

Before I close, I want to say a word about our brave helicopter pilot who was held and then released in Somalia. Tonight Michael Durant is on his way home. We are thankful beyond words that Chief Warrant Officer Durant will be reunited with his family and that he will recover from his wounds. At the same time, our hearts and the hearts of all Americans go out to the 18 families who are grieving tonight for their loved ones who were lost in Somalia and to nearly 100 others who were wounded. They and their comrades are in our prayers.

God bless you all, and thanks for listening.

NOTE: The President spoke at 10:06 a.m. from the Oval Office at the White House.

### **Proclamation 6613—World Food Day, 1993 and 1994**

*October 16, 1993*

*By the President of the United States of America*

#### **A Proclamation**

Arising from poverty, homelessness, civil strife or famine, hunger burdens the lives of nearly 800 million people throughout the world. Women and children suffer the most. Studies suggest that in developing countries, some 36 percent of children under 6 years of age are moderately or severely undernourished.

On this World Food Day, let us commit ourselves to bringing change to the lives of those who suffer from hunger and to preserving the resources we will need in the years ahead.

Failure to protect our environment now and in the future will clearly affect the ability of countries to produce food and fiber for growing populations. The United Nations has indicated that the world may not be able to feed itself by sometime early in the next century if we continue to abuse productive soil. If world food production is to be maintained and enhanced, we must learn to safeguard the biological diversity that underpins our agricultural system. Today, the biological foun-

ation is imperiled. Traditional crop varieties and animal breeds are becoming endangered. Many are already extinct. When we lose a traditional wheat or rice variety, we lose its unique characteristics and its potential pest and disease resistance, drought tolerance, or nutritional benefits. Nature's diversity is a precious inheritance. We cannot live on this earth without it. Through sound agricultural practices and intelligent shepherding of our natural resources, we can nourish and protect our land, forests, rivers, and streams.

The almost constant threat of famine in Africa and the continuing food problems in Asia should remind us all of our global vulnerability, especially as the population continues to grow. Raising the global community's awareness of the hunger that afflicts the young, the infirm, the poor, and the elderly—and considering the needs of others each day—can bring change and help ensure our food supply for the future.

The Congress, by House Joint Resolution 218, has designated October 16, 1993, and October 16, 1994, as "World Food Day" and has authorized and requested the President to issue a proclamation in observance of these days.

**Now, Therefore, I, William J. Clinton**, President of the United States of America, do hereby proclaim October 16, 1993, and October 16, 1994, as World Food Day. I call on all Americans to observe these days with appropriate programs and activities.

**In Witness Whereof**, I have hereunto set my hand this sixteenth day of October, in the year of our Lord nineteen hundred and ninety-three, and of the Independence of the United States of America the two hundred and eighteenth.

**William J. Clinton**

**Proclamation 6614—National Forest Products Week, 1993**

October 16, 1993

*By the President of the United States of America*

**A Proclamation**

Our National Forests are a priceless heritage, a gift that we hold in trust for future generations. As stewards of this inheritance, we have the obligation of preserving the capacity of these lands to sustain, not only themselves, but also the species that depend on them. Even as we strive to fulfill this obligation, the American people are asking fundamental questions about how our National Forests are managed and about how best to ensure a healthy and productive land.

Much has already been done to protect our forests. Of the 191 million acres of National Forest, 34 million have been set aside as part of the wilderness preservation system, a system that safeguards wilderness for future use and enjoyment. National Forests include more than 4,300 miles of designated segments of the National Wild and Scenic Rivers Systems. These rivers are maintained in a free-flowing condition for the enjoyment of this and future generations.

Much more remains to be done, and we are only beginning to fathom, however incompletely, the complexities of the ecosystems of which our National Forests are composed. We know that over 250 threatened and endangered species of fish, animals, and plants inhabit National Forests and are dependent on them for survival. We also know that the key to protecting these and other species is to maintain healthy ecosystems through effective management of National Forests. In addition, we now understand that our forests are only one part of a global mosaic of forest ecosystems and that, if we are to be a world leader in environmental conservation, our stewardship must set standards for the world to emulate.

Our National Forests are also vital to our physical and spiritual well-being. National Forests are the single largest provider of outdoor recreation in the United States, providing 288 million visitor days at Forest Service

campgrounds, picnic areas, and other recreation attractions in the past year. Products generated from National Forests support jobs for hundreds of thousands of workers, most located in rural America. People whose livelihoods are dependent on forest products industries must be considered as we reexamine the role of National Forests in promoting the welfare of all Americans.

Clearly, we are moving toward a new era in the stewardship of public lands. This new era is one in which we must blend environmental values with the needs of people in such a way that the National Forests represent diverse, healthy, productive, and sustainable ecosystems. Ecosystem management must be grounded on sound science and on compliance with existing law.

In recognition of the central role our forests play in enhancing the welfare of our Nation, the Congress, by Public Law 86-753 (36 U.S.C. 163), has designated the week beginning on the third Sunday in October of each year as "National Forest Products Week" and requested the President to issue a proclamation in observance of this week.

**Now, Therefore, I, William J. Clinton,** President of the United States of America, do hereby proclaim the week beginning October 17, 1993, as National Forest Products Week and call upon all Americans to observe that week with appropriate ceremonies and activities.

**In Witness Whereof,** I have hereunto set my hand this sixteenth day of October, in the year of our Lord nineteen hundred and ninety-three, and of the Independence of the United States of America the two hundred and eighteenth.

**William J. Clinton**
