to make sure that the Iraqi forces were able to deal with the internal threat. And we adjusted our tactics and started spending a lot more time getting the Iraqis up and running, and then embedding our troops with the Iraqis.

And it has been a success. But no question about it, we missed some time as we adjusted our tactics. We had to change our reconstruction strategy. We were—we thought it made sense, initially, when we went in there to build big, grand projects, which turned out to be targets for the insurgents to blow up. And a better strategy was to be spending reconstruction money at the local level, so that local leaders committed to a peaceful and unified Iraq would benefit. In other words, people would see

tangible benefits from an emerging democracy, and the leaders would be viewed as people helping to improve their lives.

And so this is a war in which we've changed tactics. It's a war in which we've adjusted and learned lessons in the process of the war.

Yes, sir.

### *Social Security Reform*

*Q.* Just after the 2004 election, you seemed to—you claimed a really enviable balance of political capital and a strong mandate. Would you make that claim today? Do you still have that?

*The President.* I'd say I'm spending that capital on the war.

*Q.* Well, is that costing you elsewhere, then?

*The President.* I don't think so. I just named 12—I just named an agenda that over the last 12 month was—would be, I suspect, if looked at objectively, would say, well, they got a lot done. And I'd be glad to repeat them if you like, which is—*[laughter]*.

*Q.* —Social Security—

*The President.* Wait a minute. Please no hand gestures. *[Laughter]*

Social Security—it didn't get done. You notice it wasn't on the list. *[Laughter]* Let me talk about that, if you don't mind. First of all, Social Security is a really difficult issue for some Members of Congress to deal with because it is fraught with all kind of political peril. As a matter of fact, it's been difficult for a lot of Congresses to deal with. The one time in recent memory that it was dealt with was when there was a near crisis—in other words, when the system was about to fall into the abyss, and people came together and solved it. But they thought it was a fairly long-term fix; it turned out to be a lot shorter fix than they thought.

So I'm disappointed Congress didn't want to go forward with it, but I'm not surprised. Therefore, I tried a new tactic. Last year, the tactic was to believe that

once the people saw there was a problem, they would then demand a solution. And we made progress on describing the problem. I think the American people are now beginning to get the picture that if we don't do something, Social Security and Medicare will bust. If we don't do something, future Congresses—not this Congress, but future Congresses—are going to be confronted with some serious decisions about raising taxes enormously or cutting benefits drastically—or other programs drastically.

And so that issue sunk in. Just that—there wasn't that connection with action inside, in the body of the respective chambers—although, there were some noble efforts made by some Members of Congress to get something started.

So the new tactics to get people involved in this process is to try to take the politics out of it and bring members of both parties, both chambers together. There's quiet consultations going on to get this commission—committee together of members that could get something put in place that would have a bipartisan appeal to it. Bipartisanship is hard to achieve in Washington these days. I readily concede that. Yet this issue is one that's going to require a bipartisan approach. It's simply not going to be an issue where one party, without the cooperation of the other party, kind of tries to move a bill. At least, that's how I view it.

But I'm committed to moving the issue. I think it's important. And I'm not deterred by the fact that nothing happened. As a matter of fact, I take great pride in the fact that I was willing to bring up the issue while others might not have. That's the job of the President. The job of the President is not to worry about the short-term attitudes. The job of the President is to confront big issues and to bring them to the front and to say to people, "Let's work together to get it solved." And I'm going to continue working on it.

Carl [Carl Cameron, FOX News].

*Terrorist Surveillance Program*

Q. Thank you, sir. On the subject of the terrorist surveillance program—

*The President.* Yes.

Q. —not to change the tone from all this emphasis on bipartisanship, but there have been now three sponsors to a measure to censure you for the implementation of that program. The primary sponsor, Russ Feingold, has suggested that impeachment is not out of the question. And on Sunday, the number-two Democrat in the Senate refused to rule that out, pending an investigation. What, sir, do you think the impact of the discussion of impeachment and censure does to you and this office and to the Nation during a time of war and in the context of the election?

*The President.* I think during these difficult times—and they are difficult when we're at war—the American people expect there to be a honest and open debate without needless partisanship. And that's how I view it. I did notice that nobody from the Democrat Party has actually stood up and called for getting rid of the terrorist surveillance program. You know, if that's what they believe, if people in the party believe that, then they ought to stand up and say it. They ought to stand up and say, the tools we're using to protect the American people shouldn't be used. They ought to take their message to the people and say, "Vote for me; I promise we're not going to have a terrorist surveillance program." That's what they ought to be doing. That's part of what is an open and honest debate.

I did notice that, at one point in time, they didn't think the PATRIOT Act ought to be reauthorized—"they" being at least the minority leader in the Senate. He openly said, as I understand—I don't want to misquote him—something along the lines that, "We killed the PATRIOT Act." And if that's what the party believes, they ought to go around the country saying, "We shouldn't give the people on the frontline

of protecting us the tools necessary to do so." That's a debate I think the country ought to have.

Yes, sir.

*Progress in Iraq*

Q. You mentioned earlier that you were encouraged by some of the discussions going on over a unity government, over the last few days. Do you now have in mind a target date for forming the unity government and—

*The President.* As soon as possible. Next question.

*Public Opinion/Progress in Iraq*

Q. How much of a factor do you think that will be, if it's achieved, in turning around, or at least improving the situation in the public opinion?

*The President.* Here in America?

Q. Right.

*The President.* That's a trick question, because you want to get me to talk about polls when I don't pay attention to polls.

