**Proclamation 7617—National
Alzheimer’s Disease Awareness
Month, 2002**

October 31, 2002

*By the President of the United States
of America*

A Proclamation

Alzheimer’s Disease robs its victims of their independence and identity and greatly affects the lives of their loved ones. This disease and other forms of dementia afflict approximately 50 percent of Americans age 85 and older. Due to the rapid growth of our elderly population, experts expect that the number of individuals who will develop this debilitating illness will dramatically increase. As we observe National Alzheimer’s Disease Awareness Month, we rededicate ourselves to fighting this devastating affliction and to supporting Alzheimer’s patients, their families, and their caregivers.

Alzheimer’s Disease harms its victims by altering the brain’s chemistry and disrupting signals to the brain by attacking cells, nerves, and transmitters. Those who develop Alzheimer’s Disease may experience memory lapses, confusion, or mood swings. They can also become withdrawn and depressed due to lost confidence, and they have significant problems communicating. These symptoms usually worsen over time and, in most cases, patients eventually need help with all of their daily activities.

Researchers at the National Institutes of Health (NIH) and in the private sector are working to understand how Alzheimer’s develops. We hope that their advances will lead to new methods for early diagnosis, new medications that will aid Alzheimer’s patients in all stages of the disease, and ultimately a cure for this debilitating illness. Recent studies suggest that commonly used substances, including certain vitamins and anti-inflammatory drugs, may help prevent Alzheimer’s Disease. In addition, we are working to increase understanding of the genetic and nongenetic risk factors that may influence the development of this disease.

As we continue to pursue better prevention and treatment regimes, we remain committed to caring for those now afflicted with
