

NOTE: The President spoke at 6:33 p.m. at the driving range of the Oconee Course at the Ritz-Carlton Lodge, Reynolds Plantation. In his remarks, he referred to Gov. Sonny Perdue of Georgia; Jamie and Harold Reynolds, co-owners, Reynolds Plantation; and Fred Cooper, Georgia State finance chairman, Bush-Cheney campaign. This item was not received in time for publication in the appropriate issue.

The President's Radio Address

June 21, 2003

Good morning. Ten weeks have passed since the fall of the Iraqi regime. Since that time, our work in Iraq has focused on two goals. First, we are working to make Iraq secure for its citizens and our military. Second, we are working to improve the lives of the Iraqi people after three decades of tyranny and oppression.

Making Iraq secure is vitally important for both Iraqi citizens and our own forces. The men and women of our military face a continuing risk of danger and sacrifice in Iraq. Dangerous pockets of the old regime remain loyal to it, and they, along with their terrorist allies, are behind deadly attacks designed to kill and intimidate coalition forces and innocent Iraqis.

Our military is acting decisively against these threats. In Operation Peninsula Strike and Operation Desert Scorpion, our forces have targeted Ba'ath party loyalists and terrorist organizations. In Baghdad, more than 28,000 American combat forces and military police are enforcing the law and arresting criminals. We are also training Iraqis to begin policing their own cities.

As we establish order and justice in Iraq, we also continue to pursue Saddam Hussein's weapons of mass destruction. Military and intelligence officials are interviewing scientists with knowledge of Saddam Hussein's weapons programs and are poring over hundreds of thousands of documents.

For more than a decade, Saddam Hussein went to great lengths to hide his weapons from the world. And in the regime's final days, documents and suspected weapons sites were looted and burned. Yet all who know the dictator's history agree that he possessed chemical and biological weapons and

that he used chemical weapons in the past. The intelligence services of many nations concluded that he had illegal weapons, and the regime refused to provide evidence they had been destroyed. We are determined to discover the true extent of Saddam Hussein's weapons programs, no matter how long it takes.

To date, the United States has provided Iraq with more than \$700 million in humanitarian and reconstruction assistance. This month, the World Food Program is distributing food rations to about 25 million Iraqis. America and our partners are also repairing water treatment plants to provide more clean water. Each week, through our efforts, more electricity is made available to more people throughout the country. And after years of neglect, Iraq's 4.2 million children under the age of 5 are receiving vaccinations against diseases such as polio, measles, and tuberculosis.

Iraq's long-term success also depends on economic development. Our administrator in Iraq has announced a \$100 million fund to pay Iraqis to repair buildings and utilities. Billions of dollars taken from Iraqis by a corrupt regime have been recovered and will be spent on reconstruction projects. Iraq is already in the process of selling oil on world markets, which will bring in much-needed revenue to help the Iraqi people. This week, the port at Umm Qasar opened to commercial traffic, and Baghdad International Airport is expected to reopen next month.

For the first time in over a decade, Iraq will soon be open to the world. And the influence of progress in Iraq will be felt throughout the Middle East. Over time, a free Government in Iraq will demonstrate that liberty can flourish in that region.

American servicemembers continue to risk their lives to ensure the liberation of Iraq. I'm grateful for their service, and so are the Iraqi people. Many Iraqis are experiencing the joys and responsibilities of freedom for the first time in their lives. And they are unafraid. As one Iraqi man said, "We are ready to rebuild our country." For the people of free Iraq, the road ahead holds great challenges. Yet at every turn, they will have

friendship and support from the United States of America.

Thank you for listening.

NOTE: The address was recorded at 10 a.m. on June 20 in the Cabinet Room at the White House for broadcast at 10:06 a.m. on June 21. The transcript was made available by the Office of the Press Secretary on June 20 but was embargoed for release until the broadcast. In his remarks, the President referred to former President Saddam Hussein of Iraq; and L. Paul Bremer III, Presidential Envoy to Iraq. The Office of the Press Secretary also released a Spanish language transcript of this address.

Remarks to the Biotechnology Industry Organization Conference

June 23, 2003

Thanks a lot. Welcome to the Nation's Capital, and thanks for having me drop by.

I knew Tommy was here when I saw his Harley Davidson parked out front. [*Laughter*] So I just put my Segway right next to it. [*Laughter*]

It is a pleasure to be with so many leaders in such a vital industry. Each of you is carrying on the incredible work began some 50 years ago by Doctors Watson and Crick. Since then, biotechnology is advancing knowledge and relieving suffering. In the years to come, the contributions of your industry will help us to win the war on terror, will help us fight hunger around the world, and will help us to save countless lives with new medicines.

My administration is committed to working with your industry so that the great powers of biotechnology can serve the true interests of our Nation and mankind.

Tommy Thompson is the Secretary of Health and Human Services. He is the point man for this administration on biotechnology and other matters of national health. And he is doing a fantastic job for America. Thank you, buddy.

I want to thank Carl Feldbaum for inviting me and inviting you. I want to thank the—and welcome the Premiers and Ministers and Ambassadors and distinguished guests from around the world who are here today. I want to thank the Members of Congress who are

here. Some of our Nation's Governors have joined us today.

I understand the Mayor is here. I always like to see the Mayor and remind him that potholes in front of the White House need to be repaired on a regular basis. [*Laughter*]

I appreciate my Commissioner, the man I named to head the Food and Drug Administration, Mark McClellan, for his service to the country.

The biotechnology industry finds itself on the frontlines of some of the great challenges of our time. The first challenge is the need to fight terror. All of us know the great possibilities of modern science when it is guided by good and humane purposes. We understand as well the terrible harm that science can do in the hands of evil people.

On September the 11th, 2001, the world saw what terrorists could do with commercial airliners turned into weapons of mass murder. We know that our enemies have ambitions to acquire and use biological, chemical, and nuclear weapons. We will not sit idly by as these threats gather, and we will continue to act before dangers are upon us. The most direct way, the best way of removing threats to our country, is to eliminate them at their source. And that's what the United States of America has done and we will do by waging a focused, relentless effort to hunt down any terrorist that would harm the United States of America and our citizens.

And we're making progress. We have captured or killed many key leaders of Al Qaida. And the other one knows we're hot on their trail. In Afghanistan and Iraq, we gave ultimatums to terror regimes. Those regimes chose defiance, and those regimes are no more.

As we take the battle to the enemy, we must always remember where the battle began: here in our own country. So we've reorganized Government to defend the homeland, with greater security at our borders and ports, with more screeners at airports, and the Nation's first environmental sensors, a network of labs to quickly detect a biological attack.

A key part of our all-out effort to prepare for the threat of bioterror is what this administration has called Project BioShield. I have proposed that our Government spend nearly