Q. That was one—

*The President.* At least that's—after 5½ years, I was able to rout you out. [Laughter]

First of all, I have no idea whether or not a—how Americans are going to react to a unity government. There will be a unity government formed; then there could be an attack the next day. And so it's hard for me to predict. I do know a unity government, though, is necessary for us to achieve our objective. I do know that the Iraqi people—11 million of them—voted in an election in December, which was, like, 4 months ago. And the message I received from—that is, I hope, the same message that those who have been in charge with forming a unity government receive, and that is the people have spoken, and they want democracy. That's what they said. Otherwise, they wouldn't have participated. They expect there to be a democracy in place that listens to their demands.

And so I'm—most importantly, I believe a unity government will begin to affect the attitudes of the Iraqis. And that's important for them to get confidence not only in a government but in a security force that will provide them security. It's—confidence amongst the Iraqis is what is going to be a vital part of achieving a victory, which will then enable the American people to understand that victory is possible. In other words, the American people will—their opinions, I suspect, will be affected by what they see on their TV screens. The unity government will affect, first and foremost, the Iraqi people, and that's a very important part of achieving success.

We do have a plan for victory, and victory is clearly stated, and that is that Iraq is not a—becomes a safe haven. And that's important for the American people, that Iraq not be a safe haven for terrorists. Their stated objective is to turn Iraq into a safe haven from which they can launch attacks.

Secondly, part of the plan for victory is for there to be security forces capable of defending and providing security to the Iraqi citizens. And thirdly, that democracy, the government take root to the extent that it can't be overturned by those who want to stop democracy from taking hold in Iraq. These are clear objectives, and they're achievable objectives.

Okay. Mark [Mark Silva, Chicago Tribune].

### *Deficit Spending*

*Q.* Mr. President, in the upcoming elections, I think many Republicans would tell you one of the big things they're worried about is the national debt, which was \$5.7 trillion when you took office and is now nearly \$8.2 trillion, and Congress has just voted to raise it to \$8.9 trillion. That would be a 58-percent increase. You've yet to veto a single bill, sir—I assume that means you're satisfied with this.

*The President.* No, I'm not satisfied with the rise of mandatory spending. As you know, the President doesn't have the—doesn't veto mandatory spending increases. And mandatory spending increases are those increases in the budget caused by increases in spending on Medicare and Social Security. And that's why—back to this man's question right here—it's important for—"this man" being Jim—[laughter]—sorry, Jim, I've got a lot on my mind these days. That's why it's important for us to modernize and strengthen Social Security and Medicare, in order to be able to deal with the increases in mandatory spending.

Secondly, in terms of discretionary spending, that part of the budget over which Congress has got some control and over which the President can make suggestions, we have suggested that the Congress fully fund the troops in harm's way. And they have, and for that the American people should be grateful.

Secondly, we suggested that Congress fund the reconstruction efforts for Katrina. They have spent now a little more than \$100 billion, and I think that's money well-spent, a commitment that needed to be kept.

Thirdly, we have said that other than security discretionary spending, that we ought to, last year, actually reduce the amount of discretionary spending and were able to do so. Ever since I've been the President, we have slowed the rate of growth of non-security discretionary spending and actually cut discretionary spending—nonsecurity discretionary spending.

Last year, I submitted a budget to the United States Congress. I would hope they would meet the targets of the budget that I submitted, in order to continue to make a commitment to the American people. But in terms of the debt, mandatory spending increases is driving a lot of that debt. And that's why it's important to get the reforms done.

*National Economy/Line-Item Veto Legislation*

Q. Thank you, sir. For the first time in years, interest rates are rising in the U.S., Europe, and Japan at the same time. Is this a concern for you? And how much strain are higher interest rates placing on consumers and companies?

*The President.* First of all, interest rates are set by an independent organization, which—

Q. —still, are you concerned about that?

*The President.* Well, I'm not quite through with my answer yet.

Q. I'm sorry.

*The President.* I'm kind of stalling for time here. [Laughter] Interest rates are set by the independent organization. I can only tell you that the economy of the United States looks very strong. And the reason I say that is that projections for first-quarter growth of this year look pretty decent. That's just projections, that's a guess by some economists, and until the actual numbers come out, we won't know. But no question that the job market is strong. When you have 4.8 percent unemployment—4.8 percent nationwide unemployment, that indicates a strong job market, and that's very important.

One of the measures as to whether or not this economy will remain strong is productivity. And our productivity of the American worker and productivity of the American business sector is rising. And that's positive, because productivity increases eventually yield—eventually yield higher standards of living. Homeownership is at an alltime high. And there has been all kinds of speculation about whether or not homeownership would—home building would remain strong, and it appears to be steady. And that's important.

In other words—and so to answer your question, I feel—without getting into kind of the—kind of microeconomics, from my perch and my perspective, the economy ap-

pears to be strong and getting stronger. And the fundamental question that those of us in Washington have to answer is, what do we do to keep it that way? How do we make sure, one, we don't put bad policies in place that will hurt economic growth? A bad policy is to raise taxes—which some want to do. There are people in the United States Congress, primarily on the Democrat side, that would be anxious to let some of the tax relief expire. Some of them actually want to raise taxes now. I think raising taxes would be wrong. As a matter of fact, that's why—and I think it's important for us to have certainty in the Tax Code. That's why I'd like to see the tax relief made permanent.

You know, it's a myth in Washington—for Washington people to go around the country saying, "Well, we'll balance the budget; just let us raise taxes." That's not how Washington works. Washington works—raise in taxes, and they figure out new ways to spend. There is a huge appetite for spending here. One way to help cure that appetite is to give me the line-item veto. You mentioned vetoing of bills—one reason why I haven't vetoed any appropriation bills is because they met the benchmarks we've set. They have—on the discretionary spending, we've said, "Here is the budget." We've agreed to a number, and they met those numbers.

