

Nov. 1 / Administration of Barack Obama, 2010

with this provision, I have sent to the *Federal Register* for publication the enclosed notice stating that the Sudan emergency is to continue in effect beyond November 3, 2010.

The crisis constituted by the actions and policies of the Government of Sudan that led to the declaration of a national emergency in Executive Order 13067 of November 3, 1997, and the expansion of that emergency in Executive Order 13400 of April 26, 2006, and with respect to which additional steps were taken in Executive Order 13412 of October 13, 2006, has not been resolved. These actions and policies are hostile

to U.S. interests and pose a continuing unusual and extraordinary threat to the national security and foreign policy of the United States. Therefore, I have determined that it is necessary to continue the national emergency declared with respect to Sudan and maintain in force sanctions against Sudan to respond to this threat.

Sincerely,

BARACK OBAMA

NOTE: The notice is listed in Appendix D at the end of this volume.

Statement on the 10th Anniversary of Crews Aboard the International Space Station

November 2, 2010

Today marks an important milestone in the history of human exploration. For the past decade, men and women from 15 nations have lived and worked together in space in the peaceful pursuit of science and exploration. The first crew of the International Space Station took up residence 200 miles above Earth on this date 10 years ago, and we have had a sustained human presence in space ever since.

Truly an international endeavor, the space station has brought disparate nations together for a common purpose, to better our lives on Earth. More than 600 experiments conducted in orbit aboard this amazing laboratory have contributed to important research designed to improve the quality of life for everyone.

Because of the extraordinary value of this orbiting research outpost, earlier this year, I proposed extending the life of the space station until at least 2020 so that NASA can pioneer new frontiers in education and international cooperation that will maximize the scientific return of

this important foothold in space. Congress overwhelmingly agreed, and I was recently able to sign into law legislation that calls for extending the life of the space station for at least another 10 years.

As we look to the next 10 years, we can only imagine what's in store for our future astronauts, engineers, and scientists. I am committed to ensuring that NASA continues along a sustainable path as an international leader in space exploration and as an inspiration to a new generation of explorers to pursue careers in science, technology, engineering, and mathematics.

As we look to the future of America's continued leadership in space and think about the steps we will take in the months and years to come to extend humanity's reach beyond Earth orbit, I would like to say thank you and a job well done to the men and women who have contributed to this historic achievement.

The President's News Conference

November 3, 2010

The President. Good afternoon, everybody. Last night I had a chance to speak to the leaders of the House and the Senate and reached out to those who had both won and lost in both par-

ties. I told John Boehner and Mitch McConnell that I look forward to working with them. And I thanked Nancy Pelosi and Harry Reid for their extraordinary leadership over the last 2 years.
