§ 3471. Payments for land removed from production for conservation purposes; authorization of appropriations

(a) The Secretary of Agriculture may enter into contracts to provide financial assistance in the form of payments to owners and operators of cropland located in counties where the soil normally freezes to a depth of at least four inches annually who remove such land from agricultural production for a period not to exceed one year for the purpose of installing enduring conservation measures which involve excavation of the soil. The payments under such contracts shall be in such amounts as determined by the Secretary to be necessary to effectuate the purposes of this subchapter but shall not exceed an amount equal to the number of acres of cropland removed from agricultural production for such purpose multiplied by 50 per centum of the typical annual rent, as determined by the Secretary, paid for similar land in the county. Financial assistance may not be provided under this section with respect to any conservation measure without the approval of the soil and water conservation district board for the district in which the land is located, and may not, in the aggregate, be provided in any year with respect to more than one-half of 1 per centum of the cropland in any county.

(b) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section, such sums to remain available until expended.

§ 3472. Conservation tillage; Congressional findings, etc.

(a) Congress finds that—

(1) domestic and international demand for agricultural products from the United States is great and is expected to significantly increase over the next twenty years;

(2) the ability of the United States to provide agricultural products to meet that demand is seriously impaired by the annual loss of five billion tons of soil due to wind and water erosion;

(3) the battle against soil erosion is being lost despite the annual expenditure of millions of dollars by the Federal Government on research, technical assistance, and conservation incentives to control soil erosion;

(4) conservation tillage practices are estimated to reduce soil erosion by 50 to 90 per centum over conventional farming practices; and

(5) conservation tillage may result in better yields, greater land use flexibility, decreased fuel use, decreased labor and equipment costs, increased retention of soil moisture, and more productive land than conventional farming practices and may be adaptable to a broad range of soil types and slopes throughout the country.

(b) It is the sense of Congress that the Secretary of Agriculture should, and is hereby urged and requested to—

(1) direct the attention of our Nation’s farmers to the costs and benefits of conservation tillage as a means of controlling soil erosion and improving profitability; and

(2) conduct a program of research designed to resolve any unanswered questions regarding the advantages and disadvantages of conservation tillage over other soil conservation practices.

§ 3473. Regulations

The Secretary of Agriculture shall prescribe such regulations as may be necessary to carry out the provisions of this chapter.

CHAPTER 55—COASTAL BARRIER RESOURCES

§ 3501. Congressional statement of findings and purpose

(a) The Congress finds that—

(1) coastal barriers along the Atlantic and Gulf coasts and along the shore areas of the Great Lakes of the United States and the adjacent wetlands, marshes, estuaries, inlets and nearshore waters provide—

(A) habitats for migratory birds and other wildlife; and

(B) habitats which are essential spawning, nursery, nesting, and feeding areas for commercially and recreationally important species of finfish and shellfish, as well as other aquatic organisms such as sea turtles;
(2) coastal barriers contain resources of extraordinary scenic, scientific, recreational, natural, historic, archeological, cultural, and economic importance; which are being irretrievably damaged and lost due to development on, among, and adjacent to, such barriers;

(3) coastal barriers serve as natural storm protective buffers and are generally unsuitable for development because they are vulnerable to hurricane and other storm damage because natural shoreline recession and the movement of unstable sediments undermine manmade structures;

(4) certain actions and programs of the Federal Government have subsidized and permitted development on coastal barriers and the result has been the loss of barrier resources, threats to human life, health, and property, and the expenditure of millions of tax dollars each year; and

(5) a program of coordinated action by Federal, State, and local governments is critical to the more appropriate use and conservation of coastal barriers.

(b) The Congress declares that it is the purpose of this chapter to minimize the loss of human life, wasteful expenditure of Federal revenues, and the damage to fish, wildlife, and other natural resources associated with the coastal barriers along the Atlantic and Gulf coasts and along the shore areas of the Great Lakes by restricting future Federal expenditures and financial assistance which have the effect of encouraging development of coastal barriers, by establishing the John H. Chafee Coastal Barrier Resources System, and by considering the means and measures by which the long-term conservation of these fish, wildlife, and other natural resources may be achieved.

mmittee on Resources of the House of Rep-
resentatives and the Committee on Environ-
ment and Public Works of the Senate.