Now, sometimes I didn't—I like the size of the pie; sometimes I didn't particularly like the slices within the pie. And so one way to deal with the slices in the pie is to give the President the line-item veto. And I was heartened the other day when members of both parties came down in the Cabinet Room to talk about passage of a line-item veto. I was particularly pleased that my opponent in the 2004 campaign, Senator Kerry, graciously came down and lent his support to a line-item veto and also made very constructive suggestions about how to get one out of the United States Congress.

Let's see here. They've told me what to say. David [David Jackson, Dallas Morning News].

*Spread of Democracy in the Middle East*

Q. Mr. President, you've spoken about Iraq as being a beacon for democracy throughout the Middle East. Yet we've had troubles in Iraq, and we've seen aggressiveness from Syria and Iran. Are you concerned that the Iraq experience is going to embolden authoritarian regimes in the Middle East and make it tougher to forge democracy there?

*The President.* There's no question that if we were to prematurely withdraw and the march to democracy were to fail, the Al Qaida would be emboldened, terrorist groups would be emboldened, the Islamofascists would be emboldened. No question about that.

There are a lot of reformers in the Middle East who would like to see Iraq succeed. And I think that if we were to lose our nerve and leave prematurely, those reformers would be let down. So failure in Iraq—which isn't going to happen—is—would send all kinds of terrible signals to an enemy that wants to hurt us and people who are desperate to change the conditions in the broader Middle East.

The—it's an interesting debate, isn't it, about whether or not this country of ours ought to work to spread liberty. It's—I find it fascinating that—to listen to the voices from around the world as to whether or not it is a noble purpose to spread liberty around the world. And it is a—I think it's—at least, my position is affected by my belief that there is universality when it comes to liberty. This isn't American liberty; this isn't America's possession. Liberty is universal. People desire to be free. And history has proven that democracies don't war. And so part of the issue is to lay peace, is to give people a chance to live in a peaceful world where mothers can raise their children without fear of violence or women are free to be able to express themselves.

Q. But how about the difficulty—

*The President.* Excuse me a second, David. Excuse me for a second, please.

The—that we ought to pursue liberty. We ought to not be worried about a foreign policy that encourages others to be free. That's why I said in my second Inauguration Address, "The goal of this country ought to be to end tyranny in the 21st century." I meant it. For the sake of—I said that for the sake of peace.

Now, what is your followup yell? [*Laughter*]

Q. I was wondering, have the difficulties of the last 3 years made the job of those reformers more difficult?

*The President.* Well, if the United States were to lose its nerve, it would certainly make the job of reformers more difficult. If people in Iran, for example, who desire to have a Iranian-style democracy, Iranian-style freedom, if they see us lose our nerve, it's likely to undermine their boldness and their desire.

What we're doing is difficult work. And one—the interesting thing that's happening is, is that imagine an enemy that says, "We will kill innocent people," because we're trying to encourage people to be free. What kind of mindset is it of people who say, "We must stop democracy"? Democracy is based upon this kind of universal belief that people should be free. And yet there are people willing to kill innocent life to stop it. To me, that ought to be a warning signal to people all around the world that the enemy we face is an enemy that ascribes to a vision that is dark and one that doesn't agree with the universal rights of men and women.

As a matter of fact, when given a chance to govern or to have their parasitical government represent their views, they suppressed women and children. There was no such thing as religious freedom. There was no such thing as being able to express yourself in the public square. There was no such thing as press conferences like this.

They were totalitarian in their view. And that would be—I'm referring to the Taliban, of course. And that's how they would like to run government. They rule by intimidation and fear, by death and destruction.

And the United States of America must take this threat seriously and must not—must never forget the natural rights that formed our country. And for people to say, "Well, the natural rights only exist for one group of people," I would call them—I would say that they're denying the basic rights to others.

And it is hard work. And it's hard work, David, because we're fighting tradition. We're fighting people that have said, "Well, wait a minute. The only way to have peace is for there to be tyranny." We're fighting intimidation. We're fighting the fact that people will be thrown in prison if they disagree.

Yes.

#### *Iraq/U.S. Armed Forces*

*Q.* Sir, you said earlier today that you believe there's a plan for success; if you did not, you would pull the troops out. And so my question is, one, is there a point at which having the American forces in Iraq becomes more a part of the problem than a part of the solution? Can you say that you will not keep American troops in there if they're caught in the crossfire in a civil war? And can you say to the American people, assure them that there will come a day when there will be no more American forces in Iraq?

*The President.* Bob [Bob Deans, Cox Newspapers], the decisions about our troop levels will be made by General Casey and the commanders on the ground. They're the ones who can best judge whether or not the presence of coalition troops create more of a problem than a solution—than be a part of the solution.

Secondly, I've answered the question on civil war. Our job is to make sure the civil war doesn't happen. But there will be—

but if there is sectarian violence, it's the job of the Iraqi forces, with coalition help, to separate those sectarian forces.

Third part of your question?

*Q.* Will there come a day—and I'm not asking you when, not asking for a timetable—will there come a day when there will be no more American forces in Iraq?

*The President.* That, of course, is an objective, and that will be decided by future Presidents and future governments of Iraq.

*Q.* So it won't happen on your watch?

*The President.* You mean a complete withdrawal? That's a timetable. I can only tell you that I will make decisions on force levels based upon what the commanders on the ground say.

Cannon [Carl Cannon, National Journal].

