NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby proclaim the week of November 2 through November 9, 1983 as National Drug Abuse Education Week. I call on all Americans to join the battle against drug abuse to protect our children so that we ensure a healthy and productive generation of Americans as our contribution to the future.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of November, in the year of our Lord nineteen hundred and eighty-three, and of the Independence of the United States of America the two hundred and eighth.

RONALD REAGAN

Editorial Note: For the President's remarks of Nov. 1, 1983, on signing Proclamation 5123, see the Weekly Compilation of Presidential Documents [vol. 19, p. 1509].

Proclamation 5124 of November 3, 1983

National Diabetes Month, 1983

By the President of the United States of America
A Proclamation

Diabetes mellitus is a chronic disease that now threatens the lives of approximately 11 million Americans. Although careful treatment can control many of the short-term metabolic effects of diabetes, the disease is also associated with serious long-term complications that affect the eyes, kidneys, nerves, and blood vessels of the heart, brain, and extremities. In addition to its devastating toll in terms of human suffering, the cost of medical care for diabetic patients and associated losses due to disability and premature mortality now exceed $10 billion annually in the United States alone.

Fortunately, the outlook for clinical advances related to the diagnosis, treatment, cure, and, ultimately, the prevention of diabetes and its complications has never been as promising as it is today. Recent research advances have included the synthetic production of purified human insulin to ensure adequate supplies of this essential hormone, the development of improved methods for insulin administration, new technologies for monitoring critical blood sugar levels, new therapies for the treatment of diabetes-related kidney, eye, and cardiovascular diseases, and improved clinical capabilities for reducing the increased perinatal morbidity and mortality associated with diabetic pregnancies.

In addition, remarkable advances have also been made in developing procedures that permit the successful transplantation of insulin-producing cells into diabetic animals without the need for chronic suppression of the immune system. As these and related studies are extended to humans, they may lead directly to the development of a cure for some of the most serious types of diabetes and to a means to prevent, arrest, or reverse the long-term complications of this disease.

Recent advances in basic biomedical research are providing new insights into the multiple causes of diabetes. We anticipate that these studies will help to identify individuals at risk for developing diabetes so that we may ultimately develop approaches that will prevent the disease and its complications altogether. Basic and clinical research advances have significantly reduced diabetes-related morbidity and mortality and have measurably im-
proved the quality of life for people with diabetes. Nevertheless, much remains to be done before the cure and prevention of diabetes and its complications become a reality. Toward this goal, the Federal government, in cooperation with the private sector, will continue in the same determined spirit to lead the way toward eliminating diabetes as a major public health problem both for current and future generations.

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, in accordance with Senate Joint Resolution 121, do hereby proclaim the month of November, 1983, as National Diabetes Month, and I call upon all government agencies and the people of the United States to observe this month with appropriate programs, ceremonies, and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this 3rd day of November, in the year of our Lord nineteen hundred and eighty-three, and of the Independence of the United States of America the two hundred and eighth.

RONALD REAGAN

Proclamation 5125 of November 4, 1983

National Reye's Syndrome Week, 1983

By the President of the United States of America
A Proclamation

Reye's Syndrome is a serious illness that may attack the brain and liver of a child recovering from influenza, chicken pox, or some other viral infection. The cause of this disease—which affects an estimated 600 to 1,200 children in the United States each year—is unknown.

The first signs of Reye's Syndrome in a child are repeated vomiting, fatigue, and general irritation. The disease may progress to a life-threatening stage. If early symptoms are recognized and treated promptly, however, it is less likely that the disease will cause dangerous brain swelling, coma, or death.

New treatments are being developed to help victims of Reye's Syndrome recover. This improved outlook is a direct result of scientific research carried out by public and private investigators and physicians, many of whom are supported by the American Reye's Syndrome Associations, the National Reye's Syndrome Foundation (Ohio), the National Reye's Syndrome Foundation (Michigan), and the United States Public Health Service. Within the Public Health Service, the Centers for Disease Control, the Food and Drug Administration and the National Institutes of Health are carrying out research projects and constant surveillance of cases.

Much still remains to be learned about Reye's Syndrome. Coordinated research is needed to find better ways to treat this disorder and ultimately to prevent it. Public education is also essential, because parents and physicians can help to protect the Nation's children from its lethal effects if they learn to recognize this disease in its earliest stages.

To enhance the public's awareness of the gravity of Reye's Syndrome, the Congress, by Senate Joint Resolution 34, has designated the week of November 7 through November 13, 1983, as "National Reye's Syndrome Week" and has authorized and requested the President to issue a proclamation in observance of that week.