#### *Same-Sex Marriage*

*Q.* Mr. President—

*The President.* No, you're not Ken. That Ken. You're Ken [Ken Bazinet, New York Daily News]. Sorry Cannon.

*Q.* Thank you, sir.

*The President.* Sorry, you're Ken, according to the chart. You thought I said Cannon—

*Q.* I thought you said Ken.

*The President.* Bazinet. [Laughter]

*Q.* Mr. President, 2 years ago, Gavin Newsom, the mayor of San Francisco, heard your State of the Union Address, went back to California, and began authorizing the marriage of gay men and lesbians. Thousands of people got married. The California courts later ruled he had overstepped his bounds. But they were—we were left with these pictures of thousands of families getting married, and they had these children, thousands of children. Now, that might have changed the debate, but it didn't. In light of that, my question is, are you still confident that society's interest and the interest of those children in gay families are being met by government saying their parents can't marry?

*The President.* I believe society's interest are met by saying—defining marriage as

between a man and a woman. That's what I believe.

### Immigration

Q. Mr. President, on immigration, yesterday you answered a question from a woman and said, the tough question here is what happens to somebody who has been here since 1987. Will you accept a bill that allows those who have been here a long time to remain in the country permanently?

*The President.* I also said that—let me make sure, Stephen [Stephen Dinan, Washington Times], that you—first of all, I'm impressed that you're actually paying attention to it. The people I saw in the press pool weren't. They were—like, Elisabeth was half-asleep—[laughter]—yes, you were. [Laughter]

Q. No, I wasn't.

*The President.* Okay. Well, the person next to you was. [Laughter] They were dozing off. I could see them watching their watches, kind of wondering how long he's going to blow on for. Let's get him out of here so we can go get lunch, is what they were thinking. [Laughter] So at least you paid attention. Thanks.

I also went on to say that people who have been here need to get in line, like everybody else who is in line legally. My point is that if we were—first of all, whatever is passed should not say “amnesty.” In my judgment, amnesty would be the wrong course of action. We have a way toward legality, in terms of citizenship. In other words, there's a difference between someone who is here legally working and someone who is a citizen. And that's part of the—I maybe didn't make that distinction perfectly clear.

This is going to be a—this could be a fractious debate, and I hope it's not. Immigration is a very difficult issue for a lot of Members, as you know. It's an emotional issue. And it's one that, if not conducted properly, will send signals that I don't think will befit the Nation's history and traditions.

My view is, is that border security starts with a good, solid strategy along the border itself—in other words, Border Patrol agents, technology, the capacity to pass information quickly so that Border Patrol agents will be more likely to intercept somebody coming across the border illegally. There needs to be enforcement mechanisms that don't discourage the Border Patrol agents. They work hard; they get somebody coming in from country X; the person says, “Check back in with us in 30 days”—they don't.

In other words, they end up in society. That has created some despondency—not despondency—it's got to discourage people who are working hard to do their job down there and realize the fruits of their labor is being undermined by a policy that, on the one hand, releases people, kind of, into society, and on the other, doesn't have enough beds to hold people so that we can repatriate them back to their countries. Chertoff has announced the fact that we're getting rid of this catch-and-release program.

Thirdly, there has to be enforcement—employer enforcement of rules and regulations. The problem there, of course, is that people are showing up with forged documents. I mentioned this onion picker that I met yesterday—onion grower—who is worried about having labor to pick his onions. But he's not—I don't think he's in a position to be able to determine whether or not what looks like a valid Social Security card, or whatever they show, is valid or not—which leads to the fact there's a whole industry that has sprung up around moving laborers to jobs that Americans won't do.

It's kind of—when you make something illegal that people want, there's a way around it, around the rules and regulations. And so you've got people, *coyotes*, stuffing people in the back of 18-wheelers or smuggling them across 105-degree desert heat. You've got forgers and tunnel-diggers. You've got a whole industry aimed at using

people as a commodity. And it's wrong, and it needs to be—we need to do something about it. And the best way to do something about it is to say that if you're—if an American won't do a job and you can find somebody who will do the job, they ought to be allowed to do it legally, on a temporary basis.

One of the issues I did talk about—the man asked me the question about—don't let people get ahead of the line. So I made that clear. But one of the issues is going to be to deal with somebody whose family has been here for a while, raised a family. And that will be an interesting debate. My answer is, that person shouldn't get automatic citizenship.

Listen, thank you for your time. I've got lunch with the President of Liberia right

now. I'm looking forward to greeting this—the first woman elected on the continent of Africa. Appreciate the opportunity to visit with you all. Look forward to future occasions.

NOTE: The President's news conference began at 10:01 a.m. in the James S. Brady Press Briefing Room at the White House. In his remarks, he referred to former Prime Minister Ayad Allawi of the Iraqi Interim Government; former President Jalal Talabani of the Iraqi Transitional Government; Gen. George W. Casey, Jr., USA, commanding general, Multi-National Force—Iraq; senior Al Qaida associate Abu Musab Al Zargawi; Grand Ayatollah Ali al-Sistani, Iraqi Shiite leader; and President Ellen Johnson Sirleaf of Liberia.

## Remarks Following Discussions With President Ellen Johnson Sirleaf of Liberia

March 21, 2006

*President Bush.* It has been such an honor to welcome you, Madam President, to the Oval Office. I find that one of the interesting parts of my job is to be able to talk to pioneers, and Madam President, you're a pioneer. You're the first woman elected President to any country on the continent of Africa. And that requires courage and vision and the desire to improve the lives of your people. And I congratulate you on that.

You know, I can remember, it wasn't all that long ago that Laura—that would be Laura Bush—and Condi Rice came back from the inauguration of this good person. I said, "Okay, tell me what kind of person am I going to be dealing with," and they said, "Capable, smart, a person who is a doer, a person committed to a bright future for Liberia." And we welcome you.

The President and I have had a good discussion. We discussed ways that the

United States Government can help this country get on its feet toward a democracy. We talked about education. We talked about security. We talked about—we also talked about the neighborhood. I asked the President her advice on a variety of issues. I told her that part of a friendship is one in which we can speak directly with each other about how best to deal with keeping the peace and making sure that health care initiatives are robust and effective. I also shared with her some of my thoughts about the world beyond the continent of Africa. And so I—we really had a good discussion.

And so, Madam President, thank you. I want to thank your delegation. Laura and I look forward to having you for lunch here in a little bit. But all in all, I think it was a very good first visit.

*President Johnson Sirleaf.* Mr. President, as I mentioned to you, on behalf of the Liberian people, I would like to thank

you—thank you, thank your administration, thank the American people, thank the U.S. Congress—for all the support that our country has received in making this important transition from war to peace.

Our people have new hope. They have new promise in the future as a result of the strong position you took that enabled us to get this opportunity for national renewal. We have taken the necessary first steps to restoring dignity to our people, starting to fix our economy, to get our international credibility and reputation back. And we're confident that Liberian people are ready to do what it takes. They're back at work; our country is open for business. We're beginning to put in all the processes that will enable us to manage our resources that God has been so good to us in giving us, for the good of our people.

We want you to know that Liberia is going to do all it can to justify the confidence that you have given to us. Liberia, we think, has the potential to become the

U.S. success story in Africa. We'll be working within our own borders; we'll be working with our neighboring states to bring peace, stability, and development to our subregion. We'll be working with our African leaders to ensure that the example we set on this transition will be one that can fuse many of our—many of other countries and other people in Africa.

As the first democratic-elected woman, I represent the expectations and aspirations of women in Liberia, in Africa and, I dare say, the world. And I must be able to deliver for them. My performance must justify.

Again, we just want to thank you for the encouragement and the support that you have given us to enable us to meet these enormous challenges of development.

*President Bush.* Thank you, Madam President. Thank you. Good job.

NOTE: The President spoke at 11:58 a.m. in the Oval Office at the White House.

## Remarks Following a Meeting With Iraq and Afghanistan Nongovernmental Organizations

*March 21, 2006*

I want to thank you all for coming. Laura and I have really enjoyed our visit.

We're talking today to people who have decided to try to help improve the lives of folks in Afghanistan and Iraq. And I just marvel at the fact that Americans from around our country have heard a call to help somebody realize the benefits of freedom. And you know, governments can help, and we will help. And obviously, we've got a brave military trying to secure freedom in Afghanistan and Iraq. But one of the real powerful parts of developing civil societies in these two countries is the fact that fellow citizens are willing to interface with citizens in Iraq and Afghanistan.

We've heard stories about Afghan women education programs and Iraqi Fulbright programs and programs to help hospitals and programs to welcome intellectuals, all aimed at helping these societies that were once brutalized by tyrants realize the great benefits and blessings of liberty. And we've got—I'm sure a lot of our citizens don't realize this, but there are thousands of, I would call them, social entrepreneurs, who are figuring out ways to help improve the human condition in these two liberated countries.

And I want to thank you all very much. It's heartening to hear your stories, and it makes me—give me—once again gives

me great reason to be proud of our country and the people who live here. So thank you all for coming. God bless your work.

NOTE: The President spoke at 2:56 p.m. in the Roosevelt Room at the White House.

Remarks on the War on Terror and a Question-and-Answer Session in  
Wheeling, West Virginia  
March 22, 2006

*The President.* Thank you all very much. Please be seated. Thanks for coming. First of all, Terry, thanks for the invitation. My purpose is to share with you what's on my mind, and then I look forward to hearing what's on yours.

I regret only one thing, Terry, and that's that Laura didn't come with me. No, I know, most people generally say, "You should have brought her, and you should have stayed at home." [Laughter] They love Laura, and so do I. And she is a fantastic First Lady. She is a great—[applause]. And she is a great source of comfort and strength for me, and I wish she were here.

I want to thank the Chamber and the Board of Directors of the Chamber for allowing me to come. You know, I'm—as Terry said, I'm the Commander in Chief; I'm also the educator in chief. And I have a duty to explain how and why I make decisions, and that's part of the reason I'm here.

I want to thank your Governor for being here. Joe Manchin is a—he's a good, decent man. He showed his heart during the mine tragedies. He asked the country—[applause]. He represented the best of West Virginia. He showed great compassion, great concern. He asked the Nation to pray on behalf of the families. We still must continue to pray for those who lost their loved ones. Joe is a problem-solver, see. He said, "We're going to deal with this issue head on." And I appreciate you working closely with the Federal Government to make sure that there are safety regulations that work, that the inspection process

works so that the miners here in this important State are able to do their job and their families can be secure in them doing their job.

So, Joe, thank you very much for your leadership. Thanks for bringing Gayle. Like you, I married well too. [Laughter]

I appreciate Congresswoman Shelley Moore Capito. Thanks for being here. I appreciate working with you. She's a good one, as we say in Texas. [Laughter] I probably shouldn't bring up Texas too much today, given the fact—yeah, I know—[laughter]. Never mind. [Laughter] I'm a little worried for my Longhorns, though, I tell you that. I'm fully informed that they're going to play a fine team.

I want to thank the mayor for being here. Mr. Mayor, I'm honored that you were at the airport. I appreciate you coming. Thanks for serving your great community. God bless you, sir.

Members of the statehouse greeted me. I appreciate Senator Mike Oliverio. He's here. Mike, I think, did the country a great service when he worked on behalf of Judge Sam Alito to get him approved by the United States Senate. I appreciate you—I want to thank you for that, Mike. I want to thank—Mike said, "Don't hold it against me; I'm a Democrat." I said, "Mike, what we—first and foremost, we're all Americans."

I thank Chris Wakim. He also was out at the airport. It's a little chilly for you all standing out there without your overcoats on, but it's all right. Thanks for being here, Chris. Thanks to all the members of

the statehouse and local officials who've joined us today. Thank you for serving your State and your community.

I want to thank John Anderson and Janis LaFont. They're from the—Valley National Gases employees. They presented me with a check for \$100,000 for the Katrina Relief Fund. They represent—[*applause*]. I want to thank you all for doing that, and I want to thank the folks you work with for doing that.

It's an amazing country, isn't it, when you think about it, that folks right here in this part of West Virginia care enough about folks in the southern part of our country that they would take some of their hard-earned money and contribute to a relief fund so people can get their lives back together. It means a lot to the people in Louisiana and Mississippi to know that there is love and compassion for their—and concern for their lives, here in West Virginia.

Ours is an incredible nation. And you're going to hear me talk about our military. And if you ask questions about the economy, you'll hear me talk about our economy. But I want to remind everybody that the true strength of America lies in the hearts and souls of our citizens. That's where America is its greatest, and I appreciate you representing that.

I met a woman named Kristen Holloway at the airport. Kristen, where are you? There you go. Gosh, you thought you had a better seat, but nevertheless—[*laughter*]. She came out to say hello. I had a chance to thank her for her being the founder of Operation Troop Appreciation. She has decided to support those who wear our uniform in any way she can. Listen, I understand war is controversial, and I'm going to talk about the war. But America has got to appreciate what it means to wear the uniform today and honor those who have volunteered to keep this country strong.

It doesn't matter whether you agree with my decision or not. But all of us should

agree with the fact that we have a remarkable country, when people who know that they're going to be sent into harm's way raise their hand and say, "I volunteer to serve." And no State has presented—had more people volunteering to serve than the great State of West Virginia. Now, they'll say, maybe some States have more people, but they got greater populations. But 75 percent of your National Guard has gone into harm's way, and we appreciate that service. And I want to thank those of you who wear the uniform for your service. I want to thank your loved ones for supporting those who wear the uniform. And I want you to hear loud and clear, the United States of America stands with you and appreciates what you're doing.

The enemy, a group of killers, struck us on September the 11th, 2001. They declared war on the United States of America. And I want to share some lessons about what took place on that day. First of all, I knew that the farther we got away from September the 11th, 2001, the more likely it would be that some would forget the lessons of that day. And that's okay. That's okay, because the job of those of us who have been entrusted to protect you and defend you is really to do so in such a way that you feel comfortable about going about your life, see. And it's fine that people forget the lessons. But one of my jobs is to constantly remind people of the lessons.

The first lesson is, is that oceans can no longer protect us. You know, when I was coming up in the fifties in Midland, Texas, it seemed like we were pretty safe. In the sixties it seemed like we were safe. In other words, conflicts were happening overseas, but we were in pretty good shape here at home. And all that was shattered on that day, when coldblooded killers hijacked airplanes, flew them into buildings and into the Pentagon, and killed 3,000 of our citizens. In other words, they declared war, and we have got to take their

declaration of war seriously. The most important responsibility of the Commander in Chief and those who wear the uniform and those who are elected to public office is to defend the citizens of this country. That is our most vital and important responsibility. I have never forgotten that, from September the 11th on. It's just been a part of my daily existence.

Secondly, the best way to defend America is to stay on the offense. The best way to protect you is to rally all the strength of National Government—intelligence and military, law enforcement, financial strength—to stay on the offense against an enemy that I believe wants to hurt us again. And that means, find them where they hide and keep the pressure on and never relent and understand that you can't negotiate with these folks. There is no compromise; there is no middle ground. And so that's exactly what we're doing.

And there's some unbelievably brave troops and intelligence officers working around the clock to keep an enemy that would like to strike us again, on the move and to bring them to justice. And we're making progress about dismantling Al Qaida. Al Qaida, after all, was the enemy that launched the attacks.

The second part of a lesson that we must never forget is the enemy, in that they're not a nation-state—in other words, they don't represent a nation-state like armies and navies used to do—need safe haven. They need places to hide so they can plan and plot. And they found safe haven, as you all know, in Afghanistan. And they were supported by a government that supports their point of view, which is a government that absolutely can't stand freedom. That was the Taliban. If you were a young girl growing up under the auspices of the Taliban, you didn't have a chance to succeed. You couldn't go to school. If you dissented in the public square, you'd be in trouble. If you didn't agree with their dark vision, whether it be religion or politics, you were in trouble. In other words,

they can't—they couldn't stand this concept of a free society—and neither can Al Qaida. See, we're dealing with ideologues. They have an ideology.

Now, I understand some say, "Well, maybe they're just isolated, kind of people that are angry and took out their anger with an attack." That's not how I view them. I view them as people that believe in something; they have an ideological base. They subverted a great religion to meet their needs, and they need places to hide. And that's why I said early on in the war that if you harbor a terrorist, you're equally as guilty as the terrorist—understanding the nature of the enemy and understanding they need safe haven. In order to protect ourselves, we must deny them safe haven.

By the way, if the President says something, he better mean it, for the sake of peace. In other words, you want your President out there making sure that his words are credible. And so I said to the Taliban, "Get rid of Al Qaida, or face serious consequences." They didn't, and they faced serious consequences, and we liberated Afghanistan. We removed the Taliban from power. We've denied Al Qaida safe haven. And that young country, that young democracy is now beginning to grow; 25 million people are liberated as a result of the United States defending itself. And that's important for us to realize, that not only are we defending ourselves, but in this instance, we've given chance to people to realize the beauties of freedom.

There's an interesting debate in the world is whether or not freedom is universal, see, whether or not—let's say, "There's old Bush imposing his values." See, I believe freedom is universal. I believe liberty is a universal thought. It's not an American thought; it is a universal thought. And if you believe that, then you ought to take great comfort and joy in helping others realize the benefits of liberty. The way I put it was, there is an Almighty God. One of the greatest gifts of that Almighty God is the desire for people to be

free, is freedom. And therefore, this country and the world ought to say, "How can we help you remain free? What can we do to help you realize the blessings of liberty?"

Remember, as we debate these issues—and it's important to have a debate in our democracy, and I welcome the debate—but remember, we were founded on the natural rights of men and women. That speaks to the universality of liberty. And we must never forget the origin of our own founding as we look around the world.

Afghanistan—I went there with Laura. We had a good visit with President Karzai. I like him—good man. You can imagine what it's like to try to rebuild a country that had been occupied and then traumatized by the Taliban. They're coming around. They got elections. They had assembly elections. He himself was elected. We expect them to honor the universal principle of freedom. I'm troubled when I hear—deeply troubled when I hear the fact that a person who has converted away from Islam may be held to account. That's not the universal application of the values that I talked about. Look forward to working with the Government of that country to make sure that people are protected in their capacity to worship.

There's still a Taliban element trying to come and hurt people. But the good news is, not only do we have great U.S. troops there, but NATO is now involved. One of my jobs is to continue to make sure that people understand the benefits of a free society emerging in a neighborhood that needs freedom. And so I'm pleased with the progress, but I fully understand there's a lot more work to be done.

Another lesson of September the 11th, and an important lesson that really does relate to the topic I want to discuss, which is Iraq, is that when you see a threat now, you got to take it seriously. That's the lesson of September the 11th—another lesson of September the 11th. When you see a threat emerging, you just can't hope it goes

away. If the job of the President is to protect the American people, my job then is to see threats and deal with them before they fully materialize, before they come to hurt us, before they come and strike America again.

And I saw a threat in Iraq. I'll tell you why I saw a threat. And by the way, it just wasn't me. Members of the United States Congress in both political parties saw a threat. My predecessor saw a threat. I mean, my predecessor saw a threat and got the Congress actually to vote a resolution that said, "We're for regime change." That's prior to my arrival. The world saw a threat. You might remember, I went to the United Nations Security Council; on the 15-to-nothing vote, we passed Resolution 1441 that said to Saddam Hussein, "Disclose, disarm, or face serious consequences." We saw a threat.

I'll tell you why I saw a threat. I saw a threat because, one, he'd been on the state—he was a state sponsor of terror. In other words, our Government—not when I was President, prior to my Presidency—declared Saddam Hussein to be a state sponsor of terror. Secondly, I know for a fact he had used weapons of mass destruction. Now, I thought he had weapons of mass destruction; Members of Congress thought he had weapons of mass destruction; the world thought he had weapons of mass destruction. That's why those nations voted in the Security Council. I'm finding out what went wrong. In other words, one of the things you better make sure of, is when you're the President, you're getting good intelligence, and obviously, the intelligence broke down. But he had that capacity to make weapons of mass destruction as well. He had not only murdered his own people, but he had used weapons of mass destruction on his own people.

That's what we knew prior to the decision I made. He also was firing on our aircraft. They were enforcing a no-fly zone, United Nations no-fly zone. The world had

spoken, and he had taken shots at British and U.S. pilots. He'd invaded his neighborhood. This guy was a threat. And so the world spoke. And the way I viewed it was that it was Saddam Hussein's choice to disclose, disarm, or face serious consequences. And he made the choice, and then I was confronted with a choice. And I made my choice. And the world is better off without Saddam Hussein in power.

The biggest threat America faces is that moment when terror and weapons of mass destruction come together. And if we ever suspect that's happening, we got to take—deal with that threat seriously. Committing our troops into harm's way is the most difficult decision a President can make. I'm going to meet with some—two families of those who lost a loved one. It's my duty to do so. I'm looking forward to being able to hug them, weep with them. And so for anybody out there in West Virginia who thinks it's easy to commit troops—it's hard. It's the last option of the President, not the first option. The first option is to deal with things diplomatically, is to rally the world to send a clear message that the behavior, in this case, of Saddam Hussein, was intolerable. And we did that.

Now the fundamental question is, can we win in Iraq? And that's what I want to talk about. First of all, you got to understand that I fully understand there is deep concern among the American people about whether or not we can win. And I can understand why people are concerned. And they're concerned because the enemy has got the capacity to affect our thinking. This is an enemy who will kill innocent people in order to achieve an objective. And Americans are decent, honorable people; they care. We care about human life. We care about human dignity. We value life. We value the life of our own citizens, and we value the life of other citizens. And so it's easy for an enemy that is willing to kill innocent people to affect us.

The enemy has told us their objectives in Iraq. And I think it's important for the

Commander in Chief to take the words of the enemy very seriously. They have said that they want to spread their philosophy to other parts of the Middle East. They have said that. They have said they want to attack us again. They believe that democracies are soft, that it's just a matter of time for the United States to lose our will and create a vacuum in Iraq, so they can use their terror techniques and their willingness to kill to develop a safe haven from which to launch attacks. That's what the enemy has said. This is—I hope the citizens of this country understand that we have intercepted documents, and we put them out for people to see. And I take the words very seriously.

Iraq is a part of the global war on terror. In other words, it's a global war. We're dealing with a group of folks that want to spread an ideology, and they see a problem developing in Iraq, and so they're heading into Iraq to fight us, because they can't stand the thought of democracy, see. Democracy trumps their ideology every time. Freedom and democracy represent hope; their point of view represents despair. Freedom represents life and the chance for people to realize their dreams; their philosophy says, "You do it my way or else." And so they're trying to fight us in Iraq.

And we have a strategy for victory in Iraq. It's a three-pronged strategy, starting with—it's politics; it is a—it's security; and it's economy. On politics, was to get the people to the polls to see if they even cared about democracy; just give them a chance to vote; see what the people thought. And you might remember the elections; it probably seems like an eternity. It was just a year ago that they started voting—a little more than a year, in January of last year. And the first election round came off okay, but the Sunnis didn't participate. They were a little disgruntled with life there. They liked their privileged status, and they were boycotting the elections. Then they

wrote a Constitution, which is a good Constitution. It's a progressive Constitution for that part of the world. More people came out to vote than last December. About 75 percent of the eligible voters said, "I want to be free; I want democracy. I don't care what Mr. Zarqawi and his Al Qaida killers are trying to do to me; I'm going to defy them and go to the polls."

And the people have spoken. And now it's time for a government to get stood up. There's time for the elected representatives—or those who represent the voters, the political parties, to come together and form a unity government. That's what the people want; otherwise, they wouldn't have gone to the polls, would they have?

I spoke to our Ambassador today and General Casey, via video conferencing, and we talked about the need to make it clear to the Iraqis, it's time; it's time to get a government in place that can start leading this nation and listening to the will of the people. It's a little hard. You can imagine what it's like coming out of the—having been ruled by a tyrant. People are—when you spoke out before, no telling what was going to happen to you; it generally wasn't good. And now people are beginning to realize democracy has taken hold.

By the way, if you look at our own history, it was a little bumpy on our road too. You might remember the Articles of Confederation. They didn't work too well. It took us a while from the moment of our Revolution to get our Constitution written, the one that we now live by.

The second part is to help people with their economy. And we had to change our strategy there. We first went in there and said, "Let's build some big plants." The problem was, the big plants served as big targets for those who are disgruntled, the terrorists who are going into Iraq to use it as a safe haven plus some of their allies, the Saddamists. These were Saddam's inner-circle buddies and stuff like that that had received special privileges. They weren't happy that they were no longer

in privileged status. And so they were destroying some of the infrastructure we were building. So we changed our strategy and said, "Look, why don't we go with smaller projects, particularly in the Provinces, so people can begin to see the benefits of what it means to have a democracy unfold."

And the third aspect is security. When we got in there, it became apparent to our troops on the ground that we had a lot of training to do. We had to really rebuild an army to make sure that people had the skills necessary to be able to fight off those who want to stop the march of democracy. First, we trained the army for threats from outside the country. But we realized the true threats were inside the country, whether it be the Saddamists, some Sunni rejectionists, or Al Qaida that was in there torturing and killing and maiming in order to get their way.

And we're making progress when it comes to training the troops. More and more Iraqis are taking the fight. Right after the bombing of the Golden Mosque, for example, is an interesting indication as to whether or not the Iraqi troops are getting better.

The enemy can't defeat us militarily, by the way. They can't beat us on the field of battle. But the only thing they can do is they can either try to stop democracy from moving—they failed on that. Last year, they failed. Their stated objective was just not to let democracy get going, and they flunked the test. Now they're trying to foment a civil war. See, that's the only way they can win. And they blew up the mosque. And there was some awful violence, some reprisals taking place. And I can understand people saying, "Man, it's all going to—it's not working out." But the security forces did a pretty good job of keeping people apart.

In other words, it was a test. It was a test for the security forces, and it was a test for the Iraqi Government. The way I like to put it is they looked into the

abyss as to whether or not they want a civil war or not and chose not to.

That's not to say we don't have more work to do, and we do. But it's important for me to continue—look, I'm an optimistic guy. I believe we'll succeed. Let me tell you this—put it to you this way: If I didn't think we'd succeed, I'd pull our troops out. I cannot look mothers and dads in the eye—I can't ask this good marine to go into harm's way if I didn't believe, one, we're going to succeed, and two, it's necessary for the security of the United States.

And it's tough fighting. It's tough fighting, because we got an enemy that's just coldblooded. They can't beat us militarily, but they can try to shake our will. See, remember, I told you, they have said that it's just a matter of time, just a matter of time before the United States loses its nerve. I believe we're doing the right thing, and we're not going to retreat in the face of thugs and assassins. [Applause] Thank you.

It's the Iraqis' fight. Ultimately, the Iraqis are going to have to determine their future. They made their decision politically; they voted. And these troops that we're training are going to have to stand up and defend their democracy. We got work, by the way, in '06 to make sure the police are trained as adequately as the military, the army. It's their choice to make. And I like to put it this way: As they stand up, we'll stand down.

But I want to say something to you about troop levels, and I know that's something that people are talking about in Washington a lot. I'm going to make up my mind based upon the advice of the United States military that's in Iraq. I'll be making up my mind about the troop levels based upon recommendations of those who are on the ground. I'm going to make up my mind based upon achieving a victory, not based upon polls, focus groups, or election-year politics.

I talked about a city named Tall 'Afar the other day in a speech I gave in Cleve-
